Details

This message is displayed if SourceMacAddress in L2 packet header does not match with client MAC address in the DHCP packet or there is a mismatch in the IP address and MAC address information with an existing client on this PortNum in a DHCP Release/Decline message. This DHCP packet will not be processed further

Remedial action

Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis

0x001dc59c

Alarm group

0x077 (MOD_ISIS)

Details

Authentication mismatch.

Remedial action

Authentication is configured on the neighbor's IS-IS interface but not on local IS-IS interface. Check authentication configuration on both local and neighbor's IS-IS interface and make sure they match.

cfmCreateMepEntry: Failed to allocate ltrList memory

Alarm groups ... Alarm IDs

Alarm ID

0x001e05d6

Alarm group

0x078 (MOD_CFM)

Details

System does not have enough memory to allocate the requested data structure.

Remedial action

Check system performance by using the command "show sys per" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

IPv4 address Conflict (DVR interface on this Controller and learned Host Route from [value]) detected: L2ISID [value] IPv4 [value].[value].[value].[value] DVR Domain [value], Check for Loop or possible duplicate IP

Alarm groups ... Alarm IDs

Alarm ID

0x00394610

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected a misconfiguration/conflict in the network between a DVR VLAN IP address on this Controller and a learned Host Route in the DVR Domain. Possibly check for a loop in the network.

Remedial action

The same IPv4 address is assigned to a Controller DVR interface VLAN IP and is learned as a Host in the DVR domain. Only one IPv4 address can exist. Need to determine which is the right owner of the IPv4 address and correct the problem on the other one. It also could be caused by a packet looping. Check for loop.

0x0e5 (MOD_DVR)

Details

DVR received an ADD TLV with a NH that is already added to this DVR host route. Check QoS stats to see if packets are dropped in the queue for DBSync as we might have missed a DELETE TLV for this NH before another ADD TLV was received.

Remedial action

Investigate the DVR node for QOS packet drops. See if there is an ARP being advertised for a Host route from multiple places.
