# 1 Introduction

An AP-6521 Series Access Point links wireless 802.11a/b/g/n devices to the controller, enabling the growth of your wireless network with a cost-effective alternative to standard Access Points. The AP-6521 Series Access Point is an enterprise class 802.11n Access Point, installed in minutes anywhere a CAT-5e (or better) cable is located.

The Access Points ship with a single dual-band radio supporting the 802.11a/b/g/n radio bands. For more information on available SKUs, refer to the following:

<b>Part Number</b>	<b>Description</b>
AP-6521-60010-US	802.11a/b/g/n single radio, integrated antenna, high power, United States model
AP-6521-60020-US	802.11a/b/g/n single radio, external antenna, high power, United States model
AP-6521-60010-EU	802.11a/b/g/n single radio, integrated antenna, high power, European model
AP-6521-60020-EU	802.11a/b/g/n single radio, external antenna, high power, European model
AP-6521-60010-WR	802.11a/b/g/n single radio, integrated antenna, high power, World Wide model
AP-6521-60020-WR	802.11a/b/g/n single radio, external antenna, high power, World Wide model

The Access Point is approved under MODEL: NCAP-500.

The Access Point should receive power and transfer data through the same CAT-5e (or better) Ethernet cable using a Power Injector. The Power Injector (Part No. AP-PSBIAS-2P2-ÄFR) is an 802.3af PoE injector. For information, see [Power Injector System](#).

A separate power supply (Part No. PWRS-147376-01R) is also available if you do not wish to use a Power Injector. This standard power supply just supplies power to the Access Point's power connector and does not converge power and Ethernet within a single cable connection.

## 1.1 Document Conventions

The following graphical alerts are used in this document to indicate notable situations:

**NOTE** Tips, hints, or special requirements that you should take note of.

---

**CAUTION** Care is required. Disregarding a caution can result in data loss or equipment malfunction.

---

**WARNING!** Indicates a condition or procedure that could result in personal injury or equipment damage.

---

## 1.2 Warnings

- Read all installation instructions and site survey reports, and verify correct equipment installation before connecting the Access Point.
- Remove jewelry and watches before installing this equipment.
- Verify any device connected to this unit is properly wired and grounded.
- Verify there is adequate ventilation around the device, and that ambient temperatures meet equipment operation specifications.

## 1.3 Site Preparation

- Consult your site survey and network analysis reports to determine specific equipment placement, power drops, and so on.
- Assign installation responsibility to the appropriate personnel.
- Identify and document where all installed components are located.
- Ensure adequate, dust-free ventilation to all installed equipment.
- Prepare Ethernet port connections.
- Verify cabling is within the maximum 100 meter allowable length.

## 1.4 Package Contents

The Access Point is available in integrated antenna and external antenna models. Contents differ depending on the Access Point type ordered.

- Access Point
- Installation Guide (*This Guide*)
- Rubber Wall Mount Spacers (4)
- LED light pipe and badge
- Wall mount screw and anchor kit

## 1.5 Features

- One RJ-45 console connector
- LED indicators
- Safety wire tie point
- Wall mount slots
- Clips for suspended T-Bar mounting
- DC power connector

An AP-6521 Series Access Point has one RJ-45 connector supporting an 10/100/1000 Ethernet port connection and requires 802.3af compliant power from an external source.

The Access Point contains runtime firmware which enables the unit to boot after either a power up or a watchdog reset. The runtime firmware on the Access Point can be updated via the Ethernet interface.

## 2 Hardware Installation

### 2.1 Installation Instructions

The Access Point can attach to a wall, mount under a suspended T-Bar or mount above a ceiling. Select a mounting option based on the physical environment of the coverage area. Do not mount the Access Point in a location that has not been approved in a site survey.

To prepare for the installation, perform the following:

1. Verify the contents of the box includes the intended Access Point and accessory hardware.
2. Review site survey and network analysis reports to determine the location and mounting position for the Access Point.
3. Connect a CAT-5 or better Ethernet cable to a PoE compatible device and run the cable to the installation site. Ensure there is sufficient cable slack to perform the installation steps.
4. Determine whether the Access Point is powered using a Power Injector system, combining data and power to the Access Point's GE1/PoE port or will be powered from a conventional power adapter providing power only to the Access Point's DC-48V connector.

### 2.2 Precautions

Before installing the Access Point:

- Verify the intended deployment location is not prone to moisture or dust.
- Verify the environment has a continuous temperature range between 0° C to 40° C.

## 2.3 Access Point Placement

For optimal performance, install the Access Point away from transformers, heavy-duty motors, fluorescent lights, microwave ovens, refrigerators and other industrial equipment. Signal loss can occur when metal, concrete, walls or floors block transmission. Install the Access Point in an open area or add Access Points as needed to improve coverage.

Antenna coverage is analogous to lighting. Users might find an area lit from far away to be not bright enough. An area lit sharply might minimize coverage and create *dark areas*. Uniform antenna placement in an area (like even placement of a light bulb) provides even, efficient coverage.

Place the Access Point using the following guidelines:

- Install the Access Point at an ideal height of 10 feet from the ground.
- Orient the Access Point antennas vertically for best reception.
- Point the Access Point antennas downward if attaching to the ceiling (external antenna models only).

To maximize the Access Point's radio coverage area, conduct a site survey to define and document radio interference obstacles before installing the Access Point.

### 2.3.1 Antenna Options

Two antenna suites are supported for the single radio, dual-band AP-6521 Series Access Point. One antenna suite supporting the 2.4 GHz band, and another antenna suite supporting the 5 GHz band. Select an antenna best suited to the intended operational environment of your Access Point.

The 2.4 GHz antenna suite includes the following models:

<b>Part Number</b>	<b>Antenna Type</b>	<b>Approximate Gain (dBi)</b>
ML-2452-APA2-01	Dipole	3
ML-2452-HPA5-036	Dipole	2.9
ML-2499-HPA3-01R	Dipole	4.6
ML-2499-APA2-01R	Dipole	2
ML-2452-APA2GA1-01	Dipole	2
ML-2452-PNA5-01R	Panel	4.5
ML-2452-PTA3M3-36	Patch	5
ML-2499-SD3-01R	Patch	4.8
Internal Antenna	PIFA	2.4

The 5 GHz antenna suite includes the following models:

<b>Part Number</b>	<b>Antenna Type</b>	<b>Approximate Gain (dBi)</b>
ML-2452-APA2-01	Dipole	5
ML-2452-HPA5-036	Dipole	4.9
ML-5299-APA1-01R	Dipole	2
ML-5299-HPA1-01R	Dipole	5
ML-2452-APA2GA1-01	Dipole	1
ML-2452-PNA5-01R	Panel	5
ML-2452-PTA3M3-36	Patch	3
ML-5299-PTA1-0R	Patch	5
Internal Antenna	PIFA	6

For a more exhaustive overview of the antennas and associated components supported, refer to the *Enterprise Wireless LAN Antenna Specification Guide* available at [www.zebra.com/support](http://www.zebra.com/support).

