SPBM ISIS detected duplicate system-id [value] on interface [value]

Alarm groups ... Alarm IDs

Alarm ID

0x00004718

Alarm group

0x001 (MOD_SNMP)

Details

An SPBM ISIS trap that signifies that the system-id is also used by a neighboring system. This is an illegal configuration.

Remedial action

Check the system-id using "show isis system-id" on both local and neighboring systems. If two systems are configured with the same system-id please change it. The system-id must be unique.

VSP Operating System Software

Duplicate Nickname [value] detected with our old LSP with system-id [value], ISIS will be set back to FAN init mode. Current system-Id [value], current hostname [value]. Wait for our old LSPs to time out before re-assign ISIS nickname.

Alarm ID

0x0000477d

Alarm group

0x001 (MOD_SNMP)

Details

The SPB node detected an old incarnation of its LSP with a different system-id, but the same nickname. This could have occured if the system-id and nickname were changed, followed by just the nickname change to the original value before the old LSP timed out.

Remedial action

Wait for the old LSP to age out. Monitor the column LIFETIME in the output of show isis lsdb with the old system-id.

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

Duplicate Nickname [value] detected with our Node HostName: [value] Chassis MAC:[value] and HostName:[value] Chassis MAC: [value]. Lost election, ISIS will be set back to FAN init mode.

Alarm groups ... Alarm IDs

Alarm ID

0x0000477f

Alarm group

0x001 (MOD_SNMP)

Details

A remote SPB Node has been configured the same nickname as the local SPB node. This is an illegal configuration. The nickname should be unique. ISIS will be set back to FAN init mode on the local node.

Remedial action

Change the nickname locally or on the remote node.

VSP Operating System Software

ospfsync_sanity_check_event: send failed

Alarm groups ... Alarm IDs

Alarm ID

0x000187df

Alarm group

0x006 (MOD_OSPF)

Details

Framework sync message sent to HA-CPU failed.

Remedial action

Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR	

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

ospfsync_sanity_check_callback: size mismatch. ha-cpu's area_lsa_cksum_sync_entry size = [value] received size = [value]

Alarm groups ... Alarm IDs

Alarm ID

0x000187e0

Alarm group

0x006 (MOD_OSPF)

Details

Data structure size mismatch between the master and secondary CPUs.

Remedial action

Contact customer service and have the following information available: runtime software versions on both CPUs.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR	

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

HA-CPU route table sanity check: route table size (best route count) mismatch. master value = [value] ha-cpu value = [value]

Alarm groups ... Alarm IDs

Alarm ID

0x000187e1

Alarm group

0x006 (MOD_OSPF)

Details

Best route count between the CPUs do not match

Remedial action

Compare routing tables between the CPUs. reboot HA-CPU to Force a fresh table sync. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_WARNING
