AirDefense Services Platform (ADSP) provides a Command Line Interface (CLI) for users to execute a limited set of commands while logged into an ADSP appliance.

1 Categories

The CLI includes the following categories:

- **Device Management**
 - Device discovery (**discover**)
 - Device and profile imports (**import**)
 - Device configuration (**reconfigure**)
 - Device polling (**dataCollection**)
 - Device relocation (**moveDevices**)
- **Firmware Upgrade / Downgrade**
 - Load firmware to ADSP (**updateFirmware**)
 - Push Firmware to Device (**installFirmware**)
- **Troubleshooting**
 - Frame Capture (**frameCapture**)
 - AP Test (**apTest**)
 - Wireless Vulnerability Assessment (**wvaTest**)
- **WIPS Functionality**
 - Termination (**terminate**)
 - ACL (**acl**)
 - Port Lookup (**portLookup**)
 - Port Suppression (**portSup**)

2 Commands

Each category includes a set of commands that are described below.

2.1 Device Management

2.1.1 *discover Command*

Usage

```
discover -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...
```

Use the -debug switch to turn on debug messages.

Parameters

<i>name</i>	Name of the job. If none is specified, it will be auto-generated. For better status monitoring results, name should be an unique string.
<i>networks</i>	Comma-separated list of networks to discover. (default: 10.0.0.1) Example: 192.168.0.1,192.168.1.0/24
<i>port</i>	SNMP port to use (default: 161)
<i>retries</i>	Number of SNMP retries (default: 3)
<i>timeout</i>	Initial SNMP timeout value (default: 200)
<i>version</i>	SNMP version: v1, v2c or v3 (default: v2c)
<i>readCommunity</i>	Community string to use for SNMP (default: public)
<i>user</i>	SNMP v3 user parameter (default: admin)
<i>authType</i>	SNMP v3 parameter: none, md5 or sha (default: md5)
<i>authPassphrase</i>	SNMP v3 authentication passphrase (default: 12345678)
<i>privType</i>	SNMP v3 parameter: none, des, 3des, aes128, aes192 or aes256 (default: des)
<i>privPassphrase</i>	SNMP v3 privacy passphrase (default: 12345678)

<i>folderId</i>	Folder ID for the floor where the discovered devices will be added. By default, auto-placement rules are utilized.
<i>folderPath</i>	Folder path for the floor where the discovered devices will be added. Example: '/ADSP/Unplaced Devices'. By default, auto-placement rules are utilized.
<i>maxStatusPollTime</i>	Maximum number of seconds to wait for the job to complete (default: 60)
<i>statusPollInterval</i>	Wait time between job status polls (default: 1000)

2.1.2 import Command

Usage

import -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>filename</i>	Name of the firmware file to be installed.
<i>user</i>	A valid ADSP user. (default: admin)
<i>folderId</i>	Folder in which to place imported devices. If this switch is not supplied, auto-placement rules are used instead.
<i>replace</i>	Imported auto-placement rules will replace existing rules, not add to them. (default: false)

2.1.3 reconfigure Command

Usage

reconfigure -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>jobDescription</i>	Name of the job. If none is specified, it will be auto-generated. For better status monitoring results, name should be an unique string.
<i>deviceType</i>	Either AP or Switch (default: AP)

<i>deviceMac</i>	MAC of device to reconfigure
<i>deviceIp</i>	IP Address of device to reconfigure
<i>user</i>	A valid ADSP user. (default: admin)
<i>maxStatusPollTime</i>	Maximum number of seconds to wait for the job to complete (default: 60)
<i>statusPollInterval</i>	Wait time between job status polls (default: 1000)

2.1.4 ***dataCollection Command***

Usage

dataCollection -paramName1 *paramValue1* -paramName2 *paramValue2* -paramName3 *paramValue3* ...

Use the -debug switch to turn on debug messages.

