Memory Not allocated for PCAP

Alarm groups ... Alarm IDs

Alarm ID

0x00024605

Alarm group

0x009 (MOD_CPP)

Details

This message appears when the master CPU fails to allocate memory for PCAP. Hot-standby data will be out of sync with the master CPU.

Remedial action

Check memory stats on CPU. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Extreme Networks Fabric Engine

WARNING: Unable to mpls module

Alarm groups ... Alarm IDs

Alarm ID

0x00034584

Alarm group

0x00d (MOD_MAIN)

Details

This message is generated when the system is unable to load the MPLS module. The required file mpls.x is not present or the file mpls.x is corrupt either in the flash or the pcmcia card

Remedial action

Ensure that the mpls.x file is present in the flash/pcmcia and not corrupt

MAC Flapping detected on Host ARP " PRINT_IP_FORMAT " MAC [value] old MAC [value], do not propagate change to DVR

Alarm groups ... Alarm IDs

Alarm ID

0x000385fc

Alarm group

0x00e (MOD_P2IP)

Details

This message indicates that the Host ARP MAC is flapping and we are not sending the change to DVR in order to protect the application.

Remedial action

Check the network for this IP/MAC combination.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE

Extreme Networks Fabric Engine

MAC Flapping detected on Host ARP " PRINT_IP_FORMAT " MAC [value] old MAC [value]. DVR not updated

Alarm groups ... Alarm IDs

Alarm ID

0x000385fd

Alarm group

0x00e (MOD_P2IP)

Details

This message indicates that the Host ARP MAC is flapping, DVR was not updated. Customer needs to find the offending device to see why the MAC is flapping and after that is fixed, do clear dvr host-entries ip <host-ip> for that particular host from one DVR Controller in the DVR Domain.

Remedial action

Check the network for this IP/MAC combination, clear dvr host-entries ip <host-ip>.

PrFilterDownloadInfoToSlot: Slot [value]: Failed to send vlan add msg for AclId [value] to VlanId [value]

Alarm groups ... Alarm IDs

Alarm ID

0x001046f6

Alarm group

0x041 (MOD_FILTER)

Details

This message is displayed when sending vlan add msg for a particular ACL filter to a vlan fails. The reason behind this is 1. The VLAN id might be invalid or non-existing 2.The port may be invalid 3.Memory allocation failure

Remedial action

See that the vlan ID is valid and existent and the port is also within the limits and if the problem is due to memory then better contact customer care.

Extreme Networks Fabric Engine

prCreatePreDefinedNsnaActsAcls: NSNA Default VOIP Vlan AclId = [value], failed to create Ace [value], attribute Yellow Subnet, action StopOnMatch

Alarm ID

0x0010473f

Alarm group

0x041 (MOD_FILTER)

Details

This message is generated when the sys fails to create an ACE associated with a particular VOIP vlan ACL filter with the attribute as VOIP, the reason being that the ACL entry is not found in the table or the action is invalid lastly memory allocation failure

Remedial action

See that the ACL entry is there in the table i.e., already existing, or see that the action is valid either PERMIT, DENY etc. and for memory related issues contact customer care
