Cannot allocate memory.

Remedial action

Check system performance by using the command "show khi performance memory" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

CFM config msg failed for C-VLAN mep [value].[value].[value] (md already associated with another service type [value])

Alarm groups ... Alarm IDs

Alarm ID

0x001e059d

Alarm group

0x078 (MOD_CFM)

Details

MD can only be NODAL SPBm service instance or not associated with a service (i.e. NONE). This message indicates that a non-supported service was associated.

Remedial action

Removing the MEP from the VLAN or creating a new MEP under a different MD may resolve this. If not resolved, contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

setTimer: out of memory

Alarm groups ... Alarm IDs

Alarm ID

0x002e0596

Alarm group

0x0b8 (MOD_LMF)

Details

This message is displayed if the system has failed to allocate memory. As a result some activity may not have come to completion or may have been abruptly terminated.

Remedial action

Check memory status in CPU and DRAM. Contact Customer Support. Please have system logs and switch configuration information available.

IPv4 address Conflict (DVR interface on this Controller and learned Host Route) detected: L2ISID [value] IPv4 [value].[value].[value].[value] DVR Domain [value]

Alarm groups ... Alarm IDs

Alarm ID

0x00394610

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected a misconfiguration/conflict in the network between a DVR VLAN IP address on this Controller and a learned Host Route in the DVR Domain.

Remedial action

The same IPv4 address is assigned to a Controller DVR interface VLAN IP and is learned as a Host in the DVR domain. Only one IPv4 address can exist. Need to determine which is the right owner of the IPv4 address and correct the problem on the other one.

VSP Operating System Software

The maximum number of owner NHs ([value]) has been hit for DVR Host Route [value].[value].[value].[value]/[value] (L3ISID [value] L2ISID [value])

Alarm ID

0x00394611

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected that a host route has hit the maximum number of owner NHs for the route on this DVR node. Need to find the problem in the network as to why there are this many owner NHs for the host route.

Remedial action

Investigate why there are so many owner NHs for this route at one time. See if there is an ARP being advertised for a Host route from multiple places.

VSP Operating System Software

DVR received an ADD for host route [value].[value].[value].[value]/[value] (L3ISID [value] L2ISID [value]) with a duplicate NH [value], Check QoS stats

Alarm groups ... Alarm IDs

Alarm ID

0x00394612

Alarm group

0x0e5 (MOD_DVR)

Details

DVR received an ADD TLV with a NH that is already added to this DVR host route. Check QoS stats to see if packets are dropped in the queue for DBSync as we might have missed a DELETE TLV for this NH before another ADD TLV was received.

Remedial action

Investigate the DVR node for QOS packet drops. See if there is an ARP being advertised for a Host route from multiple places.
