prFilterSyncHandler: corrupt message

Alarm groups ... Alarm IDs

Alarm ID

0x00174590

Alarm group

0x05d (MOD_IPFIX)

Details

This message is generated on the hot-standby when the framework msg received on the slave does not have PRFILTER_MODULE_VERSION as its module version during table/event synchronization of filter parameters. Hot-standby filter data will be out of sync with the master CPU.

Remedial action

Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

rcMapRsvpFec: findOrCreateIpv4Ftnrecord returned NULL

Alarm groups ... Alarm IDs

Alarm ID

0x001945d5

Alarm group

0x065 (MOD_RCMPLS)

Details

This message is displayed if Creating a FTN record for the FEC fails. Invalid Fec type, LDP FEC exists, Mapped LDP FEC exist, memory allocation for the ftn record fails.

Remedial action

User should ensure that a valid Fec type is passed, LDP FEC and Mapped LDP FEC do not already exist. Check Memory status in CPU contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Extreme Networks

Extreme Networks Fabric Engine

Updating default vlan for port [value] failed

Alarm groups ... Alarm IDs

Alarm ID

0x001a05b1

Alarm group

0x068 (MOD_SSA)

Details

Could not update default vlan information. This could happen if the passed port number is invalid or if the port is not configurable

Remedial action

Pass a valid port number and disable tagging on the port so it gets moved to default vlan

Remedial action

Check system performance by using the command "show khi performance memory" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

Alarm ID

0x001dc5e7

Alarm group

0x077 (MOD_ISIS)

Details

Unable to allocate memory.

Remedial action

Check system performance by using the command "show khi performance memory" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

cfmCreateIpPingResList: Failed to alloc t_CfmIpPingResList

Alarm groups ... Alarm IDs

Alarm ID

0x001e05c9

Alarm group

0x078 (MOD_CFM)

Details

System does not have enough memory to allocate the requested data structure.

Remedial action

Check system performance by using the command "show sys per" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

cmn_cfmCreateMcastTrResList: Failed to alloc t_CfmMcastTrResList

Alarm groups ... Alarm IDs

Alarm ID

0x001e05f6

Alarm group

0x078 (MOD_CFM)

Details

System does not have enough memory to allocate the requested data structure.

Remedial action

Check system performance by using the command "show sys per" to see how much memory (DramFree) is available. If DramFree is zero, system has run out of memory. Contact customer service and have the following information available for further analysis: system logs (including any memory dumps), memory usage, switch configuration, and network topology.

Extreme Networks Fabric Engine

IPv4 address Conflict (DVR interface on this Controller and learned Host Route from [value]) detected: L2ISID [value] IPv4 " PRINT_IP_FORMAT " DVR Domain [value], Check for Loop or possible duplicate IP

Alarm groups ... Alarm IDs

Alarm ID

0x00394610

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected a misconfiguration/conflict in the network between a DVR VLAN IP address on this Controller and a learned Host Route in the DVR Domain. Possibly check for a loop in the network.

Remedial action

The same IPv4 address is assigned to a Controller DVR interface VLAN IP and is learned as a Host in the DVR domain. Only one IPv4 address can exist. Need to determine which is the right owner of the IPv4 address and correct the problem on the other one. It also could be caused by a packet looping. Check for loop.

0x00394622

Alarm group

0x0e5 (MOD_DVR)

Details

DVR detected a misconfiguration in the network for a SUBNET MASK from the specified Controller for a learned DVR GW IP in the specified L2VSN/L3VSN.

Remedial action

Check L2VSN configs of all DVR Controllers to correct the problem. All L2VSNs enabled with DVR should have the same DVR GW IP, subnet and mask configured for the particular L2VSN/L2ISID.

Extreme Networks

Extreme Networks Fabric Engine

Detected a looping ARP (switching from DVR Host to local ARP and MACs differ) (IP [value].[value].[value].[value] L3ISID [value] L2ISID [value] NH [value] CMAC [value]), ARP MAC [value], port [value] SMLT [value], Check for Loop

Alarm groups ... Alarm IDs

Alarm ID

0x00394623

Alarm group

0x0e5 (MOD_DVR)

Details

DVR is continuously updating a TLV from an ARP that is continuously being received. The MACs differ for this host.

Remedial action

Check for loop misconfigurations with MLTs.

Extreme Networks

Extreme Networks Fabric Engine

DHCP Server HA service terminated. Restart server.

Alarm groups ... Alarm IDs

Alarm ID

0x00424605

Alarm group

0x109 (MOD_DHCP_SERVER)

Details

Likely clock skew greater than 60 seconds between HA peers. Check dhcp server logs to pinpoint the root cause.

Remedial action

Check dhcp server logs to pinpoint the root cause. If clock skew, syncronise the clocks between the HA peers manually or using NTP.

Extreme Networks Fabric Engine

Failed to redistribute Anycast GW I-SID [value]: maximum number of redistributed Anycast GW MAC addresses ([value]) reached for the multi-area virtual node.

Alarm groups ... Alarm IDs

Alarm ID

0x004e4603

Alarm group

0x139 (MOD_ANYCAST)

Details

Too many Anycast GW VRIDs have been configured in an SPB area and the maximum number of GW MAC addresses is already redistributed by the multi-area virtual node.

Remedial action

Reduce the number of Anycast GW MACs configured to be redistributed by the multi-area virtual node.

Fabric Engine v9.2 Alarm Reference Guide: Alarm Codes, Descriptions, and System Event Diagnostics

Abstract

This reference guide for Extreme Networks Fabric Engine version 9.2 catalogs system alarms and diagnostic messages by unique hexadecimal ID, supporting network administrators in identifying and resolving operational issues. It addresses memory allocation failures, port state transitions, task execution errors, license validation and expiration events, and synchronization breakdowns across system modules. Alarms span critical areas such as ARP spoofing detection, loop prevention, and OSPF state transitions, with each entry providing an ID, description, and dynamic placeholders for runtime values. Designed for technically proficient users, the guide enables precise fault isolation and system health monitoring across hardware and software layers.
