AP-6522 SERIES ACCESS POINT
INSTALLATION GUIDE

1   Introduction

An AP-6522 Series Access Point links wireless 802.11abgn devices to the controller, enabling the growth of your wireless network with a cost effective alternative to standard Access Points. The Access Point provides multiple deployment options.

The Access Point receives all power and transfers data through the same CAT-5 or better Ethernet cable. An 802.3af Ethernet switch or power supply (specifically rated for the AP-6522 Series) is required (Part No. PWRS-14000-148R).

An AP-6522 Series Access Point uses WiNG 5 software as its onboard operating system. The Access Point's unique WiNG 5 software enables the Access Point to function as either a Virtual Controller AP capable of adopting and managing up to 24 additional AP-6522 Series Access Points, a Standalone Access Point or a Dependent mode Access Point managed by its connected controller.

If new to Access Point technology, refer to the *WiNG Access Point System Reference Guide* to familiarize yourself with Access Point technology and the feature set supported by the WiNG operating system. The guide is available, at *www.zebra.com/support*.

The Access Point is approved under MODEL: AP-0622.

This document is written for the qualified network device installer.

1.1   Document Conventions
The following graphical alerts are used in this document to indicate notable situations:

✓	**NOTE**	Tips, hints, or special requirements that you should take note of.

⚠	**CAUTION**	Care is required. Disregarding a caution can result in data loss or equipment malfunction.

⚡	**WARNING!**	Indicates a condition or procedure that could result in personal injury or equipment damage.

1.2   Warnings

- Read all installation instructions and site survey reports, and verify correct equipment installation before connecting the Access Point.
- Remove jewelry and watches before installing this equipment.
- Verify the unit is grounded before connecting it to the power source.
- Verify any device connected to this unit is properly wired and grounded.
- Verify there is adequate ventilation around the device, and that ambient temperatures meet equipment operation specifications.

1.3   Site Preparation

- Consult your site survey and network analysis reports to determine specific equipment placement, power drops, and so on.
- Assign installation responsibility to the appropriate personnel.
- Identify and document where all installed components are located.
- Ensure adequate, dust-free ventilation to all installed equipment.
- Identify and prepare Ethernet and console port connections.
- Verify cable lengths are within the maximum allowable distances for optimal signal transmission.

1.4   Package Contents

An AP-6522 Series Access Point is available in integrated antenna and external antenna Access Points. Contents differ depending on the Access Point type ordered.

1.4.1   *External Antenna Access Point Package Contents*

- Access Point with external antenna connectors (Plenum Rated)
- 2 customer installed mounting lugs
- 4 mounting lug retaining screws
- Installation Guide *(This Guide)*

1.4.2   *Internal Antenna Access Point Package Contents*

- Access Point with internal antennas
- Installation Guide *(This Guide)*

1.4.3 Features

- 2 RJ-45 connectors, one for 10/100/1000 Ethernet and the other for the serial/console connector
- LED indicators
- Slots for wall mounting
- Clips for mounting on a suspended ceiling T-bar (internal antenna Access Point only) with separately orderable accessories
- Lock port for Kensington® style Security Lock

An AP-6522 Series Access Point has one RJ-45 connector supporting an 10/100/1000 Ethernet port and accepts 802.3af-compliant power from an external source. The illustration below is of an integrated antenna Access Point.

| ✓ | *NOTE* | When operating in a Gigabit Ethernet environment, CAT-5e or CAT-6 cable is recommended for Gigabit operation. |

DC12V   GE1/PoE   Console
An AP-6522 Series Access Point comes with dual radios supporting 802.11abgn. The Access Point contains runtime firmware which enables the unit to boot after a power up. The runtime firmware on the Access Point and the firmware downloaded from the connected controller can be updated via the Ethernet interface.

2 Hardware Installation

2.1 Installation Instructions

The Access Point mounts either on a wall (with customer supplied M4 x 25 pan head screws and wall anchor - or equivalent) or on a suspended ceiling T-bar. If deploying an external antenna Access Point on a suspended ceiling T-bar, Access Point mounting kit (Part No. KT-135628-01) is required. The Access Point is not designed for mounting on a desk.

To prepare for the installation:

1. Match the part number on the purchase order with the part numbers in the packing list and on the case of the Access Point.
2. Verify the contents of the box include the intended Access Point, and the included hardware matches the package contents (see *Package Contents on page 7*).

Part Number	Description
AP-6522-66030-US	Dual 802.11n radio AP-6522. Plastic enclosure with internal antennas. For use in the US deployments only.
AP-6522-66030-WR	Dual 802.11n radio AP-6522 Plastic enclosure with internal antennas. For use in non-US countries only.
AP-6522-66030-EU	Dual 802.11n radio AP-6522. Plastic enclosure with internal antennas. For use in EU countries only.
AP-6522-66040-US	Dual 802.11n radio AP-6522. Metal enclosure with external antenna connectors. For use in US deployments only.
AP-6522-66040-WR	Dual 802.11n radio AP-6522. Metal enclosure with external antenna connectors. For use in non-US countries only.
AP-6522-66040-EU	Dual 802.11n radio AP-6522. Metal enclosure with external antenna connectors. For use in EU countries only.
AP-6522E-66030-US	Dual 802.11n radio AP-6522E. Plastic enclosure with internal antennas. For use in the US deployments only.
AP-6522E-66030-WR	Dual 802.11n radio AP-6522E. Plastic enclosure with internal antennas. For use in non-US countries only.
AP-6522E-66030-EU	Dual 802.11n radio AP-6522E. Plastic enclosure with internal antennas. For use in EU countries only.
AP-6522E-66040-US	Dual 802.11n radio AP-6522E. Metal enclosure with external antenna connectors. For use in US deployments only.
AP-6522E-66040-WR	Dual 802.11n radio AP-6522E. Metal enclosure with external antenna connectors. For use in non-US countries only.
AP-6522E-66040-EU	Dual 802.11n radio AP-6522E. Metal enclosure with external antenna connectors. For use in EU countries only.

