Details

This message is generated when the master CPU fails to allocate memory for mac entry table. Hot-standby data will be out of sync with the slave CPU.

Remedial action

Check memory stats for the CPU and report the problem to customer service.

0x00b (MOD_VLAN_MGR)

Details

This message is displayed when a switch other than Virtual IST peer is configured to use the Virtual I-SID.

Remedial action

This is a mis-configuration. Only Virtual IST switches can be configured to use Virtual I-SID. Check the network configuration and remove the mis-configured I-SID.

0x0003c5c8

Alarm group

0x00f (MOD_RCIP)

Details

This message is generated when an attempt is made to make a router the next hop and is unable to do so. This can also be due to the unavailability of address record.

Remedial action

Check memory status in CPU and DRAM. Contact Customer Support; please have system logs and switch configuration information available.

[value] : could not allocate memory

Alarm groups ... Alarm IDs

Alarm ID

0x0006c6b0

Alarm group

0x01b (MOD_IPMC)

Details

This message is displayed if the system has failed to allocate memory. As a result some activity may not have come to completion or may have been abruptly terminated.

Remedial action

Check memory status in CPU and DRAM. Contact Customer Support. Please have system logs and switch configuration information available.

VSP Operating System Software

Internal Error, inconsistency found in add multicast interface: internal PIM interface table index is in passive range for an active interface, vlan [value] vifi [value] rc_id [value] ip [value]. Interface has been changed to pim passive mode. Customer should disable and re-enable as pim ACTIVE mode.

Alarm ID

0x0006c735

Alarm group

0x01b (MOD_IPMC)

Details

Unknown. Please report to the customer support.

Remedial action

If this interface should be PIM active you should disable it and bring it up as active.

VSP Operating System Software

Radius server [value] can be reached through MgmtRouter & GlobalRouter. please enable the Source Ip flag and configure the Source IP.

Alarm groups ... Alarm IDs

Alarm ID

0x000a45f2

Alarm group

0x029 (MOD_RADIUS)

Details

Radius server host entry does not have Source IP specfied or correct Source IP. Because both MgmtRouter and GlobalRouter have reachability to the Radius server, the device does not know which outgoing VRF should be used. In this case, Mgmt VRF will be used by default.

Remedial action

Configure the correct source IP on the Radius Server host entry. For Out-of-band management, use Virtual or Mgmt IP. For In-band management, use Circuitless IP (Loopback IP).