Parameters

<i>macs</i>	MACs to search. If not specified, will poll all MACs for within the search scope.
<i>folderId</i>	Folder id for the poll scope. By default, the system scope is used.
<i>folderPath</i>	Folder path for the poll scope. By default, the system scope is used.
<i>autoUpdateConfig</i>	Auto update non-compliant devices: true or false (default: false)
<i>type</i>	Type of poll to perform: status or dataCollection. (default: dataCollection)

2.1.5 ***moveDevices Command***

Usage

moveDevices -paramName1 *paramValue1* -paramName2 *paramValue2* -paramName3 *paramValue3* ...

Use the -debug switch to turn on debug messages.

Parameters

<i>macs</i>	Comma separated list of MAC addresses of device(s) to move.
<i>folderId</i>	Destination folder ID.
<i>FolderPath</i>	Destination folder path.
<i>reconfigure</i>	Reconfigure now; do not defer. (default: true)

<i>block</i>	Block while reconfiguring. (default: true)
<i>jobDescription</i>	Name of the job. If none is specified, it will be auto-generated. For better status monitoring results, name should be an unique string.
<i>maxStatusPollTime</i>	Maximum number of seconds to wait for the job to complete. (default: 60)
<i>statusPollInterval</i>	Wait time between job status polls. (default: 1000)

2.2 Firmware Upgrade/Downgrade

2.2.1 *updateFirmware* Command

Usage

updateFirmware -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>type</i>	Operation to perform: add or remove (default: add)
<i>filename</i>	Name of the firmware file to be installed.
<i>path</i>	The path to the file on the appliance. (add only) (default: /usr/local/smxi/tmp/)
<i>version</i>	Firmware file version (add only)
<i>deviceType</i>	CLUSTER, WIRELESS_SWITCH, L2BRIDGE, SENSOR, MU, AP, GENERIC_MIB2_DEVICE, AP_OR_SWITCH, WIRELESS_MANAGER (add only) (default: AP)
<i>vendor</i>	Device manufacturerer (add only) (default: Motorola)
<i>deviceName</i>	Name of the device type (add only) (default: AP5131)

2.2.2 *installFirmware Command*

Usage

installFirmware -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>name</i>	Name of the job. If none is specified, it will be auto-generated. For better status monitoring results, name should be an unique string.
<i>deviceMacs</i>	List of device MAC addresses to upgrade. Example: 00:11:22:33:44:55,55:44:33:22:11:00
<i>folderId</i>	Folder ID for the floor where devices will be updated.
<i>folderPath</i>	Folder path for the floor where the devices will be upgraded. Example: '/ADSP/Unplaced Devices'
<i>downgradeAllowed</i>	Should downgrades be performed: true or false (default: false)
<i>cancelJobOnFailure</i>	Should the entire job fail if a firware update fails: true or false (default: false)
<i>bandwidthLimit</i>	Bandwidth on data transfer. -1 for unlimited. (default: -1)
<i>concurrentUpgrades</i>	Number of concurrent upgrades to perform. -1 for unlimited. (default: -1)
<i>maxStatusPollTime</i>	Maximum number of seconds to wait for the job to complete (default: 60)
<i>statusPollInterval</i>	Wait time between job status polls (default: 1000)
<i>firmwareNames</i>	Comma delimited list of firmware names.

2.3 Troubleshooting Functionality

2.3.1 *frameCapture Command*

Usage

frameCapture -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>interactions</i>	Whether to check for feature interactions: true or false. (default: true)
<i>username</i>	The user to associate the frame capture with. (defaults to unix user)
<i>deviceMAC</i>	The MAC Address of the device being captured.
<i>sensor</i>	Is the device being captured a sensor: true or false. (default: false)
<i>filename</i>	Output filename.
<i>secondsToRun</i>	Number of seconds to capture. Unlimited if not specified. (default: 0)
<i>framesToCapture</i>	Number of frames to capture. 10,000 if not specified. (default: 10000)
<i>truncMgt</i>	Bytes of management frames to capture. (default: -1)
<i>truncCtl</i>	Bytes of control frames to capture. (default: -1)
<i>truncDat</i>	Bytes of data frames to capture. (default: -1)

