| Contacting Extreme Technical Support..... | 17 |
| About This Document..... | 19 |
| What's new in this document..... | 19 |
| Supported hardware and software..... | 19 |
| Supported software..... | 19 |
| Overview..... | 21 |
| Introduction..... | 21 |
| Obtaining and installing the NetIron MIBs..... | 21 |
| Downloading the MIB from the Technical Support website..... | 21 |
| Downloading the MIB from the Extreme FTP site..... | 21 |
| Importing the NetIron MIB into a UNIX environment..... | 21 |
| Reloading MIBs into a third-party NMS | 22 |
| Standard objects..... | 22 |
| Proprietary objects..... | 22 |
| SNMP support | 22 |
| Supported Standard MIBs..... | 23 |
| Supported on Extreme NetIron devices..... | 24 |
| RFC compliance - management..... | 25 |
| IEEE standards..... | 26 |
| LLDP MIB support..... | 26 |
| LLDP\LLDP-MED MIB support..... | 26 |
| RFC 1493: Definitions of Managed Objects for Bridges..... | 26 |
| RFC 1757: Remote Network Monitoring Management Information Base..... | 27 |
| RFC 1850: OSPF Version 2 Management Information Base..... | 28 |
| RFC 2096: IP Forwarding Table MIB..... | 28 |
| RFC 2233: The Interfaces Group MIB using SMIv2..... | 29 |
| RFC 2787: Definitions of Managed Objects for the Virtual Router Redundancy Protocol..... | 29 |
| VRRP operations table (vrrpOperTable)..... | 29 |
| VRRP associated IP address table (vrrpAssolpAddrTable)..... | 30 |
| VRRP router statistics (vrrpStatistics)..... | 30 |
| VRRP router statistics (vrrpRouterStatsTable)..... | 30 |
| Notifications..... | 31 |
| RFC 2819: Remote Network Monitoring Management Information Base..... | 31 |
| History control group..... | 32 |
| Ethernet history group..... | 32 |
| Alarm group..... | 32 |
| Event group..... | 33 |
| RFC 2863: The Interfaces Group MIB..... | 33 |

| | |
|--------------------------------------------------------------------------------------------------------------------------------|----|
| ifIndex..... | 33 |
| ifType for interfaces..... | 34 |
| Statistics for virtual routing interfaces on 8x10 modules..... | 34 |
| Preserved SNMP statistics on interfaces..... | 36 |
| RFC 2932: IPv4 Multicast Routing MIB..... | 40 |
| IP multicast scalar..... | 40 |
| ipMRouteTable (IP multicast route table)..... | 41 |
| ipMRouteNextHopTable (IP multicast route next hop table)..... | 42 |
| ipMRouteInterfaceTable (IP multicast route interface table)..... | 42 |
| RFC 2933: Internet Group Management Protocol MIB..... | 43 |
| igmpInterfaceTable (IGMP interface table)..... | 43 |
| igmpCacheTable (IGMP cache table)..... | 44 |
| RFC 2934: Protocol Independent Multicast MIB for IPv4..... | 45 |
| pimInterfaceTable (PIM interface table)..... | 45 |
| pimNeighborTable (PIM neighbor table)..... | 45 |
| pimIpMRouteTable (PIM IP multicast route table)..... | 46 |
| pimIpMRouteNextHopTable (PIM IP multicast route next hop table)..... | 46 |
| pimRpTable (PIM RP table) | 47 |
| pimRpSetTable (PIM RP set table)..... | 47 |
| pimCandidateRPTable (PIM candidate-RP table)..... | 47 |
| pimComponentTable (PIM component table)..... | 48 |
| RFC 3176: InMon Corporation's sFlow: A Method for Monitoring Traffic in Switched and Routed Networks..... | 48 |
| RFC 3289: Management Information Base for the Differentiated Services Architecture..... | 49 |
| diffServMultiFieldClfrTable..... | 49 |
| RFC 3415: SNMP-VIEW-BASED-ACM-MIB..... | 50 |
| RFC 3418: Management Information Base (MIB) for the SNMP..... | 50 |
| RFC 3584: SNMP-COMMUNITY-MIB..... | 51 |
| RFC 3635: Definitions of Managed Objects for the Ethernet-like interface types | 51 |
| dot3StatsTable..... | 51 |
| dot3ControlTable | 52 |
| dot3PauseTable | 52 |
| dot3HCStatsTable | 52 |
| RFC 3813: Multiprotocol Label Switching (MPLS) Label Switching Router (LSR) Management Information Base (MIB)..... | 53 |
| MPLS interface table objects..... | 53 |
| MPLS in-segment table objects | 53 |
| MPLS in-segment performance table objects..... | 54 |
| MPLS out-segment table objects..... | 54 |
| MPLS cross-connect table objects..... | 54 |
| MPLS label stack scalar object..... | 55 |
| RFC 3815: Definitions of Managed Objects for the Multiprotocol Label Switching (MPLS), Label Distribution Protocol (LDP) | 55 |
| mplsLdpLsr objects..... | 55 |
| mplsLdpEntity objects..... | 55 |
| mplsLdpEntity table..... | 55 |
| mplsLdpEntityStats table..... | 56 |
| mplsLdpSession objects..... | 57 |
| mplsLdpPeer table..... | 57 |
| mplsLdpSession table..... | 58 |
| mplsLdpSessionStats table..... | 58 |
| mplsLdpHelloAdjacency table..... | 58 |
| mplsFec objects..... | 58 |

| | |

| • Contacting Extreme Technical Support..... | 17 |

Document conventions

The document conventions describe text formatting conventions, command syntax conventions, and important notice formats used in Extreme technical documentation.

Notes, cautions, and warnings

Notes, cautions, and warning statements may be used in this document. They are listed in the order of increasing severity of potential hazards.

NOTE

A Note provides a tip, guidance, or advice, emphasizes important information, or provides a reference to related information.

ATTENTION

An Attention statement indicates a stronger note, for example, to alert you when traffic might be interrupted or the device might reboot.

CAUTION

A Caution statement alerts you to situations that can be potentially hazardous to you or cause damage to hardware, firmware, software, or data.

DANGER

A Danger statement indicates conditions or situations that can be potentially lethal or extremely hazardous to you. Safety labels are also attached directly to products to warn of these conditions or situations.

Text formatting conventions

Text formatting conventions such as boldface, italic, or Courier font may be used to highlight specific words or phrases.

| Format | Description |
|--------|-------------|
|--------|-------------|

| | |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| bold text | Identifies command names. Identifies keywords and operands. Identifies the names of GUI elements. Identifies text to enter in the GUI. |
| <i>italic</i> text | Identifies emphasis. Identifies variables. |
| Courier font | Identifies document titles. Identifies CLI output. |

| Format | Description |
|--------|-------------------------------------|
| | Identifies command syntax examples. |

Command syntax conventions

Bold and italic text identify command syntax components. Delimiters and operators define groupings of parameters and their logical relationships.

| Convention | Description |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bold text | Identifies command names, keywords, and command options. |
| <i>italic</i> text | Identifies a variable. |
| [] | Syntax components displayed within square brackets are optional. |
| { x y z } | Default responses to system prompts are enclosed in square brackets. |
| x y | A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options. |
| < > | A vertical bar separates mutually exclusive elements. |
| ... | Nonprinting characters, for example, passwords, are enclosed in angle brackets. |
| \ | Repeat the previous element, for example, <i>member</i> [<i>member</i> ...]. |
| | Indicates a "soft" line break in command examples. If a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash. |

Extreme resources

Visit the Extreme website to locate related documentation for your product and additional Extreme resources.

White papers, data sheets, and the most recent versions of Extreme software and hardware manuals are available at www.extremenetworks.com. Product documentation for all supported releases is available to registered users at www.extremenetworks.com/support/documentation.

Document feedback

Quality is our first concern at Extreme, and we have made every effort to ensure the accuracy and completeness of this document. However, if you find an error or an omission, or you think that a topic needs further development, we want to hear from you.

You can provide feedback in two ways:

- Use our short online feedback form at <http://www.extremenetworks.com/documentation-feedback-pdf/>
- Email us at internalinfodev@extremenetworks.com

Provide the publication title, part number, and as much detail as possible, including the topic heading and page number if applicable, as well as your suggestions for improvement.

Contacting Extreme Technical Support

As an Extreme customer, you can contact Extreme Technical Support using one of the following methods: 24x7 online or by telephone. OEM customers should contact their OEM/solution provider.

If you require assistance, contact Extreme Networks using one of the following methods:

- [GTAC \(Global Technical Assistance Center\)](#) for immediate support
 - Phone: 1-800-998-2408 (toll-free in U.S. and Canada) or +1 408-579-2826. For the support phone number in your country, visit: www.extremenetworks.com/support/contact.
 - Email: support@extremenetworks.com. To expedite your message, enter the product name or model number in the subject line.
- [GTAC Knowledge](#) - Get on-demand and tested resolutions from the GTAC Knowledgebase, or create a help case if you need more guidance.
- [The Hub](#) - A forum for Extreme customers to connect with one another, get questions answered, share ideas and feedback, and get problems solved. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.
- [Support Portal](#) - Manage cases, downloads, service contracts, product licensing, and training and certifications.

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number and/or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any action(s) already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

About This Document

|----------------------------------------|----|
| • What's new in this document..... | 19 |
| • Supported hardware and software..... | 19 |

What's new in this document

On October 30, 2017, Extreme Networks, Inc. acquired the data center networking business from Brocade Communications Systems, Inc. This document has been updated to remove or replace references to Brocade Communications, Inc. with Extreme Networks, Inc., as appropriate.

Supported hardware and software

The hardware platforms in the following table are supported by this release of this guide.

TABLE 1 Supported devices

| ExtremeRouting XMR Series | ExtremeRouting MLX Series | ExtremeSwitching CES 2000 Series | ExtremeRouting CER 2000 Series |
|---------------------------|---------------------------|----------------------------------|--------------------------------|
| XMR 4000 | MLX-4 | CES 2024C | CER 2024C |
| XMR 8000 | MLX-8 | CES 2024F | CER-RT 2024C |
| XMR 16000 | MLX-16 | CES 2048C | CER 2024F |
| XMR 32000 | MLX-32 | CES 2048CX | CER-RT 2024F |
| | MLXe-4 | CES 2048F | CER 2048C |
| | MLXe-8 | CES 2048FX | CER-RT 2048C |
| | MLXe-16 | | CER 2048CX |
| | MLXe-32 | | CER-RT 2048CX |
| | | | CER 2048F |
| | | | CER-RT 2048F |
| | | | CER 2048FX |
| | | | CER-RT 2048FX |

Supported software

For the complete list of supported features and the summary of enhancements and configuration notes for this release, refer to the *Extreme NetIron Release Notes*.

Overview

| | |
|--------------------------------------------------|----|
| • Introduction..... | 21 |
| • Obtaining and installing the NetIron MIBs..... | 21 |
| • Standard objects..... | 22 |
| • Proprietary objects..... | 22 |
| • SNMP support | 22 |

Introduction

The Management Information Base (MIB) is a database of objects that can be used by a Network Management System (NMS) to manage and monitor devices on the network. The MIB can be retrieved by a network management system that uses Simple Network Management Protocol (SNMP). The MIB structure determines the scope of management access allowed by a device. By using SNMP, a manager application can issue read or write operations within the scope of the MIB.

Obtaining and installing the NetIron MIBs

You can obtain the NetIron MIBs by downloading the file from the Extreme Technical Support website.

After obtaining the MIB, follow the instructions for your network management system (NMS) to be able to use the MIB with your system.

Downloading the MIB from the Technical Support website

To download the MIB from the Extreme Technical Support website, you must have a user name and password to access the Extreme support site and perform the following steps.

1. Go to <http://www.extremenetworks.com> in your Web browser.
2. Log in with your user name and password.
3. Click the Downloads tab, and then click the Knowledge Portal link.
4. Log in to the Knowledge Portal, and then click the Software tab.
5. Click the product name. Each product release has a link for its corresponding MIB.
6. Navigate to the link for the MIB and either open the file or save it to disk.

Downloading the MIB from the Extreme FTP site

You can also download the MIB from the Knowledge Portal. Contact Extreme Technical Support for details. For the latest edition of this document, which contains the most up-to-date information, refer to the Product Manuals tab at <http://www.extremenetworks.com>.

Importing the NetIron MIB into a UNIX environment

You can import the IP MIB into third-party network management applications, such as HP OpenView. By default, the IP MIB files are in DOS ASCII format that uses the following characters:

- CR/LF - Indicates the end of a line
- ^Z - Indicates the end of a file

However, in a UNIX environment, the characters LF are used to indicate the end of a line. No character indicates the end of a file. Thus, if you need to import the IP MIB into a UNIX environment, you must use a tool that converts the DOS ASCII into UNIX ASCII, such as the dos2unix tool.

Reloading MIBs into a third-party NMS

Third-party network management systems, such as HP OpenView may have problems reloading MIB files. Ensure that you must upload the following when reloading the Extreme IP MIBs:

- Unload the Enterprise MIBs which were installed from the previous upgrade before reloading any new Enterprise MIB file.
- Unload the Standard MIBs which were installed from the previous upgrade before reloading any new Standard MIB file.

Standard objects

The NetIron IP MIB supports certain standard MIB objects, which are derived from Request for Comments (RFCs) documents. Refer to [Supported Standard MIBs](#) on page 23 for details on the supported standard MIBs.

Proprietary objects

Proprietary objects are MIB objects that have been developed specifically to manage Extreme IP devices. The object identifier (OID) for these MIB objects begin with `1.3.6.1.4.1.1991`. In this manual, the prefix `1.3.6.1.4.1.1991` is represented by the characters `brcdlp`.

For example, the OID for the object `snChassis` is `1.3.6.1.4.1.1991.1.1.1`, but documented as `brcdlp.1.1.1` in this manual.

SNMP support

The SNMPv3 engine is supported on the Extreme IP devices. The SNMPv3 engine can accept V1, V2c, and V3 packet formats.

NOTE

If the SNMP GET-BULK request with a high count of max-repetitions, then the device will respond with the total count of 10.

Supported Standard MIBs

| | |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| • Supported on Extreme Netiron devices..... | 24 |
| • RFC compliance - management..... | 25 |
| • IEEE standards..... | 26 |
| • LLDP support..... | 26 |
| • LLDP\LLDP-MED MIB support..... | 26 |
| • RFC 1493: Definitions of Managed Objects for Bridges..... | 26 |
| • RFC 1757: Remote Network Monitoring Management Information Base..... | 27 |
| • RFC 1850: OSPF Version 2 Management Information Base..... | 28 |
| • RFC 2096: IP Forwarding Table MIB..... | 28 |
| • RFC 2233: The Interfaces Group MIB using SMIv2..... | 29 |
| • RFC 2787: Definitions of Managed Objects for the Virtual Router Redundancy Protocol..... | 29 |
| • RFC 2819: Remote Network Monitoring Management Information Base..... | 31 |
| • RFC 2863: The Interfaces Group MIB..... | 33 |
| • RFC 2932: IPv4 Multicast Routing MIB..... | 40 |
| • RFC 2933: Internet Group Management Protocol MIB..... | 43 |
| • RFC 2934: Protocol Independent Multicast MIB for IPv4..... | 45 |
| • RFC 3176: InMon Corporation's sFlow: A Method for Monitoring Traffic in Switched and Routed Networks..... | 48 |
| • RFC 3289: Management Information Base for the Differentiated Services Architecture..... | 49 |
| • RFC 3415: SNMP-VIEW-BASED-ACM-MIB..... | 50 |
| • RFC 3418: Management Information Base (MIB) for the SNMP..... | 50 |
| • RFC 3584: SNMP-COMMUNITY-MIB..... | 51 |
| • RFC 3635: Definitions of Managed Objects for the Ethernet-like interface types | 51 |
| • RFC 3813: Multiprotocol Label Switching (MPLS) Label Switching Router (LSR) Management Information Base (MIB)..... | 53 |
| • RFC 3815: Definitions of Managed Objects for the Multiprotocol Label Switching (MPLS), Label Distribution Protocol (LDP) | 55 |
| • RFC 4022: Management Information Base for the Transmission Control Protocol (TCP) | 59 |
| • RFC 4087: IP Tunnel MIB..... | 60 |
| • RFC 4113: Management Information Base for the User Datagram Protocol (UDP)..... | 62 |
| • RFC 4133: Entity MIB (Version 3)..... | 62 |
| • RFC 4273: Definitions of Managed Objects for BGP-4..... | 63 |
| • draft-ietf-idr-bgp4-mibv2-12 MIB..... | 65 |
| • RFC 4292: IP Forwarding Table MIB..... | 73 |
| • RFC 4293: Management Information Base for the Internet Protocol (IP)..... | 73 |
| • RFC 4363: Definitions of Managed Objects for Bridges with Traffic Classes, Multicast Filtering, and Virtual LAN Extensions..... | 77 |
| • RFC 4444: Management Information Base for Intermediate System to Intermediate System (IS-IS)..... | 79 |
| • RFC 4807: IPsec Security Policy Database Configuration MIB..... | 81 |
| • RFC 5643: Management Information Base for OSPFv3..... | 83 |
| • RFC 7420 - Path Computation Element Communication Protocol (PCEP) Management Information Base (MIB)..... | 90 |
| • MEF Service OAM PM..... | 96 |
| • IEEE8021-CFM-MIB..... | 106 |
| • IEEE8021-SECY-MIB..... | 111 |
| • IEEE8023-LAG-MIB..... | 114 |
| • LLDP-MIB..... | 115 |
| • LLDP-EXT-DOT1-MIB..... | 118 |
| • LLDP-EXT-DOT3-MIB..... | 121 |

Supported on Extreme NetIron devices

The following RFCs are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

- 1213 - MIB II
- 1493 - Bridge MIB (excluding filtering of objects)
- 1724 - RIPv2 MIB (supports only rip2Globals and rip2IfStatTable (SET operation is not supported))

NOTE

Beginning from NetIron 05.9.00 release, the objects or tables from RFC 1724 (rip2GlobalRouteChanges, rip2GlobalQueries , rip2IfStatTable, and rip2IfConfTable) supports VRF.

- 1850 - OSPF Version 2 Management Information Base
- 2465 - Management Information Base for IP Version 6: Textual Conventions and General Group

NOTE

Beginning from NetIron 05.9.00 release, The MIB objects of **ipv6IfTable**, **ipv6AddrPrefixTable**, **ipv6AddrTable**, **ipv6RouteTable**, and **ipv6NetToMediaTable** has VRF support.

- 2674 - 802.1Q and 802.1p Bridge MIB
- 2787 - VRRP MIB (Refer to [RFC 2787: Definitions of Managed Objects for the Virtual Router Redundancy Protocol](#) on page 29 for details.)
- 2819 - Remote Network Monitoring Management Information Base
- 2863 - Interfaces Group MIB
- 2932 - Multicast Routing MIB for IPv4 (Refer to [RFC 2932: IPv4 Multicast Routing MIB](#) on page 40 for details.)
- 2933 - IGMP MIB (Refer to [RFC 2933: Internet Group Management Protocol MIB](#) on page 43 for details.)
- 2934 - PIM MIB (Refer to [RFC 2934: Protocol Independent Multicast MIB for IPv4](#) on page 45 details.)
- 3289 - Management Information Base for the Differentiated Services Architecture
- 3418 - Management Information Base (MIB) for the SNMP (Refer to [RFC 3418: Management Information Base \(MIB\) for the SNMP](#) on page 50 for details.)
- 3592 - SDH/SONET MIB (partially supported)
- 3635 - Ethernet-Like MIB (Replaces RFC 2665)
- 3812 - MPLS TE Standard MIB
- 3813 - Multiprotocol Label Switching (MPLS) Label Switching Router (LSR) Management Information Base (MIB)
- 4022 - Management Information Base for the Transmission Control Protocol (TCP)
- 4087 - IP Tunnel MIB
- 4113 - Management Information Base for the User Datagram Protocol (UDP)
- 4292 - IP Forwarding MIB
- 4293 - Management Information Base for the Internet Protocol (IP). (Refer to [RFC 4293: Management Information Base for the Internet Protocol \(IP\)](#) on page 73 for details.)
- RFC 4363: Definitions of Managed Objects for Bridges with Traffic Classes, Multicast Filtering, and Virtual LAN Extensions. (Refer to [RFC 4363: Definitions of Managed Objects for Bridges with Traffic Classes, Multicast Filtering, and Virtual LAN Extensions](#) on page 77 for details.)
- 4382 - MPLS/BGP Layer 3 Virtual Private Network (VPN) Management Information Base

- 4444 - Management Information Base for Intermediate System to Intermediate System (IS-IS) (Refer to [RFC 4444: Management Information Base for Intermediate System to Intermediate System \(IS-IS\)](#) on page 79 for details.)
- 4807 - IP Security Policy Database Configuration Management Information Base
- draft-ietf-bfd - Bidirectional Forwarding Detection Management Information Base
- draft-ietf-pwe3-enet-mib-11.txt - Ethernet Pseudo Wire (PW) Management Information Base

RFC compliance - management

- 854 - TELNET
- 1445 - Administrative Model for SNMPv2 - Support for View Subtree (partially supported)
- 1492 - TACACS+
- 2030 - SNTP
- 2068 - HTTP
- 2284 - PPP EAP - Support EAP extension
- 2578 - SNMPv2
- 2579 - Textual Conventions for SMIv2
- 2865 - RADIUS
- 2866 - RADIUS Accounting
- 2868 - RADIUS Attributes for Tunnel Protocol (partially supported)
- 2869 - RADIUS Extensions - EAP Message (type 79) and Message-Authenticator (type 80)
- 3164 - BSD Syslog Protocol
- 3176 - sFlow (Refer to [RFC 3176: InMon Corporation's sFlow: A Method for Monitoring Traffic in Switched and Routed Networks](#) on page 48 for details.)
- 3410 - SNMPv3
- 3411 - Architecture for SNMP
- 3412 - Message Processing and Dispatching for SNMP
- 3413 - Simple Network Management Protocol (SNMP) Applications (partially supported)
- 3414 - USM for SNMPv3
- 3415 - VACM for SNMPv3
- 3416 - Version 2 of the Protocol Operations for the SNMP
- 3579 - RADIUS Support for Extensible Authentication Protocol (EAP) (partially supported)
- 3584 - Coexistence between Version 1, Version 2, and Version 3 of the Internet-standard Network Management Framework
- 3815 - Managed Objects for the Multiprotocol Label Switching (MPLS) and Label Distribution Protocol (LDP)
- 3826 - The Advanced Encryption Standard (AES) Cipher Algorithm in the SNMP User-based Security Model
- 4188 - Definitions of Managed Objects for Bridges
- 4251 - The Secure Shell (SSH) Protocol Architecture
- 4252 - The Secure Shell (SSH) Authentication Protocol
- 4253 - The Secure Shell (SSH) Transport Protocol
- 4254 - The Secure Shell (SSH) Connection Protocol

- 4273 - Definitions of Managed Objects for BGP-4 (Refer to [RFC 4273: Definitions of Managed Objects for BGP-4](#) on page 63 for details.)
- [draft-ietf-idr-bgp4-mibv2-12 MIB](#) on page 65 — Definitions of Managed Objects for the Fourth Version of Border Gateway Protocol (BGP-4), Second Version
- 4330 - Simple Network Time Protocol (SNTP) Version 4 for IPv4 and IPv6
- [draft-grant-tacacs-02.txt](#) - The TACACS+ Protocol
- [draft-ietf-pwe3-pw-mib-11.txt](#) - PW-STD-MIB Definitions (read-only)

IEEE standards

- [IEEE8021-CFM-MIB](#) on page 106 – IEEE 802.1ag CFM MIB
- [IEEE8021-SECY-MIB](#) on page 111 – IEEE 802.1ag SECY MIB
- [IEEE8023-LAG-MIB](#) on page 114 – IEEE 802.3 LAG MIB

LLDP MIB support

The following standard MIBs are supported on the Extreme NetIron devices with LLDP capability.

The following MIBs are in the 802.1AB standard, Station and Media Access Control Connectivity Discovery:

- [LLDP-MIB](#) on page 115
- [LLDP-EXT-DOT1-MIB](#) on page 118
- [LLDP-EXT-DOT3-MIB](#) on page 121

LLDP\LLDP-MED MIB support

The following standard MIBs are supported on Extreme NetIron devices with LLDP\LLDP-MED capability.

- [LLDP-EXT-DOT1-MIB](#)
- [LLDP-EXT-DOT3-MIB](#)

The following MIB is in the ANSI/TIA-1057 standard, Link Layer Discovery Protocol (LLDP) for Media Endpoint Devices (MED):

- [LLDP-EXT-MED-MIB](#)

RFC 1493: Definitions of Managed Objects for Bridges

The following groups are supported on the Extreme NetIron series devices.

NOTE

RFC 4188 obsoletes RFC 1493 on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Object group name | Object identifier |
|-------------------|-------------------|
| dot1dBridge | 1.3.6.1.2.1.17 |
| dot1dBase | 1.3.6.1.2.1.17.1 |
| dot1dTp | 1.3.6.1.2.1.17.2 |
| dot1dTp | 1.3.6.1.2.1.17.4 |

NOTE

The dot1dTpFdbTable (OID 1.3.6.1.2.1.17.4.4) in RFC 1493 is used to find dynamically learned MAC addresses. Statically configured MAC addresses are in the snFdbTable (refer to [Forwarding database static table information](#) on page 253).

NOTE

The SNMP MIB object dot1dTpPortTable (OID 1.3.6.1.2.1.17.2.15) does not display information for tagged ports that belong to an 802.1W RSTP configuration. The design of that MIB table is based on a Single STP standard, and does not accommodate Multiple STPs. Thus, the table displays information only for SSTP and for tagged and untagged ports.

NOTE

RFC 4188 has been converted to SMIv2 format. The object dot1dTpPortPathCost32 was added to support IEEE 802. The existing MIB dot1dTpPortPathCost has an upper range of 65535. Over that value, this MIB stays at the upper value and you should access dot1dTpPortPathCost32, which has a higher upper-range value.

RFC 1757: Remote Network Monitoring Management Information Base

NOTE

This RFC is obsolete and is replaced by RFC 2819 for the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Object group name | Object identifier |
|-------------------|-------------------|
| rmon | 1.3.6.1.2.1.16 |
| statistics | 1.3.6.1.2.1.16.1 |
| history | 1.3.6.1.2.1.16.2 |
| alarm | 1.3.6.1.2.1.16.3 |
| event | 1.3.6.1.2.1.16.9 |

The following object groups in RFC 1757 are not supported on the Extreme NetIron devices:

- hosts
- hostTopN
- matrix
- filter
- capture (packet capture)

RFC 1850: OSPF Version 2 Management Information Base

The following tables from RFC 1850 are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and Extreme NetIron CER Series devices.

NOTE

Beginning with NetIron O5.9.00 release, the following MIB objects except ospfTrap from RFC 1850 has VRF support.

| Object | Object identifier | Supported? |
|------------------------|---------------------|--------------------------------------|
| ospfGeneralGroup | 1.3.6.1.2.1.14.1 | Yes |
| ospfAreaTable | 1.3.6.1.2.1.14.2 | Yes |
| ospfStubAreaTable | 1.3.6.1.2.1.14.3 | Yes. SET operation is not supported. |
| ospfLsdbTable | 1.3.6.1.2.1.14.4 | Yes |
| ospfHostTable | 1.3.6.1.2.1.14.6 | Yes. SET operation is not supported. |
| ospflfTable | 1.3.6.1.2.1.14.7 | Yes |
| ospflfMetricTable | 1.3.6.1.2.1.14.8 | Yes. SET operation is not supported. |
| ospfvirtlfTable | 1.3.6.1.2.1.14.9 | Yes |
| ospfnbrTable | 1.3.6.1.2.1.14.10 | Yes. SET operation is not supported. |
| ospfvirtnbrTable | 1.3.6.1.2.1.14.11 | Yes |
| ospfExtLsdbTable | 1.3.6.1.2.1.14.12 | Yes |
| ospfAreaAggregateTable | 1.3.6.1.2.1.14.14 | Yes |
| ospfTrap | 1.3.6.1.2.1.14.16 | Yes |
| ospfTrapControl | 1.3.6.1.2.1.14.16.1 | Yes |

RFC 2096: IP Forwarding Table MIB

RFC 2096 is supported on the Extreme NetIron devices. RFC 2096 is obsoleted by RFC 4292 and it supports both IPv4 and IPv6 forwarding tables.

| Object group name | Object identifier |
|----------------------|-------------------------|
| ipCidrRouteDest | 1.3.6.1.2.1.4.24.4.1.1 |
| ipCidrRouteMask | 1.3.6.1.2.1.4.24.4.1.2 |
| ipCidrRouteTos | 1.3.6.1.2.1.4.24.4.1.3 |
| ipCidrRouteNextHop | 1.3.6.1.2.1.4.24.4.1.4 |
| ipCidrRouteIndex | 1.3.6.1.2.1.4.24.4.1.5 |
| ipCidrRouteType | 1.3.6.1.2.1.4.24.4.1.6 |
| ipCidrRouteProto | 1.3.6.1.2.1.4.24.4.1.7 |
| ipCidrRouteAge | 1.3.6.1.2.1.4.24.4.1.8 |
| ipCidrRouteInfo | 1.3.6.1.2.1.4.24.4.1.9 |
| ipCidrRouteNextHopAS | 1.3.6.1.2.1.4.24.4.1.10 |
| ipCidrRouteMetric1 | 1.3.6.1.2.1.4.24.4.1.11 |
| ipCidrRouteMetric2 | 1.3.6.1.2.1.4.24.4.1.12 |

| Object group name | Object identifier |
|--------------------|-------------------------|
| ipCidrRouteMetric3 | 1.3.6.1.2.1.4.24.4.1.13 |
| ipCidrRouteMetric4 | 1.3.6.1.2.1.4.24.4.1.14 |
| ipCidrRouteMetric5 | 1.3.6.1.2.1.4.24.4.1.15 |
| ipCidrRouteStatus | 1.3.6.1.2.1.4.24.4.1.16 |

RFC 2233: The Interfaces Group MIB using SMIv2

The interface entry table or ifXTable is based on RFC 2233. It contains information about the interfaces. Each sub-layer is considered to be an interface. This table contains entries for the ATM physical ports, as well as for any sub-interfaces that have been configured.

Beginning from NetIron 05.9.00 release, ifTable, ifXTable, and ifStackTable MIB objects support VRF.

| Object group name | Object identifier |
|-----------------------------|-----------------------|
| ifMIB | 1.3.6.1.2.1.31 |
| ifMIBObjects | 1.3.6.1.2.1.31.1 |
| ifTable | 1.3.6.1.2.1.2.2 |
| ifXTable | 1.3.6.1.2.1.31.1.1 |
| ifStackTable | 1.3.6.1.2.1.31.1.2 |
| ifConformance | 1.3.6.1.2.1.31.2 |
| ifCounterDiscontinuityGroup | 1.3.6.1.2.1.31.2.1.13 |

RFC 2787: Definitions of Managed Objects for the Virtual Router Redundancy Protocol

The XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices support RFC 2787, Definitions of Managed Objects for the Virtual Router Redundancy Protocol.

NOTE

SNMP support for VRRP MIBs is limited only to IPv4 and not supported on IPv6.

The following are the VRRP MIB groups:

- vrrpOperations (OID: 1.3.6.1.2.1.68.1)
- vrrpStatistics (OID: 1.3.6.1.2.1.68.2)
- vrrpConformance (OID: 1.3.6.1.2.1.68.3)

VRRP operations table (vrrpOperTable)

The operations table for a VRRP router that consists of a sequence (one or more conceptual rows) of vrrpOperEntry objects.

| Object | Object identifier | Supported? |
|----------------------|--------------------|------------|
| vrrpNodeVersion | 1.3.6.1.2.1.68.1.1 | Yes |
| vrrpNotificationCntl | 1.3.6.1.2.1.68.1.2 | Yes |
| vrrpOperTable | 1.3.6.1.2.1.68.1.3 | Yes |

| Object | Object identifier | Supported? |
|-------------------------------|-------------------------|------------|
| vrrpOperVrid | 1.3.6.1.2.1.68.1.3.1.1 | Yes |
| vrrpOperVirtualMacAddr | 1.3.6.1.2.1.68.1.3.1.2 | Yes |
| vrrpOperState | 1.3.6.1.2.1.68.1.3.1.3 | Yes |
| vrrpOperAdminState | 1.3.6.1.2.1.68.1.3.1.4 | Yes |
| vrrpOperPriority | 1.3.6.1.2.1.68.1.3.1.5 | Yes |
| vrrpOperIpAddrCount | 1.3.6.1.2.1.68.1.3.1.6 | Yes |
| vrrpOperMasterIpAddr | 1.3.6.1.2.1.68.1.3.1.7 | No |
| vrrpOperPrimaryIpAddr | 1.3.6.1.2.1.68.1.3.1.8 | Yes |
| vrrpOperAuthType | 1.3.6.1.2.1.68.1.3.1.9 | Yes |
| vrrpOperAuthKey | 1.3.6.1.2.1.68.1.3.1.10 | Yes |
| vrrpOperAdvertisementInterval | 1.3.6.1.2.1.68.1.3.1.11 | Yes |
| vrrpOperPreemptMode | 1.3.6.1.2.1.68.1.3.1.12 | Yes |
| vrrpOperVirtualRouterUpTime | 1.3.6.1.2.1.68.1.3.1.13 | Yes |
| vrrpOperProtocol | 1.3.6.1.2.1.68.1.3.1.14 | Yes |
| vrrpOperRowStatus | 1.3.6.1.2.1.68.1.3.1.15 | Yes |

VRRP associated IP address table (vrrpAssolpAddrTable)

The table of addresses associated with the virtual router.

| Object | Object identifier | Supported? |
|-------------------------|------------------------|------------|
| vrrpAssolpAddr | 1.3.6.1.2.1.68.1.4.1.1 | Yes |
| vrrpAssolpAddrRowStatus | 1.3.6.1.2.1.68.1.4.1.2 | Yes |

VRRP router statistics (vrrpStatistics)

The table of MIB objects represents the VRRP statistics.

| Object | Object identifier | Supported? |
|--------------------------|--------------------|------------|
| vrrpRouterChecksumErrors | 1.3.6.1.2.1.68.2.1 | Yes |
| vrrpRouterVersionErrors | 1.3.6.1.2.1.68.2.2 | Yes |
| vrrpRouterVridErrors | 1.3.6.1.2.1.68.2.3 | Yes |

VRRP router statistics (vrrpRouterStatsTable)

The table of MIB objects represents the total number of VRRP packets received with an invalid VRRP checksum value.

| Object | Object identifier | Supported? |
|----------------------------------|------------------------|------------|
| vrrpStatsBecomeMaster | 1.3.6.1.2.1.68.2.4.1.1 | Yes |
| vrrpStatsAdvertiseRcvd | 1.3.6.1.2.1.68.2.4.1.2 | Yes |
| vrrpStatsAdvertiseIntervalErrors | 1.3.6.1.2.1.68.2.4.1.3 | Yes |
| vrrpStatsAuthFailures | 1.3.6.1.2.1.68.2.4.1.4 | Yes |
| vrrpStatsIpTtlErrors | 1.3.6.1.2.1.68.2.4.1.5 | Yes |

| Object | Object identifier | Supported? |
|-------------------------------|-------------------------|------------|
| vrrpStatsPriorityZeroPktsRcvd | 1.3.6.1.2.1.68.2.4.1.6 | Yes |
| vrrpStatsPriorityZeroPktsSent | 1.3.6.1.2.1.68.2.4.1.7 | Yes |
| vrrpStatsInvalidTypePktsRcvd | 1.3.6.1.2.1.68.2.4.1.8 | Yes |
| vrrpStatsAddressListErrors | 1.3.6.1.2.1.68.2.4.1.9 | Yes |
| vrrpStatsInvalidAuthType | 1.3.6.1.2.1.68.2.4.1.10 | Yes |
| vrrpStatsAuthTypeMismatch | 1.3.6.1.2.1.68.2.4.1.11 | Yes |
| vrrpStatsPacketLengthErrors | 1.3.6.1.2.1.68.2.4.1.12 | Yes |

Notifications

The following table lists the supported notifications for RFC 2787.

| Object group name | Object identifier |
|-----------------------|--------------------|
| vrrpTrapNewMaster | 1.3.6.1.2.1.68.0.1 |
| vrrpTrapAuthFailure | 1.3.6.1.2.1.68.0.2 |
| vrrpTrapPacketSrc | 1.3.6.1.2.1.68.1.5 |
| vrrpTrapAuthErrorType | 1.3.6.1.2.1.68.1.6 |

RFC 2819: Remote Network Monitoring Management Information Base

On the MLX Series devices, interface statistics from the following objects of the etherStatsTable are preserved when the **clear statistics** command is entered on the CLI, if the **snmp-server preserve-statistics** command is enabled:

- etherStatsDropEvents
- etherStatsOctets
- etherStatsPkts
- etherStatsBroadcastPkts
- etherStatsMulticastPkts
- etherStatsCRCAlignErrors
- etherStatsUndersizePkts
- etherStatsOversizePkts
- etherStatsFragments
- etherStatsPkts64Octets
- etherStatsPkts65to127Octets
- etherStatsPkts128to255Octets
- etherStatsPkts256to511Octets
- etherStatsPkts512to1023Octets
- etherStatsPkts1024to1518Octets

History control group

On the Extreme NetIron devices, the history control group controls the periodic statistical sampling of data from various types of networks. The following objects in the historyControlTable store configuration entries that each define an interface, polling period, and other parameters:

- historyControlIndex
- historyControlDataSource
- historyControlBucketsRequested
- historyControlBucketsGranted
- historyControlInterval
- historyControlOwner
- historyControlStatus

Ethernet history group

On the Extreme NetIron devices, the Ethernet history group records periodic statistical samples from a network and stores them for later retrieval. The following objects of the group define the etherHistoryTable for Ethernet networks:

- etherHistoryIndex
- etherHistorySampleIndex
- etherHistoryIntervalStart
- etherHistoryDropEvents
- etherHistoryOctets
- etherHistoryPkts
- etherHistoryBroadcastPkts
- etherHistoryMulticastPkts
- etherHistoryCRCAccuracyErrors
- etherHistoryUndersizePkts
- etherHistoryOversizePkts
- etherHistoryFragments
- etherHistoryJabbers
- etherHistoryCollisions
- etherHistoryUtilization

Alarm group

On the Extreme NetIron devices, the Alarm group periodically takes statistical samples from variables in the probe and compares them to thresholds that have been configured. The alarm table stores configuration entries that each define a variable, polling period, and threshold parameters:

- alarmIndex
- alarmInterval
- alarmVariable
- alarmSampleType

- alarmValue
- alarmStartupAlarm
- alarmRisingThreshold
- alarmFallingThreshold
- alarmRisingEventIndex
- alarmFallingEventIndex
- alarmOwner
- alarmStatus

Event group

On the Extreme NetIron devices, the following objects in the Event group control the generation and notification of events from the devices. Each entry in the eventTable describes the parameters of the event that can be triggered:

- eventIndex
- eventDescription
- eventType
- eventCommunity
- eventLastTimeSent
- eventOwner
- eventStatus

RFC 2863: The Interfaces Group MIB

RFC 2863 is supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and Extreme NetIron CER Series devices.

ifIndex

On the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices, there can be 20, 40, 48, or 64 ifIndexes per module. The default is 20. Use the **snmp-server max-ifindex-per-module 40** command to change the ifIndex to 40 (for example, for backward-compatibility).

On the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices, every trunk group will appear as a row within the ifTable and ifXTable. The ifIndex range involves all the physical ports, virtual ports, loopback ports, multicast tunnels, GRE tunnels, MPLS tunnels, and Trunks in that order.

Use the Get operations on snInterfaceLookupIfIndex (indexed by ifIndex) to get InterfaceId (in a simple OID form).

[Table 2](#) details the XMR Series or MLX Series index ranges, and they are subject to change from one release to the next.

TABLE 2 XMR Series or MLX Series index ranges

| | 4-slot | 8-slot | 16-slot | 32-slot | Allocation |
|---------------|--------|--------|---------|---------|---------------------|
| Physical port | 1-192 | 1-384 | 1-768 | 1-1536 | 48 per slot |
| Mgmt port | 2 | 2 | 2 | 2 | 1 active, 1 standby |

TABLE 2 XMR Series or MLX Series index ranges (continued)

| | 4-slot | 8-slot | 16-slot | 32-slot | Allocation |
|---------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|------------|
| Virtual port | 255 default, 40 minimum, 4096 maximum | |
| Loopback port | 64 default | 64 default | 64 default | 64 default | |
| IP tunnels | 8192 | 8192 | 8192 | 8192 | |
| MPLS tunnels | 16384 | 16384 | 16384 | 16384 | |
| Trunk | 128 default, 128 minimum, 256 maximum | |

ifIndex assignment persistane

The following interfaces have ifIndex assignments that are persistent across reboots and switchover operations:

- Physical ports
- Virtual ports
- Loopback ports

NOTE

The ifIndex should be derived from the snIfIndexLookupTable using the InterfaceId (in OID form), instead of assuming that the ifIndex will always stay persistent across reloads.

On the following interfaces, IfIndex assignments are not persistent across reboots and switchover operations:

- MPLS tunnel interfaces (on NetIron devices)
- Trunk ports
- IP/GRE tunnels

ifType for interfaces

On XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices, ifType for all Ethernet interfaces (10/100 Mbps, 1 Gbps, and 10 Gbps) returns the value **ethernetCsmacd(6)** as mandated by RFC 2665.

If the snmp-server legacy iftype command is configured on the device CLI, ifType returns **gigabitEthernet(117)** or **fastEther(62)**. If the command is not configured (or **no snmp-server legacy iftype** is used) then ifType returns the value **ethernetCsmacd(6)**.

Statistics for virtual routing interfaces on 8x10 modules

The ifTable and ifXTable display information for switched and routed packets on virtual routing interfaces of the 8x10 modules installed on the XMR Series, MLX Series, and MLX Series devices. This feature is available on XMR Series, MLX Series, and MLX Series devices. The **extended-counter routed-switched** command must be configured to enable separate accounting of switched and routed packets on virtual routing interfaces.

ifTable attributes

The following MIB attributes of the ifTable return information for switched and routed packets for the 8x10 modules on the Extreme devices.

| MIB attribute | Physical | Virtual | Loopback | IP tunnel | MPLS tunnel | Trunk | GRE tunnel |
|-------------------|----------|---------|----------|-----------|-------------|-------|------------|
| ifInOctets | Yes | Yes | No | No | No | Yes | Yes |
| ifOutOctets | Yes | Yes | No | No | Yes | Yes | No |
| ifInUcastPkts | Yes | Yes | No | Yes | No | Yes | Yes |
| ifOutUcastPkts | Yes | Yes | No | No | Yes | Yes | No |
| ifInNUcastPkts | Yes | No | No | No | No | Yes | No |
| ifInDiscards | Yes | No | No | No | No | Yes | No |
| ifInErrors | Yes | No | No | No | No | Yes | No |
| ifInUnknownProtos | Yes | No | No | No | No | Yes | No |
| ifOutNUcastPkts | Yes | No | No | No | No | Yes | No |
| ifOutDiscards | Yes | No | No | No | No | Yes | No |
| ifOutErrors | Yes | No | No | No | No | Yes | No |
| ifOutQLen | Yes | No | No | No | No | Yes | No |

ifXTable attributes

The following MIB attributes of the ifXTable return information for switched and routed packets for the 8x10 modules on the Extreme devices.

| MIB attribute | Physical | Virtual | Loopback | IP tunnel | MPLS tunnel | Trunk | GRE tunnel |
|------------------------|----------|---------|----------|-----------|-------------|-------|------------|
| ifHCInOctets | Yes | Yes | No | No | No | Yes | Yes |
| ifHCOOutOctets | Yes | Yes | No | Yes | Yes | Yes | No |
| ifHCInUcastPkts | Yes | Yes | No | Yes | No | Yes | No |
| ifHCOOutUcastPkts | Yes | Yes | No | Yes | Yes | Yes | No |
| ifInMulticastPkts | Yes | No | No | No | No | Yes | No |
| ifInBroadcastPkts | Yes | No | No | No | No | Yes | No |
| ifOutMulticastPkts | Yes | No | No | No | No | Yes | No |
| ifOutBroadcastPkts | Yes | No | No | No | No | Yes | No |
| ifHCInMulticastPkts | Yes | No | No | No | No | Yes | No |
| ifHCInBroadcastPkts | Yes | No | No | No | No | Yes | No |
| ifHCOOutMulticastPkts | Yes | No | No | No | No | Yes | No |
| ifHCOOutBroadcastPkts | Yes | No | No | No | No | Yes | No |
| ifLinkUpDownTrapEnable | No | No | No | No | No | No | Yes |

NOTE

The Brocade NetIron devices support the GRE tunnels, IP tunnels, and MPLS tunnels.

Preserved SNMP statistics on interfaces

SNMP statistics in the ifTable and ifXTable for physical interfaces on MLX Series and other NetIron devices are preserved when the **snmp-server preserve-statistics** command is configured. After configuring **snmp-server preserve-statistics**, the SNMP statistics listed in the following tables are separated from the CLI statistics. When the **clear statistics interface-type interface-id** command is entered, the command clears only CLI statistics, leaving the SNMP statistics intact.

IF-MIB (RFC 2863) ifTable objects

Statistics from the following objects in the ifTable are preserved when the **snmp-server preserve-statistics** command is enabled on the CLI.

| ifTable objects | Syntax |
|-------------------------------------------------------------------------------------------------------------------------------|----------------|
| ifIndex 1.3.6.1.2.1.2.2.1.1 | InterfaceIndex |
| ifDescr 1.3.6.1.2.1.2.2.1.2 | DisplayString |
| ifType 1.3.6.1.2.1.2.2.1.3 | IANAifType |
| ifMtu 1.3.6.1.2.1.2.2.1.4 | Integer32 |
| ifSpeed 1.3.6.1.2.1.2.2.1.5 | Gauge32 |
| ifAdminStatus 1.3.6.1.2.1.2.2.1.7 | PhysAddress |
| ifOperStatus 1.3.6.1.2.1.2.2.1.8 | Integer |
| ifInOctets 1.3.6.1.2.1.2.2.1.10 | Counter32 |
| ifInUcastPkts 1.3.6.1.2.1.2.2.1.11 | Counter32 |
| ifInNUcastPkts 1.3.6.1.2.1.2.2.1.12 | Counter32 |
| NOTE This object is deprecated in the 8x10 modules installed on the MLX Series, XMR Series, and MLX Series devices. | |
| ifInDiscards 1.3.6.1.2.1.2.2.1.13 | Counter32 |
| ifInErrors 1.3.6.1.2.1.2.2.1.14 | Counter32 |
| ifInUnknownProtos 1.3.6.1.2.1.2.2.1.15 | Counter32 |
| ifOutOctets | Counter32 |

| ifTable objects | Syntax |
|---------------------------------------------------------------------------------------------------------------------------|-----------|
| 1.3.6.1.2.1.2.2.1.16 | |
| ifOutUcastPkts | Counter32 |
| 1.3.6.1.2.1.2.2.1.17 | |
| ifOutNUcastPkts | Counter32 |
| 1.3.6.1.2.1.2.2.1.18 | |
| NOTE This object is deprecated in the 8x10 modules installed on the MLX Series, XMR Series, MLX Series devices. | |
| ifOutDiscards | Counter32 |
| 1.3.6.1.2.1.2.2.1.19 | |
| ifOutErrors | Counter32 |
| 1.3.6.1.2.1.2.2.1.20 | |

IF-MIB (RFC 2863) ifXTable objects

Statistics from the following objects in the ifXTable are preserved when the **snmp-server preserve-statistics** command is enabled on the CLI.

| ifXTable objects | Syntax |
|-------------------------|---------------|
| ifName | DisplayString |
| 1.3.6.1.2.1.31.1.1.1.1 | |
| ifInMulticastPkts | Counter32 |
| 1.3.6.1.2.1.31.1.1.1.2 | |
| ifInBroadcastPkts | Counter32 |
| 1.3.6.1.2.1.31.1.1.1.3 | |
| ifOutMulticastPkts | Counter32 |
| 1.3.6.1.2.1.31.1.1.1.4 | |
| ifOutBroadcastPkts | Counter32 |
| 1.3.6.1.2.1.31.1.1.1.5 | |
| ifHCInOctets | Counter64 |
| 1.3.6.1.2.1.31.1.1.1.6 | |
| ifHCInUcastPkts | Counter64 |
| 1.3.6.1.2.1.31.1.1.1.7 | |
| ifHCInMulticastPkts | Counter64 |
| 1.3.6.1.2.1.31.1.1.1.8 | |
| ifHCInBroadcastPkts | Counter64 |
| 1.3.6.1.2.1.31.1.1.1.9 | |
| ifHCOutOctets | Counter64 |
| 1.3.6.1.2.1.31.1.1.1.10 | |
| ifHCOutUcastPkts | Counter64 |
| 1.3.6.1.2.1.31.1.1.1.11 | |

| ifXTable objects | Syntax |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| ifHCOutMulticastPkts 1.3.6.1.2.1.31.1.1.1.12 | Counter64 |
| ifHCOutBroadcastPkts 1.3.6.1.2.1.31.1.1.1.13 | Counter64 |
| ifLinkUpDownTrapEnable 1.3.6.1.2.1.31.1.1.1.14 | Integer |
| NOTE This object is used to control the generation of traps of the physical and GRE tunnel interfaces. By default, traps are enabled per interfaces for physical interfaces and disabled for tunnel interfaces. | |
| ifHighSpeed 1.3.6.1.2.1.31.1.1.1.15 | Gauge32 |
| ifPromiscuousMode 1.3.6.1.2.1.31.1.1.1.16 | TruthValue |
| ifConnectorPresent 1.3.6.1.2.1.31.1.1.1.17 | TruthValue |
| ifAlias 1.3.6.1.2.1.31.1.1.1.18 | DisplayString |
| ifCounterDiscontinuityTime 1.3.6.1.2.1.31.1.1.1.19 | TimeStamp |

EthernetLike-MIB (RFC 2665) dot3StatsTable objects (Ethernet ports only)

Statistics from the following objects in the dot3StatsTable are preserved when the **snmp-server preserve-statistics** command is enabled on the CLI.

| dot3StatsTable objects | Syntax |
|------------------------------------------------------------|-----------------|
| dot3StatsIndex 1.3.6.1.2.1.10.7.2.1.1 | Interface Index |
| dot3StatsAlignmentErrors 1.3.6.1.2.1.10.7.2.1.2 | Counter32 |
| dot3StatsFCSErrors 1.3.6.1.2.1.10.7.2.1.3 | Counter32 |
| dot3StatsSingleCollisionFrames 1.3.6.1.2.1.10.7.2.1.4 | Counter32 |
| dot3StatsMultipleCollisionFrames 1.3.6.1.2.1.10.7.2.1.5 | Counter32 |
| dot3StatsSQETestErrors 1.3.6.1.2.1.10.7.2.1.6 | Counter32 |
| dot3StatsDeferredTransmissions 1.3.6.1.2.1.10.7.2.1.7 | Counter32 |

| dot3StatsTable objects | Syntax |
|---------------------------------------------------------------|-------------------------------------------------------------|

RMON-MIB (RFC 2819) etherStatsTable objects (Ethernet ports only)

Statistics from the following objects in the etherStatsTable are preserved when the **snmp-server preserve-statistics** command is enabled on the CLI.

NOTE

The following etherStatsTable objects are supported on the Extreme NetIron devices.

| etherStatsTable objects | Syntax |
|-------------------------------------------------------|-----------|
| etherStatsDropEvents 1.3.6.1.2.1.16.1.1.1.3 | Counter32 |
| etherStatsOctets 1.3.6.1.2.1.16.1.1.1.4 | Counter32 |
| etherStatsPkts 1.3.6.1.2.1.16.1.1.1.5 | Counter32 |
| etherStatsBroadcastPkts 1.3.6.1.2.1.16.1.1.1.6 | Counter32 |
| etherStatsMulticastPkts 1.3.6.1.2.1.16.1.1.1.7 | Counter32 |
| etherStatsCRCAccuracyErrors 1.3.6.1.2.1.16.1.1.1.8 | Counter32 |

| etherStatsTable objects | Syntax |

| 1.3.6.1.2.1.16.1.1.1.17 | |
| etherStatsPkts512to1023Octets | Counter32 |
| 1.3.6.1.2.1.16.1.1.1.18 | |
| etherStatsPkts1024to1518Octets | Counter32 |
| 1.3.6.1.2.1.16.1.1.1.19 | |

RFC 2932: IPv4 Multicast Routing MIB

Support for RFC 2932 is available on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

NOTE

This MIB is not VRF-aware. MIB entries are based on the default VRF IP multicast routing tables.

NOTE

The ipMRouteBoundaryTable and ipMRouteScopeNameTable tables of RFC 2932 are not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

IP multicast scalar

Beginning with NetIron 05.9.00, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|--------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------|
| ipMRouteEnable | 1.3.6.1.2.1.83.1.1.1 | Yes. Use either the [no] ip multicast-routing or [no] router pim command to configure IP multicast routing on the router. |
| ipMRouteEntryCount | 1.3.6.1.2.1.83.1.1.7 | Yes. Use the show ip pim mcache [count] command to display the the number of rows in the ipMRouteTable. |

ipMRouteTable (IP multicast route table)

Use the **show ip pim mcache** command to display the information for the IP multicast route table.

Use the **show ip route** and **show ip mroute** commands to display the route information (ipMRouteRtAddress, ipMRouteRtMask, and ipMRouteRtType).

The SET request is not supported for this table.

| Object | Object identifier | Supported? |
|------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| ipMRouteGroup | 1.3.6.1.2.1.83.1.1.2.1.1 | Yes, but read-only. |
| ipMRouteSource | 1.3.6.1.2.1.83.1.1.2.1.2 | Yes, but read-only. |
| ipMRouteSourceMask | 1.3.6.1.2.1.83.1.1.2.1.3 | Yes, but read-only. |
| ipMRouteUpstreamNeighbor | 1.3.6.1.2.1.83.1.1.2.1.4 | Yes, but read-only. |
| ipMRouteInflIndex | 1.3.6.1.2.1.83.1.1.2.1.5 | Yes, but read-only. |
| ipMRouteUpTime | 1.3.6.1.2.1.83.1.1.2.1.6 | Yes, but read-only. |
| ipMRouteExpiryTime | 1.3.6.1.2.1.83.1.1.2.1.7 | Yes, but read-only. |
| ipMRoutePkts | 1.3.6.1.2.1.83.1.1.2.1.8 | Yes, but read-only. |
| ipMRouteDifferentInIfPackets | 1.3.6.1.2.1.83.1.1.2.1.9 | No NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |
| ipMRouteOctets | 1.3.6.1.2.1.83.1.1.2.1.10 | No NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |
| ipMRouteProtocol | 1.3.6.1.2.1.83.1.1.2.1.11 | Yes, but read-only. |
| ipMRouteRtProto | 1.3.6.1.2.1.83.1.1.2.1.12 | Yes, but read-only. |
| ipMRouteRtAddress | 1.3.6.1.2.1.83.1.1.2.1.13 | Yes, but read-only. |
| ipMRouteRtMask | 1.3.6.1.2.1.83.1.1.2.1.14 | Yes, but read-only. |
| ipMRouteRtType | 1.3.6.1.2.1.83.1.1.2.1.15 | No NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |
| ipMRouteHCOctets | 1.3.6.1.2.1.83.1.1.2.1.16 | No NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |

ipMRouteNextHopTable (IP multicast route next hop table)

In this table, “*NextHop*” refers to the downstream traffic.

The following CLI commands display information about the objects in the IP multicast route next hop table:

- show ip pim mcache
- show ip pim neighbor

The SET request is not supported for this table.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|---------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| ipMRouteNextHopGroup | 1.3.6.1.2.1.83.1.1.3.1.1 | No |
| ipMRouteNextHopSource | 1.3.6.1.2.1.83.1.1.3.1.2 | No |
| ipMRouteNextHopSourceMask | 1.3.6.1.2.1.83.1.1.3.1.3 | No |
| ipMRouteNextHopIfIndex | 1.3.6.1.2.1.83.1.1.3.1.4 | No |
| ipMRouteNextHopAddress | 1.3.6.1.2.1.83.1.1.3.1.5 | No |
| ipMRouteNextHopState | 1.3.6.1.2.1.83.1.1.3.1.6 | Yes, but read-only. Always shows forwarding(2). |
| ipMRouteNextHopUpTime | 1.3.6.1.2.1.83.1.1.3.1.7 | Yes, but read-only. |
| ipMRouteNextHopExpiryTime | 1.3.6.1.2.1.83.1.1.3.1.8 | Yes, but read-only. |
| ipMRouteNextHopClosestMemberHop | 1.3.6.1.2.1.83.1.1.3.1.9 | Yes, but read-only. |
| ipMRouteNextHopProtocol | 1.3.6.1.2.1.83.1.1.3.1.10 | Yes, but read-only. |
| ipMRouteNextHopPkts | 1.3.6.1.2.1.83.1.1.3.1.11 | No NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |

ipMRouteInterfaceTable (IP multicast route interface table)

This is the IP multicast route table for interfaces.

The **show ip pim interface** command is used to display information about this table.

The following interface-level commands are used to create an entry to the IP multicast route interface table:

- **ip pim**
- **ip pim-sparse**
- **ip pim ttl-threshold value**

The SET request is not supported for this table. Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|----------------------------|--------------------------|---------------------|
| ipMRouteInterfaceIfIndex | 1.3.6.1.2.1.83.1.1.4.1.1 | Yes |
| ipMRouteInterfaceTtl | 1.3.6.1.2.1.83.1.1.4.1.2 | Yes |
| ipMRouteInterfaceProtocol | 1.3.6.1.2.1.83.1.1.4.1.3 | Yes, but read-only. |
| ipMRouteInterfaceRateLimit | 1.3.6.1.2.1.83.1.1.4.1.4 | Yes |

| Object | Object identifier | Supported? |
|-----------------------------------|--------------------------|---------------------|
| ipMRouteInterfaceInMcastOctets | 1.3.6.1.2.1.83.1.1.4.1.5 | Yes, but read-only. |
| ipMRouteInterfaceOutMcastOctets | 1.3.6.1.2.1.83.1.1.4.1.6 | Yes, but read-only. |
| ipMRouteInterfaceHCInMcastOctets | 1.3.6.1.2.1.83.1.1.4.1.7 | Yes, but read-only. |
| ipMRouteInterfaceHCOutMcastOctets | 1.3.6.1.2.1.83.1.1.4.1.8 | Yes, but read-only. |

RFC 2933: Internet Group Management Protocol MIB

RFC 2933 is supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices:

The following limitations apply to the support of RFC 2933 on the MLX Series devices:

- IGMP Snooping is not supported.
- Tables are read-only.
- VRF support is only for the default VRF.
- Data is available only for physical ports.

igmplInterfaceTable (IGMP interface table)

The **show ip igmp interface** command is used to display information about the IGMP interface table. Beginning with NetIron 05.9.00 release, the following igmplInterfaceTable MIB objects have VRF support.

The SET request is not supported for this table.

| Object | Object identifier | Supported? |
|------------------------------------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| igmplInterfaceIndex | 1.3.6.1.2.1.85.1.1.1.1 | Yes |
| igmplInterfaceQueryInterval | 1.3.6.1.2.1.85.1.1.1.2 | Yes |
| igmplInterfaceStatus | 1.3.6.1.2.1.85.1.1.1.3 | Yes NOTE On MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, the constant value for this object is active(1). |
| igmplInterfaceVersion | 1.3.6.1.2.1.85.1.1.1.4 | Yes |
| igmplInterfaceQuerier | 1.3.6.1.2.1.85.1.1.1.5 | Yes, but read-only. |
| igmplInterfaceQueryMaxResponseTime | 1.3.6.1.2.1.85.1.1.1.6 | Yes |
| igmplInterfaceQuerierUpTime | 1.3.6.1.2.1.85.1.1.1.7 | Yes, but read-only. |
| igmplInterfaceQuerierExpiryTime | 1.3.6.1.2.1.85.1.1.1.8 | Yes, but read-only. |
| igmplInterfaceVersion1QuerierTimer | 1.3.6.1.2.1.85.1.1.1.9 | No. NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |
| igmplInterfaceWrongVersionQueries | 1.3.6.1.2.1.85.1.1.1.10 | No. |

| Object | Object identifier | Supported? |
|---------------------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |
| igmplInterfaceJoins | 1.3.6.1.2.1.85.1.1.1.11 | Yes, but read-only. |
| igmplInterfaceProxyIndex | 1.3.6.1.2.1.85.1.1.1.12 | No. Returns "0". |
| igmplInterfaceGroups | 1.3.6.1.2.1.85.1.1.1.13 | Yes, but read-only. |
| igmplInterfaceRobustness | 1.3.6.1.2.1.85.1.1.1.14 | Yes |
| igmplInterfaceLastMemQueryIntvl | 1.3.6.1.2.1.85.1.1.1.15 | Yes, but read-only. NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |

igmpCacheTable (IGMP cache table)

Use the **show ip igmp group** command to display information about the IGMP cache table. Beginning with NetIron 05.9.00 release, the following igmpCacheTable MIB objects have VRF support.

The SET request is not supported for this table.

| Object | Object identifier | Supported? |
|----------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| igmpCacheAddress | 1.3.6.1.2.1.85.1.2.1.1 | Yes |
| igmpCacheIndex | 1.3.6.1.2.1.85.1.2.1.2 | Yes |
| igmpCacheSelf | 1.3.6.1.2.1.85.1.2.1.3 | Yes |
| igmpCacheLastReporter | 1.3.6.1.2.1.85.1.2.1.4 | Yes, but read-only. NOTE On MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, the constant value for this object is 0. |
| igmpCacheUpTime | 1.3.6.1.2.1.85.1.2.1.5 | Yes, but read-only. |
| igmpCacheExpiryTime | 1.3.6.1.2.1.85.1.2.1.6 | Yes, but read-only. |
| igmpCacheStatus | 1.3.6.1.2.1.85.1.2.1.7 | Yes, but read-only. NOTE On MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, the constant value for this object is active(1). |
| igmpCacheVersion1HostTimer | 1.3.6.1.2.1.85.1.2.1.8 | Yes, but read-only. |

RFC 2934: Protocol Independent Multicast MIB for IPv4

The following PIM MIB objects are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, only default VRF is supported.

Support for RFC 2934 in these devices is presented in the following sections.

| Object | Object identifier | Supported? |
|----------------------|--------------------|-------------------------------------------------------------------------------|
| pimJoinPruneInterval | 1.3.6.1.3.61.1.1.1 | Yes, but read-only. NOTE The SET operation is not supported. |

pimInterfaceTable (PIM interface table)

Use the **show ip pim interface** command to display information about the PIM interface table.

The SET request is not supported for this table.

| Object | Object identifier | Supported? |
|-------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| pimInterfaceIndex | 1.3.6.1.3.61.1.1.2.1.1 | Yes |
| pimInterfaceAddress | 1.3.6.1.3.61.1.1.2.1.2 | Yes, but read-only. |
| pimInterfaceNetMask | 1.3.6.1.3.61.1.1.2.1.3 | Yes, but read-only. |
| pimInterfaceMode | 1.3.6.1.3.61.1.1.2.1.4 | Yes NOTE On MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, only dense and sparse modes are supported. |
| pimInterfaceDR | 1.3.6.1.3.61.1.1.2.1.5 | Yes, but read-only. |
| pimInterfaceHelloInterval | 1.3.6.1.3.61.1.1.2.1.6 | Yes |
| pimInterfaceStatus | 1.3.6.1.3.61.1.1.2.1.7 | Yes |
| pimInterfaceJoinPruneInterval | 1.3.6.1.3.61.1.1.2.1.8 | Yes |
| pimInterfaceCBSRPreference | 1.3.6.1.3.61.1.1.2.1.9 | Yes NOTE On MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, the constant value for this object is 0. |

pimNeighborTable (PIM neighbor table)

Use the **show ip pim neighbor** command to display information about the PIM neighbor table.

The SET request is not supported for this table.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|-----------------------|------------------------|---------------------|
| pimNeighborAddress | 1.3.6.1.3.61.1.1.3.1.1 | Yes |
| pimNeighborIndex | 1.3.6.1.3.61.1.1.3.1.2 | Yes, but read-only. |
| pimNeighborUpTime | 1.3.6.1.3.61.1.1.3.1.3 | Yes, but read-only. |
| pimNeighborExpiryTime | 1.3.6.1.3.61.1.1.3.1.4 | Yes, but read-only. |
| pimNeighborMode | 1.3.6.1.3.61.1.1.3.1.5 | Yes, but read-only. |

pimIpMRouteTable (PIM IP multicast route table)

The **show ip pim mcache** command displays information about the PIM IP multicast route table.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|--------------------------------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| ipMRouteGroup | 1.3.6.1.2.1.83.1.1.2.1.1 | Yes, but read-only. |
| ipMRouteSource | 1.3.6.1.2.1.83.1.1.2.1.2 | Yes, but read-only. |
| ipMRouteSourceMask | 1.3.6.1.2.1.83.1.1.2.1.3 | Yes, but read-only. |
| pimIpMRouteUpstreamAssertTimer | 1.3.6.1.3.61.1.1.4.1.1 | Yes, but read-only. |
| pimIpMRouteAssertMetric | 1.3.6.1.3.61.1.1.4.1.2 | Yes, but read-only. |
| pimIpMRouteAssertMetricPref | 1.3.6.1.3.61.1.1.4.1.3 | Yes, but read-only. |
| pimIpMRouteAssertRPTBit | 1.3.6.1.3.61.1.1.4.1.4 | No. NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |
| pimIpMRouteFlags | 1.3.6.1.3.61.1.1.4.1.5 | No. NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. |

pimIpMRouteNextHopTable (PIM IP multicast route next hop table)

The **show ip pim mcache sg** command displays information about the PIM IP multicast route next hop table.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|-----------------------|--------------------------|------------|
| ipMRouteNextHopGroup | 1.3.6.1.2.1.83.1.1.3.1.1 | Yes |
| ipMRouteNextHopSource | 1.3.6.1.2.1.83.1.1.3.1.2 | Yes |

| Object | Object identifier | Supported? |
|-------------------------------|--------------------------|---------------------|
| ipMRouteNextHopSourceMask | 1.3.6.1.2.1.83.1.1.3.1.3 | Yes |
| ipMRouteNextHopIndex | 1.3.6.1.2.1.83.1.1.3.1.4 | Yes |
| ipMRouteNextHopAddress | 1.3.6.1.2.1.83.1.1.3.1.5 | Yes |
| pimIpMRouteNextHopPruneReason | 1.3.6.1.3.61.1.1.7.1.2 | Yes, but read-only. |

pimRpTable (PIM RP table)

NOTE

On the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series, this table has been replaced by [pimRpSetTable \(PIM RP set table\)](#) on page 47

| Object | Object identifier | Supported? |
|-------------------|------------------------|-----------------------------------------------|
| pimRPGroupAddress | 1.3.6.1.3.61.1.1.5.1.1 | Yes, but read-only and only active groups. |
| pimRPAddress | 1.3.6.1.3.61.1.1.5.1.2 | Yes, but read-only. |
| pimRPState | 1.3.6.1.3.61.1.1.5.1.3 | Yes, but read-only and value is always up(1). |
| pimRPStateTimer | 1.3.6.1.3.61.1.1.5.1.4 | No. |
| pimRPLastChange | 1.3.6.1.3.61.1.1.5.1.5 | No. |
| pimRPRowStatus | 1.3.6.1.3.61.1.1.5.1.6 | Yes, but read-only. |

pimRpSetTable (PIM RP set table)

Use the `show ip pim rp-set` command to display information about the PIM RP set table.

| Object | Object identifier | Supported? |
|----------------------|------------------------|--------------------------------------------|
| pimRpSetGroupAddress | 1.3.6.1.3.61.1.1.6.1.1 | Yes |
| pimRpSetGroupMask | 1.3.6.1.3.61.1.1.6.1.2 | Yes |
| pimRpSetAddress | 1.3.6.1.3.61.1.1.6.1.3 | Yes |
| pimRpSetHoldTime | 1.3.6.1.3.61.1.1.6.1.4 | Yes, but read-only. |
| pimRpSetExpiryTime | 1.3.6.1.3.61.1.1.6.1.5 | Yes, but read-only. |
| pimRpSetComponent | 1.3.6.1.3.61.1.1.6.1.6 | Yes, but only one PIM domain is supported. |

pimCandidateRPTable (PIM candidate-RP table)

The `show ip pim bsr` command displays information about the PIM candidate-RP table.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Object | Object identifier | Supported? |
|----------------------------|-------------------------|------------------------|
| pimCandidateRPGroupAddress | 1.3.6.1.3.61.1.1.11.1.1 | Yes |
| pimCandidateRPGroupMask | 1.3.6.1.3.61.1.1.11.1.2 | Yes. |
| pimCandidateRPAddress | 1.3.6.1.3.61.1.1.11.1.3 | Yes |
| pimCandidateRPRowStatus | 1.3.6.1.3.61.1.1.11.1.4 | Yes. Returns "active". |

pimComponentTable (PIM component table)

This table contain objects specific to PIM domain and has only one row for each domain to which the router is connected. Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

Use the **ip pim border** command at the interface level to stop the flooding of the bootstrap messages.

