VSP Operating System Software

rad_sendRequest: unknown code [value] in radius send pkt

Alarm groups ... Alarm IDs

Alarm ID

0x000a45ad

Alarm group

0x029 (MOD_RADIUS)

Details

This message appears when radius server does not understand the type of request in the send packet

Remedial action

Check the Radius server compatibility with the switch and contact customer service with switch and radius server configuration details

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR	

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

rad_sendRequest: unable to send a UDP packet. error [value], [value]

Alarm groups ... Alarm IDs

Alarm ID

0x000a45ae

Alarm group

0x029 (MOD_RADIUS)

Details

Unable to send a UDP request from switch to the server due to socket fail

Remedial action

Contact customer service

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

Radius server [value] can be reached through MgmtRouter & GlobalRouter. please enable the Source Ip flag and configure the Source IP.

Alarm groups ... Alarm IDs

Alarm ID

0x000a45f2

Alarm group

0x029 (MOD_RADIUS)

Details

Radius server host entry does not have Source IP specfied or correct Source IP. Because both MgmtRouter and GlobalRouter have reachability to the Radius server, the device does not know which outgoing VRF should be used. In this case, Mgmt VRF will be used by default.

Remedial action

Configure the correct source IP on the Radius Server host entry. For Out-of-band management, use Virtual or Mgmt IP. For In-band management, use Circuitless IP (Loopback IP).

ripCircuitSyncCallback: invalid RIP circuit - cid [value]

Alarm groups ... Alarm IDs

Alarm ID

0x000bc597

Alarm group

0x02f (MOD_RIP)

Details

This message is displayed when the Rip circuit cid is invalid while syncing the Rip circuit parameters. Hot-standby data will be out of sync with the master CPU.

Remedial action

Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR	

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

ripSyncUpdateInterface: event sync failed for rip interface

Alarm groups ... Alarm IDs

Alarm ID

0x000bc598

Alarm group

0x02f (MOD_RIP)

Details

This message is generated on the Master when the RIP entity is unable to notify the hot-standby about the RIP update Interface. Hot-standby data will be out of sync with the master CPU.

Remedial action

Contact customer service and have the following information available : system logs including any memory dumps, switch configuration, and network topology for further analysis

Attributes

Name	Value	Description
AlarmType	ALARM_NONE

VSP Operating System Software

ripRouteSyncCallback: corrupt message

Alarm groups ... Alarm IDs

Alarm ID

0x000bc599

Alarm group

0x02f (MOD_RIP)

Details

This message is generated on the hot-standby when the RIP entity receives a corrupt HA framework message during table synchronization of RIP route parameters. Hot-standby data will be out of sync with the master CPU.

Remedial action

Contact customer service and have the following information available : system logs including any memory dumps, switch configuration, and network topology for further analysis

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR	

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

VSP Operating System Software

ripRouteSyncCallback: RipAddRoute() failed

Alarm groups ... Alarm IDs

Alarm ID

0x000bc59a

Alarm group

0x02f (MOD_RIP)

Details

This message is displayed if adding a RIP route entry to table in the hot standby fails. Rip is up on this local interface or route owner is not RIP or allocating timer param object fails.

Remedial action

Contact customer service and have the following information available : system logs including any memory dumps, switch configuration, and network topology for further analysis

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR	

9036566-00 VSP Operating System Software - Alarms and References for VOSS Copyright © Extreme Networks, Inc. 2017-2020. All Rights Reserved

ripGarbageListSyncCallback: malloc() failed

Alarm groups ... Alarm IDs

Alarm ID

0x000bc59b

Alarm group

0x02f (MOD_RIP)

Details

This message is generated on the hot-standby when memory allocation for the RIP entity fails while syncing garbage list parameters.Hot-standby data will be out of sync with the master CPU.

Remedial action

Check memory stats on Hot Standby. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Attributes

Name	Value	Description
AlarmType	ALARM_NONE	
Severity	S_ERROR

0x041 (MOD_FILTER)

Details

This message is displayed if sending a "add" vlan/port to acl message to the COP on all the slots or to the specific slot fails, this happens if invalid AclId or VlanId or PortNum is passed, memory allocation for the buffer fails

Remedial action

Ensure that valid AclId VlanId and PortNum are passed. Check memory stats on master CPU. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.