2.3.2 *apTest Command*

Usage

apTest -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>profileName</i>	Saved profile to use for this test. (ignores other params)
<i>ssid</i>	SSID
<i>authentication</i>	Authentication: OPEN, SHARED_KEY, NETWORK_EAP (default: OPEN)

<i>uEncryption</i>	Unicast Encryption: NONE, WEP, TKIP, AES_CCMP (default: NONE)
<i>mEncryption</i>	Multicast Encryption: NONE, WEP, TKIP, AES_CCMP (default: NONE)
<i>keyGen</i>	Key Generation: None, WPA_PSK, WPA_EAP, X8021 (default: NONE)
<i>eap</i>	EAP Method: LEAP, PEAP_GTC, EAP_FAST_AUTO, EAP_FAST_MANUAL
<i>wpa</i>	WPA Type: WPA, WPA2
<i>stationMAC</i>	MAC address of station (default: 00:11:22:33:44:55)
<i>ipAddress</i>	If the IP address is specified, then we assume dhcp is disabled.
<i>subnetMask</i>	Subnet Mask (ipAddress must be specified)
<i>defaultGateway</i>	Default Gateway (ipAddress must be specified)
<i>primaryDNS</i>	Primary DNS
<i>secondaryDNS</i>	Secondary DNS (primaryDNS must be specified)
<i>domainName</i>	Domain Name (primaryDNS must be specified)
<i>asciiKey</i>	Is ASCII WEP key: true false (default: false)
<i>wepSize</i>	Size of WEP Key: WEP64, WEP128 (default: WEP64)
<i>eapUser</i>	EAP user name
<i>eapPass</i>	EAP password
<i>pskKey</i>	PSK Key
<i>wepIndex</i>	WEP Index (default: 1)
<i>wepKey</i>	WEP Key
<i>user</i>	User to run this test (this can affect scope)
<i>testMAC</i>	MAC address of the BSS to test. If not specified, will return all MACs for all sanctioned BSSs within the scope.
<i>sensorMAC</i>	MAC address of the Sensor scope to. If not specified, will return all MACs for all sanctioned BSSs within the scope. If testMAC is specified, then test the BSS with this sensor
<i>folderId</i>	Folder ID for the test scope. By default, the system scope is used.

<i>folderPath</i>	Folder path for the test scope. By default, the system scope is used.
<i>retryCount</i>	Retry count per test. (default: 2)
<i>signalThreshold</i>	RSSI value below which we will not test BSSs (default: -70)
<i>lastSeen</i>	How recent (in minutes) was the BSS seen (in order to be tested). (default: 120)
<i>waitMinutes</i>	How long (in minutes) to wait for a sensor to become free. (default: 2)
<i>switchSensors</i>	Switch sensors on test retry: true or false (default: true)
<i>skipTest</i>	Skip BSS when sensor is busy: true or false (default: false)
<i>ssidFilter</i>	Filter BSSs within scope by SSID: true or false (default: true)
<i>forceStart</i>	Force start of test even if sensor is busy: true or false (default: false)
<i>parallel</i>	Tests to run in parallel (default: 1)
<i>forceUnknown</i>	Force test of a BSS that is not seen by any sensor: true or false. You must also specify sensorMAC. (default: false)
<i>traceroutes</i>	Traceroutes: www.google.com,192.168.1.1
<i>pings</i>	Ping Hosts: www.google.com:PINGABLE,192.168.1.1:NOTPINGABLE
<i>scans</i>	Scan Ports: www.google.com:80:Open,192.168.1.1:443:Closed
<i>lookups</i>	DNS Lookups: <hostname>:<ResolveToAddress>,www.google.com,50.4.128.3
<i>pcap</i>	File to store pcap to.