The **show ip pim bsr** command displays information about the PIM component table.

| Object | Object identifier | Supported? |
|---------------------------|-------------------------|------------------------|
| pimComponentIndex | 1.3.6.1.3.61.1.1.12.1.1 | Yes |
| pimComponentBSRAddress | 1.3.6.1.3.61.1.1.12.1.2 | Yes, but read-only. |
| pimComponentBSRExpiryTime | 1.3.6.1.3.61.1.1.12.1.3 | Yes, but read-only. |
| pimComponentCRPHoldTime | 1.3.6.1.3.61.1.1.12.1.4 | Yes |
| pimComponentStatus | 1.3.6.1.3.61.1.1.12.1.5 | Yes. Returns "active". |

RFC 3176: InMon Corporation's sFlow: A Method for Monitoring Traffic in Switched and Routed Networks

RFC 3176 MIBs enable you to configure the sFlow Export feature. Support for this RFC is available on the following devices:

- MLX Series devices
- MLX Series devices
- XMR Series
- CES 2000 Series and CER 2000 Series devices

The following groups from RFC 3176 are supported in the devices.

| Object | Object identifier | Description |
|------------------------------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| sFlowAgent | 1.3.6.1.4.1.4300.1.1 | The sFlow agent sampler. |
| sFlowVersion | 1.3.6.1.4.1.4300.1.1.1 | Returns a version string (for example, "1.2; Extreme"). |
| sFlowAgentAddressType | 1.3.6.1.4.1.4300.1.1.2 | Returns value 1 (IPv4). |
| sFlowAgentAddress | 1.3.6.1.4.1.4300.1.1.3 | Management IP. |
| sFlowTable | 1.3.6.1.4.1.4300.1.1.4 | sFlow Table. |
| sFlowDataSource | 1.3.6.1.4.1.4300.1.1.4.1.1 | ifIndex of sFlow port. |
| sFlowOwner | 1.3.6.1.4.1.4300.1.1.4.1.2 | Always null. Not supported in the CLI. |
| sFlowTimeout | 1.3.6.1.4.1.4300.1.1.4.1.3 | Always 0. Not supported in the CLI. |
| sFlowPacketSamplingRate | 1.3.6.1.4.1.4300.1.1.4.1.4 | Port sampling rate. Set this value to 0 to disable sFlow for a port. |
| sFlowCounterSamplingInterval | 1.3.6.1.4.1.4300.1.1.4.1.5 | Global counter poll interval. |
| sFlowMaximumHeaderSize | 1.3.6.1.4.1.4300.1.1.4.1.6 | Always 128. |
| sFlowMaximumDatagramSize | 1.3.6.1.4.1.4300.1.1.4.1.7 | Always 1400. |
| sFlowCollectorAddressType | 1.3.6.1.4.1.4300.1.1.4.1.8 | Returns unknown(0), ipv4(1), or ipv6(2) |
| sFlowCollectorAddress | 1.3.6.1.4.1.4300.1.1.4.1.9 | Address of first collector. For other collectors, use snFlowCollectorTable. (Refer to RFC 3176: InMon Corporation's sFlow: A Method for |

| Object | Object identifier | Description |
|----------------------|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Monitoring Traffic in Switched and Routed Networks.) |
| sFlowCollectorPort | 1.3.6.1.4.1.4300.1.1.4.1.10 | Port of first collector. For other collectors, use snSflowCollectorTable. (Refer to RFC 3176: InMon Corporation's sFlow: A Method for Monitoring Traffic in Switched and Routed Networks.) |
| sFlowDatagramVersion | 1.3.6.1.4.1.4300.1.1.4.1.11 | Always 4. |

RFC 3289: Management Information Base for the Differentiated Services Architecture

The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices support RFC 3289, Management Information Base for the Differentiated Services Architecture.

diffServMultiFieldClfrTable

The following table defines the MIB objects that describe a classifier element for matching on various fields of an IP address and upper-layer protocol header.

NOTE

The following table supports only the SNMP GET and GET-NEXT options.

| Object | Object identifier | Access |
|---------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| diffServMultiFieldClfrId | 1.3.6.1.2.1.97.1.2.6.1.1 | Incremental ID. |
| diffServMultiFieldClfrAddrType | 1.3.6.1.2.1.97.1.2.6.1.2 | The type of an IP address used by the classifier entry. <ul style="list-style-type: none"> • unknown(0) • ipv4(1) • ipv6(2) |
| diffServMultiFieldClfrDstAddr | 1.3.6.1.2.1.97.1.2.6.1.3 | Maps to the destination address. |
| diffServMultiFieldClfrDstPrefixLength | 1.3.6.1.2.1.97.1.2.6.1.4 | Maps to the destination address prefix length. |
| diffServMultiFieldClfrSrcAddr | 1.3.6.1.2.1.97.1.2.6.1.5 | Maps to the source address. |
| diffServMultiFieldClfrSrcPrefixLength | 1.3.6.1.2.1.97.1.2.6.1.6 | Maps to the source address prefix length. |
| diffServMultiFieldClfrDscp | 1.3.6.1.2.1.97.1.2.6.1.7 | Not supported. |
| diffServMultiFieldClfrFlowId | 1.3.6.1.2.1.97.1.2.6.1.8 | Not supported. |
| diffServMultiFieldClfrProtocol | 1.3.6.1.2.1.97.1.2.6.1.9 | Maps to a protocol. |
| diffServMultiFieldClfrDstL4PortMin | 1.3.6.1.2.1.97.1.2.6.1.10 | Maps to the destination port minimum. |
| diffServMultiFieldClfrDstL4PortMax | 1.3.6.1.2.1.97.1.2.6.1.11 | Maps to the destination port maximum. |
| diffServMultiFieldClfrSrcL4PortMin | 1.3.6.1.2.1.97.1.2.6.1.12 | Maps to the source port minimum. |
| diffServMultiFieldClfrSrcL4PortMax | 1.3.6.1.2.1.97.1.2.6.1.13 | Maps to the source port maximum. |
| diffServMultiFieldClfrStorage | 1.3.6.1.2.1.97.1.2.6.1.14 | Always returns volatile(2). |
| diffServMultiFieldClfrStatus | 1.3.6.1.2.1.97.1.2.6.1.15 | Always returns active(1). |

NOTE

The diffServDataPathTable, diffServClfrTable, diffServClfrElementTable, diffServMeterTable, diffServTBParamTable, diffServActionTable, diffServDscpMarkActTable, diffServCountActTable, diffServAlgDropTable, diffServRandomDropTable, diffServQTable, diffServSchedulerTable, diffServMinRateTable, and diffServMaxRateTable are not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

RFC 3415: SNMP-VIEW-BASED-ACM-MIB

The following table lists the MIBs supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

NOTE

Use **snmp-server context <context-name> vrf <vrf-name>** command to configure the SNMP contexts and associate it to VRF.
Use **snmp-server mib community-name <community-name> context <context-name>** command to map SNMP community names with SNMP contexts.

| Object group name | Object identifier | Supported? |
|-------------------|------------------------|-----------------|
| vacmContextName | 1.3.6.1.6.3.16.1.1.1.1 | Yes. Read-only. |

RFC 3418: Management Information Base (MIB) for the SNMP

RFC 3418, Management Information Base (MIB) for the Simple Network Management Protocol (SNMP) is supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and Extreme NetIron CER Series devices.

| Object group name | Object identifier | Supported? |
|-------------------|---------------------|------------|
| sysDescr | 1.3.6.1.2.1.1.1 | Yes |
| sysObjectID | 1.3.6.1.2.1.1.2 | Yes |
| sysUpTime | 1.3.6.1.2.1.1.3 | Yes |
| sysContact | 1.3.6.1.2.1.1.4 | Yes |
| sysName | 1.3.6.1.2.1.1.5 | Yes |
| sysLocation | 1.3.6.1.2.1.1.6 | Yes |
| sysServices | 1.3.6.1.2.1.1.7 | Yes |
| sysORLastChange | 1.3.6.1.2.1.1.8 | Yes |
| sysORTable | 1.3.6.1.2.1.1.9 | Yes |
| sysORIndex | 1.3.6.1.2.1.1.9.1.1 | Yes |
| sysORID | 1.3.6.1.2.1.1.9.1.2 | Yes |
| sysORDescr | 1.3.6.1.2.1.1.9.1.3 | Yes |
| sysORUpTime | 1.3.6.1.2.1.1.9.1.4 | Yes |

RFC 3584: SNMP-COMMUNITY-MIB

The following table lists the SNMP-Community table MIBs supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

NOTE

Use **snmp-server enable mib snmp-community-mib** to enable SNMP community MIBs.

| Object group name | Object identifier | Supported? |
|------------------------------|------------------------|-------------------|
| snmpCommunityIndex | 1.3.6.1.6.3.18.1.1.1.1 | Yes. |
| snmpCommunityName | 1.3.6.1.6.3.18.1.1.1.2 | Yes. Read-create. |
| snmpCommunitySecurityName | 1.3.6.1.6.3.18.1.1.1.3 | Yes. Read-create. |
| snmpCommunityContextEngineID | 1.3.6.1.6.3.18.1.1.1.4 | Yes. Read-only. |
| snmpCommunityContextName | 1.3.6.1.6.3.18.1.1.1.5 | Yes. Read-create. |
| snmpCommunityTransportTag | 1.3.6.1.6.3.18.1.1.1.6 | Yes. Read-create. |
| snmpCommunityStorageType | 1.3.6.1.6.3.18.1.1.1.7 | Yes. Read-create. |
| snmpCommunityStatus | 1.3.6.1.6.3.18.1.1.1.8 | Yes. Read-create. |

RFC 3635: Definitions of Managed Objects for the Ethernet-like interface types

The following groups from RFC 3635 are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

NOTE

RFC 3635 obsoletes RFC 2665.

dot3StatsTable

The following table lists the dot3StatsTable MIB objects.

| Object group name | Object identifier | Supported? |
|------------------------------------|-------------------------|------------|
| dot3StatsIndex | 1.3.6.1.2.1.10.7.2.1.1 | Yes |
| dot3StatsAlignmentErrors | 1.3.6.1.2.1.10.7.2.1.2 | Yes |
| dot3StatsFCSErrors | 1.3.6.1.2.1.10.7.2.1.3 | Yes |
| dot3StatsSingleCollisionFrames | 1.3.6.1.2.1.10.7.2.1.4 | Yes |
| dot3StatsMultipleCollisionFrames | 1.3.6.1.2.1.10.7.2.1.5 | Yes |
| dot3StatsSQETTestErrors | 1.3.6.1.2.1.10.7.2.1.6 | Yes |
| dot3StatsDeferredTransmissions | 1.3.6.1.2.1.10.7.2.1.7 | Yes |
| dot3StatsLateCollisions | 1.3.6.1.2.1.10.7.2.1.8 | Yes |
| dot3StatsExcessiveCollisions | 1.3.6.1.2.1.10.7.2.1.9 | Yes |
| dot3StatsInternalMacTransmitErrors | 1.3.6.1.2.1.10.7.2.1.10 | Yes |
| dot3StatsCarrierSenseErrors | 1.3.6.1.2.1.10.7.2.1.11 | Yes |
| dot3StatsFrameTooLongs | 1.3.6.1.2.1.10.7.2.1.13 | Yes |

| Object group name | Object identifier | Supported? |
|-----------------------------------|-------------------------|---------------------------------|
| dot3StatsInternalMacReceiveErrors | 1.3.6.1.2.1.10.7.2.1.16 | Yes |
| dot3StatsEtherChipSet | 1.3.6.1.2.1.10.7.2.1.17 | Yes |
| dot3StatsSymbolErrors | 1.3.6.1.2.1.10.7.2.1.18 | Yes |
| dot3StatsDuplexStatus | 1.3.6.1.2.1.10.7.2.1.19 | Yes |
| dot3StatsRateControlAbility | 1.3.6.1.2.1.10.7.2.1.20 | Yes. Always returns false(2). |
| dot3StatsRateControlStatus | 1.3.6.1.2.1.10.7.2.1.21 | Yes. Always returns Unknown(3). |

dot3ControlTable

The following table lists the dot3ControlTable MIB objects.

| Object group name | Object identifier | Supported? |
|-------------------------------|------------------------|-------------------------------|
| dot3ControlFunctionsSupported | 1.3.6.1.2.1.10.7.9.1.1 | Yes |
| dot3ControllnUnknownOpcodes | 1.3.6.1.2.1.10.7.9.1.2 | Yes |
| dot3HCControllnUnknownOpcodes | 1.3.6.1.2.1.10.7.9.1.3 | Yes. Always returns 0 (zero). |

dot3PauseTable

The following table lists the dot3PauseTable MIB objects.

| Object group name | Object identifier | Supported? |
|----------------------|-------------------------|-------------------------------|
| dot3PauseAdminMode | 1.3.6.1.2.1.10.7.10.1.1 | Yes |
| dot3PauseOperMode | 1.3.6.1.2.1.10.7.10.1.2 | Yes |
| dot3InPauseFrames | 1.3.6.1.2.1.10.7.10.1.3 | Yes |
| dot3OutPauseFrames | 1.3.6.1.2.1.10.7.10.1.4 | Yes |
| dot3HCInPauseFrames | 1.3.6.1.2.1.10.7.10.1.5 | Yes. Always returns 0 (zero). |
| dot3HCOutPauseFrames | 1.3.6.1.2.1.10.7.10.1.6 | Yes. Always returns 0 (zero). |

dot3HCStatsTable

The following table lists the dot3HCStatsTable MIB objects.

| Object group name | Object identifier | Supported? |
|--------------------------------------|-------------------------|-------------------------------|
| dot3HCStatsAlignmentErrors | 1.3.6.1.2.1.10.7.11.1.1 | Yes |
| dot3HCStatsFCSErrors | 1.3.6.1.2.1.10.7.11.1.2 | Yes |
| dot3HCStatsInternalMacTransmitErrors | 1.3.6.1.2.1.10.7.11.1.3 | Yes. Always returns 0 (zero). |
| dot3HCStatsFrameTooLongs | 1.3.6.1.2.1.10.7.11.1.4 | Yes |
| dot3HCStatsInternalMacReceiveErrors | 1.3.6.1.2.1.10.7.11.1.5 | Yes. Always returns 0 (zero). |
| dot3HCStatsSymbolErrors | 1.3.6.1.2.1.10.7.11.1.6 | Yes. Always returns 0 (zero). |

RFC 3813: Multiprotocol Label Switching (MPLS) Label Switching Router (LSR) Management Information Base (MIB)

The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices support RFC 3813, Multiprotocol Label Switching (MPLS) Label Switching Router (LSR).

NOTE

Only the SNMP GET and GET-NEXT are supported. The SNMP SET is not supported for all the LSR MIB objects, except the mplsXCNotificationsEnable object.

MPLS interface table objects

The following table lists the MPLS interface table objects.

| Object | Object identifier | Supported? |
|-------------------------------------|------------------------------|------------|
| mplsInterfaceIndex | 1.3.6.1.2.1.10.166.2.1.1.1.1 | Yes |
| mplsInterfaceLabelMinIn | 1.3.6.1.2.1.10.166.2.1.1.1.2 | No |
| mplsInterfaceLabelMaxIn | 1.3.6.1.2.1.10.166.2.1.1.1.3 | No |
| mplsInterfaceLabelMinOut | 1.3.6.1.2.1.10.166.2.1.1.1.4 | No |
| mplsInterfaceLabelMaxOut | 1.3.6.1.2.1.10.166.2.1.1.1.5 | No |
| mplsInterfaceTotalBandwidth | 1.3.6.1.2.1.10.166.2.1.1.1.6 | Yes |
| mplsInterfaceAvailableBandwidth | 1.3.6.1.2.1.10.166.2.1.1.1.7 | Yes |
| mplsInterfaceLabelParticipationType | 1.3.6.1.2.1.10.166.2.1.1.1.8 | Yes |

MPLS in-segment table objects

The following table lists the MPLS in-segment table objects.

| Object | Object identifier | Supported? |
|------------------------------|-------------------------------|------------|
| mplsInSegmentIndex | 1.3.6.1.2.1.10.166.2.1.4.1.1 | No |
| mplsInSegmentInterface | 1.3.6.1.2.1.10.166.2.1.4.1.2 | No |
| mplsInSegmentLabel | 1.3.6.1.2.1.10.166.2.1.4.1.3 | Yes |
| mplsInSegmentLabelPtr | 1.3.6.1.2.1.10.166.2.1.4.1.4 | Yes |
| mplsInSegmentNPop | 1.3.6.1.2.1.10.166.2.1.4.1.5 | Yes |
| mplsInSegmentAddrFamily | 1.3.6.1.2.1.10.166.2.1.4.1.6 | Yes |
| mplsInSegmentXCIndex | 1.3.6.1.2.1.10.166.2.1.4.1.7 | Yes |
| mplsInSegmentOwner | 1.3.6.1.2.1.10.166.2.1.4.1.8 | Yes |
| mplsInSegmentTrafficParamPtr | 1.3.6.1.2.1.10.166.2.1.4.1.9 | Yes |
| mplsInSegmentRowStatus | 1.3.6.1.2.1.10.166.2.1.4.1.10 | Yes |
| mplsInSegmentStorageType | 1.3.6.1.2.1.10.166.2.1.4.1.11 | Yes |

MPLS in-segment performance table objects

The following table lists the MPLS in-segment performance table objects.

| Object | Object identifier | Supported? |
|------------------------------------|------------------------------|------------|
| mplsInSegmentPerfOctets | 1.3.6.1.2.1.10.166.2.1.5.1.1 | No |
| mplsInSegmentPerfPackets | 1.3.6.1.2.1.10.166.2.1.5.1.2 | Yes |
| mplsInSegmentPerfErrors | 1.3.6.1.2.1.10.166.2.1.5.1.3 | No |
| mplsInSegmentPerfDiscards | 1.3.6.1.2.1.10.166.2.1.5.1.4 | No |
| mplsInSegmentPerfHCOctets | 1.3.6.1.2.1.10.166.2.1.5.1.5 | No |
| mplsInSegmentPerfDiscontinuityTime | 1.3.6.1.2.1.10.166.2.1.5.1.6 | No |

MPLS out-segment table objects

The following table lists the MPLS out-segment table objects.

| Object | Object identifier | Supported? |
|-------------------------------|-------------------------------|------------|
| mplsOutSegmentIndex | 1.3.6.1.2.1.10.166.2.1.7.1.1 | No |
| mplsOutSegmentInterface | 1.3.6.1.2.1.10.166.2.1.7.1.2 | No |
| mplsOutSegmentPushTopLabel | 1.3.6.1.2.1.10.166.2.1.7.1.3 | Yes |
| mplsOutSegmentTopLabel | 1.3.6.1.2.1.10.166.2.1.7.1.4 | Yes |
| mplsOutSegmentTopLabelPtr | 1.3.6.1.2.1.10.166.2.1.7.1.5 | Yes |
| mplsOutSegmentNextHopAddrType | 1.3.6.1.2.1.10.166.2.1.7.1.6 | Yes |
| mplsOutSegmentNextHopAddr | 1.3.6.1.2.1.10.166.2.1.7.1.7 | Yes |
| mplsOutSegmentXCIIndex | 1.3.6.1.2.1.10.166.2.1.7.1.8 | Yes |
| mplsOutSegmentOwner | 1.3.6.1.2.1.10.166.2.1.7.1.9 | Yes |
| mplsOutSegmentTrafficParamPtr | 1.3.6.1.2.1.10.166.2.1.7.1.10 | Yes |
| mplsOutSegmentRowStatus | 1.3.6.1.2.1.10.166.2.1.7.1.11 | Yes |
| mplsOutSegmentStorageType | 1.3.6.1.2.1.10.166.2.1.7.1.12 | Yes |

MPLS cross-connect table objects

The following table lists the MPLS cross-connect table objects.

| Object | Object identifier | Supported? |
|-----------------------|--------------------------------|------------|
| mplsXCIndex | 1.3.6.1.2.1.10.166.2.1.10.1.1 | Yes |
| mplsXCIIndex | 1.3.6.1.2.1.10.166.2.1.10.1.2 | Yes |
| mplsXCOutSegmentIndex | 1.3.6.1.2.1.10.166.2.1.10.1.3 | Yes |
| mplsXCLspld | 1.3.6.1.2.1.10.166.2.1.10.1.4 | Yes |
| mplsXCLLabelStackIndx | 1.3.6.1.2.1.10.166.2.1.10.1.5 | Yes |
| mplsXCOwner | 1.3.6.1.2.1.10.166.2.1.10.1.6 | Yes |
| mplsXCRowStatus | 1.3.6.1.2.1.10.166.2.1.10.1.7 | Yes |
| mplsXCStorageType | 1.3.6.1.2.1.10.166.2.1.10.1.8 | Yes |
| mplsXCAdminStatus | 1.3.6.1.2.1.10.166.2.1.10.1.9 | Yes |
| mplsXCOperStatus | 1.3.6.1.2.1.10.166.2.1.10.1.10 | Yes |

The tables mplsInterfacePerfTable, mplsOutSegmentPerfTable, mplsLabelStackTable, and mplsInSegmentMapTable are not supported.

MPLS label stack scalar object

The following table lists the MPLS label stack scalar objects. The scalar objects mplsInSegmentIndexNext, mplsOutSegmentIndexNext, mplsXCIIndexNext, and mplsLabelStackIndexNext are not supported.

| Object | Object identifier | Supported? |
|------------------------|---------------------------|---------------------------------------------------------|
| mplsMaxLabelStackDepth | 1.3.6.1.2.1.10.166.2.1.11 | Yes. Always returns the maximum label stack depth of 3. |

RFC 3815: Definitions of Managed Objects for the Multiprotocol Label Switching (MPLS), Label Distribution Protocol (LDP)

The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices support RFC 3815, Definitions of Managed Objects for the Multiprotocol Label Switching (MPLS), and Label Distribution Protocol (LDP).

Support for this MIB enables configuration and monitoring of the LDP.

mplsLdpLsr objects

| Object | Object identifier | Supported? |
|--------------------------------|--------------------------|----------------------------------------------|
| mplsLdpLsrid | 1.3.6.1.2.1.10.166.4.1.1 | Yes |
| mplsLdpLsrLoopDetectionCapable | 1.3.6.1.2.1.10.166.4.1.2 | Returns none(1) or hopCountAndPathVector(5). |

mplsLdpEntity objects

| Object | Object identifier | Supported? |
|-------------------------|----------------------------|-------------------|
| mplsLdpEntityLastChange | 1.3.6.1.2.1.10.166.4.1.2.1 | Always returns 0. |
| mplsLdpEntityIndexNext | 1.3.6.1.2.1.10.166.4.1.2.2 | Always returns 0. |

mplsLdpEntity table

This mplsLdpEntity table contains information about MPLS Label Distribution Protocol Entities which exist on this Label Switching Router (LSR) or Label Edge Router (LER).

NOTE

The following table currently supports the read-only access.

| Object | Object identifier | Supported? |
|------------------------------|--------------------------------|------------|
| mplsLdpEntityLdpld | 1.3.6.1.2.1.10.166.4.1.2.3.1.1 | Index |
| mplsLdpEntityIndex | 1.3.6.1.2.1.10.166.4.1.2.3.1.2 | Index |
| mplsLdpEntityProtocolVersion | 1.3.6.1.2.1.10.166.4.1.2.3.1.3 | Yes |

| Object | Object identifier | Supported? |
|-----------------------------------|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLdpEntityAdminStatus | 1.3.6.1.2.1.10.166.4.1.2.3.1.4 | The administrative status of the LDP Entity.The values are: <ul style="list-style-type: none">• up(1) mapped to enable(1)• down(2) or testing(3) mapped to disable(2) |
| mplsLdpEntityOperStatus | 1.3.6.1.2.1.10.166.4.1.2.3.1.5 | Displays the operational status of this LDP Entity.The values are: <ul style="list-style-type: none">• up(1) mapped to enabled(2)• down(2) mapped to disabled(3)• testing(3) mapped to disabled(3)• unknown(4) mapped to unknown(1)• dormant(5) mapped to disabled(3)• notpresent(6) mapped to disabled(3) |
| mplsLdpEntityTcpPort | 1.3.6.1.2.1.10.166.4.1.2.3.1.6 | Yes |
| mplsLdpEntityUdpDscPort | 1.3.6.1.2.1.10.166.4.1.2.3.1.7 | Yes |
| mplsLdpEntityMaxPduLength | 1.3.6.1.2.1.10.166.4.1.2.3.1.8 | Yes |
| mplsLdpEntityKeepAliveHoldTimer | 1.3.6.1.2.1.10.166.4.1.2.3.1.9 | Yes |
| mplsLdpEntityHelloHoldTimer | 1.3.6.1.2.1.10.166.4.1.2.3.1.10 | Yes |
| mplsLdpEntityInitSessionThreshold | 1.3.6.1.2.1.10.166.4.1.2.3.1.11 | Yes |
| mplsLdpEntityLabelDistMethod | 1.3.6.1.2.1.10.166.4.1.2.3.1.12 | Yes |
| mplsLdpEntityLabelRetentionMode | 1.3.6.1.2.1.10.166.4.1.2.3.1.13 | Yes |
| mplsLdpEntityPathVectorLimit | 1.3.6.1.2.1.10.166.4.1.2.3.1.14 | Yes |
| mplsLdpEntityHopCountLimit | 1.3.6.1.2.1.10.166.4.1.2.3.1.15 | Yes |
| mplsLdpEntityTransportAddrKind | 1.3.6.1.2.1.10.166.4.1.2.3.1.16 | The IP address of the interface from which hello messages are sent is used as the transport address in the hello message.Returns interface(1). |
| mplsLdpEntityTargetPeer | 1.3.6.1.2.1.10.166.4.1.2.3.1.17 | Yes |
| mplsLdpEntityTargetPeerAddrType | 1.3.6.1.2.1.10.166.4.1.2.3.1.18 | Displays the type of the internetwork layer address used for the Extended Discovery. Possible types: <ul style="list-style-type: none">• ipv4(1)• ipv6(2)• unknown(0) |
| mplsLdpEntityTargetPeerAddr | 1.3.6.1.2.1.10.166.4.1.2.3.1.19 | Yes |
| mplsLdpEntityLabelType | 1.3.6.1.2.1.10.166.4.1.2.3.1.20 | Yes |
| mplsLdpEntityDiscontinuityTime | 1.3.6.1.2.1.10.166.4.1.2.3.1.21 | Yes |
| mplsLdpEntityStorageType | 1.3.6.1.2.1.10.166.4.1.2.3.1.22 | Yes |
| mplsLdpEntityRowStatus | 1.3.6.1.2.1.10.166.4.1.2.3.1.23 | Yes |

mplsLdpEntityStats table

The mplsLdpEntityStats table is a read-only table which augments the mplsLdpEntityTable. This table keeps statistical information about the LDP Entities on the LSR. This table is read-only.

| Object | Object identifier | Supported? |
|-------------------------------------------------|---------------------------------|------------|
| mplsLdpEntityStatsSessionAttempts | 1.3.6.1.2.1.10.166.4.1.2.4.1.1 | Yes |
| mplsLdpEntityStatsSessionRejectedNoHelloErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.2 | Yes |
| mplsLdpEntityStatsSessionRejectedAdErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.3 | Yes |
| mplsLdpEntityStatsSessionRejectedMaxPduErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.4 | Yes |
| mplsLdpEntityStatsSessionRejectedLRErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.5 | Yes |
| mplsLdpEntityStatsBadLdpIdentifierErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.6 | Yes |
| mplsLdpEntityStatsBadPduLengthErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.7 | Yes |
| mplsLdpEntityStatsBadMessageLengthErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.8 | Yes |
| mplsLdpEntityStatsBadTlvLengthErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.9 | Yes |
| mplsLdpEntityStatsMalformedTlvValueErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.10 | Yes |
| mplsLdpEntityStatsKeepAliveTimerExpErrors | 1.3.6.1.2.1.10.166.4.1.2.4.1.11 | Yes |
| mplsLdpEntityStatsShutdownReceivedNotifications | 1.3.6.1.2.1.10.166.4.1.2.4.1.12 | Yes |
| mplsLdpEntityStatsShutdownSentNotifications | 1.3.6.1.2.1.10.166.4.1.2.4.1.13 | Yes |

mplsLdpSession objects

| Object | Object identifier | Supported? |
|-------------------------|----------------------------|--------------------------------|
| mplsLdpPeerLastChange | 1.3.6.1.2.1.10.166.4.1.3.1 | Unsupported, Always returns 0. |
| mplsLdpLspFecLastChange | 1.3.6.1.2.1.10.166.4.1.3.2 | Yes |

mplsLdpPeer table

The mplsLdpPeer table has information about LDP peers known by Entities in the mplsLdpEntityTable. The information in this table is based on information from the Entity-Peer interaction during session initialization but is not appropriate for the mplsLdpSessionTable, because objects in this table may or may not be used in session establishment.

| Object | Object identifier | Supported? |
|------------------------------|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLdpPeerLdpId | 1.3.6.1.2.1.10.166.4.1.3.2.1.1 | Yes |
| mplsLdpPeerLabelDistMethod | 1.3.6.1.2.1.10.166.4.1.3.2.1.2 | Yes |
| mplsLdpPeerPathVectorLimit | 1.3.6.1.2.1.10.166.4.1.3.2.1.3 | Yes |
| mplsLdpPeerTransportAddrType | 1.3.6.1.2.1.10.166.4.1.3.2.1.4 | Displays the type of the Internet address for the mplsLdpPeerTransportAddr object. Possible types: <ul style="list-style-type: none">• ipv4(1)• ipv6(2)• unknown(0) |
| mplsLdpPeerTransportAddr | 1.3.6.1.2.1.10.166.4.1.3.2.1.5 | Yes |

mplsLdpSession table

The mplsLdpSession table contains information of sessions between the LDP Entities and LDP Peers. This table augments the mplsLdpPeerTable. Each row in this table represents a single session. This table is read-only.

| Object | Object identifier | Supported? |
|------------------------------------|--------------------------------|-------------------------|
| mplsLdpSessionStateLastChange | 1.3.6.1.2.1.10.166.4.1.3.3.1.1 | Unsupported. Returns 0. |
| mplsLdpSessionState | 1.3.6.1.2.1.10.166.4.1.3.3.1.2 | Yes |
| mplsLdpSessionRole | 1.3.6.1.2.1.10.166.4.1.3.3.1.3 | Yes |
| mplsLdpSessionProtocolVersion | 1.3.6.1.2.1.10.166.4.1.3.3.1.4 | Yes |
| mplsLdpSessionKeepAliveHoldTimeRem | 1.3.6.1.2.1.10.166.4.1.3.3.1.5 | Yes |
| mplsLdpSessionKeepAliveTime | 1.3.6.1.2.1.10.166.4.1.3.3.1.6 | Yes |
| mplsLdpSessionMaxPduLength | 1.3.6.1.2.1.10.166.4.1.3.3.1.7 | Yes |
| mplsLdpSessionDiscontinuityTime | 1.3.6.1.2.1.10.166.4.1.3.3.1.8 | Yes |

mplsLdpSessionStats table

A table of statistics between the LDP Entities and LDP Peers. This table is read-only.

| Object | Object identifier | Supported? |
|-----------------------------------------|--------------------------------|------------|
| mplsLdpSessionStatsUnknownMesTypeErrors | 1.3.6.1.2.1.10.166.4.1.3.4.1.1 | Yes |
| mplsLdpSessionStatsUnknownTlvErrors | 1.3.6.1.2.1.10.166.4.1.3.4.1.2 | Yes |

mplsLdpHelloAdjacency table

A table of hello adjacencies for the sessions. This table is read-only.

| Object | Object identifier | Supported? |
|----------------------------------|----------------------------------|------------|
| mplsLdpHelloAdjacencyIndex | 1.3.6.1.2.1.10.166.4.1.3.5.1.1.1 | Index |
| mplsLdpHelloAdjacencyHoldTimeRem | 1.3.6.1.2.1.10.166.4.1.3.5.1.1.2 | Yes |
| mplsLdpHelloAdjacencyHoldTime | 1.3.6.1.2.1.10.166.4.1.3.5.1.1.3 | Yes |
| mplsLdpHelloAdjacencyType | 1.3.6.1.2.1.10.166.4.1.3.5.1.1.4 | Yes |

mplsFec objects

A table of MPLS Forwarding Equivalence Class (FEC) objects.

| Object | Object identifier | Supported? |
|-------------------|------------------------------|---------------------------------------|
| mplsFecLastChange | 1.3.6.1.2.1.10.166.4.1.3.8.1 | Same data as mplsLdpLspFecLastChange. |
| mplsFecIndexNext | 1.3.6.1.2.1.10.166.4.1.3.8.2 | Unsupported. Always returns 0. |

mplsFec table

The mplsFec table represents the FEC information associated with an LSP.

NOTE

This table currently supports read-only access.

| Object | Object identifier | Supported? |
|-------------------------|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsFecIndex | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.1 | Index |
| mplsFecType | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.2 | Yes |
| mplsFecAddrPrefixLength | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.3 | Yes |
| mplsFecAddrType | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.4 | Displays the value of this object and the type of the Internet address. Possible values: <ul style="list-style-type: none">• ipv4(1)• ipv6(2)• unknown(0) |
| mplsFecAddr | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.5 | Yes |
| mplsFecStorageType | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.6 | Yes |
| mplsFecRowStatus | 1.3.6.1.2.1.10.166.4.1.3.8.3.1.7 | Yes |

mplsLdpSessionPeerAddr table

The mplsLdpSessionPeerAddr table extends the mplsLdpSessionTable. This table is used to store Label Address information from Label Address Messages received by this LSR from Peers. This table is read-only and should be updated when Label Withdraw Address Messages are received (for example, rows should be deleted as appropriate).

NOTE

As more than one address may be contained in a Label Address Message, this table **sparse augments** the mplsLdpSessionTable's information.

| Object | Object identifier | Supported? |
|-----------------------------------|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLdpSessionPeerAddrIndex | 1.3.6.1.2.1.10.166.4.1.3.11.1.1 | Index |
| mplsLdpSessionPeerNextHopAddrType | 1.3.6.1.2.1.10.166.4.1.3.11.1.2 | Displays the internetwork layer address type of this Next Hop Address as specified in the Label Address Message associated with this Session. Possible values: <ul style="list-style-type: none">• ipv4(1)• ipv6(2)• unknown(0) |
| mplsLdpSessionPeerNextHopAddr | 1.3.6.1.2.1.10.166.4.1.3.11.1.3 | Yes |

RFC 4022: Management Information Base for the Transmission Control Protocol (TCP)

The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices support RFC 4022, Management Information Base for Transmission Control Protocol (TCP). All objects have read-only access, except for the tcpConnectionState object in the tcpConnectionTable. The tcpConnectionState object has read-write access.

RFC 4087: IP Tunnel MIB

The following tables in RFC 4087 are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

tunnellfTable

The tunnellfTable contains information on configured tunnels.

| Object names | Description |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| tunnellfLocalAddress | Not supported as it is deprecated. |
| tunnellfRemoteAddress | Not supported as it is deprecated. |
| tunnellfEncapsMethod | Read-only. Only 6to4 and GRE tunnel types are supported. This is the encapsulation method used by the tunnel. |
| tunnellfHopLimit | Read-only. This is the IPv4 time-to-live (TTL) or IPv6 Hop Limit to use in the outer IP header. A value of 0 indicates that the value is copied from the payload's header. |
| tunnellfSecurity | Read-only. Returns ipsec(2) value for IPSec tunnels otherwise none(1). |
| tunnellfTOS | Read-only. |
| tunnellfFlowLabel | Read-only. Always returns -1 which indicates a wildcard as suggested by RFC 3595. |
| tunnellfAddressType | Read-only. |
| tunnellfLocallnetAddress | Read-only. |
| tunnellfRemotelnetAddress | Read-only. |
| tunnellfEncapsLimit | Read-only. This is the maximum number of additional encapsulations permitted for packets undergoing encapsulation at this node. A value of -1 indicates that no limit is present, except as a result of the packet size. |

tunnellnetConfigTable

The tunnellnetConfigTable can be used to map a set of tunnel endpoints to the associated ifIndex value. Every row in the tunnellfTable with a fixed destination address should have a corresponding row in the tunnellnetConfigTable.

| Object names | Description |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| tunnellnetConfigAddressType | Read-only. Index value. |
| tunnellnetConfigLocalAddress | Read-only. Index value. |
| tunnellnetConfigRemoteAddress | Read-only. Index value. |
| tunnellnetConfigEncapsMethod | Read-only. Index value. This is the encapsulation method used by the tunnel. Only 6to4 and GRE tunnel types are supported. |
| tunnellnetConfigID | Read-only. Index value. Always 1 in 6 to 4 tunnel type. |
| tunnellnetConfigIfIndex | Read-only. |
| tunnellnetConfigStatus | Read-only. Always returns active(1). |
| tunnellnetConfigStorageType | Read-only. Always returns nonVolatile(3). |

ifTable support

Support for the tunnellfTable and tunnellnetConfigTable affects the ifTable (RFC 1213).

| Object names | Description |
|-------------------|----------------------------------------------------------------------------------------------------------|
| ifIndex | Read-only. Index value. |
| ifDescr | Read-only. |
| ifType | Read-only. |
| ifMtu | Read-only. |
| ifSpeed | Read-only. |
| ifPhysAddress | Not supported. |
| ifAdminStatus | Read-only. |
| ifOperStatus | Read-only. |
| ifLastChange | Read-only. Always returns 0. |
| ifSpecific | Read-only. This is a deprecated MIB object. |
| ifInOctets | Not supported. |
| ifInUcastPkts | Read-only. Reports total received packet count from tunnel. |
| ifInNUcastPkts | Not supported. Returns 0. This is a deprecated MIB object. |
| ifInDiscards | Not supported. |
| ifInErrors | Not supported. |
| ifInUnknownProtos | Not supported. |
| ifOutOctets | Read-only. |
| ifOutUcastPkts | Read-only. Reports total transmitted packet count to tunnel and total received packet count from tunnel. |
| ifOutNUcastPkts | Not supported. Returns 0. This is a deprecated MIB object. |
| ifOutDiscards | Not supported. |
| ifOutErrors | Not supported. |
| ifOutQLen | Read-only. |

ifXTable

Support for the tunnellIfTable and tunnellNetConfigTable also affects ifXTable (RFC 2233).

| Object names | Description |
|------------------------|-------------------------------------------------------------|
| ifName | Read-only. |
| ifInMulticastPkts | Read-only. Returns 0. |
| ifInBroadcastPkts | Not supported. Returns 0. |
| ifOutMulticastPkts | Read-only. Returns 0. |
| ifOutBroadcastPkts | Not supported. Returns 0. |
| ifHCInOctets | Read-only. Returns 0. |
| ifHCInUcastPkts | Read-only. Reports total received packet count from tunnel. |
| ifHCInBroadcastPkts | Not supported. Returns 0. |
| ifHCOutOctets | Read-only. Returns 0. |
| ifHCOutUcastPkts | Read-only. Reports total received packet count from tunnel. |
| ifHCOutMulticastPkts | Not supported. Returns 0. |
| ifHCOutBroadcastPkts | Not supported. Returns 0. |
| ifLinkUpDownTrapEnable | Read-only. Always returns disabled(2). |

| Object names | Description |
|----------------------------|-------------------------------------|
| ifHighSpeed | Read-only. |
| ifPromiscuousMode | Read-only. Always returns true(1). |
| ifConnectorPresent | Read-only. Always returns false(2). |
| ifAlias | Read-only. |
| ifCounterDiscontinuityTime | Read-only. |

RFC 4113: Management Information Base for the User Datagram Protocol (UDP)

RFC 4113, Management Information Base for the User Datagram Protocol (UDP) is supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

All objects have read-only access.

RFC 4133: Entity MIB (Version 3)

RFC 4133, Entity MIB (Version 3) is supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Object group name | Object identifier | Supported? |
|-------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| entPhysicalTable | 1.3.6.1.2.1.47.1.1.1 | Yes |
| entPhysicalIndex | 1.3.6.1.2.1.47.1.1.1.1 | Yes. Not-accessible. |
| entPhysicalDescr | 1.3.6.1.2.1.47.1.1.1.2 | Yes |
| entPhysicalVendorType | 1.3.6.1.2.1.47.1.1.1.3 | Yes. NOTE This object is defined for assigning vendor type OIDs (For example, brcdlp.1.17.1.3.2.2 and brcdlp.1.17.1.5.2) to various physical entities like chassis, power supply, Fan, MP, SFM, and various types of LP modules. |
| entPhysicalContainedIn | 1.3.6.1.2.1.47.1.1.1.4 | Yes |
| entPhysicalClass | 1.3.6.1.2.1.47.1.1.1.5 | Yes |
| entPhysicalParentRelPos | 1.3.6.1.2.1.47.1.1.1.6 | Yes |
| entPhysicalName | 1.3.6.1.2.1.47.1.1.1.7 | Yes |
| entPhysicalHardwareRev | 1.3.6.1.2.1.47.1.1.1.8 | Yes. NOTE The information is available only for MP, SFM, and LP modules. |
| entPhysicalFirmwareRev | 1.3.6.1.2.1.47.1.1.1.9 | Yes. |

| Object group name | Object identifier | Supported? |
|--------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | NOTE The information is available only for MP, SFM, and LP modules. |
| entPhysicalSoftwareRev | 1.3.6.1.2.1.47.1.1.1.1.10 | Yes. NOTE The information is available only for MP, SFM, and LP modules. |
| entPhysicalSerialNum | 1.3.6.1.2.1.47.1.1.1.1.11 | Yes. Read-only. |
| entPhysicalMfgName | 1.3.6.1.2.1.47.1.1.1.1.12 | Yes |
| entPhysicalModelName | 1.3.6.1.2.1.47.1.1.1.1.13 | Yes |

| entPhysicalIsFRU | 1.3.6.1.2.1.47.1.1.1.1.16 | Yes |
| entPhysicalMfgDate | 1.3.6.1.2.1.47.1.1.1.1.17 | Yes |
| entPhysicalUris | 1.3.6.1.2.1.47.1.1.1.1.18 | Yes. Read-only. |
| entPhysicalContainsTable | 1.3.6.1.2.1.47.1.3.3 | Yes |
| entLastChangeTime | 1.3.6.1.2.1.47.1.4.1 | Yes |
| entConfigChange | 1.3.6.1.2.1.47.2.0.1 | Yes NOTE This notification is generated when the value of entLastChangeTime is changed, and occurs if the time interval is 5 mins between the changes in the entLastChangeTime. |

RFC 4273: Definitions of Managed Objects for BGP-4

NOTE

The definitions of managed objects for BGP-4 is used instead of RFC 1567, Definitions of Managed Objects for the Fourth Version of the Border Gateway Protocol (BGP-4) using SMIv2. RFC 1657 has been obsoleted by RFC 4273.

NOTE

Beginning with NetIron 05.9.00 release, the following BGP-4 MIBs have VRF support.

| Object group name | Object identifier | Notes |
|-------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| bgpVersion | 1.3.6.1.2.1.15.1 | The vector of the supported BGP version numbers. |
| bgpLocalAS | 1.3.6.1.2.1.15.2 | The local autonomous system number. The MLX Series and NetIron devices return "AS_TRANS (23456)" if the number is greater than 16 bits. |

| Object group name | Object identifier | Notes |
|--------------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgpPeerTable | 1.3.6.1.2.1.15.3 | The bgpPeerRemoteAs object is the remote autonomous system number received in the BGP OPEN message. The MLX Series and NetIron devices return "AS_TRANS (23456)" for this object if the number is greater than 16 bits. |
| bgpPeerEntry | 1.3.6.1.2.1.15.3.1 | - |
| bgpPeerIdentifier | 1.3.6.1.2.1.15.3.1.1 | - |
| bgpPeerState | 1.3.6.1.2.1.15.3.1.2 | - |
| bgpPeerAdminStatus | 1.3.6.1.2.1.15.3.1.3 | - |
| bgpPeerNegotiatedVersion | 1.3.6.1.2.1.15.3.1.4 | - |
| bgpPeerLocalAddr | 1.3.6.1.2.1.15.3.1.5 | - |
| bgpPeerLocalPort | 1.3.6.1.2.1.15.3.1.6 | - |
| bgpPeerRemoteAddr | 1.3.6.1.2.1.15.3.1.7 | - |
| bgpPeerRemotePort | 1.3.6.1.2.1.15.3.1.8 | - |
| bgpPeerRemoteAs | 1.3.6.1.2.1.15.3.1.9 | - |
| bgpPeerInUpdates | 1.3.6.1.2.1.15.3.1.10 | - |
| bgpPeerOutUpdates | 1.3.6.1.2.1.15.3.1.11 | - |
| bgpPeerInTotalMessages | 1.3.6.1.2.1.15.3.1.12 | - |
| bgpPeerOutTotalMessages | 1.3.6.1.2.1.15.3.1.13 | - |
| bgpPeerLastError | 1.3.6.1.2.1.15.3.1.14 | - |
| bgpPeerFsmEstablishedTransitions | 1.3.6.1.2.1.15.3.1.15 | - |
| bgpPeerFsmEstablishedTime | 1.3.6.1.2.1.15.3.1.16 | - |
| bgpPeerConnectRetryInterval | 1.3.6.1.2.1.15.3.1.17 | - |
| bgpPeerHoldTime | 1.3.6.1.2.1.15.3.1.18 | - |
| bgpPeerKeepAlive | 1.3.6.1.2.1.15.3.1.19 | - |
| bgpPeerHoldTimeConfigured | 1.3.6.1.2.1.15.3.1.20 | - |
| bgpPeerKeepAliveConfigured | 1.3.6.1.2.1.15.3.1.21 | - |
| bgpPeerMinASOriginationInterval | 1.3.6.1.2.1.15.3.1.22 | - |
| bgpPeerMinRouteAdvertisementInterval | 1.3.6.1.2.1.15.3.1.23 | - |
| bgpPeerInUpdateElapsedTime | 1.3.6.1.2.1.15.3.1.24 | - |
| bgplIdentifier | 1.3.6.1.2.1.15.4 | - |
| bgp4PathAttrTable | 1.3.6.1.2.1.15.6 | - |
| bgp4PathAttrEntry | 1.3.6.1.2.1.15.6.1 | - |
| bgp4PathAttrPeer | 1.3.6.1.2.1.15.6.1.1 | - |
| bgp4PathAttrlpAddrPrefixLen | 1.3.6.1.2.1.15.6.1.2 | - |
| bgp4PathAttrlpAddrPrefix | 1.3.6.1.2.1.15.6.1.3 | - |
| bgp4PathAttrOrigin | 1.3.6.1.2.1.15.6.1.4 | - |
| bgp4PathAttrASPathSegment | 1.3.6.1.2.1.15.6.1.5 | This object is the sequence of AS path segments. Each AS path segment is represented by a triplet of <i>type</i> , <i>length</i> , and <i>value</i> . The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices return "AS_TRANS" if the AS number is greater than 2 bytes. |

| Object group name | Object identifier | Notes |
|-----------------------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4PathAttrNextHop | 1.3.6.1.2.1.15.6.1.6 | - |
| bgp4PathAttrMultiExitDisc | 1.3.6.1.2.1.15.6.1.7 | - |
| bgp4PathAttrLocalPref | 1.3.6.1.2.1.15.6.1.8 | - |
| bgp4PathAttrAtomicAggregate | 1.3.6.1.2.1.15.6.1.9 | - |
| bgp4PathAttrAggregatorAS | 1.3.6.1.2.1.15.6.1.10 | The AS number of the last BGP4 speaker that performed route aggregation. A value of zero (0) indicates the absence of this attribute. The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices return "AS_TRANS (23456)" for this object if remote AS is greater than 16 bits. |
| bgp4PathAttrAggregatorAddr | 1.3.6.1.2.1.15.6.1.11 | - |
| bgp4PathAttrCalcLocalPref | 1.3.6.1.2.1.15.6.1.12 | - |
| bgp4PathAttrBest | 1.3.6.1.2.1.15.6.1.13 | - |
| bgp4PathAttrUnknown | 1.3.6.1.2.1.15.6.1.14 | - |

draft-ietf-idr-bgp4-mibv2-12 MIB

The following section of draft-ietf-idr-bgp4-mibv2-12 defines MIB objects for managing the Border Gateway Protocol, version 4.

BGP4v2 per-peer session management information

The following table displays information about the BGP4v2 per-peer session management information group. Use the **show ip bgp neighbor*id*** command to display the BGP4v2 per-peer session management information.

NOTE

The following table is not supported on the Extreme NetIron CES 2000 series BASE Packages device.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2PeerTable brcdlp.3.5.1.1.2 | None | The BGP4v2 per-peer table. The table contains one entry per BGP peer and the information about the connections with the BGP peers. |
| bgp4V2PeerInstance brcdlp.3.5.1.1.2.1.1 Syntax: Unsigned32 | None | Specifies the routing instance index. Some of the BGP implementations permit the creation of multiple instances of a BGP routing process. The implementations that do not support multiple routing instances, return 1 for this object. The VRF index is used to identify the peer instance. The VRF index is a zero-based index. |
| bgp4V2PeerLocalAddrType brcdlp.3.5.1.1.2.1.2 Syntax: InetAddressType | None | Specifies the address family of a local-end peering session. The following address types are supported: <ul style="list-style-type: none"> • ipv4(1) • ipv6(2) |
| bgp4V2PeerLocalAddr brcdlp.3.5.1.1.2.1.3 | None | Specifies the local IP address of the received BGP connection. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: InetAddress bgp4V2PeerRemoteAddrType brcdlp.3.5.1.2.1.4 | None | Specifies the address family of a remote end peering session. The following address types are supported: <ul style="list-style-type: none">• ipv4(1)• ipv6(2) |
| bgp4V2PeerRemoteAddr brcdlp.3.5.1.2.1.5 Syntax: InetAddress | None | Specifies the remote IP address of the received BGP peer. |
| bgp4V2PeerLocalPort brcdlp.3.5.1.2.1.6 Syntax: InetPortNumber | Read-only | Indicates the local port for the TCP connection between the BGP peers. |
| bgp4V2PeerLocalAs brcdlp.3.5.1.2.1.7 Syntax: InetAutonomousSystemNumber | Read-only | Indicates a Autonomous System (AS) is the peering session that represents itself to the remote peer. Some implementations of BGP can represent itself as multiple autonomous systems. |
| bgp4V2PeerLocalIdentifier brcdlp.3.5.1.2.1.8 Syntax: Bgp4V2IdentifierTC | Read-only | Specifies the BGP identifier of the local system for the peering session. It is required that all the values of bgp4V2PeerLocalIdentifier and bgp4V2PeerInstance objects must be identical. |
| bgp4V2PeerRemotePort brcdlp.3.5.1.2.1.9 Syntax: InetPortNumber | Read-only | Specifies the remote port for the TCP connection between the BGP peers. NOTE The objects bgp4V2PeerLocalAddr, bgp4V2PeerLocalPort, bgp4V2PeerRemoteAddr, and bgp4V2PeerRemotePort provides the appropriate references to the standard MIB TCP connection table or to the IPv6 TCP MIB as referenced in RFC 4022. |
| bgp4V2PeerRemoteAs brcdlp.3.5.1.2.1.10 Syntax: InetAutonomousSystemNumber | Read-only | Specifies the remote AS number received in the BGP OPEN message. |
| bgp4V2PeerRemoteIdentifier brcdlp.3.5.1.2.1.11 Syntax: Bgp4V2IdentifierTC | Read-only | Specifies the BGP identifier of the received remote BGP peer. The entry received must be 0.0.0.0 unless the bgp4V2PeerState is in the openconfirm(5) or in established(6) state. |
| bgp4V2PeerAdminStatus brcdlp.3.5.1.2.1.12 Syntax: Integer | Read-only | Specifies whether the BGP finite state machine (FSM) for the remote peer is halted or running, the BGP FSM for a remote peer is halted after processing a stop event. Likewise, if in the running state after processing a start event. The bgp4V2PeerState is in the idle state when the FSM is halted. Although, some extensions such as Graceful Restart leaves the peer in the idle state with the FSM running. <ul style="list-style-type: none">• halted(1) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2PeerState brcdlp.3.5.1.2.1.13 Syntax: Integer | Read-only | <ul style="list-style-type: none"> running(2) <p>Indicates the BGP peer connection states:</p> <ul style="list-style-type: none"> idle(1) connect(2) active(3) opensent(4) openconfirm(5) established(6) |
| bgp4V2PeerDescription brcdlp.3.5.1.2.1.14 Syntax: SnmpAdminString | Read-only | Specifies a user-configured description identifying the peer. The object must contain a description that is unique within the existing BGP instance for the peer. |

BGP4v2 per-peer error management information

The following table contains the BGP4v2 per-peer error management information objects.

NOTE

The following table is not supported on the Extreme Netiron CES 2000 series BASE Packages device.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2PeerErrorsTable brcdlp.3.5.1.1.3 Syntax: Unsigned32 | None | On a per-peer basis, the table reflects the last protocol-defined error encountered and reported on the peer session. |
| bgp4V2PeerLastErrorCodeReceived brcdlp.3.5.1.1.3.1.1 Syntax: Unsigned32 | Read-only | Specifies the last error code received from the peer through a notification message on the connection. The field is zero(0), if no error occurs. |
| bgp4V2PeerLastErrorSubCodeReceived brcdlp.3.5.1.1.3.1.2 Syntax: Unsigned32 | Read-only | Specifies the last error subcode received from the peer through a notification message on the connection. The field is zero(0), if no error occurs. |
| bgp4V2PeerLastErrorReceivedTime brcdlp.3.5.1.1.3.1.3 Syntax: TimeStamp | Read-only | Indicates the time stamp when the last notification is received from the peer. |
| bgp4V2PeerLastErrorReceivedText brcdlp.3.5.1.1.3.1.4 Syntax: SnmpAdminString | Read-only | Specifies the implementation-specific explanation of the error reported. |
| bgp4V2PeerLastErrorReceivedData brcdlp.3.5.1.1.3.1.5 Syntax: Octet String NOTE This object is not supported on MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices | Read-only | <p>Specifies the data of the last error code received by the peer.</p> <p>As per RFC 2578, some implementations have limitations dealing with Octet Strings that are larger than 255. So, the data is truncated.</p> |
| bgp4V2PeerLastErrorCodeSent brcdlp.3.5.1.1.3.1.6 Syntax: Unsigned32 | Read-only | Specifies the last error code sent to the peer through a notification message on the |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | connection. The field is zero(0), if no error occurs. |
| bgp4V2PeerLastErrorSubCodeSent brcdlp.3.5.1.1.3.1.7 Syntax: Unsigned32 | Read-only | Specifies the last error subcode sent to the peer through a notification message on the connection. The field is zero(0), if no error occurs. |
| bgp4V2PeerLastErrorSentTime brcdlp.3.5.1.1.3.1.8 Syntax: TimeStamp | Read-only | Indicates the time stamp when the last notification is sent to the peer. |
| bgp4V2PeerLastErrorSentText brcdlp.3.5.1.1.3.1.9 Syntax: SnmpAdminString | Read-only | Specifies the implementation-specific explanation of the error reported. |
| bgp4V2PeerLastErrorSentData brcdlp.3.5.1.1.3.1.10 Syntax: Octet String NOTE This object is not supported on MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices | Read-only | Specifies the data of the last error code sent to the peer. As per RFC 2578, some implementations have limitations dealing with Octet Strings that are larger than 255. So, the data is truncated. |

BGP4v2 per-peer event times table

The following table contains the BGP4v2 per-peer event times-related objects.

NOTE

The following table is not supported on the Extreme Netiron CES 2000 series BASE Packages device.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2PeerEventTimesTable brcdlp.3.5.1.1.4 | None | A table reporting the per-peering session amount of time elapsed and update events while the peering session advanced into the established state. |
| bgp4V2PeerFsmEstablishedTime brcdlp.3.5.1.1.4.1.1 Syntax: Gauge32 | Read-only | Indicates how long (in seconds) the peer has been in the established state or how long since the peer was last in the established state. The value of the object is set to zero(0) when a new peer is configured or when the router is booted. The value remains zero if the peer has never reached the established state. |
| bgp4V2PeerInUpdatesElapsedTime brcdlp.3.5.1.1.4.1.2 Syntax: Gauge32 | Read-only | Indicates the elapsed time (in seconds) since the last BGP update message was received from the peer. The value of the object is set to zero(0) each time bgpPeerInUpdates is incremented. |

BGP4v2 NLRI table

The following table contains the BGP4v2 Network Layer Reachability Information (NLRI) objects. Use the **show ip bgp routes detail** command to display all the BGP attributes of a route, such as communities. Use the **show ip bgp routes** command to display the entries learned through NLRI available in the update.

NOTE

The following table is not supported on the Extreme Netiron CES 2000 series BASE Packages device.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2NlriTable brcdlp.3.5.1.1.9 | None | The BGP4v2-received path attribute table contains information about paths to destination networks received from all the BGP4 peers. Collectively, this represents the Adj-Ribs-In. For NLRI, the route in which the bgp4V2NlriBest object is true represents the route that is installed in the LocRib from the Adj-Ribs-In. |
| bgp4V2NlriIndex brcdlp.3.5.1.9.1.1 Syntax: Unsigned32 NOTE This object is not supported on MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices | None | Specifies the index that allows multiple instances of a base prefix for a certain AFI-SAFI from a given peer. This is used to allow a peer in future implementations to send more than a single route instance and allow extensions that extend an NLRI field to send the same prefix while utilizing other extension-specific information. The index is always 1. |
| bgp4V2NlriAfi brcdlp.3.5.1.9.1.2 Syntax: Bgp4V2AddressFamilyIdentifierTC | None | Specifies the address family of the prefix for NLRI. NOTE It is not necessary that an AFI definition is equivalent to an InetAddressType. |
| bgp4V2NlriSafi brcdlp.3.5.1.9.1.3 Syntax: Bgp4V2SubsequentAddressFamilyIdentifierTC | None | Specifies the subsequent address family of the prefix for NLRI. |
| bgp4V2NlriPrefixType brcdlp.3.5.1.9.1.4 Syntax: InetAddressType | None | Specifies the type of the IP address prefix in an NLRI field. The value of the object is derived from the appropriate value from the bgp4V2NlriAfi field. Where an appropriate InetAddressType is not available, the value of the object is unknown(0). |
| bgp4V2NlriPrefix brcdlp.3.5.1.9.1.5 Syntax: InetAddress | None | Indicates an IP address prefix in an NLRI field. The object is an IP address containing the prefix with the length specified by the bgp4V2NlriPrefixLen object. Any bits beyond the length specified by the bgp4V2NlriPrefixLen object are set to zero(0). |
| bgp4V2NlriPrefixLen brcdlp.3.5.1.9.1.6 Syntax: InetAddressPrefixLength | None | Indicates the length in bits of the address prefix in an NLRI field. |
| bgp4V2NlriBest brcdlp.3.5.1.9.1.7 Syntax: TruthVal | Read-only | Indicates whether the route is chosen as the best BGP4 route for the destination. |
| bgp4V2NlriCalcLocalPref brcdlp.3.5.1.9.1.8 | Read-only | Specifies the degree of preference calculated by the receiving BGP4 speaker for an advertised route. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Unsigned32 bgp4V2NlriOrigin brcdlp.3.5.1.9.1.9 Syntax: Integer | Read-only | The value of the object is zero (0) where the prefix is ineligible. Specifies the ultimate origin of the path information: <ul style="list-style-type: none"> igp(1) - The networks that are interior. egp(2) - The networks learned through an Exterior Gateway Protocol (EGP). incomplete(3) - The networks that are learned by some other means. |
| bgp4V2NlriNextHopAddrType brcdlp.3.5.1.9.1.10 Syntax: InetAddressType | Read-only | Specifies the address family of the address for the border router that is used to access the destination network. |
| bgp4V2NlriNextHopAddr brcdlp.3.5.1.9.1.11 Syntax: InetAddress | Read-only | Specifies the address of the border router that is used to access the destination network. The address is the next-hop address received in the update packet associated with the prefix: <ul style="list-style-type: none"> For RFC 2545 style double nexthops, the object contains the global scope next hop. For bgpPathAttrLinkLocalNextHop, the object contains the link local scope next hop, if it is present. For bgp4V2NlriNextHopAddr, the object contains the link local next hop, if a mechanism is developed to use only a link local next hop. |
| bgp4V2NlriLinkLocalNextHopAddrType brcdlp.3.5.1.9.1.12 Syntax: InetAddressType | Read-only | Specifies the address type for an IPv6 link local address. The object is present only when receiving RFC 2545 style double nexthops. The object is present optionally in BGP implementations that do not support IPv6. The value of the object is unknown(0) when there is no IPv6 link local next hop present. |
| bgp4V2NlriLinkLocalNextHopAddr brcdlp.3.5.1.9.1.13 Syntax: InetAddress | Read-only | Indicates the value that contains an IPv6 link local address and is present only when receiving RFC 2545 style double nexthops. The object is present optionally in BGP implementations that do not support IPv6. The length of the object is zero(0) when there is no IPv6 link local next hop present. |
| bgp4V2NlriLocalPrefPresent brcdlp.3.5.1.9.1.14 Syntax: TruthVal | Read-only | Indicates if the value is true when the LOCAL_PREF value is sent in the UPDATE message. The value is always true. |
| bgp4V2NlriLocalPref brcdlp.3.5.1.9.1.15 Syntax: Unsigned32 | Read-only | Specifies the degree of preference of the originating BGP4 speaker for an advertised route. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2NlriMedPresent brcdlp.3.5.1.9.1.16 Syntax: TruthVal | Read-only | Indicates if the value is true when a Multi-Exit Discriminator (MED) value is sent in the UPDATE message. |
| bgp4V2NlriMed brcdlp.3.5.1.9.1.17 Syntax: Unsigned32 | Read-only | Indicates the metric used to discriminate between multiple exit points to an adjacent autonomous system. When an MED value is absent but has a calculated default value, the object will contain the calculated value. |
| bgp4V2NlriAtomicAggregate brcdlp.3.5.1.9.1.18 Syntax: TruthVal | Read-only | Indicates if the value is true when the ATOMIC_AGGREGATE path attribute is present and indicates that NLRI cannot be made more specific. |
| bgp4V2NlriAggregatorPresent brcdlp.3.5.1.9.1.19 Syntax: TruthVal | Read-only | Indicates if the value is true when the AGGREGATOR path attribute is sent in the UPDATE message. |
| bgp4V2NlriAggregatorAS brcdlp.3.5.1.9.1.20 Syntax: InetAutonomousSystemNumber | Read-only | Specifies an AS number of the last BGP4 speaker that performed route aggregation. The value of the object is zero(0) when the bgp4V2NlriAggregatorPresent object is false. |
| bgp4V2NlriAggregatorAddr brcdlp.3.5.1.9.1.21 Syntax: Bgp4V2IdentifierTC | Read-only | Specifies the IP address of the last BGP4 speaker that performed route aggregation. The value of the object is 0.0.0.0 when the bgp4V2NlriAggregatorPresent object is false. |
| bgp4V2NlriAsPathCalcLength brcdlp.3.5.1.9.1.22 Syntax: Unsigned32 | Read-only | Indicates the value that represents the calculated length of the AS-Path according to the rules in the BGP specification. The value is used in route selection. |
| bgp4V2NlriAsPathString brcdlp.3.5.1.9.1.23 Syntax: SnmpAdminString | Read-only | <p>Specifies a string depicting the AS-Path to the network, which is received from the peer that is advertised.</p> <p>The format of the string is implementation-dependent and it must be designed for operator readability.</p> <p>SnmpAdminString is capable of representing a maximum of 255 characters. This may lead to the string being truncated in the presence of a large AS-Path.</p> <p>NOTE It is recommended that when the content of the object is truncated, the final three octets should be reserved for the ellipsis string (...). The bgp4V2NlriAsPath object gives access to the full AS-Path.</p> |
| bgp4V2NlriAsPath brcdlp.3.5.1.9.1.24 Syntax: Octet String | Read-only | Specifies the contents of the BGP4 AS_PATH attribute to provide an authorized form of the BGP4 AS_PATH along with the human-readable bgp4V2NlriAsPathString object that can be truncated. The object is parsed using the rules defined for four-octet autonomous systems as defined in RFC 4893. RFC 4271 |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>and RFC 5065 define the general format of the AS_PATH attribute and its code points.</p> <p>The AS_PATH attribute is composed of a sequence of AS segments. Each AS segment is represented in the following fields:</p> <ul style="list-style-type: none"> • The path segment type and path segment are one octet in length each. Any one of the following can represent the path segment type field: <ul style="list-style-type: none"> - 1 - AS_SET (RFC 4721) - 2 - AS_SEQUENCE (RFC 4721) - 3 - AS_CONFED_SEQUENCE (RFC 3065) - 4 - AS_CONFED_SET (RFC 3065) • The path segment length field contains the number of autonomous systems (not the number of octets) in the path segment value field. • The path segment value field contains one or more autonomous system numbers, each encoded as a four octet length field in network-byte order. <p>NOTE An SNMP agent can truncate the objects that are less than its maximum theoretical length of 4072 octets. It is recommended that when such truncation occurs on the boundary of an encoded AS, the partial AS be discarded from the object and the object size adjusted accordingly. When such truncation happens, either alone or in conjunction with the truncation of a partially encoded AS, it will yield an empty path segment value. In that case, the path segment type and path segment length components of the truncated AS_PATH attribute are also discarded and the object size is adjusted accordingly.</p> |
| bgp4V2NlriPathAttrUnknown brcdlp.3.5.1.9.1.25 Syntax: Octet String | Read-only | <p>Specifies the path attributes that are not understood by the implementation are presented. These path attributes use the type, length, and value encoding from RFC 4271.</p> <p>NOTE An SNMP agent can truncate the objects that are less than its maximum theoretical length of 4072 octets.</p> |
| bgp4V2NlriRxPathIdentifier brcdlp.3.5.1.9.1.26 | Read-only | Path identifier that identifies the incoming path. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: String bgp4V2NlriTxPathIdentifier brcdlp.3.5.1.1.9.1.27 Syntax: String | | <p>In order for a BGP speaker to advertise multiple paths for the same address prefix, a new identifier (Path Identifier) is introduced so that a particular path for an address prefix can be identified by the combination of the address prefix and the Path Identifier. The assignment of the Path Identifier for a path by a BGP speaker is purely a local matter.</p> <p>In order to carry the Path Identifier in an UPDATE message, the existing NLRI encodings are extended by prepending the Path Identifier field, which is of four-octets.</p> |
| | Read-only | <p>Path identifier that identifies the outgoing path.</p> <p>In order for a BGP speaker to advertise multiple paths for the same address prefix, a new identifier (Path Identifier) needs to be introduced so that a particular path for an address prefix can be identified by the combination of the address prefix and the Path Identifier. The assignment of the Path Identifier for a path by a BGP speaker is purely a local matter.</p> <p>In order to carry the Path Identifier in an UPDATE message, the existing NLRI encodings are extended by prepending the Path Identifier field, which is of four-octets.</p> |

RFC 4292: IP Forwarding Table MIB

The MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices support the entire RFC 4292 with the following exceptions. RFC 4292 replaces RFC 2096 and RFC 2465.

- The object `inetCidrRouteDiscards` is not supported.
- The objects in the `inetCidrRouteTable` has VRF support.
- All objects have read-only access.