✓ | *NOTE* In the above part numbers, a country code of "EU" represents a European Access Point, a country code of "WR" represents a world wide Access Point, and a country code of "US" defines the Access Point as only legally deployable in the United States.

3. Review site survey and network analysis reports to determine the location and mounting position for the Access Point.

4. Connect a CAT-5 or better Ethernet cable to a compatible 802.3af power source and run the cable to the installation site. Ensure there is sufficient slack on the cable to perform the installation steps.

✓ | *NOTE* When operating in a Gigabit Ethernet environment, CAT-5e or CAT-6 cable is recommended for Gigabit operation.

2.2 Precautions

Before installing an AP-6522 Series Access Point, verify the following:

- If a DC power supply is used, ensure it's the approved power supply (PWRS-1400-148R) for the AP-6522 Series Access Point.
- Do not to install the Access Point in wet or dusty areas.
- Verify the environment has a continuous temperature range between 0° C to 40° C.

2.3 Access Point Placement

For optimal performance, install the Access Point away from transformers, heavy-duty motors, fluorescent lights, microwave ovens, refrigerators and other industrial equipment. Signal loss can occur when metal, concrete, walls or floors block transmission. Install the Access Point in an open area or add Access Points as needed to improve coverage.

Antenna coverage is analogous to lighting. Users might find an area lit from far away to be not bright enough. An area lit sharply might minimize coverage and create *dark areas.* Uniform antenna placement in an area (like even placement of a light bulb) provides even, efficient coverage.

Place the Access Point using the following guidelines:

- Install the Access Point at an ideal height of 10 feet from the ground.
- Orient the Access Point antennas vertically for best reception (applies to external antenna Access Points only).

To maximize the Access Point's radio coverage area, conduct a site survey to define and document radio interference obstacles before installing the Access Point.

2.4   Integrated Antenna Access Point Wall Mount Instructions

Wall mounting requires hanging the Access Point along its width or length using the two slots on the bottom of the unit. The Access Point can be mounted on to any plaster, wood, or cement wall surface using customer supplied screw hardware (M3.5 x 0.6 x 20 mm- or equivalent).

2.4.1   Wall Mount Hardware

- Two wide-shoulder Phillips pan head self-tapping screws (customer supplied)
- Two wall anchors (customer supplied)
- Security cable (optional)

| ✓ | *NOTE* | The following screws are recommended: (ANSI Standard) #6-18 X 0.875in. Type A or AB Self-Tapping Screw, or (ANSI Standard Metric) M3.5 X 0.6 X 20mm Type D Self-Tapping Screw. |

2.4.2   Wall Mount Procedure
1.   Orient the case on the wall by its width or length.
Correct Orientation   Incorrect Orientation

⚠️ *CAUTION*   To ensure proper operation of an Access Point, ensure it is mounted in the correct orientation as shown above.

2. Mark two points (for drill holes) 4.08 inches (103.7 mm) apart on a horizontal line.

3. At each point, drill a hole in the wall, insert an anchor, screw into the anchor the wall mounting screw and stop when there is 1mm between the screw head and the wall.

✓ **NOTE** When pre-drilling a hole the recommended hole size is 2.8mm (0.11in.).

---

4. If required, install and attach a Kensington security cable (customer supplied) to the unit's lock port.

5. Attach an Ethernet cable from the Access Point to a controller with an 802.3af-compatible power source or use the PWRS-14000-148R power supply to supply power to the Access Point (once fully cabled).

6. Place the middle of each of the case's mount slots over the screw heads.

7. Slide the case down along the mounting surface to hang the mount slots on the screw heads.

8. Verify the unit has power by observing that the LEDs are lit or flashing.

⚠ **CAUTION** If not using a 802.3af capable controller to power the Access Point, ensure only the designated power supply (PWRS-14000-148R) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the unit and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.

2.5   Integrated Antenna Access Point Suspended Ceiling T-Bar Mount

Ceiling mount requires holding the Access Point up against a T-bar of a suspended ceiling grid and twisting the case onto the T-bar.

2.5.1   Suspended Ceiling T-Bar Mount Procedure
Plastic Under Ceiling Mount A   Plastic Under Ceiling Mount B

1. If required, install and attach a Kensington security cable (customer supplied) to the unit's lock port.
2. Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source or use the PWRS-14000-148R power supply to supply power to the Access Point (once fully cabled).
3. Align the bottom of the T-bar with the back of the case.
4. Orient the case by its length, and the length of the T-bar.
5. Rotate the case 45 degrees clockwise, or about 10 o'clock.
6. Push the back of the case onto the bottom of the T-bar.
7. Rotate the case 45 degrees counter-clockwise. The clips click as they fasten to the T-bar.
8. Verify the unit has power by observing the LEDs.

> ⚠ **CAUTION**   If not using a 802.3af capable controller to power the Access Point, ensure only the designated power supply (PWRS-14000-148R) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the unit and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.
2.6 External Antenna Access Point Wall Mount Instructions

A wall mount deployment requires hanging the Access Point along its width or length using the pair of slots on the bottom of the unit. The Access Point can be mounted on to any plaster, wood or cement wall surface using the provided wall anchors.

2.6.1 Wall Mount Hardware

- Two customer provided wide-shoulder Phillips pan head self-tapping screws (M3.5 x 0.6 x 20 mm)
- Two wall anchors (customer supplied)
- Security cable (optional)

> **NOTE** The following screws are recommended: (ANSI Standard) #6-18 X 0.875in. Type A or AB Self-Tapping Screw, or (ANSI Standard Metric) M3.5 X 0.6 X 20mm Type D Self-Tapping Screw.

