Details

This message is generated when the master CPU fails to allocate memory for mac entry table. Hot-standby data will be out of sync with the slave CPU.

Remedial action

Check memory stats for the CPU and report the problem to customer service.

Adding I-SID to a VLAN on an IST switch requires configuring this ISID-VLAN pair on both IST peers and the IST MLT([value]) must be a member of the VLAN([value]).

Alarm groups ... Alarm IDs

Alarm ID

0x0002c6c1

Alarm group

0x00b (MOD_VLAN_MGR)

Details

If all the VLANs with I-SIDs are not created on BOTH IST switches, it might result in potential data loss on the L2VSNs.

Remedial action

Please add all VLANs with I-SIDs on both IST switches and also add the IST MLT to all these VLANs.

IpDoSpecial: ipNetToMediaPhysAddress cannot modify mac address of an existing entry

Alarm groups ... Alarm IDs

Alarm ID

0x000385aa

Alarm group

0x00e (MOD_P2IP)

Details

This message is generated when the mac address of an existing p2ip entry cannot be modified.

Remedial action

Modification of mac address for an existing p2ip is not possible.

PORT Flapping detected on Host ARP [value].[value].[value].[value] MAC [value] Port [value] do not propagate change to DVR

Alarm groups ... Alarm IDs

Alarm ID

0x00038602

Alarm group

0x00e (MOD_P2IP)

Details

This message indicates that the Host ARP MAC is flapping and we are not sending the change to DVR in order to protect the application.

Remedial action

Check the network for this IP/MAC combination.

PORT Flapping detected on Host ARP [value].[value].[value].[value] MAC [value] Port [value]. DVR not updated

Alarm groups ... Alarm IDs

Alarm ID

0x00038603

Alarm group

0x00e (MOD_P2IP)

Details

This message indicates that the Host ARP PORT is flapping, DVR was not updated. Customer needs to find the offending device to see why the ARP is learned on two different Ports (Port flapping) and after that is fixed, do clear dvr host-entries ip <host-ip> for that particular host from one DVR Controller in the DVR Domain.

Remedial action

Check the network for this IP/MAC combination, clear dvr host-entries ip <host-ip>.

rcIpRsmltSetPeerRecord: Peer RSMLT IP [value].[value].[value].[value] is not in Local RSMLT IP subnet [value].[value].[value].[value] on Vlan [value]

Alarm groups ... Alarm IDs

Alarm ID

0x0003c801

Alarm group

0x00f (MOD_RCIP)

Details

This message is generated during a set operation when the peer RSMLT IP is not in the local RSMLT IP circuit.

Remedial action

Check the IP addresses on both sides for the given VLAN; if they are on the same subnet, contact customer service and have the following information available system logs including any memory dumps, switch configuration, and network topology for further analysis.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

All VLANs with I-SIDs MUST be configured on both IST peers and IST MLT MUST be a member of all these VLANs.

Alarm groups ... Alarm IDs

Alarm ID

0x00064717

Alarm group

0x019 (MOD_MLT)

Details

If all the VLANs with I-SIDs are not created on BOTH IST switches, it might result in potential data loss on the L2VSNs.

Remedial action

Please add all VLANs with I-SIDs on both IST switches and also add the IST MLT to all the VLANs.