RFC 4293: Management Information Base for the Internet Protocol (IP)

RFC 4293, Management Information Base for the Internet Protocol (IP) obsoletes the following:

- RFC 2011: SNMPv2 Management Information Base for the Internet Protocol using SMIV2
- RFC 2465: Management Information Base for IP Version 6: Textual Conventions and General Group
- RFC 2466: Management Information Base for IP Version 6: ICMPv6 Group

The following table summarizes the tables from the RFC that are supported.

| Object group name | Object identifier | Supported IP version | Access |
|------------------------------|-------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IP scalar variables | 1.3.6.1.2.1.4 | IPv4 and IPv6 | <p>Only the following objects have read-write access:</p> <ul style="list-style-type: none"> • ipDefaultTTL • ipv6IpDefaultHopLimit • ipv6IpForwarding <p>All other scalar variables are read-only.</p> <p>NOTE GET operation is not supported on the Extreme NetIron devices for the ipv6InterfaceTableLastChange scalar object.</p> |
| ipNetToMediaTable | 1.3.6.1.2.1.4.22 | IPv4 | <p>All objects are read-only.</p> <p>Beginning from NetIron 05.9.00 release, this MIB object supports VRF.</p> |
| ipv4InterfaceTable | 1.3.6.1.2.1.4.28 | IPv4 | <p>All objects are read-only.</p> <p>NOTE Beginning from NetIron 05.9.00 release, the MIB objects in ipv4InterfaceTable supports VRF.</p> |
| ipv6InterfaceTable | 1.3.6.1.2.1.4.30 | IPv6 | <p>All objects are read-only.</p> <p>NOTE Beginning from NetIron 05.9.00 release, the MIB objects in ipv6InterfaceTable supports VRF.</p> |
| ipSystemStatsTable | | | |
| ipSystemStatsInOctets | 1.3.6.1.2.1.4.31.1.1.5 | None | Always returns 0. |
| ipSystemStatsHCInOctets | 1.3.6.1.2.1.4.31.1.1.6 | None | Always returns 0. |
| ipSystemStatsInAddrErrors | 1.3.6.1.2.1.4.31.1.1.9 | IPv4 | IPv6 returns 0. |
| ipSystemStatsInUnknownProtos | 1.3.6.1.2.1.4.31.1.1.10 | IPv4 | IPv6 returns 0. |
| ipSystemStatsInTruncatedPkts | 1.3.6.1.2.1.4.31.1.1.11 | IPv6 | IPv4 returns 0. |
| ipSystemStatsInDiscards | 1.3.6.1.2.1.4.31.1.1.17 | IPv4 | IPv6 returns 0. |
| ipSystemStatsOutNoRoutes | 1.3.6.1.2.1.4.31.1.1.22 | IPv4 | IPv6 returns 0. |
| ipSystemStatsOutFragReqds | 1.3.6.1.2.1.4.31.1.1.26 | IPv4 | IPv6 returns 0. |
| ipSystemStatsOutFragFails | 1.3.6.1.2.1.4.31.1.1.28 | IPv4 | IPv6 returns 0. |
| ipSystemStatsOutTransmits | 1.3.6.1.2.1.4.31.1.1.30 | IPv4 | IPv6 returns 0. |
| ipSystemStatsHCOutTransmits | 1.3.6.1.2.1.4.31.1.1.31 | IPv4 | IPv6 returns 0. |
| ipSystemStatsOutOctets | 1.3.6.1.2.1.4.31.1.1.32 | None | Always returns 0. |
| ipSystemStatsHCOutOctets | 1.3.6.1.2.1.4.31.1.1.33 | None | Always returns 0. |
| ipSystemStatsInMcastPkts | 1.3.6.1.2.1.4.31.1.1.34 | None | Always returns 0. |

| Object group name | Object identifier | Supported IP version | Access |
|--------------------------------|-------------------------|----------------------|----------------------------|
| ipSystemStatsHCInMcastPkts | 1.3.6.1.2.1.4.31.1.1.35 | None | Always returns 0. |
| ipSystemStatsInMcastOctets | 1.3.6.1.2.1.4.31.1.1.36 | None | Always returns 0. |
| ipSystemStatsHCInMcastOctets | 1.3.6.1.2.1.4.31.1.1.37 | None | Always returns 0. |
| ipSystemStatsOutMcastPkts | 1.3.6.1.2.1.4.31.1.1.38 | None | Always returns 0. |
| ipSystemStatsHCOutMcastPkts | 1.3.6.1.2.1.4.31.1.1.39 | None | Always returns 0. |
| ipSystemStatsOutMcastOctets | 1.3.6.1.2.1.4.31.1.1.40 | None | Always returns 0. |
| ipSystemStatsHCOutMcastOctets | 1.3.6.1.2.1.4.31.1.1.41 | None | Always returns 0. |
| ipSystemStatsInBcastPkts | 1.3.6.1.2.1.4.31.1.1.42 | None | Always returns 0. |

| dot1vProtocol | | |
| dot1vProtocolGroupTable | 1.3.6.1.2.1.17.7.1.5.1 | Yes. Read-only. |
| dot1vProtocolPortTable | 1.3.6.1.2.1.17.7.1.5.2 | Yes. Read-only. |

dot1vProtocolGroupTable mapping

The following table lists the dot1vProtocolGroupTable mapping for the frame type and protocol value to the groupID.

| Group ID | Frame type | Protocol value |
|----------|------------|-------------------|
| 1 | Ethernet | 0x0800(IPv4) |
| 2 | Ethernet | 0x86DD(IPv6) |
| 3 | Ethernet | 0x8137(IPX) |
| 4 | Ethernet | 0x809B(AppleTalk) |
| 5 | rfc_1042 | 0x0800(IPv4) |
| 6 | rfc_1042 | 0x86DD(IPv6) |
| 7 | rfc_1042 | 0x8137(IPX) |
| 8 | rfc_1042 | 0x809B(AppleTalk) |
| 9 | snap8021H | 0x0800(IPv4) |
| 10 | snap8021H | 0x86DD(IPv6) |
| 11 | snap8021H | 0x8137(IPX) |
| 12 | snap8021H | 0x809B(AppleTalk) |

RFC 4444: Management Information Base for Intermediate System to Intermediate System (IS-IS)

This RFC 4444, Management Information Base for Intermediate System to Intermediate System (IS-IS) is supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

Scalar isisSys objects

The following scalar objects are supported in the NetIron IP MIB; however, only read-only access is provided.

| Object group name | Object identifier | Supported? | Notes |
|-----------------------------|--------------------------|------------|----------------------------------------------------------------------------------------------------------------|
| isisSysVersion | 1.3.6.1.2.1.138.1.1.1.1 | Yes | Always returns 1. |
| isisSysLevelType | 1.3.6.1.2.1.138.1.1.1.2 | Yes | <ul style="list-style-type: none"> • level1(1) • level2(2) • level 1 and 2(3) |
| isisSysID | 1.3.6.1.2.1.138.1.1.1.3 | Yes | - |
| isisSysMaxPathSplits | 1.3.6.1.2.1.138.1.1.1.4 | Yes | Default value is 4. |
| isisSysMaxLSPGenInt | 1.3.6.1.2.1.138.1.1.1.5 | Yes | - |
| isisSysPollESHelloRate | 1.3.6.1.2.1.138.1.1.1.6 | No | - |
| isisSysWaitTime | 1.3.6.1.2.1.138.1.1.1.7 | No | - |
| isisSysAdminState | 1.3.6.1.2.1.138.1.1.1.8 | Yes | <ul style="list-style-type: none"> • on(1) • off(2) |
| isisSysL2toL1Leaking | 1.3.6.1.2.1.138.1.1.1.9 | Yes | - |
| isisSysMaxAge | 1.3.6.1.2.1.138.1.1.1.10 | Yes | - |
| isisSysReceiveLSPBufferSize | 1.3.6.1.2.1.138.1.1.1.11 | Yes | - |
| isisSysProtSupported | 1.3.6.1.2.1.138.1.1.1.12 | Yes | BITS: <ul style="list-style-type: none"> • ipv4(1) • ipv6(2) |
| isisSysNotificationEnable | 1.3.6.1.2.1.138.1.1.1.13 | Yes | - |

Supported tables in RFC 4444

The following tables in RFC 4444 are supported; however, only read-only access is allowed.

NOTE

Tables in RFC 4444 that are not listed in the table below are not supported. For example, the isisRATable is not supported.

| Object group name | Object identifier | Comments |
|---------------------------|-----------------------|----------|
| isisManAreaAddrTable | 1.3.6.1.2.1.138.1.1.2 | - |
| isisAreaAddrTable | 1.3.6.1.2.1.138.1.1.3 | - |
| isisSummAddrTable | 1.3.6.1.2.1.138.1.1.4 | - |
| isisRedistributeAddrTable | 1.3.6.1.2.1.138.1.1.5 | - |
| isisRouterTable | 1.3.6.1.2.1.138.1.1.6 | - |
| isisSysLevelTable | 1.3.6.1.2.1.138.1.2.1 | - |

| Object group name | Object identifier | Comments |
|-------------------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| isisCircTable | 1.3.6.1.2.1.138.1.3.2 | The following objects from this table are not supported: <ul style="list-style-type: none">• isisCircMeshGroupEnabled will return INACTIVE.• isisCircMeshGroup will return zero (0). Also, the object isisCirc3WayEnabled is always ON for Pt 2 Pt. |
| isisCircLevelTable | 1.3.6.1.2.1.138.1.4.1 | - |
| isisSystemCounterTable | 1.3.6.1.2.1.138.1.5.1 | - |
| isisCircuitCounterTable | 1.3.6.1.2.1.138.1.5.2 | - |
| isisPacketCounterTable | 1.3.6.1.2.1.138.1.5.3 | - |
| isisIsAdjTable | 1.3.6.1.2.1.138.1.6.1 | - |
| isisIsAdjAreaAddrTable | 1.3.6.1.2.1.138.1.6.2 | - |
| isisIsAdjIPAddrTable | 1.3.6.1.2.1.138.1.6.3 | - |
| isisIsAdjProtSuppTable | 1.3.6.1.2.1.138.1.6.4 | - |
| isisIPRATable | 1.3.6.1.2.1.138.1.8.1 | - |
| isisLSPSummaryTable | 1.3.6.1.2.1.138.1.9.1 | - |
| isisLSPTLVTable | 1.3.6.1.2.1.138.1.9.2 | - |
| isisNOTIFICATION | 1.3.6.1.2.1.138.1.10 | - |

Notifications

IS-IS notification is enabled by default. To disable notification, issue the **no snmp-server enable trapsisis** command at the device CLI. Use **snmp-server enable trapsisis** command to re-enable notification.

Table 3 lists the notifications in RFC 4444 that are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

NOTE

Only one IS-IS trap is generated for each notification type within a 60-second (1 minute) period. For example, if several authentication failure notification types occur within a 60-second period, only one trap is generated for the authentication failure notification type. This duration is different from what is specified in RFC 4444.

TABLE 3 Supported RFC 4444 notifications

| Object group name | Object identifier |
|--------------------------------|-------------------------|
| isisDatabaseOverload | 1.3.6.1.2.1.138.1.10.1 |
| isisAttemptToExceedMaxSequence | 1.3.6.1.2.1.138.1.10.4 |
| isisIDLenMismatch | 1.3.6.1.2.1.138.1.10.5 |
| isisMaxAreaAddressesMismatch | 1.3.6.1.2.1.138.1.10.6 |
| isisOwnLSPPurge | 1.3.6.1.2.1.138.1.10.7 |
| isisSequenceNumberSkip | 1.3.6.1.2.1.138.1.10.8 |
| isisAuthenticationFailure | 1.3.6.1.2.1.138.1.10.10 |
| isisAreaMismatch | 1.3.6.1.2.1.138.1.10.12 |
| isisAdjacencyChange | 1.3.6.1.2.1.138.1.10.17 |
| isisLSPErrorDetected | 1.3.6.1.2.1.138.1.10.18 |

[Table 4](#) lists the notifications in RFC 4444 that are not supported.

TABLE 4 Unsupported RFC 4444 notifications

| Object group name | Object identifier |
|--------------------------------|-------------------------|
| isisManualAddressDrops | 1.3.6.1.2.1.138.1.10.2 |
| isisCorruptedLSPDetected | 1.3.6.1.2.1.138.1.10.3 |
| isisAuthenticationTypeFailure | 1.3.6.1.2.1.138.1.10.9 |
| isisVersionSkew | 1.3.6.1.2.1.138.1.10.11 |
| isisRejectedAdjacency | 1.3.6.1.2.1.138.1.10.13 |
| isisLSPTooLargeToPropagate | 1.3.6.1.2.1.138.1.10.14 |
| isisOrigLSPBuffSizeMismatch | 1.3.6.1.2.1.138.1.10.15 |
| isisProtocolsSupportedMismatch | 1.3.6.1.2.1.138.1.10.16 |

RFC 4807: IPsec Security Policy Database Configuration MIB

RFC 4807 is supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

NOTE

Only read-only access is available for the objects.

spdLocalConfigObjects

The following table lists the IPsec Security Policy Database (SPD) local configuration objects.

| Object | Object identifier |
|---------------------------|-----------------------|
| spdIngressPolicyGroupName | 1.3.6.1.2.1.153.1.1.1 |
| spdEgressPolicyGroupName | 1.3.6.1.2.1.153.1.1.2 |

spdEndpointToGroupTable

The following table lists the SPD endpoint to group table objects.

| Object group name | Object identifier | Access |
|------------------------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spdEndGroupDirection | 1.3.6.1.2.1.153.1.2.1.1 | <ul style="list-style-type: none"> Ingress/Inbound(1) Egress/Outbound(2) |
| spdEndGroupInterface | 1.3.6.1.2.1.153.1.2.1.2 | Interface index |
| spdEndGroupName | 1.3.6.1.2.1.153.1.2.1.3 | <ul style="list-style-type: none"> The group name is derived from joining multiple strings of the <i>vrf-id:ifIndex:ifDirection:Encap:SPI:AuthAlg:EncryptAlg</i> IPsec data. The maximum of 32 characters is allowed in a group name. |
| spdEndGroupLastChanged | 1.3.6.1.2.1.153.1.2.1.4 | Always returns 0. |
| spdEndGroupStorageType | 1.3.6.1.2.1.153.1.2.1.5 | Always returns volatile(2). |

| Object group name | Object identifier | Access |
|----------------------|-------------------------|---------------------------|
| spdEndGroupRowStatus | 1.3.6.1.2.1.153.1.2.1.6 | Always returns active(1). |

spdGroupContentsTable

The following table lists the SPD group contents table objects.

| Object group name | Object identifier | Access |
|---------------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spdGroupContName | 1.3.6.1.2.1.153.1.3.1.1 | <ul style="list-style-type: none"> The group name is derived from joining multiple strings of the <i>vrf-id:ifIndex:ifDirection:Encap:SPI:AuthAlg:EncryptAlg</i> IPsec data. The maximum of 32 characters is allowed in a group name. The index is the string name returned from querying the <i>spdEndpointToGroupTable</i> and <i>spdEndGroupName</i> field. |
| spdGroupContPriority | 1.3.6.1.2.1.153.1.3.1.2 | The priority number is used for representing Accept(1) and Drop(65535) rules. |
| spdGroupContFilter | 1.3.6.1.2.1.153.1.3.1.3 | Always returns <i>spdTrueFilter</i> instance. |
| spdGroupContComponentType | 1.3.6.1.2.1.153.1.3.1.4 | Always returns rule(2). |
| spdGroupContComponentName | 1.3.6.1.2.1.153.1.3.1.5 | <ul style="list-style-type: none"> Returns a rule name that is used as an index to <i>spdRuleDefinitionTable</i> to find the FilterAction associated with this policy group. The rule name is derived from joining multiple strings of the <i>vrf-id:ifIndex:ifDirection:priorty</i> IPsec data. The maximum of 32 characters is allowed in a rule name. |
| spdGroupContLastChanged | 1.3.6.1.2.1.153.1.3.1.6 | Always returns 0. |
| spdGroupContStorageType | 1.3.6.1.2.1.153.1.3.1.7 | Always returns volatile(2). |
| spdGroupContRowStatus | 1.3.6.1.2.1.153.1.3.1.8 | Always returns active(1). |

spdRuleDefinitionTable

The following table lists the SPD rule definition table objects.

| Object group name | Object identifier | Access |
|-----------------------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spdRuleDefName | 1.3.6.1.2.1.153.1.4.1.1 | <ul style="list-style-type: none"> The index is the string name derived from querying the <i>spdGroupContentsTable</i> and <i>spdGroupContComponentName</i> field. The rule name is derived from joining multiple strings of the <i>vrf-id:ifIndex:ifDirection:priorty</i> IPsec data. |
| spdRuleDefDescription | 1.3.6.1.2.1.153.1.4.1.2 | A user-defined string description of the rule. |
| spdRuleDefFilter | 1.3.6.1.2.1.153.1.4.1.3 | The field points to an entry of diffServMultiFieldClfrTable on page 49 of the Differentiated Services MIB. |

| Object group name | Object identifier | Access |
|-------------------------|-------------------------|-------------------------------------------------------------------------------|
| spdRuleDefFilterNegated | 1.3.6.1.2.1.153.1.4.1.4 | Always returns false(2). |
| spdRuleDefAction | 1.3.6.1.2.1.153.1.4.1.5 | The field points to a static action, either spdDropAction or spdAcceptAction. |
| spdRuleDefAdminStatus | 1.3.6.1.2.1.153.1.4.1.6 | Always returns enabled(1). |
| spdRuleDefLastChanged | 1.3.6.1.2.1.153.1.4.1.7 | Always returns 0. |
| spdRuleDefStorageType | 1.3.6.1.2.1.153.1.4.1.8 | Always returns volatile(2). |
| spdRuleDefRowStatus | 1.3.6.1.2.1.153.1.4.1.9 | Always returns active(1). |

The tables spdCompoundFilterTable, spdSubfiltersTable, spdIpOffsetFilterTable, spdTimeFilterTable, spdIpsoHeaderFilterTable, spdCompoundActionTable, and spdSubactionsTable are not supported.

The following tables of scalar objects are supported, except the scalar object diffServMultiFieldClfrNextFree.

spdStaticFilters

The following table lists the SPD static filter scalar object.

| Object | Object identifier | Access |
|-----------------------|-------------------------|-----------------|
| spdTrueFilterInstance | 1.3.6.1.2.1.153.1.7.1.0 | Always true(1). |

spdStaticActions

The following table lists the SPD static actions scalar objects.

| Object | Object identifier | Access |
|--------------------|------------------------|-----------------------------------------------------------------------------------------------------------|
| spdDropAction | 1.3.6.1.2.1.153.1.13.1 | Indicates that a packet must be dropped and no action or packet logging is done. |
| spdDropActionLog | 1.3.6.1.2.1.153.1.13.2 | Indicates that a packet must be dropped and an action or packet logging is required. |
| spdAcceptAction | 1.3.6.1.2.1.153.1.13.3 | Indicates that a packet must be accepted (or passed-through) and no action or packet logging is done. |
| spdAcceptActionLog | 1.3.6.1.2.1.153.1.13.4 | Indicates that a packet must be accepted (or passed-through) and an action or packet logging is required. |

RFC 5643: Management Information Base for OSPFv3

The XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices are provided with the following OSPFv3 Management Information Base.

NOTE

The following tables support only SNMP GET request. Beginning from NetIron 05.9.00 release, the MIB objects from RFC 5643 are provided with VRF support.

NOTE

The Extreme NetIron devices do not support ospfv3HostTable and ospfv3CfgNbrTable.

ospfv3GeneralGroup

The following table lists the OSPFv3 general group objects.

| Object | Object identifier | Supported? |
|--------------------------------|------------------------|------------|
| ospfv3RouterId | 1.3.6.1.2.1.191.1.1.1 | Yes |
| ospfv3AdminStatus | 1.3.6.1.2.1.191.1.1.2 | Yes |
| ospfv3VersionNumber | 1.3.6.1.2.1.191.1.1.3 | Yes |
| ospfv3AreaBdrRtrStatus | 1.3.6.1.2.1.191.1.1.4 | Yes |
| ospfv3AreaBdrRtrStatus | 1.3.6.1.2.1.191.1.1.5 | Yes |
| ospfv3AsScopeLsaCount | 1.3.6.1.2.1.191.1.1.6 | Yes |
| ospfv3AsScopeLsaCksumSum | 1.3.6.1.2.1.191.1.1.7 | Yes |
| ospfv3OriginateNewLsas | 1.3.6.1.2.1.191.1.1.8 | No |
| ospfv3RxNewLsas | 1.3.6.1.2.1.191.1.1.9 | No |

ospfv3AreaTable

The following table lists the OSPFv3 area table objects.

| Object | Object identifier | Supported? |
|--------------------------|-------------------------|------------|
| ospfv3Areaid | 1.3.6.1.2.1.191.1.2.1.1 | Yes |
| ospfv3AreaImportAsExtern | 1.3.6.1.2.1.191.1.2.1.2 | Yes |
| ospfv3AreaSpfRuns | 1.3.6.1.2.1.191.1.2.1.3 | Yes |
| ospfv3AreaBdrRtrCount | 1.3.6.1.2.1.191.1.2.1.4 | No |
| ospfv3AreaAsBdrRtrCount | 1.3.6.1.2.1.191.1.2.1.5 | No |

| Object | Object identifier | Supported? |
|--------------------------------------|--------------------------|------------|
| ospfv3AreaScopeLsaCount | 1.3.6.1.2.1.191.1.2.1.6 | Yes |
| ospfv3AreaScopeLsaCksumSum | 1.3.6.1.2.1.191.1.2.1.7 | Yes |
| ospfv3AreaSummary | 1.3.6.1.2.1.191.1.2.1.8 | Yes |
| ospfv3AreaRowStatus | 1.3.6.1.2.1.191.1.2.1.9 | Yes |
| ospfv3AreaStubMetric | 1.3.6.1.2.1.191.1.2.1.10 | Yes |
| ospfv3AreaNssaTranslatorRole | 1.3.6.1.2.1.191.1.2.1.11 | Yes |
| ospfv3AreaNssaTranslatorState | 1.3.6.1.2.1.191.1.2.1.12 | Yes |
| ospfv3AreaNssaTranslatorStabInterval | 1.3.6.1.2.1.191.1.2.1.13 | Yes |
| ospfv3AreaNssaTranslatorEvents | 1.3.6.1.2.1.191.1.2.1.14 | No |
| ospfv3AreaStubMetricType | 1.3.6.1.2.1.191.1.2.1.15 | Yes |
| ospfv3AreaTEEnabled | 1.3.6.1.2.1.191.1.2.1.16 | No |

ospfv3AsLsdbTable

The following table lists the OSPFv3 process's AS-scope Link State Database (LSDB) table objects.

| Object | Object identifier | Supported? |
|---------------------------|-------------------------|------------|
| ospfv3AsLsdbType | 1.3.6.1.2.1.191.1.3.1.1 | Yes |
| ospfv3AsLsdbRouterId | 1.3.6.1.2.1.191.1.3.1.2 | Yes |
| ospfv3AsLsdbLsid | 1.3.6.1.2.1.191.1.3.1.3 | Yes |
| ospfv3AsLsdbSequence | 1.3.6.1.2.1.191.1.3.1.4 | Yes |
| ospfv3AsLsdbAge | 1.3.6.1.2.1.191.1.3.1.5 | Yes |
| ospfv3AsLsdbChecksum | 1.3.6.1.2.1.191.1.3.1.6 | Yes |
| ospfv3AsLsdbAdvertisement | 1.3.6.1.2.1.191.1.3.1.7 | Yes |
| ospfv3AsLsdbTypeKnown | 1.3.6.1.2.1.191.1.3.1.8 | Yes |

ospfv3AreaLsdbTable

The following table lists the OSPFv3 Area-scope Link State Database (LSDB) table objects.

| Object | Object identifier | Supported? |
|-----------------------------|-------------------------|------------|
| ospfv3AreaLsdbAreaId | 1.3.6.1.2.1.191.1.4.1.1 | Yes |
| ospfv3AreaLsdbType | 1.3.6.1.2.1.191.1.4.1.2 | Yes |
| ospfv3AreaLsdbRouterId | 1.3.6.1.2.1.191.1.4.1.3 | Yes |
| ospfv3AreaLsdbLsid | 1.3.6.1.2.1.191.1.4.1.4 | Yes |
| ospfv3AreaLsdbSequence | 1.3.6.1.2.1.191.1.4.1.5 | Yes |
| ospfv3AreaLsdbAge | 1.3.6.1.2.1.191.1.4.1.6 | Yes |
| ospfv3AreaLsdbzCheckSum | 1.3.6.1.2.1.191.1.4.1.7 | Yes |
| ospfv3AreaLsdbAdvertisement | 1.3.6.1.2.1.191.1.4.1.8 | Yes |
| ospfv3AreaLsdbTypeKnown | 1.3.6.1.2.1.191.1.4.1.9 | Yes |

ospfv3LinkLsdbTable

The following table lists the OSPFv3 Link-Scope Link State Database (LSDB) MIBs for non-virtual interfaces.

| Object | Object identifier | Supported? |
|-----------------------------|--------------------------|------------|
| ospfv3LinkLsdbIfIndex | 1.3.6.1.2.1.191.1.5.1.1 | Yes |
| ospfv3LinkLsdbIfInstId | 1.3.6.1.2.1.191.1.5.1.2 | Yes |
| ospfv3LinkLsdbType | 1.3.6.1.2.1.191.1.5.1.3 | Yes |
| ospfv3LinkLsdbRouterId | 1.3.6.1.2.1.191.1.5.1.4 | Yes |
| ospfv3LinkLsdbLsid | 1.3.6.1.2.1.191.1.5.1.5 | Yes |
| ospfv3LinkLsdbSequence | 1.3.6.1.2.1.191.1.5.1.6 | Yes |
| ospfv3LinkLsdbAge | 1.3.6.1.2.1.191.1.5.1.7 | Yes |
| ospfv3LinkLsdbChecksum | 1.3.6.1.2.1.191.1.5.1.8 | Yes |
| ospfv3LinkLsdbAdvertisement | 1.3.6.1.2.1.191.1.5.1.9 | Yes |
| ospfv3LinkLsdbTypeKnown | 1.3.6.1.2.1.191.1.5.1.10 | Yes |

ospfv3IfTable

The following table lists the OSPFv3 interface table MIBs.

| Object | Object identifier | Supported? |
|----------------|-------------------------|------------|
| ospfv3IfIndex | 1.3.6.1.2.1.191.1.7.1.1 | Yes |
| ospfv3IfInstId | 1.3.6.1.2.1.191.1.7.1.2 | Yes |
| ospfv3IfAreaId | 1.3.6.1.2.1.191.1.7.1.3 | Yes |
| ospfv3IfType | 1.3.6.1.2.1.191.1.7.1.4 | Yes |

ospfv3VirtIfTable

The following table lists the OSPFv3 virtual IfTable MIBs.

| Object | Object identifier | Supported? |
|-------------------------------|--------------------------|------------|
| ospfv3VirtIfAreaId | 1.3.6.1.2.1.191.1.8.1.1 | Yes |
| ospfv3VirtIfNeighbor | 1.3.6.1.2.1.191.1.8.1.2 | Yes |
| ospfv3VirtIfIndex | 1.3.6.1.2.1.191.1.8.1.3 | Yes |
| ospfv3VirtIfInstId | 1.3.6.1.2.1.191.1.8.1.4 | Yes |
| ospfv3VirtIfTransitDelay | 1.3.6.1.2.1.191.1.8.1.5 | Yes |
| ospfv3VirtIfRetransInterval | 1.3.6.1.2.1.191.1.8.1.6 | Yes |
| ospfv3VirtIfHelloInterval | 1.3.6.1.2.1.191.1.8.1.7 | Yes |
| ospfv3VirtIfRtrDeadInterval | 1.3.6.1.2.1.191.1.8.1.8 | Yes |
| ospfv3VirtIfState | 1.3.6.1.2.1.191.1.8.1.9 | Yes |
| ospfv3VirtIfEvents | 1.3.6.1.2.1.191.1.8.1.10 | No |
| ospfv3VirtIfRowStatus | 1.3.6.1.2.1.191.1.8.1.11 | Yes |
| ospfv3VirtIfLinkScopeLsaCount | 1.3.6.1.2.1.191.1.8.1.12 | Yes |
| ospfv3VirtIfLinkLsaCksumSum | 1.3.6.1.2.1.191.1.8.1.13 | No |

ospfv3NbrTable

The following table lists the OSPFv3 neighbor MIBs.

| Object | Object identifier | Supported? |
|----------------------------------|--------------------------|------------|
| ospfv3NbrIfIndex | 1.3.6.1.2.1.191.1.9.1.1 | Yes |
| ospfv3NbrIfInstId | 1.3.6.1.2.1.191.1.9.1.2 | Yes |
| ospfv3NbrRtrId | 1.3.6.1.2.1.191.1.9.1.3 | Yes |
| ospfv3NbrAddressType | 1.3.6.1.2.1.191.1.9.1.4 | Yes |
| ospfv3NbrAddress | 1.3.6.1.2.1.191.1.9.1.5 | Yes |
| ospfv3NbrOptions | 1.3.6.1.2.1.191.1.9.1.6 | Yes |
| ospfv3NbrPriority | 1.3.6.1.2.1.191.1.9.1.7 | Yes |
| ospfv3NbrState | 1.3.6.1.2.1.191.1.9.1.8 | Yes |
| ospfv3NbrEvents | 1.3.6.1.2.1.191.1.9.1.9 | Yes |
| ospfv3NbrLsRetransQLen | 1.3.6.1.2.1.191.1.9.1.10 | yes |
| ospfv3NbrHelloSuppressed | 1.3.6.1.2.1.191.1.9.1.11 | No |
| ospfv3NbrIfId | 1.3.6.1.2.1.191.1.9.1.12 | Yes |
| ospfv3NbrRestartHelperStatus | 1.3.6.1.2.1.191.1.9.1.13 | Yes |
| ospfv3NbrRestartHelperAge | 1.3.6.1.2.1.191.1.9.1.14 | No |
| ospfv3NbrRestartHelperExitReason | 1.3.6.1.2.1.191.1.9.1.15 | No |

ospfv3VirtNbrTable

The following table lists the OSPFv3 Virtual Neighbor MIB objects.

| Object | Object identifier | Supported? |
|--------------------------------------|---------------------------|------------|
| ospfv3VirtNbrArea | 1.3.6.1.2.1.191.1.11.1.1 | Yes |
| ospfv3VirtNbrRtrId | 1.3.6.1.2.1.191.1.11.1.2 | Yes |
| ospfv3VirtNbrIfIndex | 1.3.6.1.2.1.191.1.11.1.3 | Yes |
| ospfv3VirtNbrIfInstId | 1.3.6.1.2.1.191.1.11.1.4 | Yes |
| ospfv3VirtNbrAddressType | 1.3.6.1.2.1.191.1.11.1.5 | Yes |
| ospfv3VirtNbrAddress | 1.3.6.1.2.1.191.1.11.1.6 | Yes |
| ospfv3VirtNbrOptions | 1.3.6.1.2.1.191.1.11.1.7 | Yes |
| ospfv3VirtNbrState | 1.3.6.1.2.1.191.1.11.1.8 | Yes |
| ospfv3VirtNbrEvents | 1.3.6.1.2.1.191.1.11.1.9 | No |
| ospfv3VirtNbrLsRetransQLen | 1.3.6.1.2.1.191.1.11.1.10 | yes |
| ospfv3VirtNbrHelloSuppressed | 1.3.6.1.2.1.191.1.11.1.11 | No |
| ospfv3VirtNbrIfId | 1.3.6.1.2.1.191.1.11.1.12 | Yes |
| ospfv3VirtNbrRestartHelperStatus | 1.3.6.1.2.1.191.1.11.1.13 | Yes |
| ospfv3VirtNbrRestartHelperAge | 1.3.6.1.2.1.191.1.11.1.14 | No |
| ospfv3VirtNbrRestartHelperExitReason | 1.3.6.1.2.1.191.1.11.1.15 | No |

ospfv3AreaAggregateTable

The following table lists the OSPFv3 area aggregate table MIB objects.

| Object | Object identifier | Supported? |
|---------------------------------|--------------------------|------------|
| ospfv3AreaAggregateAreaID | 1.3.6.1.2.1.191.1.12.1.1 | Yes |
| ospfv3AreaAggregateAreaLsdbType | 1.3.6.1.2.1.191.1.12.1.2 | Yes |
| ospfv3AreaAggregatePrefixType | 1.3.6.1.2.1.191.1.12.1.3 | Yes |
| ospfv3AreaAggregatePrefix | 1.3.6.1.2.1.191.1.12.1.4 | Yes |
| ospfv3AreaAggregatePrefixLength | 1.3.6.1.2.1.191.1.12.1.5 | Yes |
| ospfv3AreaAggregateRowStatus | 1.3.6.1.2.1.191.1.12.1.6 | Yes |
| ospfv3AreaAggregateEffect | 1.3.6.1.2.1.191.1.12.1.7 | Yes |
| ospfv3AreaAggregateRouteTag | 1.3.6.1.2.1.191.1.12.1.8 | No |

ospfv3VirtLinkLsdbTable

The following table lists the OSPFv3 virtual link LSDB table MIB objects.

| Object | Object identifier | Supported? |
|---------------------------------|---------------------------|------------|
| ospfv3VirtLinkLsdbIfAreaId | 1.3.6.1.2.1.191.1.13.1.1 | Yes |
| ospfv3VirtLinkLsdbIfNeighbor | 1.3.6.1.2.1.191.1.13.1.2 | Yes |
| ospfv3VirtLinkLsdbType | 1.3.6.1.2.1.191.1.13.1.3 | Yes |
| ospfv3VirtLinkLsdbRouterId | 1.3.6.1.2.1.191.1.13.1.4 | Yes |
| ospfv3VirtLinkLsdbLsid | 1.3.6.1.2.1.191.1.13.1.5 | Yes |
| ospfv3VirtLinkLsdbSequence | 1.3.6.1.2.1.191.1.13.1.6 | Yes |
| ospfv3VirtLinkLsdbAge | 1.3.6.1.2.1.191.1.13.1.7 | Yes |
| ospfv3VirtLinkLsdbChecksum | 1.3.6.1.2.1.191.1.13.1.8 | Yes |
| ospfv3VirtLinkLsdbAdvertisement | 1.3.6.1.2.1.191.1.13.1.9 | Yes |
| ospfv3VirtLinkLsdbTypeKnown | 1.3.6.1.2.1.191.1.13.1.10 | Yes |

ospfv3NotificationEntry

The following table lists the OSPFv3 notifications.

| Object | Object identifier | Supported? |
|-----------------------|------------------------|------------|
| ospfv3ConfigErrorType | 1.3.6.1.2.1.191.1.14.1 | Yes |
| ospfv3PacketType | 1.3.6.1.2.1.191.1.14.2 | Yes |
| ospfv3PacketSrc | 1.3.6.1.2.1.191.1.14.3 | Yes |

ospfv3Notifications

The following table lists the OSPFv3 notifications.

| Object | Object identifier | Supported? |
|-------------------------|---------------------|------------|
| ospfv3VirtIfStateChange | 1.3.6.1.2.1.191.0.1 | Yes |

| Object | Object identifier | Supported? |
|----------------------------------------|----------------------|------------|
| ospfv3NbrStateChange | 1.3.6.1.2.1.191.0.2 | Yes |
| ospfv3VirtNbrStateChange | 1.3.6.1.2.1.191.0.3 | Yes |
| ospfv3IfConfigError | 1.3.6.1.2.1.191.0.4 | Yes |
| ospfv3VirtIfConfigError | 1.3.6.1.2.1.191.0.5 | Yes |
| ospfv3IfRxBadPacket | 1.3.6.1.2.1.191.0.6 | Yes |
| ospfv3VirtIfRxBadPacket | 1.3.6.1.2.1.191.0.7 | Yes |
| ospfv3LsdbOverflow | 1.3.6.1.2.1.191.0.8 | Yes |
| ospfv3LsdbApproachingOverflow | 1.3.6.1.2.1.191.0.9 | Yes |
| ospfv3IfStateChange | 1.3.6.1.2.1.191.0.10 | Yes |
| ospfv3NssaTranslatorStatusChange | 1.3.6.1.2.1.191.0.11 | Yes |
| ospfv3RestartStatusChange | 1.3.6.1.2.1.191.0.12 | Yes |
| ospfv3NbrRestartHelperStatusChange | 1.3.6.1.2.1.191.0.13 | No |
| ospfv3VirtNbrRestartHelperStatusChange | 1.3.6.1.2.1.191.0.14 | No |

RFC 7420 - Path Computation Element Communication Protocol (PCEP) Management Information Base (MIB)

RFC 7420 PCEP MIB describes managed objects for modeling of the Path Computation Element Communication Protocol (PCEP) for communication between a Path Computation Client (PCC) and a Path Computation Element (PCE).

Usage Guidelines

The following MIB tables are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

The following OIDs always return zero value and the devices does not support PCE servers and Svec:

- pcePcepPeerNumPCReqRcvd
- pcePcepPeerNumPCRepSent
- pcePcepPeerNumPCRepSent
- pcePcepSessNumPCReqRcvd
- pcePcepSessNumPCRepSent
- pcePcepSessLocalOverload - This OID is not supported.
- pcePcepSessLocalOverloadClear - This OID is not supported.
- pcePcepSessNumSvecRcvd - Applicable only for Svec in PCEP
- pcePcepSessNumSvecReqRcvd - Applicable only for Svec in PCEP
- pcePcepPeerNumSvecSent - Applicable only for Svec in PCEP
- pcePcepPeerNumSvecReqSent - Applicable only for Svec in PCEP

History

| Release version | History |
|-----------------|--------------------------|
| 6.0.00a | This MIB was introduced. |

pcePcepEntityTable

The following table objects contain information about local PCEP entities. All the objects support Read-only operation.

pcePcepEntityTable objects

| Objects | Object Identifier | Supported? (Yes/No) |
|--------------------------------|------------------------|---------------------|
| pcePcepEntityTable | 1.3.6.1.2.1.227.1.1 | Yes. |
| pcePcepEntityIndex | 1.3.6.1.2.1.227.1.1.1 | Yes. |
| pcePcepEntityAdminStatus | 1.3.6.1.2.1.227.1.1.2 | Yes. |
| pcePcepEntityOperStatus | 1.3.6.1.2.1.227.1.1.3 | Yes. |
| pcePcepEntityAddrType | 1.3.6.1.2.1.227.1.1.4 | Yes. |
| pcePcepEntityAddr | 1.3.6.1.2.1.227.1.1.5 | Yes. |
| pcePcepEntityConnectTimer | 1.3.6.1.2.1.227.1.1.6 | Yes. |
| pcePcepEntityConnectMaxRetry | 1.3.6.1.2.1.227.1.1.7 | Yes. |
| pcePcepEntityInitBackoffTimer | 1.3.6.1.2.1.227.1.1.8 | Yes. |
| pcePcepEntityMaxBackoffTimer | 1.3.6.1.2.1.227.1.1.9 | Yes. |
| pcePcepEntityOpenWaitTimer | 1.3.6.1.2.1.227.1.1.10 | Yes. |
| pcePcepEntityKeepWaitTimer | 1.3.6.1.2.1.227.1.1.11 | Yes. |
| pcePcepEntityKeepAliveTimer | 1.3.6.1.2.1.227.1.1.12 | Yes. |
| pcePcepEntityDeadTimer | 1.3.6.1.2.1.227.1.1.13 | Yes. |
| pcePcepEntityAllowNegotiation | 1.3.6.1.2.1.227.1.1.14 | Yes. |
| pcePcepEntityMaxKeepAliveTimer | 1.3.6.1.2.1.227.1.1.15 | Yes. |
| pcePcepEntityMinDeadTimer | 1.3.6.1.2.1.227.1.1.16 | Yes. |
| pcePcepEntityMinKeepAliveTimer | 1.3.6.1.2.1.227.1.1.17 | Yes. |
| pcePcepEntityMinDeadTimer | 1.3.6.1.2.1.227.1.1.18 | Yes. |
| pcePcepEntitySyncTimer | 1.3.6.1.2.1.227.1.1.19 | Yes. |
| pcePcepEntityRequestTimer | 1.3.6.1.2.1.227.1.1.20 | Yes. |
| pcePcepEntityMaxSessions | 1.3.6.1.2.1.227.1.1.21 | Yes. |
| pcePcepEntityMaxUnknownReqs | 1.3.6.1.2.1.227.1.1.22 | Yes. |
| pcePcepEntityMaxUnknownMsgs | 1.3.6.1.2.1.227.1.1.23 | Yes. |

History

pcePcepPeerTable

The following table MIB objects contain information about peers known by the local PCEP entity. The table objects give peer information that spans PCEP sessions and use pcePcepSessTable for information about current PCEP sessions. All the objects support Read-only operation.

pcePcepPeerTable objects

| Objects | Object Identifier | Supported? (Yes/No) |
|---------------------------------|--------------------------|---------------------|
| pcePcepPeerTable | 1.3.6.1.2.1.227.1.2 | Yes. |
| pcePcepPeerAddrType | 1.3.6.1.2.1.227.1.2.1.1 | Yes. |
| pcePcepPeerAddr | 1.3.6.1.2.1.227.1.2.1.2 | Yes. |
| pcePcepPeerRole | 1.3.6.1.2.1.227.1.2.1.3 | Yes. |
| pcePcepPeerDiscontinuityTime | 1.3.6.1.2.1.227.1.2.1.4 | Yes. |
| pcePcepPeerInitiateSession | 1.3.6.1.2.1.227.1.2.1.5 | Yes. |
| pcePcepPeerSessionExists | 1.3.6.1.2.1.227.1.2.1.6 | Yes. |
| pcePcepPeerNumSessSetupOK | 1.3.6.1.2.1.227.1.2.1.7 | Yes. |
| pcePcepPeerNumSessSetupFail | 1.3.6.1.2.1.227.1.2.1.8 | Yes. |
| pcePcepPeerSessionUpTime | 1.3.6.1.2.1.227.1.2.1.9 | Yes. |
| pcePcepPeerSessionFailTime | 1.3.6.1.2.1.227.1.2.1.10 | Yes. |
| pcePcepPeerSessionFailUpTime | 1.3.6.1.2.1.227.1.2.1.11 | Yes. |
| pcePcepPeerAvgRspTime | 1.3.6.1.2.1.227.1.2.1.12 | Yes. |
| pcePcepPeerLWMRspTime | 1.3.6.1.2.1.227.1.2.1.13 | Yes. |

pcePcepSessTable

A table of PCEP sessions that involve the local PCEP entity. Each entry in this table represents a single session. A table entry appears when the corresponding PCEP session transitions out of idle state. If the PCEP session transitions back into an idle state, then the corresponding entry in the table is removed. All the objects support Read-only operation.

pcePcepSessTable objects

MEF Service OAM PM

The XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices are provided with the following Metro Ethernet Forum (MEF) Service OAM (SOAM) Performance Monitoring (PM) MIB.

Ethernet global performance monitoring configuration table

The *mefSoamPmGlobalTable* represents the Ethernet global performance monitoring configuration MIB objects. The SNMP GET and GET-NEXT requests are supported.

| Object group name | Object identifier | Supported? |
|----------------------------------------------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>mefSoamPmGlobalOperNextIndex</i> | 1.3.6.1.4.1.15007.1.3.1.1.1.1 | Yes. Read-only. |
| <i>mefSoamPmGlobalLmSingleEndedResponder</i> | 1.3.6.1.4.1.15007.1.3.1.1.1.2 | Yes. Read-only. NOTE Always returns the value True and this object is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| <i>mefSoamPmGlobalSmSingleEndedResponder</i> | 1.3.6.1.4.1.15007.1.3.1.1.1.3 | Yes. Read-only. NOTE Always returns the value True and this object is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| <i>mefSoamPmGlobalDmSingleEndedResponder</i> | 1.3.6.1.4.1.15007.1.3.1.1.1.4 | Yes. Read-only. NOTE Always returns the value True. |

Ethernet delay measurement configuration table

The `mefSoamDmCfgTable` represents the Ethernet delay measurement configuration table MIB objects. The SNMP GET, GET-NEXT, and SET requests are supported.

NOTE

The delay measurement tables are enhanced to support a 1-DM functionality with no impact on the existing functionality of 2-DM.

| Object group name | Object identifier | Supported? |
|------------------------------------------------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>mefSoamDmCfgIndex</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.1 | Yes. Not Accessible. |
| <code>mefSoamDmCfgType</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.2 | Yes. Read-create. |
| <code>mefSoamDmCfgVersion</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.3 | Yes. Read-create. NOTE Supports only the version 0. |
| <code>mefSoamDmCfgEnabled</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.4 | Yes. Read-create. |
| <code>mefSoamDmCfgCounterEnable</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.5 | Yes. Read-only. |
| <code>mefSoamDmCfgInterval</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.6 | Yes. Read-create |
| <code>mefSoamDmCfgPriority</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.7 | Yes. Read-create. |
| <code>mefSoamDmCfgDropEligible</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.8 | Yes. Read-create. NOTE Supports only the value TRUE. |
| <code>mefSoamDmCfgFrameSize</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.9 | Yes. Read-only. |
| <code>mefSoamDmCfgDataPattern</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.10 | No |
| <code>mefSoamDmCfgTestTlvIncluded</code> | 1.3.6.1.4.1.15007.1.3.1.3.1.1.11 | No |

| mefSoamDmCfgHistoryClear | 1.3.6.1.4.1.15007.1.3.1.3.1.1.31 | Yes. Read-create. |
| mefSoamDmCfgRowStatus | 1.3.6.1.4.1.15007.1.3.1.3.1.1.32 | Yes. Read-create. |

Ethernet delay measurement current statistic table

The `mefSoamDmCurrentStatsTable` represents the Ethernet delay measurement current statistic MIB objects. The SNMP GET and GET-NEXT requests are supported.

NOTE

The objects in the table are read-only.

| Object group name | Object identifier | Supported? |
|-----------------------------------------------|---------------------------------|------------|
| <code>mefSoamDmCurrentStatsIndex</code> | 1.3.6.1.4.1.15007.1.3.1.3.3.1.1 | Yes |
| <code>mefSoamDmCurrentStatsStartTime</code> | 1.3.6.1.4.1.15007.1.3.1.3.3.1.2 | Yes |
| <code>mefSoamDmCurrentStatsElapsedTime</code> | 1.3.6.1.4.1.15007.1.3.1.3.3.1.3 | Yes |
| <code>mefSoamDmCurrentStatsSuspect</code> | 1.3.6.1.4.1.15007.1.3.1.3.3.1.4 | Yes |

| Object group name | Object identifier | Supported? |
|---------------------------------------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| mefSoamDmCurrentStatsFrameDelayRoundTripMin | 1.3.6.1.4.1.15007.1.3.1.3.3.1.5 | Yes |
| mefSoamDmCurrentStatsFrameDelayRoundTripMax | 1.3.6.1.4.1.15007.1.3.1.3.3.1.6 | Yes |
| mefSoamDmCurrentStatsFrameDelayRoundTripAvg | 1.3.6.1.4.1.15007.1.3.1.3.3.1.7 | Yes |
| mefSoamDmCurrentStatsFrameDelayForwardMin | 1.3.6.1.4.1.15007.1.3.1.3.3.1.8 | Yes NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmCurrentStatsFrameDelayForwardMax | 1.3.6.1.4.1.15007.1.3.1.3.3.1.9 | Yes NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmCurrentStatsFrameDelayForwardAvg | 1.3.6.1.4.1.15007.1.3.1.3.3.1.10 | Yes NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmCurrentStatsFrameDelayBackwardMin | 1.3.6.1.4.1.15007.1.3.1.3.3.1.11 | No |

| mefSoamDmCurrentStatsIFDVRoundTripAvg | 1.3.6.1.4.1.15007.1.3.1.3.3.1.22 | No |
| mefSoamDmCurrentStatsInitiatedMeasurements | 1.3.6.1.4.1.15007.1.3.1.3.3.1.23 | Yes |
| mefSoamDmCurrentStatsCompletedMeasurements | 1.3.6.1.4.1.15007.1.3.1.3.3.1.24 | Yes |

Ethernet delay measurement historic statistic table

The `mefSoamDmHistoricStatsTable` represents the Ethernet delay measurement historic statistic MIB objects. The table supports maximum of 32 rows. Whenever, a new delay measurement happens, the last row of the table is replaced with the new entry.

NOTE

The objects in the table are read-only. The `mefSoamDmHistoricStatsTable` is not persistent upon reboot of a device.

| Object group name | Object identifier | Supported? |
|-----------------------------------------------------------|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>mefSoamDmHistoricStatsIndex</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.1 | Yes. Not Accessible. |
| <code>mefSoamDmHistoricStatsEndTime</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.2 | Yes |
| <code>mefSoamDmHistoricStatsElapsedTime</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.3 | Yes |
| <code>mefSoamDmHistoricStatsSuspect</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.4 | Yes |
| <code>mefSoamDmHistoricStatsFrameDelayRoundTripMin</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.5 | Yes |
| <code>mefSoamDmHistoricStatsFrameDelayRoundTripMax</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.16 | Yes |
| <code>mefSoamDmHistoricStatsFrameDelayRoundTripAvg</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.7 | Yes |
| <code>mefSoamDmHistoricStatsFrameDelayForwardMin</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.8 | Yes. NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| <code>mefSoamDmHistoricStatsFrameDelayForwardMax</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.9 | Yes. NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| <code>mefSoamDmHistoricStatsFrameDelayForwardAvg</code> | 1.3.6.1.4.1.15007.1.3.1.3.5.1.10 | Yes. |

| Object group name | Object identifier | Supported? |
|---------------------------------------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| | | NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmHistoricStatsFrameDelayBackwardMin | 1.3.6.1.4.1.15007.1.3.1.3.5.1.11 | No |
| mefSoamDmHistoricStatsFrameDelayBackwardMax | 1.3.6.1.4.1.15007.1.3.1.3.5.1.12 | No |
| mefSoamDmHistoricStatsFrameDelayBackwardAvg | 1.3.6.1.4.1.15007.1.3.1.3.5.1.13 | No |
| mefSoamDmHistoricStatsIFDVForwardMin | 1.3.6.1.4.1.15007.1.3.1.3.5.1.14 | Yes NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmHistoricStatsIFDVForwardMax | 1.3.6.1.4.1.15007.1.3.1.3.5.1.15 | Yes NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmHistoricStatsIFDVForwardAvg | 1.3.6.1.4.1.15007.1.3.1.3.5.1.16 | Yes NOTE This object is supported only for 1-way DM that is supported only on the CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmHistoricStatsIFDVBackwardMin | 1.3.6.1.4.1.15007.1.3.1.3.5.1.17 | No |
| mefSoamDmHistoricStatsIFDVBackwardMax | 1.3.6.1.4.1.15007.1.3.1.3.5.1.18 | No |
| mefSoamDmHistoricStatsIFDVBackwardAvg | 1.3.6.1.4.1.15007.1.3.1.3.5.1.19 | No |
| mefSoamDmHistoricStatsIFDVRoundTripMin | 1.3.6.1.4.1.15007.1.3.1.3.5.1.20 | No |
| mefSoamDmHistoricStatsIFDVRoundTripMax | 1.3.6.1.4.1.15007.1.3.1.3.5.1.21 | No |
| mefSoamDmHistoricStatsIFDVRoundTripAvg | 1.3.6.1.4.1.15007.1.3.1.3.5.1.22 | No |
| mefSoamDmHistoricStatsInitiatedMeasurements | 1.3.6.1.4.1.15007.1.3.1.3.5.1.23 | Yes |
| mefSoamDmHistoricStatsCompletedMeasurements | 1.3.6.1.4.1.15007.1.3.1.3.5.1.24 | Yes |

Performance measurement delay threshold configuration table

The `mefSoamDmThresholdTable` represents the Ethernet delay monitoring configuration MIB objects.

| Object group name | Object identifier | Supported? |
|--------------------------------------|---------------------------------|----------------------|
| <code>mefSoamDmThresholdIndex</code> | 1.3.6.1.4.1.15007.1.3.1.3.7.1.1 | Yes. Not Accessible. |

| Object group name | Object identifier | Supported? |
|---------------------------------------------------|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mefSoamDmThresholdEnable | 1.3.6.1.4.1.15007.1.3.1.3.7.1.2 | Yes. Read-create. |
| mefSoamDmThresholdMaxFrameDelayRoundTripThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.3 | Yes. Read-create. |
| mefSoamDmThresholdAveFrameDelayRoundTripThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.4 | Yes. Read-create. |
| mefSoamDmThresholdMaxIFDVRoundTripThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.5 | No |
| mefSoamDmThresholdAveIFDVRoundTripThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.6 | No |
| mefSoamDmThresholdMaxFrameDelayForwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.7 | Yes. Read-create. NOTE This object is supported only for 1-way DM that is supported only on CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmThresholdAveFrameDelayForwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.8 | Yes. Read-create. NOTE This object is supported only for 1-way DM that is supported only on CES 2000 Series and CER 2000 Series platforms. |
| mefSoamDmThresholdMaxIFDVForwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.9 | No |
| mefSoamDmThresholdAveIFDVForwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.10 | No |
| mefSoamDmThresholdMaxFrameDelayBackwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.11 | No |
| mefSoamDmThresholdAveFrameDelayBackwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.12 | No |
| mefSoamDmThresholdMaxIFDVBackwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.13 | No |
| mefSoamDmThresholdAveIFDVBackwardThreshold | 1.3.6.1.4.1.15007.1.3.1.3.7.1.14 | No |

Frame loss measurement configuration table

The `mefSoamLmCfgTable` includes the configuration attributes and operations for the frame loss measurement function defined in Y.1731.

NOTE

The following table is supported only on the CES 2000 Series and CER 2000 Series devices.

| Object group name | Object identifier | Supported? |
|----------------------------------|---------------------------------|----------------------|
| <code>mefSoamLmCfgIndex</code> | 1.3.6.1.4.1.15007.1.3.1.2.1.1.1 | Yes. Not Accessible. |
| <code>mefSoamLmCfgType</code> | 1.3.6.1.4.1.15007.1.3.1.2.1.1.2 | Yes. Read-create. |
| <code>mefSoamLmCfgEnabled</code> | 1.3.6.1.4.1.15007.1.3.1.2.1.1.3 | Yes. Read-create. |

| Object group name | Object identifier | Supported? |
|-----------------------------------|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | NOTE Supports only the value TRUE. |
| mefSoamLmCfgCounterEnable | 1.3.6.1.4.1.15007.1.3.1.2.1.1.4 | Yes. Read-create (partial support) NOTE The bit pattern of the sender can be set only to 10011110 and the bit pattern of the receiver can be set as 01100000. |
| mefSoamLmCfgInterval | 1.3.6.1.4.1.15007.1.3.1.2.1.1.5 | Yes. Read-create. NOTE Supports only the values 1000, 10000, 60000, and 600000. |
| mefSoamLmCfgPriority | 1.3.6.1.4.1.15007.1.3.1.2.1.1.6 | Yes. Read-create. |
| mefSoamLmCfgDropEligible | 1.3.6.1.4.1.15007.1.3.1.2.1.1.7 | Yes. Read-create. NOTE Supports only the value TRUE for SLM and FALSE for LLM. |
| mefSoamLmCfgFrameSize | 1.3.6.1.4.1.15007.1.3.1.2.1.1.8 | Yes. Read-only. |
| mefSoamLmCfgDataPattern | 1.3.6.1.4.1.15007.1.3.1.2.1.1.9 | No |
| mefSoamLmCfgTestTlvIncluded | 1.3.6.1.4.1.15007.1.3.1.2.1.1.10 | No |
| mefSoamLmCfgTestTlvPattern | 1.3.6.1.4.1.15007.1.3.1.2.1.1.11 | No |
| mefSoamLmCfgMeasurementInterval | 1.3.6.1.4.1.15007.1.3.1.2.1.1.12 | Yes. Read-create. |
| mefSoamLmCfgDestMacAddress | 1.3.6.1.4.1.15007.1.3.1.2.1.1.13 | Yes. Read-create. |
| mefSoamLmCfgDestMepId | 1.3.6.1.4.1.15007.1.3.1.2.1.1.14 | Yes. Read-create. |
| mefSoamLmCfgDestIsMepId | 1.3.6.1.4.1.15007.1.3.1.2.1.1.15 | Yes. Read-create. |
| mefSoamLmCfgSourceMacAddress | 1.3.6.1.4.1.15007.1.3.1.2.1.1.16 | No |
| mefSoamLmCfgStartTimeType | 1.3.6.1.4.1.15007.1.3.1.2.1.1.17 | Yes. Read-create. NOTE None value is not supported. |
| mefSoamLmCfgFixedStartDateAndTime | 1.3.6.1.4.1.15007.1.3.1.2.1.1.18 | Yes. Read-create. NOTE In SET operation, the Year value must always be 0. Supports only 8 octet values. |
| mefSoamLmCfgRelativeStartTime | 1.3.6.1.4.1.15007.1.3.1.2.1.1.19 | Yes. Read-create. |
| mefSoamLmCfgStopTimeType | 1.3.6.1.4.1.15007.1.3.1.2.1.1.20 | Yes. Read-create. NOTE None value is not supported. |
| mefSoamLmCfgFixedStopDateAndTime | 1.3.6.1.4.1.15007.1.3.1.2.1.1.21 | Yes. Read-create. |

| Object group name | Object identifier | Supported? |
|------------------------------------------------|----------------------------------|-----------------------------------------------------------------------------------------------------------------|
| | | NOTE In SET operation, the Year value must always be 0. Supports only 8 octet values. |
| mefSoamLmCfgRelativeStopTime | 1.3.6.1.4.1.15007.1.3.1.2.1.1.22 | Yes. Read-create. |
| mefSoamLmCfgPeriodicity | 1.3.6.1.4.1.15007.1.3.1.2.1.1.23 | Yes. Read-create. NOTE Only the values 0 for non-periodic and 8640000 for daily are supported. |
| mefSoamLmCfgAlignMeasurementIntervals | 1.3.6.1.4.1.15007.1.3.1.2.1.1.24 | Yes. Read-only. |
| mefSoamLmCfgAvailabilityNumConsecutiveFlr Meas | 1.3.6.1.4.1.15007.1.3.1.2.1.1.25 | No |
| mefSoamLmCfgAvailabilityThreshold | 1.3.6.1.4.1.15007.1.3.1.2.1.1.26 | No |
| mefSoamLmCfgUnavailabilityThreshold | 1.3.6.1.4.1.15007.1.3.1.2.1.1.27 | No |
| mefSoamLmCfgFlrNumConsecutiveMeas | 1.3.6.1.4.1.15007.1.3.1.2.1.1.28 | No |
| mefSoamLmCfgSessionStatus | 1.3.6.1.4.1.15007.1.3.1.2.1.1.29 | Yes. Read-only. |
| mefSoamLmCfgHistoryClear | 1.3.6.1.4.1.15007.1.3.1.2.1.1.30 | Yes. Read-create. |
| mefSoamLmCfgRowStatus | 1.3.6.1.4.1.15007.1.3.1.2.1.1.31 | Yes. Read-create. |

SOAM loss measurement current statistic table

The `mefSoamLmCurrentStatsTable` contains the results for the current Measurement Interval in a SOAM Loss Measurement session.

NOTE

The objects in the table are read-only.

| Object group name | Object identifier | Supported? |
|------------------------------------------------|----------------------------------|----------------------|
| mefSoamLmCurrentStatsIndex | 1.3.6.1.4.1.15007.1.3.1.2.3.1.1 | Yes. Not Accessible. |
| mefSoamLmCurrentStatsStartTime | 1.3.6.1.4.1.15007.1.3.1.2.3.1.2 | Yes |
| mefSoamLmCurrentStatsElapsedTime | 1.3.6.1.4.1.15007.1.3.1.2.3.1.3 | Yes |
| mefSoamLmCurrentStatsSuspect | 1.3.6.1.4.1.15007.1.3.1.2.3.1.4 | Yes |
| mefSoamLmCurrentStatsForwardTransmittedFrames | 1.3.6.1.4.1.15007.1.3.1.2.3.1.5 | Yes |
| mefSoamLmCurrentStatsForwardReceivedFrames | 1.3.6.1.4.1.15007.1.3.1.2.3.1.6 | Yes |
| mefSoamLmCurrentStatsForwardMinFlr | 1.3.6.1.4.1.15007.1.3.1.2.3.1.7 | Yes |
| mefSoamLmCurrentStatsForwardMaxFlr | 1.3.6.1.4.1.15007.1.3.1.2.3.1.8 | Yes |
| mefSoamLmCurrentStatsForwardAvgFlr | 1.3.6.1.4.1.15007.1.3.1.2.3.1.9 | Yes |
| mefSoamLmCurrentStatsForwardAvailable | 1.3.6.1.4.1.15007.1.3.1.2.3.1.10 | No |
| mefSoamLmCurrentStatsForwardUnavailable | 1.3.6.1.4.1.15007.1.3.1.2.3.1.11 | No |
| mefSoamLmCurrentStatsBackwardTransmittedFrames | 1.3.6.1.4.1.15007.1.3.1.2.3.1.12 | Yes |
| mefSoamLmCurrentStatsBackwardReceivedFrames | 1.3.6.1.4.1.15007.1.3.1.2.3.1.13 | Yes |

| Object group name | Object identifier | Supported? |
|--------------------------------------------|----------------------------------|------------|
| mefSoamLmCurrentStatsBackwardMinFlr | 1.3.6.1.4.1.15007.1.3.1.2.3.1.14 | Yes |
| mefSoamLmCurrentStatsBackwardMaxFlr | 1.3.6.1.4.1.15007.1.3.1.2.3.1.15 | Yes |
| mefSoamLmCurrentStatsBackwardAvgFlr | 1.3.6.1.4.1.15007.1.3.1.2.3.1.16 | Yes |
| mefSoamLmCurrentStatsBackwardAvailable | 1.3.6.1.4.1.15007.1.3.1.2.3.1.17 | No |
| mefSoamLmCurrentStatsBackwardUnavailable | 1.3.6.1.4.1.15007.1.3.1.2.3.1.18 | No |
| mefSoamLmCurrentStatsInitiatedMeasurements | 1.3.6.1.4.1.15007.1.3.1.2.3.1.19 | Yes |
| mefSoamLmCurrentStatsCompletedMeasurements | 1.3.6.1.4.1.15007.1.3.1.2.3.1.20 | Yes |

SOAM loss measurement historic statistic table

The `mefSoamLmCurrentStatsTable` contains the results for the historic measurement interval in a SOAM Loss Measurement session.

NOTE

The objects in the table are read-only.

| Object group name | Object identifier | Supported? |
|-------------------------------------------------|----------------------------------|------------|
| mefSoamLmHistoricStatsIndex | 1.3.6.1.4.1.15007.1.3.1.2.4.1.1 | Yes |
| mefSoamLmHistoricStatsEndTime | 1.3.6.1.4.1.15007.1.3.1.2.4.1.2 | Yes |
| mefSoamLmHistoricStatsElapsedTime | 1.3.6.1.4.1.15007.1.3.1.2.4.1.3 | Yes |
| mefSoamLmHistoricStatsSuspect | 1.3.6.1.4.1.15007.1.3.1.2.4.1.4 | Yes |
| mefSoamLmHistoricStatsForwardTransmittedFrames | 1.3.6.1.4.1.15007.1.3.1.2.4.1.5 | Yes |
| mefSoamLmHistoricStatsForwardReceivedFrames | 1.3.6.1.4.1.15007.1.3.1.2.4.1.6 | Yes |
| mefSoamLmHistoricStatsForwardMinFlr | 1.3.6.1.4.1.15007.1.3.1.2.4.1.7 | Yes |
| mefSoamLmHistoricStatsForwardMaxFlr | 1.3.6.1.4.1.15007.1.3.1.2.4.1.8 | Yes |
| mefSoamLmHistoricStatsForwardAvgFlr | 1.3.6.1.4.1.15007.1.3.1.2.4.1.9 | Yes |
| mefSoamLmHistoricStatsForwardAvailable | 1.3.6.1.4.1.15007.1.3.1.2.4.1.10 | No |
| mefSoamLmHistoricStatsForwardUnavailable | 1.3.6.1.4.1.15007.1.3.1.2.4.1.11 | No |
| mefSoamLmHistoricStatsBackwardTransmittedFrames | 1.3.6.1.4.1.15007.1.3.1.2.4.1.12 | Yes |
| mefSoamLmHistoricStatsBackwardReceivedFrames | 1.3.6.1.4.1.15007.1.3.1.2.4.1.13 | Yes |
| mefSoamLmHistoricStatsBackwardMinFlr | 1.3.6.1.4.1.15007.1.3.1.2.4.1.14 | Yes |
| mefSoamLmHistoricStatsBackwardMaxFlr | 1.3.6.1.4.1.15007.1.3.1.2.4.1.15 | Yes |
| mefSoamLmHistoricStatsBackwardAvgFlr | 1.3.6.1.4.1.15007.1.3.1.2.4.1.16 | Yes |
| mefSoamLmHistoricStatsBackwardAvailable | 1.3.6.1.4.1.15007.1.3.1.2.4.1.17 | No |
| mefSoamLmHistoricStatsBackwardUnavailable | 1.3.6.1.4.1.15007.1.3.1.2.4.1.18 | No |
| mefSoamLmHistoricStatsInitiatedMeasurements | 1.3.6.1.4.1.15007.1.3.1.2.4.1.19 | Yes |
| mefSoamLmHistoricStatsCompletedMeasurements | 1.3.6.1.4.1.15007.1.3.1.2.4.1.20 | Yes |

SOAM loss measurement threshold configuration table

The `mefSoamLmThresholdTable` contains the list of Loss Measurement threshold values for LM Performance Monitoring.

| Object group name | Object identifier | Supported? |
|---------------------------------------------------------|---------------------------------|---------------------|
| <code>mefSoamLmThresholdIndex</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.1 | Yes. Not accessible |
| <code>mefSoamLmThresholdEnable</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.2 | Yes. Read-only. |
| <code>mefSoamLmThresholdMaxFlrForwardThreshold</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.3 | Yes. Read-create. |
| <code>mefSoamLmThresholdAveFlrForwardThreshold</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.4 | Yes. Read-create. |
| <code>mefSoamLmThresholdMaxFlrBackwardThreshold</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.5 | Yes. Read-create. |
| <code>mefSoamLmThresholdAveFlrBackwardThreshold</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.6 | Yes. Read-create. |
| <code>mefSoamLmThresholdUnavailForwardThreshold</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.7 | No |
| <code>mefSoamLmThresholdUnavailBackwardThreshold</code> | 1.3.6.1.4.1.15007.1.3.1.2.5.1.8 | No |

IEEE8021-CFM-MIB

The following tables in the IEEE8021-CFM-MIB are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

The following scalars are supported, but read-only access is available:

- `dot1agCfmDefaultMdDefLevel` (OID: 1.3.111.2.802.1.1.8.1.2.1) - This object always returns 0.
- `dot1agCfmDefaultMdDefMhfCreation` (OID: 1.3.111.2.802.1.1.8.1.2.2) - This object always returns defMHFdefault(2).
- `dot1agCfmDefaultMdDefIdPermission` (OID: 1.3.111.2.802.1.1.8.1.2.3) - This object always returns sendIdNone(1).

The following tables are supported, but read-only access for these tables is available at this time:

- `dot1agCfmMdTable`
- `dot1agCfmMaNetTable`
- `dot1agCfmMaCompTable`
- `dot1agCfmMaMepListTable`
- `dot1agCfmMepTable`
- `dot1agCfmLtrTable`
- `dot1agCfmMepDbTable`

Other tables or the `dot1agCfmFaultAlarm` notification are not supported.

dot1agCfmMdTable

The `dot1agCfmMdTable` is the Maintenance Domain table. Each row in the domain represents a different Maintenance Domain. It is indexed by the `dot1agCfmMdIndex` object. Only read-only access is available for the objects listed in the below table.

| Object group name | Type | Object identifier | Comments |
|-------------------------------|------------|-------------------------------|----------------------------|
| <code>dot1agCfmMdIndex</code> | Unsigned32 | 1.3.111.2.802.1.1.8.1.5.2.1.1 | Index variable. Supported. |

| Object group name | Type | Object identifier | Comments |
|----------------------------|-------------------------------|-------------------------------|-------------------------------|
| dot1agCfmMdFormat | dot1agCfmMaintDomainNameType | 1.3.111.2.802.1.1.8.1.5.2.1.2 | Supported. |
| dot1agCfmMdName | dot1agCfmMaintDomainName | 1.3.111.2.802.1.1.8.1.5.2.1.3 | Supported. |
| dot1agCfmMdMdLevel | dot1agCfmMDLevel | 1.3.111.2.802.1.1.8.1.5.2.1.4 | Supported. |
| dot1agCfmMdMhfCreation | dot1agCfmMhfCreation | 1.3.111.2.802.1.1.8.1.5.2.1.5 | Supported. |
| dot1agCfmMdMhfldPermission | dot1agCfmldPermission | 1.3.111.2.802.1.1.8.1.5.2.1.6 | Always returns sendIdNone(1). |
| dot1agCfmMdMaNextIndex | dot1afCfmIndexIntegerNextFree | 1.3.111.2.802.1.1.8.1.5.2.1.7 | Supported. |
| dot1agCfmMdRowStatus | RowStatus | 1.3.111.2.802.1.1.8.1.5.2.1.8 | Always returns active(1). |

dot1agCfmMaNetTable

Each row in the dot1agCfmMaNetTable represents an Maintenance Association (MA), which is a set of maintenance association end points (MEPs). Each MEP is configured with a single service instance. It is indexed by the dot1agCfmMdIndex and dot1agCfmMaIndex objects.

Only read-only access is available for these objects.

| Object group name | Type | Object identifier | Comments |
|---------------------------|-----------------------------|-------------------------------|----------------------------|
| dot1agCfmMaIndex | Unsigned32 | 1.3.111.2.802.1.1.8.1.6.1.1.1 | Index variable. Supported. |
| dot1agCfmMaNetFormat | dot1agCfmMaintAssocNameType | 1.3.111.2.802.1.1.8.1.6.1.1.2 | Supported. |
| dot1agCfmMaNetName | dot1agCfmMaintAssocName | 1.3.111.2.802.1.1.8.1.6.1.1.3 | Supported. |
| dot1agCfmMaNetCcmInterval | dot1agCfmCcmInterval | 1.3.111.2.802.1.1.8.1.6.1.1.4 | Supported. |
| dot1agCfmMaNetRowStatus | RowStatus | 1.3.111.2.802.1.1.8.1.6.1.1.5 | Always returns active(1). |

dot1agCfmMaCompTable

The dot1agCfmMaCompTable is the MA component table. Each row in the table represents an MA, which is a set of MEPs. Each MEP is configured with a single service instance. It is indexed by dot1agCfmMaComponentId, dot1agCfmMdIndex, and dot1agCfmMaIndex. Only read-only access is available for this table.

| Object group name | Type | Object identifier | Comments |
|----------------------------------------|---------------------------------------|-------------------------------|-------------------------------|
| ieee8021CfmMaComponentId | ieee8021PbbComponentIdentifierTC | 1.3.111.2.802.1.1.8.1.6.4.1.1 | Index variable. Supported. |
| ieee8021CfmMaCompPrimarySelectorType | Integer: • vlandid(1) • isid(2) | 1.3.111.2.802.1.1.8.1.6.4.1.2 | Supported. |
| ieee8021CfmMaCompPrimarySelectorOrNone | ieee8021ServiceSelectorValueOrNone | 1.3.111.2.802.1.1.8.1.6.4.1.3 | Supported. |
| ieee8021CfmMaCompMhfCreation | dot1agCfmMhfCreation | 1.3.111.2.802.1.1.8.1.6.4.1.4 | Supported. |
| ieee8021CfmMaCompldPermission | dot1agCfmldPermission | 1.3.111.2.802.1.1.8.1.6.4.1.5 | Always returns sendIdNone(1). |
| ieee8021CfmMaCompNumberOfVids | Unsigned32 | 1.3.111.2.802.1.1.8.1.6.4.1.6 | Supported. |
| ieee8021CfmMaCompRowStatus | RowStatus | 1.3.111.2.802.1.1.8.1.6.4.1.7 | Always return active(1). |

dot1agCfmMaMepListTable

The dot1agCfmMaMepListTable contains the list of known MEPs for a given MA. It is indexed by dot1agCfmMdIndex, dot1agCfmMaIndex, and dot1agCfmMaMepListIdentifier.

| Object group name | Type | Object identifier | Comments |
|------------------------------|----------------|-------------------------------|----------------------------|
| dot1agCfmMaMepListIdentifier | dot1agCfmMepId | 1.3.111.2.802.1.1.8.1.6.3.1.1 | Index variable. Supported. |
| dot1agCfmMaMepListRowStatus | RowStatus | 1.3.111.2.802.1.1.8.1.6.3.1.2 | Always returns active(1). |

dot1agCfmMepTable

The dot1agCfmMepTable is the Maintenance Association End Point (MEP) table. Each row in the table represents a different MEP. It is indexed by dot1agCfmMdIndex, dot1agCfmMaIndex, and dot1agCfmMepIdentifier.