2.6.2 Wall Mount Procedure - New Installation

This section describes a new installation with no previous Access Point existing on the intended wall surface.

1. Attach the two provided mounting ears (using four ear mounting screws) to the two narrow ends of the Access Point. Align the ears using the built in ear alignment pin on the Access Point housing. Torque the screws to 6 lb-in.
2. Place the Access Point against the wall, ensuring the Access Point's logo is in the correct orientation.

3.   Mark the screw hole locations on a vertical axis using the ear's mounting holes.

4.   At each point, drill a hole in the wall and insert the anchor.

✓   ***NOTE***   When pre-drilling a hole the recommended hole size is 2.8mm (0.11in.).

---

5.   Place the Access Point on the anchor. Insert screws through the Access Point's mounting ears and into the anchor.

6.   If required, install and attach a Kensington security cable (customer supplied) to the unit's lock port.

7.   Attach an Ethernet cable from the Access Point to a controller with an 802.3af-compatible power source or use the PWRS-14000-148R power supply to supply power to the Access Point (once fully cabled).

8.   Attach appropriate antennas to the connectors.

9.   Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source.

10. Verify the Access Point is receiving power by observing that the LEDs are lit or flashing.

⚠   ***CAUTION***   If not using a 802.3af capable controller to power the Access Point, ensure only the designated power supply (PWRS-14000-148R) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the unit and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.

2.6.3   *Wall Mount Procedure - Existing Access Point Replacement*

An existing external antenna Access Point AP300 (WSAP-5100-100) or external antenna Access Point AP650 (AP-0650-660X0), installed on a wall (plenum installation), can be replaced by an AP-6522 Series Access Point. Simply remove the existing legacy Access Point from its mounting screws, leave the mounting hardware in place and install the new external antenna AP-6522 Series Access Point directly on to the existing mounting hardware. The cabling procedure for such a replacement is as described in the previous section.

2.7   External Antenna Access Point Suspended Ceiling T-Bar Mount

Ceiling mount requires holding the Access Point up against a T-bar of a suspended ceiling grid and twisting the case onto the T-bar. If deploying an external antenna Access Point on a ceiling T-Bar, the Access Point mounting kit (Part No. KT-135628-01) or ceiling mount hardware (SCT-2) is required.

2.7.1   Suspended Ceiling T-Bar Mount Procedure - Using Mounting Kit

The following installation uses the Access Point mounting kit (Part No. KT-135628-01) to deploy the Access Point on a ceiling T-Bar.

1. If required, install and attach a Kensington security cable (customer provided) to the unit's lock port.
2. Using only the mounting bracket from the mounting kit, rotate and click the mounting bracket into the mounting slots on the Access Point.
3. Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source or use the PWRS-14000-148R power supply to supply power to the Access Point (once fully cabled).
4. With the ceiling tile raised, slip the T-Bar bracket on to the exposed T-Bar flange.
5. Lower the ceiling tile and verify the stability of the T-Bar mounting bracket connection. There will be no stability in this assembly until the ceiling tile is lowered on to the T-Bar to secure the mounting hardware.
6. Verify the unit has power by observing the LEDs.

CAUTION   If not using an 802.3af capable controller to power the Access Point, ensure only the designated power supply (PWRS-14000-148R) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the unit and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.

2.7.2   Suspended Ceiling T-Bar Mount Procedure - Using Ceiling Hardware

The following installation uses the Access Point ceiling mounting kit (Part No. SCT-2) to deploy the Access Point on a ceiling T-Bar.

1. If required, install and attach a Kensington security cable (customer provided) to the unit's lock port.
2. Remove nut from the SCT-2 kit and place assembly and screw through Access Point mounting ear.
3. Place the clips from the SCT-2 ceiling mount kit over ceiling T-Bar.

4.   Tighten clips using provided nuts.

5.   Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source or use the PWRS-14000-148R power supply to supply power to the Access Point (once fully cabled).

6.   Attach appropriate antennas to the connectors.

7.   Attach an Ethernet cable from the Access Point to the controller with an 802.3af compatible power source.

8.   Verify the unit has power by observing the LEDs.
CAUTION   If not using an 802.3af capable controller to power the Access Point, ensure only the designated power supply (PWRS-14000-148R) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the unit and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.

2.8   External Antenna Suspended Ceiling Tile (Plenum) Mount

Ceiling mount requires placing the Access Point above suspended ceiling tile.

✓	**NOTE**	Notes or warnings about suspended ceiling mounts apply to all installations where the unit is placed on suspended ceiling tile.

⚠	**CAUTION**	Do not mount the Access Point directly to any suspended ceiling tile with a thickness less than 12.7mm (0.5in.) or a suspended ceiling tile with an unsupported span greater than 660mm (26in.). Fitting the Access Point with the supplied mounting ears and hanging the Access Point on a pipe or beam is strongly recommended.

2.8.1   Suspended Ceiling Mount Hardware

- Security cable (optional)
- Mounting ears
- Customer supplied pipe or channel clamps

2.8.2   Ceiling Mount Procedure

1. If possible, remove the ceiling tile from its frame and place it, finish side down, on a work surface.
2. If required, install and attach a Kensington security cable (customer provided) to the unit's lock port.
3. Place the Access Point on the ceiling tile or attach to a plenum beam or pipe using industry available clamps.
4. Attach appropriate antennas to the connectors.
5. Bring the tile into the ceiling space
6. Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source or use the PWRS-14000-148R power supply to supply power to the Access Point (once fully cabled).
7. Verify the Access Point is receiving power by observing the LEDs.
8. Place the ceiling tile back in its frame.

