Problems Resolved in This Release

Work Item Number	Description
Wi00939998	Security vulnerability: User is able to change the admin password by using simple script This vulnerability allows remote attackers to execute arbitrary code on vulnerable installations of Nortel/Avaya Identity Engines Ignition Server. Authentication is not required to exploit this vulnerability. 7.0.2 Release fixes the flaw within the AdminAccountManager process, which listens for GIOP requests over TCP ports 23456 and 23457 (SSL). The AdminAccountManager will block a remote attacker from changing the administrative password.

8. Upgrade procedure

Note: This upgrade procedure is only applicable for those who're upgrading from 7.0.0 or 7.0.1 release. If you're running any older version and would like to upgrade to 7.0.2, you must first upgrade to 7.0.0 release. Refer to AIEIS 7.0 release notes for more information on licensing requirements & upgrade procedure.

Follow the instructions given below before proceeding with the upgrade.

- Please make sure that the current system is running 7.0.0 or 7.0.1 build and has a valid 7.0 Base license.
- It is strongly recommended that the underlying OS be upgraded as well before proceeding. Please refer to documentation on upgrading the OS using the provided package file.
- Take a backup of entire VM using the VMware Backup & restore utility prior to the upgrade.
 - *It's highly recommended to take a backup of entire 7.0 VM so that user can revert to the backed up VM, if needed.*
- Take a backup of the policy configuration data from the Dashboard.
- Close the Dashboard and install 7.0.2 Dashboard.
- From the newly installed Dashboard, upgrade the Ignition Server to release 7.0.2 as mentioned in the '*Ignition Server – Administration Guide section Activating a firmware image*'