Unless otherwise noted, all objects have read-only access.

| Object group name | Type | Object identifier | Comments |
|---------------------------------|---------------------------|--------------------------------|---------------------------------------|
| dot1agCfmMepIdentifier | dot1agCfmMepId | 1.3.111.2.802.1.1.8.1.7.1.1.1 | Index variable. Supported. Read-only. |
| dot1agCfmMepIfIndex | interfaceIndexOrZero | 1.3.111.2.802.1.1.8.1.7.1.1.2 | Supported. Read-only. |
| dot1agCfmMepDirection | dot1agCfmMpDirection | 1.3.111.2.802.1.1.8.1.7.1.1.3 | Supported. Read-only. |
| dot1agCfmMepPrimaryVid | Unsigned32 | 1.3.111.2.802.1.1.8.1.7.1.1.4 | Always returns 0. Read-only. |
| dot1agCfmMepActive | TruthValue | 1.3.111.2.802.1.1.8.1.7.1.1.5 | Supported. Read-only. |
| dot1agCfmMepFngState | dot1agCfmFngState | 1.3.111.2.802.1.1.8.1.7.1.1.6 | Supported. Read-only. |

| dot1agCfmMepTransmitLtmSeqNumber | Unsigned32 | 1.3.111.2.802.1.1.8.1.7.1.1.43 | Supported. Read-only. |
| dot1agCfmMepTransmitLtmEgressIdentifier | Octet String | 1.3.111.2.802.1.1.8.1.7.1.1.44 | Supported. Read-only. |
| dot1agCfmMepRowStatus | RowStatus | 1.3.111.2.802.1.1.8.1.7.1.1.45 | Always returns active(1). Read-only. |

dot1agCfmLtrTable

The dot1agCfmLtrTable extends the MEP table and contains a list of Linktrace replies received by a specific MEP in response to a Linktrace message. It is indexed by dot1agCfmMdIndex, dot1agCfmMaIndex, dot1agCfmMeplIdentifier, dot1agCfmLtrSeqNumber, and dot1agCfmLtrReceiveOrder.

Only one Linktrace number sequence, which is the last one sent, is supported in this table. Only read-only access is available for this table.

| Object group name | Type | Object identifier | Comments |
|--------------------------|------------|-------------------------------|------------|
| dot1agCfmLtrSeqNumber | Unsigned32 | 1.3.111.2.802.1.1.8.1.7.2.1.1 | Supported. |
| dot1agCfmLtrReceiveOrder | Unsigned32 | 1.3.111.2.802.1.1.8.1.7.2.1.2 | Supported. |

| Object group name | Type | Object identifier | Comments |
|-------------------------------------|----------------------------------|--------------------------------|-------------------------------|
| dot1agCfmLtrTtl | Unsigned32 | 1.3.111.2.802.1.1.8.1.7.2.1.3 | Supported. |
| dot1agCfmLtrForwarded | TruthValue | 1.3.111.2.802.1.1.8.1.7.2.1.4 | Supported. |
| dot1agCfmLtrTerminalMep | TruthValue | 1.3.111.2.802.1.1.8.1.7.2.1.5 | Supported. |
| dot1agCfmLtrLastEgressIdentifier | Octet String | 1.3.111.2.802.1.1.8.1.7.2.1.6 | Supported. |
| dot1agCfmLtrNextEgressIdentifier | Octet String | 1.3.111.2.802.1.1.8.1.7.2.1.7 | Supported. |
| dot1agCfmLtrRelay | dot1agCfmRelayActionFieldValue | 1.3.111.2.802.1.1.8.1.7.2.1.8 | Supported. |
| dot1agCfmLtrChassisIdSubtype | IldpChassisIdSubtype | 1.3.111.2.802.1.1.8.1.7.2.1.9 | Supported. |
| dot1agCfmLtrChassisId | IldpChassisId | 1.3.111.2.802.1.1.8.1.7.2.1.10 | Always returns a NULL string. |
| dot1agCfmLtrManAddressDomain | TDomain | 1.3.111.2.802.1.1.8.1.7.2.1.11 | Always returns {0.0}. |
| dot1agCfmLtrManAddress | TAddress | 1.3.111.2.802.1.1.8.1.7.2.1.12 | Always returns a NULL string. |
| dot1agCfmLtrIngress | dot1agCfmIngressActionFieldValue | 1.3.111.2.802.1.1.8.1.7.2.1.13 | Supported. |
| dot1agCfmLtrIngressMac | MacAddress | 1.3.111.2.802.1.1.8.1.7.2.1.14 | Supported. |
| dot1agCfmLtrIngressPortIdSubtype | IldpPortIdSubtype | 1.3.111.2.802.1.1.8.1.7.2.1.15 | Supported. |
| dot1agCfmLtrIngressPortId | dot1agCfmEgressActionFieldValue | 1.3.111.2.802.1.1.8.1.7.2.1.16 | Supported. |

| dot1agCfmLtrEgressMac | MacAddress | 1.3.111.2.802.1.1.8.1.7.2.1.18 | Supported. |
| dot1agCfmLtrEgressPortIdSubtype | IldpPortIdSubtype | 1.3.111.2.802.1.1.8.1.7.2.1.19 | Supported. |
| dot1agCfmLtrEgressPortId | IldpPortId | 1.3.111.2.802.1.1.8.1.7.2.1.20 | Supported. |
| dot1agCfmLtrOrganizationSpecificTlv | Octet String | 1.3.111.2.802.1.1.8.1.7.2.1.21 | Always returns a NULL string. |

dot1agCfmMepDbTable

The dot1agCfmMepDbTable is the MEP Database. This database is maintained by every MEP. It maintains the information received about other MEPs in the Maintenance Domain. It is indexed by dot1agCfmMdIndex, dot1agCfmMaIndex, dot1agCfmMeplIdentifier, and dot1agCfmMepDbRMepIdentifier. Only read-only access is available.

| Object group name | Type | Object identifier | Comments |
|-----------------------------------|--------------------------|--------------------------------|-------------------------------|
| dot1agCfmMepDbRMepIdentifier | dot1agCfmMeplId | 1.3.111.2.802.1.1.8.1.7.3.1.1 | Supported. |
| dot1agCfmMepDbRMepState | dot1agCfmRemoteMepState | 1.3.111.2.802.1.1.8.1.7.3.1.2 | Supported. |
| dot1agCfmMepDbRMepFailedOkTimeme | TimeStamp | 1.3.111.2.802.1.1.8.1.7.3.1.3 | Supported. |
| dot1agCfmMepDbMacAddress | MacAddress | 1.3.111.2.802.1.1.8.1.7.3.1.4 | Supported. |
| dot1agCfmMepDbRdi | TruthValue | 1.3.111.2.802.1.1.8.1.7.3.1.5 | Supported. |
| dot1agCfmMepDbPortStatusTlv | dot1agCfmPortStatus | 1.3.111.2.802.1.1.8.1.7.3.1.6 | Supported. |
| dot1agCfmMepDbInterfaceStatusTlTv | dot1agCfmInterfaceStatus | 1.3.111.2.802.1.1.8.1.7.3.1.7 | Supported. |
| dot1agCfmMepDbChassisIdSubtype | IldpChassisIdSubtype | 1.3.111.2.802.1.1.8.1.7.3.1.8 | Supported. |
| dot1agCfmMepDbChassisId | IldpChassisId | 1.3.111.2.802.1.1.8.1.7.3.1.9 | Always returns a Null string. |
| dot1agCfmMepDbManAddressDomain | TDomain | 1.3.111.2.802.1.1.8.1.7.3.1.10 | Always returns {0.0}. |
| dot1agCfmMepDbManAddress | TAddress | 1.3.111.2.802.1.1.8.1.7.3.1.11 | Always returns a Null string. |

IEEE8021-SECY-MIB

The following tables in the SECY-MIB are supported only on the MLX Series devices.

NOTE

Unless otherwise noted, all objects have read-only access.

- secyIfTable
- secyTxSCTable
- secyTxSATable
- secyRxSCTable
- secyRxSATable
- secyCipherSuiteTable
- secyTxSAStatsTable
- secyTxSCStatsTable
- secyRxSAStatsTable
- secyRxSCStatsTable
- secyStatsTable

secyIfTable

The following table represents the system level information for each interface supported by the MAC security entity.

| Object | Object identifier | Supported? |
|---------------------------|---------------------------|------------|
| secyIfInterfaceIndex | 1.0.8802.1.1.3.1.1.1.1.1 | Yes |
| secyIfMaxPeerSCs | 1.0.8802.1.1.3.1.1.1.1.2 | Yes |
| secyIfRxMaxKeys | 1.0.8802.1.1.3.1.1.1.1.3 | Yes |
| secyIfTxMaxKeys | 1.0.8802.1.1.3.1.1.1.1.4 | Yes |
| secyIfProtectFramesEnable | 1.0.8802.1.1.3.1.1.1.1.5 | Yes |
| secyIfValidateFrames | 1.0.8802.1.1.3.1.1.1.1.6 | Yes |
| secyIfReplayProtectEnable | 1.0.8802.1.1.3.1.1.1.1.7 | Yes |
| secyIfReplayProtectWindow | 1.0.8802.1.1.3.1.1.1.1.8 | Yes |
| secyIfCurrentCipherSuite | 1.0.8802.1.1.3.1.1.1.1.9 | Yes |
| secyIfAdminPt2PtMAC | 1.0.8802.1.1.3.1.1.1.1.10 | Yes |
| secyIfOperPt2PtMAC | 1.0.8802.1.1.3.1.1.1.1.11 | Yes |
| secyIfIncludeSCIEnable | 1.0.8802.1.1.3.1.1.1.1.12 | Yes |
| secyIfUseESEnable | 1.0.8802.1.1.3.1.1.1.1.13 | Yes |
| secyIfUseSCBEnable | 1.0.8802.1.1.3.1.1.1.1.14 | Yes |

secyTxSCTable

The following table provides information about the status of each transmitting SC supported by the MAC security entity.

| Object | Object identifier | Supported? |
|-----------------------|--------------------------|------------|
| secyTxSCI | 1.0.8802.1.1.3.1.1.2.1.1 | Yes |
| secyTxSCState | 1.0.8802.1.1.3.1.1.2.1.2 | Yes |
| secyTxSCEncodingSA | 1.0.8802.1.1.3.1.1.2.1.3 | No |
| secyTxSCEncipheringSA | 1.0.8802.1.1.3.1.1.2.1.4 | No |
| secyTxSCCreatedTime | 1.0.8802.1.1.3.1.1.2.1.5 | No |
| secyTxSCStartedTime | 1.0.8802.1.1.3.1.1.2.1.6 | No |
| secyTxSCStoppedTime | 1.0.8802.1.1.3.1.1.2.1.7 | No |

secyTxSATable

The following table provides information about the status of each transmitting SA supported by the MAC security entity.

| Object | Object identifier | Supported? |
|-------------------------|--------------------------|------------|
| secyTxSA | 1.0.8802.1.1.3.1.1.3.1.1 | Yes |
| secyTxSAState | 1.0.8802.1.1.3.1.1.3.1.2 | Yes |
| secyTxSANextPN | 1.0.8802.1.1.3.1.1.3.1.3 | Yes |
| secyTxSAConfidentiality | 1.0.8802.1.1.3.1.1.3.1.4 | No |
| secyTxSASAKUnchanged | 1.0.8802.1.1.3.1.1.3.1.5 | No |
| secyTxSACreatedTime | 1.0.8802.1.1.3.1.1.3.1.6 | No |
| secyTxSAStartedTime | 1.0.8802.1.1.3.1.1.3.1.7 | No |
| secyTxSASoppedTime | 1.0.8802.1.1.3.1.1.3.1.8 | No |

secyRxSCTable

The following table provides information about the status of each receiving SC supported by the MAC security entity.

| Object | Object identifier | Supported? |
|---------------------|--------------------------|------------|
| secyRxSCI | 1.0.8802.1.1.3.1.1.4.1.1 | Yes |
| secyRxSCState | 1.0.8802.1.1.3.1.1.4.1.2 | Yes |
| secyRxSCCurrentSA | 1.0.8802.1.1.3.1.1.4.1.3 | No |
| secyRxSCCreatedTime | 1.0.8802.1.1.3.1.1.4.1.4 | No |
| secyRxSCStartedTime | 1.0.8802.1.1.3.1.1.4.1.5 | No |
| secyRxSCStoppedTime | 1.0.8802.1.1.3.1.1.4.1.6 | No |

secyRxSATable

The following table provides information about the status of each receiving SA supported by the MAC security entity.

| Object | Object identifier | Supported? |
|----------------------|--------------------------|------------|
| secyRxSA | 1.0.8802.1.1.3.1.1.5.1.1 | Yes |
| secyRxSAState | 1.0.8802.1.1.3.1.1.5.1.2 | Yes |
| secyRxSANextPN | 1.0.8802.1.1.3.1.1.5.1.3 | Yes |
| secyRxSASAKUnchanged | 1.0.8802.1.1.3.1.1.5.1.4 | No |

| Object | Object identifier | Supported? |
|---------------------|--------------------------|------------|
| secyRxSACreatedTime | 1.0.8802.1.1.3.1.1.5.1.5 | No |
| secyRxSAStartedTime | 1.0.8802.1.1.3.1.1.5.1.6 | No |
| secyRxSAStoppedTime | 1.0.8802.1.1.3.1.1.5.1.7 | No |

secyCipherSuiteTable

The following table is a list of selectable cipher suites for the MAC security entity.

| Object | Object identifier | Supported? |
|---------------------------------|--------------------------|------------|
| secyCipherSuiteIndex | 1.0.8802.1.1.3.1.1.6.1.1 | Yes |
| secyCipherSuiteId | 1.0.8802.1.1.3.1.1.6.1.2 | Yes |
| secyCipherSuiteName | 1.0.8802.1.1.3.1.1.6.1.3 | Yes |
| secyCipherSuiteCapability | 1.0.8802.1.1.3.1.1.6.1.4 | Yes |
| secyCipherSuiteProtection | 1.0.8802.1.1.3.1.1.6.1.5 | Yes |
| secyCipherSuiteProtectionOffset | 1.0.8802.1.1.3.1.1.6.1.6 | Yes |
| secyCipherSuiteDataLengthChange | 1.0.8802.1.1.3.1.1.6.1.7 | Yes |
| secyCipherSuiteIcvLength | 1.0.8802.1.1.3.1.1.6.1.8 | Yes |
| secyCipherSuiteRowStatus | 1.0.8802.1.1.3.1.1.6.1.9 | Yes |

secyTxSAStatsTable

The following table that contains the statistics objects for each transmitting SA in the MAC security entity.

| Object | Object identifier | Supported? |
|----------------------------|--------------------------|------------|
| secyTxSAStatsProtectedPkts | 1.0.8802.1.1.3.1.2.1.1.1 | Yes |
| secyTxSAStatsEncryptedPkts | 1.0.8802.1.1.3.1.2.1.1.2 | Yes |

secyTxSCStatsTable

The following table that contains the statistics objects for each transmitting SC in the MAC security entity.

| Object | Object identifier | Supported? |
|------------------------------|---------------------------|------------|
| secyTxSCStatsProtectedPkts | 1.0.8802.1.1.3.1.2.2.1.1 | Yes |
| secyTxSCStatsEncryptedPkts | 1.0.8802.1.1.3.1.2.2.1.4 | Yes |
| secyTxSCStatsOctetsProtected | 1.0.8802.1.1.3.1.2.2.1.10 | Yes |
| secyTxSCStatsOctetsEncrypted | 1.0.8802.1.1.3.1.2.2.1.11 | Yes |

secyRxSAStatsTable

The following table that contains the statistics objects for each receiving SA in the MAC security entity.

| Object | Object identifier | Supported? |
|----------------------------|--------------------------|------------|
| secyRxSAStatsUnusedSAPkts | 1.0.8802.1.1.3.1.2.3.1.1 | Yes |
| secyRxSAStatsNoUsingSAPkts | 1.0.8802.1.1.3.1.2.3.1.4 | Yes |

| Object | Object identifier | Supported? |
|---------------------------|---------------------------|------------|
| secyRxSAStatsNotValidPkts | 1.0.8802.1.1.3.1.2.3.1.13 | Yes |
| secyRxSAStatsInvalidPkts | 1.0.8802.1.1.3.1.2.3.1.16 | Yes |
| secyRxSAStatsOKPkts | 1.0.8802.1.1.3.1.2.3.1.25 | Yes |

secyRxSCStatsTable

The following table contains the statistics objects for each receiving SC in the MAC security entity.

| Object | Object identifier | Supported? |
|------------------------------|---------------------------|------------|
| secyRxSCStatsUnusedSAPkts | 1.0.8802.1.1.3.1.2.4.1.1 | Yes |
| secyRxSCStatsNoUsingSAPkts | 1.0.8802.1.1.3.1.2.4.1.2 | Yes |
| secyRxSCStatsLatePkts | 1.0.8802.1.1.3.1.2.4.1.3 | Yes |
| secyRxSCStatsNotValidPkts | 1.0.8802.1.1.3.1.2.4.1.4 | Yes |
| secyRxSCStatsInvalidPkts | 1.0.8802.1.1.3.1.2.4.1.5 | Yes |
| secyRxSCStatsDelayedPkts | 1.0.8802.1.1.3.1.2.4.1.6 | Yes |
| secyRxSCStatsUncheckedPkts | 1.0.8802.1.1.3.1.2.4.1.7 | Yes |
| secyRxSCStatsOKPkts | 1.0.8802.1.1.3.1.2.4.1.8 | Yes |
| secyRxSCStatsOctetsValidated | 1.0.8802.1.1.3.1.2.4.1.9 | Yes |
| secyRxSCStatsOctetsDecrypted | 1.0.8802.1.1.3.1.2.4.1.10 | Yes |

secyStatsTable

The following table lists the objects for the statistics information of each Secy supported by the MAC security entity.

| Object | Object identifier | Supported? |
|---------------------------|--------------------------|------------|
| secyStatsTxUntaggedPkts | 1.0.8802.1.1.3.1.2.5.1.1 | Yes |
| secyStatsTxTooLongPkts | 1.0.8802.1.1.3.1.2.5.1.2 | Yes |
| secyStatsRxUntaggedPkts | 1.0.8802.1.1.3.1.2.5.1.3 | Yes |
| secyStatsRxNoTagPkts | 1.0.8802.1.1.3.1.2.5.1.4 | Yes |
| secyStatsRxBadTagPkts | 1.0.8802.1.1.3.1.2.5.1.5 | Yes |
| secyStatsRxUnknownSCIPkts | 1.0.8802.1.1.3.1.2.5.1.6 | Yes |
| secyStatsRxNoSCIPkts | 1.0.8802.1.1.3.1.2.5.1.7 | Yes |
| secyStatsRxOverrunPkts | 1.0.8802.1.1.3.1.2.5.1.8 | Yes |

IEEE8023-LAG-MIB

The following dot3adAggTable MIB objects are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Object | Object identifier | Supported? |
|---------------------|------------------------------|-----------------|
| dot3adAggIndex | 1.2.840.10006.300.43.1.1.1.1 | Yes. Read only. |
| dot3adAggMACAddress | 1.2.840.10006.300.43.1.1.1.2 | Yes. Read only. |

| Object | Object identifier | Supported? |
|--------------------------------|-------------------------------|-----------------|
| dot3adAggActorSystemPriority | 1.2.840.10006.300.43.1.1.1.2 | Yes. Read only. |
| dot3adAggActorSystemID | 1.2.840.10006.300.43.1.1.1.3 | Yes. Read only. |
| dot3adAggAggregateOrIndividual | 1.2.840.10006.300.43.1.1.1.5 | Yes. Read only. |
| dot3adAggActorAdminKey | 1.2.840.10006.300.43.1.1.1.6 | Yes. Read only. |
| dot3adAggActorOperKey | 1.2.840.10006.300.43.1.1.1.7 | Yes. Read only |
| dot3adAggPartnerSystemID | 1.2.840.10006.300.43.1.1.1.8 | Yes. Read only |
| dot3adAggPartnerSystemPriority | 1.2.840.10006.300.43.1.1.1.9 | Yes. Read only |
| dot3adAggPartnerOperKey | 1.2.840.10006.300.43.1.1.1.10 | Yes. Read only |

LLDP-MIB

The following tables in the LLDP-MIB are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

- IldpPortConfigTable
- IldpConfigManAddrTable
- Ildpstatistics
- IldpStatsTxPortTable
- IldpStatsRxPortTable
- IldpLocalSystemData
- IldpLocPortTable
- IldpLocManAddrTable
- IldpRemTable
- IldpRemManAddrTable
- IldpRemUnknownTLVTable
- IldpRemOrgDefInfoTable

IldpPortConfigTable

The following table controls the LLDP frame transmission on the individual ports.

| Object | Object identifier | Supported? |
|----------------------------------|--------------------------|------------|
| IldpPortConfigPortNum | 1.0.8802.1.1.2.1.1.6.1.1 | Yes |
| IldpPortConfigAdminStatus | 1.0.8802.1.1.2.1.1.6.1.2 | Yes |
| IldpPortConfigNotificationEnable | 1.0.8802.1.1.2.1.1.6.1.3 | Yes |
| IldpPortConfigTLVsTxEnable | 1.0.8802.1.1.2.1.1.6.1.4 | Yes |

IldpConfigManAddrTable

The following table controls the selection of LLDP management address TLV instances to be transmitted on the individual ports.

| Object | Object identifier | Supported? |
|--------------------------------|--------------------------|------------|
| IldpConfigManAddrPortsTxEnable | 1.0.8802.1.1.2.1.1.7.1.1 | Yes |

Ildpstatistics

The following table lists the LLDP statistics group objects.

| Object | Object identifier | Supported? |
|----------------------------------|----------------------|------------|
| IldpStatsRemTablesLastChangeTime | 1.0.8802.1.1.2.1.2.1 | Yes |
| IldpStatsRemTablesInserts | 1.0.8802.1.1.2.1.2.2 | Yes |
| IldpStatsRemTablesDeletes | 1.0.8802.1.1.2.1.2.3 | Yes |
| IldpStatsRemTablesDrops | 1.0.8802.1.1.2.1.2.4 | Yes |
| IldpStatsRemTablesAgeouts | 1.0.8802.1.1.2.1.2.5 | Yes |

IldpStatsTxPortTable

The following table contains LLDP transmission statistics for the individual ports.

| Object | Object identifier | Supported? |
|----------------------------|--------------------------|------------|
| IldpStatsTxPortNum | 1.0.8802.1.1.2.1.2.6.1.1 | Yes |
| IldpStatsTxPortFramesTotal | 1.0.8802.1.1.2.1.2.6.1.2 | Yes |

IldpStatsRxPortTable

The following table contains LLDP reception statistics for the individual ports.

| Object | Object identifier | Supported? |
|--------------------------------------|--------------------------|------------|
| IldpStatsRxPortNum | 1.0.8802.1.1.2.1.2.7.1.1 | Yes |
| IldpStatsRxPortFramesDiscardedTotal | 1.0.8802.1.1.2.1.2.7.1.2 | Yes |
| IldpStatsRxPortFramesErrors | 1.0.8802.1.1.2.1.2.7.1.3 | Yes |
| IldpStatsRxPortFramesTotal | 1.0.8802.1.1.2.1.2.7.1.4 | Yes |
| IldpStatsRxPortTLVsDiscardedTotal | 1.0.8802.1.1.2.1.2.7.1.5 | Yes |
| IldpStatsRxPortTLVsUnrecognizedTotal | 1.0.8802.1.1.2.1.2.7.1.6 | Yes |
| IldpStatsRxPortAgeoutsTotal | 1.0.8802.1.1.2.1.2.7.1.7 | Yes |

IldpLocalSystemData

The following table lists the LLDP local system data objects.

| Object | Object identifier | Supported? |
|-------------------------|----------------------|------------|
| IldpLocChassisIdSubtype | 1.0.8802.1.1.2.1.3.1 | Yes |

| Object | Object identifier | Supported? |
|------------------------|----------------------|------------|
| IldpLocChassisId | 1.0.8802.1.1.2.1.3.2 | Yes |
| IldpLocSysName | 1.0.8802.1.1.2.1.3.3 | Yes |
| IldpLocSysDesc | 1.0.8802.1.1.2.1.3.4 | Yes |
| IldpLocSysCapSupported | 1.0.8802.1.1.2.1.3.5 | Yes |
| IldpLocSysCapEnabled | 1.0.8802.1.1.2.1.3.6 | Yes |

IldpLocPortTable

The following table contains one or more rows per-port information associated with the local system known to the agent.

| Object | Object identifier | Supported? |
|----------------------|--------------------------|------------|
| IldpLocPortNum | 1.0.8802.1.1.2.1.3.7.1.1 | Yes |
| IldpLocPortIdSubtype | 1.0.8802.1.1.2.1.3.7.1.2 | Yes |
| IldpLocPortId | 1.0.8802.1.1.2.1.3.7.1.3 | Yes |
| IldpLocPortDesc | 1.0.8802.1.1.2.1.3.7.1.4 | Yes |

IldpLocManAddrTable

The following table contains management address information on the local system known to the agent.

| Object | Object identifier | Supported? |
|-------------------------|--------------------------|------------|
| IldpLocManAddrSubtype | 1.0.8802.1.1.2.1.3.8.1.1 | Yes |
| IldpLocManAddr | 1.0.8802.1.1.2.1.3.8.1.2 | Yes |
| IldpLocManAddrLen | 1.0.8802.1.1.2.1.3.8.1.3 | Yes |
| IldpLocManAddrIfSubtype | 1.0.8802.1.1.2.1.3.8.1.4 | Yes |
| IldpLocManAddrIfId | 1.0.8802.1.1.2.1.3.8.1.5 | Yes |
| IldpLocManAddrOID | 1.0.8802.1.1.2.1.3.8.1.6 | Yes |

IldpRemTable

The following table contains one or more rows per-physical network connection known to the agent.

| Object | Object identifier | Supported? |
|-------------------------|---------------------------|------------|
| IldpRemTimeMark | 1.0.8802.1.1.2.1.4.1.1.1 | Yes |
| IldpRemLocalPortNum | 1.0.8802.1.1.2.1.4.1.1.2 | Yes |
| IldpRemIndex | 1.0.8802.1.1.2.1.4.1.1.3 | Yes |
| IldpRemChassisIdSubtype | 1.0.8802.1.1.2.1.4.1.1.4 | Yes |
| IldpRemChassisId | 1.0.8802.1.1.2.1.4.1.1.5 | Yes |
| IldpRemPortIdSubtype | 1.0.8802.1.1.2.1.4.1.1.6 | Yes |
| IldpRemPortId | 1.0.8802.1.1.2.1.4.1.1.7 | Yes |
| IldpRemPortDesc | 1.0.8802.1.1.2.1.4.1.1.8 | Yes |
| IldpRemSysName | 1.0.8802.1.1.2.1.4.1.1.9 | Yes |
| IldpRemSysDesc | 1.0.8802.1.1.2.1.4.1.1.10 | Yes |

| Object | Object identifier | Supported? |
|------------------------|---------------------------|------------|
| IldpRemSysCapSupported | 1.0.8802.1.1.2.1.4.1.1.11 | Yes |
| IldpRemSysCapEnabled | 1.0.8802.1.1.2.1.4.1.1.12 | Yes |

IldpRemManAddrTable

The following table contains one or more rows per-management address information on the remote system learned on a particular port contained in the local chassis known to the agent.

| Object | Object identifier | Supported? |
|-------------------------|--------------------------|------------|
| IldpRemManAddrSubtype | 1.0.8802.1.1.2.1.4.2.1.1 | Yes |
| IldpRemManAddr | 1.0.8802.1.1.2.1.4.2.1.2 | Yes |
| IldpRemManAddrlfSubtype | 1.0.8802.1.1.2.1.4.2.1.3 | Yes |
| IldpRemManAddrlfId | 1.0.8802.1.1.2.1.4.2.1.4 | Yes |
| IldpRemManAddrOID | 1.0.8802.1.1.2.1.4.2.1.5 | Yes |

IldpRemUnknownTLVTable

The following table contains information about an incoming TLV that is not recognized by the receiving LLDP agent.

| Object | Object identifier | Supported? |
|-----------------------|--------------------------|------------|
| IldpRemUnknownTLVType | 1.0.8802.1.1.2.1.4.3.1.1 | Yes |
| IldpRemUnknownTLVInfo | 1.0.8802.1.1.2.1.4.3.1.2 | Yes |

IldpRemOrgDefInfoTable

The following table contains one or more rows per physical network connection that advertises the organizationally-defined information.

| Object | Object identifier | Supported? |
|--------------------------|--------------------------|------------|
| IldpRemOrgDefInfoOUI | 1.0.8802.1.1.2.1.4.4.1.1 | Yes |
| IldpRemOrgDefInfoSubtype | 1.0.8802.1.1.2.1.4.4.1.2 | Yes |
| IldpRemOrgDefInfoIndex | 1.0.8802.1.1.2.1.4.4.1.3 | Yes |
| IldpRemOrgDefInfo | 1.0.8802.1.1.2.1.4.4.1.4 | Yes |

LLDP-EXT-DOT1-MIB

The following tables in the LLDP-EXT-DOT1-MIB are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

- IldpXdot1ConfigPortVlanTable
- IldpXdot1ConfigVlanNameTable
- IldpXdot1ConfigProtoVlanTable
- IldpXdot1ConfigProtocolTable
- IldpXdot1LocTable

- IldpXdot1LocProtoVlanTable
- IldpXdot1LocVlanNameTable
- IldpXdot1LocProtocolTable
- IldpXdot1RemTable
- IldpXdot1RemProtoVlanTable
- IldpXdot1RemVlanNameTable
- IldpXdot1RemProtocolTable

IldpXdot1ConfigPortVlanTable

The following table lists the object that controls the selection of LLDP Port VLAN-ID TLVs to be transmitted on the individual ports.

| Object | Object identifier | Supported? |
|---------------------------------|----------------------------------|------------|
| IldpXdot1ConfigPortVlanTxEnable | 1.0.8802.1.1.2.1.5.32962.1.1.1.1 | Yes |

IldpXdot1ConfigVlanNameTable

The following table lists the object that controls the selection of LLDP VLAN name TLV instances to be transmitted on the individual ports.

| Object | Object identifier | Supported? |
|---------------------------------|------------------------------------|------------|
| IldpXdot1ConfigVlanNameTxEnable | 1.0.8802.1.1.2.1.5.32962.1.1.2.1.1 | Yes |

IldpXdot1ConfigProtoVlanTable

The following table lists the object that controls selection of LLDP Port and Protocol VLAN-ID TLV instances to be transmitted on the individual ports.

| Object | Object identifier | Supported? |
|----------------------------------|------------------------------------|------------|
| IldpXdot1ConfigProtoVlanTxEnable | 1.0.8802.1.1.2.1.5.32962.1.1.3.1.1 | Yes |

IldpXdot1ConfigProtocolTable

The following table lists the object that controls the selection of LLDP TLV instances to be transmitted on the individual ports.

| Object | Object identifier | Supported? |
|---------------------------------|------------------------------------|------------|
| IldpXdot1ConfigProtocolTxEnable | 1.0.8802.1.1.2.1.5.32962.1.1.4.1.1 | Yes |

IldpXdot1LocTable

The following table contains one row per port for IEEE 802.1 organizationally-defined LLDP extension on the local system known to the agent.

| Object | Object identifier | Supported? |
|------------------------|------------------------------------|------------|
| IldpXdot1LocPortVlanId | 1.0.8802.1.1.2.1.5.32962.1.2.1.1.1 | Yes |

IldpXdot1LocProtoVlanTable

The following table contains one or more rows per-port and per-protocol VLAN information about the local system.

| Object | Object identifier | Supported? |
|--------------------------------|------------------------------------|------------|
| IldpXdot1LocProtoVlanId | 1.0.8802.1.1.2.1.5.32962.1.2.2.1.1 | Yes |
| IldpXdot1LocProtoVlanSupported | 1.0.8802.1.1.2.1.5.32962.1.2.2.1.2 | Yes |
| IldpXdot1LocProtoVlanEnabled | 1.0.8802.1.1.2.1.5.32962.1.2.2.1.3 | Yes |

IldpXdot1LocVlanNameTable

The following table contains one or more rows per IEEE 802.1Q VLAN name information on the local system known to the agent.

| Object | Object identifier | Supported? |
|----------------------|------------------------------------|------------|
| IldpXdot1LocVlanId | 1.0.8802.1.1.2.1.5.32962.1.2.3.1.1 | Yes |
| IldpXdot1LocVlanName | 1.0.8802.1.1.2.1.5.32962.1.2.3.1.2 | Yes |

IldpXdot1LocProtocolTable

The following table contains one or more rows per-protocol identity information on the local system known to the agent.

| Object | Object identifier | Supported? |
|---------------------------|------------------------------------|------------|
| IldpXdot1LocProtocolIndex | 1.0.8802.1.1.2.1.5.32962.1.2.4.1.1 | Yes |
| IldpXdot1LocProtocolId | 1.0.8802.1.1.2.1.5.32962.1.2.4.1.2 | Yes |

IldpXdot1RemTable

The following table contains one or more rows per-physical network connection known to the agent.

| Object | Object identifier | Supported? |
|------------------------|------------------------------------|------------|
| IldpXdot1RemPortVlanId | 1.0.8802.1.1.2.1.5.32962.1.3.1.1.1 | Yes |

IldpXdot1RemProtoVlanTable

The following table contains one or more rows per-port and per-protocol VLAN information about the remote system received on the particular port.

| Object | Object identifier | Supported? |
|--------------------------------|------------------------------------|------------|
| IldpXdot1RemProtoVlanId | 1.0.8802.1.1.2.1.5.32962.1.3.2.1.1 | Yes |
| IldpXdot1RemProtoVlanSupported | 1.0.8802.1.1.2.1.5.32962.1.3.2.1.2 | Yes |
| IldpXdot1RemProtoVlanEnabled | 1.0.8802.1.1.2.1.5.32962.1.3.2.1.3 | Yes |

IldpXdot1RemVlanNameTable

The following table contains one or more rows per IEEE 802.1Q VLAN name information about the remote system received on the particular port.

| Object | Object identifier | Supported? |
|----------------------|------------------------------------|------------|
| IldpXdot1RemVlanId | 1.0.8802.1.1.2.1.5.32962.1.3.3.1.1 | Yes |
| IldpXdot1RemVlanName | 1.0.8802.1.1.2.1.5.32962.1.3.3.1.2 | Yes |

IldpXdot1RemProtocolTable

The following table contains one or more rows per protocol information about the remote system received on the particular port.

| Object | Object identifier | Supported? |
|---------------------------|------------------------------------|------------|
| IldpXdot1RemProtocolIndex | 1.0.8802.1.1.2.1.5.32962.1.3.4.1.1 | Yes |
| IldpXdot1RemProtocolId | 1.0.8802.1.1.2.1.5.32962.1.3.4.1.2 | Yes |

LLDP-EXT-DOT3-MIB

The following tables in the LLDP-EXT-DOT3-MIB are supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

- IldpXdot3PortConfigTable
- IldpXdot3LocPortTable
- IldpXdot3LocPowerTable
- IldpXdot3LocLinkAggTable
- IldpXdot3LocMaxFrameSizeTable
- IldpXdot3RemPortTable
- IldpXdot3RemPowerTable
- IldpXdot3RemLinkAggTable
- IldpXdot3RemMaxFrameSizeTable

IldpXdot3PortConfigTable

The following table lists the objects that controls the selection of LLDP TLVs to be transmitted on the individual ports.

| Object | Object identifier | Supported? |
|---------------------------------|---------------------------------|------------|
| IldpXdot3PortConfigTLVsTxEnable | 1.0.8802.1.1.2.1.5.4623.1.1.1.1 | Yes |

IldpXdot3LocPortTable

The following table contains one row per port of Ethernet port information (as part of the LLDP 802.3 organizational extension) on the local system known to the agent.

| Object | Object identifier | Supported? |
|--------------------------------------|-----------------------------------|------------|
| IldpXdot3LocPortAutoNegSupported | 1.0.8802.1.1.2.1.5.4623.1.2.1.1.1 | Yes |
| IldpXdot3LocPortAutoNegEnabled | 1.0.8802.1.1.2.1.5.4623.1.2.1.1.2 | Yes |
| IldpXdot3LocPortAutoNegAdvertisedCap | 1.0.8802.1.1.2.1.5.4623.1.2.1.1.3 | Yes |
| IldpXdot3LocPortOperMauType | 1.0.8802.1.1.2.1.5.4623.1.2.1.1.4 | Yes |

IldpXdot3LocPowerTable

The following table contains one row per port of power Ethernet information (as part of the LLDP 802.3 organizational extension) on the local system known to the agent.

| Object | Object identifier | Supported? |
|----------------------------------|-----------------------------------|------------|
| IldpXdot3LocPowerPortClass | 1.0.8802.1.1.2.1.5.4623.1.2.2.1.1 | Yes |
| IldpXdot3LocPowerMDISupported | 1.0.8802.1.1.2.1.5.4623.1.2.2.1.2 | Yes |
| IldpXdot3LocPowerMDIEnabled | 1.0.8802.1.1.2.1.5.4623.1.2.2.1.3 | Yes |
| IldpXdot3LocPowerPairControlable | 1.0.8802.1.1.2.1.5.4623.1.2.2.1.4 | Yes |
| IldpXdot3LocPowerPairs | 1.0.8802.1.1.2.1.5.4623.1.2.2.1.5 | Yes |
| IldpXdot3LocPowerClass | 1.0.8802.1.1.2.1.5.4623.1.2.2.1.6 | Yes |

IldpXdot3LocLinkAggTable

The following table contains one row per port of link aggregation information (as part of the LLDP 802.3 organizational extension) on the local system known to the agent.

| Object | Object identifier | Supported? |
|---------------------------|-----------------------------------|------------|
| IldpXdot3LocLinkAggStatus | 1.0.8802.1.1.2.1.5.4623.1.2.3.1.1 | Yes |
| IldpXdot3LocLinkAggPortId | 1.0.8802.1.1.2.1.5.4623.1.2.3.1.2 | Yes |

IldpXdot3LocMaxFrameSizeTable

The following table contains one row per port of maximum frame size information (as part of the LLDP 802.3 organizational extension) on the local system known to the agent.

| Object | Object identifier | Supported? |
|--------------------------|-----------------------------------|------------|
| IldpXdot3LocMaxFrameSize | 1.0.8802.1.1.2.1.5.4623.1.2.4.1.1 | Yes |

IldpXdot3RemPortTable

The following table contains Ethernet port information (as part of the LLDP 802.3 organizational extension) of the remote system.

| Object | Object identifier | Supported? |
|--------------------------------------|-----------------------------------|------------|
| IldpXdot3RemPortAutoNegSupported | 1.0.8802.1.1.2.1.5.4623.1.3.1.1.1 | Yes |
| IldpXdot3RemPortAutoNegEnabled | 1.0.8802.1.1.2.1.5.4623.1.3.1.1.2 | Yes |
| IldpXdot3RemPortAutoNegAdvertisedCap | 1.0.8802.1.1.2.1.5.4623.1.3.1.1.3 | Yes |
| IldpXdot3RemPortOperMauType | 1.0.8802.1.1.2.1.5.4623.1.3.1.1.4 | Yes |

IldpXdot3RemPowerTable

The following table contains Ethernet power information (as part of the LLDP 802.3 organizational extension) of the remote system.

| Object | Object identifier | Supported? |
|----------------------------|-----------------------------------|------------|
| IldpXdot3RemPowerPortClass | 1.0.8802.1.1.2.1.5.4623.1.3.2.1.1 | Yes |

| Object | Object identifier | Supported? |
|----------------------------------|-----------------------------------|------------|
| IldpXdot3RemPowerMDISupported | 1.0.8802.1.1.2.1.5.4623.1.3.2.1.2 | Yes |
| IldpXdot3RemPowerMDIEnabled | 1.0.8802.1.1.2.1.5.4623.1.3.2.1.3 | Yes |
| IldpXdot3RemPowerPairControlable | 1.0.8802.1.1.2.1.5.4623.1.3.2.1.4 | Yes |
| IldpXdot3RemPowerPairs | 1.0.8802.1.1.2.1.5.4623.1.3.2.1.5 | Yes |
| IldpXdot3RemPowerClass | 1.0.8802.1.1.2.1.5.4623.1.3.2.1.6 | Yes |

IldpXdot3RemLinkAggTable

The following table contains port link aggregation information (as part of the LLDP 802.3 organizational extension) of the remote system.

| Object | Object identifier | Supported? |
|---------------------------|-----------------------------------|------------|
| IldpXdot3RemLinkAggStatus | 1.0.8802.1.1.2.1.5.4623.1.3.3.1.1 | Yes |
| IldpXdot3RemLinkAggPortId | 1.0.8802.1.1.2.1.5.4623.1.3.3.1.2 | Yes |

IldpXdot3RemMaxFrameSizeTable

The table contains one row per port of maximum frame size information (as part of the LLDP 802.3 organizational extension) of the remote system.

| Object | Object identifier | Supported? |
|--------------------------|-----------------------------------|------------|
| IldpXdot3RemMaxFrameSize | 1.0.8802.1.1.2.1.5.4623.1.3.4.1.1 | Yes |

Registration MIB Definition

This section describes the Registration objects that identify the Extreme product that is being managed. The following table presents the objects for product registration. The sysOID will return one of these values.

| Object name and identifier | Description |
|----------------------------------------------|-------------------------------------|
| snNetIronXMR16000 brcdlp.1.3.41.1 | NetIron XMR-16000 Family |
| snNIXMR16000Router brcdlp.1.3.41.1.2 | NetIron XMR-16000 Router |
| snNetIronXMR8000 brcdlp.1.3.41.2 | NetIron XMR-8000 Family |
| snNIXMR8000Router brcdlp.1.3.41.2.2 | NetIron XMR-8000 Router |
| snNetIronXMR4000 brcdlp.1.3.41.3 | NetIron XMR-4000 Family |
| snNIXMR4000Router brcdlp.1.3.41.3.2 | NetIron XMR-4000 Router |
| snNetIronXMR32000 brcdlp.1.3.41.4 | NetIron XMR-32000 Family |
| snNetIronXMR32000Router brcdlp.1.3.41.4.2 | NetIron XMR-32000 Router |
| snNetIronMLX16Router brcdlp.1.3.44.1.2 | Extreme NetIron MLX-16 Router |
| snNetIronMLX8Router brcdlp.1.3.44.2.2 | Extreme NetIron MLX-8 Router |
| snNetIronMLX4Router brcdlp.1.3.44.3.2 | Extreme NetIron MLX-4 Router |
| snNetIronMLX-32Router brcdlp.1.3.44.4 | Extreme NetIron MLX-32 Router |
| snCes2024F brcdlp.1.3.49.1 | Extreme NetIron CES 2024F Switch |
| snCes2024C brcdlp.1.3.49.2 | Extreme NetIron CES 2024C Switch |
| snCes2048F brcdlp.1.3.49.3 | Extreme NetIron CES 2048F Switch |
| snCes2048C brcdlp.1.3.49.4 | Extreme NetIron CES 2048C Switch |
| snCes2048FX brcdlp.1.3.49.5 | Extreme NetIron CES 2048FX Switch |
| snCes2048CX brcdlp.1.3.49.6 | Extreme NetIron CES 2048CX Switch |
| snCes2024F4X brcdlp.1.3.49.7 | Extreme NetIron CES 2024F-4X Switch |
| snCes2024C4X brcdlp.1.3.49.8 | Extreme NetIron CES 2024C-4X Switch |
| snCer2024F brcdlp.1.3.51.1 | Extreme NetIron CER 2024F Switch |
| snCer2024C | Extreme NetIron CER 2024C Switch |

| Object name and identifier | Description |
|------------------------------------------------|-------------------------------------|
| brcdlp.1.3.51.2 | |
| snCer2048F brcdlp.1.3.51.3 | Extreme NetIron CER 2048F Switch |
| snCer2048C brcdlp.1.3.51.4 | Extreme NetIron CER 2048C Switch |
| snCer2048FX brcdlp.1.3.51.5 | Extreme NetIron CER 2048FX Switch |
| snCer2048CX brcdlp.1.3.51.6 | Extreme NetIron CER 2048CX Switch |
| snCer2024F4X brcdlp.1.3.51.7 | Extreme NetIron CER 2024F-4X Switch |
| snCer2024C4X brcdlp.1.3.51.8 | Extreme NetIron CER 2024C-4X Switch |
| snBrocadeMLXeFamily brcdlp.1.3.55 | MLX Series Core Router family |
| snBrocadeMLXeSlot16 brcdlp.1.3.55.1 | MLXe-16 slot chassis family |
| snBrocadeMLXeSlot16Router brcdlp.1.3.55.1.2 | MLXe-16 slot Router |
| snBrocadeMLXeSlot8 brcdlp.1.3.55.2 | MLXe-8 slot chassis family |
| snBrocadeMLXeSlot8Router brcdlp.1.3.55.2.2 | MLXe-8 slot Router |
| snBrocadeMLXeSlot4 brcdlp.1.3.55.3 | MLXe-4 slot chassis family |
| snBrocadeMLXeSlot4Router brcdlp.1.3.55.3.2 | MLXe-4 slot Router |
| snBrocadeMLXeSlot32 brcdlp.1.3.55.4 | MLXe-32 slot chassis family |
| snBrocadeMLXeSlot32Router brcdlp.1.3.55.4.2 | MLXe-32 slot Router |

Agent MIB Definition

| | |
|------------------------------------------|-----|
| • General chassis information..... | 127 |
| • Fan status..... | 127 |
| • Flash card..... | 128 |
| • Power supply table..... | 129 |
| • Fan table..... | 130 |
| • Stacking chassis unit information..... | 130 |

General chassis information

The following objects apply to all devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snChasSerNum brcdlp.1.1.1.1.2 Syntax: DisplayString | Read-only | <p>Shows the serial number of the chassis stored in the EEPROM of the device. This is not the serial number on the label of the device.</p> <p>If the chassis serial number is available, it is the lowest three octets of the lowest MAC address in the device. For example, if the lowest MAC address is 00e0 52a9 2b20, then the serial number of the chassis is a92b20.</p> <p>If the serial number is unknown or unavailable, then the value is a null string.</p> <p>This object can have up to 128 characters.</p> |

Fan status

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snChasFanStatus brcdlp.1.1.1.1.4 Syntax: Integer32 | Read-only | Description |
| snChasEnablePwrSupplyTrap brcdlp.1.1.1.1.12 Syntax: Integer | Read-write | <p>Indicates if the SNMP agent process has been enabled to generate power supply failure traps:</p> <ul style="list-style-type: none">disabled(0)enabled(1) <p>Default: enabled(1)</p> |
| snChasEnableFanTrap brcdlp.1.1.1.1.16 Syntax: Integer | Read-write | <p>For chassis devices only.</p> <p>Indicates if the SNMP agent process has been enabled to generate fan failure traps:</p> <ul style="list-style-type: none">disabled(0)enabled(1) <p>Default: enabled(1)</p> |
| snChasIdNumber brcdlp.1.1.1.1.17 | Read-only | Shows the chassis identity number. This is used by inventory control. This is not the number on the label of the device. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: DisplayString snChasEnableTempWarnTrap brcdlp.1.1.1.21 | | By default, this object displays a null string. This object can have up to 64 characters. Indicates if the SNMP agent process has been enabled to generate temperature warning traps: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: enabled(1) |
| Syntax: Integer | Read-write | |

Flash card

The following objects manage the flash cards in all the devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snChasFlashCard brcdlp.1.1.1.22 Syntax: Integer32 | Read-only | Applies only to M4 management modules. This object is a bit array that contains the flash card status. This is a packed bit string. The status of each flash card is encoded into one bit. There can be up to two flash cards. The bits are: <ul style="list-style-type: none">• 2 to 31 - Reserved• 1 - Flash card 2 status• 0 - Flash card 1 status (Bit 0 is the least significant bit.) Flash card status can be one of the following: <ul style="list-style-type: none">• 0 - Flash card is absent• 1 - Flash card is present |
| snChasFlashCardLeds brcdlp.1.1.1.23 Syntax: Integer32 | Read-only | Shows the status of LEDs on a flash card. Each bit shows one of the following: <ul style="list-style-type: none">• 0 - Flash card is off• 1 - Flash card is on |
| snChasNumSlots brcdlp.1.1.1.24 Syntax: Integer32 | Read-only | Shows the number of slots in the chassis. |
| snChasArchitectureType brcdlp.1.1.1.25 Syntax: Integer | Read-only | Shows the architecture type: <ul style="list-style-type: none">• stackable(1) - old stackable• bigIron(2)• terathon(3)• fifthGen(4) |
| snChasProductType brcdlp.1.1.1.26 Syntax: Integer | Read-only | Shows the product type. The following shows the meaning of each bit: <ul style="list-style-type: none">• invalid(0)• BigIron MG8(1)• NetIron 40G(2)• NetIron IMR 640(3)• BigIron RX 800(4) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • XMR Series router 16000(5) • BigIron RX 400(6) • XMR Series router 8000(7) • BigIron RX 200(8) • XMR Series router 4000(9) • MLX Series 32(13) • XMR Series router 32000(14) • BigIron RX-32(15) • niCES2000Series(16) • niCER2000Series(17) • brMlxESlot4(18) - This value is supported only on the Extreme Netiron devices. • brMlxESlot8(19) - This value is supported only on the Extreme Netiron devices. • brMlxESlot16(20) - This value is supported only on the Extreme Netiron devices. • brMlxESlot32(21) - This value is supported only on the Extreme Netiron devices. |
| snChasSystemMode brcdlp.1.1.1.1.27 Syntax: Integer | Read-only | <p>This object displays the mode of the MLX Series, XMR Series, or MLX Series devices. It returns one of the following values:</p> <ul style="list-style-type: none"> • xmr(1) • mlx(2) <p>Values are returned as follows:</p> <ul style="list-style-type: none"> • If snChasProductType is niXmr4000, niXmr8000, niXmr160000, or niXmr32000, then this object returns xmr(1). • if snChasProductType is niMlx4, niMlx8, niMlx16, or niMlx32 then this object returns mlx(2). • If snChasProductType is brMlxE4, brMlxE8, brMlxE16, or brMlxE32 this object returns either xmr(1) or mlx(2) depending on the mode of the system. |
| snChasFactoryPartNumber brcdlp.1.1.1.1.28 Syntax: DisplayString | Read-only | This object displays the factory part number assigned by the manufacturer. |
| snChasFactorySerialNumber brcdlp.1.1.1.1.29 Syntax: DisplayString | Read-only | This object displays the factory serial number assigned by the manufacturer. |

Power supply table

The following table applies to the power supply in all products.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snChasPwrSupplyTable brcdlp.1.1.2.1 | None | A table containing power supply information. Only installed power supplies appear in the table. |
| snChasPwrSupplyIndex brcdlp.1.1.2.1.1.1 Syntax: Integer32 | Read-only | The index to the power supply table. |
| snChasPwrSupplyDescription brcdlp.1.1.2.1.1.2 Syntax: DisplayString | Read-only | The power supply description. For example, you may see the description, "right side power supply". This object can have up to 128 characters. |
| snChasPwrSupplyOperStatus brcdlp.1.1.2.1.1.3 Syntax: Integer | Read-only | The status of the power supply: <ul style="list-style-type: none"> other(1) - Status is neither normal(2) or failure(3). This value is not used for stackables. normal(2) failure(3) |

Fan table

The following table applies to the fans in all devices, except for devices that support the stacking functionality.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------|
| snChasFanTable brcdlp.1.1.3.1 | None | A table containing fan information. Only installed fans appear in the table. |
| snChasFanIndex brcdlp.1.1.3.1.1.1 Syntax: Integer32 | Read-only | The index to the fan table. |
| snChasFanDescription brcdlp.1.1.3.1.1.2 Syntax: DisplayString | Read-only | The fan description. For example, you may see the description "left side panel, back fan". This object can have up to 128 characters. |
| snChasFanOperStatus brcdlp.1.1.3.1.1.3 Syntax: Integer | Read-only | The status of the fan operation: <ul style="list-style-type: none"> other(1) normal(2) failure(3) |

Stacking chassis unit information

The following table manages the temperature for devices that supports the stacking functionality.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------|
| snChasUnitTable brcdlp.1.1.4.1 | None | A table of information for each unit in a stack. Only an active unit is displayed in a table row. |
| snChasUnitIndex brcdlp.1.1.4.1.1.1 Syntax: Integer32 | Read-only | The index to the table. |
| snChasUnitSerNum brcdlp.1.1.4.1.1.2 | Read-only | The serial number of the unit. If the serial number is unknown or unavailable, then the |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: DisplayString snChasUnitNumSlots brcdlp.1.1.4.1.1.3 | | value should be a zero length string. There can be up to 128 characters for the serial number. |
| Syntax: Integer32 snChasUnitPartNum brcdlp. 1.1.4.1.1.7 | Read-only | Number of slots of the chassis for each unit. |
| Syntax: DisplayString | Read-only | Indicates the part number of the chassis only for XMR Series, MLX Series, MLX Series devices. Nothing is displayed if the part number is unknown or unavailable. |

Agent Groups

| | |
|--------------------------------------------------------------------|-----|
| • Agent global group..... | 133 |
| • Image and configuration file download and upload..... | 134 |
| • Usage notes on CPU utilization and system CPU utility table..... | 138 |
| • Image version..... | 139 |
| • Agent board table..... | 147 |
| • Trap receiver table..... | 152 |
| • Boot sequence table..... | 153 |
| • SP boot sequence table..... | 154 |

Agent global group

The following objects allow you to reload the agent.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgReload brcdlp.1.1.2.1.1 Syntax: Integer | Read-write | <p>Restarts the agent. The following values can only be read:</p> <ul style="list-style-type: none">other(1) - Agent is in unknown or other state.running(2) - Agent is running.busy(4) - Reload is not allowed at this time as flash is busy. <p>The following value can be written:</p> <ul style="list-style-type: none">reset(3) - Do a hard reset. <p>NOTE</p> <p>The agent returns a response before the action occurs. This object requires a password to be set for the snAgGblPassword object. User can disable the password using no snmp-server pw-check command.</p> |
| snAgEraseNVRAM brcdlp.1.1.2.1.2 Syntax: Integer | Read-write | <p>Erases the NVRAM of the agent. This object can have one of the following values:</p> <ul style="list-style-type: none">normal(1) - NVRAM is not being erased.error(2) - Either the erase operation failed or the flash memory is bad.erasing(4) - NVRAM is being erased. If the process starts, you cannot set this object to erase(3) until the process is finished and the value of this object is either normal(1) or error(2).busy(5) - Operation is not allowed at this time as flash is busy. <p>The following value can be written:</p> <ul style="list-style-type: none">erase(3) - Erase operation. <p>The agent returns a response even before the erase operation is complete. The read values will be erased until the erase operation is finished. New erase requests will be rejected until an error(2) or normal(1) value is obtained.</p> |
| snAgWriteNVRAM brcdlp.1.1.2.1.3 | Read-write | <p>Saves all configuration information to NVRAM of the agent. The following values can only be read:</p> <ul style="list-style-type: none">normal(1) |

| Name, OID, and syntax | Access | Description |
|----------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer Syntax: Integer | | <ul style="list-style-type: none"> error(2) - Operation failed or the flash is bad. writing(4) - Agent is writing to NVRAM flash. busy(5) - Operation is not allowed at this time as flash is busy. <p>The following value can be written:</p> <ul style="list-style-type: none"> write(3) - Write operation. <p>The agent returns a response even before the write operation is complete. The read values will be written until the write operation is finished. New write requests will be rejected until an error(2) or normal(1) value is obtained. This object requires a password to be set for the snAgGlbPassword object.</p> |

Image and configuration file download and upload

The following objects manage file downloads and uploads. They are available in all devices.

When uploading or downloading configuration files to and from the TFTP server using SNMP, check for the following:

- If the SNMP password check is enabled on the device, the object must be sent with the following information in the same PDU as the TFTP objects:
 - If AAA is used for SNMP authentication and the authentication method is enable or line, then the value of snAgGlbPassword must be in cleartext format.
 - If AAA is used for SNMP authentication and the authentication method is local, RADIUS, Telnet, TACACS, or TACACS+, then the value of snAgGlbPassword must be in the *user password* format. The space between *user* and *password* is the delimiter.
 - If AAA is not used for authentication, then the value of snAgGlbPassword for the enable password must be in cleartext format.
- Make sure that the user has administrative access (privilege=0) on the device; otherwise, the user will not be able to upload files to the TFTP server.

NOTE

An atomic set of snAgImgLoad, snAgImgFname, snAgTftpServerAddrType and snAgTftpServerAddr is required for a successful download or upload.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgImgFname brcdlp.1.1.2.1.6 Syntax: DisplayString | Read-write | Shows the name of the image file, including path, that is currently associated with the system. When the object is not used, the value is blank. It can have up to 32 characters. |
| snAgImgLoad brcdlp.1.1.2.1.7 Syntax: Integer | Read-write | <p>Downloads or uploads a new software image to the agent. Use one of the following values in an SNMP set:</p> <ul style="list-style-type: none"> uploadMPPPrimary(19) - Uploads the primary image from the management processor flash memory to the TFTP server. downloadMPPPrimary(20) - Downloads the primary image from the TFTP server to management processor flash memory. |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • uploadMPSecondary(21) - Uploads the secondary image from the management processor flash memory to the TFTP server. • downloadMPSecondary(22) - Downloads the secondary image from the TFTP server to management processor flash memory. • downloadSPPrimary(24) - Downloads the primary image from the TFTP server to secondary processor flash memory. • downloadSPSecondary(25) - Downloads the secondary image from the TFTP server to secondary processor flash memory. • uploadMPBootROM(26) - Uploads the Boot from the management processor flash memory to the TFTP server. • downloadMPBootROM(27) - Downloads the Boot from flash image from the TFTP server to management processor flash memory. • uploadMPBootTFTP(28) - Uploads the Boot from TFTP image from management processor flash memory to the TFTP server. • downloadMPBootTFTP(29) - Downloads the Boot from TFTP image from the TFTP server to management processor flash memory. • uploadMPMonitor(30) - Uploads the Monitor image from management processor flash memory to the TFTP server. • downloadMPMonitor(31) - Downloads the Monitor image from the TFTP server to management processor flash memory. • downloadSPBootROM(32) - Download the Boot image from the TFTP server to secondary processor flash memory . • downloadSPMonitor(33) - Download the monitor image from TFTP server to SP flash. <p>The following messages may be displayed:</p> <ul style="list-style-type: none"> • normal(1) • flashPrepareReadFailure(2) • flashReadError(3) • flashPrepareWriteFailure(4) • flashWriteError(5) • tftpTimeoutError(6) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • tftpOutOfBufferSpace(7) • tftpBusy(8) • tftpRemoteOtherErrors(9) • tftpRemoteNoFile(10) • tftpRemoteBadAccess(11) • tftpRemoteDiskFull(12) • tftpRemoteBadOperation(13) • tftpRemoteBadId(14) • tftpRemoteFileExists(15) • tftpRemoteNoUser(16) • operationError(17) • loading(18) - The operation is in process. • uploadMPPrimary(19) • downloadMPPrimary(20) • uploadMPSecondary(21) • downloadMPSecondary(22) • tftpWrongFileType(23) • downloadSPPrimary(24) • downloadSPSecondary(25) • uploadMPBootROM(26) • downloadMPBootROM(27) • uploadMPBootTFTP(28) • downloadMPBootTFTP(29) • uploadMPMonitor(30) • downloadMPMonitor(31) • downloadSPBootROM(32) • downloadSPMonitor(33) <p>This object requires a password to be set for the snAgGblPassword object.</p> |
| snAgCfgFname brcdlp.1.1.2.1.8 Syntax: DisplayString | Read-write | Shows the name of the configuration file, including its path, currently associated with the system. If there are multiple configuration files, the names are separated by semicolons (:). This object can have up to 32 characters. |
| snAgCfgLoad brcdlp.1.1.2.1.9 Syntax: Integer | Read-write | <p>Downloads or uploads a configuration file to the agent. Use one of the following values for an SNMP set:</p> <ul style="list-style-type: none"> • uploadFromFlashToServer(20) - Uploads the configuration file from the flash to the TFTP server. • downloadToFlashFromServer(21) - Downloads the configuration file from the TFTP server to flash. • uploadFromDramToServer(22) - Uploads the configuration file from the DRAM to the TFTP server. • downloadToDramFromServer(23) - Downloads the configuration file from the TFTP server to DRAM. |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

A separate write memory using the CLI or an SNMP "set snAgWriteNVRAM" is required to</p> |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>save the configuration to NVRAM. This object requires a password to be set for the snAgGblPassword object.</p> <p>NOTE The snAgTftpServerIp object is deprecated by the snAgTftpServerAddrType object and the snAgTftpServerAddr object supports both IPv4 and IPv6.</p> |
| snAgTftpServerAddrType brcdlp.1.1.2.1.65 Syntax: ipAddress | Read-write | Shows the TFTP server IP address type. The supported address types are ipv4(1) and ipv6(2). The default address type is ipv4(1). |
| snAgTftpServerAddr brcdlp.1.1.2.1.66 Syntax: DisplayString | Read-write | Shows the TFTP server IP address. |
| snAgGblPasswordCheckMode brcdlp.1.1.2.1.68 Syntax: EnabledStatus | Read-only | <p>When enabled all image- or file-related MIB object SET request PDUs must include the password using the snAgGblPassword object.</p> <ul style="list-style-type: none"> enabled(1) - The password checking for SNMP SET request is enabled. The default value is enabled(1). disabled(2) - The password checking for SNMP SET request is disabled. |

Usage notes on CPU utilization and system CPU utility table

There are three groups of CPU utilization MIB objects.

Group A consists of the following object and it is not to be used.

| MIB object | OID |
|--------------------|-------------------|
| snAgGblCpuUtilData | brcdlp.1.1.2.1.35 |

The object in this group can display management module CPU utilization. The data it displays is from the last time that this object was read. If there is more than one management station reading the object, conflict occurs because every read resets the CPU utilization until the next read. It is recommended that this object not to be used.

Group B consists of the following objects.

| MIB object | OID |
|-----------------------|-------------------|
| snAgGblCpuUtil1SecAvg | brcdlp.1.1.2.1.50 |
| snAgGblCpuUtil5SecAvg | brcdlp.1.1.2.1.51 |
| snAgGblCpuUtil1MinAvg | brcdlp.1.1.2.1.52 |

Group B was created to resolve the multi-management stations issue of snAgGblCpuUtilData. These three objects are time-based. However, they only work for the management CPU utilization.

NOTE

The objects in Group B have been obsoleted on the XMR Series and MLX Series devices.

Use snAgentCpuUtilTable on the XMR Series and MLX Series devices.

Use snAgentCpuUtilTable if supported on a device instead of snAgGblCpuUtil1SecAvg, snAgGblCpuUtil5SecAvg, and snAgGblCpuUtil1MinAvg.

Group C consists of the snAgentCpu table.

| MIB object | OID |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| snAgentCpu | brcdlp.1.1.2.11 |
| snAgentCpuUtilTable | brcdlp.1.1.2.11.1 |
| snAgentCpuUtilEntry | brcdlp.1.1.2.11.1.1 |
| snAgentCpuUtilSlotNum | brcdlp.1.1.2.11.1.1.1 |
| snAgentCpuUtilCpuld | brcdlp.1.1.2.11.1.1.2 |
| snAgentCpuUtilInterval | brcdlp.1.1.2.11.1.1.3 |
| snAgentCpuUtilPercent | brcdlp.1.1.2.11.1.1.5 |
| NOTE Execute cpu-usage on command in the config mode, if MP CPU utilization is needed on the Extreme NetIron devices. | |
| snAgentCpuUtil100thPercent | brcdlp.1.1.2.11.1.1.6 |

The snAgentCpu table was created because switch families evolved from a single-CPU system to a multi-CPU system and CPU utilization information to non-management CPUs is required.