⚠	**CAUTION**	If not using an 802.3af capable controller to power the Access Point, ensure only the designated power supply (PWRS-14000-148R) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the unit and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.

2.9   External Antenna Access Point Antenna Options

Two antenna suites are supported for External Antenna Access Points. One antenna suite supporting the 2.4 GHz band and another antenna suite supporting the 5 GHz band. Select an antenna Access Point best suited to the intended operational environment of your Access Point.

The 2.4 GHz antenna suite includes the following Access Points:

Part Number	*Antenna Type*
ML-2452-APA2-01	Dipole Antenna
ML-2499-SD3-01R	Patch Antenna
ML-2499-HPA3-01R	Omni Antenna
ML-2452-PNA5-01R	Panel Antenna
ML-2452-PTA3M3-036	Omni Antenna
ML-2452-APAG2A1-01 (Black) ML-2452-APAG2A1-02 (White)	Dipole Antenna

The 5 GHz antenna suite includes the following Access Points:

Part Number	*Antenna Type*
ML-2452-APA2-01	Dipole Antenna
ML-5299-PTA1-01R	Patch Antenna
ML-5299-HPA1-01R	Omni Antenna
ML-2452-PNA5-01R	Panel Antenna
ML-2452-PTA3M3-036	Omni Antenna
ML-2452-APAG2A1-01 (Black) ML-2452-APAG2A1-02 (White)	Dipole Antenna

For up-to-date information on supported antennas and antenna specifications, please refer to the *Enterprise Wireless LAN Antenna Specification Guide*. For more information, refer to *www.zebra.com/support*.

2.10   LED Indicators

Both Integrated Antenna and External Antenna Access Points have LED activity indicators on the front of the case. With the External Antenna Access Points mounted above a ceiling, LEDs are at the center of an oval badge on the ceiling.
The LEDs provide a status display indicating error conditions, transmission, and network activity for the 5 GHz 802.11an (amber) radio or the 2.4 GHz 802.11bgn (green) radio.

Task	5 GHz Activity LED (Amber)	2.4 GHz Activity LED (Green)
Unadopted	Off	Blink interval at 5 times a second
Normal Operation	• If this radio band is enabled: Blink at 5 second interval • If this radio band is disabled: Off • If there is activity on this band: Blink interval at 1 time per second	• If this radio band is enabled: Blink at 5 second interval • If this radio band is disabled: Off • If there is activity on this band: Blink interval at 1 time per second
Firmware Update	On	Off
Sensor Mode	Blink interval at 5 times a second	Blink interval at 5 times a second

3   Basic Access Point Configuration

Once the Access Point is installed and powered on, complete the following steps to get the device up and running and access management functions:

1. Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source or use the PWRS-14000-148R power supply to supply power to the AP-6522 (once fully cabled).
   If your host system is a DHCP server, an IP address is automatically assigned to the Access Point and can be used for device connection. However, if a DHCP server is not available, you'll need to derive the IP address from the Access Point MAC address. Using this method, the last two bytes of the Access Point MAC address become the last two octets of the IP address. For example:

   MAC address - 00:C0:23:00:F0:0A
   Zero-Config IP address - 169.254.240.10

   To derive the Access Point's IP address using its MAC address:

   a. Open the Windows calculator be selecting *Start > All Programs > Accessories > Calculator*. This menu path may vary slightly depending on your version of Windows.
   b. With the Calculator displayed, select *View > Scientific*. Select the **Hex** radio button.
   c. Enter a hex byte of the Access Point's MAC address. For example, F0.
   d. Select the **Dec** radio button. The calculator converts F0 into 240. Repeat this process for the last Access Point MAC address octet.
2. Point the Web browser to the Access Point's IP address. The following login screen displays:

3. Enter the default username *admin* in the **Username** field.
4. Enter the default password *admin123* in the **Password** field.

5.   Click the **Login** button to load the management interface.

✓   *NOTE*   When logging in for the first time, you're prompted to change the
                    password to enhance device security in subsequent logins.

✓   *NOTE*   If you get disconnected when running the wizard, you can connect again
                    with the Access Point's actual IP address (once obtained) and resume the
                    wizard.

---

6.   If this is the first time the management interface has been accessed, the Initial Setup Wizard automatcally
     displays.

📋 **Function Highlight** ───

- Access Point Types: Virtual Controller AP, Standalone AP, or Dependent AP

- Networking Mode: Bridge or Router Operation

- LAN Configuration

- Radio Configuration

- WAN Configuration

- Wireless LAN Setup

- Location, Country Code, Time Zone, Date and Time

- Summary and Save/Commit

Choose One Type to Setup the Access Point

⦿ Typical Setup (Recommended)
     - The wizard uses as many default parameters as possible to simply the confiuration process.

◯ Advanced Setup
     - With this selection, you may configure the access point's LAN, WAN, Radio Mapping, Radius Server,
     WLAN, etc.

✓ | *NOTE* | The Initial Setup Wizard displays the same content for each Access Point model supported. The only difference being the number of radios configurable by model.

The Introduction screen displays the various actions that can be performed using the wizard under the **Function Highlight** field.

Use the **Choose One type to Setup the Access Point** field options to select the type of wizard to run. The **Typical Setup** is the recommended wizard. This wizard uses the default parameters for most of the configuration parameters and sets up a working network with the least amount of manual configuration.

The **Advanced Setup** wizard is for administrators who prefer more control over the different configuration parameters. A few more configuration screens are available for customization when the Advanced Setup wizard is used.

The first page of the *Initial Setup Wizard* displays the **Navigation Panel** and **Function Highlights** for the configuration activities comprising the Access Point's initial setup. This page also displays options to select the typical or advanced mode for the wizard.

The Navigation Panel for the Typical Setup Wizard displays the basic configuration options.

