VSP Operating System Software

rcMltTblSet: When a Vlan is added or removed to/from a Dynamic MLT, only the currently active ports will be added (removed) to the vlan port member list.If there are other ports configured for this MLT aggregation, but if they are inactive, they are not added (removed) to the vlan port list. User must add/remove the inactive ports to/from the Vlan. Failure to do so, may result in traffic loss, when these ports become active later.

Alarm groups ... Alarm IDs

Alarm ID

0x00064716

Alarm group

0x019 (MOD_MLT)

Details

If all the potentail ports are not added to the Vlan now, it will not be added later when they become active resulting in potentail data loss.

Remedial action

Please add all ports that are configured for this MLT aggregation, but not active yet to this vlan as port member.

addRestrictEntry: Can't allocate Restrict Entry!

Alarm groups ... Alarm IDs

Alarm ID

0x000c85aa

Alarm group

0x032 (MOD_NTP)

Details

This message is displayed if the system has failed to allocate memory. As a result some activity may not have come to completion or may have been abruptly terminated.

Remedial action

Check the memory stats of CPU. Contact customer service and have the following information available: system logs including any memory dumps, switch configuration, and network topology for further analysis.

Extreme Networks

VSP Operating System Software

Adding IPv6 and non-IPv6 ACLs on the same [value] can result in unintentional dropping of IPv6 packets, if the non-IPv6 ACL is configured with "default-action deny".

Alarm ID

0x001049d9

Alarm group

0x041 (MOD_FILTER)

Details

Filters with DENY action have higher priority than PERMIT filters, and an IPv6 filter will always hit the default-action rule of a non-IPv6 filter configured on the same Port or Vlan.

Remedial action

Add additional ACE(s) to the non-IPv6 ACL, to prevent IPv6 packets from hitting the "default-action deny" rule.