2.3.3 **wvaTest Command**

Usage

wvaTest -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>profileName</i>	Saved profile to use for this test (ignores other params)
<i>ssid</i>	SSID

<i>authentication</i>	Authentication: OPEN, SHARED_KEY, NETWORK_EAP (default: OPEN)
<i>uEncryption</i>	Unicast Encryption: NONE, WEP, TKIP, AES_CCMP (default: NONE)
<i>mEncryption</i>	Multicast Encryption: NONE, WEP, TKIP, AES_CCMP (default: NONE)
<i>keyGen</i>	Key Generation: None, WPA_PSK, WPA_EAP, X8021 (default: NONE)
<i>eap</i>	EAP Method: LEAP, PEAP_GTC, EAP_FAST_AUTO, EAP_FAST_MANUAL
<i>wpa</i>	WPA Type: WPA, WPA2
<i>stationMAC</i>	MAC address of station (default: 00:11:22:33:44:55)
<i>ipAddress</i>	If the IP address is specified then we assume dhcp is disabled.
<i>subnetMask</i>	Subnet Mask (ipAddress must be specified)
<i>defaultGateway</i>	Default Gateway (ipAddress must be specified)
<i>primaryDNS</i>	Primary DNS
<i>secondaryDNS</i>	Secondary DNS (primaryDNS must be specified)
<i>domainName</i>	Domain Name (primaryDNS must be specified)
<i>asciiKey</i>	Is ASCII WEP key: true false (default: false)
<i>wepSize</i>	Size of WEP Key: WEP64, WEP128 (default: WEP64)
<i>eapUser</i>	EAP user name
<i>eapPass</i>	EAP password
<i>pskKey</i>	PSK Key
<i>wepIndex</i>	WEP Index (default: 1)
<i>wepKey</i>	WEP Key
<i>user</i>	User to run this test (this can affect scope)
<i>testMAC</i>	MAC address of the BSS to test. If not specified, will return all MACs for all sanctioned BSSs within the scope.
<i>sensorMAC</i>	MAC address of the Sensor scope to. If not specified, will return all MACs for all sanctioned BSSs within the scope. If testMAC is specified, then test the BSS with this sensor.

<i>folderId</i>	Folder ID for the test scope. By default, the system scope is used.
<i>folderPath</i>	Folder path for the test scope. By default, the system scope is used.
<i>retryCount</i>	Retry count per test. (default: 2)
<i>signalThreshold</i>	RSSI value below which we will not test BSSs (default: -70)
<i>lastSeen</i>	How recent (in minutes) was the BSS seen (in order to be tested). (default: 120)
<i>waitMinutes</i>	How long (in minutes) to wait for a sensor to become free. (default: 2)
<i>switchSensors</i>	Switch sensors on test retry: true or false (default: true)
<i>skipTest</i>	Skip BSS when sensor is busy: true or false (default: false)
<i>ssidFilter</i>	Filter BSSs within scope by SSID (default: true)
<i>forceStart</i>	Force start of test even if sensor is busy. (default: false)
<i>parallel</i>	Tests to run in parallel (default: 1)
<i>forceUnknown</i>	Force test of a BSS that is not seen by any sensor. Must specify sensorMAC. (default: false)
<i>type</i>	Type of WVA scan: black or white (default: black)
<i>zoneTransfer</i>	Discover hosts via zone transfer (default: false)
<i>tracerouteDNS</i>	Perform traceroute to DNS (default: false)
<i>tracerouteWINS</i>	Perform traceroute to WINS (default: false)
<i>tracerouteHost</i>	Perform traceroute to supplied host
<i>scanUnpingable</i>	Port scan unpingable hosts. (default: false)
<i>reverseLookup</i>	Perform reverse lookup on address. (default: false)
<i>internetHost</i>	Address to check for internet access.
<i>internetPort</i>	Port of internetHost to check for internet access. (default: 80)
<i>scanTimeout</i>	Number of minutes before we time out the test. (default: 1440)
<i>additionalPorts</i>	Additional ports to scan: 80,443,8543,etc

<i>hostEntry1</i>	Host entry: <network>,<ports>,<ping>,<source>.
<i>hostEntry2</i>	Host entry: 192.168.1.1,80:443,ALLOWED NOTALLOWED DONT_CARE,192.168.1.1
<i>hostEntry3</i>	Additional hostEntries can be added in contiguous increments

2.4 WIPS Functionality

2.4.1 *terminate Command*

Usage

terminate -paramName1 *paramValue1* -paramName2 *paramValue2* -paramName3 *paramValue3* ...