Navigation Panel

✓ **Introduction**

 Access Point Settings

 Network Topology

 LAN Configuration

 Wireless LAN Setup

 Summary and Commit

A green checkmark to the left of an item in the **Navigation Panel** defines the task as having its minimum required configuration set correctly. A red X defines a task as still requiring at least one parameter be defined correctly.

7. Select **Save/Commit** within each page to save the updates made to that page's configuration. Select **Next** to proceed to the next page listed in the Navigation Panel without saving your updates.

> *NOTE*   While you can navigate to any page in the navigation panel, you cannot complete the Initial AP Setup Wizard until each task in the Navigation Panel has a green checkmark.

For the purposes of this guide, use the **Typical Setup (Recommended)** option to simplify the process of getting the Access Point up and running quickly with a minimum number of changes to the Access Point's default configuration.

For information on using the Access Point's Advanced Setup option, refer to the *WiNG Access Point System Reference Guide* to familiarize yourself with the feature set supported by the WiNG operating system. The guide is available at *www.zebra.com/support*.

To configure the Access Point using the Typical Setup Wizard:

8. Select **Typical Setup** from the **Choose One type to Setup the Access Point** field on the Initial Setup Wizard.

9. The Typical Setup Wizard displays the **Access Point Settings** screen to define the Access Point's Standalone versus Virtual Controller AP functionality. This screen also enables selection of the country of operation for the Access Point.

Access Point Type Selection

○ Virtual Controller AP - When more than one access point is deployed, a single access point can function as a Virtual Controller AP and manage Dependent mode access points. The Virtual Controller AP can adopt and configure other like APs in a 24-cell deployment.

⦿ Standalone AP - Select this option to deploy this access point as an autonomous "fat" access point. A standalone AP isn't managed by a Virtual Controller AP, or adopted by a controller.

Country | Choose a Country Code   ▾ |

---

10. Select an **Access Point Type** from the following options:

    • *Virtual Controller AP* - When more than one Access Point is deployed, a single Access Point can function as a Virtual Controller AP. Up to 24 Access Points can be connected to, and managed by, a single Virtual Controller AP of the same Access Point model. These connected Access Points must be the same model as the Virtual Controller AP.

    • *Standalone AP* - Select this option to deploy this Access Point as an autonomous fat Access Point.

A Standalone AP isn't managed by a Virtual Controller AP, or adopted by a controller.

> **NOTE** If wanting to adopt the Access Point to a controller or service platform, use the controller or service platform's resident UI to connect to the Access Point, provision its configuration and administrate the Access Point's configuration.

> **NOTE** If designating the Access Point as a Standalone AP, the Access Point's UI should be used to define its device configuration, and not the CLI. The CLI provides the ability to define more than one profile and the UI does not. Consequently, the two interfaces cannot be used collectively to manage profiles without an administrator encountering problems.

11. Select the **Country Code** of the country where the Access Point is deployed. Selecting a proper country is a critical task while configuring the Access Point, as it defines the correct channels of operation and ensures compliance to the regulations of the selected country. This field is only available for the Typical Setup Wizard.

12. Select **Next** to set the Access Point's network mode.

13. The Typical Setup Wizard displays the **Network Topology** screen to define how the Access Point handles network traffic.

⌃ Network Topology ————————————————————————————————————

⦿ Router Mode - the access point routes traffic between the wireless network and the Internet or corporate network (WAN).
◯ Bridge Mode - In Bridge Mode, the access point depends on an external router for routingLAN and WAN traffic. Routing is generally used on one device, whereas bridging is typically used in a larger density network. Thus, select Bridge Mode when deploying this access point with numerous peer APs supporting clients on both the 2.4 and 5GHz radio bands.

14. Select an Access Point Mode from the available options.

- *Router Mode* -In Router Mode, the Access Point routes traffic between the local network (LAN) and the Internet or external network (WAN). Router mode is recommended in a deployment supported by just a single Access Point.

- *Bridge Mode* - In Bridge Mode, the Access Point depends on an external router for routing LAN and WAN traffic. Routing is generally used on one device, whereas bridging is typically used in a larger density network. Select Bridge Mode when deploying this Access Point with numerous peer Access Points supporting clients on both the 2.4GHz and 5GHz radio bands.

✓	***NOTE*** When Bridge Mode is selected, WAN configuration cannot be performed and the Typical Setup Wizard does not display the WAN configuration screen.

15. Select **Next**. The Typical Setup Wizard displays the **LAN Configuration** screen to set the Access Point's
     LAN interface configuration.

🖧 LAN Configuration

Please configure interface settings for LAN (VLAN 1) which will be used by wireless clients

⬤ Use DHCP   What is this?

⬤ Static IP Address/Subnet   What is this?   192. 168. 13 . 23 / 24 ▼ ✱

DHCP Server

☐ Use on-board DHCP server to assign IP addresses to wireless clients

Range   192. 168. 0 . 100 -- 192. 168. 0 . 200

Default Gateway   192. 168. 0 . 1

Domain Name Server (DNS)

☑ DNS Forwarding

Primary DNS [.   .   .   ]   Secondary DNS [.   .   .   ]

16. Set the following DHCP and Static IP Address/Subnet information for the LAN interface:
   - *Use DHCP* - Select the checkbox to enable an automatic network address configuration using the
     Access Point's DHCP server.
   - *Static IP Address/Subnet* - Enter an IP Address and a subnet for the Access Point's LAN interface. If
     Use DHCP is selected, this field is not available. When selecting this option, define the following *DHCP
     Server* and *Domain Name Server (DNS)* resources, as those fields will become enabled on the bottom
     portion of the screen.
      - *Use on-board DHCP server to assign IP addresses to wireless clients* - Select the checkbox to
        enable the Access Point's DHCP server to provide IP and DNS information to clients on the LAN
        interface.
      - *Range* - Enter a starting and ending IP Address range for client assignments on the LAN interface.
        Avoid assigning IP addresses from x.x.x.1 - x.x.x.10 and x.x.x.255, as they are often reserved for
        standard network services. This is a required parameter.
      - *Default Gateway* - Define a default gateway address for use with the default gateway. This is a
        required parameter.

