Details

The I-SID is already used by a regular untagged S-UNI on the port (for a Static S-UNI or as Guest I-SID).

Remedial action

Change either the I-SID used by the Static S-UNI/Guest I-SID or the I-SID provided within the Fabric-Attach-ISID RADIUS binding.

This message is displayed when sending vlan add msg for a particular ACL filter to a vlan fails. The reason behind this is 1. The VLAN id might be invalid or non-existing 2.The port may be invalid 3.Memory allocation failure

Remedial action

See that the vlan ID is valid and existent and the port is also within the limits and if the problem is due to memory then better contact customer care.

prFilterMltPortUp: prFilterActivatePort Failed: AclId [value], Port [value]

Alarm groups ... Alarm IDs

Alarm ID

0x00104710

Alarm group

0x041 (MOD_FILTER)

Details

When a port becomes active member of an ACL, then the slot which this port belongs to must receive update with filtering enabled. But when this fails we see this message. The reason is that 1.NULL acl pointer 2. Invalid port number 3. Unsupported ACL type

Remedial action

See that the pointers points top a valid ACL filter and the port number is valid and the type is also valid.

Extreme Networks

Extreme Networks Fabric Engine

Adding IPv6 and non-IPv6 ACLs on the same [value] can result in unintentional dropping of IPv6 packets, if the non-IPv6 ACL is configured with "default-action deny".

Alarm groups ... Alarm IDs

Alarm ID

0x001049d9

Alarm group

0x041 (MOD_FILTER)

Details

Filters with DENY action have higher priority than PERMIT filters, and an IPv6 filter will always hit the default-action rule of a non-IPv6 filter configured on the same Port or Vlan.

Remedial action

Add additional ACE(s) to the non-IPv6 ACL, to prevent IPv6 packets from hitting the "default-action deny" rule.

ipv6RedistributeSyncNotify : malloc failed!

Alarm groups ... Alarm IDs

Alarm ID

0x00108742

Alarm group

0x042 (MOD_RCIP6)

Details

This message is displayed when the master CPU fails to allocate memory for IPv6 redistribution table synchronization. Hot-standby data will be out of sync with master CPU.

Remedial action

Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), switch configuration, and network topology.

vrrpV3TblAssociatedAddressSyncCallback: Unable to find the VRRP Record for Ifindex [value] and Vrld [value] AddrType [value]

Alarm groups ... Alarm IDs

Alarm ID

0x001087f2

Alarm group

0x042 (MOD_VRRPV3)

Details

This message appears when the event sync for VRRP fails. VRRP data will be out of sync with master CPU.

Remedial action

Check memory stats and try to reboot the secondary CPU. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), switch configuration, and network topology.
