Extreme Networks

Extreme Networks Fabric Engine

The type for Internal PSU-[value] does not match the other PSU(s) present. PoE budget is as if all powered PSUs are the lowest wattage PSU.

Alarm groups ... Alarm IDs

Alarm ID

0x000108b1

Alarm group

0x004 (MOD_CHAS_MGR)

Details

The specified power supply is not the same type as the other power supply(s) present. PoE budget is calculated as if all powered PSUs are the lowest wattage PSU. E.g. if one 715W and one 1100W are powered, the PoE budget assumes two 715W PSUs are powered.

Remedial action

Replace the specified power supply with the same power supply type that is already present. Consult the Power Supply section of the Hardware Installation Guide.

Extreme Networks Fabric Engine

ospfsync_event_handler: INVALID VRF ID PASSED TO CALLBACK msg type [value]

Alarm groups ... Alarm IDs

Alarm ID

0x000185e2

Alarm group

0x006 (MOD_OSPF)

Details

Vrf id passed to the sync call back function is invalid. Hot-standby OSPF data will be out of sync with master CPU

Remedial action

Check memory stats, try rebooting secondary CPU to force a fresh table sync. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis

Details

This message is generated when the master CPU fails to allocate memory for mac entry table. Hot-standby data will be out of sync with the slave CPU.

Remedial action

Check memory stats for the CPU and report the problem to customer service.

MAC Flapping detected on Host ARP " PRINT_IP_FORMAT " MAC [value] old MAC [value]. DVR not updated

Alarm groups ... Alarm IDs

Alarm ID

0x000385fd

Alarm group

0x00e (MOD_P2IP)

Details

This message indicates that the Host ARP MAC is flapping, DVR was not updated. Customer needs to find the offending device to see why the MAC is flapping and after that is fixed, do clear dvr host-entries ip <host-ip> for that particular host from one DVR Controller in the DVR Domain.

Remedial action

Check the network for this IP/MAC combination, clear dvr host-entries ip <host-ip>.

udpSyncCallback: corrupt message

Alarm groups ... Alarm IDs

Alarm ID

0x0003c5ac

Alarm group

0x00f (MOD_RCIP)

Details

Software version mismatch between the master CPU and HA-CPU. Hot-standby UDP data will be out of sync with the master CPU

Remedial action

Check software versions between master and HA-CPU. Contact customer service and have the following information available: software version on both CPUs

Attributes

Name	Value	Description
AlarmType	ALARM_NONE

ipRsmltNodeSyncCallback: memory allocation for RSMLT circuit failed

Alarm groups ... Alarm IDs

Alarm ID

0x0003c6ac

Alarm group

0x00f (MOD_RCIP)

Details

This message is displayed if memory allocation for Rsmlt circuit fails. Hot-standby Rsmlt data will be out of sync with master CPU.

Remedial action

Check memory stats on master CPU. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR

Alarm group

0x00f (MOD_RCIP)

Details

This message is displayed if the system has failed to allocate memory. As a result some activity may not have come to completion or may have been abruptly terminated.

Remedial action

Check memory status in CPU and DRAM. Contact Customer Support; please have system logs and switch configuration information available.

Attributes

Name	Value	Description

igmpCreateTimer: Can't allocate memory

Alarm groups ... Alarm IDs

Alarm ID

0x0005c5c7

Alarm group

0x017 (MOD_IGMP)

Details

This message is displayed if the system has failed to allocate memory. As a result some activity may not have come to completion or may have been abruptly terminated.

Remedial action

Check memory status in CPU and DRAM. Contact Customer Support; please have system logs and switch configuration information available.

cannot allocate timed prune link list object

Alarm ID

0x0006c5f5

Alarm group

0x01b (MOD_IPMC)

Details

This message is displayed if the system has failed to allocate memory. As a result some activity may not have come to completion or may have been abruptly terminated.

Remedial action

Check memory status in CPU and DRAM. Contact Customer Support. Please have system logs and switch configuration information available.