- *DNS Forwarding* - Select this option to allow a DNS server to translate domain names into IP addresses. If this option is not selected, a primary and secondary DNS resource must be specified. DNS forwarding is useful when a request for a domain name is made but the DNS server, responsible for converting the name into its corresponding IP address, cannot locate the matching IP address.
  - *Primary DNS* - Enter an IP Address for the main Domain Name Server providing DNS services for the Access Point's LAN interface.
  - *Secondary DNS* - Enter an IP Address for the backup Domain Name Server providing DNS services for the Access Point's LAN interface.

17. Select **Next.** The Typical Setup Wizard displays the **Wireless LAN Setup** screen to set the Access Point's Wireless LAN interface configuration.

18. Set the following WLAN1 Configuration parameters:
- *SSID* - Configure the SSID for the WLAN.
- *WLAN Type* - Configure the encryption and authentication to use with this WLAN.
  - *No Authentication and No Encryption* - Configures a network without any authentication. This option also configures the network without encryption. This means that any data transmitted through the network is in plain text. Any device between end points can see the information transmitted. This is the least secure of all network configurations.
  - *Captive Portal Authentication and No Encryption* - Configures a network that uses a RADIUS server to authenticate users before allowing them on to the network. Once on the network, no encryption is used for the data being transmitted through the network. Select this option to use a Web page (either internally or externally hosted) to authenticate users before access is granted to the network.
  - *PSK authentication, WPA2 encryption* - Configures a network that uses PSK authentication and WPA2 encryption. Select this option to implement a pre-shared key that must be correctly shared between the Access Point and requesting clients using this WLAN.
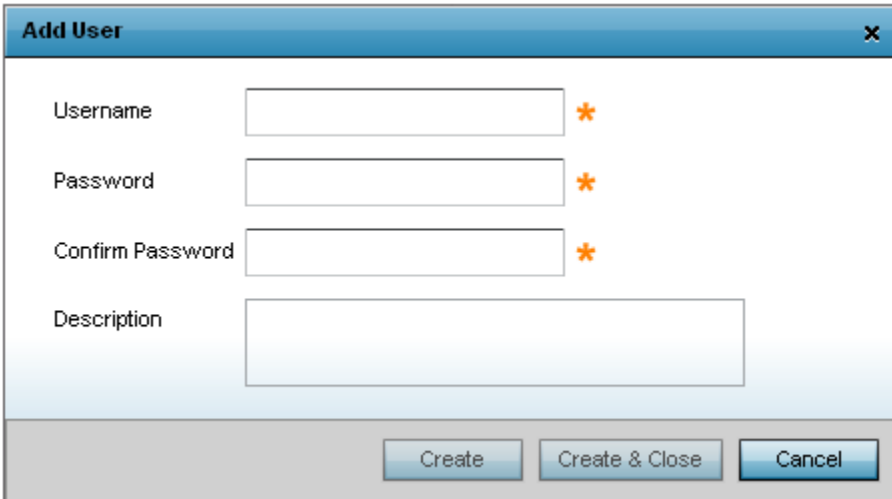

19. Select **Next**. The Typical Setup Wizard displays the **RADIUS Server Configuration** screen if required.

Otherwise, the *Typical Setup Wizard* displays the **Summary and Commit** screen.

20. Use the **Radius Server Configuration** screen to configure the users for the onboard RADIUS server. Use the screen to add, modify and remove RADIUS users.

Some WLANs require authentication using the on-board RADIUS server. User accounts must be added for all users that should be authorized by the server.

Username	Description

21. Select **Add User** to display the dialog to enter user information to add to the RADIUS server user database.

22. Enter the following user information:
    - *Username* - Provide a user name used to authenticate the user.
    - *Password* - Provide a password used to authenticate the user.
    - *Confirm Password* - Confirm the password by entering the same password as entered in the Password field.
    - *Description* - Provide a description to identify the user created in the RADIUS server database.

23. To create the entry in the RADIUS server database and add another user, select **Create**. To create the entry in the RADIUS server database and close the Add User dialog, select **Create & Close**.

24. Select **Modify User** on the RADIUS Server Configuration screen to modify information for an existing user from the RADIUS database. Highlight the user entry then select **Modify User**.

✓   *NOTE*   The *Username* cannot be modified with this dialog.

25. Select **Delete User** on the RADIUS Server Configuration screen to remove information for an existing user from the RADIUS database. Highlight the user entry and select **Delete User**.

26. Select **Confirm** on the dialog displayed. The entry for the user is removed from the RADIUS database.

27. To dismiss the dialog without adding, modifying or removing entries in the RADIUS server database, select **Cancel**.

28. Select **Next**. The Typical Setup Wizard displays the **Summary and Commit** screen to summarize the screens (pages) and settings updated using the Typical Setup Wizard.

    Port to External   GE1 Port

WLAN Configuration

No user intervention or additional settings are required. Its an additional means of validating the Access Point's updated configuration before it's deployed. However, if a screen displays settings not intended as part of the initial configuration, then any screen can be selected again from within the Navigation Panel and its settings modified accordingly.

29. If the configuration displays as intended, select **Save/Commit** to implement these settings to the Access Point's configuration. If additional changes are warranted based on the summary, either select the target page from the **Navigational Panel**, or use the **Back** and **Next** buttons to scroll to the target screen.