Image version

The following objects show information about software images in a device. These objects are available in all devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgImgVer brcdlp.1.1.2.1.11 Syntax: DisplayString | Read-only | Shows the version of the running software. The software image file name is displayed in the following format: major.minor.maintenance[letters] It can have up to 32 characters. |
| snAgFlashImgVer brcdlp.1.1.2.1.12 Syntax: DisplayString | Read-only | Shows the version of the software image that has been saved in the local storage, such as the flash memory. The software image file name is displayed in the following format: major.minor.maintenance[letters] It can have up to 32 characters. If this file is unknown or not available, then this object displays a null string. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgGbIflpAddr brcdlp.1.1.2.1.13 Syntax: Integer NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. | Read-write | Shows the IP address of the interface. |
| snAgGbIflpMask brcdlp.1.1.2.1.14 Syntax: Integer NOTE This object is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. | Read-write | Shows the IP address mask of the interface. |
| snAgGbIPassword brcdlp.1.1.2.1.15 Syntax: DisplayString | Read-write | <p>Shows the system security access password, which is used only for an SNMP-Set. An SNMP-Get will return a zero string.</p> <p>If the password-change any command (the default) is configured on the device, then this object must be part of the SNMP Set operation on some critical SNMP objects.</p> <p>The value of this object depends on the authentication method for SNMP operation:</p> <ul style="list-style-type: none"> • If there is no AAA authentication configuration for SNMP, then this object will have the enable super-user password. • If AAA authentication for SNMP is configured and has the leading method as "enable" or "line", this object will have the corresponding "enable" or "line" password. • If the switch has AAA authentication for SNMP operation, and the method specified is one of local, TACACS+, or RADIUS, this object will have the <i>username password</i> format with one space character between <i>username</i> and <i>password</i>. <p>The maximum size allows concatenation of 48 octets of username and 48 octets of password, with one blank character</p> <p>Valid values: Up to 48 octets</p> |
| snAgGbIDataRetrieveMode brcdlp.1.1.2.1.19 Syntax: Integer | Read-write | <p>Retrieves the VLAN Table and Port-STP Table data as indicated by the selected mode. The mode can be one of the following:</p> <ul style="list-style-type: none"> • nextbootCfg(0) - Retrieves the next boot configuration data. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> operationalData(1) - Retrieves the current running data. <p>Default: nextbootCfg(0)</p> |
| snAgSystemLog brcdlp.1.1.2.1.20 Syntax: Octet String | Read-write | <p>Indicates whether any network management system has login privileges. The agent allows only one network management system to be logged in.</p> <p>The value of this object consists of an Octet String. The following four bytes contain a secret code.</p> <p>The value of the first byte can be one of the following:</p> <ul style="list-style-type: none"> login(1) - Login for a network management system. heartbeat(2) - A value for the login NMS periodically to check in; otherwise, the Agent automatically sets this object to logout(3) after a timeout period. logout(3) - A value for an NMS to log out. changePassword(4) - A value for the login NMS to change the password, only if snAgGblPasswordChangeMode was configured to "anyMgmtEntity". changeReadOnlyCommunity(5) - A value for the login NMS to change the read-only community string, only if snAgGblPasswordChangeMode was configured to "anyMgmtEntity". changeReadWriteCommunity(6) - A value for the login NMS to change the read-write community string, only if snAgGblPasswordChangeMode was configured to "anyMgmtEntity". <p>This object requires a password to be set for the snAgGblPassword object.</p> |
| snAgGblEnableColdStartTrap brcdlp.1.1.2.1.21 Syntax: Integer | Read-write | <p>Indicates if the SNMP agent process has been enabled to generate cold start traps:</p> <ul style="list-style-type: none"> disabled(0) enabled(1) <p>Default: enabled(1)</p> |
| snAgGblEnableLinkUpTrap brcdlp.1.1.2.1.22 Syntax: Integer | Read-write | <p>Indicates if the SNMP agent process has been enabled to generate link up traps:</p> <ul style="list-style-type: none"> disabled(0) enabled(1) <p>Default: enabled(1)</p> |
| snAgGblEnableLinkDownTrap brcdlp.1.1.2.1.23 Syntax: Integer | Read-write | <p>Indicates if the SNMP agent process has been enabled to generate link down traps:</p> <ul style="list-style-type: none"> disabled(0) enabled(1) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Default: enabled(1) |
| snAgGblPasswordChangeMode brcdlp.1.1.2.1.24 Syntax: Integer | Read-only | <p>Specifies which management entity is allowed to change the "enable" password for the device. For security reasons, this object can only be modified using the device CLI.</p> <p>Valid values:</p> <ul style="list-style-type: none"> anyMgmtEntity(1) - Any SNMP management station, console command line interface, or Telnet command line interface can be used to change the password. consoleAndTelnet(2) - The password can be changed using the console command line interface or the Telnet command line interface. consoleOnly(3) - Only the console command line interface can be used. telnetOnly(4) - Only the Telnet command line interface can be used. <p>Default: consoleAndTelnet(2)</p> |
| snAgGblReadOnlyCommunity brcdlp.1.1.2.1.25 Syntax: DisplayString | Read-write | <p>Allows you to configure SNMP read-only community strings for the device. This object can be used in an SNMP-Set, but not an SNMP-Get. Get returns a blank.</p> <p>Valid values: Up to 32 characters</p> <p>NOTE To use this object, make sure that "password-change any" has been configured in the device to allow passwords to be updated from SNMP or any method.</p> |
| snAgGblReadWriteCommunity brcdlp.1.1.2.1.26 Syntax: DisplayString | Read-write | <p>Allows you to configure SNMP read-write community strings for the device. This object can be used in an SNMP-Set, but not an SNMP-Get. Get will return a blank.</p> <p>Valid values: Up to 32 characters</p> <p>NOTE To use this object, make sure that "password-change any" has been configured in the device to allow passwords to be updated from SNMP or any method.</p> |
| snAgGblCurrentSecurityLevel brcdlp.1.1.2.1.27 Syntax: Integer | Read-only | Represents the current login security level (0 through 5). Each level of security requires a password to permit users for different system configurations. Levels are defined in the Image version object. |
| snAgGblSecurityLevelSet brcdlp.1.1.2.1.28 Syntax: Integer | Read-write | Shows the security level required to set an "enable" password. This security level can be from 0 through 5. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgGblLevelPasswordsMask brcdlp.1.1.2.1.29 Syntax: Integer32 | Read-only | Shows the bitmap of level passwords, which were successfully assigned to the system: <ul style="list-style-type: none">• Bit 0 - Level 0 = admin• Bit 4 - Level 4 = port configuration• Bit 5 - Level 5 = read only |
| snAgGblCpuUtilData brcdlp.1.1.2.1.35 Syntax: Gauge | Read-only | The statistics collection of utilization of the CPU in the devices. Reading this object in the Extreme NetIron devices reset all the counters. Therefore, it is not required to set the object to snAgGblUtilCollect. |
| snAgGblCpuUtilCollect brcdlp.1.1.2.1.36 Syntax: Integer | Read-write | Enables or disables the collection of CPU utilization statistics in a device. This can be one of the following: <ul style="list-style-type: none">• enable(1)• disable(0) |
| snAgGblTelnetTimeout brcdlp.1.1.2.1.37 Syntax: Integer32 | Read-write | Shows how many minutes a Telnet session can remain idle before it times out. Each value unit is one minute. The value of this object can be up to 240 minutes. A value of 0 means that the Telnet session never times out. |
| snAgGblEnableWebMgmt brcdlp.1.1.2.1.38 Syntax: Integer | Read-write | Enables or disables access to the device from the Web Management Interface: <ul style="list-style-type: none">• disable(0)• enable(1) |
| snAgGblSecurityLevelBinding brcdlp.1.1.2.1.39 Syntax: Integer32 | Read-only | After a network management system logs in to a device with a user ID and password, the privilege level assigned to that system is saved in this object. The privilege level can be one of the following: <ul style="list-style-type: none">• Bit 0 - Level 0 = admin• Bit 4 - Level 4 = port configuration• Bit 5 - Level 5 = read only• 255 - Invalid binding |
| snAgSoftwareFeature brcdlp.1.1.2.1.41 Syntax: Octet String | Read-only | Contains a bit string representing the software feature of the running software image. Each bit can have one of the following values: <ul style="list-style-type: none">• 0 - The feature is not available• 1 - The feature is available Bit 0 is the least significant bit of an octet, and bit 7 is the most significant bit of an octet: <ul style="list-style-type: none">• Octet 0, bit 0 - RMON• Octet 0, bit 1 - IPX switching• Octet 0, bit 2 - Server Load Balancing• Octet 0, bit 3 - Layer 3 filter in switch• Octet 0, bit 4 - IPX routing• Octet 0, bit 5 - AppleTalk routing• Octet 0, bit 6 - IP multicast routing• Octet 0, bit 7 - Local access control• Octet 1, bit 0 - BGP routing• Octet 1, bit 1 - Loopback interface |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • Octet 1, bit 2 - BigIron multi-management module • Octet 1, bit 3 - BigIron SYSIF II • Octet 1, bit 4 - BigIron POS support • Octet 1, bit 5 - AppleTalk cable VLAN • Octet 1, bit 6 - 64 subnet • Octet 1, bit 7 - multi-slot trunk • Octet 2, bit 0 - TACACS • Octet 2, bit 1 - Gigabit Ethernet port auto-negotiation mode • Octet 2, bit 2 - FSRP • Octet 2, bit 3 - Exodus requested OSPF enhancement • Octet 2, bit 4 - OSPF NSSA • Octet 2, bit 5 - POS • Octet 2, bit 6 - QoS • Octet 2, bit 7 - Single Span • Octet 3, bit 0 - Fast Span • Octet 3, bit 1 - Base Layer 3 • Octet 3, bit 2 - Static log buffer • Octet 3, bit 3 - Layer 2 POS • Octet 3, bit 4 - BI15K • Octet 3, bit 5 - Layer 2 ATM • Octet 3, bit 6 - ATM • Octet 3, bit 7 - NETFLOW • Octet 4, bit 0 - sFlow • Octet 4, bit 1 - GVRP • Octet 4, bit 2 - GARP • Octet 4, bit 3 - Dynamic trunk • Octet 4, bit 4 - IGC 8G • Octet 4, bit 5 - Rate limit • Octet 4, bit 6 - IPC rate limit • Octet 4, bit 7 - MPLS • Octet 5, bit 0 - IS-IS • Octet 5, bit 1 - Link aggregation • Octet 5, bit 2 - Port dual mode • Octet 5, bit 3 - Private VLAN • Octet 5, bit 4 - MBGP • Octet 5, bit 5 - IPV6 protocol VLAN • Octet 5, bit 6 - X10G • Octet 6, bit 0 - FDP • Octet 6, bit 1 - Port tag • Octet 6, bit 2 - Wireless capable • Octet 6, bit 3 - snSwPortVlanId object has changed from read-only to read-write • Octet 6, bit 4 - LLDP |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Additional bits are added for new features. Check the MIB file for the software version you are running. |
| snAgGblEnableModuleInsertedTrap brcdlp.1.1.2.1.42 Syntax: Integer | Read-write | Indicates if the SNMP agent process has been enabled to generate traps for hardware modules that have been inserted in the chassis: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: enabled(1) |
| snAgGblEnableModuleRemovedTrap brcdlp.1.1.2.1.43 Syntax: Integer | Read-write | Indicates if the SNMP agent process has been enabled to generate traps for hardware modules that have been removed from the chassis: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: enabled(1) |
| snAgGblEnableTelnetServer brcdlp.1.1.2.1.45 Syntax: Integer | Read-write | Enables or disables the Telnet server in a device: <ul style="list-style-type: none">• disable(0)• enable(1) Default: enable(1) |
| snAgGblTelnetPassword brcdlp.1.1.2.1.46 Syntax: DisplayString | Read-write | Contains the Telnet access password, which is only used with an SNMP-Set. An SNMP-Get produces a zero string. This object can have 48 characters. This object requires a password to be set for the snAgGblPassword object. |
| snAgBuildDate brcdlp.1.1.2.1.47 Syntax: DisplayString | Read-only | Shows the date when the software was built. It can display up to 32 characters. |
| snAgBuildtime brcdlp.1.1.2.1.48 Syntax: DisplayString | Read-only | Shows the time when the software was built. It can display up to 32 characters. |
| snAgBuildVer brcdlp.1.1.2.1.49 Syntax: DisplayString | Read-only | Shows the image label of the software. It can display up to 32 characters. |
| snAgGblCpuUtil1SecAvg brcdlp.1.1.2.1.50 Syntax: Gauge32 | Read-only | Shows CPU utilization every second. Use snAgentCpuUtilTable on the devices. |
| snAgGblCpuUtil5SecAvg brcdlp.1.1.2.1.51 Syntax: Gauge32 | Read-only | Shows CPU utilization every five seconds. Use snAgentCpuUtilTable on the devices. |
| snAgGblCpuUtil1MinAvg brcdlp.1.1.2.1.52 Syntax: Gauge32 | Read-only | Shows CPU utilization every minute. Use snAgentCpuUtilTable on the devices. |
| snAgGblDynMemUtil brcdlp.1.1.2.1.53 Syntax: Gauge32 | Read-only | Shows the system dynamic memory utilization of the device in percentage units. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE On Extreme NetIron devices, use the snAgentBrdMemoryUtil100thPercent object.</p> |
| snAgGbIDynMemTotal brcdlp.1.1.2.1.54 Syntax: Guage32 | Read-only | <p>Shows the total amount of system dynamic memory available in a device in number of bytes.</p> <p>NOTE On Extreme NetIron devices, use the snAgentBrdMemoryTotal object.</p> |
| snAgGbIDynMemFree brcdlp.1.1.2.1.55 Syntax: Gauge32 | Read-only | <p>Shows the amount of system dynamic memory that is currently available in a device in number of bytes.</p> <p>NOTE On Extreme NetIron devices, use the snAgentBrdMemoryAvailable object.</p> |
| snAgImgLoadSPModuleType brcdlp.1.1.2.1.56 Syntax: Integer | Read-write | <p>Shows the switch processor module type that receives the downloaded image:</p> <ul style="list-style-type: none"> • other(1) • vm1(2) • pos12(3) • pos48(4) • atm(5) • gignpa(6) • lp(7) |
| snAgImgLoadSPModuleNumber brcdlp.1.1.2.1.57 Syntax: Integer32 | Read-write | <p>Shows the slot number of a switch processor module that receives the downloaded image. Setting this object to zero (0) means that the switch processor modules receives the image.</p> |
| snAgTrapHoldTime brcdlp.1.1.2.1.58 Syntax: Integer | Read-write | <p>The number of seconds that traps will be held during device initialization. Traps are buffered while the device is initialized; they are sent when the device is back online.</p> <p>Valid value: 1 - 600</p> |
| snAgSFlowSourceInterface brcdlp.1.1.2.1.59 Syntax: InterfaceIndex | Read-write | <p>Identifies the source interface for sFlow packets sent by the device that is running sFlow Export.</p> <p>Use the ifIndex value for this object to specify the source interface to be used. The interface should have an IP address configured for sFlow. A value of zero (0) indicates that a source interface has not been configured for sFlow. Port 65534 is used to specify a null port.</p> |
| snAgGbITelnetLoginTimeout brcdlp.1.1.2.1.60 Syntax: Integer | Read-write | <p>Indicates how many minutes you have to log in before Telnet is disconnected.</p> <p>Valid values: 1 - 10 minutes</p> <p>Default: 1 minute</p> |
| snAgGbIBannerExec brcdlp.1.1.2.1.61 | Read-write | Enter a message that will be displayed when a user enters the Privileged EXEC CLI level of a device. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: DisplayString snAgGblBannerIncoming brcdlp.1.1.2.1.62 | | Enter up to 2048 characters for this banner. Use the character "\n" within the string to start a new line. Leave this object blank if no message is to be displayed. |
| Syntax: DisplayString snAgGblBannerMotd brcdlp.1.1.2.1.63 | Read-write | Enter a message that will be displayed on the console when a user establishes a Telnet session. This message includes the location where the user is connecting from and displays a text message that can be configured. Enter up to 2048 characters for this banner. Use the character "\n" within the string to start a new line. Leave this object blank if no message is to be displayed. |
| Syntax: TruthVal snAgGblDeleteFirstBeforeDownload brcdlp.1.1.2.1.67 | Read-write | Enter the message of the day that is displayed on a user's terminal when the user establishes a Telnet CLI session. Enter up to 2048 characters for this banner. Use the character "\n" within the string to start a new line. Leave this object blank if no message is to be displayed. |
| Syntax: TruthVal The agent board table provides information about the boards. It contains the board ID, board status, LEDs, status, and other information about the main and expansion boards. | Read-write | When set to true, deletes the existing target file on the Management module flash. This object can be set to true only when the snAgImgLoad is set to downloadMPPrimary(20), downloadMPSecondary(22), downloadSPPrimary(24), downloadSPSecondary(25), or downloadMPMonitor(31) in the same SNMP set request PDU. This object is reset to false after successful or unsuccessful download of specified file to flash. Reading this object returns false(2). |

Agent board table

The agent board table provides information about the boards. It contains the board ID, board status, LEDs, status, and other information about the main and expansion boards.

NOTE

The MP-MR2 is supported only on the XMR Series, MLX Series, and MLX Series devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------|-----------|-----------------------------------------------------------------|
| snAgentBrdTable brcdlp.1.1.2.2.1 | None | A table of each physical board information. |
| snAgentBrdIndex brcdlp.1.1.2.2.1.1.1 | Read-only | The index to the agent board table. Valid values: 1 - 42 |

| snAgentBrdMainPortTotal brcdlp.1.1.2.2.1.1.4 Syntax: Integer32 | Read-only | Shows the total number of ports on the main board. |
| snAgentBrdStatusLedString brcdlp.1.1.2.2.1.1.17 Syntax: Octet String | Read-only | The object contains an octet string that shows the value of the status of the link LED on the front panel. Each LED is encoded into 1 bit for each switch port.. The value of each bit can be one of the following: <ul style="list-style-type: none"> • 0 - Link is off • 1 - Link is on |
| snAgentBrdTrafficLedString brcdlp.1.1.2.2.1.1.18 Syntax: Octet String | Read-only | A bit array that contains the value of the front panel traffic LEDs. This is a packed bit string; each LED is encoded into 1 bit for each switch |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | port. The value of each bit can be one of the following: <ul style="list-style-type: none">• 0 - No traffic• 1 - Traffic is flowing |
| snAgentBrdMediaLedString brcdlp.1.1.2.2.1.1.19 Syntax: Octet String | Read-only | Applies to devices with an LED for media type. It contains an octet string with 64-bits per slot. The value of each bit can be one of the following: <ul style="list-style-type: none">• 0 - Half-duplex• 1 - Full-duplex |
| snAgentBrdSpeedLedString brcdlp.1.1.2.2.1.1.20 Syntax: Octet String | Read-only | Applies to devices that have an LED for traffic speed. Contains an octet string with 64-bits per slot. The value of each bit can be one of the following: <ul style="list-style-type: none">• 0 - 10 Mbit• 1 - 100 Mbit |
| snAgentBrdAlarmLedString brcdlp.1.1.2.2.1.1.21 Syntax: Octet String | Read-only | Applies to devices that have an alarm LED. Contains an octet string with 64-bits per slot. The value of each bit can be one of the following: <ul style="list-style-type: none">• 0 - No alarm• 1 - Alarm |
| snAgentBrdTxTrafficLedString brcdlp.1.1.2.2.1.1.22 Syntax: Octet String | Read-only | Applies only to POS modules. Contains an octet string with 64-bits per slot. The value of each bit can be one of the following: <ul style="list-style-type: none">• 0 - No transmit traffic• 1 - Transmit traffic |
| snAgentBrdRxTrafficLedString brcdlp.1.1.2.2.1.1.23 Syntax: Octet String | Read-only | Applies only to POS modules. Contains an octet string with 64-bits per slot. The value of each bit can be one of the following: <ul style="list-style-type: none">• 0 - No receive traffic• 1 - Receive traffic |
| snAgentBrdMemoryTotal brcdlp.1.1.2.2.1.1.24 Syntax: CounterBasedGauge64 | Read-only | Shows the total memory in bytes within this module. |
| snAgentBrdMemoryAvailable brcdlp.1.1.2.2.1.1.25 Syntax: CounterBasedGauge64 | Read-only | Shows the available total memory in bytes within this module. |
| snAgentBrdSerialNumber brcdlp.1.1.2.2.1.1.26 Syntax: DisplayString | Read-only | Indicates the serial number of the board only for XMR Series, MLX Series, and MLX Series devices. No string is displayed if the serial number has not been programmed in the EEPROM or the module does not support a serial number. |
| snAgentBrdPartNumber brcdlp.1.1.2.2.1.1.27 Syntax: DisplayString | Read-only | Indicates the part number of the board only for XMR Series, MLX Series, and MLX Series devices. Nothing is displayed if the part number has not been programmed in the EEPROM or the module does not support a part number. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentBrdMemoryUtil100thPercent brcdlp.1.1.2.2.1.1.28 Syntax: Unsigned32 | Read-only | Indicates the dynamic memory that is currently utilized within this module, in units of one-hundredth of a percent. |
| snAgentBrdUpTime brcdlp.1.1.2.2.1.1.29 Syntax: TimeTicks | Read-only | Indicates the uptime for the module, in units of one-hundredth of a second. This value is valid only if the value of snAgentBrdModuleStatus is "moduleRunning(10)". |

Trap receiver table

The trap receiver table allows you to configure trap receivers on IPv4 devices.

NOTE

To delete a trap receiver, the agent needs the following varbinds in the setRequest PDU: snAgTrpRcvrlpAddr, snAgTrpRcvrCommunityOrSecurityName, and snAgTrpRcvrStatus. The snAgTrpRcvrStatus object must be set to delete(3).

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgTrpRcvrTable brcdlp.1.1.2.3.1 Syntax: SEQUENCE OF SnAgTrpRcvrEntry | None | The trap receiver table. |
| snAgTrpRcvrIndex brcdlp.1.1.2.3.1.1.1 Syntax: Integer | Read-only | Shows the index in the trap receiver table. Valid values: 1 - 10 |
| snAgTrpRcvrlpAddr brcdlp.1.1.2.3.1.1.2 Syntax: IpAddress | Read-write | Indicates the IP address of the SNMP manager that will receive the trap. |
| snAgTrpRcvrCommunityOrSecurityName brcdlp.1.1.2.3.1.1.3 Syntax: Octet String | Read-write | Indicates the community string to use to access the trap receiver. This object can have up to 32 octets. |
| snAgTrpRcvrStatus brcdlp.1.1.2.3.1.1.4 Syntax: Integer | Read-write | Controls the management of the table rows. The following are the values: <ul style="list-style-type: none">• ignore(5) - Do not send traps to this entry at this time.• delete(3) - Deletes the row.• create(4) - Creates a new row. If the row exists, then a SET with a value of create(5) returns error "badValue". Deleted rows are deleted immediately. The following values can be returned on reads: <ul style="list-style-type: none">• other(1) - Some other case.• valid(2) - Row exists and is valid.• ignore(5) - Do not send traps to this entry at this time. |
| snAgTrpRcvrUDPPort brcdlp.1.1.2.3.1.1.5 | Read-write | Indicates the UDP port number of the trap receiver. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|--------------------------------------------------------------------------|
| Syntax: Integer snAgTrpRcvrSecurityModel brcdlp.1.1.2.3.1.1.6 | | Valid values: 0 - 65535 Default: 162 |
| Syntax: Integer snAgTrpRcvrSecurityLevel brcdlp.1.1.2.3.1.1.7 | Read-write | Allows configuration of security model (v1, v2c, or 3). |
| Syntax: Integer | | Allows configuration of the security level (noauth, auth, or auth+priv). |

Boot sequence table

The boot sequence table shows a list of software image loads. The images are in the sequence that will be used at boot up. When the devices are booted, the first image in the table will be loaded into the device. If that software image fails, the second image will be tried. The process continues until a successful load is completed.

The boot sequence table is available in all devices. The combination of all the objects in this table must be unique. Duplicate instructions are rejected.

NOTE

Ensure that each entry is unique. It is possible to create entries with the same instructions by creating a new sequence index. Duplicate instructions may cause loops.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgBootSeqTable brcdlp.1.1.2.4.1 | None | Identifies the boot sequence table. |
| snAgBootSeqIndex brcdlp.1.1.2.4.1.1.1 Syntax: Integer | Read-only | The index to the boot sequence table. |
| snAgBootSeqInstruction brcdlp.1.1.2.4.1.1.2 Syntax: Integer | Read-write | Shows the image from which the device will boot: <ul style="list-style-type: none"> • fromPrimaryFlash(1) • fromSecondaryFlash(2) • fromTftpServer(3) • fromBootpServer(4) |
| snAgBootSeqIpAddr brcdlp.1.1.2.4.1.1.3 Syntax: IpAddress | Read-write | If the object Boot sequence table is set to "fromTftpServer", this object shows the IP address of the TFTP server that contains the image that will be used in the boot. |
| snAgBootSeqFilename brcdlp.1.1.2.4.1.1.4 Syntax: DisplayString | Read-write | Shows the name of the image filename on the TFTP server that will be used in the boot. This object applies only if the object Boot sequence table is set to "fromTftpServer". This object can have up to 32 characters. |
| snAgBootSeqRowStatus brcdlp.1.1.2.4.1.1.5 Syntax: Integer | Read-write | Creates or deletes an entry in the boot sequence table: <ul style="list-style-type: none"> • other(1) • valid(2) • delete(3) |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|-------------------------------------------------------------|
| | | <ul style="list-style-type: none"> create(4) |

SP boot sequence table

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgSpBootSeqTable brcdlp.1.1.2.4.2 | None | Identifies the SP boot sequence table. |
| snAgSpBootSeqSpNumber brcdlp.1.1.2.4.2.1.1 | None | The slot number of a switch processor module for which this boot sequence applies. Setting value 0 applies to all SP modules. Index 0 is valid only for setting to simplify the set operation for all the modules. |
| snAgSpBootSeqIndex brcdlp.1.1.2.4.2.1.2 Syntax: Integer | None | The index to the boot sequence table. |
| snAgSpBootSeqInstruction brcdlp.1.1.2.4.2.1.3 Syntax: Integer | Read-write | <p>Shows the image from which the device will boot:</p> <ul style="list-style-type: none"> fromSpPrimaryFlash(1) fromSpSecondaryFlash(2) fromMpPrimaryFlash(3) fromMpSecondaryFlash(4) fromPcmciaCard1(5) fromPcmciaCard2(6) fromTftpServer(7) interactively(8) |
| snAgSpBootSeqIpAddr brcdlp.1.1.2.4.2.1.4 Syntax: IpAddress | Read-write | If the object Boot sequence table on page 153 is set to "fromTftpServer", this object shows the IP address of the TFTP server that contains the image that will be used in the boot. |
| snAgSpBootSeqFilename brcdlp.1.1.2.4.2.1.5 Syntax: DisplayString | Read-write | Shows the name of the image filename on the TFTP server that will be used in the boot. This object applies only if the object Boot sequence table on page 153 is set to "fromTftpServer". This object can have up to 32 characters. |
| snAgSpBootSeqRowStatus brcdlp.1.1.2.4.2.1.6 Syntax: Integer | Read-write | <p>Creates or deletes an entry in the boot sequence table:</p> <ul style="list-style-type: none"> valid(1) delete(2) create(3) |

Agent system parameters configuration table

The agent system parameters configuration table presents the definition of the configuration system parameters. For example, the table may show the maximum number of VLANs a network can have.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------|
| snAgentSysParaConfigTable brcdlp.1.1.2.7.1 | None | The agent system parameters configuration table. |
| snAgentSysParaConfigIndex brcdlp.1.1.2.7.1.1.1 Syntax: Integer32 | Read-only | The index to the agent system parameters configuration table. |
| snAgentSysParaConfigDescription brcdlp.1.1.2.7.1.1.2 Syntax: DisplayString | Read-only | The parameter description string. This object can have up to 32 characters. |
| snAgentSysParaConfigMin brcdlp.1.1.2.7.1.1.3 Syntax: Integer32 | Read-only | The minimum value of this agent system parameter. |
| snAgentSysParaConfigMax brcdlp.1.1.2.7.1.1.4 Syntax: Integer32 | Read-only | The maximum value of this agent system parameter. |
| snAgentSysParaConfigDefault brcdlp.1.1.2.7.1.1.5 Syntax: Integer32 | Read-only | The default value of this agent system parameter. |
| snAgentSysParaConfigCurrent brcdlp.1.1.2.7.1.1.6 Syntax: Integer32 | Read-write | The current configured value of this agent system parameter. |

Configured module table

The configured module table contains information about modules. It includes the object **snAgentConfigModuleSerialNumber** , which contains the serial number of the Extreme NetIron devices.

NOTE

The snAgentConfigModuleType object has new values included to support the new version of MP card MR2 in the Configured module table. Also, the MP-MR2 is supported only on the XMR Series, MLX Series, and MLX Series devices.

| Name, OID, and syntax | Access | Description |

| snAgentConfigModuleNumberOfCpus brcdlp.1.1.2.8.1.1.9 Syntax: Integer32 | Read-only | The number of CPUs in the module. |

Agent user access group

The agent user access group section presents the objects used to control user access to devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------|
| snAgentUserMaxAccnt brcdlp.1.1.2.9.1.1 Syntax: Integer32 | Read-only | Shows the maximum number of user accounts that can be configured on the device. |

Agent user account table

The objects in this table provide information about user accounts.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentUserAccntTable brcdlp.1.1.2.9.2 | None | A table of user account information. |
| snAgentUserAccntName brcdlp.1.1.2.9.2.1.1 Syntax: DisplayString | Read-only | <p>Displays the user name. This object can have up to 48 characters</p> |
| snAgentUserAccntPassword brcdlp.1.1.2.9.2.1.2 Syntax: DisplayString | Read-write | <p>Contains the user password. Valid values: Up to 48 characters</p> <p>NOTE The password-change any command must be configured on the device to set the password field through SNMP SET operation.</p> |
| snAgentUserAccntEncryptCode brcdlp.1.1.2.9.2.1.3 Syntax: Integer32 | Read-write | States the password encryption method code. |
| snAgentUserAccntPrivilege brcdlp.1.1.2.9.2.1.4 Syntax: Integer32 | Read-write | Shows the user privilege. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentUserAccntRowStatus brcdlp.1.1.2.9.2.1.5 Syntax: Integer | Read-write | <p>Creates, modifies, or deletes a user account table entry:</p> <ul style="list-style-type: none"> • other(1) • valid(2) • delete(3) • create(4) • modify(5) |

Agent redundant group

Use the following objects to manage redundant management groups.

NOTE

The upgraded version of MP card MR2 supports all the objects in the Agent redundant group table. The MP-MR2 is supported only on the XMR Series, MLX Series, and MLX Series devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentRedunActiveMgmtMod brcdlp.1.1.2.10.1.1 Syntax: Integer32 | Read-write | <p>Shows the slot number of the active management module. Setting this object does not take effect immediately. You must save the configuration data to flash storage, then reboot the system before the new value takes effect. Setting a value of 0 requests the system to auto-select an active management module after power up.</p> <p>Default: 0</p> |
| snAgentRedunSyncConfig brcdlp.1.1.2.10.1.2 Syntax: Integer32 | Read-write | <p>Shows how often the data in the active management module will be copied to the backup management module. The value for this object is in seconds.</p> <p>Setting this object to 0 disables the copy process. Setting it to a negative value starts the process immediately, but runs only once.</p> <p>Default: Every 10 seconds</p> |
| snAgentRedunBkupCopyBootCode brcdlp.1.1.2.10.1.3 Syntax: Integer | Read-write | <p>If enabled, the backup management module copies the boot code of the active management module to its boot code flash storage after power up, and whenever the active management module's boot code is updated. The backup management module does not copy the boot code if it is identical to what is already in flash storage:</p> <ul style="list-style-type: none"> • disabled(0) • enabled(1) <p>Default: disabled(0)</p> |
| snAgentEnableMgmtModRedunStateChangeTra p brcdlp.1.1.2.10.1.4 Syntax: Integer | Read-write | <p>Indicates if the SNMP agent process has been enabled to generate management module redundancy state change traps:</p> <ul style="list-style-type: none"> • disabled(0) • enabled(1) |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentRedunBkupBootLoad brcdlp.1.1.2.10.1.5 Syntax: Integer | Read-write | <p>Default: enabled(1)</p> <p>Downloads a new boot code from boot flash storage of the active management module to the backup management module.</p> <p>In a set operation, enter the value downloadBackup(20) to download the boot code from the active management module to the backup management module. A set operation is rejected during a download until an error or normal state is reached.</p> <p>One of the following values is returned by a get operation:</p> <ul style="list-style-type: none"> normal(1) - No operation. operationError(17) - Error codes. downloadBackup(20) - Download boot code from active module to backup to the backup module. |
| snAgentRedunSwitchOver brcdlp.1.1.2.10.1.6 Syntax: Integer | Read-write | <p>Switches a backup management module to an active management module:</p> <ul style="list-style-type: none"> other(1) reset(2) - Resets the backup module to active. |

System CPU utilization table

The objects in the following table are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentCpuUtilTable brcdlp.1.1.2.11.1 | None | The table to list utilization for all CPUs. |
| snAgentCpuUtilSlotNum brcdlp.1.1.2.11.1.1 Syntax: Integer32 | Read-only | The slot number of the module that contains the CPU. |
| snAgentCpuUtilCpuld brcdlp.1.1.2.11.1.2 Syntax: Integer32 | Read-only | <p>The ID of the CPU:</p> <ul style="list-style-type: none"> For non-VM1/WSM management module, there is one CPU. For VM1/WSM, there is one management CPU and three slave CPUs. The management CPU could be turned off. For POS and ATM, there is no management CPU but two slave CPUs. The ID for the management CPU is 1. A value of 2 and greater identifies the slave CPUs. |
| snAgentCpuUtilInterval brcdlp.1.1.2.11.1.3 | Read-only | The value, in seconds, for this utilization. For both management and slave CPUs, utilizations |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer32 snAgentCpuUtilPercent brcdlp.1.1.2.11.1.1.5 Syntax: Gauge32 NOTE Execute cpu-usage on command in the config mode, if the MP CPU utilization is required on the Extreme NetIron devices. This object is supported on the MLX Series, MLX Series, and XMR Series devices. | Read-only | for 1 sec, 5 sec, 60 sec, and 300 sec intervals are displayed. The statistical CPU utilization in units of one percent. |
| snAgentCpuUtil100thPercent brcdlp.1.1.2.11.1.1.6 Syntax: Gauge32 NOTE This object is supported on the XMR Series, MLX Series, and MLX Series devices. | Read-only | The statistical CPU utilization in units of one-hundredth of a percent. |

System process utilization table

The following table lists CPU utilization and statistics for all CPU processes on the device.

NOTE

The objects in the following table are supported on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snCpuProcessTable brcdlp.1.1.2.11.2 | None | System process utilization table. |
| snCpuProcessName brcdlp.1.1.2.11.2.1.1 Syntax: DisplayString | Read-only | Name of the process. |
| snCpuProcess5SecUtil brcdlp.1.1.2.11.2.1.2 Syntax: Gauge | Read-only | Statistics collected during the last 5 seconds of process utilization. Divide this number by 100 to get the percentage utilization. It can have a value 0 or a value between 100 to 10000 in multiples of 100. If the agent is queried immediately after turning on the CPU usage and 5 seconds have not been elapsed, then the data will not be available. Returns the data for the actual elapsed time for the NetIron devices. |
| snCpuProcess1MinUtil brcdlp.1.1.2.11.2.1.3 Syntax: Gauge | Read-only | Statistics collected during the last 1 minute of process utilization. Divide this number by 100 to get the percentage utilization. It can have a value 0 or a value between 100 to 10000 in multiples of 100. If the agent is queried immediately after turning on the CPU usage and 1 minute have not been elapsed, then the data will not be available. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | available. Returns the data for the actual elapsed time for the NetIron devices. |
| snCpuProcess5MinUtil brcdlp.1.1.2.11.2.1.4 Syntax: Gauge | Read-only | Statistics collected during the last 5 minutes of process utilization. Divide this number by 100 to get the percentage utilization. It can have a value 0 or a value between 100 to 10000 in multiples of 100. If the agent is queried immediately after turning on the CPU usage and 5 minutes have not been elapsed, then the data will not be available. Returns the data for the actual elapsed time for the NetIron devices. |
| snCpuProcessRuntime brcdlp.1.1.2.11.2.1.6 Syntax: Counter | Read-only | Process runtime in milliseconds. |
| snAgentCpuProcessEnable brcdlp.1.1.2.11.3 Syntax: EnabledStatus | Read-write | Enables the CPU utilization statistics collection. |

Resource utilization table

The following tables provides SNMP support for the CPU, Message Queue, and buffer resource utilization details of each task.

NOTE

The following tables are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

Task CPU table

The following table displays the CPU state, wait time, hold time and priority with respect to each task in the device.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------|
| snAgentTaskCpuTable brcdlp.1.1.2.17.1 | None | Displays the CPU state, wait time, hold time and priority with respect to each task in the device. |
| snAgentTaskCPUTaskID brcdlp.1.1.2.17.1.1.1 Syntax: Integer32 | Read-only | Represents the task identification number. |
| snAgentTaskCpuTaskName brcdlp.1.1.2.17.1.1.2 Syntax: DisplayString | Read-only | Represents the task name. |
| snAgentTaskCpuState brcdlp.1.1.2.17.1.1.3 Syntax: DisplayString | Read-only | Represents the current state of the task. |
| snAgentTaskCpuWaitTime brcdlp.1.1.2.17.1.1.4 Syntax: Gauge32 | Read-only | A count used to represent the wait time in milliseconds. |
| snAgentTaskCpuHoldTime brcdlp.1.1.2.17.1.1.5 Syntax: Gauge32 | Read-only | A count used to represent the hold time in milliseconds. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------|
| snAgentTaskCpuTaskActivity brcdlp.1.1.2.17.1.1.6 Syntax: DisplayString | Read-only | Represents the task activity. <ul style="list-style-type: none">• A - running since last show• I - idle |

Task Message Queue (MQ) table

The following table displays the Message Queue Priority, Depth, Messages and the failed count with respect to each task and corresponding MQ priority in the device.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentTaskMQTable brcdlp.1.1.2.17.2 Syntax: Integer32 | None | Displays the Message Queue Priority, Depth, Msgs and the failed count with respect to each task and corresponding Message Queue priority in the device. |
| snAgentTaskMQTaskID brcdlp.1.1.2.17.2.1.1 Syntax: Integer32 | Read-only | Represents the task identification number. |
| snAgentTaskMQTaskName brcdlp.1.1.2.17.2.1.2 Syntax: DisplayString | Read-only | Represents the task name. |
| snAgentTaskMQPriority brcdlp.1.1.2.17.2.1.3 Syntax: Integer32 | Read-only | Represents the priority of the Message Queue. |
| snAgentTaskMQLength brcdlp.1.1.2.17.2.1.4 Syntax: Integer32 | Read-only | Represents the size of the Message Queue. |
| snAgentTaskMQDepth brcdlp.1.1.2.17.2.1.5 Syntax: Gauge32 | Read-only | A count used to represent the Message Queue depth. |
| snAgentTaskMQMaxDepth brcdlp.1.1.2.17.2.1.6 Syntax: Counter32 | Read-only | A count used to represent the maximum depth reached ever (clear on read counter). |
| snAgentTaskMQStickyMaxDepth brcdlp.1.1.2.17.2.1.7 Syntax: Counter32 | Read-only | A count used to represent the maximum depth reached ever (this counter is not clear on read). |
| snAgentTaskMQMsgs brcdlp.1.1.2.17.2.1.8 Syntax: Gauge32 | Read-only | A count used to represent the number of messages. |
| snAgentTaskMQMaxMsgs brcdlp.1.1.2.17.2.1.9 Syntax: Counter32 | Read-only | A count used to represent the maximum number of messages reached ever (clear on read counter). |
| snAgentTaskMQStickyMaxMsgs brcdlp.1.1.2.17.2.1.10 Syntax: Counter32 | Read-only | A count used to represent the maximum number of messages reached ever (this counter is not clear on read). |
| snAgentTaskMQFailedCount brcdlp.1.1.2.17.2.1.11 | Read-only | A count used to represent failed count (clear on read counter). |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------|-----------|-----------------------------------------------------------------------------|
| Syntax: Gauge32 | | |
| snAgentTaskMQStickyFailedCount brcdlp.1.1.2.17.2.1.12 | Read-only | A count used to represent failed count (this counter is not clear on read). |
| Syntax: Counter32 | | |

Task buffer table

The following table displays the Task ID, Task name, Pool ID and the buffer count of each task in the device.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------|-----------|---------------------------------------------------------------------------------------------|
| snAgentTaskBufferTable brcdlp.1.1.2.17.3 | None | Displays the Task ID, Task name , Pool_ID and the buffer count of each task in the device . |
| snAgentTaskBufferTaskID brcdlp.1.1.2.17.3.1.1 | None | Represents the task identification number. |
| Syntax: Integer32 | | |
| snAgentTaskBufferTaskName brcdlp.1.1.2.17.3.1.2 | Read-only | Represents the task name. |
| Syntax: DisplayString | | |
| snAgentTaskBufferPoolID brcdlp.1.1.2.17.3.1.3 | Read-only | Represents the pool identification number. |
| Syntax: Integer32 | | |
| snAgentTaskBufferCount brcdlp.1.1.2.17.3.1.4 | Read-only | A count used to represent the number of buffers allocated to a task. |
| Syntax: Gauge32 | | |

IfXWatermarkTable table

The following table displays the high and low watermark of bits per second and packets per second for each port in the system.

NOTE

The objects in the following table are supported only on the MLX Series, MLX Series, and XMR Series devices. SNMP GET and SNMP WALK operations are supported.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IfXWatermarkTable brcdlp.1.1.2.18.1 | None | Table displays the highest and lowest transmit and receive bit rate and packet rate of a port for the current and previous 1-hour or 24-hour window. |
| ifWatermarkCurrentHourWindowStartTime brcdlp.1.1.2.18.1.1.1 | Read-only | Time at which the current 1-hour window started. The current 1-hour window starts when the line card comes up. The current hour window start time expires every 1-hour. |
| Syntax: DisplayString | | |
| ifWatermarkCurrentHourHighRxUtilTime brcdlp.1.1.2.18.1.1.2 | Read-only | Time at which the port bit or packet received rate reached its highest inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| Syntax: DisplayString | | |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| ifWatermarkCurrentHourHighInPktRate brcdlp.1.1.2.18.1.1.3 Syntax: Counter64 | Read-only | Packet rate when the highest receive packet rate was recorded inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourHighInBitRate brcdlp.1.1.2.18.1.1.4 Syntax: Counter64 | Read-only | Bit rate when the highest receive bit rate was recorded on the interface inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourLowRxInUtilTime brcdlp.1.1.2.18.1.1.5 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its lowest inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourLowInPktRate brcdlp.1.1.2.18.1.1.6 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime |
| ifWatermarkCurrentHourLowInBitRate brcdlp.1.1.2.18.1.1.7 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourHighTxUtilTime brcdlp.1.1.2.18.1.1.8 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its highest inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourHighOutPktRate brcdlp.1.1.2.18.1.1.9 Syntax: Counter64 | Read-only | Packet rate when the highest transmit packet rate was recorded inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourHighOutBitRate brcdlp.1.1.2.18.1.1.10 Syntax: Counter64 | Read-only | Bit rate when the highest transmit bit rate was recorded on the interface inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourLowTxOutUtilTime brcdlp.1.1.2.18.1.1.11 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its lowest inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourLowOutPktRate brcdlp.1.1.2.18.1.1.12 Syntax: Counter64 | Read-only | Packet rate when the lowest received packet rate was recorded inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkCurrentHourLowOutBitRate brcdlp.1.1.2.18.1.1.13 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the current 1-hour window since IfWatermarkCurrentHourWindowStartTime. |
| ifWatermarkLastHourHighRxUtilTime brcdlp.1.1.2.18.1.1.14 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its highest inside the last 1-hour. |
| ifWatermarkLastHourHighInPktRate brcdlp.1.1.2.18.1.1.15 Syntax: Counter64 | Read-only | Packet rate when the highest receive packet rate was recorded inside the last 1-hour. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| ifWatermarkLastHourHighInBitRate brcdlp.1.1.2.18.1.1.16 Syntax: Counter64 | Read-only | Bit rate when the highest receive bit rate was recorded on the interface inside the last 1-hour. |
| ifWatermarkLastHourLowRxUtilTime brcdlp.1.1.2.18.1.1.17 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its lowest inside the last 1-hour., |
| ifWatermarkLastHourLowInPktRate brcdlp.1.1.2.18.1.1.18 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the last 1-hour. |
| ifWatermarkLastHourLowInBitRate brcdlp.1.1.2.18.1.1.19 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the last 1-hour. |
| ifWatermarkLastHourHighTxUtilTime brcdlp.1.1.2.18.1.1.20 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its highest inside the last 1-hour. |
| ifWatermarkLastHourHighOutPktRate brcdlp.1.1.2.18.1.1.21 Syntax: Counter64 | Read-only | Packet rate when the highest transmit packet rate was recorded inside the last 1-hour. |
| ifWatermarkLastHourHighOutBitRate brcdlp.1.1.2.18.1.1.22 Syntax: Counter64 | Read-only | Bit rate when the highest transmit bit rate was recorded on the interface inside the last 1-hour. |
| ifWatermarkLastHourLowTxUtilTime brcdlp.1.1.2.18.1.1.23 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its lowest inside the last 1-hour. |
| ifWatermarkLastHourLowOutPktRate brcdlp.1.1.2.18.1.1.24 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the last 1-hour. |
| ifWatermarkLastHourLowOutBitRate brcdlp.1.1.2.18.1.1.25 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the last 1-hour. |
| ifWatermarkCurrentDayWindowStartTime brcdlp.1.1.2.18.1.1.26 Syntax: DisplayString | Read-only | Time at which the current 24-hour window started. The current 24-hour window starts when the line card comes up. |
| ifWatermarkCurrentDayHighRxUtilTime brcdlp.1.1.2.18.1.1.27 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its highest inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayHighInPktRate brcdlp.1.1.2.18.1.1.28 Syntax: Counter64 | Read-only | Packet rate when the highest receive packet rate was recorded inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| ifWatermarkCurrentDayHighInBitRate brcdlp.1.1.2.18.1.1.29 Syntax: Counter64 | Read-only | Bit rate when the highest receive bit rate was recorded on the interface inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayLowRxInUtilTime brcdlp.1.1.2.18.1.1.30 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its lowest inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayLowInPktRate brcdlp.1.1.2.18.1.1.31 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayLowInBitRate brcdlp.1.1.2.18.1.1.32 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayHighTxUtilTime brcdlp.1.1.2.18.1.1.33 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its highest inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayHighOutPktRate brcdlp.1.1.2.18.1.1.34 Syntax: Counter64 | Read-only | Packet rate when the highest transmit packet rate was recorded inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayHighOutBitRate brcdlp.1.1.2.18.1.1.35 Syntax: Counter64 | Read-only | Bit rate when the highest transmit bit rate was recorded on the interface inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayLowTxOutUtilTime brcdlp.1.1.2.18.1.1.36 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its lowest inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayLowOutPktRate brcdlp.1.1.2.18.1.1.37 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkCurrentDayLowOutBitRate brcdlp.1.1.2.18.1.1.38 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the current 24-hour window since IfWatermarkCurrentDayWindowStartTime. |
| ifWatermarkLastDayHighRxUtilTime brcdlp.1.1.2.18.1.1.39 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its highest inside the last 24-hour window. |
| ifWatermarkLastDayHighInPktRate brcdlp.1.1.2.18.1.1.40 Syntax: Counter64 | Read-only | Packet rate when the highest receive packet rate was recorded inside the last 24-hour window. |
| ifWatermarkLastDayHighInBitRate brcdlp.1.1.2.18.1.1.41 Syntax: Counter64 | Read-only | Bit rate when the highest receive bit rate was recorded on the interface inside the last 24-hour window. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------|
| ifWatermarkLastDayLowRxUtilTime brcdlp.1.1.2.18.1.1.42 Syntax: DisplayString | Read-only | Time at which the port bit or packet receive rate reached its lowest inside the last 24-hour window. |
| ifWatermarkLastDayLowInPktRate brcdlp.1.1.2.18.1.1.43 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the last 24-hour window. |
| ifWatermarkLastDayLowInBitRate brcdlp.1.1.2.18.1.1.44 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the last 24-hour window. |
| ifWatermarkLastDayHighTxUtilTime brcdlp.1.1.2.18.1.1.45 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its highest inside the last 24-hour window. |
| ifWatermarkLastDayHighOutPktRate brcdlp.1.1.2.18.1.1.46 Syntax: Counter64 | Read-only | Packet rate when the highest transmit packet rate was recorded inside the last 24-hour window. |
| ifWatermarkLastDayHighOutBitRate brcdlp.1.1.2.18.1.1.47 Syntax: Counter64 | Read-only | Bit rate when the highest transmit bit rate was recorded on the interface inside the last 24-hour window. |
| ifWatermarkLastDayLowTxUtilTime brcdlp.1.1.2.18.1.1.48 Syntax: DisplayString | Read-only | Time at which the port bit or packet transmit rate reached its lowest inside the last 24-hour window. |
| ifWatermarkLastDayLowOutPktRate brcdlp.1.1.2.18.1.1.49 Syntax: Counter64 | Read-only | Packet rate when the lowest receive packet rate was recorded inside the last 24-hour window. |
| ifWatermarkLastDayLowOutBitRate brcdlp.1.1.2.18.1.1.50 Syntax: Counter64 | Read-only | Bit rate when the lowest receive bit rate was recorded on the interface inside the last 24-hour window. |

Switch Group Configuration

| | |
|-------------------------------------------|-----|
| • Switch group configuration..... | 173 |
| • Fabric drop count statistics table..... | 176 |

Switch group configuration

The switch group configuration table is partially supported on the Extreme NetIron devices.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snSwGroupIpL3SwMode brcdlp.1.1.3.1.2 Syntax: Integer | Read-write | Indicates if the Layer 3 IP switch is enabled for the switch group: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snSwGroupIpMcastMode brcdlp.1.1.3.1.3 Syntax: Integer | Read-write | Indicates if the IP multicast pruning mode is enabled for the switch group: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snSwGroupSwitchAgeTime brcdlp.1.1.3.1.5 Syntax: Integer32 | Read-write | Sets the aging period for ports on the device, defining how long a port address remains active in the address table. Valid values: 0 = no aging, or 67 - 65535 seconds Default: 300 seconds |
| snVlanGroupVlanCurEntry brcdlp.1.1.3.1.6 Syntax: Integer32 | Read-only | Shows the number of VLANs that are currently configured. |
| snFdbTableCurEntry brcdlp.1.1.3.1.9 Syntax: Integer32 | Read-only | Shows the total number of entries in the Filtering Database (FDB) that are configured currently. |
| snFdbTableStationFlush brcdlp.1.1.3.1.10 Syntax: Integer | Read-write | Shows the state of the flush operation for the FDB table. The following value can be written: <ul style="list-style-type: none">• flush(3) - Perform the flush operation. After the flush operation starts, any new flush request is rejected until the operation is complete or failed. The following values can only be read: <ul style="list-style-type: none">• normal(1) - Normal state• error(2) - Operation failed• flushing(4) - Operation is in process |
| snSwIpMcastQuerierMode brcdlp.1.1.3.1.15 Syntax: Integer | Read-write | The IP Multicast pruning mode is configured in either Non-Querier or Querier mode. <ul style="list-style-type: none">• querier(1) - Send out host queries. (active)• nonQuerier(2) - Do not send out host queries. (passive) |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Default: querier(1) |
| snVlanGroupVlanMaxEntry brcdlp.1.1.3.1.19 Syntax: Integer32 | Read-write | Shows the maximum number of VLAN entries that can be configured. NOTE This object is read-only on the Extreme Netiron devices. The SET request returns the error as not writable. Use the snAgentSysParaConfigEntry object, to set the maximum allowed VLAN. |
| snSwEnableBridgeNewRootTrap brcdlp.1.1.3.1.25 Syntax: Integer | Read-write | Indicates whether the SNMP agent process is permitted to generate bridge new root traps. |
| snSwEnableBridgeTopoChangeTrap brcdlp.1.1.3.1.26 Syntax: Integer | Read-write | Indicates whether the SNMP agent process is permitted to generate bridge topology change traps. |
| snSwEnableLockedAddrViolationTrap brcdlp.1.1.3.1.27 Syntax: Integer | Read-write | Indicates whether the SNMP agent process is permitted to generate locked address violation traps. |
| snSwIpxL3SwMode brcdlp.1.1.3.1.28 Syntax: Integer | Read-write | Indicates whether or not Layer 3 IPX switch mode is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: disabled(0) |
| snSwProtocolVLanMode brcdlp.1.1.3.1.31 Syntax: Integer | Read-write | Indicates whether or not protocol VLAN is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snMacStationVLanId brcdlp.1.1.3.1.32 Syntax: Integer | Read-write | Shows the MAC Station's VLAN ID index in the standard Forwarding Database for Transparent Bridge Table (dot1dTpFdbTable). Because the dot1dTpFdbTable index is the MAC address assigned to one of the ports in the bridge (VLAN) and each MAC address can be reassigned to different ports belonging to different bridges (VLANs), the snMacStationVLanId can be used to specify which bridge (VLAN) MAC Station information of the dot1dTpFdbTable to retrieve. If you do not specify the VLAN ID in this MIB, the default VLAN (bridge) ID will be used when dot1dTpFdbTable is retrieved. Valid values: 1 - 4095 |
| snSwClearCounters brcdlp.1.1.3.1.33 Syntax: Integer | Read-write | Clears software counters: <ul style="list-style-type: none">• valid(0) - An SNMP-GET of this MIB shows that it is a valid command to use.• clear(1) - Clear counter commands of the following counters: Dot3, MIB2, IP, and IPX counters for all ports. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snSw8021qTagType brcdlp.1.1.3.1.34 Syntax: Integer32 | Read-write | Specifies the IEEE802.1q tag type that is embedded in the length or type field of an Ethernet packet. It specifies that the two octets after the length or type field in an Ethernet packet are the tag value. Default: 33024 |
| snSwBroadcastLimit brcdlp.1.1.3.1.35 Syntax: Integer32 | Read-write | Specifies the number of broadcast packets per second. This limits the number of broadcast packets to forward out of the switch ports. Setting this object to 0 disables the limitation check. Default: 0 NOTE This object is deprecated by snSwBroadcastLimit2 on the Extreme NetIron devices. |
| snSwDefaultVlanId brcdlp.1.1.3.1.38 Syntax: Integer | Read-write | Shows the VLAN ID of the default port VLAN. Valid values: 1 - 4095 |
| snSwGlobalAutoNegotiate brcdlp.1.1.3.1.39 Syntax: Integer | Read-write | Applies only to Gigabit Ethernet ports. Specifies the negotiation mode of the port: <ul style="list-style-type: none">• disable(0) - All Gigabit Ethernet ports are in non negotiation mode.• enable(1) - All Gigabit Ethernet ports will start auto-negotiation indefinitely until they succeed.• negFullAuto(2) - All Gigabit Ethernet ports will start with auto-negotiation. If the negotiation fails, then they will automatically switch to non-negotiation mode. Gigabit Ethernet ports on all stackable products do not support negFullAuto(2).• other(3) Default: negFullAuto(2) |
| snSwSingleStpMode brcdlp.1.1.3.1.41 Syntax: Integer | Read-write | Indicates if the Single Spanning Tree System Mode in the Switch Group is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: disabled(0) |
| snSwFastStpMode brcdlp.1.1.3.1.42 Syntax: Integer | Read-write | Indicates if Fast Spanning Tree System Mode in the Switch Group is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snSwViolatorIndex brcdlp.1.1.3.1.43 Syntax: Integer32 | Read-only | The port number of the device that received a violator packet. This number is included in the locked address violator trap. |
| snSwSingleStpVlanId brcdlp.1.1.3.1.44 | Read-only | The VLAN ID of the Single Spanning Tree VLAN if Single Spanning Tree was enabled. This object |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer32 | | returns zero if Single Spanning Tree was disabled. |
| snSwBroadcastLimit2 brcdlp.1.1.3.1.45 Syntax: Unsigned32 | Read-write | Limit the number of broadcast packets to forward out of the switch ports. This object specifies the number of broadcast packets per second. Default value: 4294967295 |

Fabric drop count statistics table

The MLX Series, MLX Series, and XMR Series are provided with Simple Network Management Protocol (SNMP) Management Information Base (MIB) support for the fabric drop count. The fabric drop counters are maintained by the system and are updated automatically whenever there is a packet drop at switch fabric level.

The brcdFabricStatsTable contains information of Switch Fabric Module (SFM) related information are specific to the MLX Series, MLX Series, and XMR Series devices.

NOTE

The following brcdFabricStatsTable is supported only on the High-speed SFM (HSFM) cards. The table support GET and GET-NEXT requests.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------|
| brcdFabricStatsTable brcdlp.1.1.13.1.1.1 | None | The brcdFabricStatsTable contains information of various SFM counters supported by the system. |
| brcdFabricSfmId brcdlp.1.1.13.1.1.1.1 Syntax: Unsigned32 | None | The SFM ID. |
| brcdFabricSfmFeld brcdlp.1.1.13.1.1.1.2 Syntax: Unsigned32 | None | The Fabric Element (FE) ID. |
| brcdFabricDropMAC0Count brcdlp.1.1.13.1.1.1.3 Syntax: Counter32 | Read-only | The number of packets dropped for MAC0 (links 0 through 23) link group. |
| brcdFabricDropMAC1Count brcdlp.1.1.13.1.1.1.4 Syntax: Counter32 | Read-only | The number of packets dropped for MAC1 (links 24 through 47) link group. |
| brcdFabricDropMAC2Count brcdlp.1.1.13.1.1.1.5 Syntax: Counter32 | Read-only | The number of packets dropped for MAC2 (links 48 through 71) link group. |
| brcdFabricDropMAC3Count brcdlp.1.1.13.1.1.1.6 Syntax: Counter32 | Read-only | The number of packets dropped for MAC3 (links 72 through 95) link group. |

Switch Port Information Group

- Switch port information..... 177

Switch port information

The following table contains information about the switch port groups.

The snSwIInfoTable, which is indexed by ifIndex port format, replaces the snSwPortInfoTable, which is indexed by a proprietary port format.

NOTE

The objects snSwIStatsInFrames through snSwIStatsOutKiloBitsPerSec use common application programming interface (API) for LP port statistics.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snSwIInfoTable brcdlp.1.1.3.3.5 | None | The switch port information table. |
| snSwIInfoPortNum brcdlp.1.1.3.3.5.1.1 Syntax: InterfaceIndex | Read-only | Shows the port or interface index. |
| snSwIInfoMonitorMode brcdlp.1.1.3.3.5.1.2 Syntax: Integer | Read-write | This object is deprecated by snPortMonitorTable. |
| snSwIInfoMirrorPorts brcdlp.1.1.3.3.5.1.3 Syntax: Integer | Read-write | Contains a list of port or interface indexes (ifindex) that mirror this interface when monitoring is enabled. |
| snSwIInfoTagMode brcdlp.1.1.3.3.5.1.4 Syntax: Integer | Read-write | Indicates if the port has an 802.1q tag: <ul style="list-style-type: none">tagged(1) - Ports can have multiple VLAN IDs because these ports can be members of more than one VLAN.untagged(2) - There is only one VLAN ID per port.dual(3) - Dual mode is associated with a VLAN ID snSwIvlanId; dual mode with snSwIvlanId zero disables the dual mode. |
| snSwIInfoTagType brcdlp.1.1.3.3.5.1.5 Syntax: Integer32 | Read-write | Indicates the IEEE802.1q tag type of an interface. The tag type is embedded in the two octets in the length or type field of an Ethernet packet. It specifies that the two octets after the length or type field in an Ethernet packet is the tag value. Default value: 33024 |
| snSwIInfoChnMode brcdlp.1.1.3.3.5.1.6 Syntax: Integer | Read-write | Indicates if the port operates in half- or full-duplex mode: <ul style="list-style-type: none">none(0) - This is not used. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> halfDuplex(1) - Half-duplex mode. Available only for 10/100 Mbps ports. fullDuplex(2) - Full-duplex mode. 100BaseFx, 1000BaseSx, and 1000BaseLx ports operate only at fullDuplex(2). <p>The read-back channel status from hardware are as follows:</p> <ul style="list-style-type: none"> halfDuplex(1) - Half-duplex mode. fullDuplex(2) - Full-duplex mode. <p>The port media type (expansion or regular) and port link type (trunk or feeder) determine the value of this object. The port cannot be set to half-duplex mode if the port connect mode is m200e(4). However, the value of this parameter may be automatically set whenever the expansion port is connected, for example, in the case of a cascade-connecting device.</p> |
| snSwIfInfoSpeed brcdlp.1.1.3.3.5.1.7 Syntax: Integer | Read-write | <p>Indicates the speed configuration for a port:</p> <ul style="list-style-type: none"> none(0) - Link down or no traffic. sAutoSense(1) - Auto-sensing 10 or 100 Mbits. s10M(2) - 10 Mbits per second. s100M(3) - 100 Mbits per second. s1G(4) - 1 Gbits per second. s1GM(5) - 1 Gbits per second master. s155M(6) - 155 Mbits per second (ATM) (for expansion board only). s10G(7) - 10 Gbits per second. s622M(8) - OC12 - 622 Mbits per second. (XMR Series, MLX Series, and MLX Series.) s2488M(9) - OC48 - 2.488 Gbits per second. (XMR Series, MLX Series, and MLX Series.) s9953M(10) - OC192 - 9.953 Gbits per second. (XMR Series, MLX Series, and MLX Series.) s16G(11) - 16 Gbits per second. s100G(12) - 100 Gbits per second. s40G(13) - 40 Gbits per second. S2500M(14) - 2.5 Gbits per second. <p>The read-back hardware status are the following:</p> <ul style="list-style-type: none"> none(0) - Link down or no traffic. s10M(2) - 10 Mbits per second. s100M(3) - 100 Mbits per second. s1G(4) - 1G bits per second. s1GM(5) - 1G bits per second master. s155M(6) - 155 Mbits per second (ATM) (for expansion board only). |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • s10G(7) - 10 Gbits per second. • s622M(8) - OC12 - 622 Mbits per second. (XMR Series, MLX Series, and MLX Series.) • s2488M(9) - OC48 - 2.488 Gbits per second. (XMR Series, MLX Series, and MLX Series.) • s9953M(10) - OC192 - 9.953 Gbits per second. Interface ID to ifIndex lookup table

Given an interface ID, the interface ID to ifIndex lookup table returns the ifIndex value. The table is useful for mapping a known interface to the corresponding ifIndex value. The contents of the interface ID to ifIndex lookup table can only be accessed using GET operations. Unlike other SNMP tables, this table does not support GET-NEXT operations. If you try to walk the table using GET-NEXT, no rows will be returned.

| snInterfaceLookupIfIndex brcdlp.1.1.3.3.3.1.2 Syntax: Integer32 | Read-only | Shows the interface in the ifIndex format. |

ifIndex to interface ID lookup table

The ifIndex to interface ID lookup table maps ifindex values to the interface ID lookup table. If the table provides an ifIndex, this table returns the interface ID value.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snIfIndexLookupTable brcdlp.1.1.3.3.4 | None | The ifIndex to interface ID lookup table. |
| snIfIndexLookupIfIndex brcdlp.1.1.3.3.4.1.1 Syntax: Integer32 | Read-only | Shows the interface in the ifIndex format. |
| snIfIndexLookupInterfaceId brcdlp.1.1.3.3.4.1.2 Syntax: InterfaceId | Read-only | <p>Shows the interface ID, which consists of the following:</p> <p>Octet 0 - Port type, which can be one of the following:</p> <ul style="list-style-type: none"> 1 - Ethernet 2 - POS 3 - ATM 4 - Virtual 5 - Loopback 6 - GRE Tunnel 7 - ATM Subif 8 - MPLS Tunnel 9 - ATM PVC 10 - Management 11 - Trunk 12 - IP Tunnel (for IP tunnels, except MPLS) <p>This value also applies to 6 - 4 tunnels in the Extreme Netiron devices.</p> |

ifIndex to optical parameters table

If the table provides an ifIndex, the ifIndex to optical parameters table returns the optical parameters for the ifIndex.

NOTE

The following objects provide information for POS and Ethernet optical monitoring. They are equivalent to the output of the **show optics** command.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfOpticalMonitoringInfoTable brcdlp.1.1.3.3.6 | None | This table lists the instrumented parameters of all optical interfaces. |
| snlfOpticalMonitoringTemperature brcdlp.1.1.3.3.6.1.1 Syntax: Display string | Read-only | <p>This object holds the value of the transmitter laser diode temperature for the interface. This object indicates the health of the transmitter. The format is xxx.yyyy C (Celcius), followed by whether the measured value is normal, high or low alarm, or high or low warning.</p> <p>For 100G LR4 and LR10 optic, this object returns the average temperature for all the lanes.</p> |
| snlfOpticalMonitoringTxPower brcdlp.1.1.3.3.6.1.2 Syntax: Display string | Read-only | <p>This object holds the value of the transmitter optical signal power for the interface, measured in dBm, followed by whether this is a normal value, or high or low warning or alarm.</p> <p>For 100G LR4 and LR10 optic, this object returns the aggregated Tx power for all the lanes.</p> |
| snlfOpticalMonitoringRxPower brcdlp.1.1.3.3.6.1.3 Syntax: Display string | Read-only | <p>This object holds the value of the receiver optical signal power for the interface, measured in dBm, followed by whether this is a normal value, high or low warning, or alarm.</p> |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | For 100G LR4 and LR10 optic, this object returns the aggregated Rx power for all the lanes. |
| snlfOpticalMonitoringTxBiasCurrent brcdlp.1.1.3.3.6.1.4 Syntax: Display string | Read-only | The Tx bias current. It is measured in mA, and is followed by whether this is a normal value, high or low warning, or alarm. For 100G LR4 and LR10 optic, this object returns the aggregated Tx bias current for all the lanes. |

The following table is introduced to display the Tx and Rx Power status and its value in units of MicroWatt.

TABLE 5 snlfOpticalMonitoring2Table

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfOpticalMonitoring2Table brcdlp.1.1.3.3.12 | None | This table lists the instrumented parameters of all optical interfaces. It augments snlfOpticalMonitoringInfoTable for displaying the Tx and Rx power status and the Tx Power and Rx Power value in units of microwatt. |
| snlfOpticalMonitoring2TxPowerStatus brcdlp.1.1.3.3.12.1.1 Syntax: Integer | Read-only | This object holds the status of the transmitter optical signal power for the interface indicating whether this is normal or an alarm is present. |
| snlfOpticalMonitoring2TxPowerVal brcdlp.1.1.3.3.12.1.2 Syntax: Unsigned32 | Read-only | This object holds the value of the transmitter optical signal power for the interface, measured in microWatt. For 100G LR4 and LR10 optic, this object returns the aggregated Tx power for all the lanes. |
| snlfOpticalMonitoring2RxPowerStatus brcdlp.1.1.3.3.12.1.3 Syntax: Integer | Read-only | This object holds the status of the receiver optical signal power for the interface, indicating whether this is a normal value or an alarm. |
| snlfOpticalMonitoring2RxPowerVal brcdlp.1.1.3.3.12.1.4 Syntax: Unsigned 32 | Read-only | This object holds the value of the receiver optical signal power for the interface, measured in microWatt. For 100G LR4 and LR10 optic, this object returns the aggregated Rx Power for all the lanes. |

Optical lane monitoring table

The following table objects display the optical parameters table per lane for 100G of type LR4, LR10, ER4, SR4, SR10, CWDM4, and 40G of type LR4 and SR4 is supported.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfOpticalLaneMonitoringTable brcdlp.1.1.3.3.10 | None | This table lists the instrumented parameters of all lanes within a 40G optic of type SR4 and LR4, 100G optic of type LR4 and LR10. The LR4 and SR4 have 4 lanes per optic and LR10 has 10 lanes per optic. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfOpticalLaneMonitoringLane brcdlp.1.1.3.3.10.1.1 Syntax: Unsigned32 | None | This object is the lane number of the 40G and 100G optic. LR4 and SR4 have 4 lanes per optic and LR10 has 10 lanes per optic. |
| snlfOpticalLaneMonitoringTemperature brcdlp.1.1.3.3.10.1.2 Syntax: DisplayString | Read-only | This object holds the value of the transmitter laser diode temperature for the lane in the interface. Indicates the health of the transmitter. The format is xxx.yyyy C (Celsius), followed by whether the measured value is normal, high/low alarm, or high/low warning. |
| snlfOpticalLaneMonitoringTxPower brcdlp.1.1.3.3.10.1.3 Syntax: DisplayString | Read-only | This object holds the value of the transmitter optical signal power for the lane in the interface, measured in dBm, followed by whether this is a normal value, or high or low warning or alarm. |
| snlfOpticalLaneMonitoringRxPower brcdlp.1.1.3.3.10.1.4 Syntax: DisplayString | Read-only | This object holds the value of the receiver optical signal power for the lane in the interface, measured in dBm, followed by whether this is a normal value, or high/low warning or alarm. |
| snlfOpticalLaneMonitoringTxBiasCurrent brcdlp.1.1.3.3.10.1.5 Syntax: DisplayString | Read-only | The Tx Bias Current. It is measured in mA, and is followed by whether this is a normal value, or high/low warning or alarm. |

The following table is introduced to display the Tx and Rx Power status and its value in units of MicroWatt.

TABLE 6 snlfOpticalLaneMonitoring2Table

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfOpticalLaneMonitoring2Table brcdlp.1.1.3.3.13 | None | This table lists the instrumented parameters of all lanes within a 40G Optic of type SR4 and LR4, 100G optic of type LR4 and LR10. The LR4 and SR4 have 4 lanes per optic and LR10 has 10 lanes per optic. It augments snlfOpticalLaneMonitoringTable for displaying the Tx and Rx power status and the Tx Power and Rx Power value in units of Microwatt. |
| snlfOpticalLaneMonitoring2TxPowerStatus brcdlp.1.1.3.3.13.1.1 Syntax: Integer | Read-only | This object holds the status of the transmitter optical signal power for the lane in the interface, indicating whether this is normal or an alarm is present. <ul style="list-style-type: none"> • notSupported(1) • notApplicable(2) • highAlarm(3) • highWarn(4) • normal(5) • lowWarn(6) • lowAlarm(7) |
| snlfOpticalLaneMonitoring2TxPowerVal brcdlp.1.1.3.3.13.1.2 Syntax: Unsigned32 | Read-only | This object holds the value of the transmitter optical signal power for the lane in the interface, measured in MicroWatt. |

TABLE 6 snlfOpticalLaneMonitoring2Table (continued)

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfOpticalLaneMonitoring2RxPowerStatus brcdlp.1.1.3.3.13.1.3 Syntax: Integer | Read-only | This object holds the status of the receiver optical signal power for the lane in the interface, indicating whether this is normal or an alarm is present. <ul style="list-style-type: none"> • notSupported(1) • notApplicable(2) • highAlarm(3) • highWarn(4) • normal(5) • lowWarn(6) • lowAlarm(7) |
| snlfOpticalLaneMonitoring2RxPowerVal brcdlp.1.1.3.3.13.1.4 Syntax: Unsigned32 | Read-only | This object holds the value of the receiver optical signal power for the lane in the interface, measured in MicroWatt. |

Interface media information table

The following table shows the information of the media device installed in the physical ports.

