VSP Operating System Software

Adding IPv6 and non-IPv6 ACLs on the same [value] can result in unintentional dropping of IPv6 packets, if the non-IPv6 ACL is configured with "default-action deny".

Alarm groups ... Alarm IDs

Alarm ID

0x001049d9

Alarm group

0x041 (MOD_FILTER)

Details

Filters with DENY action have higher priority than PERMIT filters, and an IPv6 filter will always hit the default-action rule of a non-IPv6 filter configured on the same Port or Vlan.

Remedial action

Add additional ACE(s) to the non-IPv6 ACL, to prevent IPv6 packets from hitting the "default-action deny" rule.

0x042 (MOD_RCIP6)

Details

Category: duReport Tunnel creation failed for one of the following reasons: system memory was depleted or the maximum number of tunnels (2000) has already been created.

Remedial action

Increase DRAM size. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), switch configuration, and network topology.

vrrpV3SyncNotify: Failed to sync the V3 vrrp entry

Alarm groups ... Alarm IDs

Alarm ID

0x0010873b

Alarm group

0x042 (MOD_VRRPV3)

Details

This message appears when the table sync for VRRP configuration fails. VRRP data will be out of sync with master CPU.

Remedial action

Check memory stats and try to reboot the secondary CPU. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), switch configuration, and network topology.