4   Specifications

4.1   Integrated Antenna Access Point Electrical Characteristics

An AP-6522 Series Integrated Antenna Access Point has the following electrical characteristics:

Operating Current & Voltage	12VDC, 1A (accessory power connector)
	48V,0.25A (PoE connector)

4.2   Integrated Antenna Access Point Physical Characteristics

An AP-6522 Series Integrated Antenna Access Point has the following physical characteristics:

Dimensions	9.38 inches x 7.5 inches x 1.38 inches
	23.82 cm x 19.50 cm x 3.50 cm
Housing	Plastic
Weight	0.90 lbs / 0.40 kg
Operating Temperature	32°F to 104°F/0°C to 40°C
Storage Temperature	-40°F to 185°F/-40°C to 85°C
Operating Humidity	5 to 95% Relative Humidity non-condensing
Storage Humidity	85% Relative Humidity non-condensing
Operating Altitude (max)	8,000 ft @ 28C
Storage Altitude (max)	30,000 ft @ 12C
Electrostatic Discharge	+/-15kV Air and +/-8kV Contact @ 50% Relative Humidity

4.3   External Antenna Access Point Electrical Characteristics

An AP-6522 Series External Antenna Access Point has the following electrical characteristics:

Operating Current & Voltage	12VDC, 1A (accessory power connector)
	48V,0.25A (PoE connector)

4.4   External Antenna Access Point Physical Characteristics

An AP-6522 Series External Antenna Access Point has the following physical characteristics:

Dimensions	7.88 inches x 5.00 inches x 1.00 inches
	20.01 cm x 12.70 cm x 2.54 cm
Housing	Metal
Weight	1.45 lbs / 0.65 kg
Operating Temperature	32°F to 104°F/0°C to 40°C
Storage Temperature	-40°F to 185°F/-40°C to 85°C
Operating Humidity	5 to 95% Relative Humidity non-condensing
Storage Humidity	85% Relative Humidity non-condensing
Operating Altitude (max)	8,000 ft @ 28C
Storage Altitude (max)	30,000 ft @ 12C
Electrostatic Discharge	+/-15kV Air and +/-8kV Contact @ 50% Relative Humidity

4.5   Radio Characteristics

AP-6522 Series Access Points have the following radio characteristics:

Operating Channels	All channels from 4920 MHz to 5825 MHz except channel 52 -64
	Channels 1-13 (2412-2472 MHz)
	Channel 14 (2484 MHz) Japan only
	Actual operating frequencies depend on regulatory approval for the country of use.
Data Rates Supported	802.11b: 1,2,5.5,11Mbps
	802.11g: 1,2,5.5,11,6,9,12,18,24,36,48, and 54Mbps
	802.11a: 6,9,12,18,24,36,48, and 54Mbps
	802.11n: MCS 0-15 up to 300Mbps
Wireless Medium	*Direct Sequence Spread Spectrum* (DSSS),
	Orthogonal Frequency Division Multiplexing (OFDM)
	Spatial multiplexing (MIMO)
Network Standards	802.11a, 802.11b, 802.11g, 802.3, 802.11n (Draft 2.0)
Maximum Available Transmit Power	Maximum available conducted transmit power per chain: 2.4 GHz: 21dBm
	Maximum available conducted transmit power all chains: 2.4 GHz: 24dBm
	Maximum available conducted transmit power per chain: 5 GHz: 19dBm
	Maximum available conducted transmit power all chains: 5 GHz: 22dBm
Transmit Power Adjustment	1dB increments

5   Regulatory Information

This guide applies to Model Number AP-6522. The AP-6522 Access Point is approved under MODEL: AP-0622.

All Zebra devices are designed to be compliant with rules and regulations in locations they are sold and will be labeled as required.

Any changes or modifications to Zebra equipment, not expressly approved by Zebra, could void the user's authority to operate the equipment.

Zebra devices are professionally installed, the Radio Frequency Output Power will not exceed the maximum allowable limit for the country of operation.

Antennas: Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could cause damage and may violate regulations.

This device is only to be used with a Symbol Wireless Switch.

5.1   Country Approvals

Regulatory markings, subject to certification, are applied to the device signifying the radio(s) is/are approved for use in the following countries: United States, Canada, Japan, China, S. Korea, Australia, and rope.

Please refer to the Declaration of Conformity (DoC) for details of other country markings. This is available at: *www.zebra.com/doc*.

Note: For 2.4GHz or 5GHz Products: rope includes, Austria, Belgium, Bulgaria, Czech Republic, Cyprus, Denmark, Estonia, Finland. For 2.4GHz or 5GHz Products: rope includes, Austria, Belgium, Bulgaria, Czech Republic, Cyprus, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Operation of the device without regulatory approval is illegal.

5.2 Health and Safety Recommendations

5.2.1 Country Selection

Select only the country in which you are using the device. Any other selection will make the operation of this device illegal.

5.2.2 Frequency of Operation – FCC and IC

You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles (such as grain, dust, or metal powders).

5 GHz Only

The use in the UNII (Unlicensed National Information Infrastructure) band 1 (5150-5250 MHz) is restricted to Indoor Use Only; any other use will make the operation of this device illegal.

Industry Canada Statement:

Caution: The device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-Channel mobile satellite systems. High power radars are allocated as primary users (meaning they have priority) of 5250-5350 MHz and 5650-5850 MHz and these radars could cause interference and/or damage to LE-LAN devices.

Avertissement: Le dispositif fonctionnant dans la bande 5150-5250 MHz est réservé uniquement pour une utilisation à l'intérir afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux.

Les utilisatrs de radars de haute puissance sont désignés utilisatrs principaux (c.-à-d., qu'ils ont la priorité) pour les bands 5250-5350 MHz et 5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

5.3 Health and Safety Recommendations

5.3.1 Warnings for Use of Wireless Devices

 Please observe <u>all</u> warning notices with regard to the usage of wireless devices.