### 2.3.2 Power Injector System

The Access Point can receive power via an Ethernet cable connected to the GE1/PoE port.

When users purchase a WLAN solution, they often need to place Access Points in obscure locations. In the past, a dedicated power source was required for each Access Point in addition to the Ethernet infrastructure. This often required an electrical contractor to install power drops at each Access Point location. The Power Injector merges power and Ethernet into one cable, reducing the burden of installation and allowing optimal Access Point placement in respect to the intended coverage area.

The Power Injector (Part No. AP-PSBIAS-2P2-AFR) is an 802.3af PoE injector. The Access Point can only use a Power Injector when connecting to the Access Point's GE1/PoE port. The Power Injector is separately ordered and not shipped with the Access Point. A separate Power Injector is required for each Access Point comprising the network.

The Power Injector has no On/Off power switch. The Injector receives power and is ready for device connection and operation as soon as AC power is applied. Refer to the Installation Guide shipped with the Power Injector for a description of the device's LEDs. The Power Injector can be installed free standing, on an even horizontal surface or wall mounted using the Power Injector's wall mounting key holes.

The following guidelines should be adhered to before cabling the Power Injector to an Ethernet source and an Access Point:

- Do not block or cover airflow to the Power Injector.
- Keep the Power Injector away from excessive heat, humidity, vibration and dust.
- The Power Injector isn't a repeater, and does not amplify the Ethernet signal. For optimal performance, ensure the Power Injector is placed as close as possible to the Ethernet switch. This allows the Access Point to be deployed away from power drops.
- Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft).

**CAUTION** To avoid problematic performance and restarts, disable POE from a wired controller port connected to an Access Point if mid-span *power sourcing equipment* (PSE) is used between the two, regardless of the manufacturer.

---

---

**CAUTION** Ensure AC power is supplied to the Power Injector using an AC cable with an appropriate ground connection approved for the country of operation.

---

---

**NOTE** If not using the Power Injector to power the Access Point, the only other approved power solution is the standard power supply (Part Number PWRS-147376-01R). The standard power supply does not converge data and power in one cable, and requires a separate data Ethernet connection in addition to a power connection. This product is intended to be supplied by a listed power adapter marked "Class 2" or "L.P.S" (or "Limited Power Source") and rated from 48Vdc, 0.27A minimum.

---

---

## 2.4 Wall Mount Installation

To support wall mount installations, the Access Point is fastened directly to a flat wall surface. The wall should be of gypsum board, plaster, wood or concrete in composition.

**CAUTION** An Access Point should be wall mounted to concrete or plaster-wall-board (dry wall) only. Do not wall mount the Access Point to combustible surfaces.

---

---

To install the Access Point to a wall surface:

1. Orient the Access Point by either its width or length.
2. Mark the mounting surface at the target screw insertion points.
3. At each point, drill a hole in the wall, insert an anchor, screw into the anchor the wall mounting screw and stop when there is 1mm between the screw head and the wall.
4. If pre-drilling a hole, the recommended hole size is 2.8mm (0.11in.) if the screws are going directly into the wall and 6mm (0.23in.) if wall anchors are being used.
5. If required, install and attach a security cable to the Access Point lock port.
6. Attach the antennas to their correct connectors.

For information on available antennas, see [Antenna Options](#).

7. Place the large center opening of each of the mount slots over the screw heads.
8. Slide the Access Point down along the mounting surface to hang the mount slots on the screw heads.
9. Cable the Access Point using either the Power Injector solution or an approved line cord and power supply.

For Power Injector installations:

- a. Connect an RJ-45 CAT5 Ethernet cable between the network data supply (host) and the Power Injector's **Data In** connector.
- b. Connect an RJ-45 CAT5 Ethernet cable between the Power Injector's **Data & Power Out** connector and the Access Point.
- c. Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft). The Power Injector has no On/Off power switch. The Power Injector receives power as soon as AC power is applied. For more information, see [Power Injector System](#).

For power adapter (Part Number PWRS-147376-01R) and line cord installations:

- a. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the network data supply (host) and the Access Point's GE1/PoE.
- b. Verify the power adapter is correctly rated according the country of operation.
- c. Connect the power supply line cord to the power adapter.
- d. Attach the power adapter cable to the DC-48V power connector on the Access Point.

- e. Attach the power supply line cord to a power supply.
10. Verify the behavior of the Access Point LEDs. For more information, see [LED Indicator](#).
11. The Access Point is ready to configure. For information on basic Access Point device configuration, see [Basic Access Point Configuration](#).

## 2.5 Suspended Ceiling T-Bar Installation

A suspended ceiling mount requires holding the Access Point up against the T-bar of a suspended ceiling grid and twisting the Access Point chassis onto the T-bar.

To install the Access Point on a ceiling T-bar:

1. If desired, install and attach a security cable to the Access Point lock port.
2. If using an external antenna model, attach the antennas to their correct connectors.
3. For more information on the antenna options available to the Access Point, see [Antenna Options](#).
4. Cable the Access Point using either the Power Injector solution or an approved line cord and power supply.

**CAUTION** Do not connect to the power source until the cabling of the Access Point is complete. Ensure PoE is not connected to the Access Point's console connector or risk rendering the console connector permanently inoperable.

---

---

For Power Injector installations:

- a. Connect an RJ-45 CAT5 Ethernet cable between the network data supply (host) and the Power Injector's **Data In** connector.
- b. Connect an RJ-45 CAT5 Ethernet cable between the Power Injector's **Data & Power Out** connector and the Access Point.
- c. Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft). The Power Injector has no On/Off power switch. The Power Injector receives power as soon as AC power is applied. For more information, see [Power Injector System](#).

For power adapter (Part Number PWRS-147376-01R) and line cord installations:

- a. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the network data supply (host) and the Access Point's GE1/PoE.
  - b. Verify the power adapter is correctly rated according the country of operation.
  - c. Connect the power supply line cord to the power adapter.
  - d. Attach the power adapter cable to the DC-48V power connector on the Access Point.
  - e. Attach the power supply line cord to a power supply.
5. Verify the behavior of the Access Point LEDs. For more information, see [Basic Access Point Configuration](#).

6. Align the bottom of the ceiling T-bar with the back of the Access Point.
7. Orient the Access Point chassis by its length and the length of the ceiling T-bar.
8. Rotate the Access Point chassis 45 degrees clockwise.
9. Push the back of the Access Point chassis on to the bottom of the ceiling T-bar.

10. Rotate the Access Point chassis 45 degrees counter-clockwise. The clips click as they fasten to the T-bar.
11. Verify the behavior of the Access Point LEDs. For more information, see [LED Indicator](#).
12. The Access Point is ready to configure. For information on basic Access Point device configuration, see [Basic Access Point Configuration](#).

## 2.6 Above the Ceiling (Plenum) Installation

An above the ceiling installation requires placing the Access Point above a suspended ceiling and installing the provided light pipe under the ceiling tile for viewing the status LED of the unit. An above the ceiling deployment enables installations compliant with drop ceilings, suspended ceilings and industry standard tiles from .625 to .75 inches thick.

