Details

This message is generated when the master CPU fails to allocate memory for mac entry table. Hot-standby data will be out of sync with the slave CPU.

Remedial action

Check memory stats for the CPU and report the problem to customer service.

MAC Flapping detected on Host ARP [value].[value].[value].[value] MAC [value] old MAC [value]. DVR not updated

Alarm groups ... Alarm IDs

Alarm ID

0x000385fd

Alarm group

0x00e (MOD_P2IP)

Details

This message indicates that the Host ARP MAC is flapping, DVR was not updated. Customer needs to find the offending device to see why the MAC is flapping and after that is fixed, do clear dvr host-entries ip <host-ip> for that particular host from one DVR Controller in the DVR Domain.

Remedial action

Check the network for this IP/MAC combination, clear dvr host-entries ip <host-ip>.

udpProtocolSyncCallback: corrupt message

Alarm groups ... Alarm IDs

Alarm ID

0x0003c5af

Alarm group

0x00f (MOD_RCIP)

Details

Data structure size mismatch between the master and secondary CPUs. Hot-standby UDP data will be out of sync with the master CPU.

Remedial action

Contact customer service and have the following information available: runtime software versions on both CPUs.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE

If the deleting of route by ARP is left incomplete we get this type of warning. Deleting not done completely.

Remedial action

Reference count is not so zero which shows that all routes have not been deleted so see that all are deleted.

ipRsmltEventSyncHandler: rcv framework msg failed for Modify ARP and MAC event

Alarm groups ... Alarm IDs

Alarm ID

0x0003c6a7

Alarm group

0x00f (MOD_RCIP)

Details

This message is generated when it is unable to sync RSMLT ARP and MAC event to the secondary in HA mode. Hot-standby Rsmlt data will be out of sync with master CPU. Software error.

Remedial action

Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR

Blocking ARP on port [value] for possible Dos attack.

Alarm groups ... Alarm IDs

Alarm ID

0x0003c8a7

Alarm group

0x00f (MOD_RCIP)

Details

This message is logged due to a possible DOS attack.

Remedial action

MAC should be properly and already recorded on that particular port.

VSP Operating System Software

Radius server [value] can be reached through MgmtRouter & GlobalRouter. please enable the Source Ip flag and configure the Source IP.

Alarm groups ... Alarm IDs

Alarm ID

0x000a45f2

Alarm group

0x029 (MOD_RADIUS)

Details

Radius server host entry does not have Source IP specfied or correct Source IP. Because both MgmtRouter and GlobalRouter have reachability to the Radius server, the device does not know which outgoing VRF should be used. In this case, Mgmt VRF will be used by default.

Remedial action

Configure the correct source IP on the Radius Server host entry. For Out-of-band management, use Virtual or Mgmt IP. For In-band management, use Circuitless IP (Loopback IP).
