ercdIngressIpfixInit: Failed to create Ingress Ipfix Index Table2

Alarm groups ... Alarm IDs

Alarm ID

0x00124564

Alarm group

0x049 (RMOD_ERCD)

Details

This message is displayed if creating and initializing Ingress Ipfix Index Table2 fails, this happens when there is No COP memory to create the Index Table, Invalid data is passed, writing default data to the table fails, Rsp is not up

Remedial action

Ensure that valid data is passed. Check memory stats on master CPU. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

ercdLerInit: can't malloc COP memory for DestIP record

Alarm ID

0x0015c509

Alarm group

0x057 (RMOD_ERCD_MPLS)

Details

This message is displayed when the sys is unable to provide COP memory for a DestIP record

Remedial action

Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis

Alarm group

0x057 (RMOD_ERCD_MPLS)

Details

This message is displayed when the nhfle table has reached its peak limits and cannot assign further entries into it due to memory allocation failure

Remedial action

Check memory status in CPU. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis

K2 [value] Zag [value] PMM Error Ext log messages suppressed

Alarm groups ... Alarm IDs

Alarm ID

0x00170607

Alarm group

0x05c (RMOD_HWIFCOP)

Details

PMM Error Ext log messages have been suppressed because an internal datapath error is causing an excess of hardware interrupts resulting in excessive log message generation.

Remedial action

Contact customer service. Please have sys logs and switch config available

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR

Alarm ID

0x001945f7

Alarm group

0x065 (MOD_RCMPLS)

Details

1: This message is displayed if adding the Ftn Vpn entry to the DB fails, malloc fails. Invalid VrfId, Invalid Fec type, Not Enough memory space, Failed to link new FTN entry with vrfId.;2: This message appears when the function fails and returns a NULL value. Here a function accepts vrfID with IP/Mask destination to create an FTN record but if incurs an error it returns a NULL value resulting in display of the Error Message.

Remedial action

1: User should ensure that VrfId, Fec type passed are valid. Check Memory status in CPU contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.;2: The problem is due to various reasons such as invalid vrfID or fec type or memory allocation failed etc. Make sure that you give the correct input

Authentication Failure (pkt with No authentication) for P2P Hello Pdu received on interface [value]

Alarm ID

0x001dc597

Alarm group

0x077 (MOD_ISIS)

Details

Authentication mismatch.

Remedial action

Authentication is configured on the local ISIS interface but not on neighbor's ISIS interface. Check authentication configuration on both local and neighbor's ISIS interface and make sure they match.

Remedial action

Check system performance by using the command "show khi performance memory" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

CFM config msg failed for md [value] (failed to allocate memory)

Alarm groups ... Alarm IDs

Alarm ID

0x001e0584

Alarm group

0x078 (MOD_CFM)

Details

Requested configuration change for the provided MD name failed. Memory issue.

Remedial action

Check system performance by using the command "show sys per" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

cfmCreateMepEntry: Failed to allocate ltrList memory

Alarm groups ... Alarm IDs

Alarm ID

0x001e05d6

Alarm group

0x078 (MOD_CFM)

Details

System does not have enough memory to allocate the requested data structure.

Remedial action

Check system performance by using the command "show sys per" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

IPv4 address Conflict (DVR interface on this Controller and learned Host Route from [value]) detected: L2ISID [value] IPv4 [value].[value].[value].[value] DVR Domain [value], Check for Loop or possible duplicate IP

Alarm ID

0x00394610

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected a misconfiguration/conflict in the network between a DVR VLAN IP address on this Controller and a learned Host Route in the DVR Domain. Possibly check for a loop in the network.

Remedial action

The same IPv4 address is assigned to a Controller DVR interface VLAN IP and is learned as a Host in the DVR domain. Only one IPv4 address can exist. Need to determine which is the right owner of the IPv4 address and correct the problem on the other one. It also could be caused by a packet looping. Check for loop.

VSP Operating System Software

Detected conflicting IP, DVR Interface not created (IP [value].[value].[value].[value]/[value] L3ISID [value] L2ISID [value]), Check DVR VLAN config on Controllers

Alarm groups ... Alarm IDs

Alarm ID

0x00394621

Alarm group

0x0e5 (MOD_DVR)

Details

DVR received an IP subnet route from a Controller that conflicts with an already learned subnet route for a particular L2ISID in a L3ISID.

Remedial action

Check DVR Controller configurations for DVR VLANs. See if there are overlapping subnets in different L2ISIDs for the same L3ISID.

VSP Operating System Software

Misconfig (SUBNET MASK) detected: MASK [value] for DVR GW IP [value].[value].[value].[value] from Controller [value] (DVR GW IP [value].[value].[value].[value] L2ISID [value] L3ISID [value] MASK [value])

Alarm groups ... Alarm IDs

Alarm ID

0x00394622

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected a misconfiguration in the network for a SUBNET MASK from the specified Controller for a learned DVR GW IP in the specified L2VSN/L3VSN.

Remedial action

Check L2VSN configs of all DVR Controllers to correct the problem. All L2VSNs enabled with DVR should have the same DVR GW IP, subnet and mask configured for the particular L2VSN/L2ISID.