**NOTE** The Access Point is Plenum rated to UL2043 and NEC1999 to support above the ceiling installations. To ensure UL compliance and proper Access Point operation within the Air Handling Plenum, the Access Point must be installed with the bottom surface of the unit in contact with the un-finished surface of the ceiling tile. Placing the product on the ceiling tile will facilitate the positioning of the light pipe. Placement of the product in the Air Handling Plenum off of, or away from, the unfinished surface of the ceiling tile is not UL approved and certification of UL2043 compliance would be void in that case.

**CAUTION** Do not mount the Access Point directly to suspended ceiling tile with a thickness less than 12.7mm (0.5in.) or a suspended ceiling tile with an unsupported span greater than 660mm (26in.).

The mounting hardware required to install the Access Point above a ceiling consists of:

- Light pipe
- Badge for light pipe
- Decal for badge

To install the Access Point above a ceiling:

1. If possible, remove the adjacent ceiling tile from its frame and place it aside.
2. If required, install and attach a security cable to the Access Point's lock port.
3. Mark a point on the finished side of the tile where the light pipe is to be located.
4. Create a light pipe path hole in the target position on the ceiling tile.
5. Use a drill to make a hole in the tile the approximate size of the Access Point LED light pipe.

**CAUTION** Take care not to damage the finished surface of the ceiling tile when creating the light pipe hole and installing the light pipe.

6. Remove the light pipe's rubber stopper (from the Access Point) before installing the light pipe.
7. Connect the light pipe to the bottom of the Access Point. Align the tabs and rotate approximately 90 degrees. Do not over tighten.
8. Fit the light pipe into hole in the tile from its unfinished side.

9. Place the decal on the back of the badge and slide the badge onto the light pipe from the finished side of the tile.
10. Attach the antennas to their correct connectors.
11. Align the ceiling tile into its former ceiling space.
12. Cable the Access Point using either the Power Injector solution or an approved line cord and power supply.

**CAUTION** Do not connect to the power source until the cabling of the Access Point is complete. Ensure PoE is not connected to the Access Point's console connector or risk rendering the console connector permanently inoperable.

---

---

For Power Injector installations:

- a. Connect an RJ-45 CAT5 Ethernet cable between the network data supply (host) and the Power Injector's **Data In** connector.
- b. Connect an RJ-45 CAT5 Ethernet cable between the Power Injector's **Data & Power Out** connector and the Access Point.
- c. Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft). The Power Injector has no On/Off power switch. The Power Injector receives power as soon as AC power is applied. For more information, see [Power Injector System](#).

For power adapter (Part Number PWRS-147376-01R) and line cord installations:

- a. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the network data supply (host) and the Access Point's GE1/PoE.
  - b. Verify the power adapter is correctly rated according the country of operation.
  - c. Connect the power supply line cord to the power adapter.
  - d. Attach the power adapter cable to the DC-48V power connector on the Access Point.
  - e. Attach the power supply line cord to a power supply.
13. Verify the behavior of the Access Point LED light pipe. For more information, see [LED Indicator](#).
  14. Place the ceiling tile back in its frame and verify it is secure.
  15. The Access Point is ready to configure. For information on basic Access Point device configuration, see [Basic Access Point Configuration](#).

## 2.7 LED Indicator

An AP-6521 Series Access Point has a single LED activity indicator on the front of the unit.

Front

The LED provides a status display indicating error conditions, transmission, and network activity for the 5 GHz 802.11a/n (amber) radio or the 2.4 GHz 802.11b/g/n (green) radio.

<b>Task</b>	<b>5 GHz Activity LED (Amber)</b>	<b>2.4 GHz Activity LED (Green)</b>
<i>Unadopted</i>	Off	Blinking 5 times per second
<i>Normal Operation</i>	<ul style="list-style-type: none"> <li>• If this radio band is enabled: Blink at 5 second interval</li> <li>• If this radio band is disabled: Off</li> <li>• If there is activity on this band: Blink at a 1Hz</li> </ul>	<ul style="list-style-type: none"> <li>• If this radio band is enabled: Blink at 5 second interval</li> <li>• If this radio band is disabled: Off</li> <li>• If there is activity on this band: Blink at a 1Hz</li> </ul>
<i>Firmware Update</i>	On	Off
<i>Locate AP Mode</i>	Blink at 5Hz	Blink at 5Hz

### 3 Basic Access Point Configuration

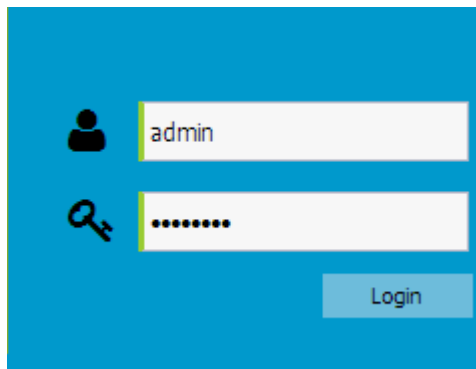

To provide the Access Point a basic configuration and access management functions:

1. Power up the Access Point.

The Access Point can be powered using an appropriately rated power adapter, POE injector or POE switch resource.

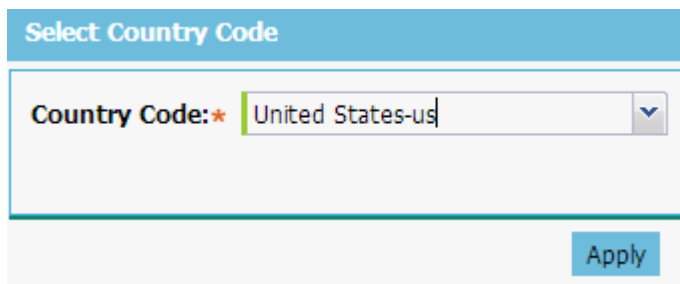

2. Connect to the Access Point.

Refer to the bottom of the Access Point to obtain the numeric IP address used for connecting to the device. Point the Web browser to the Access Point's IP address. The login screen displays.

The image shows a login screen with a blue background. On the left, there is a black silhouette of a person and a black key icon. To the right of the person icon is a white text input field containing the text "admin". Below the person icon is a white password input field containing a series of black dots. At the bottom right of the form is a blue button with the text "Login" in white.

3. Enter the default username *admin* in the **Username** field.
4. Enter the default password *admin123* in the **Password** field.
5. Select the **Login** button to load the management interface.

If this is the first time the user interface has been accessed, a screen displays prompting for the Access Point's country code.

The image shows a screen titled "Select Country Code" in a blue header. Below the header is a white form with a label "Country Code:\*" in bold black text. To the right of the label is a white text input field containing the text "United States-us" and a small blue dropdown arrow on the right side. At the bottom right of the form is a blue button with the text "Apply" in white.

6. Select the **Country Code** specific to this Access Point's deployment location.

Selecting the correct country is central to legal operation. Each country has its own regulatory restrictions concerning electromagnetic emissions and the maximum RF signal strength that can be transmitted.