These objects retrieve information from the output of the **show media** command.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlfMediaInfoTable brcdlp.1.1.3.3.9 | None | The information of the media device (SFP/XFP/ Copper) installed in the physical port. Only the ifIndices of Ethernet ports that are associated with the operational cards are included in this table. |
| snlfMediaType brcdlp.1.1.3.3.9.1.1 Syntax: Display string | Read-only | The type of the media installed in the physical port. |
| snlfMediaVendorName brcdlp.1.1.3.3.9.1.2 Syntax: Display string | Read-only | The media vendor name (full name of the corporation). |
| snlfMediaVersion brcdlp.1.1.3.3.9.1.3 Syntax: Display string | Read-only | The media vendor product version number. |
| snlfMediaPartNumber brcdlp.1.1.3.3.9.1.4 Syntax: Display string | Read-only | The media vendor part number. |
| snlfMediaSerialNumber brcdlp.1.1.3.3.9.1.5 Syntax: Display string | Read-only | The vendor serial number of the media device. |

Loopback interface configuration table

The following table lists the objects that are supported on the MLX Series, MLX Series, and XMR Series devices.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snLoopbackIntfConfigTable brcdlp.1.2.13.1 | None | The loopback interface configuration table. |
| snLoopbackIntfConfigPortIndex brcdlp.1.2.13.1.1.1 Syntax: Integer | Read-only | Shows the port index for a loopback interface configuration entry. There can be up to eight entries in this table. Valid values: 1 - 64 |
| snLoopbackIntfMode brcdlp.1.2.13.1.1.2 Syntax: Integer | Read-write | Indicates if loopback interface is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snLoopbackIntfRowStatus brcdlp.1.2.13.1.1.3 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written are: <ul style="list-style-type: none">• delete(3) - Deletes the row.• create(4) - Creates a new row.• modify(5) - Modifies an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row.• invalid(1) - Row is inoperative.• valid(2) - Row exists and is valid. |

CAM Statistics

| | |
|--------------------------------------|-----|
| • CAM profile | 195 |
| • CAM usage for Layer 3 traffic..... | 195 |
| • CAM usage for Layer 2 traffic..... | 196 |
| • CAM usage session table..... | 197 |
| • CAM usage other table..... | 198 |

CAM profile

The following object identifies CAM partition profiles. Each profile adjusts the partitions to optimize the device for corresponding applications.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snCamProfile brcdlp.1.14.1.1.1.1 Syntax: Integer | Read-only | <p>Identifies the CAM partition profile. Each profile adjusts the partitions to optimize the device for corresponding applications.</p> <p>Displays one of the following:</p> <ul style="list-style-type: none">• default(1)• ipv4(2)• ipv4Ipv6(3)• ipv4Ipv6(4)• ipv4Vpls(5)• ipv4Vpn(6)• ipv6(7)• l2Metro(8)• l2Metro2(9)• mplsL3vpn(10)• mplsL3vpn2(11)• mplsVpls(12)• mplsVpls2(13)• mplsVpnVpls(14)• multiService(15)• multiService2(16)• multiService3(17)• multiService4(18)• multiService5(19)• multiService6(20)• telemetry1(21) |

CAM usage for Layer 3 traffic

The following table contains information about the CAM usage on the device by Layer 3 traffic.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snCamUsageL3Table brcdlp.1.14.1.1.2.1 | None | The CAM usage table for Layer 3 traffic. |
| snCamUsageL3Slot brcdlp.1.14.1.1.2.1.1.1 Syntax: Unsigned32 | None | A number that uniquely identifies an interface module on the device. |
| snCamUsageL3Processor brcdlp.1.14.1.1.2.1.1.2 Syntax: Unsigned32 | None | A number which uniquely identifies the network processor of the interface module identified by the CAM usage for Layer 3 traffic object. |
| snCamUsageL3Type brcdlp.1.14.1.1.2.1.1.3 Syntax: Integer | None | Identifies the type of Layer 3 traffic passing through the network processor: <ul style="list-style-type: none"> • ipv4(1) • ipv6(2) • ipv4vpn(3) • ipv6vpn(4) |
| snCamUsageL3Supernet brcdlp.1.14.1.1.2.1.1.4 Syntax: Unsigned32 | None | Identifies the supernet for the Layer 3 type traffic. It provides information for the longest match lookup. For example: <ul style="list-style-type: none"> • 0 - All the bits of an IP address will be matched. • 1 - All but the lowest bit in an IP address will be matched. Valid Values: <ul style="list-style-type: none"> • IPv4 and IPv4VPN (0 - 32), where a value of 32 indicates the entry is the total of other supernets indexed by [0..31]. • IPv6 (0 - 10), where a value of 10 indicates the entry is the total of other Supernets indexed by [0..9]. |
| snCamUsageL3Size brcdlp.1.14.1.1.2.1.1.5 Syntax: Unsigned32 | Read-only | The effective CAM size by the Layer 3 traffic: <ul style="list-style-type: none"> • IPv4 traffic - Each unit is 4 bytes. • IPv4vpn traffic - Each unit is 8 bytes. • IPv6 traffic - Each unit is 16 bytes. |
| snCamUsageL3Free brcdlp.1.14.1.1.2.1.1.6 Syntax: Gauge32 | Read-only | The amount of CAM currently available by the Layer 3 traffic entry: <ul style="list-style-type: none"> • IPv4 traffic - each unit is 4 bytes. • IPv4vpn traffic - each unit is 8 bytes. • IPv6 traffic - each unit is 16 bytes. |
| snCamUsageL3UsedPercent brcdlp.1.14.1.1.2.1.1.7 Syntax: Percent | Read-only | The percentage of CAM currently being used by the Layer 3 traffic. |

CAM usage for Layer 2 traffic

The following table contains information about the CAM usage on the device by Layer 2 traffic.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snCamUsageL2Table brcdlp.1.14.1.1.2.2 | None | The CAM usage table for Layer 2 traffic. |
| snCamUsageL2Slot brcdlp.1.14.1.1.2.2.1.1 Syntax: Unsigned32 | None | A number that uniquely identifies an interface module on the device. |
| snCamUsageL2Processor brcdlp.1.14.1.1.2.2.1.2 Syntax: Unsigned32 | None | A number which uniquely identifies the network processor of the interface module identified by the CAM usage for Layer 2 traffic object. |
| snCamUsageL2Type brcdlp.1.14.1.1.2.2.1.3 Syntax: Integer | None | Identifies the type of Layer 2 traffic passing through the network processor: <ul style="list-style-type: none"> • forwarding(1) • protocol(2) • flooding(3) • total(4) • portBUMRL(5) |
| snCamUsageL2Size brcdlp.1.14.1.1.2.2.1.4 Syntax: Unsigned32 | Read-only | Indicates the effective CAM size for this Layer 2 traffic entry. Each unit is 8 bytes. |
| snCamUsageL2Free brcdlp.1.14.1.1.2.2.1.5 Syntax: Gauge32 | Read-only | Shows the amount of CAM currently available for this Layer 2 traffic. Each unit is 8 bytes. |
| snCamUsageL2UsedPercent brcdlp.1.14.1.1.2.2.1.6 Syntax: Percent | Read-only | Shows the percentage of CAM currently being used for this Layer 2 traffic. |

CAM usage session table

The following table contains information about the CAM usage on the device by sessions traffic.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snCamUsageSessionTable brcdlp.1.14.1.1.2.3 | None | The CAM usage table for Layer 3 traffic. |
| snCamUsageSessionSlot brcdlp.1.14.1.1.2.3.1.1 Syntax: Unsigned32 | None | A number that uniquely identifies an interface module on the device. |
| snCamUsageSessionProcessor brcdlp.1.14.1.1.2.3.1.2 Syntax: Unsigned32 | None | A number which uniquely identifies the network processor on the interface module identified by the CAM usage session table object. |
| snCamUsageSessionType brcdlp.1.14.1.1.2.3.1.3 Syntax: Integer | None | Identifies the type of session: <ul style="list-style-type: none"> • ipv4Multicast(1) • ipv4andMacReceiveAcl(2) • ipv4andMacRuleAcl(3) • ipv4andMacTotal(4) • ipv4andMacOut(5) • ipv6Multicast(6) |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • ipv6ReceiveAcl(7) • ipv6RuleAcl(8) • ipv6Total(9) • ipv6Out(10) • labelOut(11) • ipv4SrcGuardDenial(12) • ipv4SrcGuardPermit(13) • internalForwardingLookup(14) • l2OpenFlowCatchAll(27) • l2OpenFlowUnprotected(28) • l2OpenFlowNormal(29) • l2OpenFlowProtected(30) • ipv4OpenFlowCatchAll(31) • ipv4OpenFlowUnprotected(32) • ipv4OpenFlowNormal(33) • ipv4OpenFlowProtected(34) • broadcastAcl(35) • macTotal(36) • ipv4ReceiveAcl(37) - Supported only on the Extreme Netiron devices. • ipv4RuleAcl(38) - Supported only on the Extreme Netiron devices. • ipv4Total(39) - Supported only on the Extreme Netiron devices. |
| snCamUsageSessionSize brcdlp.1.14.1.1.2.3.1.4 Syntax: Unsigned32 | Read-only | Identifies the effective CAM size for this session traffic entry: <ul style="list-style-type: none"> • IPv4 sessions - Each unit is 16 bytes. • IPv6 sessions - Each unit is 64 bytes. |
| snCamUsageSessionFree brcdlp.1.14.1.1.2.3.1.5 Syntax: Gauge32 | Read-only | The amount of CAM currently available for this session: <ul style="list-style-type: none"> • IPv4 sessions - Each unit is 16 bytes. • IPv6 sessions - Each unit is 64 bytes. |
| snCamUsageSessionUsedPercent brcdlp.1.14.1.1.2.3.1.6 Syntax: Percent | Read-only | The percentage of CAM currently being used by this session. |

CAM usage other table

The following table contains information about the CAM usage on the device by traffic other than Layer 3, Layer 2, and Sessions.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------------|
| snCamUsageOtherTable brcdlp.1.14.1.1.2.4 | None | CAM usage table for traffic types other than Layer 3, Layer 2, and Sessions traffic. |
| snCamUsageOtherSlot brcdlp.1.14.1.1.2.4.1.1 Syntax: Unsigned32 | None | A number that uniquely identifies an interface module on the device. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snCamUsageOtherProcessor brcdlp.1.14.1.1.2.4.1.2 Syntax: Unsigned32 | None | A number which uniquely identifies the network processor on the interface module identified by the CAM usage other table object. |
| snCamUsageOtherType brcdlp.1.14.1.1.2.4.1.3 Syntax: Integer | None | Identifies the traffic type: <ul style="list-style-type: none"> • gre(1) • multicastVpls(2) |
| snCamUsageOtherSize brcdlp.1.14.1.1.2.4.1.4 Syntax: Unsigned32 | Read-only | Indicates the effective CAM size for this Other traffic type: <ul style="list-style-type: none"> • GRE - Each unit is 8 bytes. • Multicast VPLS - Each unit is 16 bytes. |
| snCamUsageOtherFree brcdlp.1.14.1.1.2.4.1.5 Syntax: Gauge32 | Read-only | Indicates the amount of CAM currently available to this traffic type: <ul style="list-style-type: none"> • GRE: each unit is 8 bytes • Multicast VPLS: each unit is 16 bytes |
| snCamUsageOtherUsedPercent brcdlp.1.14.1.1.2.4.1.6 Syntax: Percent | Read-only | Indicates the percentage of CAM currently being used for this traffic type. |

System DRAM

| | |
|-------------------------------------------|-----|
| • System DRAM information group..... | 201 |
| • System temperature table..... | 201 |
| • System temperature threshold table..... | 202 |
| • Software licensing..... | 202 |

System DRAM information group

The system DRAM information group displays memory utilization statistics for protocols that use dynamic memory allocation. It shows the same information that the **show memory** command displays.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------|
| snAgSystemDRAM brcdlp.1.1.2.12.4 | None | The system DRAM information groups. |
| snAgSystemDRAMUtil brcdlp.1.1.2.12.4.1 Syntax: Integer | Read-only | The amount of system dynamic memory that is currently utilized, in percent. This object replaces "snAgGblDynMemUtil". |
| snAgSystemDRAMTotal brcdlp.1.1.2.12.4.2 Syntax: Integer | Read-only | The total amount of system dynamic memory, in bytes. This object replaces "snAgGblDynMemTotal". |
| snAgSystemDRAMFree brcdlp.1.1.2.12.4.3 Syntax: Integer | Read-only | The amount of free system dynamic memory, in bytes. This object replaces "snAgGblDynMemFree". |

System temperature table

This section displays the SNMP MIB objects for temperature readings on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

. The system temperature table shows temperature reading information for each module's temperature sensor.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentTempTable brcdlp.1.1.2.13.1 | None | The table that displays the temperature reading for each module's temperature sensor. Note that temperature readings are displayed only for those modules that have temperature sensors. |
| snAgentTempSlotNum brcdlp.1.1.2.13.1.1.1 Syntax: Integer32 | None | The slot number of the module to which the temperature sensor is attached. |
| snAgentTempSensorId brcdlp.1.1.2.13.1.1.2 Syntax: Integer32 | None | The identification number of the module's temperature sensor. The following applies to the Management modules: <ul style="list-style-type: none">Sensor 1 - The intake temperature. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> Sensor 2 - The exhaust-side temperature. |
| snAgentTempSensorDescr brcdlp.1.1.2.13.1.1.3 Syntax: Display string | Read-only | The description of the temperature sensor. |
| snAgentTempValue brcdlp.1.1.2.13.1.1.4 Syntax: Integer | Read-only | <p>The temperature reading for the temperature sensor. This value is displayed in units of 0.5° Celsius.</p> <p>Valid values: 110 - 250</p> |

System temperature threshold table

The following table lists the temperature levels of the fan settings.

NOTE

The new MP card MR2 supports all the objects in the System temperature threshold table. The MP-MR2 is supported only on the MLX Series, XMR Series, and MLX Series devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgentTempThresholdTable brcdlp.1.1.2.13.2 | None | <p>The table lists the temperature threshold levels for four speeds of fan settings:</p> <ul style="list-style-type: none"> low medium medium-high high |
| snAgentTempThresholdModule brcdlp.1.1.2.13.2.1.1 Syntax: Integer | None | The module in the system for which threshold levels represented by this row are applicable. |
| snAgentTempThresholdLevel brcdlp.1.1.2.13.2.1.2 Syntax: Integer | None | The temperature threshold level of the module for which threshold levels represented by this row are applicable. |
| snAgentTempThresholdHighValue brcdlp.1.1.2.13.2.1.3 Syntax: Integer | Read-write | The high value for the temperature threshold, above which the fans would need to operate at the next higher speed. If the value reaches more than the high threshold value for the 'high' level, the module will be shut down. |
| snAgentTempThresholdLowValue brcdlp.1.1.2.13.2.1.4 Syntax: Integer | Read-write | The low value for the temperature threshold, below which the fans would need to operate at the next lower speed. This value is not applicable for the 'low' level, as there are no more lower speeds. |

Software licensing

The following table contains information about the software licenses configured on the device.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryLicenseTable brcdlp.1.1.2.15.1 | None | A list of licenses maintained by the license subsystem. |
| fdryLicensePackageName brcdlp.1.1.2.15.1.1.1 Syntax: DisplayString | None | The name of the package, whose license information, this entry displays. |
| fdryLicenseLid brcdlp.1.1.2.15.1.1.2 Syntax: DisplayString | None | The License ID (LID) of the chassis or the line module for which this entry displays license information. |
| fdryLicenseHash brcdlp.1.1.2.15.1.1.3 Syntax: DisplayString | None | A unique hash for identifying a license entry in the system. This helps traverse through the entries with the same package name and LID. |
| fdryLicenseType brcdlp.1.1.2.15.1.1.4 Syntax: Integer | Read-only | The type of the license, which can be either normal or trial. |
| fdryLicensePrecedence brcdlp.1.1.2.15.1.1.5 Syntax: Unsigned32 | Read-only | Defines the priority of a particular trial license among those having the same package name and LID. This is primarily used for determining which license to use when there are many trial and normal licenses with the same package name and LID. |
| fdryLicenseTrialDays brcdlp.1.1.2.15.1.1.6 Syntax: Unsigned32 | Read-only | The number of trial days for the license, if it is a trial license. Otherwise, the value has no meaning for normal licenses and read as 0 on a Get operation. |
| fdryLicenseTrialTimeElapsed brcdlp.1.1.2.15.1.1.7 Syntax: Unsigned32 | Read-only | The cumulative number of hours used for this trial license. This counts all the usages of the trial license. For a normal license, this is 0. |
| fdryLicenseTrialTimeLeft brcdlp.1.1.2.15.1.1.8 Syntax: Unsigned32 | Read-only | The number of hours left for the trial license. This is derived from the total number of hours and the cumulative number of hours used. For a normal license, this is 0. |
| fdryLicenseTrialState brcdlp.1.1.2.15.1.1.9 Syntax: Integer | Read-only | This indicates the state of the trial license: <ul style="list-style-type: none"> • Invalid - The license is not valid. • Unused - The license is never used. • Active - The license has been used at least once. • Expired - The license has expired and can no longer be used. |
| fdryLicenseVendorInfo brcdlp.1.1.2.15.1.1.10 Syntax: DisplayString | Read-only | This is the Extreme-specific package data which is an octet string. This contains encoded information of license-specific information such as package bit mask, number of ports and so on. |
| fdryLicenseSlot brcdlp.1.1.2.15.1.1.11 Syntax: Integer32 | Read-only | This indicates the slot number of the module to which the license belongs. There is a one-to-one mapping between LID and slot number, as each module has a unique LID and can be present in only one slot. |

License information

The following object indicates the feature (license) installed on the device.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryLicensedFeatureInfo brcdlp.1.1.2.15.2 Syntax: Bits NOTE This object is supported only on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices. | Read-only | Indicates the feature or package for which the license has been enabled on the device: <ul style="list-style-type: none"> • ospf(0) • isis(1) • bgp(2) • mpls(3) |

Package upgrade operation

The following objects indicate the package upgrade process on all the Extreme Netiron devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdSwPackageName brcdlp.1.1.2.16.1.1.1 Syntax: DisplayString | Read-write | Specifies the name of the release package file or the manifest file, which includes the path that is currently associated with the system. When the object is not used, the value is a zero(0) length string. |
| brcdSwPackageLoad brcdlp.1.1.2.16.1.1.2 Syntax: Integer | Read-write | Specifies the action object to upgrade the system using a release package. The value none(1) specifies the system comes up and not used for SET request. The following values download the release package from a TFTP server and upgrade the system: <ul style="list-style-type: none"> • tftpToPrimary(2)—Installs both MP and LP application images to the primary code. • tftpToSecondary(3)—Installs both MP and LP application images to the secondary code. • tftpToMgmtModulePrimaryIntfModule Secondary(4)—Installs an MP application image to the primary code and an LP application image to the secondary code. • tftpToMgmtModuleSecondaryIntfModule Primary(5)—Installs an MP application image to the secondary code and an LP application image to the primary code. |
| brcdSwPackageLoadStatus brcdlp.1.1.2.16.1.1.3 Syntax: Integer | Read-only | Indicates the progress of the upgrade operation. The operation starts with the "normal(1)" value when there is no outstanding upgrade process. When an upgrade process is initiated, the operation is transitioned to the "started(2)" value and proceeds further. When the upgrade |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>process stops, whether the operation is successful or with errors, it returns to the "normal(1)" value. Finally, the brcdSwPackageLoadResultTable is populated with the summary of the upgrade process.</p> <ul style="list-style-type: none"> • normal(1) • started(2) • internalError(3) • manifestFileDownloadError(4) • manifestFileValidationErrors(5) • downloadingManagementModuleBoot(6) • downloadingManagementModuleMonitor(7) • downloadingManagementModuleApplication(8) • downloadingInterfaceModuleBoot(9) • downloadingInterfaceModuleMonitor(10) • downloadingInterfaceModuleApplication(11) • downloadingInterfaceModuleFpga(12) • downloadingFpgaMBridge(13) • downloadingFpgaSBridge(14) • downloadingFpgaHBridge(15) • upgradingManagementModuleBoot(16) • upgradingManagementModuleMonitor(17) • upgradingManagementModuleApplication(18) • upgradingInterfaceModuleBoot(19) • upgradingInterfaceModuleMonitor(20) • upgradingInterfaceModuleApplication(21) • upgradingInterfaceModuleFpga(22) • upgradingFpgaMBridge(23) • upgradingFpgaSBridge(24) • upgradingFpgaHBridge(25) |
| brcdSwPackageUpgradeAllImages brcdlp.1.1.2.16.1.1.4 Syntax: TruthVal | Read-write | <p>Specifies all images upgrade.</p> <ul style="list-style-type: none"> • true(1) - The upgrade sequence includes MP FPGA images (MBRIDGE/MBRIDGE32 and SBRIDGE/HSBRIDGE). • false(2) - Upgrades only MP and LP monitor images, MP and LP application images, and LP bundled FPGA images for the XMR Series and the MLX Series. For CES 2000 Series and CER 2000 Series, only the monitor, application, and FPGA |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|----------------------------------------------------------------------------------------|
| | | images are upgraded. Returns false(2), for a read-only operation. Default: false(2) |

Package upgrade result table

The following table contains the objects that indicate the summary of the last upgrade operation completed on the Extreme NetIron devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdSwPackageLoadResultTable brcdlp.1.1.2.16.1.5 | None | Contains the summary of the upgrade operation. |
| brcdSwPackageUpgradeResultIndex brcdlp.1.1.2.16.1.5.1.1 Syntax: Unsigned32 | None | Specifies the sequential index or upgrade step. |
| brcdSwPackageUpgradeResultImageType brcdlp.1.1.2.16.1.5.1.2 Syntax: BrcdImageType | Read-only | Specifies the associated image type for the step of the upgrade process. |
| brcdSwPackageUpgradeResultStatus brcdlp.1.1.2.16.1.5.1.3 Syntax: Integer | Read-only | Indicates the upgrade status for the particular image upgrade. |
| brcdSwPackageUpgradeResultTimeStamp brcdlp.1.1.2.16.1.5.1.4 Syntax: TimeStamp | Read-only | Specifies the time stamp when the upgrade step is performed. |
| brcdSwPackageUpgradeResultDescription brcdlp.1.1.2.16.1.5.1.5 Syntax: DisplayString | Read-only | Contains the summary description for the particular image upgrade. NOTE The result description is empty when brcdSwPackageLoadResultStatus is "ok". |
| brcdSwPackageUpgradeSkipVersionCheck brcdlp.1.1.2.16.1.5.1.6 Syntax: TruthValue NOTE This object is not supported on the CES 2000 Series and CER 2000 Series devices. | Read-write | Skips the version comparison of the FPGA images. By default, performs the version comparison between the image version in the manifest file with the file installed in the system. <ul style="list-style-type: none"> • true - Forces the system to upgrade the images by skipping the version check • false - Default value NOTE This object is not supported in LP Auto-upgrade modules. |

Interface module auto-upgrade objects

The following objects are for configuring the interface module auto-upgrade process for the Extreme NetIron devices.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdSwIntfModAutoUpgradeMode brcdlp.1.1.2.16.1.2.1 Syntax: Integer | Read-write | Specifies the mode of an LP auto-upgrade. The following values can be written: <ul style="list-style-type: none"> • unknown(1) • disabled(2) • tftp(3) • slot1(4) • slot2(5) |
| brcdSwIntfModAutoUpgradeTftpAddrType brcdlp.1.1.2.16.1.2.2 Syntax: InetAddressType | Read-write | Specifies the IP address type of a TFTP server. The following address types are supported: <ul style="list-style-type: none"> • ipv4(1) • ipv6(2) |
| brcdSwIntfModAutoUpgradeTftpAddr brcdlp.1.1.2.16.1.2.3 Syntax: InetAddress | Read-write | Specifies the IP address of a TFTP server for auto-upgrade. |
| brcdSwIntfModAutoUpgradeSrcPath brcdlp.1.1.2.16.1.2.4 Syntax: DisplayString | Read-write | Specifies the path to the topmost directory of the release package relative to the source. |
| brcdSwIntfModAutoUpgradeAllImages brcdlp.1.1.2.16.1.2.5 Syntax: TruthValue | Read-write | Specifies all images upgrade. <ul style="list-style-type: none"> • The upgrade sequence includes only the LP boot image, if set to true(1). • The default false(2), upgrades only the LP FPGA images. Returns false(2), for a read-only operation. This object is deprecated. SET operation is not supported and READ operation will return false(2). |

NTP MIB Definition

- NTP general group..... 209

NTP general group

You can configure Layer 2 and Layer 3 switches to consult SNTP servers for the current system time and date. As Layer 2 and Layer 3 switches do not retain time and date information across power cycles, using the SNTP feature alleviates the need to reconfigure time and date after a system reset.

The following objects provide information on the NTP server. These objects apply to all devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snNTPGeneral brcdlp.1.1.3.11.1 | None | Begins the NTP configuration objects. |
| snNTPTimeZone brcdlp.1.1.3.11.1.2 Syntax: Integer | Read-write | Time zone: <ul style="list-style-type: none">• alaska(0)• aleutian(1)• arizona(2)• central(3)• eastIndiana(4)• eastern(5)• hawaii(6)• michigan(7)• mountain(8)• pacific(9)• samoa(10)• gmtPlus1200(11)• gmtPlus1100(12)• gmtPlus1000(13)• gmtPlus0900(14)• gmtPlus0800(15)• gmtPlus0700(16)• gmtPlus0600(17)• gmtPlus0500(18)• gmtPlus0400(19)• gmtPlus0300(20)• gmtPlus0200(21)• gmtPlus0100(22)• gmt(23) - default• gmtMinus0100(24)• gmtMinus0200(25)• gmtMinus0300(26)• gmtMinus0400(27)• gmtMinus0500(28)• gmtMinus0600(29) |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> gmtMinus0700(30) gmtMinus0800(31) gmtMinus0900(32) gmtMinus1000(33) gmtMinus1100(34) gmtMinus1200(35) gmtPlus1130(36) gmtPlus1030(37) gmtPlus0930(38) gmtPlus0630(39) gmtPlus0530(40) gmtPlus0430(41) gmtPlus0330(42) gmtMinus0330(43) gmtMinus0830(44) gmtMinus0930(45) |
| snNTPSummerTimeEnable brcdlp.1.1.3.11.1.3 Syntax: Integer | Read-write | <p>Indicates if daylight saving time is enabled:</p> <ul style="list-style-type: none"> disabled(0) enabled(1) - Enables daylight saving time starting at 02:00:00 on the first Sunday in April and ending at 02:00:00 in last Sunday in October. <p>Default: disabled(0)</p> |
| snNTPSystemClock brcdlp.1.1.3.11.1.4 Syntax: Octet String | Read-write | <p>Shows the format of the system clock:</p> <ul style="list-style-type: none"> octet 0 - Seconds after the minute [0-60] octet 1 - Minutes after the hour [0-59] octet 2 - Hours since midnight [0-23] octet 3 - Day of the month [1-31] octet 4 - Months since January [0-11] octet 5 - Years since 1900 octet 6 - Days since Sunday [0-6] <p>Octets 0 to 5 must have valid values and Octet 6 must be set to 0. To disable the system clock set all octets to zero.</p> |

DNS2 MIB Definition

- DNS table.....[211](#)
- DNS address table.....[211](#)

DNS table

The table lists the IPv4 and IPv6 DNS service names for the Extreme devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryDns2DomainNameTable brcdlp.1.1.3.34.1.1 Syntax: Sequence of FdryDns2DomainNameTable | None | The DNS name table. |
| fdryDns2DomainNameIndex brcdlp.1.1.3.34.1.1.1.1 Syntax: Unsigned32 | None | The index to the DNS name table. |
| fdryDns2DomainNameAddrType brcdlp.1.1.3.34.1.1.1.2 Syntax: InetAddressType | Read-create | The DNS IP address type: <ul style="list-style-type: none">• ipv4(1)• ipv6(2) Default: ipv4(1) |
| fdryDns2DomainNameName brcdlp.1.1.3.34.1.1.1.3 Syntax: DisplayString | Read-create | The DNS domain name string. |
| fdryDns2DomainNameRowStatus brcdlp.1.1.3.34.1.1.1.4 Syntax: RowStatus | Read-create | This variable is used to create, modify, or delete a row in this table. When a row in this table is in active(1) state, no objects in that row can be modified except for this object. |

DNS address table

The address table lists the IPv4 and IPv6 DNS addresses. These objects apply to the Extreme devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|--------|-----------------------------------------------------------------------------------------------------------------------|
| fdryDnsServerTable brcdlp.1.1.3.34.2.1 Syntax: FdryDnsServerTable | None | The DNS address list table that lists the IPv4 and IPv6 DNS addresses. |
| fdryDnsServerAddrType brcdlp.1.1.3.34.2.1.1.1 Syntax: InetAddressType | None | The DNS IP address type: <ul style="list-style-type: none">• ipv4(1)• ipv6(2) Default: ipv4(1) |
| fdryDnsServerIndex brcdlp.1.1.3.34.2.1.1.2 Syntax: Unsigned32 | None | The index to the DNS address table. Up to four DNS IP addresses are supported for each IPv4 and IPv6 protocol. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryDnsServerAddr brcdlp.1.1.3.34.2.1.1.3 Syntax: InetAddress | Read-create | The DNS IP address. |
| fdryDnsServerRowStatus brcdlp.1.1.3.34.2.1.1.4 Syntax: RowStatus | Read-create | This variable is used to create, modify, or delete a row in this table. When a row in this table is in active(1) state, no objects in that row can be modified except for this object. |

Trace route group

| | |
|--------------------------------------------|-----|
| • Trace route group..... | 213 |
| • General trace route group..... | 213 |
| • Trace route result table..... | 214 |
| • IP prefix list table..... | 215 |
| • IP AS-Path access list string table..... | 216 |
| • IP community list string table..... | 217 |

Trace route group

This group uses the following method to detect routes used to reach a destination address.

1. The originating Layer 3 Switch sends a probe packet (a UDP packet) to the destination address with a time-to-live (TTL) value of 1.
2. The first Layer 3 Switch that receives this packet decrements the TTL, then drops the packet and returns a ICMP packet to the originator.
3. The originating Layer 3 Switch records the route in the [Trace route result table](#) on page 214.
4. The originating Layer 3 Switch sends a probe packet (a UDP packet) to the destination address with a TTL value of 2.
5. The second Layer 3 Switch that receives this packet decrements the TTL, then drops the packet and returns an ICMP packet to the originator.
6. The originating Layer 3 Switch records the route in [Trace route result table](#) on page 214.

This procedure is repeated until the destination is reached or the maximum TTL is reached.

General trace route group

The following objects define the trace route probe packet.

| Name, OID, and Syntax | Access | Description |
|---------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------|
| snRtIpTraceRouteGeneral brcdlp.1.2.2.10.1 | None | Beginning from Netiron 05.9.00 release, this MIB object supports VRF. |
| snRtIpTraceRouteTargetAddr brcdlp.1.2.2.10.1.1 | Read-write | Shows the target IP address of the trace route. Syntax: ipAddress |
| snRtIpTraceRouteMinTtl brcdlp.1.2.2.10.1.2 | Read-write | Indicates the minimum TTL value carried in the first probe packet. Valid values: 1 - 255 seconds Default: 1 second |
| snRtIpTraceRouteMaxTtl brcdlp.1.2.2.10.1.3 | Read-write | Indicates the maximum TTL value carried in the last probe packet. Valid values: 1 - 255 seconds. Default: 30 second |

| Name, OID, and Syntax | Access | Description |
|-----------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtlpTraceRouteTimeOut brcdlp.1.2.2.10.1.4 Syntax: Integer | Read-write | Indicates the number of seconds the Layer 3 Switch waits for a response from the probe packet (i.e. the ICMP packet) before timing out. Valid values: 1 - 120 seconds. Default: 2 seconds |
| snRtlpTraceRouteControl brcdlp.1.2.2.10.1.5 Syntax: Integer | Read-write | Indicates the progress of the trace route: <ul style="list-style-type: none">• start(1) - snRtlpTraceRouteDestAddr must have been initialized before start(1) can be written.• abort(2) - Stops the current trace route operation.• success(3) - The destination address is reached.• failure(4) - Either the destination address is not reach, trace route times out, or the ending TTL is reached before the operation is completed.• inProgress(5) - Trace route operation has started. Only "start" and "abort" are writable values; whereas, "success", "failure" and "inProgress" are read-only (or returned) values. The Trace route result table on page 214 contains the routes and target addresses. |

Trace route result table

This table contains the routes and the target addresses used in the trace route operation to reach the destination address.

| Name, OID, and Syntax | Access | Description |
|-------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| snRtlpTraceRouteResultTable brcdlp.1.2.2.10.2.1 | None | The trace route results table. |
| snRtlpTraceRouteResultIndex brcdlp.1.2.2.10.2.1.1.1 Syntax: Integer32 | Read-only | The index for an entry in the trace route results table. |
| snRtlpTraceRouteResultAddress brcdlp.1.2.2.10.2.1.1.2 Syntax: IpAddress | Read-only | Indicates the IP address of the Layer 3 Switch or the target IP address of the Layer 3 Switch. |
| snRtlpTraceRouteResultRoundTripTime1 brcdlp.1.2.2.10.2.1.1.3 Syntax: Time ticks | Read-only | Shows the round trip time between the transmission of the first probe packet and the received response of the ICMP packet. |
| snRtlpTraceRouteResultRoundTripTime2 brcdlp.1.2.2.10.2.1.1.4 Syntax: Time ticks | Read-only | Shows the round trip time between the transmission of the second probe and the received response of the ICMP packet. |

IP prefix list table

An IP prefix list specifies a list of networks. When you apply an IP prefix list to a neighbor, the Layer 3 Switch sends or receives only a route whose destination is in the IP prefix list. You can configure up to 100 prefix lists. The software interprets the prefix lists in sequential order, beginning with the lowest sequence number.

| Name, OID, and Syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlpPrefixListTable brcdlp.1.2.2.14 | None | IP prefix list table. |
| snlpPrefixListName brcdlp.1.2.2.14.1.1 Syntax: Octet String | Read-only | Specifies the name of the prefix list. This name can be used when applying the prefix list to a neighbor. It is an octet string; each character of the name is represented by one octet. There can be up to 32 octets for this name. |
| snlpPrefixListSequence brcdlp.1.2.2.14.1.2 Syntax: Integer32 | Read-only | Shows the sequence of an entry in the table. There can be up to 100 prefix list entries. If a sequence number is not specified, then entries are numbered in increments of 5, beginning with prefix list entry 5. Incoming or outgoing routes are matched against the entries in the IP prefix list in numerical order, beginning with the lowest sequence number. |
| snlpPrefixListDesc brcdlp.1.2.2.14.1.3 Syntax: Octet String | Read-write | Specifies the description of the prefix. This description is in an octet string; each character in the description is represented by one octet. There can be up to 80 octets in the description. |
| snlpPrefixListAction brcdlp.1.2.2.14.1.4 Syntax: Integer | Read-write | Indicates what to do with the route if it matches this entry: <ul style="list-style-type: none"> • deny(0) • permit(1) |
| snlpPrefixListAddr brcdlp.1.2.2.14.1.5 Syntax: IpAddress | Read-write | Shows the IP address of the prefix. |
| snlpPrefixListGeValue brcdlp.1.2.2.14.1.7 Syntax: Integer | Read-write | Specifies that the prefix is greater than the value of the IP prefix list table object. Valid values: 0 - 32 |
| snlpPrefixListLeValue brcdlp.1.2.2.14.1.8 Syntax: Integer | Read-write | Specifies that the prefix is less than the value of the IP prefix list table object. Valid values: 0 - 32 |
| NOTE | | |
| You can specify a range of length for prefixes that are more specific than the values for the IP prefix list table and IP prefix list table objects. The ge-value or le-value you specify must meet the following condition: <code>length < ge-value <= le-value <= 32</code> | | |
| If a value for IP prefix list table is specified, then the mask-length range is from the value of IP prefix list table to 32. | | |
| If a value for IP prefix list table is specified, then mask-length range is from length to the value of IP prefix list table . | | |
| If no value is specified for either the less than or greater than objects, then routes must exactly match the prefixes on the list. | | |
| snlpPrefixListRowStatus brcdlp.1.2.2.14.1.9 Syntax: Integer | Read-write | Controls the management of the table rows. The values that can be written are: <ul style="list-style-type: none"> • delete(3) - Deletes the row • create(4) - Creates a new row • modify(5) - Modifies an existing row |

| Name, OID, and Syntax | Access | Description |
|-----------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row• invalid(1) - Row is inoperative• valid(2) - Row exists and is valid |
| snlpPrefixListLength brcdlp.1.2.2.14.1.10 Syntax: Integer32 | Read-write | The length of the IP prefix's mask. |

IP AS-Path access list string table

AS-Path is a list of the other ASs through which a route passes. BGP4 routers can use the AS-Path to detect and eliminate routing loops. The IP AS-Path access list string table contains filters that are used to deny or permit updates received from BGP4 neighbors.

| Name, OID, and Syntax | Access | Description |
|---------------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlpAsPathAccessListStringTable brcdlp.1.2.2.16 | None | IP AS-Path access list string table. |
| snlpAsPathAccessListStringName brcdlp.1.2.2.16.1.1 Syntax: DisplayString | Read-only | An index for the entry in the table. |
| snlpAsPathAccessListStringSequence brcdlp.1.2.2.16.1.2 Syntax: Integer32 | Read-only | The sequence index for this entry in this table. |
| snlpAsPathAccessListStringAction brcdlp.1.2.2.16.1.3 Syntax: Integer | Read-write | Determines what to do with the packet if its address matches this entry: <ul style="list-style-type: none">• deny(0)• permit(1) |
| snlpAsPathAccessListStringRegExpression brcdlp.1.2.2.16.1.4 Syntax: Integer | Read-write | Specifies the AS-Path information that will be permitted or denied. This object contains a regular expression. Each character of the regular expression string is represented by one octet. |
| snlpAsPathAccessListStringRowStatus brcdlp.1.2.2.16.1.5 Syntax: Integer | Read-write | Controls the management of the table rows. The values that can be written are <ul style="list-style-type: none">• delete(3) - Deletes the row• create(4) - Creates a new row• modify(5) - Modifies an existing row If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row• invalid(1) - Row is inoperative• valid(2) - Row exists and is valid |

IP community list string table

This table contains the list of community strings used.

| Name, OID, and Syntax | Access | Description |
|----------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snlpCommunityListStringTable brcdlp.1.2.2.17 | None | IP community list string table. |
| snlpCommunityListStringName brcdlp.1.2.2.17.1.1 Syntax: Octet String | Read-only | An index for an entry in the table. This object can have up to 32 octets. |
| snlpCommunityListStringSequence brcdlp.1.2.2.17.1.2 Syntax: Integer32 | Read-only | Indicates the sequence of this entry in the table. |
| snlpCommunityListStringAction brcdlp.1.2.2.17.1.3 Syntax: Integer | Read-write | Indicates the action to take if the community string on the packet matches this filter: <ul style="list-style-type: none"> • deny(0) • permit(1) |
| snlpCommunityListStringCommNum brcdlp.1.2.2.17.1.4 Syntax: Integer | Read-write | Shows the community string's number, represented by four octets. This number can be from 1 to 0xFFFFFFFF. There can be up to 20 community string numbers. |
| snlpCommunityListStringInternet brcdlp.1.2.2.17.1.5 Syntax: Integer | Read-write | Indicates if the community is enabled: <ul style="list-style-type: none"> • disabled(0) • enabled(1) |
| snlpCommunityListStringNoAdvertise brcdlp.1.2.2.17.1.6 Syntax: Integer | Read-write | Indicates the community string will not be advertised to any internal or external peers: <ul style="list-style-type: none"> • false(0) • true(1) |
| snlpCommunityListStringNoExport brcdlp.1.2.2.17.1.7 Syntax: Integer | Read-write | Indicates if this route is not advertised as an EBGP peer: <ul style="list-style-type: none"> • false(0) • true(1) |
| snlpCommunityListStringRowStatus brcdlp.1.2.2.17.1.8 Syntax: Integer | Read-write | Controls the management of the table rows. The values that can be written are: <ul style="list-style-type: none"> • delete(3) - Delete the row • create(4) - Create a new row • modify(5) - Modify an existing row If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none"> • noSuch(0) - No such row • invalid(1) - Row is inoperative • valid(2) - Row exists and is valid |
| snlpCommunityListStringLocalAs brcdlp.1.2.2.17.1.9 Syntax: Integer | Read-write | Determines if this route will be sent to peers in other sub autonomous systems within the local confederation. Do not advertise this route to an external system. |

| Name, OID, and Syntax | Access | Description |
|-------------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| snlpCommunityListStringType brcdlp.1.2.2.17.1.10 Syntax: Integer | Read-write | Displays the type of the community list, whether standard or extended. |
| snlpCommunityListStringRegExpr brcdlp.1.2.2.17.1.11 Syntax: DisplayString | Read-write | This will display the regular expression string for extended community list. This object returns the value NULL for standard community list. |

Stackable Management Group

- General stackable management information..... 219

General stackable management information

The objects in the following table provide information about the general stacking devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snStackPriSwitchMode brcdlp.1.1.5.1.1 Syntax: Integer | Read-write | <p>The stackable management primary switch mode is either enabled or disabled.</p> <ul style="list-style-type: none">enabled(1) - Primary switch enabled.disabled(0) - Primary switch disabled. <p>Default: disabled(0)</p> |
| snStackMaxSecSwitch brcdlp.1.1.5.1.2 Syntax: Integer | Read-only | The maximum number of secondary switches are allowed in the stackable management group. |
| snStackTotalSecSwitch brcdlp.1.1.5.1.3 Syntax: Integer | Read-only | The total number of secondary switches currently connected to the stackable management group. |
| snStackSyncAllSecSwitch brcdlp.1.1.5.1.4 Syntax: Integer | Read-write | <p>Synchronize all the secondary switches in the stackable management group with the following commands:</p> <ul style="list-style-type: none">device(2)global(3)local(4) <p>The return result of the previous commands is either:</p> <ul style="list-style-type: none">normal(0)invalid(1) |
| snStackSmSlotIndex brcdlp.1.1.5.1.5 Syntax: Integer | Read-write | The slot 0 is the master slot and slots 1-8 are slaves. All the slot-based MIB data can be retrieved with respect to this slot index. |
| snStackFmpSetProcess brcdlp.1.1.5.1.6 Syntax: Integer | Read-only | <p>The state of the FMT set process:</p> <ul style="list-style-type: none">normal(0) - The set process is either in an idle state or FMP-SET-SUCCESS state.pending(1) - The pending process is waiting for the result of an FMP-SET.failure(2) - The failure result of an FMP-SET. |

FDP MIB Definitions

| • FDP global configuration objects..... | 223 |
| • FDP cached address entry table | 224 |

FDP interface table

The Foundry Discovery Protocol (FDP) interface table shows whether or not the FDP is enabled on a physical interface. You can use the following table to disable or enable FDP on individual interfaces.

NOTE

You cannot disable the Cisco Discovery Protocol (CDP) on individual interfaces.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snFdplInterfaceTable brcdlp.1.1.3.20.1.1.1 | None | The FDP interface table |
| snFdplInterfaceIfIndex brcdlp.1.1.3.20.1.1.1.1 | None | Shows the ifIndex value of the local interface. |
| snFdplInterfaceEnable brcdlp.1.1.3.20.1.1.1.1.2 Syntax: Integer | Read-write | Determines if FDP is enabled on the interface: <ul style="list-style-type: none">• false(0) - FDP is disabled.• true(1) - FDP is enabled. Default: true(1) |
| snFdplInterfaceCdpEnable brcdlp.1.1.3.20.1.1.1.1.3 Syntax: Integer | Read-write | Determines if CDP is enabled on the interface: <ul style="list-style-type: none">• false(0) - CDP is disabled.• true(1) - CDP is enabled. Default: true(1) |

FDP cache table

Each entry in the FDP cache table contains information received from FDP or Cisco Discovery Protocol (CDP) on one interface of one device. The table is available if FDP or CDP is enabled globally. Entries appear when an FDP or CDP advertisement is received from a neighbor device. Entries are deleted when FDP or CDP is disabled on an interface or globally.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------|
| snFdpCacheTable brcdlp.1.1.3.20.1.2.1 | None | The FDP cache table. |
| snFdpCacheIfIndex brcdlp.1.1.3.20.1.2.1.1.1 | None | Shows the ifIndex value of the local interface. |
| snFdpCacheDeviceIndex brcdlp.1.1.3.20.1.2.1.1.2 Syntax: Integer32 | Read-only | A unique value for each device from which FDP or CDP messages are being received. |
| snFdpCacheDeviceId brcdlp.1.1.3.20.1.2.1.1.3 | Read-only | Shows a description for the device as reported in the most recent FDP or CDP message. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: DisplayString snFdpCacheAddressType brcdlp.1.1.3.20.1.2.1.1.4 Syntax: Integer | Read-only | A zero-length string indicates no Device-ID field (TLV) was reported in the most recent FDP or CDP message. Indicates the type of address contained in the FDP cache table object for this entry: <ul style="list-style-type: none">• ip(1)• ipx(2)• appletalk(3) |
| snFdpCacheAddress brcdlp.1.1.3.20.1.2.1.1.5 Syntax: Octet String | Read-only | Shows the network-layer address of the device's SNMP agent, as reported in the most recent FDP or CDP message. A device may have more than one address. This object shows the first address on the device. The format of this object depends on the value of the snFdpCacheAddressType object: <ul style="list-style-type: none">• ip(1) - 4 octets• ipx(2) - 10 octets:<ul style="list-style-type: none">- Octets 1-4 - Network number- Octets 5-10 - Host number• appletalk(3) - 3 octets:<ul style="list-style-type: none">- Octets 1-2 - Network number- Octet 3 - Host number |
| snFdpCacheVersion brcdlp.1.1.3.20.1.2.1.1.6 Syntax: DisplayString | Read-only | Shows the software version running in the device as reported in the most recent FDP or CDP message. |
| snFdpCacheDevicePort brcdlp.1.1.3.20.1.2.1.1.7 Syntax: DisplayString | Read-only | Shows the port ID of the device as reported in the most recent FDP or CDP message. This will typically be the value of the ifName object. A zero-length string indicates no Port-ID field (TLV) was reported in the most recent FDP or CDP message. |
| snFdpCachePlatform brcdlp.1.1.3.20.1.2.1.1.8 Syntax: DisplayString | Read-only | Shows the device's hardware platform as reported in the most recent FDP or CDP message. A zero-length string indicates that no Platform field (TLV) was reported in the most recent FDP or CDP message. |
| snFdpCacheCapabilities brcdlp.1.1.3.20.1.2.1.1.9 Syntax: DisplayString | Read-only | Shows the device's functional capabilities as reported in the most recent FDP or CDP message. |
| snFdpCacheVendorId brcdlp.1.1.3.20.1.2.1.1.10 Syntax: Integer | Read-only | Indicates if FDP or CDP received the entry: <ul style="list-style-type: none">• fdp(1)• cdp(2) |
| snFdpCachelsAggregateVlan brcdlp.1.1.3.20.1.2.1.1.11 Syntax: Integer | Read-only | Indicates if this entry is from a neighbor device that is in an aggregated VLAN: <ul style="list-style-type: none">• false(0) - It is not in an aggregated VLAN.• true(1) - It is in an aggregate VLAN. |
| snFdpCacheDeviceTagType brcdlp.1.1.3.20.1.2.1.1.12 | Read-only | Shows the tag type of the neighbor device that sent this entry. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer snFdpCacheDevicePortVlanMask brcdlp.1.1.3.20.1.2.1.1.13 | Read-only | Shows the port VLAN masks, in a 512-byte octet string, of the neighbor that sent this entry. |
| Syntax: Octet String snFdpCachePortTagMode brcdlp.1.1.3.20.1.2.1.1.14 | Read-only | Shows the port tag mode on the neighbor device: <ul style="list-style-type: none">• untagged(1)• tagged(2)• dual(3) |
| Syntax: Integer snFdpCacheDefaultTrafficVlanIdForDualMode brcdlp.1.1.3.20.1.2.1.1.15 | Read-only | Shows the default traffic a VLAN ID for neighbor devices that have dual-mode ports. |
| Syntax: Integer32 | | |

FDP global configuration objects

The following objects are used to configure FDP globally.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snFdpGlobalRun brcdlp.1.1.3.20.1.3.1 Syntax: Integer | Read-write | Indicates if the FDP is enabled: <ul style="list-style-type: none">• false(0) - FDP is disabled. FDP entries in snFdpCacheTable are deleted when FDP is disabled.• true(1) - FDP is enabled. Enabling FDP automatically enables CDP globally. Default: false(0) |
| snFdpGlobalMessageInterval brcdlp.1.1.3.20.1.3.2 Syntax: Integer | Read-write | Indicates the interval at which FDP messages are to be generated. Valid values: 5 - 900 seconds Default: 60 seconds |
| snFdpGlobalHoldTime brcdlp.1.1.3.20.1.3.3 Syntax: Integer | Read-write | Indicates how long the receiving device will hold FDP messages. Valid values: 10 - 255 seconds Default: 180 seconds |
| snFdpGlobalCdpRun brcdlp.1.1.3.20.1.3.4 Syntax: Integer | Read-write | Shows if the CDP is enabled: <ul style="list-style-type: none">• false(0) - CDP is disabled. CDP entries in snFdpCacheTable are deleted when FDP is disabled.• true(1) - CDP is enabled. Enabling CDP does not automatically enable FDP globally. Default: false (0) |

FDP cached address entry table

The FDP cached address entry table shows all the cached addresses from which FDP or CDP messages are being received. The table is available if FDP or CDP is enabled globally.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snFdpCachedAddressTable brcdlp.1.1.3.20.1.4.1 | None | The FDP cached address entry table. |
| snFdpCachedAddrIfIndex brcdlp.1.1.3.20.1.4.1.1.1 Syntax: Integer | None | Shows the ifIndex value of the local interface. |
| snFdpCachedAddrDeviceIndex brcdlp.1.1.3.20.1.4.1.1.2 Syntax: Integer32 | Read-only | Shows a unique value for each device from which FDP or CDP messages are being received. |
| snFdpCachedAddrDeviceAddrEntryIndex brcdlp.1.1.3.20.1.4.1.1.3 Syntax: Integer32 | Read-only | Shows a unique value for each address on the device from which FDP or CDP messages are being received. A device may have several addresses. There will be one entry for each address. |
| snFdpCachedAddrType brcdlp.1.1.3.20.1.4.1.1.4 Syntax: Integer | Read-only | Indicates the type of address contained in the FDP cached address entry table object for this entry: <ul style="list-style-type: none"> • ip(1) • ipx(2) • appletalk(3) |
| snFdpCachedAddrValue brcdlp.1.1.3.20.1.4.1.1.5 Syntax: Octet String | Read-only | Indicates the network-layer address of the device's SNMP agent as reported in the most recent FDP or CDP message. The format of this object depends on the value of the snFdpCachedAddrValue object: <ul style="list-style-type: none"> • ip(1) - 4 octets • ipx(2) - 10 octets: <ul style="list-style-type: none"> - Octets 1-4 - Network number - Octets 5-10 - Host number • appletalk(3) - 3 octets: <ul style="list-style-type: none"> - Octets 1-2 - Network number - Octet 3 - Host number |

NP statistics table

NOTE

The MIB objects for various Network Processor (NP) statistics supported on the MLX Series, MLX Series, and XMR Series devices. It is not supported on the CES 2000 Series and CER 2000 Series devices.

The Network Processor statistics table displays information about the statistics on all the POS and Ethernet cards.

Use the **show np statistics** command to show the Network Processor statistics.

Use the **clear np statistics** command to clear both the CLI and SNMP statistics counters for the Network Processor. The **snmp-server preserve-statistics** command does not preserve the Network Processor statistics.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------|
| brcdNPStatsTable brcdip.1.14.2.1.1.1 | None | The Network Processor table. |
| brcdNPStatsIfIndex brcdip.1.14.2.1.1.1.1 Syntax: InterfaceIndex | None | The interface index for the entry. This is applicable only for the interfaces that are physically present and operationally up. |
| brcdNPStatsRxRawGoodPkts brcdip.1.14.2.1.1.1.2 Syntax: Counter 64 | Read-only | Shows the number of good packets received from the MAC address. |
| brcdNPStatsRxForwardPkts brcdip.1.14.2.1.1.1.3 Syntax: Counter 64 | Read-only | Shows the number of packets forwarded by a packet evaluation engine on the ingress path. |
| brcdNPStatsRxDiscardPkts brcdip.1.14.2.1.1.1.4 Syntax: Counter 64 | Read-only | Shows the number of packets flagged for discard by a packet evaluation engine. |
| brcdNPStatsRxMiscPkts brcdip.1.14.2.1.1.1.5 Syntax: Counter 64 | Read-only | Shows the number of miscellaneous packets received. |
| brcdNPStatsRxUnicastPkts brcdip.1.14.2.1.1.1.6 Syntax: Counter 64 | Read-only | Shows the number of unicast packets received. |
| brcdNPStatsRxBroadcastPkts brcdip.1.14.2.1.1.1.7 Syntax: Counter 64 | Read-only | Shows the number of broadcast packets received. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------|
| brcdNPStatsRxMulticastPkts brcdlp.1.14.2.1.1.1.8 Syntax: Counter 64 | Read-only | Shows the number of multicast packets received. |
| brcdNPStatsRxSendtoTMPkts brcdlp.1.14.2.1.1.1.9 Syntax: Counter 64 | Read-only | Shows the number of packets sent to the Traffic Manager. |
| brcdNPStatsRxBadPkts brcdlp.1.14.2.1.1.1.10 Syntax: Counter 64 | Read-only | Shows the number of bad packets received. |
| brcdNPStatsRxLookupUnavailable brcdlp.1.14.2.1.1.1.11 Syntax: Counter 64 | Read-only | Shows the number of packets dropped due to unavailability of the CAM interface for packet lookups. |
| brcdNPStatsRxACLDrop brcdlp.1.14.2.1.1.1.12 Syntax: Counter 64 | Read-only | Shows the number of ACL drops on the ingress path. |
| brcdNPStatsRxPriority0And1Drop brcdlp.1.14.2.1.1.1.13 Syntax: Counter 64 | Read-only | Shows the number of packets dropped based on priority 0 and 1 on the ingress path. |
| brcdNPStatsRxPriority2And3Drop brcdlp.1.14.2.1.1.1.14 Syntax: Counter 64 | Read-only | Shows the number of packets dropped based on priority 2 and 3 on the ingress path. |
| brcdNPStatsRxPriority4And5Drop brcdlp.1.14.2.1.1.1.15 Syntax: Counter 64 | Read-only | Shows the number of packets dropped based on priority 4 and 5 on the ingress path. |
| brcdNPStatsRxPriority6And7Drop brcdlp.1.14.2.1.1.1.16 Syntax: Counter 64 | Read-only | Shows the number of packets dropped based on priority 6 and 7 on the ingress path. |
| brcdNPStatsRxSuppressRPFDrop brcdlp.1.14.2.1.1.1.17 Syntax: Counter 64 | Read-only | Shows the number of suppressed RPF drops on the ingress path due to ACL override. |
| brcdNPStatsRxRPFDrop brcdlp.1.14.2.1.1.1.18 Syntax: Counter 64 | Read-only | Shows the number of RPF drops on the ingress path. |
| brcdNPStatsRxIPv4Pkts brcdlp.1.14.2.1.1.1.19 Syntax: Counter 64 | Read-only | Shows the number of packets that have IPv4 EType (0x0800) and IP version (0x4). |
| brcdNPStatsRxIPv6Pkts brcdlp.1.14.2.1.1.1.20 Syntax: Counter 64 | Read-only | Shows the number of packets that have IPv6 EType (0x86DD) and IP version (0x6). |
| brcdNPStatsRxRouteOnlyDrop brcdlp.1.14.2.1.1.1.21 Syntax: Counter 64 | Read-only | Shows the number of packets dropped due to the route-only configuration during MAC-DA processing. |
| brcdNPStatsRxIPv6SuppressRPFDrop brcdlp.1.14.2.1.1.1.22 Syntax: Counter 64 | Read-only | Shows the number of suppressed IPv6 RPF drops on the ingress path due to ACL override. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPStatsRxIPv6RPFDropCount brcdlp.1.14.2.1.1.1.23 Syntax: Counter 64 | Read-only | Shows the number of IPv6 RPF drops on the ingress path. |
| brcdNPStatsRxIPv4Bytes brcdlp.1.14.2.1.1.1.24 Syntax: Counter 64 | Read-only | Shows the number of raw packet bytes (+FCS) that have IPv4 EType (0x0800) and IP version (0x4). |
| brcdNPStatsRxIPv6Bytes brcdlp.1.14.2.1.1.1.25 Syntax: Counter 64 | Read-only | Shows the number of raw packet bytes (+FCS) that have IPv6 EType (0x86DD) and IP version (0x6). |
| brcdNPStatsRxPOSCtrlProtocolPkts brcdlp.1.14.2.1.1.1.26 Syntax: Counter 64 | Read-only | Shows the number of control protocol packets received in the POS mode. NOTE This object is supported only on the POS interfaces. For other interfaces, this object returns "0". |
| brcdNPStatsRxPOSLinkDrop brcdlp.1.14.2.1.1.1.27 Syntax: Counter 64 | Read-only | Shows the number of packets dropped due to the link state in the POS mode. NOTE This object is supported only on the POS interfaces. For other interfaces, this object returns "0". |
| brcdNPStatsRxRoutedPktsDrop brcdlp.1.14.2.1.1.1.28 Syntax: Counter 64 | Read-only | Shows the number of IPv4 or IPv6 routed packets that are received and then dropped because the time-to-live (TTL) is "0" or routing is not enabled on the given virtual interface. |
| brcdNPStatsTxSentToMACPkts brcdlp.1.14.2.1.1.1.29 Syntax: Counter 64 | Read-only | Shows the total number of packets sent to a MAC address for transmission. |
| brcdNPStatsTxRawGoodPkts brcdlp.1.14.2.1.1.1.30 Syntax: Counter 64 | Read-only | Shows the total number of packets sent to egress processing logic that pass the initial length checks. |
| brcdNPStatsTxSrcPortSupressDrop brcdlp.1.14.2.1.1.1.31 Syntax: Counter 64 | Read-only | Shows the number of packets dropped because of the suppression of the transmit source port. |
| brcdNPStatsTxBadPktCnt brcdlp.1.14.2.1.1.1.32 Syntax: Counter 64 | Read-only | Shows the total number of packets dropped in egress logic that fail the initial length checks. |
| brcdNPStatsTxUnicastPkts brcdlp.1.14.2.1.1.1.33 Syntax: Counter 64 | Read-only | Shows the number of unicast packets transmitted. |
| brcdNPStatsTxBroadcastPkts brcdlp.1.14.2.1.1.1.34 Syntax: Counter 64 | Read-only | Shows the number of broadcast packets transmitted. |
| brcdNPStatsTxMulticastPkts brcdlp.1.14.2.1.1.1.35 Syntax: Counter 64 | Read-only | Shows the number of multicast packets transmitted. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPStatsTxReceiveFromTM brcdlp.1.14.2.1.1.1.1.36 Syntax: Counter 64 | Read-only | Shows the number of packets received from the Traffic Manager. |
| brcdNPStatsTxACLDrop brcdlp.1.14.2.1.1.1.1.37 Syntax: Counter 64 | Read-only | Shows the number of packets dropped by the outbound ACL logic. |
| brcdNPStatsTxPFCMulticastDrop brcdlp.1.14.2.1.1.1.1.38 Syntax: Counter 64 | Read-only | Shows the total number of multicast FID packets that have been dropped by egress logic that map to the egress queue that is in the paused state. NOTE This object is supported only on the NI-MLX-10Gx8-D 8-port 10GbE module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, NI-MLX-10Gx8-X 8-port 10GbE (X) module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Zero is returned for the other cards. |
| brcdNPStatsTxPFCMTUExceedDrop brcdlp.1.14.2.1.1.1.1.39 Syntax: Counter 64 | Read-only | Shows the total number of packets dropped by egress logic that exceed the MTU of the egress queue. NOTE This object is supported only on the NI-MLX-10Gx8-D 8-port 10GbE module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, NI-MLX-10Gx8-X 8-port 10GbE (X) module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, and BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Zero is returned for the other cards. |
| brcdNPStatsTxPFCQMAPErrorDrop brcdlp.1.14.2.1.1.1.1.40 Syntax: Counter 64 | Read-only | Shows the number of packets dropped by egress logic that do not match with any valid egress queue. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE This object is supported only on the NI-MLX-10Gx8-D 8-port 10GbE module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, NI-MLX-10Gx8-X 8-port 10GbE (X) module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, and BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Zero is returned for the other cards.</p> |
| brcdNPStatsTxIPv4Pkts brcdlp.1.14.2.1.1.1.41 Syntax: Counter 64 | Read-only | Shows the number of IPv4 packets transmitted from the port. The packets have IPv4 Etype (0x0800) and IP version (0x4). |
| brcdNPStatsTxIPv6Pkts brcdlp.1.14.2.1.1.1.42 Syntax: Counter 64 | Read-only | Shows the number of IPv6 packets transmitted from the port. The packets have IPv6 Etype (0x86DD) and IP version (0x6). |
| brcdNPStatsTxIPv4Bytes brcdlp.1.14.2.1.1.1.43 Syntax: Counter 64 | Read-only | Shows the number of packet bytes (+FCS) that have IPv4 EType (0x0800) and IP version (0x4). |
| brcdNPStatsTxIPv6Bytes brcdlp.1.14.2.1.1.1.44 Syntax: Counter 64 | Read-only | Shows the number of packet bytes (+FCS) that have IPv6 EType (0x86DD) and IP version (0x6). |
| brcdNPStatsTxCtrlProtocolPkts brcdlp.1.14.2.1.1.1.45 Syntax: Counter 64 | Read-only | Shows the number of control protocol packets sent in the POS mode. NOTE This object is supported only on the POS interfaces. For other interfaces, this object returns "0". |
| brcdNPStatsTxPOSLinkDrop brcdlp.1.14.2.1.1.1.46 Syntax: Counter 64 | Read-only | Shows the number of packets dropped due to the link state in the POS mode. NOTE This object is supported only on the POS interfaces. For other interfaces, this object returns "0". |

NP QoS statistics table

The brcdNPQosStatTable displays information of Network Processor (NP) QoS-related statistics per port for per priority.

By default, the SNMP support is disabled. It is recommended to use **enable-qos-statistics** command to enable Quality of Service (QoS) accounting and **snmp-server enable mib np-qos-stat** command to enable the SNMP support.

Use **clear np qos statistics [ethernetslot/port | posslot/port | slotslot no]** and **clear np qos stats lag lag_name** commands to clear all the CLI and SNMP statistics counters for the NP QoS statistics.

NOTE

The MIB objects in the following table are read-only and support only SNMP GET, GET-NEXT, WALK, and GET-BULK requests.

The following table contains information of Network Processor QoS-related statistics supported on the XMR Series and MLX Series devices and the table is not supported on the CES 2000 Series and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPQosStatTable brcdlp.1.14.2.1.1.2 | None | The NP QoS statistics table. |
| brcdNPQosStatIfIndex brcdlp.1.14.2.1.1.2.1.1 Syntax: InterfaceIndex | None | The ifIndex of the interface. The table includes all the interfaces of the LP modules that are physically present and operationally up and it also includes all the deployed LAG interfaces. |
| brcdNPQosStatQosPriority brcdlp.1.14.2.1.1.2.1.2 Syntax: PriorityTC | None | The QoS priority associated with the entry. This is a 1-based index. The priority0 maps to 1, priority1 maps to 2, and so on. The priority value equal to the nonPriority(128) is not applicable. |
| brcdNPQosStatIngressPkts brcdlp.1.14.2.1.1.2.1.3 Syntax: Counter 64 | Read-only | The number of packets that has arrived on the specified interface with a DSCP, EXP, or PCP value equal to the value of the brcdNPQosStatQosPriority object. |
| brcdNPQosStatIngressBytes brcdlp.1.14.2.1.1.2.1.4 Syntax: Counter 64 | Read-only | The number of bytes that has arrived on the specified interface with a DSCP, EXP, or PCP value in the packet equal to the value of the brcdNPQosStatQosPriority object. |
| brcdNPQosStatEgressPkts brcdlp.1.14.2.1.1.2.1.5 Syntax: Counter 64 | Read-only | The number of packets that has left the device on the specified interface with an internal priority value equal to the value of the brcdNPQosStatQosPriority object. The internal priority is dependent on the configuration, but in general it is a function of DSCP, EXP, or PCP. |
| brcdNPQosStatEgressBytes brcdlp.1.14.2.1.1.2.1.6 Syntax: Counter 64 | Read-only | The number of bytes that has left the device on the specified interface with an internal priority value equal to the value of the brcdNPQosStatQosPriority object. The internal priority is dependent on the configuration, but in general it is a function of DSCP, EXP, or PCP. |

NP buffer error table

The brcdNPBufferErrorTable contains information of Network Processor (NP) buffer memory-related error events on the CES 2000 Series and CER 2000 Series devices.

NOTE

The brcdNPBufferErrorTable is not supported on the MLX Series devices.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPBufferErrorTable brcdlp.1.14.2.1.1.3 | None | A list of brcdNPBufferError entries. The table contains information of various NP error event counters supported by the system. The objects |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------|
| | | in this table are refreshed every second, based on request. |
| brcdNPBufferErrorSlotId brcdlp.1.14.2.1.1.3.1.1 Syntax: Unsigned32 | None | The slot ID of the module. The module must be physically present and operationally up. This is an 1-based index. |
| brcdNPBufferErrorDeviceId brcdlp.1.14.2.1.1.3.1.2 Syntax: Unsigned32 | None | The NP device ID. A number which uniquely identifies the NP within a module in the system. This is an 1-based index. |
| brcdNPBufferErrorDescription brcdlp.1.14.2.1.1.3.1.3 Syntax: DisplayString | Read-only | The range of ports serviced by the NP identified by the brcdNPBufferErrorSlotId and brcdNPBufferDeviceId objects. |
| brcdNPBufferErrorIngressCurrentEvents brcdlp.1.14.2.1.1.3.1.4 Syntax: Counter32 | Read-only | The counter for NP ingress buffer error events recorded within a window. |
| brcdNPBufferErrorIngressCumulativeEvents brcdlp.1.14.2.1.1.3.1.5 Syntax: Counter32 | Read-only | The counter for NP ingress total buffer error events recorded. |
| brcdNPBufferErrorEgressCurrentEvents brcdlp.1.14.2.1.1.3.1.6 Syntax: Counter32 | Read-only | The counter for NP egress buffer error events recorded within a window. |
| brcdNPBufferErrorEgressCumulativeEvents brcdlp.1.14.2.1.1.3.1.7 Syntax: Counter32 | Read-only | The counter for NP egress total buffer error events recorded. |

NP CSRAM error table

The following table contains information of various Network Processor(NP) CSRAM error event counters supported only on the CES 2000 Series and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPSCSRAMErrorTable brcdlp.1.14.2.1.1.4 | None | The table contains information of various Network Processor(NP) CSRAM error event counters supported by the system. The objects in the table are refreshed every second based on the request. |
| brcdNPSCSRAMErrorSlotId brcdlp.1.14.2.1.1.4.1.1 Syntax: Unsigned32 | None | Slot-ID of the module that uniquely identifies it in the system. The module must be physically present and up. This is an 1-based index. |
| brcdNPSCSRAMErrorDeviceId brcdlp.1.14.2.1.1.4.1.2 Syntax: Unsigned32 | None | The NP device-ID, a number that uniquely identifies the Network Processor within a module in the system. This is an 1-based index. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------|
| brcdNPCSRALErrorDescription brcdlp.1.14.2.1.4.1.3 Syntax: DisplayString | Read-only | The object gives the range of ports serviced by the NP identified by brcdNPCSRALErrorSlotId and brcdNPCSRALErrorDeviceId objects. |
| brcdNPCSRALErrorCurrentEvents brcdlp.1.14.2.1.4.1.4 Syntax: Counter32 | Read-only | Counter for NP CSRAM errors recorded within the current counters in a configured window. |
| brcdNPCSRALErrorCumulativeEvents brcdlp.1.14.2.1.4.1.5 Syntax: Counter32 | Read-only | Counter for total NP CSRAM errors recorded within the cumulative counters in a configured window. |

NP LPMRAM error table

The following table contains information of LPMRAM error event counters supported only on the CES 2000 Series and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPLPMRAMErrorTable brcdlp.1.14.2.1.1.5 | None | The table contains information of various Network Processor(NP) LPMRAM error event counters supported by the system. The objects in the table are refreshed every second based on the request. |
| brcdNPLPMRAMErrorIndex brcdlp.1.14.2.1.1.5.1.1 Syntax: Unsigned32 | None | This object uniquely identifies an LPM within a Network Processor. CER 2000 Series uses LPM-0, LPM-1, and LPM-2 memories, whereas CES 2000 Series uses LPM-3 memory alone. This is an 1-based index. Therefore, an index value of 1 maps to LPM-0, 2 maps to LPM-1, and so on. |
| brcdNPLPMRAMErrorSlotId brcdlp.1.14.2.1.1.5.1.2 Syntax: Unsigned32 | None | Slot-ID of the module that uniquely identifies it in the system. The module must be physically present and up. This is an 1-based index. |
| brcdNPLPMRAMErrorDeviceId brcdlp.1.14.2.1.1.5.1.3 Syntax: Unsigned32 | None | The NP device-ID, a number that uniquely identifies the Network Processor within a module in the system. This is an 1-based index. |
| brcdNPLPMRAMErrName brcdlp.1.14.2.1.1.5.1.4 Syntax: DisplayString | Read-only | The object gives a string representing the LPM identified by brcdNPLPMRAMErrorIndex. |
| brcdNPLPMRAMErrorDescription brcdlp.1.14.2.1.1.5.1.5 Syntax: DisplayString | Read-only | The object gives the range of ports serviced by the NP identified by brcdNPLPMRAMErrorSlotId and brcdNPLPMRAMErrorDeviceId. |
| brcdNPLPMRAMErrorCurrentEvents brcdlp.1.14.2.1.1.5.1.6 Syntax: Counter32 | Read-only | Counter for the error events recorded within the current counters in a configured window in the LPM identified by brcdNPLPMRAMErrorIndex. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | brcdNPLPMRAMErrorSlotId, and brcdNPLPMRAMErrorDeviceId. |
| brcdNPLPMRAMErrorCumulativeEvents brcdlp.1.14.2.1.1.5.1.7 Syntax: Counter32 | Read-only | Counter for the error events recorded within the cumulative counters in a configured window in the LPM identified by brcdNPLPMRAMErrorIndex, brcdNPLPMRAMErrorSlotId and brcdNPLPMRAMErrorDeviceId. |

NP debug statistics table

The following table contains the debug statistics of Network Processors in the line cards that are supported only on the MLX Series, MLX Series, and XMR Series devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPDebugStatTable brcdlp.1.14.2.1.1.6 | None | The table contains the debug statistics of Network Processors in the line cards. |
| brcdNPDebugStatSlotId brcdlp.1.14.2.1.1.6.1.1 Syntax: Unsigned32 | None | Slot ID of the LP module, which uniquely identifies a line card. The LP module must be physically present and operationally up. |
| brcdNPDebugStatNPDeviceId brcdlp.1.14.2.1.1.6.1.2 Syntax: Unsigned32 | None | The NP device ID, a number which uniquely identifies the Network Processor within a line card in the system. |
| brcdNPDebugStatDescription brcdlp.1.14.2.1.1.6.1.3 Syntax: DisplayString | Read-only | The object gives the range of ports serviced by the brcdNPDebugStatNPDeviceId object. |
| brcdNPDebugStatL2SourceAddrLearnDrop brcdlp.1.14.2.1.1.6.1.4 Syntax: Counter64 | Read-only | A count of all L2 source address learning drop packets. |
| brcdNPDebugStatRateLimitVPLSLocalLearnDrop brcdlp.1.14.2.1.1.6.1.5 Syntax: Counter64 | Read-only | A count of all rate limit VPLS local learning drop packets. |
| brcdNPDebugStatUnknownMPLSDrop brcdlp.1.14.2.1.1.6.1.6 Syntax: Counter64 | Read-only | A count of all unknown MPLS drop packets. It includes packets with Unknown Label to CPU (or) MPLS Label TTL is less than or equal to 1 (or) L2VPN Packet but the PRAM type is not equal to VLL or VPLS (or) MPLS transit label TTL is less than or equal to 1. |
| brcdNPDebugStatUnknownMPLSDrop brcdlp.1.14.2.1.1.6.1.7 Syntax: Counter64 | Read-only | A count of all destination address VC lookup missed packets. |
| brcdNPDebugStatRateLimitVPLSRemoteLearnDrop brcdlp.1.14.2.1.1.6.1.8 | Read-only | A count of all rate limit VPLS remote learn drop packets. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Counter64 brcdNPDebugStatIPv4DestAddrVCMiss brcdlp.1.14.2.1.1.6.1.9 Syntax: Counter64 | Read-only | A count of all IPv4 destination address VC lookup missed packets. |
| brcdNPDebugStatIPv6DestAddrVCMiss brcdlp.1.14.2.1.1.6.1.10 Syntax: Counter64 | Read-only | A count of all IPv6 destination address VC lookup missed packets. |
| brcdNPDebugStatVPLSTx brcdlp.1.14.2.1.1.6.1.11 Syntax: Counter64 | Read-only | A count of all VPLS destination address hit Tx processing packets. |
| brcdNPDebugStatVLLTx brcdlp.1.14.2.1.1.6.1.12 Syntax: Counter64 | Read-only | A count of all VLL destination address hit Tx processing packets. |
| brcdNPDebugStatUnknownL3VPNIngressDrop brcdlp.1.14.2.1.1.6.1.13 Syntax: Counter64 | Read-only | A count of all unknown Layer3 VPN ingress drop packets. It includes outer IP checksum fail (or) TTL equals to 0 (or) routing not enabled packets. |
| brcdNPDebugStatIPv6VPNTx brcdlp.1.14.2.1.1.6.1.14 Syntax: Counter64 | Read-only | A count of all IPv6 VPN transmit processing packets. |
| brcdNPDebugStatIPv4VPNTx brcdlp.1.14.2.1.1.6.1.15 Syntax: Counter64 | Read-only | A count of all IPv4 VPN transmit processing packets. |
| brcdNPDebugStatGREIPv4RxCount brcdlp.1.14.2.1.1.6.1.16 Syntax: Counter64 | Read-only | A count of all GRE encapsulated IPv4 payload packets proceeded for IP DPA processing. |
| brcdNPDebugStatGREInvalidDrop brcdlp.1.14.2.1.1.6.1.17 Syntax: Counter64 | Read-only | A count of all packets with invalid protocol type in the GRE header. |
| brcdNPDebugStat6to4RxCount brcdlp.1.14.2.1.1.6.1.18 Syntax: Counter64 | Read-only | A count of all valid outer IPv4 header and source ingress check hit packets. |
| brcdNPDebugStatGRENfSourceIngressChkMiss brcdlp.1.14.2.1.1.6.1.19 Syntax: Counter64 | Read-only | A count of all GRE outer IPv4 source ingress check missed packets. |
| brcdNPDebugStat6to4EnfSourceIngressChkMiss brcdlp.1.14.2.1.1.6.1.20 Syntax: Counter64 | Read-only | A count of all outer IPv4 source ingress check missed packets. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPDebugStatGREMPLSRxCount brcdlp.1.14.2.1.1.6.1.21 Syntax: Counter64 | Read-only | A count of all GRE encapsulated MPLS payload packets proceeded for MPLS receive processing. |
| brcdNPDebugStatGREIPv6RxCount brcdlp.1.14.2.1.1.6.1.22 Syntax: Counter64 | Read-only | A count of all GRE encapsulated IPv6 payload packets proceeded for IP DPA processing. |
| brcdNPDebugStatPBBRxDropCount brcdlp.1.14.2.1.1.6.1.23 Syntax: Counter64 | Read-only | A count of all PBB Rx drop packets. This counter is valid only for 2x100G, 8x10G, 4x40G, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module line cards. |
| brcdNPDebugStatPBBTxCount brcdlp.1.14.2.1.1.6.1.24 Syntax: Counter64 | Read-only | A count of all PBB Tx packets. This counter is valid only for 2x100G, 8x10G, 4x40G, BR-MLX-10Gx20 20-port 1/10GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module line cards. |
| brcdNPDebugStatIPv4DestAddrVCDrop brcdlp.1.14.2.1.1.6.1.25 Syntax: Counter64 | Read-only | A count of all IPv4 destination address VC drop packets. This counter is valid only for 2x100G, 8x10G, 4x40G, BR-MLX-10Gx20 20-port 1/10GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module line cards. |
| brcdNPDebugStatIPv6DestAddrVCDrop brcdlp.1.14.2.1.1.6.1.26 Syntax: Counter64 | Read-only | A count of all IPv6 destination address VC drop packets. This counter is valid only for 2x100G, 8x10G, 4x40G, BR-MLX-10Gx20 20-port 1/10GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module line cards. |
| brcdNPDebugStatSourceAddrPortVLANMiss brcdlp.1.14.2.1.1.6.1.27 Syntax: Counter64 | Read-only | A count of all source address port VLAN missed packets. |
| brcdNPDebugStatVPLSSourceAddrPortVLAN Miss brcdlp.1.14.2.1.1.6.1.28 Syntax: Counter64 | Read-only | A count of all VPLS source address port VLAN missed packets. |
| brcdNPDebugStatSourceAddrVCMiss brcdlp.1.14.2.1.1.6.1.29 Syntax: Counter64 | Read-only | A count of all source address VC missed packets. |
| brcdNPDebugStatIPv4HWFwdCount brcdlp.1.14.2.1.1.6.1.30 Syntax: Counter64 | Read-only | A count of all valid IPv4 hardware forwarded packets. |
| brcdNPDebugStatIPv6HWFwdCount brcdlp.1.14.2.1.1.6.1.31 Syntax: Counter64 | Read-only | A count of all valid IPv6 hardware forwarded packets. |
| brcdNPDebugStatMulticastRPFDropCount brcdlp.1.14.2.1.1.6.1.32 Syntax: Counter64 | Read-only | A count of all multicast RPF failed packets. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-----------|--------------------------------------------------------------|
| brcdNPDebugStatMPLSLsrTxCount brcdlp.1.14.2.1.1.6.1.33 Syntax: Counter64 | Read-only | A count of valid transit LSR cross-connect packets. |
| brcdNPDebugStatGREIPv4TxCount brcdlp.1.14.2.1.1.6.1.34 Syntax: Counter64 | Read-only | A count of valid IPv4 payload with GRE encapsulation. |
| brcdNPDebugStat6to4TxCount brcdlp.1.14.2.1.1.6.1.35 Syntax: Counter64 | Read-only | A count of all valid 6 to 4 transmit packets. |
| brcdNPDebugStatMPLSRSPVPTxCount brcdlp.1.14.2.1.1.6.1.36 Syntax: Counter64 | Read-only | A count of all valid MPLS RSVP transmit packets. |
| brcdNPDebugStatGREMPLSTxCount brcdlp.1.14.2.1.1.6.1.37 Syntax: Counter64 | Read-only | A count of all valid GRE encapsulated MPLS transmit packets. |
| brcdNPDebugStatGREIPv6TxCount brcdlp.1.14.2.1.1.6.1.38 Syntax: Counter64 | Read-only | A count of valid IPv6 payload with IPv4 GRE encapsulation. |

Extreme NP notification support table

The following table is added to support the NP memory error notification objects.