Use the -debug switch to turn on debug messages.

Parameters

<i>deviceType</i>	Either BSS or Station (default: BSS)
<i>deviceMac</i>	The MAC address of the device being terminated
<i>terminationDuration</i>	Number of minutes to terminate. Unlimited if not specified.

2.4.2 *acl Command*

Usage

acl -paramName1 *paramValue1* -paramName2 *paramValue2* -paramName3 *paramValue3* ...

Use the -debug switch to turn on debug messages.

Parameters

<i>mac</i>	MAC address to ACL (default: 00:00:00:00:00:01)
<i>get</i>	Gets ACL entries
<i>add</i>	Adds an ACL entry
<i>remove</i>	Removes an ACL entry for the specified MAC address
<i>refresh</i>	Refreshes ACL entries for the specified MAC address
<i>reapply</i>	Reapplies ACL entries for the specified MAC address

<i>user</i>	Need to specify a valid ADSP user here for scope permission validation. (default: admin)
<i>folderId</i>	Folder ID for the port-lookup scope. By default, the system scope is used.
<i>folderPath</i>	Folder path for the port-lookup scope. By default, the system scope is used.
<i>maxStatusPollTime</i>	Maximum number of seconds to wait for the job to complete (default: 60)
<i>statusPollInterval</i>	Wait time between job status polls (default: 1000)

2.4.3 ***portLookup Command***

Usage

portLookup -paramName1 paramValue1 -paramName2 paramValue2 -paramName3 paramValue3 ...

Use the -debug switch to turn on debug messages.

Parameters

<i>macs</i>	MAC addresses to search. If not specified, will return all MAC addresses for all switches within the search scope.
<i>user</i>	Need to specify a valid ADSP user here for scope permission validation. (default: admin)
<i>switchMac</i>	Specifies the switch MAC address for a single-switch lookup
<i>switchIp</i>	Specifies the switch IP address for a single-switch lookup
<i>folderId</i>	Folder ID for the port-lookup scope. By default, the system scope is used.
<i>folderPath</i>	Folder path for the port-lookup scope. By default, the system scope is used.
<i>maxStatusPollTime</i>	Maximum number of seconds to wait for the job to complete (default: 60)
<i>statusPollInterval</i>	Wait time between job status polls (default: 1000)

2.4.4 portSup Command

Usage

portSup -paramName1 *paramValue1* -paramName2 *paramValue2* -paramName3 *paramValue3* ...

Use the -debug switch to turn on debug messages.

Parameters

<i>switchMac</i>	Specifies the switch MAC address
<i>switchIp</i>	Specifies the switch IP address (alternative to switchMac)
<i>ifIndex</i>	Specifies the index of the interface to enable/disable (default: 0)
<i>ifName</i>	Specifies the name of the interface to enable/disable (used for information purposes only)
<i>ifDescr</i>	Specifies the name of the interface to enable/disable (used for information purposes only)
<i>user</i>	Need to specify a valid ADSP user here for scope permission validation. (default: admin)
<i>enable</i>	If specified, will enable the interface instead of disabling it

3 Support and Sales

Motorola Solutions' Enterprise Mobility Support Center

If you have a problem with your equipment, contact Enterprise Mobility support for your region. Support and issue resolution are provided for products under warranty or that are covered by an Enterprise Mobility Services agreement. Contact information and web self-service are available by visiting <http://supportcentral.motorola.com/>.

When contacting Enterprise Mobility support, please provide the following information:

- Serial number of the unit
- Model number or product name
- Software type and version number

Motorola responds to calls by email, telephone or fax within the time limits set forth in support agreements. If you purchased your Enterprise Mobility business product from a Motorola business partner, contact that business partner for support.

Customer Support Web Site

Motorola's Support Central Web site, located at <http://supportcentral.motorola.com/> provides information and online assistance including developer tools, software downloads, product manuals, support contact information and online repair requests.

MOTOROLA SOLUTIONS, INC
1303 E. ALGONQUIN ROAD
SCHAUMBURG, IL 60196