Select **Apply** to implement the selected Country Code. SKU's only support certain countries (for example: a US SKU only includes US, Guam, Puerto Rico, American Samoa, US Virgin Islands and Mariana Island).

The Access Point automatically displays a **Dashboard** where users can assess network health and conduct a diagnostic review of Access Point performance.

**NOTE** At some point in the Access Point's initial setup, the default password should be changed to enhance the security of the Access Point managed network. Refer to the *Configuration > Management* screen to change the default password to a more secure password.

- Expand the **Configuration** menu item and select **Basic**.

The screenshot displays the 'Basic Configuration Settings' interface. It includes the following fields and controls:

- AP Name:** A text input field containing 'AN-08-15E54C'.
- Country Code:** A dropdown menu with 'Select a Country' as the current selection.
- Virtual Controller:** A checkbox that is currently unchecked.
- Timezone:** A dropdown menu with 'Select a Timezone' as the current selection.
- Date & Time:** A date input field showing '05/12/2014', an 'Hour' spinner set to '1', a 'Mins' spinner set to '34', and radio buttons for 'AM' and 'PM' (with 'PM' selected).
- NTP Server:** A text input field with three dots indicating a domain or IP address.

At the bottom right, there are two buttons: 'Apply' and 'Discard'.

- Set the following **Basic Configuration Settings** for this Access Point:
  - AP Name** - Provide an AP Name used as this Access Point's network identifier. If setting this Access Point as a Virtual Controller, each Access Point managed by this Virtual Controller lists this Access Point's AP Name as its own. The AP Name is a required parameter.
  - Country Code** - If the Country Code was not set when the Access Point was initially powered on, set the country now to ensure the Access Point's legal operation. The Access Point's wireless capabilities are disabled until the required country code is set.
  - Virtual Controller** - Select this option to define this Access Point as a Virtual Controller capable of managing and provisioning up to 24 Access Points of the same model. If selecting this Access Point as a Virtual Controller, those Access Points managed by this Virtual Controller will list this Access Point's AP Name as its own. Only one Virtual Controller can be designated.
  - Timezone** - Use the drop-down menu to specify the geographic timezone where the Access Point is deployed. Different geographic time zones have daylight savings clock adjustments, so specifying the timezone correctly is important to account for geographic time changes.

- *Date & Time* - Set the date, hour and minute for the Access Point's current system time. Specify whether the current time is in the *AM* or *PM*.
  - *NTP Server* - Optionally provide the IP address of a NTP server resource. *Network Time Protocol* (NTP) manages time and/or network clock synchronization within the network. NTP is a client/server implementation. Access Points (NTP clients) periodically synchronize their clock with a master clock (an NTP server). For example, an Access Point resets its clock to 07:04:59 upon reading a time of 07:04:59 from its designated NTP server.
9. Select **Apply** to implement the updates.
  10. Expand the **Configuration** menu item and select **WAN**.

WAN Settings

Enable:

Port: ge1

Interface: vlan1

DHCP Client  Static IP  PPPoE Settings

Static IP/Mask:\*

Primary DNS:

Secondary DNS:

Default Gateway:

11. Refer to the **WAN Settings** field and set the following:
  - *Enable* - Select this option to allow a connection between the Access Point and a larger network or outside world through the WAN port. Disable this option to isolate the WAN connection. No connections to a larger network or Internet are possible. Clients cannot communicate beyond configured subnets. Both the physical *Port* used to connect to the WAN and the virtual *Interface* (VLAN) are also listed and fixed.
  - *DHCP Client* - Select this option to enable DHCP for the Access Point WAN connection. This is useful, if the target network or *Internet Service Provider* (ISP) uses DHCP. DHCP is a protocol that includes mechanisms for IP address allocation and delivery of host-specific configuration parameters from a DHCP server to a host. Some of these parameters are IP address, network mask, and gateway. The WAN and LAN ports should not both be configured as DHCP clients.
  - *Static IP* - Select this option to bypass DHCP address allocation resources and manually set the IP address for the Access Point's WAN connection. Manually provide the Access Point's Static IP/Mask and Default Gateway.

- *PPPoE Settings* - Optionally enable *Point-to-Point Protocol over Ethernet* (PPPoE) on the WAN network. If PPPoE is enabled, provide the required *Auth Type*, *Login Name* and *Login Password*. *Server Name* and *Default Gateway* are optional settings. PPP is a data-link protocol for dialup connections allowing an Access Point to use a broadband modem (DSL, cable modem, etc.) for access to high-speed data and broadband networks. Most DSL providers support (or deploy) the PPPoE protocol. PPPoE uses standard encryption, authentication, and compression as specified by the PPPoE protocol. PPPoE enables the Access Point to establish a point-to-point connection to an ISP over an existing Ethernet interface.
- *Static IP / Mask* - Specify an IP address for the WAN connection if using static address assignment for the WAN port. An IP address uses a series of four numbers defined in dot notation, for example, 190.188.12.1. Additionally, specify a Mask for the access point's WAN connection. This number is available from the ISP for a DSL or cable-modem connection, or from an administrator if the Access Point connects to a larger network.
- *Primary/Secondary DNS/Default Gateway* - If using a static IP or DHCP, enter the Primary and Secondary DNS server resource's numerical IP address and Default Gateway.

**NOTE** If segmenting traffic between the Access Point's WAN and LAN, you'll need to create a VLAN. Complete steps 13 and 14 to define the required VLAN. Otherwise, proceed to step 15.

---

12. Select **Apply** to implement the updates.

- Expand the **Configuration** menu item and select **Access Points**. Each **AP Name** displays as a link that can be selected to update the configuration of that specific Access Point. Select a target AP Name link from amongst those displayed in the Access Points screen.

**Edit -> AN-08-15E54C**

---

**Basic Settings**

AP Name :\* AN-08-15E54C

Location : SEQUOIA-CONF

Version : 5.5.3.0-027D

Model : AP-7532-67030-US

UP Time : 0 days, 01 hours 08 minutes

---

**LAN IP Interface Settings**

+ Add | Delete

<input checked="" type="checkbox"/>	Interface (1-4094)	Description	Static IP
	VLAN*		0.0.0.0/24

Update Cancel

Refer to the **LAN IP Interface Settings** field, and add a VLAN and Static IP as required for enabling DHCP (within the *Configuration > Services* screen) for client IP address requests and ensuring routable traffic.

- Select **Apply** to commit the updates to the selected Access Point's configuration.
- Expand the **Configuration** menu item and select **Wireless**.

The Wireless screen displays fields where *Radio Settings* and *Wireless LAN* settings can be defined. It is recommended default radio settings remain as is for the Access Point's basic setup.