NOTE

SNMP read-operations like SNMP-WALK, SNMP-GET, SNMP-GETNEXT or SNMP-GETBULK are not supported.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------------|
| brcdNPNotificationSupportTable brcdlp.1.14.2.0.5 | None | The table objects are used by notifications defined in the brcdNPMMIBNotification group. |
| brcdNPNotificationSupportSlotId brcdlp.1.14.2.0.5.1.1 Syntax: Unsigned32 | None | Slot ID of the LP module, which uniquely identifies a line card. The LP module must be physically present and operationally up. |
| brcdNPNotificationSupportDeviceId brcdlp.1.14.2.0.5.1.2 Syntax: Unsigned32 | None | The NP device ID, a number which uniquely identifies the Network Processor within a line card in the system. |
| brcdNPNotificationSupportDescription brcdlp.1.14.2.0.5.1.3 Syntax: DisplayString | Accessible-for-notify | This object is used by the notifications to represent the range of ports serviced by the NP device. |
| brcdNPNotificationSupportErrorType brcdlp.1.14.2.0.5.1.4 Syntax: DisplayString | Accessible-for-notify | This object is used by the traps to represent type or location of the error in the NP device. |

System Logging Group

| | |
|--------------------------------------------|-----|
| • Global system logging group objects..... | 237 |
| • Dynamic system logging buffer table..... | 238 |
| • Static system logging buffer table..... | 239 |
| • System log server table..... | 240 |

Global system logging group objects

The following objects are for global system logging processes for all devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgSysLogGblEnable brcdlp.1.1.2.6.1.1 Syntax: Integer | Read-write | Enables or disables system logging. Set this object to one of the following values: <ul style="list-style-type: none">• disable(0)• enable(1) Default: enable(1) |
| snAgSysLogGblBufferSize brcdlp.1.1.2.6.1.2 Syntax: Integer32 | Read-write | Sets the number of dynamic system logging entries. Valid values: Up to 100 entries Default: 50 entries |
| snAgSysLogGblClear brcdlp.1.1.2.6.1.3 Syntax: Integer | Read-write | Clears the dynamic and static system log buffers. Set this object to one of the following values: <ul style="list-style-type: none">• normal(0) - System logs will not be cleared.• clearAll(1) - Clears both dynamic and static system log buffers.• clearDynamic(2) - Clears only the dynamic system log.• clearStatic(3) - Clears only the static system log. |
| snAgSysLogGblCriticalLevel brcdlp.1.1.2.6.1.4 Syntax: Integer32 | Read-write | Filters and identifies the events that will be logged in the logging buffer. This object consists of 32 bits. The following shows the meaning of each bit: Bit Meaning 8- 31 Reserved 7 Warning (warning conditions) 6 Notification (normal but significant conditions) 5 Informational (informational messages) 4 Error (error conditions) 2 Debugging (debugging messages) 1 Critical (critical conditions). Setting this bit to 1 tells the logging buffer to accept the corresponding event. 0 Alert (immediate action needed). Setting this bit to 0 makes the logging buffer reject the corresponding event. Default: 255 |
| snAgSysLogGblLoggedCount | Read-write | Shows the number events logged in the system logging buffer. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.1.1.2.6.1.5 Syntax: Counter32 | | |
| snAgSysLogGblDroppedCount brcdlp.1.1.2.6.1.6 Syntax: Counter32 | Read-only | Shows the number of events dropped from the system logging buffer. |
| snAgSysLogGblFlushedCount brcdlp.1.1.2.6.1.7 Syntax: Counter32 | Read-only | Shows the number of times that the system logging buffer was cleared. |
| snAgSysLogGblOverrunCount brcdlp.1.1.2.6.1.8 Syntax: Counter32 | Read-only | Shows the number of times that the system logging buffer has wrapped around. |
| snAgSysLogGblFacility brcdlp.1.1.2.6.1.10 Syntax: Integer | Read-write | <p>Shows the facility code:</p> <ul style="list-style-type: none"> • kern(1) • user(2) • mail(3) • daemon(4) • auth(5) • syslog(6) • lpr(7) • news(8) • uucp(9) • sys9(10) • sys10(11) • sys11(12) • sys12(13) • sys13(14) • sys14(15) • cron(16) • local0(17) • local1(18) • local2(19) • local3(20) • local4(21) • local5(22) • local6(23) • local7(24) <p>Default: user(2)</p> |

Dynamic system logging buffer table

The following table applies to all devices. It contains the events logged in the dynamic system log. Events that are not logged in the static system log are logged in the dynamic system log.

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|--------------------------------------|
| snAgSysLogBufferTable | None | Dynamic system logging buffer table. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.1.1.2.6.2 | | |
| snAgSysLogBufferIndex brcdlp.1.1.2.6.2.1.1 Syntax: Integer32 | Read-only | Shows the index to the dynamic system logging buffer table. |
| snAgSysLogBufferTimeStamp brcdlp.1.1.2.6.2.1.2 Syntax: Time ticks | Read-only | Shows the time stamp for when the event is logged. |
| snAgSysLogBufferCriticalLevel brcdlp.1.1.2.6.2.1.3 Syntax: Integer | Read-only | The critical level of this event: <ul style="list-style-type: none"> • other(1) • alert(2) • critical(3) • debugging(4) • emergency(5) • error(6) • informational(7) • notification(8) • warning(9) |
| snAgSysLogBufferMessage brcdlp.1.1.2.6.2.1.4 Syntax: DisplayString | Read-only | Displays the system logging message. |
| snAgSysLogBufferCalTimeStamp brcdlp.1.1.2.6.2.1.5 Syntax: DisplayString | Read-only | Shows the time stamp when the event is logged. This object is used only if an external time source, such as an SNTP server, is configured. Otherwise, the value of this object is 0. This object returns a NULL terminated time stamp string if the system calendar time was set. It returns a blank if the system calendar time was not set. |

Static system logging buffer table

The following table applies to all devices. It contains the events logged in the static system log. The static system log receives power failures, fan failures, temperature warnings, or shutdown messages.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------|
| snAgStaticSysLogBufferTable brcdlp.1.1.2.6.3 | None | Static system logging buffer table. |
| snAgStaticSysLogBufferIndex brcdlp.1.1.2.6.3.1.1 Syntax: Integer | Read-only | The index to the static system logging buffer table. |
| snAgStaticSysLogBufferTimeStamp brcdlp.1.1.2.6.3.1.2 Syntax: Time ticks | Read-only | A time stamp, in number of time ticks, when the event is logged. |
| snAgStaticSysLogBufferCriticalLevel brcdlp.1.1.2.6.3.1.3 Syntax: Integer | Read-only | The critical level of this event: <ul style="list-style-type: none"> • other(1) • alert(2) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> critical(3) debugging(4) emergency(5) error(6) informational(7) notification(8) warning(9) |
| snAgStaticSysLogBufferMessage brcdlp.1.1.2.6.3.1.4 Syntax: DisplayString | Read-only | The system logging message. |
| snAgStaticSysLogBufferCalTimeStamp brcdlp.1.1.2.6.3.1.5 Syntax: DisplayString | Read-only | <p>A time stamp when the event is logged. This object is used only if an external time source, such as an SNTP server, is configured. Otherwise, the value of this object is 0.</p> <p>If an SNTP server is used to maintain time, then this object adds the value of the snAgStaticSysLogBufferTimeStamp object to the SNTP base to calculate the absolute time.</p> <p>This object returns a NULL terminated time stamp string if the system calendar time was set. It returns a blank if the system calendar time was not set.</p> |

System log server table

The system log (syslog) server table shows which server receives syslog messages. Every server in the table receives all syslog messages.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgSysLogServerTable brcdlp.1.1.2.6.4 | None | System log server table. |
| snAgSysLogServerIP brcdlp.1.1.2.6.4.1.1 Syntax: IpAddress | Read-write | IP address of system log server. |
| snAgSysLogServerUDPPort brcdlp.1.1.2.6.4.1.2 Syntax: Integer | Read-write | <p>UDP port number of the syslog server.</p> <p>Valid values: 0 - 65535</p> |
| snAgSysLogServerRowStatus brcdlp.1.1.2.6.4.1.3 Syntax: Integer | Read-write | <p>Controls the management of the table rows. The following values can be written:</p> <ul style="list-style-type: none"> delete(3) - Deletes the row. create(4) - Creates a new row. <p>If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately.</p> <p>The following values can be returned on reads:</p> <ul style="list-style-type: none"> other(1) - Other. valid(2) - Row exists and is valid. |

sFlow MIB

- sFlow 241

sFlow

This section presents the sFlow objects that are proprietary to products.

sFlow collector table

Currently, RFC 3176 allows only one sFlow destination to be configured. To configure two or more destinations, use the following table.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snSflowCollectorTable brcdlp.1.1.3.19.2 | None | Table of sFlow collectors, beginning with the second collector. Configure the first sFlow collector using the sFlowCollectorAddress and sFlowCollectorPort objects in the RFC 3176 sFlow Table. |
| snSflowCollectorIndex brcdlp.1.1.3.19.2.1.1 Syntax: Integer32 | Read-only | The index to the sFlow collector table. |
| snSflowCollectorIP brcdlp.1.1.3.19.2.1.2 Syntax: IpAddress | Read-write | The IP address of the sFlow collector. |
| snSflowCollectorUDPPort brcdlp.1.1.3.19.2.1.3 Syntax: Integer32 | Read-write | The number of the UDP port used by the sFlow collector. |
| snSflowCollectorRowStatus brcdlp.1.1.3.19.2.1.4 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">• delete(3) - Deletes the row.• create(4) - Creates a new row.• modify(5) - Modifies an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row.• other(1) - Some other case.• valid(2) - Row exists and is valid. |
| snSflowCollectorVrfName brcdlp.1.1.3.19.2.1.4 Syntax: Integer | Read-write | Adds the multi-VRF support for sFlow Collector. |

VLAN Layer 2 Switch MIB Definition

| | |
|--------------------------------------|-----|
| • VLAN by port membership table..... | 243 |
| • Port VLAN configuration table..... | 244 |
| • VLAN extended statistics | 248 |

VLAN by port membership table

The following table is the Port VLAN (Layer 2 VLAN) port membership table.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVlanByPortMemberTable brcdlp.1.1.3.2.6 | None | This table is used to create or delete a port VLAN (Layer 2 VLAN) entry. |
| snVlanByPortMemberEntry brcdlp.1.1.3.2.6.1 | None | An entry in the Port VLAN port membership table. |
| snVlanByPortMemberVlanId brcdlp.1.1.3.2.6.1.1 Syntax: Integer | Read-only | The VLAN identifier (VLAN ID). Valid values: 1 - 4095 VLAN IDs |
| snVlanByPortMemberPortId brcdlp.1.1.3.2.6.1.2 Syntax: Integer | Read-only | The ifIndex that is a member of the port VLAN. |
| snVlanByPortMemberRowStatus brcdlp.1.1.3.2.6.1.3 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">delete(3) - Delete the row.create(4) - Create a new row. If the row exists, then a SET with a value of create(4) returns a bad value error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">noSuch(0) - No such row.other(1) - Some other case.valid(2) - Row exists and is valid. |
| snVlanByPortMemberTagMode brcdlp.1.1.3.2.6.1.4 Syntax: Integer | Read-write | For a tagged or dual-mode port, there can be multiple VLANs per port. For an untagged port, there is only one VLAN ID per port. The values are: <ul style="list-style-type: none">tagged(1)untagged(2) |

Port VLAN configuration table

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVlanByPortCfgTable brcdlp.1.1.3.2.7 | None | The Port VLAN (Layer 2 VLAN) configuration table. |
| snVlanByPortCfgEntry brcdlp.1.1.3.2.7.1 | None | An entry of the port VLAN configuration table. |
| snVlanByPortCfgVlanId brcdlp.1.1.3.2.7.1.1 Syntax: Integer | Read-write | The VLAN ID index to this table. Each VLAN identifier can be a member of multiple ports. Valid values: 1 - 4095 |
| snVlanByPortCfgQos brcdlp.1.1.3.2.7.1.2 Syntax: PortQosTC | Read-write | Shows the Quality of Service (QoS) settings for the devices. For Stackable devices, the values can be one of the following: <ul style="list-style-type: none">• level0(0) - Low priority• level1(1) - High priority For Chassis devices, the value can be one of the following: <ul style="list-style-type: none">• level0(0)• level1(1)• level2(2)• level3(3)• level4(4)• level5(5)• level6(6)• level7(7)• invalid(127) - This value is used by CES 2000 Series or CER 2000 Series devices to signify that no Quality of Service was specified for this VLAN. |
| snVlanByPortCfgStpMode brcdlp.1.1.3.2.7.1.3 Syntax: Integer | Read-write | Indicates whether or not Spanning Tree Protocol (STP) is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snVlanByPortCfgStpPriority brcdlp.1.1.3.2.7.1.4 Syntax: Integer | Read-write | Shows the value of the dot1dStpPriority, which is the first two octets of the STP or RSTP bridge ID. The STP and RSTP bridge IDs are eight octets long. This object contains the writable portion of the bridge ID. The last six octets are contained in the dot1dBaseBridgeAddress of the object. Valid values: 1 - 65535 |
| snVlanByPortCfgStpGroupMaxAge brcdlp.1.1.3.2.7.1.5 Syntax: Integer32 | Read-write | Shows the value of dot1dStpBridgeMaxAge, which is the last six octets of the STP or RSTP bridge ID. All bridges use this object for MaxAge when this bridge is acting as the root. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE 802.1D-1990 specifies that the range for this parameter is related to the value of dot1dStpBridgeHelloTime in the object. The granularity of this timer is specified by 802.1D-1990 to be one second. An agent may return a bad value error if a set is attempted to a value which is not a whole number of seconds. (Refer to RFC 1493 Bridge MIB.)</p> <p>Valid values: 6 - 40</p> |
| snVlanByPortCfgStpGroupHelloTime brcdlp.1.1.3.2.7.1.6 Syntax: Integer | Read-write | <p>Shows the value of dot1dStpBridgeHelloTime, which is the value used by all bridges when this bridge is acting as the root.</p> <p>NOTE The granularity of this timer is specified by 802.1D-1990 to be one second. An agent may return a bad Value error if a set is attempted to a value which is not a whole number of seconds. (Refer to RFC 1493 Bridge MIB.)</p> <p>Valid values: 1 - 10</p> |
| snVlanByPortCfgStpGroupForwardDelay brcdlp.1.1.3.2.7.1.7 Syntax: Integer32 | Read-write | <p>Shows the value of dot1dStpBridgeForwardDelay, which is the value used by all bridges for ForwardDelay when this bridge is acting as the root.</p> <p>NOTE 802.1D-1990 specifies that the range for this parameter is related to the value of dot1dStpBridgeMaxAge, which is in the object. The granularity of this timer is specified by 802.1D-1990 to be one second. An agent may return a bad value error if a set is attempted to a value which is not a whole number of seconds. (Refer to RFC 1493 Bridge MIB.)</p> <p>Valid values: 2 - 30</p> |
| snVlanByPortCfgBaseNumPorts brcdlp.1.1.3.2.7.1.8 Syntax: Integer32 | Read-only | The number of ports controlled by this bridging entity. |
| snVlanByPortCfgBaseType brcdlp.1.1.3.2.7.1.9 Syntax: Integer | Read-only | <p>Indicates what type of bridging this bridge can perform. If a bridge is actually performing a certain type of bridging, this will be indicated by entries in the port table for the given type:</p> <ul style="list-style-type: none"> • unknown(1) • transparentOnly(2) • sourcerouteOnly(3) • srt(4) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVLanByPortCfgStpProtocolSpecification brcdlp.1.1.3.2.7.1.10 Syntax: Integer | Read-only | <p>Shows what version of STP is being run:</p> <ul style="list-style-type: none"> • unknown(1) • decLb100(2) - Indicates the DEC LANbridge 100 Spanning Tree Protocol. • ieee8021d(3) - IEEE 802.1d implementations will return this value. If future versions of the IEEE Spanning Tree Protocol are released that are incompatible with the current version, a new value will be defined. |
| snVLanByPortCfgStpMaxAge brcdlp.1.1.3.2.7.1.11 Syntax: Integer | Read-only | <p>Shows the value of dot1dStpMaxAge, which is the maximum age that the STP information can exist before it is discarded. The STP information is learned from the network. The value of this object is in hundredths of a second, and is the actual value that this bridge is currently using. (Refer to RFC 1493 Bridge MIB.)</p> |
| snVLanByPortCfgStpHelloTime brcdlp.1.1.3.2.7.1.12 Syntax: Timeout | Read-only | <p>Shows the value of dot1dStpHelloTime, which is the interval between the transmission of configuration bridge PDUs by this node. This value applies to any port when it is the root of the spanning tree or is trying to become the root. This is the actual value that this bridge is currently using.</p> <p>This value is in hundredths of a second. (Refer to RFC 1493 Bridge MIB.)</p> |
| snVLanByPortCfgStpHoldTime brcdlp.1.1.3.2.7.1.13 Syntax: Integer32 | Read-only | <p>Shows the value of dot1dStpHoldTime, which is the interval when no more than two configuration bridge PDUs can be transmitted by this node. The interval is in units of hundredths of a second.</p> <p>(Refer to RFC 1493 Bridge MIB.)</p> |
| snVLanByPortCfgStpForwardDelay brcdlp.1.1.3.2.7.1.14 Syntax: Timeout | Read-only | <p>Shows the value of dot1dStpForwardDelay, which controls how fast a port changes its spanning state when moving towards the forwarding state. The value determines how long the port stays in each of the listening and learning states, which precede the forwarding state. This value is also used, when a topology change has been detected and is under way, to age all dynamic entries in the forwarding database.</p> <p>NOTE This value is the one that this bridge is currently using in contrast to dot1dStpBridgeForwardDelay, which is the value that this bridge and all others would start using should this bridge become the root. This value is measured in hundredths of a second. (Refer to RFC 1493 Bridge MIB.)</p> |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVlanByPortCfgStpTimeSinceTopologyChange brcdlp.1.1.3.2.7.1.15 Syntax: Time ticks | Read-only | Shows the time since the last topology change was detected by the bridge entity. This time is in hundredths of a second. |
| snVlanByPortCfgStpTopChanges brcdlp.1.1.3.2.7.1.16 Syntax: Counter32 | Read-only | Shows the total number of topology changes detected by this bridge since the management entity was last reset or initialized. |
| snVlanByPortCfgStpRootCost brcdlp.1.1.3.2.7.1.17 Syntax: Integer32 | Read-only | Shows the value of dot1dStpRootCost, which is the cost of the path to the root as seen from this bridge. (Refer to RFC 1493 Bridge MIB.) |
| snVlanByPortCfgStpRootPort brcdlp.1.1.3.2.7.1.18 Syntax: Integer32 | Read-only | Shows the value of dot1dStpRootPort, which is the port number of the port which offers the lowest cost path from this bridge to the root bridge. (Refer to RFC 1493 Bridge MIB.) |
| snVlanByPortCfgStpDesignatedRoot brcdlp.1.1.3.2.7.1.19 Syntax: Bridged | Read-only | Shows the value of dot1dStpDesignatedRoot, which is the bridge identifier of the root of the spanning tree as determined by the Spanning Tree Protocol as executed by this node. This value is used as the root identifier parameter in all configuration bridge PDUs originated by this node. (Refer to RFC 1493 Bridge MIB.) |
| snVlanByPortCfgBaseBridgeAddress brcdlp.1.1.3.2.7.1.20 Syntax: MAC address | Read-only | Shows the MAC address used by this bridge when it must be referred to in a unique fashion. It is recommended that this be the numerically smallest MAC address of all ports that belong to this bridge; however, it is only required to be unique. When concatenated with dot1dStpPriority, a unique bridge identifier is formed, which is used in the Spanning Tree Protocol. |
| snVlanByPortCfgVlanName brcdlp.1.1.3.2.7.1.21 Syntax: DisplayString | Read-write | Shows the name of the VLAN community string. Valid values: Up to 32 characters |
| snVlanByPortCfgRouterIntf brcdlp.1.1.3.2.7.1.22 Syntax: Integer32 | Read-write | This object is optional. It identifies the virtual interface for the router to the VLAN, and applies only to the router. If an SNMP-Get value is zero, that means this object was not configured. |
| snVlanByPortCfgRowStatus brcdlp.1.1.3.2.7.1.23 Syntax: Integer | Read-write | Deletes a VLAN entry. |
| snVlanByPortCfgInOctets brcdlp.1.1.3.2.7.1.25 Syntax: Counter64 | Read-only | The number of bytes received on this VLAN. This can be used as the per-VE counter, if there is one-to-one mapping for VLAN-VE. |
| snVlanByPortCfgTransparentHwFlooding brcdlp.1.1.3.2.7.1.26 Syntax: Integer | Read-write | Enables or disables transparent VLAN flooding on a VLAN: <ul style="list-style-type: none">• disabled(0)• enabled(1) |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|----------------------|
| | | Default: disabled(0) |

VLAN extended statistics

This section describes the MIB objects for the Virtual Local Area Network (VLAN) extended statistics supported on G2 products of MLX Series and XMR Series devices.

Use the **extended-counters priority** command to configure a module to enable per-VLAN or per-port, or priority accounting (or extended counters) that applies to both ingress and egress counters. Use the **extended-counters routed-switched** command to configure the system to count switched and routed packets separately. The default value or the **no form of the** command configures the system to count switched and routed packets combined. All the counters reset to "0" when the state is changed. Also, the current counters that reset to "0" maintain an aggregate count.

NOTE

The Layer 2 VPN counters apply only to switched packets.

The following table lists the objects of extended statistics for VLAN.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdVlanExtStatsTable brcdlp.1.1.3.2.8 | None | Table contains the extended statistics for VLAN ports of G2 and later modules. It is not applicable for G1 cards. These statistics apply to Layer 2 VLANs as well as port VLANs that are associated to IP interfaces (physical or VE). |
| brcdVlanExtStatsVlanId brcdlp.1.1.3.2.8.1.1 Syntax: BrcdVlanIdTC | None | The VLAN identifier (VLAN ID). |
| brcdVlanExtStatsIfIndex brcdlp.1.1.3.2.8.1.2 Syntax: InterfaceIndex | None | The ifIndex of the port belonging to this VLAN. |
| brcdVlanExtStatsPriorityId brcdlp.1.1.3.2.8.1.3 Syntax: PortPriorityTC | None | Identifies the port QoS priority. The values 1 through 8 internally map to priorities 0 through 7. The value 128 refers to the aggregate count bucket. |
| brcdVlanExtStatsInSwitchedPkts brcdlp.1.1.3.2.8.1.4 Syntax: Counter64 | Read-only | The number of packets received by this port classified as belonging to this VLAN for switched packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsInRoutedPkts brcdlp.1.1.3.2.8.1.5 Syntax: Counter64 | Read-only | The number of packets received by this port classified as belonging to this VLAN for routed packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsInPkts brcdlp.1.1.3.2.8.1.6 Syntax: Counter64 | Read-only | The number of packets received by this port classified as belonging to this VLAN for both switched and routed packets. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdVlanExtStatsOutSwitchedPkts brcdlp.1.1.3.2.8.1.7 Syntax: Counter64 | Read-only | The number of packets transmitted by this port classified as belonging to this VLAN for switched packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsOutRoutedPkts brcdlp.1.1.3.2.8.1.8 Syntax: Counter64 | Read-only | The number of packets transmitted by this port classified as belonging to this VLAN for routed packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsOutPkts brcdlp.1.1.3.2.8.1.9 Syntax: Counter64 | Read-only | The number of packets transmitted by this port classified as belonging to this VLAN for both switched and routed packets. |
| brcdVlanExtStatsInSwitchedOctets brcdlp.1.1.3.2.8.1.10 Syntax: Counter64 | Read-only | The bytes count received by this port classified as belonging to this VLAN for switched packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsInRoutedOctets brcdlp.1.1.3.2.8.1.11 Syntax: Counter64 | Read-only | The bytes count received by this port classified as belonging to this VLAN for routed packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsInOctets brcdlp.1.1.3.2.8.1.12 Syntax: Counter64 | Read-only | The bytes count received by this port classified as belonging to this VLAN for both switched and routed packets. |
| brcdVlanExtStatsOutSwitchedOctets brcdlp.1.1.3.2.8.1.13 Syntax: Counter64 | Read-only | The bytes count transmitted by this port classified as belonging to this VLAN for switched packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsOutRoutedOctets brcdlp.1.1.3.2.8.1.14 Syntax: Counter64 | Read-only | The bytes count transmitted by this port classified as belonging to this VLAN for routed packets. The value is applicable only if the system is configured to separately count the two types of packets. Otherwise, it returns "0". |
| brcdVlanExtStatsOutOctets brcdlp.1.1.3.2.8.1.15 Syntax: Counter64 | Read-only | The bytes count transmitted by this port classified as belonging to this VLAN for both switched and routed packets. |

VLAN extended statistics for VPLS

The following table contains information for the extended VLAN accounting that applies to the Virtual Private LAN Service (VPLS) endpoint attached to the Customer Edge (CE) device.

NOTE

Use the **snmp-server disable mibmib-table-keyword** command to disable the SNMP support for the table and use the **no** form of the command to re-enable the support. The overall SNMP-WALK performance is increased when the SNMP support is disabled for the table.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdVplsEndptVlanExtStatsTable brcdlp.1.2.15.2.2.4 | None | This table contains the VLAN extended statistics for VPLS endpoints. For more information, refer to VLAN extended statistics on page 248. |
| brcdVplsEndptVlanExtStatsPriorityId brcdlp.1.2.15.2.2.4.1.1 Syntax: PortPriorityTC | None | Identifies the port QoS priority. The values 1 through 8 internally map to priorities 0 through 7. The value 128 indicates that priority-level accounting is not enabled. |
| brcdVplsEndptVlanExtStatsInPkts brcdlp.1.2.15.2.2.4.1.2 Syntax: Counter64 | Read-only | The number of valid switched and routed frames received by the endpoint from the Customer Edge (CE). |
| brcdVplsEndptVlanExtStatsOutPkts brcdlp.1.2.15.2.2.4.1.3 Syntax: Counter64 | Read-only | The number of valid switched and routed frames transmitted by the endpoint to the CE. |
| brcdVplsEndptVlanExtStatsInOctets brcdlp.1.2.15.2.2.4.1.4 Syntax: Counter64 | Read-only | The switched and routed bytes count received by the endpoint from the CE. |
| brcdVplsEndptVlanExtStatsOutOctets brcdlp.1.2.15.2.2.4.1.5 Syntax: Counter64 | Read-only | The switched and routed bytes count transmitted by the endpoint to the CE. |
| brcdVplsEndptVlanExtStatsRoutedInPkts brcdlp.1.2.15.2.2.4.1.6 Syntax: Counter64 | Read-only | The number of valid routed frames received by the endpoint from the CE. |
| brcdVplsEndptVlanExtStatsRoutedOutPkts brcdlp.1.2.15.2.2.4.1.7 Syntax: Counter64 | Read-only | The number of valid routed frames transmitted by the endpoint to the CE. |
| brcdVplsEndptVlanExtStatsRoutedInOctets brcdlp.1.2.15.2.2.4.1.8 Syntax: Counter64 | Read-only | The routed bytes count received by the endpoint from the CE. |
| brcdVplsEndptVlanExtStatsRoutedOutOctets brcdlp.1.2.15.2.2.4.1.9 Syntax: Counter64 | Read-only | The routed bytes count transmitted by the endpoint to the CE. |
| brcdVplsEndptVlanExtStatsSwitchedInPkts brcdlp.1.2.15.2.2.4.1.10 Syntax: Counter64 | Read-only | The number of valid switched frames received by the endpoint from the CE. |
| brcdVplsEndptVlanExtStatsSwitchedOutPkts brcdlp.1.2.15.2.2.4.1.11 Syntax: Counter64 | Read-only | The number of valid switched frames transmitted by the endpoint to the CE. |
| brcdVplsEndptVlanExtStatsSwitchedInOctets brcdlp.1.2.15.2.2.4.1.12 Syntax: Counter64 | Read-only | The switched bytes count received by the endpoint from the CE. |
| brcdVplsEndptVlanExtStatsSwitchedOutOctets brcdlp.1.2.15.2.2.4.1.13 Syntax: Counter64 | Read-only | The switched bytes count transmitted by the endpoint to the CE. |

VLAN extended statistics for VLL and VLL-local endpoints

The following table contains information for the extended VLAN accounting that applies to the Virtual Leased Line (VLL) and VLL-local endpoints attached to the Customer Edge (CE) device.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdVIIEndptVlanExtStatsTable brcdlp.1.2.15.2.1.2 | None | This table contains the VLAN extended statistics for VLL endpoints. For more information, refer to VLAN extended statistics for VLL and VLL-local endpoints . |
| brcdVIIEndptVlanExtStatsPriorityId brcdlp.1.2.15.2.1.2.1.1 Syntax: PortPriorityTC | None | Identifies the port QoS priority. The values 1 through 8 internally map to priorities 0 through 7. The value 128 indicates that the priority-level accounting is not enabled. |
| brcdVIIEndptVlanExtStatsInPkts brcdlp.1.2.15.2.1.2.1.2 Syntax: Counter64 | Read-only | The number of valid frames received by this endpoint from the Customer Edge (CE). |
| brcdVIIEndptVlanExtStatsOutPkts brcdlp.1.2.15.2.1.2.1.3 Syntax: Counter64 | Read-only | The number of valid frames transmitted by this endpoint to the Customer Edge (CE). |
| brcdVIIEndptVlanExtStatsInOctets brcdlp.1.2.15.2.1.2.1.4 Syntax: Counter64 | Read-only | The bytes count received by this endpoint from the Customer Edge (CE). |
| brcdVIIEndptVlanExtStatsOutOctets brcdlp.1.2.15.2.1.2.1.5 Syntax: Counter64 | Read-only | The bytes count transmitted by this endpoint to the Customer Edge (CE). |

Forwarding Database Group

- Forwarding database static table information..... 253

Forwarding database static table information

The following table contains the forwarding database information for each station known to the system. There is one entry per station.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snFdbTable brcdlp.1.1.3.4.1 | None | The forwarding database static table. |
| snFdbStationIndex brcdlp.1.1.3.4.1.1.1 Syntax: Integer | Read-only | Shows the FDB Station index to the FDB Station table. |
| snFdbStationAddr brcdlp.1.1.3.4.1.1.2 Syntax: Integer | Read-write | Shows the snFdbs physical address. The physical address represents a MAC Station. |
| snFdbVLanId brcdlp.1.1.3.4.1.1.4 Syntax: Integer | Read-write | Indicates the Station VLAN ID. |
| snFdbStationQos brcdlp.1.1.3.4.1.1.5 Syntax: Integer | Read-write | Shows the Quality of Service (QoS) values for the station: For stackable stations, the values can be: <ul style="list-style-type: none">• low(0) - Low priority• high(1) - High priority For chassis stations, the values can be: <ul style="list-style-type: none">• level0(0)• level1(1)• level2(2)• level3(3)• level4(4)• level5(5)• level6(6)• level7(7) |
| snFdbRowStatus brcdlp.1.1.3.4.1.1.7 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">• delete(3) - Deletes the row.• create(4) - Creates a new row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row.• invalid(1) - Row is inoperative.• valid(2) - Row exists and is valid. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------|------------|---------------------------------|
| snFdbStationIndex brcdlp.1.1.3.4.1.1.8 Syntax: InterfaceIndex | Read-write | Station interface index number. |

Port STP Configuration Group

- Port STP configuration groups..... 255

Port STP configuration groups

The Spanning Tree Protocol (STP) eliminates Layer 2 loops in networks by selectively blocking some ports and allowing other ports to forward traffic based on global (bridge) and local (port) parameters you can configure.

STP table

NOTE

The snPortStpTable was deprecated. It has been replaced by snIfStpTable.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snIfStpTable brcdlp.1.1.3.5.2 | None | A specific snIfStpTable consists of a number of switch ports. This table exists only if snVlanByPortCfgTable exists and snVlanByPortCfgStpMode is enabled for each VLAN. |
| snIfStpVlanId brcdlp.1.1.3.5.2.1.1 Syntax: Integer | Read-only | Shows the VLAN ID of the VLAN switch community. Valid values: 1 - 65535 |
| snIfStpPortNum brcdlp.1.1.3.5.2.1.2 Syntax: InterfaceIndex | Read-only | Shows the port number of the switch that has the ifIndex value. |
| snIfStpPortPriority brcdlp.1.1.3.5.2.1.3 Syntax: Integer | Read-write | Shows the value of the priority field, which is contained in the first (in network byte order) octet of the (2 octet long) Port ID. The second octet of the Port ID is given by the value of dot1dStpPort. The two octets combine to form the identity of the root bridge in a spanning tree (instance of STP). The bridge with the lowest value has the highest priority and is the root. Valid values: 0 - 255 |
| snIfStpCfgPathCost brcdlp.1.1.3.5.2.1.4 Syntax: Integer | Read-write | Shows the value of the dot1dStpPortPathCost, which is the port's path cost of paths towards the spanning tree root which include this port. 802.1D-1990 recommends that the default value of this parameter be in inverse proportion to the speed of the attached LAN. Writing value zero to this object sets the path cost to a default value which automatically changes according to port speed. Valid values: 0 - 200000000 |
| snIfStpOperState brcdlp.1.1.3.5.2.1.5 Syntax: Integer | Read-only | Indicates if the port STP entry is activated and is in running mode: <ul style="list-style-type: none">• notActivated(0)• activated(1) |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Default: notActivated(0) |
| snlfTpPortState brcdlp.1.1.3.5.2.1.8 Syntax: Integer | Read-only | <p>Shows the port's current state as defined by application of the Spanning Tree Protocol. This state controls what action a port takes when it receives a frame:</p> <ul style="list-style-type: none"> • disabled(1) - The port is not participating in STP. This can occur when the port is disconnected or STP is disabled on the port. • blocking(2) - STP has blocked Layer 2 traffic on this port to prevent a loop. The device or VLAN can reach the root bridge using another port with the forwarding(5) state. When a port is in this state, the port does not transmit or receive user frames, but the port does continue to receive STP BPDUs. • listening(3) - STP is responding to a topology change and this port is listening for a BPDU from neighboring bridges in order to determine the new topology. No user frames are transmitted or received during this state. • learning(4) - The port has passed the listening state and will change to the blocking or forwarding state, depending on the results of STP's reconvergence. The port does not transmit or receive user frames during this state. However, the device can learn the MAC addresses of frames that the port receives during this state and make corresponding entries in the MAC table. • forwarding(5) - STP is allowing the port to send and receive frames. • broken(6) - Ports that are malfunctioning are placed into this state by the bridge. • preforwarding(7) |
| snlfTpPortDesignatedCost brcdlp.1.1.3.5.2.1.9 Syntax: Integer32 | Read-only | The cost to the root bridge as advertised by the designated bridge that is connected to this port. This value is compared to the Root Path Cost field in received bridge PDUs. |
| snlfTpPortDesignatedRoot brcdlp.1.1.3.5.2.1.10 Syntax: Bridgeld | Read-only | Shows the unique ID of the root bridge. The root bridge is recorded as the root in the configuration BPDUs, which are transmitted by the designated bridge for the segment to which the port is attached. |
| snlfTpPortDesignatedBridge brcdlp.1.1.3.5.2.1.11 Syntax: Bridgeld | Read-only | Shows the ID of the designated bridge. The designated bridge is the device that connects the network segment to the root bridge. |
| snlfTpPortDesignatedPort brcdlp.1.1.3.5.2.1.12 | Read-only | Shows the ID of the port on the designated bridge that connects to the root bridge on the network. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Octet String snlfTpPortAdminRstp brcdlp.1.1.3.5.2.1.13 | | This object has two octets. |
| Syntax: TruthVal snlfTpPortProtocolMigration brcdlp.1.1.3.5.2.1.14 | Read-write | Enables or disables RSTP of a port which is a member of a VLAN. If the VLAN is not operating in RSTP, this object will return FALSE(2) and this object is not writable. |
| Syntax: TruthVal snlfTpPortAdminEdgePort brcdlp.1.1.3.5.2.1.15 | Read-write | When operating in RSTP (version 2) mode, writing TRUE(1) to this object forces this port to transmit RSTP BPDUs. Any other operation on this object has no effect and it always returns FALSE(2) when read. |
| Syntax: TruthVal snlfTpPortAdminPointToPoint brcdlp.1.1.3.5.2.1.16 | Read-write | The administrative value of the edge port parameter. A value of TRUE(1) indicates that this port should be assumed as an edge port and a value of FALSE(2) indicates that this port should be assumed as a non-edge port. |
| Syntax: Integer snlfTpOperPathCost brcdlp.1.1.3.5.2.1.17 | Read-only | The administrative point-to-point status of the LAN segment attached to this port. A value of TRUE(1) indicates that this port should always be treated as if it is connected to a point-to-point link. A value of FALSE(2) indicates that this port should be treated as having a shared media connection. |
| Syntax: Integer snlfTpPortRole brcdlp.1.1.3.5.2.1.18 | Read-only | Shows the value of dot1dTpPortPathCost, which is the port's path cost of paths towards the spanning tree root which include this port. 802.1D-1990 recommends that the default value of this parameter be in inverse proportion to the speed of the attached LAN. Reading value zero indicates an unknown path cost value because the port speed cannot be determined due to the speed auto sense in progress or the port link is down. Valid values: 0 - 200000000. |
| Syntax: Counter32 snlfTpBPDUTransmitted brcdlp.1.1.3.5.2.1.19 | Read-only | The STP or RSTP port role: <ul style="list-style-type: none">• unknown(0)• alternate(1)• root(2)• designated(3)• backupRole(4)• disabledRole(5) |
| Syntax: Counter32 snlfTpBPDUReceived brcdlp.1.1.3.5.2.1.20 | Read-only | The STP or RSTP bridge protocol unit transmitted counter. |
| Syntax: Counter32 snlfRstpConfigBPDUReceived brcdlp.1.1.3.5.2.1.21 | Read-only | The RSTP configuration bridge protocol unit received counter. |
| Syntax: Counter32 snlfRstpTCNBPDUReceived brcdlp.1.1.3.5.2.1.22 | Read-only | The RSTP topology change notification bridge protocol unit received counter. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------|-----------|---------------------------------------------------------------------------------|
| Syntax: Counter32 | | |
| snlfRstpConfigBPDUTransmitted brcdlp.1.1.3.5.2.1.23 | Read-only | The RSTP configuration bridge protocol unit transmitted counter. |
| Syntax: Counter32 | | |
| snlfRstpTCNBPDUTransmitted brcdlp.1.1.3.5.2.1.24 | Read-only | The RSTP topology change notification bridge protocol unit transmitted counter. |
| Syntax: Counter32 | | |

MRP MIB Definition

- MRP table..... 259

MRP table

The following table contains information about Metro Ring Protocol (MRP) MIB objects.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snMetroRingTable brcdlp.1.1.3.29.2.1 | None | The MRP table. |
| snMetroRingVlanId brcdlp.1.1.3.29.2.1.1.1 Syntax: Integer32 | None | Identifies a VLAN that controls the metro ring. |
| snMetroRingId brcdlp.1.1.3.29.2.1.1.2 Syntax: Integer32 | None | The metro ring identifier. |
| snMetroRingConfigState brcdlp.1.1.3.29.2.1.1.3 Syntax: Integer | Read-write | The state of the metro ring. |
| snMetroRingRole brcdlp.1.1.3.29.2.1.1.4 Syntax: Integer | Read-write | Shows the metro ring role: <ul style="list-style-type: none">other(1) - None of the cases below.master(2) - Device which originates RHP packets.member(3) - Device which forwards RHP packets. |
| snMetroRingHelloTime brcdlp.1.1.3.29.2.1.1.5 Syntax: Integer32 | Read-write | The time interval to periodically transmit Ring Health Protocol (RHP) in milliseconds. |
| snMetroRingPreforwardingTime brcdlp.1.1.3.29.2.1.1.6 Syntax: Integer32 | Read-write | The time interval that a metro ring stays in the preforwarding state before changing to the forwarding state (in milliseconds). |
| snMetroRingPort1 brcdlp.1.1.3.29.2.1.1.7 Syntax: InterfaceIndex | Read-write | The ifIndex value of port 1 to configure into the metro ring. |
| snMetroRingPort2 brcdlp.1.1.3.29.2.1.1.8 Syntax: InterfaceIndex | Read-write | The ifIndex value of port 2 to configure into the metro ring. |
| snMetroRingName brcdlp.1.1.3.29.2.1.1.9 Syntax: DisplayString | Read-write | The description of the metro ring. |
| snMetroRingRowStatus brcdlp.1.1.3.29.2.1.1.10 Syntax: Integer | Read-write | Creates and deletes rows in the table, and controls whether they are used. Values are: <ul style="list-style-type: none">delete(3) - Deletes a row.create(4) - Creates a new row. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows disappear immediately. The following values can be returned on reads: <ul style="list-style-type: none"> • noSuchName - No such row • other(1) - Some other cases. • valid(2) - The row exists and is valid. |
| snMetroRingOperState brcdlp.1.1.3.29.2.1.1.11 Syntax: Integer | Read-only | Shows the metro ring operational state. Valid values:other(1), enabled(2), disabled(3) |
| snMetroRingTopoGroupId brcdlp.1.1.3.29.2.1.1.12 Syntax: Integer32 | Read-only | The ID of the topology group that controls the metro ring. |
| snMetroRingRHPTransmitted brcdlp.1.1.3.29.2.1.1.13 Syntax: Counter32 | Read-only | The Ring Health Protocol (RHP) transmitted counter. |
| snMetroRingRHPRReceived brcdlp.1.1.3.29.2.1.1.14 Syntax: Counter32 | Read-only | The Ring Health Protocol (RHP) received counter. |
| snMetroRingStateChanged brcdlp.1.1.3.29.2.1.1.15 Syntax: Counter32 | Read-only | The counter for the number of times the ring state has changed. |
| snMetroRingTCRBPDUReceived brcdlp.1.1.3.29.2.1.1.16 Syntax: Counter32 | Read-only | The topology change protocol received counter. |
| snMetroRingPriPort brcdlp.1.1.3.29.2.1.1.17 Syntax: InterfaceIndex | Read-only | The ifIndex value of the primary port. |
| snMetroRingSecPort brcdlp.1.1.3.29.2.1.1.18 Syntax: InterfaceIndex | Read-only | The ifIndex value of the secondary port. |
| snMetroRingPriPortState brcdlp.1.1.3.29.2.1.1.19 Syntax: Integer | Read-only | The state of the metro ring primary port: <ul style="list-style-type: none"> • other(1) - None of the cases below. • preforwarding(2) - Port transmits RHP packets; port does not transmit data packets. • forwarding(3) - Port transmits RHP and data packets. • blocking(4) - Port receives RHP packets; does not receive data packets. • disabled(5) - Port is disabled from the metro ring. |
| snMetroRingSecPortState brcdlp.1.1.3.29.2.1.1.20 Syntax: Integer | Read-only | The state of the metro ring secondary port: <ul style="list-style-type: none"> • other(1) - None of the cases below. • preforwarding(2) - Port transmits RHP packets; port does not transmit data packets. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> forwarding(3) - Port transmits RHP and data packets. blocking(4) - Port receives RHP packets; does not receive data packets. disabled(5) - Port is disabled from the metro ring. |
| snMetroRingPriPortType brcdlp.1.1.3.29.2.1.1.21 Syntax: Integer | Read-only | The metro ring primary port type: <ul style="list-style-type: none"> other(1) - None of the cases below. regular(2) - Port is configured to operate on a single ring. tunnel(3) - Port is configured to operate on multiple rings. |
| snMetroRingSecPortType brcdlp.1.1.3.29.2.1.1.22 Syntax: Integer | Read-only | The metro ring secondary port type: <ul style="list-style-type: none"> other(1) - None of the cases below. regular(2) - Port is configured to operate on a single ring. tunnel(3) - Port is configured to operate on multiple rings. |
| snMetroRingPriPortActivePort brcdlp.1.1.3.29.2.1.1.23 Syntax: InterfaceIndex | Read-only | The ifIndex value of the active primary port. |
| snMetroRingSecPortActivePort brcdlp.1.1.3.29.2.1.1.24 Syntax: InterfaceIndex | Read-only | The ifIndex value of the active secondary port. |

RADIUS Group

| | |
|-----------------------------------|-----|
| • RADIUS general group..... | 263 |
| • RADIUS server table (IPv4)..... | 265 |

RADIUS general group

You can use a Remote Authentication Dial In User Service (RADIUS) server to secure the following types of access to the switch or router:

- Telnet access
- SSH access
- Web management access
- Access to the Privileged EXEC level and CONFIG level of the CLI

The following objects provide information on RADIUS authentication and apply to all devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRadiusSNMPAccess brcdlp.1.1.3.12.1.1 Syntax: Integer | Read-only | Indicates if the RADIUS group MIB objects can be accessed by an SNMP manager: <ul style="list-style-type: none">• disabled(0) - All RADIUS group MIB objects return a "general error".• enabled(1) Default: disabled(0) |
| snRadiusEnableTelnetAuth brcdlp.1.1.3.12.1.2 Syntax: Integer | Read-write | Indicates if Telnet authentication as specified by the RADIUS general group object is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: disabled(0) |
| snRadiusRetransmit brcdlp.1.1.3.12.1.3 Syntax: Integer | Read-write | Indicates the number of authentication query retransmissions that can be sent to the RADIUS server. Valid values: 1 - 5 Default: 3 |
| snRadiusTimeOut brcdlp.1.1.3.12.1.4 Syntax: Integer | Read-write | Specifies the number of seconds to wait for an authentication reply from the RADIUS server. Each unit is one second. Valid values: 1 - 60 Default: 3 |
| snRadiusDeadTime brcdlp.1.1.3.12.1.5 Syntax: Integer | Read-write | Specifies the RADIUS server dead time. Each unit is one minute. Valid values: 0 - 5 Default: 3 |
| snRadiusKey brcdlp.1.1.3.12.1.6 Syntax: DisplayString | Read-write | Shows the authentication key as encrypted text. This object can have up to 64 characters. A write operation can only be done if the SET request |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>uses SNMPv3 with data encrypted using a privacy key.</p> |
| snRadiusLoginMethod brcdlp.1.1.3.12.1.7 Syntax: Octet String | Read-write | <p>Shows the sequence of authentication methods for the RADIUS server. Each octet represents a method for authenticating the user at login. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> • enable(1) - Authenticate by the "Enable" password for the command line interface. • radius(2) - Authenticate by requesting the RADIUS server. • local(3) - Authenticate by local user account table. • line(4) - Authenticate by the Telnet password. • tacplus(5) - Authenticate by requesting the TACACS Plus server. • none(6) - Do not authenticate. • tacacs(7) - Authenticate by requesting the TACACS server. <p>Setting a zero length octet string invalidates all previous authentication methods.</p> |
| snRadiusEnableMethod brcdlp.1.1.3.12.1.8 Syntax: Octet String | Read-write | <p>Shows the sequence of authentication methods for the RADIUS server. Each octet represents a method for authenticating the user after login, as the user enters the privilege mode of the command line interface. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> • enable(1) - Authenticate by the "Enable" password for the command line interface. • radius(2) - Authenticate by requesting the RADIUS server. • local(3) - Authenticate by local user account table. • line(4) - Authenticate by the Telnet password. • tacplus(5) - Authenticate by requesting the TACACS Plus server. • none(6) - Do not authenticate. • tacacs(7) - Authenticate by requesting the TACACS server. <p>Setting a zero length octet string invalidates all previous authentication methods.</p> |
| snRadiusWebServerMethod brcdlp.1.1.3.12.1.9 Syntax: Octet String | Read-write | <p>Shows the sequence of authentication methods. Each octet represents a method for authenticating the user who is accessing the Web server. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> • enable(1) - Authenticate by the "Enable" password for the command line interface. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> radius(2) - Authenticate by requesting the RADIUS server. local(3) - Authenticate by local user account table. line(4) - Authenticate by the Telnet password. tacplus(5) - Authenticate by requesting the TACACS Plus server. none(6) - Do not authenticate. tacacs(7) - Authenticate by requesting the TACACS server. <p>Setting a zero length octet string invalidates all previous authentication methods.</p> |
| snRadiusSNMPServerMethod brcdlp.1.1.3.12.1.10 Syntax: Octet String | Read-write | <p>Shows the sequence of authentication methods. Each octet represents a method to authenticate the user who is accessing the SNMP server. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> enable(1) - Authenticate by the "Enable" password for the command line interface. radius(2) - Authenticate by requesting the RADIUS server. local(3) - Authenticate by local user account table. line(4) - Authenticate by the Telnet password. tacplus(5) - Authenticate by requesting the TACACS Plus server. none(6) - Do not authenticate. tacacs(7) - Authenticate by requesting the TACACS server. <p>Setting a zero length octet string invalidates all previous authentication methods.</p> |

RADIUS server table (IPv4)

The following objects provide information on the RADIUS server and they apply to all IPv4 devices. Configure **enablesnmp config-radius** command along with other RADIUS configurations to populate the objects of [RADIUS server table \(IPv4\)](#).

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------|
| snRadiusServerTable brcdlp.1.1.3.12.2 | None | RADIUS server table. |
| snRadiusServerIp brcdlp.1.1.3.12.2.1.1 Syntax: ipAddress | Read-only | Shows the RADIUS server IP address. |
| snRadiusServerAuthPort brcdlp.1.1.3.12.2.1.2 Syntax: Integer32 | Read-write | <p>Shows the UDP port number for authentication. Displays the default when the value is set to zero.</p> <p>Default: 1812</p> |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRadiusServerAcctPort brcdlp.1.1.3.12.2.1.3 Syntax: Integer32 | Read-write | Shows the UDP port number used for accounting. Displays the default when the value is set to zero. Default: 1813 |
| snRadiusServerRowStatus brcdlp.1.1.3.12.2.1.4 Syntax: Integer | Read-write | Creates or deletes a RADIUS server table entry: <ul style="list-style-type: none">• other(1)• valid(2)• delete(3)• create(4) |
| snRadiusServerRowKey brcdlp.1.1.3.12.2.1.5 Syntax: DisplayString | Read-write | Shows the authentication key, displayed as encrypted text. Valid values: Up to 64 characters |
| snRadiusServerUsage brcdlp.1.1.3.12.2.1.6 Syntax: Integer | Read-write | Allows this server to be dedicated for a particular AAA activity: <ul style="list-style-type: none">• default(1)• authenticationOnly(2)• authorizationOnly(3)• accountingOnly(4) |

TACACS Group

| | |
|-----------------------------------|-----|
| • TACACS general MIBs..... | 267 |
| • TACACS server table (IPv4)..... | 268 |

TACACS general MIBs

The Terminal Access Controller Access Control System (TACACS) or security protocols can be used to authenticate the following types of access to devices:

- Telnet access
- SSH access
- Access to management functions
- Web management access
- Access to the Privileged EXEC level and CONFIG level of the CLI

The TACACS and protocols define how authentication, authorization, and accounting (AAA) information is sent between a device and an authentication database on a TACACS server.

The following objects provide information on TACACS authentication and apply to all devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTacacsRetransmit brcdlp.1.1.3.13.1.1 Syntax: Integer | Read-write | Shows the number of authentication query retransmissions to the TACACS server. Valid values: 1 - 5 Default: 3 |
| snTacacsTimeOut brcdlp.1.1.3.13.1.2 Syntax: Integer | Read-write | Specifies how many seconds to wait for an authentication reply from the TACACS server. Valid values: 0 - 15 Default: 3 seconds |
| snTacacsDeadTime brcdlp.1.1.3.13.1.3 Syntax: Integer | Read-write | Specifies the TACACS server dead time in minutes. Valid values: 0 - 5 Default: 3 minutes |
| snTacacsKey brcdlp.1.1.3.13.1.4 Syntax: DisplayString | Read-write | Authentication key displayed as encrypted text. Valid values: Up to 64 characters A write operation can only be done if the SET request uses SNMPv3 with data encrypted using a privacy key. |
| snTacacsSNMPAccess brcdlp.1.1.3.13.1.5 Syntax: Integer | Read-only | Indicates whether the TACACS group MIB objects can be accessed by an SNMP manager: <ul style="list-style-type: none">• disabled(0) - All TACACS group MIB objects return "general error".• enabled(1) Default: disabled(0) |

TACACS server table (IPv4)

The following objects provide information on the TACACS server. They apply to all IPv4 devices. Configure **enablesnmp config-tacacs** command along with other TACACS configurations to populate the objects of [TACACS server table \(IPv4\)](#).

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTacacsServerTable brcdlp.1.1.3.13.2 | None | TACACS server table. |
| snTacacsServerIp brcdlp.1.1.3.13.2.1.1 Syntax: ipAddress | Read-only | Shows the TACACS server IP address. |
| snTacacsServerAuthPort brcdlp.1.1.3.13.2.1.2 Syntax: Integer32 | Read-write | Specifies the UDP port used for authentication. Default: 49 |
| snTacacsServerRowStatus brcdlp.1.1.3.13.2.1.3 Syntax: Integer | Read-write | Creates or deletes a TACACS server table entry: <ul style="list-style-type: none">• other(1)• valid(2)• delete(3)• create(4) |
| snTacacsServerRowKey brcdlp.1.1.3.13.2.1.4 Syntax: DisplayString | Read-write | Authentication key displayed as encrypted text. Valid values: Up to 64 characters |
| snTacacsServerUsage brcdlp.1.1.3.13.2.1.5 Syntax: Integer | Read-write | Allows this server to be dedicated to a particular AAA activity: <ul style="list-style-type: none">• default(1)• authenticationOnly(2)• authorizationOnly(3)• accountingOnly(4) |

DHCP Gateway List

| | |
|--------------------------------|-----|
| • DHCP gateway list table..... | 269 |
| • DNS group (IPv4)..... | 269 |

DHCP gateway list table

The following objects provide information on Dynamic Host Configuration Protocol (DHCP) gateways.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snDhcpGatewayListTable brcdlp.1.1.3.8.1 | None | A table of DHCP gateway addresses. |
| snDhcpGatewayListId brcdlp.1.1.3.8.1.1.1 Syntax: Integer | Read-only | Shows the ID for a DHCP gateway. Valid values: 1 - 32 |
| snDhcpGatewayListAddrList brcdlp.1.1.3.8.1.1.2 Syntax: Octet String | Read-write | Lists the DHCP gateway addresses in each DHCP gateway list. This list contains 1 to 8 IP addresses represented by octet strings. This object can have 4 to 32 octets. |
| snDhcpGatewayListRowStatus brcdlp.1.1.3.8.1.1.3 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">delete(3) - Delete the row.create(4) - Create a new row.modify(5) - Modify an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">noSuch(0) - No such row.invalid(1) - Row is inoperative.valid(2) - Row exists and is valid. |

DNS group (IPv4)

The Domain Name System (DNS) resolver feature allows you to use a host name to perform Telnet, ping, and traceroute. You can also define a DNS domain on a Layer 2 Switch or Layer 3 Switch and thereby recognize all hosts within that domain.

The following objects provide information on DNS. They apply to all IPv4 devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------|
| snDnsDomainName brcdlp.1.1.3.9.1 Syntax: DisplayString | Read-write | Shows the DNS domain name. This object can have up to 80 characters. |
| snDnsGatewayIpAddrList brcdlp.1.1.3.9.2 Syntax: Octet String | Read-write | Shows the DNS gateway IP addresses. This list contains up to four IP addresses, represented by octet strings. This object has 16 octets. |

Port MAC Security

Port MAC security table

The following table shows the same information as the **show port security mac** command.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityTable brcdlp.1.1.3.24.1.1.1 | None | The port MAC security table. |
| snPortMacSecurityIfIndex brcdlp.1.1.3.24.1.1.1.1.1 Syntax: Unsigned32 | Read-only | The ifIndex value (ID) of the Ethernet interface on which Port MAC security is enabled. |
| snPortMacSecurityResource brcdlp.1.1.3.24.1.1.1.1.2 Syntax: Integer | Read-only | Indicates how the MAC addresses on an interface are secured: <ul style="list-style-type: none">• local(1) - Local resource was used. The interface secures at least one secure MAC address entry. Each interface can store up to 64 local resources.• shared(2) - Shared resource was used. When an interface has secured enough MAC addresses to reach its limit for local resources, it can secure additional MAC addresses by using global or shared resources. |
| snPortMacSecurityQueryIndex brcdlp.1.1.3.24.1.1.1.1.3 Syntax: Unsigned32 | Read-only | An index for a MAC address entry that was secured for this interface. |
| snPortMacSecurityMAC brcdlp.1.1.3.24.1.1.1.1.4 Syntax: Integer | Read-only | The secured MAC address. |
| snPortMacSecurityAgeLeft brcdlp.1.1.3.24.1.1.1.1.5 Syntax: Unsigned32 | Read-only | The number of minutes the MAC address will remain secure. A value of 0 indicates no aging is in effect. |
| snPortMacSecurityShutdownStatus brcdlp.1.1.3.24.1.1.1.1.6 Syntax: Integer | Read-only | Indicates if the interface has been shut down due to a security violation: <ul style="list-style-type: none">• up(1) - The port is up.• down(2) - The port has been shut down. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityShutdownTimeLeft brcdlp.1.1.3.24.1.1.1.1.7 Syntax: Unsigned32 | Read-only | If the value of Port MAC security table is down(2), this object shows the number of seconds before it is enabled again. If the value is up(1), this object shows 0. |
| snPortMacSecurityVlanId brcdlp.1.1.3.24.1.1.1.1.8 Syntax: Unsigned32 | Read-only | Shows the VLAN membership of this interface. This object shows a value from 1 through 65535. |

Port MAC security module statistics table

The following table shows the same information as the **show port security statistics** *module* command.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityModuleStatTable brcdlp.1.1.3.24.1.1.2 Syntax: Unsigned32 | None | The port MAC security module statistics table that shows the port MAC security statistics for each module. |
| snPortMacSecurityModuleStatSlotNum brcdlp.1.1.3.24.1.1.2.1.1 Syntax: Integer | Read-only | The slot number of the port MAC security module. |
| snPortMacSecurityModuleStatTotalSecurityPorts brcdlp.1.1.3.24.1.1.2.1.2 Syntax: Unsigned32 | Read-only | The total number of Ethernet interfaces on which MAC security is configured in this module. |
| snPortMacSecurityModuleStatTotalMACs brcdlp.1.1.3.24.1.1.2.1.3 Syntax: Unsigned32 | Read-only | The total number of secure MAC addresses learned or configured in this module. |
| snPortMacSecurityModuleStatViolationCounts brcdlp.1.1.3.24.1.1.2.1.4 Syntax: Unsigned32 | Read-only | The number of security violations that occurred in this module. |
| snPortMacSecurityModuleStatTotalShutdownPorts brcdlp.1.1.3.24.1.1.2.1.5 Syntax: Unsigned32 | Read-only | The number of Ethernet interfaces in this module that were shut down due to security violations. |

Port MAC security interface table

The following table shows the same information as the **show port security ethernet** *slot/port* command.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityIntfContentTable brcdlp.1.1.3.24.1.1.3 Syntax: InterfaceIndex | None | The port MAC security interface table that shows the port MAC security statistics for an Ethernet interface. |
| snPortMacSecurityIntfContentIfIndex brcdlp.1.1.3.24.1.1.3.1.1 Syntax: InterfaceIndex | None | Shows the ifIndex value of the local interface. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityIntfContentSecurity brcdlp.1.1.3.24.1.1.3.1.2 Syntax: Integer | Read- write | Indicates whether MAC port security is enabled or disabled on this interface: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snPortMacSecurityIntfContentViolationType brcdlp.1.1.3.24.1.1.3.1.3 Syntax: Integer | Read-write | The port security violation type for this interface: <ul style="list-style-type: none">• shutdown(0)• restricted(1) |
| snPortMacSecurityIntfContentShutdownTime brcdlp.1.1.3.24.1.1.3.1.4 Syntax: Unsigned32 | Read-write | If snPortMacSecurityIntfContentViolationType is 0 (shutdown), this value indicates the number of seconds the interface shuts down when the violation occurs. If snPortMacSecurityIntfContentViolationType is 1 (restrict), this value will always be 0. |
| snPortMacSecurityIntfContentShutdownTimeLeft brcdlp.1.1.3.24.1.1.3.1.5 Syntax: Unsigned32 | Read-only | If snPortMacSecurityIntfContentViolationType is 0 (shutdown), this value indicates the number of seconds before this interface will be re-enabled. If snPortMacSecurityIntfContentViolationType is 1 (restrict), this value will always be 0. |
| snPortMacSecurityIntfContentAgeOutTime brcdlp.1.1.3.24.1.1.3.1.6 Syntax: Unsigned32 | Read-write | The amount of time, in minutes, the MAC addresses learned on this interface will remain secure. A value of 0 indicates no aging is in effect. |
| snPortMacSecurityIntfContentMaxLockedMacAllowed brcdlp.1.1.3.24.1.1.3.1.7 Syntax: Unsigned32 | Read-write | The maximum number of secure MAC addresses that can be locked to this interface. |
| snPortMacSecurityIntfContentTotalMACs brcdlp.1.1.3.24.1.1.3.1.8 Syntax: Unsigned32 | Read-only | The total number of secure MAC addresses that are locked to this interface. |
| snPortMacSecurityIntfContentViolationCounts brcdlp.1.1.3.24.1.1.3.1.9 Syntax: Unsigned32 | Read-only | The total number of security violations that occurred on this interface. |

Port MAC security interface MAC table

The following table shows the same information as the **show port security mac ethernet slot/port** command.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityIntfMacTable brcdlp.1.1.3.24.1.1.4 | None | The port MAC security interface MAC table that shows the port MAC security status for each Ethernet interface. |
| snPortMacSecurityIntfMacIfIndex brcdlp.1.1.3.24.1.1.4.1.1 Syntax: Integer | Read-only | Shows the ifIndex value of the local interface. |
| snPortMacSecurityIntfMacAddress brcdlp.1.1.3.24.1.1.4.1.2 Syntax: MAC Address | Read-only | The secure MAC addresses for this local Ethernet interface on which the secure MAC address is configured and learned. The maximum number of the secure MAC |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------|
| | | addresses is restricted by the object snPortMacSecurityIntfContentMaxLockedMacAll owned. |
| snPortMacSecurityIntfMacVlanId brcdlp.1.1.3.24.1.1.4.1.3 Syntax: Unsigned32 | Read-write | The VLAN membership of this interface. A value of zero indicates it is not applicable. |

Port MAC security autosave MAC table

The following table shows the same information as the **show port security autosave** command.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMacSecurityAutosaveMacTable brcdlp.1.1.3.24.1.1.5 | None | The port MAC security autosave MAC table that shows the secure MAC addresses that were saved automatically. |
| snPortMacSecurityAutosaveMacIfIndex brcdlp.1.1.3.24.1.1.5.1.1 Syntax: Integer32 | Read-only | Shows the ifIndex value of the local interface. |
| snPortMacSecurityAutosaveMacResource brcdlp.1.1.3.24.1.1.5.1.2 Syntax: Integer32 | Read-only | Indicates the resource used to autosave secure MAC addresses: <ul style="list-style-type: none"> • 1 - Local • 2 - Shared |
| snPortMacSecurityAutosaveMacQueryIndex brcdlp.1.1.3.24.1.1.5.1.3 Syntax: Unsigned32 | Read-only | The index entry within the given resource of the local interface on which MAC port security is autosaved. |
| snPortMacSecurityAutosaveMacAddress brcdlp.1.1.3.24.1.1.5.1.4 Syntax: MAC Address | Read-only | The secure MAC addresses for this local Ethernet interface on which the secure MAC address is autosaved. |

Port MAC security global MIB group

The following table shows the global MIBs for MAC port security.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMacGlobalSecurityFeature brcdlp.1.1.3.24.1.2.1 Syntax: Integer | Read-write | Indicates whether port security for this device is disabled or enabled: <ul style="list-style-type: none">• 0 - Disabled• 1 - Enabled |
| snPortMacGlobalSecurityAgeOutTime brcdlp.1.1.3.24.1.2.2 Syntax: Unsigned32 | Read-write | The amount of time, in minutes, the MAC addresses learned on this device will remain secure. A value of 0 indicates no aging is in effect. |
| snPortMacGlobalSecurityAutosave brcdlp.1.1.3.24.1.2.3 Syntax: Unsigned32 | Read-write | The port security autosave value for this device. |

Port monitor table

The following table shows the status of port monitoring on an interface.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPortMonitorTable brcdlp.1.1.3.25.1 | None | The port monitor table. |
| snPortMonitorIfIndex brcdlp.1.1.3.25.1.1.1 | None | Shows the ifIndex value of the local interface. |
| snPortMonitorMirrorList brcdlp.1.1.3.25.1.1.2 Syntax: DisplayString | Read-write | <p>Lists the monitoring status of each port. The values in this object are space delimited. They consist of a sequence of a port's ifIndex followed by the port's monitoring mode. Port monitoring mode can be one of the following:</p> <ul style="list-style-type: none"> • 0 - Monitoring is off. • 1 - The port will monitor input traffic. • 2 - The port will monitor output traffic. • 3 - The port will monitor both input and output traffic. <p>For example, you may see the following values: 65 2 66 1 "65" may represent port 2/1 and "66" port 2/2. The entry means that port 2/1 is monitoring output traffic. Port 2/2 is monitoring input traffic.</p> |

MAC Authentication MIB Definition

| | |
|---------------------------------------------------------------------|-----|
| • MAC clear interface multi-device port authentication objects..... | 277 |
| • Multi-device port authentication objects | 277 |
| • Multi-device port authentication clear sessions | 278 |

MAC clear interface multi-device port authentication objects

The following clear interface objects are available for multi-device port authentication.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snMacAuthClearIfFCmdTable brcdlp.1.1.3.28.2 | None | The status of clearing a MAC authentication entry for an interface. |
| snMacAuthClearIfCmdIndex brcdlp.1.1.3.28.2.1.1 Syntax: InterfaceIndex | None | The ifIndex value of the local interface on which a clear command is issued and monitored. |
| snMacAuthClearIfCmdAction brcdlp.1.1.3.28.2.1.2 Syntax: InterfaceIndex | Read-write | The action value of the local interface: <ul style="list-style-type: none">valid(0) - An SNMP-GET of this command shows that it is valid.clear(1) - Represents clearing a MAC authentication entry for an interface. |

Multi-device port authentication objects

The following objects are available for multi-device port authentication.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snMacAuthTable brcdlp.1.1.3.28.3 | None | Displays the MAC authentication table. |
| snMacAuthIfIndex brcdlp.1.1.3.28.3.1.1 Syntax: InterfaceIndex | None | In order to identify a particular interface, this object identifies the instance of the ifIndex object, defined in RFC 2863. |
| snMacAuthVlanId brcdlp.1.1.3.28.3.1.2 Syntax: Integer | None | The ID of a VLAN of which the port is a member. The port must be untagged. For a tagged port that belongs to multiple VLANs, this object returns 0, which is an invalid VLAN ID value. |
| snMacAuthMac brcdlp.1.1.3.28.3.1.3 Syntax: MacAddress | None | MAC address to be authenticated. |
| snMacAuthState brcdlp.1.1.3.28.3.1.4 Syntax: Integer | Read-only | The state of MAC authentication. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------|
| snMacAuthTimeStamp brcdlp.1.1.3.28.3.1.5 Syntax: Object-Type | Read-only | Time stamp at which the MAC address was authenticated or failed to be authenticated. |
| snMacAuthAge brcdlp.1.1.3.28.3.1.6 Syntax: Integer | Read-only | Age of the MAC session in which the MAC address is authenticated. |
| snMacAuthDot1x brcdlp.1.1.3.28.3.1.7 Syntax: Integer | Read-only | Indicates whether dot1x is enabled or not. |

Multi-device port authentication clear sessions

The following clear sessions objects are available for multi-device port authentication.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snMacAuthClearMacSessionTable brcdlp.1.1.3.28.4 | None | The status of clearing a MAC session entry indexed by a MAC address. |
| snMacAuthClearMacSessionEntry brcdlp.1.1.3.28.4.1 | None | An entry of clearing a MAC session entry indexed by a MAC address. |
| snMacAuthClearMacSessionIfIndex brcdlp.1.1.3.28.4.1.1 Syntax: InterfaceIndex | None | The ifIndex value of the local interface on which a clear command is issued and monitored. |
| snMacAuthClearMacSessionMac brcdlp.1.1.3.28.4.1.2 Syntax: MacAddress | None | A MAC session entry indexed by a MAC address. |
| snMacAuthClearMacSessionAction brcdlp.1.1.3.28.4.1.3 Syntax: Integer | Read-write | The action value of the clear MAC session: <ul style="list-style-type: none"> valid(0) - An SNMP-GET of this MIB shows that it is a valid command. clear(1) - Represents clearing a MAC session entry indexed by a MAC address. |

Traffic Manager MIB Definition

| | |
|---------------------------------------------------------------|-----|
| • Traffic Manager statistics information group..... | 279 |
| • Traffic Manager statistics table..... | 279 |
| • Traffic Manager VOQ statistics table..... | 283 |
| • Traffic Manager unicast VOQ statistics table..... | 285 |
| • Traffic Manager multicast VOQ statistics table..... | 287 |
| • Traffic Manager CPU VOQ statistics table..... | 288 |
| • Traffic Manager CPU VOQ information table..... | 290 |
| • Traffic Manager CPU aggregation queue statistics table..... | 292 |

Traffic Manager statistics information group

NOTE

This chapter describes the objects for the Traffic Manager statistics supported on the MLX Series, MLX Series, and XMR Series devices.