5.3.2 Potentially Hazardous Atmospheres - Fixed Installations

You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles (such as grain, dust, or metal powders).

5.3.3   Safety in Hospitals

Wireless devices transmit radio frequency energy and may affect medical electrical equipment. When installed adjacent to other equipment, it is advised to verify that the adjacent equipment is not adversely affected.

Pacemakers

Pacemaker manufacturers recommended that a minimum of 15cm (6 inches) be maintained between a handheld wireless device and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with independent research and recommendations by Wireless Technology Research.

Persons with Pacemakers:

• Should ALWAYS keep the device more than 15cm (6 inches) from their pacemaker when turned ON.

• Should not carry the device in a breast pocket.

• Should use the ear furthest from the pacemaker to minimize the potential for interference.

• If you have any reason to suspect that interference is taking place, turn OFF your device.

Other Medical Devices

Please consult your physician or the manufacturer of the medical device, to determine if the operation of your wireless product may interfere with the medical device.

5.4   RF Exposure Guidelines

5.4.1   Reducing RF Exposure - Use Properly

Only operate the device in accordance with the instructions supplied.

5.4.2   International

The device complies with internationally recognized standards covering human exposure to electromagnetic fields from radio devices. For information on "International" human exposure to electromagnetic fields refer to the *Declaration of Conformity* (DoC) at: *www.zebra.com/doc*.

5.4.3

Remote and Standalone Antenna Configurations

To comply with RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons.

5.4.4   US and Canada

Co-located statement

To comply with FCC RF exposure compliance requirement, the antennas used for this transmitter must not be co-located or operating in conjunction with any other transmitter/antenna except those already approved in this filling.

Remote and Standalone Antenna Configurations

To comply with FCC RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons.

5.5   Power Supply

Use ONLY a LISTED, Type no. PWRS-14000-148R (12VDC @ 4.16A), direct plug-in power supply, marked Class 2 (IEC60950-1, SELV).

This device can be powered from a 802.3af compliant power source which is certified by the appropriate agencies.

Use of alternative Power Supply will invalidate any approvals given to this unit and may be dangerous.

5.6   Wireless Devices - Countries

5.6.1   Country Selection

Select only the country in which you are using the device. Any other selection will make the operation of this device illegal.

✓	**NOTE**	The US only models (AP-6522-66030-US and AP-6522-66040-US) have the country code permanently set to the US. The WR models (AP-6522-66030-WR and AP-6522-66040-WR) cannot be configured for use in the US.

5.6.2   Operation in the US and Canada

The use on UNII (Unlicensed National Information Infrastructure) Band 1 5150-5250 MHz is restricted to indoor use only, any other use will make the operation of this device illegal.

The available channels for 802.11 bg operation in the US are Channels 1 to 11. The range of channels is limited by firmware.

5.6.3   Radio Frequency Interference Requirements—FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions,

may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help.

Radio Transmitters (Part 15)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

5.6.4   Radio Frequency Interference Requirements – Canada

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Radio Transmitters

For RLAN Devices:

The use of 5 GHz RLAN's, for use in Canada, have the following restrictions:

- Restricted Band 5.60 – 5.65 GHz

This device complies with RSS 210 of Industry Canada. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux dx conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

Label Marking: The Term "IC:" before the radio certification signifies that Industry Canada technical specifications were met.

CE 5.7   CE Marking and European Economic Area (EEA)

The use of 2.4GHz RLAN's, for use through the EEA, have the following restrictions:

- Maximum radiated transmit power of 100 mW EIRP in the frequency range 2.400 -2.4835 GHz.
- France outside usage, the equipment is restricted to 2.400-2.45 GHz frequency range.
- Italy requires a user license for outside usage.

5.8   Statement of Compliance

Zebra hereby declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. A Declaration of Conformity may be obtained from *www.zebra.com/doc*.

5.9   Korea Warning Statement for Class B ITE

기 종 별	사 용 자 안 내 문
B급 기기〈 (가정용 방송통신기기)	이 기기는 가정용 (B급) 으로 전자파적합등록을 한 기기로서 주로 가정에서 사용하는 것을 목적 으로 하며 , 모든 지역에서 사용할 수 있습니다
Class B (Broadcasting Communication Device for Home Use)	This device obtained EMC registration mainly for home use (Class B) and may be used in all areas.

5.10   Other Countries

Australia

Use of 5GHz RLAN's in Australia is restricted in the following band 5.50 – 5.65GHz.

Brazil

Declarações Regulamentares para AP-6522 - Brasil

Nota: A marca de certificação se aplica ao Transceptor, modelo AP-6522. Este equipamento opera em caráter secundário, isto é, não tem direito a proteção contra interferência prejudicial, mesmo de estações do mesmo tipo, e não pode causar interferência a sistemas operando em caráter primário. Para maiores informações sobre ANATEL consulte o site: *www.anatel.gov.br*

Chile

Este equipo cumple con la Resolución No 403 de 2008, de la Subsecretaria de telecomunicaciones, relativa a radiaciones electromagnéticas.

Mexico

Restrict Frequency Range to: 2.450 – 2.4835 GHz.

6 Support

If you have a problem with your equipment, contact support for your region.

Contact information is available at: *www.zebra.com/support*.

When contacting support, please provide the following information:

• Serial number of the unit

• Model number or product name

• Software type and version number

Support responds to calls by e-mail, telephone, or fax within the time limits set forth in support agreements. If you purchased your product from a business partner, contact that business partner for support.

6.1 Customer Support Web Sites

Support located at: *www.zebra.com/support* provides information and online assistance including developer tools, software downloads, product manuals and online repair requests.

6.2 Manuals

Documentation is available at: *www.zebra.com/support*.