In respect to the **Radio Settings**, the professional installer should be aware of the following:

2.4Ghz	Channel: <input type="text" value="smart"/>	Power: <input checked="" type="radio"/> Smart <input type="radio"/> <input type="text" value="0"/> dBm	Antenna Gain:★ <input type="text" value="0"/> dBi
5Ghz	Channel: <input type="text" value="smart"/>	Power: <input checked="" type="radio"/> Smart <input type="radio"/> <input type="text" value="0"/> dBm	Antenna Gain:★ <input type="text" value="0"/> dBi

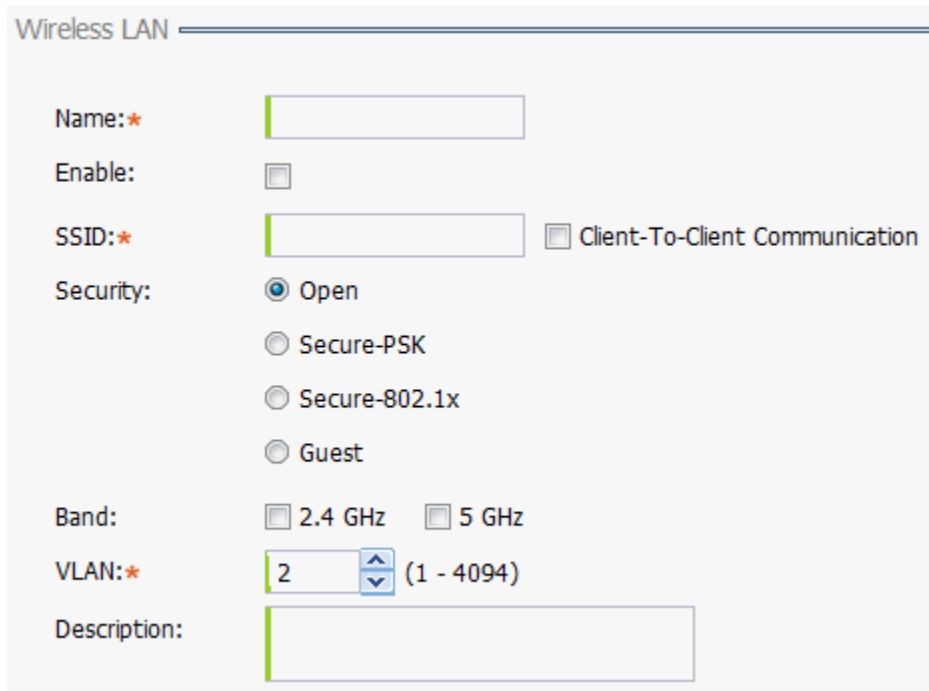

**NOTE** The above example includes a field for setting the antenna gain. This setting is only available for external antenna model Access Points and does not display for internal antenna model Access Points.

- The **Channels** available for configuration are channels for which the product is approved in its selected country. The professional installer must ensure the product is set to operate under conditions, and on channels, approved by country regulations.
- Selecting **Smart** as the **Power** setting automatically configures radio power to not exceed the maximum power allowed by the defined country. For static power settings, the professional installer must ensure the configured power levels are compliant with local and regional regulations. The county selected automatically limits the maximum output power that can be set.
- For external antenna model Access Points, configure the **Antenna Gain** based on the antenna used in the deployment. The set gain value should include the antenna gain, along with any additional components, such as extension cables used between the Access Point and the antenna.

In respect to **Wireless LAN** settings, at minimum, a WLAN should be created providing some measure of security.

16. To create a new WLAN, select **+ Add** from the upper, left-hand side of the **Wireless LAN** field.

The screenshot shows the 'Wireless LAN' configuration page. It includes the following fields and options:

- Name:** A required text input field.
- Enable:** A checkbox.
- SSID:** A required text input field.
- Client-To-Client Communication:** A checkbox.
- Security:** Radio buttons for 'Open' (selected), 'Secure-PSK', 'Secure-802.1x', and 'Guest'.
- Band:** Checkboxes for '2.4 GHz' and '5 GHz'.
- VLAN:** A dropdown menu showing '2' and a range '(1 - 4094)'.
- Description:** A text input field.

17. Set the following configuration attributes for the new WLAN:

- *Name* - Provide a unique name for the WLAN as its network identifier. This is a required setting.
- *Enable* - Select this setting to enable this WLAN within the Access Point managed network and provide some measure of data protection.
- *SSID* - Specify the WLAN's SSID. The WLAN SSID is case sensitive and alphanumeric. SSID length should not exceed 32 characters. This is a required setting. Select **Client-To-Client Communication** to enable client interoperability within this WLAN. The default is disabled, meaning clients are *not* allowed to exchange packets with other clients. It does not necessarily prevent clients on other WLANs from sending packets to this WLAN, but if this setting is disabled on the other WLAN, clients are not permitted to interoperate at all.
- *WLAN Type* - The screen displays with the **Open** option selected. Naming and saving such a policy (as is) would provide no security and might only make sense in a network wherein no sensitive data is either transmitted or received. This default setting is *not* recommended.

If selecting **Secure-PSK**, enter a **WPA2 Key** to password protect the WLAN. Define whether the key is entered in ASCII or HEX characters. Selecting *Show* to expose the key is not recommended.

If selecting **Secure-802.1x**, provide an IP address (or hostname) and a shared secret (password) used to access an external RADIUS server resource designated to validate user requests to the Access Point's WLAN resources.

Selecting **Guest** displays fields for captive portal Web page creation, and is beyond the scope of this basic Access Point configuration.

- *Band* - Select the 2.4 GHz and/or 5 GHz radio bands supported by the Access Point and its connected clients. If this Access Point is designated as a Virtual Controller AP, both radio bands should be enabled.
- *VLAN* - Use the spinner control to specify a VLAN from 1 - 4,094 for this WLAN. When a client associates with a WLAN, the client is assigned a VLAN by load balance distribution. It is recommended you do not use VLAN 1 with the WLAN if the WAN port has been enabled.
- *Description* - Optionally enter a WLAN description to further describe the WLAN's deployment objective.

18. Select **Apply** to commit the updates to the Access Point's WLAN configuration.

19. Expand the **Configuration** menu item and select **Services**

DHCP Settings

Enable DHCP Server

+ Add | Delete | Row Count: 0

<input type="checkbox"/>	Interface	IP	Start IP	End IP

Apply | Discard

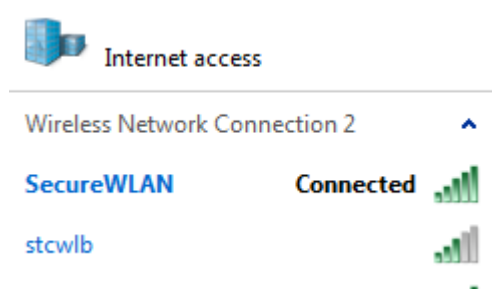

20. Select **Enable DHCP Server** to ensure the Access Point can provision IP addresses to requesting clients over the specified interface.

**NOTE** A VLAN must be already configured and available to the DHCP server as a viable interface between the Access Point and requesting client. Refer to the **LAN IP Interface Settings** field (within the Edit Access Point screen), and add a VLAN.

