Abstract

This reference guide for Extreme Networks VOSS version 9.3 catalogs system alarms and diagnostic messages by unique hexadecimal ID, supporting network administrators in identifying and resolving operational issues. It addresses memory allocation failures, port state transitions, task execution errors, license validation and expiration events, and synchronization breakdowns across system modules. Alarms span critical areas such as ARP spoofing detection, loop prevention, and OSPF state transitions, with each entry providing an ID, description, and dynamic placeholders for runtime values. Designed for technically proficient users, the guide enables precise fault isolation and system health monitoring across hardware and software layers.

VSP Operating System Software

Alarms (sorted by ID)

Sort by groups

ID	Alarm Description
0x00000001	[value]: out of memory
0x00000002	[value]: malloc failed!
0x00000004	alsClientRegister returns [value]
0x00000005	IGMP Loss Group Member:MemIpAddr:" PRINT_IP_FORMAT ",GrpAddr:" PRINT_IP_FORMAT ",src_port:[value],IfIndex:[value]
0x00000006	Port [value] is an access port
0x00000009	SMLT [value] Link is DOWN
0x0000000a	SMLT [value] Link is UP
0x0000000b	Unknown message type [value]
0x0000000c	unrecognized record type [value] from alsRead
0x0000000e	[value]: taskSpawn() failed
0x00000012	smltIstSessionUp
0x00000013	smltIstSessionDown
0x00000016	cannot allocate filter index object
0x00000017	cannot allocate filter link list object
0x00000018	indexAdd() - failed adding
0x00000019	Link Down([value]/[value])
0x0000001e	Link Up([value]/[value])
0x0000001f	Password modified for user access level RO
0x00000020	Password modified for user access level RW
0x00000021	Password modified for user access level RWA
0x00000022	Password modified for user access level RWL1
0x00000023	Password modified for user access level RWL2
0x00000024	Password modified for user access level RWL3
0x00000025	Port [value] is a brouter port
0x00000026	Port [value] is a trunk port
0x00000027	Port [value] is a trunk port of mlt-[value]
0x00000028	[value]:ltrAlloc FAILED
0x00000029	[value]: LtrSendSync Failed: Status=[value]
0x0000002b	ASSERT function [value] line [value]