Select **+ Add** and provide a starting and ending IP range of addresses that constitute a pool of addresses available to requesting clients.

21. Select **Apply** to commit the updates to the Access Point's DHCP configuration.
22. At this point, you're ready to connect to the network using the security restrictions applied to the newly created WLAN. Ensure the new secure WLAN has been enabled, and check whether a client is able to access the Access Point managed network.

## 4 Specifications

### 4.1 Electrical Characteristics

An AP-6521 Series Access Point has the following electrical characteristics:

<i>Max DC Power Consumption</i>	12.95W (270mA@48V)
---------------------------------	--------------------

### 4.2 Physical Characteristics

An AP-6521 Series Access Point has the following physical characteristics:

<i>Dimensions</i>	6.0 (Length) x 5.5 (Width) x 1.63 (Tall) - Inches 152.4 (Length) x 139.7 (Width) x 41.1 (Tall) - Millimeters
<i>Housing</i>	Plastic
<i>Weight</i>	0.60 lbs/0.272 kg
<i>Operating Temperature</i>	32°F to 104°F/0°C to 40°C
<i>Storage Temperature</i>	-40°F to 158°F/-40°C to 70°C
<i>Operating Humidity</i>	5 to 95% Relative Humidity non-condensing
<i>Storage Humidity</i>	85% Relative Humidity non-condensing
<i>Operating Altitude (max)</i>	8,000 ft @ 28°C
<i>Storage Altitude (max)</i>	30,000 ft @ 12°C
<i>Electrostatic Discharge</i>	+/-15kV Air and +/-8kV Contact @ 50% Relative Humidity

## 4.3 Radio Characteristics

An AP-6521 Series Access Point has the following radio characteristics:

<i>Operating Channel (2.4 GHz)</i>	Channel 1 to 13 (2412 to 2472 MHz) *Japan Only - Channel 14 (2484 MHz)
<i>Operating Channel (5. GHz)</i>	Channels 36 - 165
<i>802.11a Data Rates</i>	6, 9, 12, 18, 24, 36, 48, 54 Mbps
<i>802.11b Data Rates</i>	1, 2, 5.5, 11 Mbps
<i>802.11g Data Rates</i>	6, 9, 12, 18, 24, 36, 48, 54 Mbps
<i>802.11n Data Rates</i>	MCS0 to MCS15 at both HT20 and HT40 modes
<i>Max Transmit Power (2.4GHz)</i>	27 dBm
<i>Max Transmit Power (5 GHz)</i>	22 dBm
<i>Transmit Power Adjustment</i>	1 dB

**NOTE** Channel 14 is valid only for 802.11b in Japan, 802.11g is not supported.

---

## 5 Regulatory Information

### 5.1 Regulatory Overview

AP-6521 Series Access Points are approved under MODEL: NCAP-500.

All Zebra devices are designed to be compliant with rules and regulations in locations they are sold and will be labeled as required.

Any changes or modifications to Zebra equipment, not expressly approved by Zebra, could void the user's authority to operate the equipment.

Zebra Access Points must be professionally installed and configured so that the Radio Frequency Output Power will not exceed the maximum allowable limit for the country of operation.

Antennas: Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could cause damage and may violate regulations. Use of an unapproved antenna is illegal under FCC regulations subjecting the end user to fines and equipment seizure.

### 5.2 Wireless Device Country Approvals

Regulatory markings, subject to certification, are applied to the device signifying the radio(s) is/are approved for use in the following countries: United States, Canada, Japan, China, S. Korea, Australia, and Europe.

Please refer to the *Declaration of Conformity* (DoC) for details of other country markings. This is available at [www.zebra.com/doc](http://www.zebra.com/doc)

**Note:** For 2.4GHz or 5GHz Products: Europe includes, Austria, Belgium, Bulgaria, Czech Republic, Cyprus, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Operation of the device without regulatory approval is illegal.

#### 5.2.1 Country Selection – Note for AP & Wireless Controller

Select only the country in which you are using the device. Any other selection will make the operation of this device illegal. The US version of the Access Point will only have US listed in the country selection table. The US version will be sold / used in the US protectorates: American Samoa, Guam, Puerto Rico, US Virgin Islands.

#### 5.2.2 Frequency of Operation – FCC and IC

##### 5 GHz Only

The use on UNII (Unlicensed National Information Infrastructure) Band 1 5150-5250 MHz is restricted to indoor use only, any other use will make the operation of this device illegal.

Industry Canada Statement:

**Caution:** The device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-Channel mobile satellite systems. High power radars are allocated as primary users (meaning they have priority) of 5250-5350 MHz and 5650-5850 MHz and these radars could cause interference and/or damage to LE-LAN devices.

**Avertissement:** Le dispositif fonctionnant dans la bande 5150-5250 MHz est réservé uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux. Les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bands 5250-5350 MHz et 5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

### **2.4 GHz Only**

The available channels for 802.11 b/g operation in the US are Channels 1 to 11. The range of channels is limited by firmware.

## **5.3 Health and Safety Recommendations**

### **5.3.1 Warnings for the use of Wireless Devices**

Please observe all warning notices with regard to the usage of wireless devices.

### **5.3.2 Potentially Hazardous Atmospheres – Fixed Installations**

You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles (such as grain, dust, or metal powders).

### **5.3.3 Safety in Hospitals**

Wireless devices transmit radio frequency energy and may affect medical electrical equipment. When installed adjacent to other equipment, it is advised to verify that the adjacent equipment is not adversely affected.

#### **Pacemakers**

Pacemaker manufacturers recommended that a minimum of 15cm (6 inches) be maintained between a handheld wireless device and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with independent research and recommendations by Wireless Technology Research.

Persons with Pacemakers:

- Should ALWAYS keep the device more than 15cm (6 inches) from their pacemaker when turned ON.
- Should not carry the device in a breast pocket.
- Should use the ear furthest from the pacemaker to minimize the potential for interference.
- If you have any reason to suspect that interference is taking place, turn OFF your device.

### ***Other Medical Devices***

Please consult your physician or the manufacturer of the medical device, to determine if the operation of your wireless product may interfere with the medical device.

## **5.4 RF Exposure Guidelines**

### **5.4.1 Safety Information**

#### ***Reducing RF Exposure—Use Properly***

Only operate the device in accordance with the instructions supplied.

## **5.5 International**

The device complies with internationally recognized standards covering human exposure to electromagnetic fields from radio devices. For information on “International” human exposure to electromagnetic fields refer to the *Declaration of Conformity* (DoC) at [www.zebra.com/doc](http://www.zebra.com/doc).

## **5.6 EU**

### ***Remote and Standalone Antenna Configurations***

To comply with EU RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons.

## **5.7 US and Canada**

### ***Co-located statement***

To comply with FCC RF exposure compliance requirement, the antennas used for this transmitter must not be co-located or operating in conjunction with any other transmitter/antenna except those already approved in this filling.

### ***Remote and Standalone Antenna Configurations***

To comply with FCC RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons.

## 5.8 Power Supply

This device is powered from a 802.3af compliant power source which is UL approved and certified by the appropriate agencies.

## 5.9 Radio Frequency Interference Requirements—FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

### ***Radio Transmitters (Part 15)***

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Restricted Band 5.60 – 5.65 GHz

## 5.10 Radio Frequency Interference Requirements – Canada

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

### ***5.10.1 Radio Transmitters***

For RLAN Devices:

The use of 5 GHz RLAN's, for use in Canada, have the following restrictions:

- Restricted Band 5.60 – 5.65 GHz

L'utilisation de RLAN de 5 GHz, pour utilisation au Canada est soumise aux restrictions suivantes:

- Bande Restreinte de 5,60 à 5,65 GHz

This device complies with RSS 210 of Industry & Science Canada. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de

brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable

Label Marking: The Term "IC:" before the radio certification only signifies that Industry Canada technical specifications were met.

## 5.11 CE Marking and European Economic Area (EEA)

The use of 2.4 GHz RLAN's, for use through the EEA, have the following restrictions:

- Maximum radiated transmit power of 100 mW EIRP in the frequency range 2.400 -2.4835 GHz.
- France, outside usage is restricted to 2.4 – 2.454 GHz.
- Italy requires a user license for outside usage.

## 5.12 Mexico

"La operación de este equipo está sujeta a lassiguientes dos condiciones: (1) es posible que este equipo o dispositivo no cause interferencia perjudicialy (2) este equipo o dispositivo debe aceptar cualquierinterferencia, incluyendo la que pueda causar suoperación no deseada."

## 5.13 Statement of Compliance

Zebra hereby declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. A Declaration of Conformity may be obtained from [www.zebra.com/doc](http://www.zebra.com/doc).

## 5.14 Waste Electrical and Electronic Equipment (WEEE)

**English:** For EU Customers: All products at the end of their life must be returned to Zebra for recycling. For information on how to return product, please go to: [www.zebra.com/weee](http://www.zebra.com/weee).

**Français:** Clients de l'Union Européenne: Tous les produits en fin de cycle de vie doivent être retournés à Zebra pour recyclage. Pour de plus amples informations sur le retour de produits, consultez : [www.zebra.com/weee](http://www.zebra.com/weee).

**Español:** Para clientes en la Unión Europea: todos los productos deberán entregarse a Zebra al final de su ciclo de vida para que sean reciclados. Si desea más información sobre cómo devolver un producto, visite: [www.zebra.com/weee](http://www.zebra.com/weee).

**Български:** За клиенти от ЕС: След края на полезния им живот всички продукти трябва да се връщат на Zebra за рециклиране. За информация относно връщането на продукти, моля отидете на адрес: [www.zebra.com/weee](http://www.zebra.com/weee).

**Deutsch:** Für Kunden innerhalb der EU: Alle Produkte müssen am Ende ihrer Lebensdauer zum Recycling an Zebra zurückgesandt werden. Informationen zur Rücksendung von Produkten finden Sie unter [www.zebra.com/weee](http://www.zebra.com/weee).

**Italiano:** per i clienti dell'UE: tutti i prodotti che sono giunti al termine del rispettivo ciclo di vita devono essere restituiti a Zebra al fine di consentirne il riciclaggio. Per informazioni sulle modalità di restituzione, visitare il seguente sito Web: [www.zebra.com/weee](http://www.zebra.com/weee).

**Português:** Para clientes da UE: todos os produtos no fim de vida devem ser devolvidos à Zebra para reciclagem. Para obter informações sobre como devolver o produto, visite: [www.zebra.com/weee](http://www.zebra.com/weee).

**Nederlands:** Voor klanten in de EU: alle producten dienen aan het einde van hun levensduur naar Zebra te worden teruggezonden voor recycling. Raadpleeg [www.zebra.com/weee](http://www.zebra.com/weee) voor meer informatie over het terugzenden van producten.

**Polski:** Klienci z obszaru Unii Europejskiej: Produkty wycofane z eksploatacji należą i zwrócić do firmy Zebra w celu ich utylizacji. Informacje na temat zwrotu produktów znajdują się na stronie internetowej [www.zebra.com/weee](http://www.zebra.com/weee).

**Čeština:** Pro zákazníky z EU: Všechny produkty je nutné po skončení jejich životnosti vrátit společnosti Zebra k recyklaci. Informace o způsobu vrácení produktu najdete na webové stránce: [www.zebra.com/weee](http://www.zebra.com/weee).

**Eesti:** EL klientidele: kõik tooted tuleb nende eluea lõppedes tagastada taaskasutamise eesmärgil Zebra'ile. Lisainformatsiooni saamiseks toote tagastamise kohta külastage palun aadressi: [www.zebra.com/weee](http://www.zebra.com/weee).

**Magyar:** Az EU-ban vásárlóknak: Minden tönkrement termékét a Zebra vállalathoz kell eljuttatni újrahasznosítás céljából. A termék visszajuttatásának módjával kapcsolatos tudnivalóért látogasson el a [www.zebra.com/weee](http://www.zebra.com/weee) weboldalra.

**Svenska:** För kunder inom EU: Alla produkter som uppnått sin livslängd måste returneras till Zebra för återvinning. Information om hur du returnerar produkten finns på [www.zebra.com/weee](http://www.zebra.com/weee).

**Suomi:** Asiakkaat Euroopan unionin alueella: Kaikki tuotteet on palautettava kierrätettäväksi Zebra-yhtiöön, kun tuotetta ei enää käytetä. Lisätietoja tuotteen palauttamisesta on osoitteessa [www.zebra.com/weee](http://www.zebra.com/weee).

**Dansk:** Til kunder i EU: Alle produkter skal returneres til Zebra til recirkulering, når de er udtjent. Læs oplysningerne om returnering af produkter på: [www.zebra.com/weee](http://www.zebra.com/weee).

**Ελληνικά:** Για πελάτες στην Ε.Ε.: Όλα τα προϊόντα, στο τέλος της διάρκειας ζωής τους, πρέπει να επιστρέφονται στην Zebra για ανακύκλωση. Για περισσότερες πληροφορίες σχετικά με την επιστροφή ενός προϊόντος, επισκεφθείτε τη διεύθυνση [www.zebra.com/weee](http://www.zebra.com/weee) στο Διαδίκτυο.

**Malti:** Għal klijenti fl-UE: il-prodotti kollha li jkunu waslu fl-aħħar tal-ħajja ta' l-użu tagħhom, iridu jiġu rritornati għand Zebra għar-riċiklaġġ. Għal aktar taġġir dwar kif għandek tirritorna l-prodott, jekk jogħġbok żur:

[www.zebra.com/weee](http://www.zebra.com/weee).

**Românesc:** Pentru clienții din UE: Toate produsele, la sfârșitul duratei lor de funcționare, trebuie returnate la Zebra pentru reciclare. Pentru informații despre returnarea produsului, accesați: [www.zebra.com/weee](http://www.zebra.com/weee).

**Slovenski:** Za kupce v EU: vsi izdelki se morajo po poteku življenjske dobe vrniti podjetju Zebra za reciklažo. Za informacije o vračilu izdelka obiščite: [www.zebra.com/weee](http://www.zebra.com/weee).

**Slovenčina:** Pre zákazníkov z krajín EU: Všetky výrobky musia byť po uplynutí doby ich životnosti vrátené spoločnosti Zebra na recykláciu. Bližšie informácie o vrátení výrobkov nájdete na: [www.zebra.com/weee](http://www.zebra.com/weee).

**Lietuvių:** ES vartotojams: visi gaminiai, pasibaigus jų eksploatacijos laikui, turi būti grąžinti utilizuoti į kompaniją „Zebra“. Daugiau informacijos, kaip grąžinti gaminį, rasite: [www.zebra.com/weee](http://www.zebra.com/weee).

**Latviešu:** ES klientiem: visi produkti pēc to kalpošanas mūža beigām ir jānogādā atpakaļ Zebra otrreizējai pārstrādei. Lai iegūtu informāciju par produktu nogādāšanu Zebra, lūdzu, skatiet: [www.zebra.com/weee](http://www.zebra.com/weee).

**Türkçe:** AB Müşterileri için: Kullanım süresi dolan tüm ürünler geri dönüşürme için Zebra'ya iade edilmelidir. Ürünlerin nasıl iade edileceği hakkında bilgi için lütfen şu adresi ziyaret edin: [www.zebra.com/weee](http://www.zebra.com/weee).

### **Turkish WEEE Statement of Compliance**

EEE Yönetmeliğine Uygundur

## 5.15 Japan (VCCI) - Voluntary Control Council for Interference Class B ITE

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。取扱説明書に従って正しい取り扱いをして下さい。

This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.

## 5.16 Korea Warning Statement for Class B ITE

기종별	사용자안내문
B 급 기기 (가정용 방송통신기기)	이 기기는 가정용 (B 급) 으로 전자파적합등록을 한 기기로서 주로 가정에서 사용하는 것을 목적으로 하며, 모든 지역에서 사용할 수 있습니다.
Class B (Broadcasting Communication Device for Home Use)	This device obtained EMC registration mainly for home use (Class B) and may be used in all areas.

## 5.17 Other Countries

### Australia

Use of 5 GHz RLAN's in Australia is restricted in the following band 5.50 – 5.65 GHz.

### Brazil

Regulatory declarations for AP-6521 - BRAZIL

Note: The certification mark applied to the AP-6521 is for Restrict Radiation Equipment. This equipment operates on a secondary basis and does not have the right for protection against harmful interference from other users including same equipment types. Also this equipment must not cause interference to systems operating on primary basis.

For more information consult the website <http://www.anatel.gov.br>

Declarações Regulamentares para AP-6521 - Brasil

Nota: "A marca de certificação se aplica ao Transceptor, modelo AP-650. Este equipamento opera em caráter secundário, isto é, não tem direito a proteção contra interferência prejudicial, mesmo de estações do mesmo tipo, e não pode causar interferência a sistemas operando em caráter primário."

Para maiores informações sobre ANATEL consulte o site: <http://www.anatel.gov.br>

## Chile

"Este equipo cumple con la Resolución No 403 de 2008, de la Subsecretaria de telecomunicaciones, relativa a radiaciones electromagnéticas."

"This device complies with the Resolution Not 403 of 2008, of the Undersecretary of telecommunications, relating to electromagnetic radiation."

### Mexico

Restrict Frequency Range to: 2.450 – 2.4835 GHz.

## Taiwan

### NOTICE!

According to: Administrative Regulations on Low Power Radio Waves Radiated Devices

### Article 12

Without permission granted by the DGT, any company, enterprise, or user is not allowed to change frequency, enhance transmitting power or alter original characteristic as well as performance to an approved low power radio-frequency devices.

### Article 14

The low power radio-frequency devices shall not influence aircraft security and interfere legal communications; If found, the user shall cease operating immediately until no interference is achieved.

The said legal communications means radio communications is operated in compliance with the Telecommunications Act.

The low power radio-frequency devices must be susceptible with the interference from legal communications or ISM radio wave radiated devices. Wireless devices operate in the frequency band of 5.25-5.35 GHz, limited for Indoor use only.

### 臺灣

#### 低功率電波輻射性電機管理辦法

#### 第十二條

經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

#### 第十四條

低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，改善至無干擾時方得繼續使用。

前項合法通信，指依電信規定作業之無線電通信。

低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

Wireless devices operate in the frequency band of 5.25-5.35 GHZ, limited for Indoor use.

在 5.25–5.35 赫頻帶內操作之無線資訊傳輸設備，限於室內使用。

## Korea

For radio equipment using 2400~2483.5MHz or 5725~5825MHz, the following expressions should be displayed:

1. “This radio equipment cannot provide a service relevant to human life safety, as it can be crossed” through the user manual, etc.

당해 무선설비 는전파혼 신 가능성이 있으므로 인명안전과 관련된 서비스는 할 수 없습니다

2. “This radio equipment cannot provide a service relevant to human life safety, as it can be crossed” through the user manual, etc.

당해 무선설비 는전파혼 신 가능성이 있으므로 인명안전과 관련된 서비스는 할 수 없습니다

## 6 Support

If you have a problem with your equipment, contact support for your region.

Contact information is available at: [www.zebra.com/support](http://www.zebra.com/support).

When contacting support, please provide the following information:

- Serial number of the unit
- Model number or product name
- Software type and version number

Support responds to calls by e-mail, telephone, or fax within the time limits set forth in support agreements. If you purchased your product from a business partner, contact that business partner for support.

### 6.1 Customer Support Web Sites

Support located at: [www.zebra.com/support](http://www.zebra.com/support) provides information and online assistance including developer tools, software downloads, product manuals and online repair requests.

### 6.2 Manuals

Documentation is available at: [www.zebra.com/support](http://www.zebra.com/support).

## 7 AP-6521 Series Access Point China ROHS Compliance

部件名称 (Parts)	有害物质 					
	铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr(VI))	多溴联 苯 (PBB)	多溴二苯 醚 (PBDE)
金属部件 (Metal Parts)	○	○	○	○	○	○
电路模块 (Circuit Modules)	X	○	○	○	○	○
电缆及电缆组件 (Cables and Cable Assemblies)	○	○	○	○	○	○
塑料和聚合物部件 (Plastic and Polymeric Parts)	○	○	○	○	○	○
光学和光学组件 (Optics and Optical Components)	○	○	○	○	○	○
电池 (Batteries)	○	○	○	○	○	○

本表格依据 SJ/T 11364 的规定编制。

○: 表示该有害物质在该部件所有均质材料中的含量均在 GB/T 26572 规定的限量要求以下。

X: 表示该有害物质至少在该部件的某一均质材料中的含量超出 GB/T 26572 规定的限量要求。(企业可在此处, 根据实际情况对上表中打“x”的技术原因进行进一步说明。)

This table was created to comply with China RoHS requirements for the AP-6521 Access Point.