Use the **clear tm statistics** CLI command to clear both the CLI and SNMP statistics counters for the Traffic Manager. Use the **clear tm-voq-stats** command to clear the VOQ statistics. The **snmp-server preserve-statistics** CLI command does not preserve the Traffic Manager statistics.

This table contains information about the Traffic Manager statistics information group on the NI-MLX-1Gx48-T, NI-MLX-1Gx24, NI-MLX-10Gx8, BR-MLX-100Gx2, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module, and all the POS modules.

The **show tm port-mapping** command displays information about the Traffic Manager statistics information group.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------|
| brcdTMPortMappingMaxPorts brcdlp.1.14.2.2.1.1 Syntax: Unsigned32 | Read-only | Shows the maximum number of ports that are supported by the Traffic Manager on the system. |
| brcdTMPortMappingUsedPorts brcdlp.1.14.2.2.1.2 Syntax: Unsigned32 | Read-only | Shows the currently used ports for this system |
| brcdTMPortMappingAvailablePorts brcdlp.1.14.2.2.1.3 Syntax: Unsigned32 | Read-only | Shows the available ports on the system. |

Traffic Manager statistics table

The following table contains the Traffic Manager-related statistics. Use the **show tm statistics** CLI command to display information about the Traffic Manager-related statistics.

This table contains information for the Traffic Manager statistics on all the POS and the Ethernet 10/100/1000M/10G/40G/100G cards.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdTMStatsTable brcdlp.1.14.2.1.2.2 | None | The Traffic Manager statistics table. |
| brcdTMStatsSlotId brcdlp.1.14.2.1.2.2.1.1 Syntax: Unsigned32 | None | Shows the slot ID of the LP module that uniquely identifies a line card. The LP module must be physically present and operationally up. |
| brcdTMStatsTMDividelId brcdlp.1.14.2.1.2.2.1.2 Syntax: Unsigned32 | None | Shows the Traffic Manager device ID that uniquely identifies the Network Processor Traffic Manager within a line card in the system. |
| brcdTMStatsDescription brcdlp.1.14.2.1.2.2.1.3 Syntax: DisplayString | Read-only | Shows the range of ports serviced by brcdTMStatsTMDividelId. |
| brcdTMStatsTotalIngressPktsCnt brcdlp.1.14.2.1.2.2.1.4 Syntax: Counter64 | Read-only | Shows the count of all packets entering into the Traffic Manager. |
| brcdTMStatsIngressEnqueuePkts brcdlp.1.14.2.1.2.2.1.5 Syntax: Counter64 | Read-only | Shows the count of all packets entering ingress queues on the Traffic Manager. |
| brcdTMStatsEgressEnqueuePkts brcdlp.1.14.2.1.2.2.1.6 Syntax: Counter64 | Read-only | Shows the count of all packets entering egress queues and forwarded out of the Traffic Manager. |
| brcdTMStatsIngressEnqueueBytes brcdlp.1.14.2.1.2.2.1.7 Syntax: Counter64 | Read-only | Shows the count of all bytes entering ingress queues on the Traffic Manager. NOTE This object is not supported on the NI-MLX-10Gx8-D 8-port 10GbE (D) module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, NI-MLX-10Gx8-X 8-port 10GbE (X) module, BR-MLX-10Gx24-DM 24-port-10GbE module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Zero is returned for these cards. |
| brcdTMStatsEgressEnqueueBytes brcdlp.1.14.2.1.2.2.1.8 Syntax: Counter64 | Read-only | Shows the count of all bytes entering egress queues and forwarded out of the Traffic Manager. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE</p> <p>This object is not supported on the NI-MLX-10Gx8-D 8-port 10GbE module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, NI-MLX-10Gx8-X 8-port 10GbE (X) module, BR-MLX-10Gx24-DM 24-port-10GbE module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Zero is returned for these cards.</p> |
| brcdTMStatsIngressDequeuePkts brcdlp.1.14.2.1.2.2.1.9 Syntax: Counter64 | Read-only | Shows the count of all packets dequeued from ingress queues and forwarded to the Traffic Manager. |
| brcdTMStatsIngressDequeueBytes brcdlp.1.14.2.1.2.2.1.10 Syntax: Counter64 | Read-only | <p>Shows the count of all bytes dequeued from ingress queues and forwarded to the Traffic Manager.</p> <p>NOTE</p> <p>This object is not supported on the NI-MLX-10Gx8-D 8-port 10GbE (D) module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, NI-MLX-10Gx8-X 8-port 10GbE (X) module, BR-MLX-10Gx24-DM 24-port-10GbE module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Zero is returned for these cards.</p> |
| brcdTMStatsIngressTotalQDiscardPkts brcdlp.1.14.2.1.2.2.1.11 Syntax: Counter64 | Read-only | <p>SbrcdTMStatsIngressTotalQDiscardBytes shows the count of all packets failing to enter ingress queues on the Traffic Manager. This may be due to the following reasons:</p> <ul style="list-style-type: none"> The queue reaches its maximum depth, WRED, or other reasons. The Network Processor drops the packets due to an unknown Layer 3 route, RPF, or segment filtering. |
| brcdTMStatsIngressTotalQDiscardBytes brcdlp.1.14.2.1.2.2.1.12 Syntax: Counter64 | Read-only | <p>Shows the count of all bytes failing to enter ingress queues on the Traffic Manager. This may be due to the following reasons:</p> <ul style="list-style-type: none"> The queue reaches its maximum depth, WRED, or other reasons. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> The Network Processor drops the packets due to an unknown Layer 3 route, RPF, or segment filtering. <p>NOTE This object is not supported on the NI-MLX-10Gx8-D 8-port 10GbE (X) module, NI-MLX-10Gx8-D 8-port 10GbE(D) module, NI-MLX-10Gx8-M 8-port 10GbE (M) module, BR-MLX-10Gx24-DM 24-port-10GbE module, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE module. Traffic Manager VOQ statistics table

The brcdTMDestUcastQStatTable contains information of the unicast queue counters aggregated across all the Traffic Managers (TMs) per destination interface. The following MIB objects are supported on the XMR Series and MLX Series devices and the table is not supported on the CES 2000 Series and CER 2000 Series devices.

By default, the SNMP support for brcdTMDestUcastQStatTable is disabled. Use **tm-voq-collection [intervalseconds]** command to enable Traffic Manager Virtual Output Queue (VOQ) statistics and **snmp-server enable mib tm-dest-qstat** command to enable the SNMP support.

Use **clear tm-voq-stats dst_port [ethernet | all] slot/port** command to clear all the CLI and SNMP statistics counters for the Traffic Manager VOQ statistics.

NOTE

Expect a delay or latency of 25 seconds in the reported statistics values because of internal cacheing of the statistics.

The Extreme NetIron devices can support the Traffic Manager statistics aggregation only for traffic coming from the following card types:

- BR-MLX-10Gx8-X 8-port 10GbE Module
- NI-MLX-10Gx8-D 8-port 10GbE Module
- NI-MLX-10Gx8-M 8-port 10GbE (M) Module
- BR-MLX-100Gx2-X 2-port 100GbE Module
- NI-X-OC192x1 1-port OC192 STM64 Module
- NI-X-OC192x2 2-port OC192 STM64 Module
- NI-X-OC48x2 2-port OC48/12 STM16/STM4 Module

- NI-X-OC48x4 4-port OC48/12 STM16/STM4 Module
- NI-X-OC48x8 8-port OC48/12 STM16/STM4 Module
- NI-MLX-1Gx48-T 48-port 10/100/1000Base-T MRJ21 Module
- BR-MLX-1GCx24-X 24-port 10/100/1000Base-T Copper Module
- BR-MLX-1GFx24-X 24-port 1GbE SFP Module
- BR-MLX-40Gx4-M 4-port 40GbE Module
- BR-MLX-10Gx20 20-port 1/10GbE Module
- BR-MLX-100Gx2-CFP2 2-port 100GbE Module
- and BR-MLX-10Gx4-M-IPSEC 4-port 10GbE Module

NOTE

The MIB objects in the following table are read-only and support only SNMP GET, GET-NEXT, WALK, and GET-BULK requests.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdTMDestUcastQStatTable brcdlp.1.14.2.1.2.8 | NA | The Traffic Manager unicast queue counters aggregated across all the TMs per destination interface per priority table. |
| brcdTMDestUcastQStatDestIfIndex brcdlp.1.14.2.1.2.8.1.1 Syntax: InterfaceIndex | NA | The ifindex of the destination interface. The table includes all the interfaces of the LP modules that are physically present and operationally up and it also includes all the deployed LAG interfaces. |
| brcdTMDestUcastQStatPriority brcdlp.1.14.2.1.2.8.1.2 Syntax: PriorityTC | NA | The priority of the packets that are stored in the queue. This is a 1-based value. The priority0 maps to 1, priority1 maps to 2, and so on. The priority value equal to nonPriority(128) indicates the aggregated counters for the given destination port. When tm-max-queues is set to 4, the two consecutive priorities are stored in one unicast queue. Valid values: 1, 3, 5, 7, and 128 |
| brcdTMDestUcastQStatEnquePkts brcdlp.1.14.2.1.2.8.1.3 Syntax: Counter64 | Read-only | The total aggregated count of the packets entering an ingress queue across the TMs. |
| brcdTMDestUcastQStatEnqueBytes brcdlp.1.14.2.1.2.8.1.4 Syntax: Counter64 | Read-only | The total aggregated count of the bytes entering an ingress queue across the TMs. |
| brcdTMDestUcastQStatDequeuePkts brcdlp.1.14.2.1.2.8.1.5 Syntax: Counter64 | Read-only | The total aggregated count of the packets that are dequeued or transmitted from an ingress queue across the TMs. |
| brcdTMDestUcastQStatDequeueBytes brcdlp.1.14.2.1.2.8.1.6 Syntax: Counter64 | Read-only | The total aggregated count of the bytes that are dequeued or transmitted from an ingress queue across the TMs. |
| brcdTMDestUcastQStatTotalQDiscardPkts brcdlp.1.14.2.1.2.8.1.7 Syntax: Counter64 | Read-only | For a VOQ, the total aggregated count across all the packets of TMs is discarded due to one of the following reasons: <ul style="list-style-type: none"> • Before enqueueing, caused by WRED • When the maximum queue depth is reached |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> After enqueueing but before dequeuing, caused by aging |

Traffic Manager unicast VOQ statistics table

The Traffic Manager unicast Virtual Output Queue (VOQ) statistics table contains information about the Traffic Manager unicast VOQ-related statistics. Use the `show tm-voq-stat src_port [ethernet | pos] slot /port dst_port [ethernet | pos] slot /port [priority | all]` command for information about the Traffic Manager unicast queue-related statistics.

NOTE

The following table contains information about the Traffic Manager unicast queue-related statistics on the NI-MLX-1Gx48-T, NI-MLX-1Gx24, NI-MLX-10Gx8, BR-MLX-100Gx2, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, BR-MLX-10Gx4-M-IPSEC 4-port 10GbE, and all the POS modules.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdTMUcastQStatsTable brcdlp.1.14.2.1.2.3 | None | The Traffic Manager unicast VOQ statistics table. |
| brcdTMUcastQStatsSlotId brcdlp.1.14.2.1.2.3.1.1 Syntax: Unsigned32 | None | Shows the slot ID of the LP module that uniquely identifies a line card. The LP module must be physically present and operationally up. |
| brcdTMUcastQStatsTMDividelId brcdlp.1.14.2.1.2.3.1.2 Syntax: Unsigned32 | None | Shows the Traffic Manager device ID that uniquely identifies the Network Processor Traffic Manager within a line card in the system. |
| brcdTMUcastQStatsDstIfIndex brcdlp.1.14.2.1.2.3.1.3 Syntax: InterfaceIndex | None | Shows the destination interface index. This is applicable only for the interface on the LP module that is physically present and operationally up. |
| brcdTMUcastQStatsPriority brcdlp.1.14.2.1.2.3.1.4 Syntax: PriorityTC | None | Shows the priority of the packets that will be stored in this queue. This is a 1-based index. When the tm-max-queues is set to 4, two consecutive priorities are stored in one unicast queue. In this case, the valid values for this index are 1, 3, 5, and 7. |
| brcdTMUcastQStatsDescription brcdlp.1.14.2.1.2.3.1.5 Syntax: DisplayString | Read-only | This object gives the range of ports serviced by brcdTMUcastQStatsTMDividelId and priorities serviced by this queue. |
| brcdTMUcastQStatsEnquePkts brcdlp.1.14.2.1.2.3.1.6 Syntax: Counter64 | Read-only | Shows the count of all packets entering ingress queues on the Traffic Manager. |

Traffic Manager multicast VOQ statistics table

The Traffic Manager multicast VOQ statistics table contains information about the queue-related statistics. Use the **show tm-voq-stat src_port [ethernet | pos] slot /port multicast [priority | all]** CLI command for information about the Traffic Manager multicast queue-related statistics.

NOTE

The following table contains information about the Traffic Manager unicast queue-related statistics on the NI-MLX-1Gx48-T, NI-MLX-1Gx24, NI-MLX-10Gx8, BR-MLX-100Gx2, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, BR-MLX-10Gx4-M-IPSEC 4-port 10GbE, and all the POS modules.

Traffic Manager CPU VOQ statistics table

The Traffic Manager CPU VOQ statistics table contains the CPU queue-related statistics. Use the `show tm-voq-stat src_port [ethernet | pos] slot/portcpu-queue | cpu-copy-q [priority | all]` CLI command for information about the Traffic Manager CPU queue-related statistics.

NOTE

The following table contains information about the Traffic Manager CPU queue-related statistics on the NI-MLX-1Gx48-T, NI-MLX-1Gx24, NI-MLX-10Gx8, BR-MLX-100Gx2, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, BR-MLX-10Gx4-M-IPSEC 4-port 10GbE, and all the POS modules.

| Name, OID, and syntax | Access | Description |

Traffic Manager CPU VOQ information table

The Traffic Manager CPU VOQ information table is used for profiling the CPU queue size and credit count at regular intervals. It is advised for the SNMP manager to request the complete row in a single GET or GET-NEXT request for profiling.

NOTE

The following table displays information about the Traffic Manager CPU queue on the NI-MLX-1Gx48-T, NI-MLX-1Gx24, NI-MLX-10Gx8, BR-MLX-100Gx2, BR-MLX-40Gx4-M 4-port 40GbE module, BR-MLX-10Gx20 20-port 1/10GbE module, BR-MLX-100Gx2-CFP2 2-port 100GbE module, BR-MLX-10Gx4-M-IPSEC 4-port 10GbE, and all the POS modules.

| Name, OID, and syntax | Access | Description |

Traffic Manager CPU aggregation queue statistics table

The control packets are transmitted to the LP-CPU through Traffic Manager using four different queues based on the type of the packets. The queues are cpu-copy-queue, cpu-mgmt-queue, cpuproto-queue, and cpu-queue. From the respective queue the packets are transmitted to the Management CPU.

The Traffic Manager CPU aggregation queue statistics table is used to track the aggregated CPU statistics.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdTMCpuAggrQStatsTable brcdlp.1.14.2.1.2.9 | None | This table contains information about aggregation of Traffic Manager CPU queue counters supported by the system. |
| brcdTMCpuAggrQStatsDescription brcdlp.1.14.2.1.2.9.1.1 Syntax: DisplayString | Read-only | The range of ports serviced by the brcdTMCpuQStatsTMDeviceld. |
| brcdTMCpuAggrQStatsEnquePkts brcdlp.1.14.2.1.2.9.1.2 Syntax: Counter64 | Read-only | An aggregate count of all packets entering ingress queues on the Traffic Manager. |
| brcdTMCpuAggrQStatsEnqueBytes brcdlp.1.14.2.1.2.9.1.3 Syntax: Counter64 | Read-only | An aggregate count of all bytes entering ingress queues on the Traffic Manager. |
| brcdTMCpuAggrQStatsDequeuePkts brcdlp.1.14.2.1.2.9.1.4 Syntax: Counter64 | Read-only | An aggregate count of all packets dequeued from ingress queues and forwarded on the Traffic Manager. |
| brcdTMCpuAggrQStatsDequeueBytes brcdlp.1.14.2.1.2.9.1.5 Syntax: Counter64 | Read-only | An aggregate count of all bytes dequeued from ingress queues and forwarded on the Traffic Manager. |
| brcdTMCpuAggrQStatsTotalQDiscardPkts brcdlp.1.14.2.1.2.9.1.6 Syntax: Counter64 | Read-only | An aggregate count of all packets failing to enter ingress queues on the Traffic Manager due to the following reasons: <ul style="list-style-type: none"> When the queue reaches its maximum depth or WRED. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> When the Network Processor decides to drop packets for including: an unknown Layer 3 route, RPF, or segment filtering. |
| brcdTMcpuAggrQStatsTotalQDiscardBytes brcdlp.1.14.2.1.2.9.1.7 Syntax: Counter64 | Read-only | An aggregate count of all bytes failing to enter ingress queues on the Traffic Manager due to the following reasons: <ul style="list-style-type: none"> When the queue reaches its maximum depth or WRED. When the Network Processor decides to drop packets for including: an unknown Layer 3 route, RPF, or segment filtering. |
| brcdTMcpuAggrQStatsOldestDiscardPkts brcdlp.1.14.2.1.2.9.1.8 Syntax: Counter64 | Read-only | An aggregate count of all packets entering ingress queues on the Traffic Manager but deleted due to buffer full. |
| brcdTMcpuAggrQStatsOldestDiscardBytes brcdlp.1.14.2.1.2.9.1.9 Syntax: Counter64 | Read-only | An aggregate count of all bytes entering ingress queues on the Traffic Manager but deleted due to buffer full. |
| brcdTMcpuAggrQStatsWREDDroppedPkts brcdlp.1.14.2.1.2.9.1.10 Syntax: Counter64 | Read-only | An aggregate count of all packets entering ingress queues on the Traffic Manager but dropped due to WRED. |
| brcdTMcpuAggrQStatsWREDDroppedBytes brcdlp.1.14.2.1.2.9.1.11 Syntax: Counter64 | Read-only | An aggregate count of all bytes entering ingress queues on the Traffic Manager but dropped due to WRED. |

ACL global MIB objects

The following table lists the global MIB objects of the ACL table.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgAclGblAcctEnable brcdlp.1.2.2.15.1.2 Syntax: Integer NOTE This object is not supported on the CES 2000 Series and CER 2000 Series devices. | Read-write | Specifies the administration status of the ACL accounting. <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snAgAclGblIpv4AcctClear brcdlp.1.2.2.15.1.3 Syntax: InterfaceIndexOrZero | Read-write | Clears the IPv4 ACL accounting information of a particular interface. The value "0" clears IPv4 ACL accounting information on all the interfaces. Returns the value 0 for SNMP GET and GET-NEXT requests. |
| snAgAclGblIpv6AcctClear brcdlp.1.2.2.15.1.4 Syntax: InterfaceIndexOrZero | Read-write | Clears the IPv6 ACL accounting information of a particular interface. The value "0" clears IPv6 ACL accounting information on all the interfaces. Returns the value 0 for SNMP GET and GET-NEXT requests. |
| snAgAclGblRebindAclNumber brcdlp.1.2.2.15.1.5 Syntax: AclNumber | Read-write | Specifies the valid ACL number for a rebind. Returns the value 0 for SNMP GET and GET-NEXT requests. |
| snAgAclGblRebindAclName brcdlp.1.2.2.15.1.6 Syntax: DisplayString | Read-write | Specifies the ACL name for a rebind. Returns a null string for SNMP GET and GET-NEXT requests. Maximum 255 characters are allowed. |
| brcdPbrAclAccntFilterAclName brcdlp.1.2.2.15.1.7 Syntax: DisplayString | Read-write | Used to control the content of brcdPbrAclAccntTable. Any ACL filter that has a full or partial match with ACL name will not be returned in the brcdPbrAclAccntTable. The default value is null and all ACL filters will be returned by the table, if not specified. |
| brcdPbrAclAccntCounterType brcdlp.1.2.2.15.1.8 Syntax: Integer | Read-write | This object is used to control the counter value of the brcdPbrAclAccntAclInfo object in |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>brcdPbrAclAccntTable. It specifies the statistics to query.</p> <ul style="list-style-type: none"> • cumulative(1) - default • last5min(2) |

IPv4 ACL table

The IPv4 ACL table contains the access control lists (ACLs) defined for the device. The snAgAclGblCurRowIndex object determines the number of ACLs that can be added to this table.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgAclTable brcdlp.1.2.2.15.2 | None | Access control list table. |
| snAgAclIndex brcdlp.1.2.2.15.2.1.1 Syntax: Integer32 | Read-only | <p>Shows the index for an ACL entry that is associated with this ACL.</p> <p>This number must be unique among all the entries, even though the value of other objects for an entry may be the same as those of another entry.</p> |
| snAgAclNumber brcdlp.1.2.2.15.2.1.2 Syntax: AclNumber | Read-write | <p>The access control list number for an entry:</p> <ul style="list-style-type: none"> • 1 to 99 - Standard access list • 100 to 199 - Extended access list |
| snAgAclName brcdlp.1.2.2.15.2.1.3 Syntax: DisplayString | Read-write | Shows the ACL name. |
| snAgAclAction brcdlp.1.2.2.15.2.1.4 Syntax: Integer | Read-write | <p>Indicates if IP packets that matched this access control list are permitted or denied:</p> <ul style="list-style-type: none"> • deny(0) • permit(1) <p>The default action when no ACLs are configured on a device is to permit all traffic. However, once you configure an ACL and apply it to a port, the default action for that port is to deny all traffic that is not explicitly permitted on the port.</p> <ul style="list-style-type: none"> • If you want to tightly control access, configure ACLs consisting of permit entries for the access you want to permit. The ACLs implicitly deny all other access. • If you want to secure access in environments with many users, you might want to configure ACLs that consist of explicit deny entries, then add an entry to permit all access to the end of each ACL. The software permits packets that are not denied by the deny entries. |
| snAgAclProtocol brcdlp.1.2.2.15.2.1.5 Syntax: IPProtocol | Read-write | Indicates the protocol denied or permitted by the extended ACL. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>The protocol can be one of the following well-known names or any protocol number from 0 through 255:</p> <ul style="list-style-type: none"> • Internet Control Message Protocol (ICMP) • Internet Group Management Protocol (IGMP) • Internet Gateway Routing Protocol (IGRP) • Internet Protocol (IP) • Open Shortest Path First (OSPF) • Transmission Control Protocol (TCP) • User Datagram Protocol (UDP) <p>Entering "0" indicates any protocol.</p> |
| snAgAclSourceIp brcdlp.1.2.2.15.2.1.6 Syntax: ipAddress | Read-write | <p>Applies only to extended ACLs.</p> <p>Identifies the source IP address of the packet that will either be permitted or denied.</p> |
| snAgAclSourceMask brcdlp.1.2.2.15.2.1.7 Syntax: ipAddress | Read-write | <p>Applies only to extended ACLs.</p> <p>Identifies the source IP subnet mask of the packet that will either be permitted or denied.</p> |
| snAgAclSourceOperator brcdlp.1.2.2.15.2.1.8 Syntax: Operator | Read-write | <p>Applies only to TCP or UDP ports in extended ACLs.</p> <p>Indicates how the policy will be compared to the ports specified in the IPv4 ACL table and IPv4 ACL table objects:</p> <ul style="list-style-type: none"> • eq(0) - The policy applies only to packets whose source port number matches the port number specified in the objects. • neq(1) - The policy applies only to packets whose source port numbers are not included in the specified range. • lt(2) - The policy applies only to packets whose source port numbers are less than those in the specified range. • gt(3) - The policy applies only to packets whose source port numbers are greater than those in the specified range. • range(4) - The policy applies to packets whose source port numbers fall within the specified range. • undefined(7) |
| snAgAclSourceOperand1 brcdlp.1.2.2.15.2.1.9 Syntax: Integer | Read-write | <p>Applies only to TCP or UDP ports in extended ACLs.</p> <p>Shows the source port number to be matched. If used with the IPv4 ACL table object, it defines the start of the range of source port numbers to be matched.</p> |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Valid values: 0 - 65535. A value of 0 means that this object is not applicable. |
| snAgAclSourceOperand2 brcdlp.1.2.2.15.2.1.10 Syntax: Integer | Read-write | Applies only to TCP or UDP ports in extended ACLs. Used with the IPv4 ACL table object, it defines the end of the range of source port numbers to be matched. Valid values: 0 - 65535. A value of 0 means that this object is not applicable. |
| snAgAclDestinationIp brcdlp.1.2.2.15.2.1.11 Syntax: IpAddress | Read-write | Applies only to extended ACLs. Identifies the destination IP address of the packet that can either be permitted or denied. |
| snAgAclDestinationMask brcdlp.1.2.2.15.2.1.12 Syntax: IpAddress | Read-write | Applies only to extended ACLs. Identifies the destination subnet mask of the packet that can either be permitted or denied. |
| snAgAclDestinationOperator brcdlp.1.2.2.15.2.1.13 Syntax: Operator | Read-write | Applies only to TCP or UDP ports in extended ACLs. Indicates how the policy will be compared to the ports specified in the IPv4 ACL table and IPv4 ACL table objects: <ul style="list-style-type: none">• eq(0) - The policy applies only to packets whose destination port number matches the port number specified in the objects.• neq(1) - The policy applies only to packets whose destination port numbers are not included in the specified range.• lt(2) - The policy applies only to packets whose destination port numbers are less than those in the specified range.• gt(3) - The policy applies only to packets whose destination port numbers are greater than those in the specified range.• range(4) - The policy applies to packets whose destination port numbers fall within the specified range.• undefined(7) |
| snAgAclDestinationOperand1 brcdlp.1.2.2.15.2.1.14 Syntax: Integer | Read-write | Applies only to TCP or UDP ports in extended ACLs. Shows the destination port number to be matched. If used with the IPv4 ACL table object, it defines the start of the range of destination port numbers to be matched. Valid values: 0 - 65535. A value of 0 means that this object is not applicable. |
| snAgAclDestinationOperand2 brcdlp.1.2.2.15.2.1.15 | Read-write | Applies only to TCP or UDP ports in extended ACLs. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer snAgAclPrecedence brcdlp.1.2.2.15.2.1.16 | | Used with the IPv4 ACL table object, it defines the end of the range of destination port numbers to be matched. Valid values: 0 - 65535. A value of 0 means that this object is not applicable. |
| Syntax: PrecedenceValue Syntax: PrecedenceValue | Read-write | Applies only to extended ACLs. Indicates the IP precedence value that a packet must have to be permitted or denied: <ul style="list-style-type: none">• routine(0)• priority(1)• immediate(2)• flash(3)• flash-override(4)• critical(5)• internet(6)• network(7) The following priorities specify a hardware-forwarding queue: routine(0), priority(1), immediate(2), and flash(3). |
| snAgAclTos brcdlp.1.2.2.15.2.1.17 | Read-write | Applies only to extended ACLs. Indicates the type of service a packet must have to be denied or permitted: <ul style="list-style-type: none">• normal(0) - The ACL matches packets that have the normal TOS. If TOS is not defined, packets are matched to this value.• minMonetaryCost(1) - The ACL matches packets that have the minimum monetary cost TOS.• maxReliability(2) - The ACL matches packets that have the maximum reliability TOS.• maxThroughput(4) - The ACL matches packets that have the maximum throughput TOS.• minDelay(8) - The ACL matches packets that have the minimum delay TOS. |
| snAgAclEstablished brcdlp.1.2.2.15.2.1.18 | Read-write | Applies only to extended ACLs. Enables or disables the filtering of established TCP packets that have the ACK or RESET flag turned on. This additional filter only applies to TCP transport protocol: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snAgAclLogOption brcdlp.1.2.2.15.2.1.19 | Read-write | Determines if ACL matches are logged: <ul style="list-style-type: none">• false(0) - Do not log ACL matches.• true(1) - Log ACL matches. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgAclStandardFlag brcdlp.1.2.2.15.2.1.20 Syntax: TruthVal | Read-write | Indicates if this is a standard ACL: <ul style="list-style-type: none">• false(0) - The ACL is an extended ACL.• true(1) - The ACL is a standard ACL. |
| snAgAclRowStatus brcdlp.1.2.2.15.2.1.21 Syntax: SnRowStatus | Read-write | Creates or deletes an ACL entry: <ul style="list-style-type: none">• other(1)• valid(2)• delete(3)• create(4) |
| snAgAclFlowCounter brcdlp.1.2.2.15.2.1.22 Syntax: Counter64 | Read-only | Shows an approximate count of flows that match the individual ACL entry. |
| snAgAclPacketCounter brcdlp.1.2.2.15.2.1.23 Syntax: Counter64 | Read-only | Shows the number of packets that matched the ACL entry. |
| snAgAclComments brcdlp.1.2.2.15.2.1.24 Syntax: DisplayString | Read-write | Indicates the description of an individual ACL entry. |
| snAgAclIpPriority brcdlp.1.2.2.15.2.1.25 Syntax: Integer | Read-write | Indicates the QoS priority option for this ACL. This priority assigns traffic that matches the ACL to a hardware-forwarding queue. In addition to changing the internal forwarding priority, if the outgoing interface is an 802.1Q interface, this option maps the specified priority to its equivalent 802.1p (CoS) priority and marks the packet with the new 802.1p priority. <p>NOTE This option applies only to 10 Gigabit Ethernet modules.</p> |
| snAgAclPriorityForce brcdlp.1.2.2.15.2.1.26 Syntax: Integer | Read-write | Indicates the priority that is being forced on the outgoing packet. This parameter allows you assign packets of outgoing traffic that match the ACL to a specific hardware-forwarding queue, even though the incoming packet may be assigned to another queue. <p>Valid values:</p> <ul style="list-style-type: none">• qos0(0)• qos1(1)• qos2(2)• qos3(3)• Not defined(4) <p>Default: Not defined(4)</p> <p>NOTE This option applies only to 10 Gigabit Ethernet modules.</p> |
| snAgAclPriorityMapping brcdlp.1.2.2.15.2.1.27 Syntax: Integer | Read-write | Indicates the priority of the incoming packet to be matched. This option maps the packet's 802.1p value. It does not change the packet's |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE This is not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series and CER 2000 Series devices. | | forwarding priority through the device nor does it mark the packet. Valid values: 0 - 8 Default: Not defined(8) |
| snAgAclDscpMarking brcdlp.1.2.2.15.2.1.28 Syntax: Integer | Read-write | Indicates the DSCP marking of a packet that will be matched. Valid values: 0 - 64 Default: Not defined(64) NOTE This option applies only to 10 Gigabit Ethernet modules. |
| snAgAclDscpMapping brcdlp.1.2.2.15.2.1.29 Syntax: Integer | Read-write | Indicates the DCSP value of the incoming packet value to be matched. Valid values: 0 - 64 Default: Not defined(64) NOTE This option applies only to 10 Gigabit Ethernet modules. |
| snAgAclIcmpCode brcdlp.1.2.2.15.2.1.30 Syntax: Integer | Read write | If you entered a value for ICMP message type number in the IPv4 ACL table object, enter the code number in this object. Valid value for type code 1, Echo reply 1 = Echo reply Valid values for type code 4, Destination unreachable <ul style="list-style-type: none"> • 1 = Network unreachable • 2 = Host unreachable • 3 = Protocol unreachable • 4 = Port unreachable • 5 = Fragmentation needed but do not fragment bit set • 6 = Source route failed • 7 = Destination network unknown • 8 = Destination host unknown • 9 = Source host isolated • 10 = Destination network administratively prohibited • 11 = Destination host administratively prohibited • 12 = Network unreachable for TOS • 13 = Host unreachable for TOS • 14 = Communication administratively prohibited by filter • 15 = Host precedence violation • 16 = Precedence cutoff in effect |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>Valid values for type code 5, Source quench 1 = Source quench</p> <p>Valid values for type code 6, Redirect</p> <ul style="list-style-type: none"> • 1 = Redirect for network • 2 = Redirect for host • 3 = Redirect for TOS and network • 4 = Redirect for TOS and host <p>Valid value for type code 9, Echo request 1 = Echo request</p> <p>Valid value for type code 10, Router advertisement 1 = Router advertisement</p> <p>Valid value for type code 11, Router solicitation 1 = Router solicitation</p> <p>Valid values for type code 12, Time exceeded</p> <ul style="list-style-type: none"> • 1 = Time to live equals 0 during transmit • 2 = Time to live equals 0 during reassembly <p>Valid values for type code 13, Parameter problem</p> <ul style="list-style-type: none"> • 1 = IP header bad (catchall error) • 2 = Required option missing <p>Valid value for type code 14, Timestamp request 1 = Timestamp request</p> <p>Valid value for type code 15, Timestamp reply 1 = Timestamp reply</p> <p>Valid value for type code 16, Information request 1 = Information request</p> <p>Valid value for type code 17, Information reply 1 = Information reply</p> <p>Valid value for type code 18, Address mask request 1 = Address mask request</p> <p>Valid value for type code 19, Address mask reply 1 = Address mask reply</p> |
| snAgAclParameters brcdlp.1.2.2.15.2.1.31 Syntax: BITS | Read-write | The mask represents multiple parameters are configured for the ACL. Bit 0 specifies the first octet. <ul style="list-style-type: none"> • Bit 0 = Matches fragmented IP packets. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> Bit 1 = Matches non-fragmented IP packets. Bit 2 = Matches only the TCP packets with SYN Bit set. Valid only if the snAgAclSourceOperator or snAgAclDestinationOperator object is set to TCP. Bit 3 = Permits the packets that fail in RPF check. Bit 4 = Mirrors the packets matching ACL permit clause. Bit 5 = Sends the packets matching ACL permit clause to sFlow collector. Bit 6 = Sets the dscp-mapping. The value is given by snAgAclDscpMarking. Bit 7 = Sets the dscp-marking. The value is given by snAgAclDscpMapping. |
| snAgAclVlanId brcdlp.1.2.2.15.2.1.32 Syntax: FdryVlanIdOrNoneTC | Read-create | An optional VLAN ID to match against the incoming packets. By default, the VLAN ID field is ignored during the match and the value 0 is returned. |
| snAgAclClauseString brcdlp.1.2.2.15.2.1.33 Syntax: DisplayString | Read-only | Returns the equivalent filter clause string. |

ACL bind to port table

The ACL bind to port table contains ACL port bindings for a Layer 3 Switch. Port numbers and bind direction are used to index entries.

NOTE

The ACL port MIBs are supported on the MLX Series and XMR Series devices. Beginning from NetIron 05.9.00 release, the following MIB objects have VRF support.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgAclIfBindTable brcdlp.1.2.2.15.4 | None | The ACL bind to port table. |
| snAgAclIfBindIndex brcdlp.1.2.2.15.4.1.1 Syntax: InterfaceIndex | Read-only | The number of the virtual or physical interface to which this ACL is bound. |
| snAgAclIfBindDirection brcdlp.1.2.2.15.4.1.2 Syntax: Direction | Read-only | Shows the traffic direction to which the ACL will be applied: <ul style="list-style-type: none"> inbound(0) outbound(1) |
| snAgAclIfBindNum brcdlp.1.2.2.15.4.1.3 Syntax: Integer | Read-create | Shows the defined IPv4 ACL number that will be bound to the port. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAgAclIfBindName brcdlp.1.2.2.15.4.1.4 Syntax: DisplayString | Read-create | The name of the IPv4 ACL name bound to the Interface. Maximum 255 characters are allowed. |
| snAgAclIfBindVifPortList brcdlp.1.2.2.15.4.1.5 Syntax: Octet string | Read-create | Contains a list of ports for binding a virtual interface. Each port index is an ifIndex. If there are four or more consecutive ifIndexes, then they will be encoded. The Encoding and decoding scheme is range-based. Each range prefix with 0000 (2 octets) where 0000 is not a valid ifIndex. The next 2 octets indicates the lower range ifIndex, followed by 2 octets of higher range ifIndex. The individual (non-range) ones will be displayed as is. For example: Port list: 0001..0005 0015 0032..0047 Port list in PDU: 0000 0001 0005 000f 0000 0020 002f |
| snAgAclIfRowStatus brcdlp.1.2.2.15.4.1.6 Syntax: SnRowStatus | Read-create | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">• delete(3) - Delete the row.• create(4) - Create a new row.• modify(5) - Modify an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row.• invalid(1) - Row is inoperative.• valid(2) - Row exists and is valid. |
| snAgAclIfBindDenyLogging brcdlp.1.2.2.15.4.1.7 Syntax: Integer | Read-create | Enables or disables deny logging. |
| snAgAclIfIpv6BindName brcdlp.1.2.2.15.4.1.8 Syntax: DisplayString | Read-create | The name of the IPv6 ACL name bound to the interface. A maximum 200 characters is allowed. |

ACL accounting table

The following table contains the ACLs configured on the NetIron devices.

NOTE

The ACL accounting table is supported on the XMR Series, MLX Series, MLX Series, CES 2000 Series, and CER 2000 Series devices. SNMP-WALK on the agAclAccntEntry object may not return the full output in certain configurations of Extreme NetIron devices. Beginning from NetIron 05.9.00 release, the following MIB objects have VRF support.

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|------------------------------------------------|
| agAclAccntTable | None | Table of ACL accounting statistics for router. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.1.2.2.15.5 agAclAccntKind brcdlp.1.2.2.15.5.1.1 Syntax: Integer | None | The following kinds of ACL accounting statistics are supported: <ul style="list-style-type: none"> • ipv4(0) • l2(1) • ipv4PolicyBasedRouting(2) • rateLimit(3) • receiveAcl(4) • ipv6(5) • ipv6PolicyBasedRouting(6) • ipv6ReceiveAcl(7) - This value is not supported on the CES 2000 Series and CER 2000 Series devices. • userDefinedAcl(8) - This value is not supported on the CES 2000 Series and CER 2000 Series devices. |
| agAclAccntIfIndex brcdlp.1.2.2.15.5.1.2 Syntax: InterfaceIndex | None | Physical or virtual interface on which ACL accounting is desired. For Receive-ACL, use the lowest port of the management module as the value for this object. |
| agAclAccntDirection brcdlp.1.2.2.15.5.1.3 Syntax: Direction | None | ACL port direction, inbound or outbound. For Receive-ACL kind, direction cannot be outbound. |
| agAclAccntAclNumber brcdlp.1.2.2.15.5.1.4 Syntax: AclNumber | None | The access list number for this entry. |
| agAclAccntFilterId brcdlp.1.2.2.15.5.1.5 Syntax: Unsigned | None | Filter ID within a given ACL. This is a zero-based value. |
| agAclAccntAclName brcdlp.1.2.2.15.5.1.6 Syntax: AclNameString | Read-only | ACL name for an entry, if applicable. Otherwise, a null string is returned. |
| agAclAccntOneSecond brcdlp.1.2.2.15.5.1.7 Syntax: Counter64 | Read-only | Accounting data for last one second. |
| agAclAccntOneMinute brcdlp.1.2.2.15.5.1.8 Syntax: Counter64 | Read-only | Accounting data for last one minute. |
| agAclAccntFiveMinute brcdlp.1.2.2.15.5.1.9 Syntax: Counter64 | Read-only | Accounting data for last five minute. |
| agAclAccntCumulative brcdlp.1.2.2.15.5.1.10 Syntax: Counter64 | Read-only | Cumulative accounting data since the ACL was installed. |
| agAclAccntRaclDropCnt brcdlp.1.2.2.15.5.1.11 Syntax: Counter64 | Read-only | Receive-ACL drop counter used for rate limiting. Not used for other ACL kind. The value returned is per ACL, instead of per filter within the ACL. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | This object supports rate limiting statistics for ACL and Layer 2 ACL-enabled interfaces. |
| agAclAccntRaclFwdCnt brcdlp.1.2.2.15.5.1.12 Syntax: Counter64 | Read-only | Receive-ACL forward counter used for rate limiting. Not used for other ACL kind. The value returned is per ACL, instead of per filter within the ACL. This object supports rate limiting statistics for ACL and Layer 2 ACL-enabled interfaces. |
| agAclAccntRaclRemarkCnt brcdlp.1.2.2.15.5.1.13 Syntax: Counter64 | Read-only | Receive-ACL remark counter used for rate limiting. Not used for other ACL kind. The value returned is per ACL, instead of per filter within the ACL. This object supports rate limiting statistics for ACL and Layer 2 ACL-enabled interfaces. |
| agAclAccntRaclTotalCnt brcdlp.1.2.2.15.5.1.14 Syntax: Counter64 | Read-only | Receive-ACL total counter used for rate limiting. Not used for other ACL kind. The value returned is per ACL, instead of per filter within the ACL. This object supports rate limiting statistics for ACL and Layer 2 ACL-enabled interfaces. |
| agAclAccntRaclTotalSWHitCountCnt brcdlp.1.2.2.15.5.1.15 Syntax: Counter64 | Read-only | Receive-ACL cumulative software hit counter. Not used for other ACL kind. The value returned is per ACL, instead of per filter within the ACL. |

Textual conventions

The Layer 2 ACL tables use the following textual conventions.

| Name and syntax | Description |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryVlanIdOrNoneTC Syntax: Integer32 | The VLAN ID that uniquely identifies a specific VLAN, or no VLAN. The special value of zero is used to indicate that no VLAN ID is present or used. This can be used in any situation where an object or a table entry must refer either to a specific VLAN, or to no VLAN. Valid values: 0 or 1 - 4094 |
| PortQosTC Syntax: Integer | The port QoS priority-hardware queue. The value 0 is the lowest priority and 7 is the highest. Valid values: <ul style="list-style-type: none">• level0(0)• level1(1)• level2(2)• level3(3)• level4(4)• level5(5)• level6(6)• level7(7)• invalid(127) |
| fdryEonetTypeOrZeroTC Syntax: Integer | Ethernet Type field within the Ethernet-II frame: <ul style="list-style-type: none">• invalid(0) |

| Name and syntax | Description |
|------------------------------------------|--------------------------------------------------------------------------------------------------|
| | <ul style="list-style-type: none"> • ipv4(1) • arp(2) • ipv6(3) |
| fdryClauseIndexTC Syntax: Unsigned 32 | One-based clause index value within a given ACL number. |

Layer 2 ACL next clause table

The Layer 2 ACL next clause table (fdryL2AclNextClauseTable) contains the list of the next lowest available clause index that can be used for creating a Layer 2 ACL in the fdryL2AclTable configuration table. (Refer to [Layer 2 ACL configuration table](#) on page 308.)

Every Layer 2 ACL in fdryL2AclTable has a clause index that consists of a list of ACL clause entries. A Layer 2 ACL cannot be created without any clause entries. There must be at least one clause entry in a Layer 2 ACL. Thus, when all the clause entries are deleted from a Layer 2 ACL, the ACL itself will also be deleted.

By default, there will be 64 clause entries for each Layer 2 ACL. This number can be changed by issuing the **system-max l2-acl-table-entries** command on the device CLI. You can specify up to 256 clause entries per Layer 2 ACL.

The initial value of fdryL2AclNextClauseIndex in each table row is 1. When a clause entry is created for a Layer 2 ACL, this value is incremented by one. When the number of clause entries created for an ACL reaches the maximum limit, a Get operation on fdryL2AclClauseIndex will return a noSuchInstance error. The error indicates that no more clauses can be added to fdryL2AclTable for this ACL.

When a clause entry for an ACL is removed (in the beginning or middle or end), the clause index is available for adding a new clause entry for this ACL. The fdryL2AclClauseIndex always returns the lowest available clause index where a new clause must be added.

The CLI displays the ACL clause in chronological order. However, SNMP is bounded by clause index, and thus it may not display the rows in chronological order. The clause index does not map to the sequence in which the ACL clause is checked at run time. The clause index is an internal value used to identify unique ACL clauses within a given ACL ID.

For example, if only three clause entries can be created for a Layer 2 ACL, the following steps describe how the ACL clause is assigned.

1. Before adding any clause to a Layer 2 ACL, a Get operation on fdryL2AclNextClauseIndex returns "1".
2. When you add the first clause entry, a Get operation on fdryL2AclNextClauseIndex returns "2".
3. When you add the second clause entry, a Get operation on fdryL2AclNextClauseIndex returns "3".
4. When you add the third clause entry, a Get operation on fdryL2AclNextClauseIndex returns "4".

5. If you remove the second clause entry (#2), a Get operation on fdryL2AclNextClauseIndex, returns "2" because it is the lowest available index.

The fdryL2AclNextClauseTable is a read-only table.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryL2AclNextClauseTable brcdlp.1.2.2.15.6 | None | This read-only table contains the list of the next lowest available clause index that can be used for creating a new entry in fdryL2AclTable. The clause index values will not change as a result of switchovers or hitless upgrades, but may change as a result of a device reload. However, the relative order of persistent entries would remain the same. |
| fdryL2AclNextClauseIndex brcdlp.1.2.2.15.6.1.1 Syntax: Textual conventions on page 306 | Read-only | The next lowest available clause index for a given Layer 2 ACL number. The maximum value of this object is the configured maximum number of clauses for a Layer 2 ACL. Even though the syntax of fdryL2AclClauseIndex is Textual conventions on page 306, its value will be from 1 to the configured maximum clause entries for each Layer 2 ACL. |

Layer 2 ACL configuration table

The following objects are available for Layer 2 ACL configuration.

NOTE

The following fdryL2AclTable has support only for the numbered Layer2 ACL and does not have support for the named Layer2 ACL.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryL2AclTable brcdlp.1.2.2.15.7 | None | The table of Layer 2 ACLs. A Layer 2 ACL number can have 64 (default) to 256 clauses. The clause index values will not change as a result of switchovers or hitless upgrades, but may change as a result of a device reload. However, the relative order of persistent entries remains the same. |
| fdryL2AclNumber brcdlp.1.2.2.15.7.1.1 Syntax: AclNumber | None | The access list number for this entry. For Layer 2 ACLs, valid values are from 400 through 599. |
| fdryL2AclClauseIndex brcdlp.1.2.2.15.7.1.2 Syntax: Textual conventions on page 306 | None | The index of the clause within a given ACL number. During row creation, the clause index value should match the next available clause index for a given ACL number. It is advisable to first perform a Get operation on fdryL2AclNextClauseTable for a given ACL number, and use the value of fdryL2AclNextClauseIndex returned by the agent. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryL2AclAction brcdlp.1.2.2.15.7.1.3 Syntax: Action | Read-write | Action to take if the Layer 2 packet on the port matches this ACL. |
| fdryL2AclSourceMac brcdlp.1.2.2.15.7.1.4 Syntax: MAC address | Read-write | Optional source MAC address. By default, it matches with any source MAC address within a packet. Default: '000000000000'H |
| fdryL2AclSourceMacMask brcdlp.1.2.2.15.7.1.5 Syntax: MAC address | Read-write | Optional source MAC address mask. For a Set operation, this object can only be used in conjunction with fdryL2AclSourceMac. By default, this matches any source MAC address within a packet. If you want to match the first two bytes of the address aabb.cccc.eeff, use the mask ffff.0000.0000. In this case, the clause matches all source MAC addresses that contain "aabb" as the first two bytes and any values in the remaining bytes of the MAC address. Default: '000000000000'H |
| fdryL2AclDestinationMac brcdlp.1.2.2.15.7.1.6 Syntax: MAC address | Read-write | Optional destination MAC address. By default, it matches any destination MAC address within a packet. Default: '000000000000'H |
| fdryL2AclDestinationMacMask brcdlp.1.2.2.15.7.1.7 Syntax: MAC address | Read-write | Optional destination MAC address mask. For a Set operation, this object can only be used in conjunction with fdryL2AclDestinationMac. By default, it matches any destination MAC address within a packet. If you want to match the first two bytes of the address aabb.cccc.eeff, use the mask ffff.0000.0000. In this case, the clause matches all destination MAC addresses that contain "aabb" as the first two bytes and any values in the remaining bytes of the MAC address. Default: '000000000000'H |
| fdryL2AclVlanId brcdlp.1.2.2.15.7.1.8 Syntax: Textual conventions on page 306 | Read-write | The optional VLAN ID to match against the incoming packet. By default, the VLAN ID field is ignored during the match and the value 0 is returned. Default: 0 |
| fdryL2AclEthernetType brcdlp.1.2.2.15.7.1.9 Syntax: Textual conventions on page 306 | Read-write | The optional Ethernet type to match against the etype field of the incoming packet. By default, the etype field is ignored during the match. Default: invalid |
| fdryL2AclDot1pPriority brcdlp.1.2.2.15.7.1.10 Syntax: Textual conventions on page 306 | Read-write | This object is optional. It assigns the traffic that matches the ACL to a hardware-forwarding queue. In addition to changing the internal forwarding priority, if the outgoing interface is an 802.1q interface, this option maps the specified priority to its equivalent 802.1p (QoS) priority and marks the packet with the new 802.1p |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>priority. This option is applicable only for the inbound Layer 2 ACLs.</p> <p>NOTE The fdryL2AclDot1pPriority object following fdryL2AclDot1pPriorityForce cannot be used together in a Layer 2 ACL entry.</p> <p>Default: level0(0)</p> |
| fdryL2AclDot1pPriorityForce brcdlp.1.2.2.15.7.1.11 Syntax: Textual conventions on page 306 | Read-write | <p>This object is optional. It assigns the packets of outgoing traffic that match the Layer 2 ACL to a specific hardware-forwarding queue, even though the incoming packet may be assigned to another queue. This option is applicable only for the inbound ACLs.</p> <p>NOTE The fdryL2AclDot1pPriority object following fdryL2AclDot1pPriorityForce cannot be used together in a Layer 2 ACL entry.</p> <p>Default: level0(0)</p> |
| fdryL2AclDot1pPriorityMapping brcdlp.1.2.2.15.7.1.12 Syntax: Textual conventions on page 306 | Read-write | <p>This object is optional. It matches the packet's 802.1p value. This option does not change the packet's forwarding priority through the device or mark the packet. It is applicable for both inbound and outbound Layer 2 ACLs.</p> <p>Default: level0(0)</p> |
| fdryL2AclMirrorPackets brcdlp.1.2.2.15.7.1.13 Syntax: TruthVal | Read-write | <p>This object is optional. It is applicable only for the ACLs with a permit clause.</p> <p>When you bind a Layer 2 ACL to a port, you can configure the port to mirror the packets to another port using the acl-mirror-port CLI command. Then the packets permitted on this port (as a result of the bound ACL) will be mirrored on the other port.</p> <p>Default: "false"</p> |
| fdryL2AclLogEnable brcdlp.1.2.2.15.7.1.14 Syntax: TruthVal | Read-write | <p>The optional parameter to enable logging only when a deny clause is specified. Note that the traffic denied by the implicit deny mechanism is not subject to logging. The implicit deny occurs when traffic does not match any of the clauses and there is no permit any any clause specified at the end of the Layer 2 ACL.</p> <p>Default: "false"</p> |
| fdryL2AclRowStatus brcdlp.1.2.2.15.7.1.15 Syntax: RowStatus | Read-write | <p>The row status variable is used according to installation and removal conventions for conceptual rows. Setting this object to active(1) or createAndGo(4) results in the addition of a Layer 2 ACL filter in the router. Duplicate entries will be rejected during row creation.</p> |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>As part of the row creation, entries are appended to this table. Row insertion may not be supported.</p> <p>Setting this object to destroy(6) removes the associated filter from the router. Other values in the enumeration are not used.</p> |

Layer 2 ACL binding configuration table

The Layer 2 ACL binding configuration table lists the Layer 2 ACLs that have been bound to a port.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryL2AclIfBindTable brcdlp.1.2.2.15.8 | None | <p>The table of Layer 2 ACL binding to a port. Layer 2 ACLs and Layer 3 ACLs cannot be bound to the same port. However, you can configure a port to use Layer 2 ACLs, and another port on the same device to use Layer 3 ACLs.</p> <p>In general:</p> <ul style="list-style-type: none"> • Layer 2 ACLs cannot be bound to virtual interfaces, unlike Layer 3 ACLs. • You cannot modify an existing Layer 2 ACL clause. You must first unbind the Layer 2 ACL, delete it, and then create a new clause. |
| fdryL2AclIfBindDirection brcdlp.1.2.2.15.8.1.1 Syntax: Direction | None | <p>Indicates if Layer 2 ACLs are bound to incoming or outgoing ports:</p> <ul style="list-style-type: none"> • inbound(0) • outbound(1)) |
| fdryL2AclIfBindAclNumber brcdlp.1.2.2.15.8.1.2 Syntax: Unsigned32 | Read-write | <p>The Layer 2 ACL number that is to be bound to a physical interface.</p> <p>Valid values: 400 - 599</p> |
| fdryL2AclIfBindRowStatus brcdlp.1.2.2.15.8.1.3 Syntax: RowStatus | Read-write | <p>The row status variable is used according to the installation and removal conventions for conceptual rows.</p> <p>Setting this object to active(1) or createAndGo(4) binds the Layer 2 ACL to the specified physical port.</p> <p>Setting this object to destroy(6) unbinds the Layer 2 ACL from the port.</p> <p>Other values in the enumeration are not used.</p> |
| fdryL2AclIfBindAclName brcdlp.1.2.2.15.8.1.4 Syntax: AclNameString | Read-only | Represents the name of each configured L2 named ACL. |

PBR ACL Accounting Table

NOTE

The following table is supported only on the MLX Series, MLX Series, and XMR Series devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdPbrAclAccntTable brcdlp.1.2.2.15.9 | None | The table of PBR ACL Accounting Statistics for router. |
| brcdPbrAclAccntKind brcdlp.1.2.2.15.9.1.1 Syntax: Integer | None | The kind of PBR ACL Accounting statistics that is required. <ul style="list-style-type: none"> • ipv4PolicyBasedRouting(1) • ipv6PolicyBasedRouting(2) • l2PolicyBasedRouting(3) • udaPlicyBasedRouting(4) |
| brcdPbrAclAccntIfIndex brcdlp.1.2.2.15.9.1.2 Syntax: InterfaceIndex | None | The physical or virtual interface on which ACL accounting is desired. |
| brcdPbrSerialNumber brcdlp.1.2.2.15.9.1.3 Syntax: Integer | None | A running serial number that may change if an ACL or routemap is modified. Valid values: 0 - 2147483647 |
| brcdPbrAclAccntAclInfo brcdlp.1.2.2.15.9.1.4 Syntax: DisplayString | Read-only | This contains ACL Number, ACL Name, ACL Filter ID, and last five minutes and cumulative accounting data since the ACL was installed. Each field is separated by a pipe character. For example, 5MIN CUMULATIVE ACL Number ACL Filter Id ACL Name. Depending on the value of the brcdPbrAclAccntCounterType object the corresponding counter will have the value while the other is zero. |

Layer 2 named ACL configuration table

NOTE

The following table is supported only on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryL2NamedAclTable brcdlp.1.2.2.15.10 | None | The table displays the Layer 2 named Access Control List (ACL) Information, such as: <ul style="list-style-type: none"> • Source MAC address • Source MAC mask • Destination MAC address • Destination MAC mask • VLAN ID • Ethernet type |
| fdryL2NamedAclIndex brcdlp.1.2.2.15.10.1.1 | None | Represents a unique number for each configured Layer 2 named ACL. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: AclNumber fdryL2NamedAclClauseIndex brcdlp.1.2.2.15.10.1.2 Syntax: FdryClauseIndexTC | None | The index of the clause within a given ACL number. |
| fdryL2NamedAclName brcdlp.1.2.2.15.10.1.3 Syntax: AclNameString | Read-only | Represents the name of each configured Layer 2 named ACL. |
| fdryL2NamedAclAction brcdlp.1.2.2.15.10.1.4 Syntax: Action | Read-only | Action to take if the ingress Layer 2 packet matches this ACL. |
| fdryL2NamedAclSourceMac brcdlp.1.2.2.15.10.1.5 Syntax: MacAddress | Read-only | Optional source MAC address. By default, it matches with any source MAC address within a packet. Default: '000000000000'H |
| fdryL2NamedAclSourceMacMask brcdlp.1.2.2.15.10.1.6 Syntax: MacAddress | Read-only | Optional source MAC address mask. By default, it matches with any source MAC address within a packet. To match on the first two bytes of the address aabb.cccdd.eeff, use the mask ffff.0000.0000. In this case, the clause matches all source MAC addresses that contain 'aabb' as the first two bytes and any values in the remaining bytes of the MAC address. Default: '000000000000'H |
| fdryL2NamedAclDestinationMac brcdlp.1.2.2.15.10.1.7 Syntax: MacAddress | Read-only | Optional destination MAC address. By default, it matches with any destination MAC within a packet. Default: '000000000000'H |
| fdryL2NamedAclDestinationMacMask brcdlp.1.2.2.15.10.1.8 Syntax: MacAddress | Read-only | Optional destination MAC address mask. By default, it matches with any destination MAC within a packet. To match on the first two bytes of the address aabb.cccdd.eeff, use the mask ffff.0000.0000. In this case, the clause matches all destination MAC addresses that contain "aabb" as the first two bytes and any values in the remaining bytes of the MAC address. Default: '000000000000'H |
| fdryL2NamedAclVlanId brcdlp.1.2.2.15.10.1.9 Syntax: FdryVlanIdOrNoneTC | Read-only | Optional VLAN ID to match against that of the incoming packet. By default, the VLAN ID field is ignored during the match. In this case, the value 0 is returned. Default: 0 |
| fdryL2NamedAclEthernetType brcdlp.1.2.2.15.10.1.10 Syntax: FdryEtypeOrZeroTC | Read-only | Optional Ethernet type to match against the etype field of the incoming packet. By default, the etype field is ignored during the match. Default: invalid |
| fdryL2NamedAclDot1pPriority brcdlp.1.2.2.15.10.1.11 | Read-only | The priority option assigns traffic that matches the ACL to a hardware-forwarding queue. In addition to changing the internal forwarding |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: PortQosTC fdryL2NamedAclDot1pPriority brcdlp.1.2.2.15.10.1.12 Syntax: PortQosTC | | <p>priority, if the outgoing interface is an 802.1q interface, this option maps the specified priority to its equivalent 802.1p (QoS) priority and marks the packet with the new 802.1p priority. This option is applicable for inbound ACLs only.</p> <p>NOTE <code>fdryL2NamedAclDot1pPriority</code> <code>following</code> <code>fdryL2NamedAclDot1pPriorityForce</code> cannot be used together in an ACL entry.</p> <p>Default: level0</p> |
| fdryL2NamedAclDot1pPriorityForce brcdlp.1.2.2.15.10.1.12 Syntax: PortQosTC | Read-only | <p>The priority-force option assigns packets of outgoing traffic that match the ACL to a specific hardware forwarding queue, even though the incoming packet is assigned to another queue. This option is applicable for inbound ACLs only.</p> <p>NOTE <code>fdryL2NamedAclDot1pPriority</code> <code>following</code> <code>fdryL2NamedAclDot1pPriorityForce</code> cannot be used together in an ACL entry.</p> <p>Default: level0</p> |
| fdryL2NamedAclDot1pPriorityMapping brcdlp.1.2.2.15.10.1.13 Syntax: PortQosTC | Read-only | <p>The priority-mapping option matches on the packet's 802.1p value. This option does not change the packets forwarding priority through the device or mark the packet. The keyword is applicable for both inbound and outbound ACLs.</p> <p>Default: level0</p> |
| fdryL2NamedAclMirrorPackets brcdlp.1.2.2.15.10.1.14 Syntax: TruthValue | Read-only | <p>Mirror packets matching the ACL permit clause. Default: false</p> |
| fdryL2NamedAclLogEnable brcdlp.1.2.2.15.10.1.15 Syntax: TruthValue | Read-only | <p>Optional parameter to enable logging only when a deny clause is specified. Note that traffic denied by an implicit deny mechanism is not subject to logging. The implicit deny is enabled when the traffic does not match any of the clauses and there is no "permit any any" clause specified at the end.</p> <p>Default: false</p> |
| fdryL2NamedAclRowStatus brcdlp.1.2.2.15.10.1.16 Syntax: RowStatus | Read-only | <p>The row status variable illustrates the current status (active).</p> |

IPv6 ACL MIB Definition

- IPv6 ACL table..... 315
- IPv6 access list table..... 316

IPv6 ACL table

The following table contains the IPv6 ACLs for Extreme Netiron IPv6 devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryIpv6AclTable brcdlp.1.2.16.1.1.1 | None | The IPv6 access control list filters. |
| fdryIpv6AclIndex brcdlp.1.2.16.1.1.1.1 Syntax: Unsigned32 | None | The index number for an ACL entry. This is a unique number even though the name is not unique for a given ACL with the same or different source address, prefix length, destination address, destination prefix length, protocol type, action (permit or deny) type, and operator (neq, eq, gt, and lt). |
| fdryIpv6AclName brcdlp.1.2.16.1.1.1.2 Syntax: DisplayString | Read-create | The ACL name for an entry. NOTE The object access is read-only in the Extreme Netiron devices. |
| fdryIpv6AclAction brcdlp.1.2.16.1.1.1.3 Syntax: Action | Read-create | The action to take if the IP packet matches this ACL. |
| fdryIpv6AclProtocol brcdlp.1.2.16.1.1.1.4 Syntax: IpProtocol | Read-create | The transport protocols. 0 means any protocol. |
| fdryIpv6AclSourceIp brcdlp.1.2.16.1.1.1.5 Syntax: Ipv6Address | Read-create | The source IPv6 address. |
| fdryIpv6AclSourcePrefixLen brcdlp.1.2.16.1.1.1.6 Syntax: Unsigned32 | Read-create | The source IPv6 address prefix length. |
| fdryIpv6AclSourceOperator brcdlp.1.2.16.1.1.1.7 Syntax: Operator | Read-create | The type of comparison to perform. This applies only to TCP or UDP. |
| fdryIpv6AclSourceOperand1 brcdlp.1.2.16.1.1.1.8 Syntax: Unsigned32 | Read-create | This object refers to the source transport protocol port number of the operand 1. |
| fdryIpv6AclSourceOperand2 brcdlp.1.2.16.1.1.1.9 Syntax: Unsigned32 | Read-create | This object refers to the source transport protocol port number of the operand 2. |
| fdryIpv6AclDestinationIp | Read-create | The destination IPv6 address. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.1.2.16.1.1.1.1.10 Syntax: Ipv6Address | | |
| fdryIpv6AclDestinationPrefixLen brcdlp.1.2.16.1.1.1.1.11 Syntax: Unsigned32 | Read-create | The destination IPv6 address prefix length. |
| fdryIpv6AclDestinationOperator brcdlp.1.2.16.1.1.1.1.12 Syntax: Operator | Read-create | The type of comparison to perform. This applies only to TCP or UDP. |
| fdryIpv6AclDestinationOperand1 brcdlp.1.2.16.1.1.1.1.13 Syntax: Unsigned32 | Read-create | This object refers to the destination transport protocol port number of the operand 1. |
| fdryIpv6AclDestinationOperand2 brcdlp.1.2.16.1.1.1.1.14 Syntax: Unsigned32 | Read-create | This object refers to the destination transport protocol port number of the operand 2. |
| fdryIpv6AclEstablished brcdlp.1.2.16.1.1.1.1.15 Syntax: RtrStatus | Read-create | Enables or disables the filtering of established TCP packets for which the ACK or RESET flag is on. This filter applies only to the TCP transport protocol. |
| fdryIpv6AclLogOption brcdlp.1.2.16.1.1.1.1.16 Syntax: TruthValue | Read-create | The log flag. This should be set to one, which enables logging. |
| fdryIpv6AclComments brcdlp.1.2.16.1.1.1.1.17 Syntax: DisplayString | Read-create | A description of the individual ACL entry. |
| fdryIpv6AclRowStatus brcdlp.1.2.16.1.1.1.1.18 Syntax: RowStatus | Read-create | Creates or deletes an ACL entry. |
| fdryIpv6AclVlanId brcdlp.1.2.16.1.1.1.1.19 Syntax: FdryVlanIdOrNoneTC | Read-create | An optional VLAN ID to match against the incoming packets. By default, the VLAN ID field is ignored during the match and the value 0 is returned. |
| fdryIpv6AclClauseString brcdlp. 1.2.16.1.1.1.1.20 Syntax: DisplayString | Read-only | Returns the equivalent filter clause string. |

IPv6 access list table

The following table contains the IPv6 access list entries supported on the Extreme Netiron devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlpv6AccessListTable brcdlp.1.2.16.1.1.2 | None | IPv6 Access Control List (ACL) configuration table. The table supports only IPv6 ACLs with names not more than 110 characters. SNMP WALK operation will skip the entries if the IPv6 ACL name is greater than 110 characters. |
| brcdlpv6AccessListName brcdlp.1.2.16.1.1.2.1.1 | None | The name of an IPv6 ACL. The IPv6 ACL name length is restricted to 110 characters from |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: DisplayString brcdlpv6AccessListNextIndex brcdlp.1.2.16.1.1.2.1.2 | | <p>SNMP and it can be 200 characters from CLI. This is due to SNMP restriction on sub-OID length to be 128 for index objects.</p> <p>SNMP GET/GETNEXT operations skip the IPv6 ACLs with more than 110 characters in it.</p> <p>SNMP SET operation is rejected if the IPv6 ACL name length is more than 110 characters.</p> |
| Syntax: Unsigned32 brcdlpv6AccessListRowStatus brcdlp.1.2.16.1.1.2.1.3 | Read-only | Specifies the next index entry. A combination of the IPv6 ACL ID and the next available filter ID is used as an index while creating an access list filter entry in the fdrylpv6AclTable. |
| Syntax: RowStatus | Read-create | <p>The following options are supported:</p> <ul style="list-style-type: none"> • active(1)—To return SNMP GET or GET-NEXT requests. • createAndGo(4)—To add a new row. • destroy(6)—To remove a row. |

IP VRRP MIB Definition

- VRRP and VRRP-Extended MIBs..... 319

VRRP and VRRP-Extended MIBs

The following table contains the global objects that apply to Virtual Router Redundancy Protocol (VRRP), Virtual Router Redundancy Protocol Extended (VRRP-E), and Virtual Switch Redundancy Protocol (VSRP).

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVrrpGroupOperMode brcdlp.1.2.12.1.1 Syntax: Integer NOTE This object is supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. | Read-write | Indicates if VRRP is enabled for this system: <ul style="list-style-type: none">• disabled(0) - Disable VRRP.• enabled(1) - Activate VRRP. Default: disabled(0) |

MCT MIB Definition

| | |
|---------------------------------|-----|
| • MCT global MIB object..... | 321 |
| • MCT cluster table..... | 321 |
| • MCT cluster ICL table..... | 324 |
| • MCT cluster peer table..... | 325 |
| • MCT cluster client table..... | 328 |

MCT global MIB object

The following table lists the global MIB object of the MCT table.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctL2Forward brcdlp.1.1.12.1.1.1 Syntax: EnabledStatus | Read-write | The global cluster Layer 2 forward state of the system. The STP packets coming from the MCT VLANs is dropped when the object is set to the disabled(2) state. |

MCT cluster table

The following table lists the objects that apply globally to the Extreme NetIron devices. Currently, the Extreme NetIron devices support only one cluster.

Use the **deploy** command or SNMP-SET request for brcdMctClusterDeploy with the deploy(2) value to verify whether the user has provided all the configuration information. The notReady(3) value for brcdMctClusterRowStatus indicates the user has not configured all the required cluster objects.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctClusterTable brcdlp.1.1.12.1.1.2 | None | The MCT cluster table. |
| brcdMctClusterId brcdlp.1.1.12.1.1.2.1.1 Syntax: Unsigned32 | None | The ID of the MCT cluster. |
| brcdMctClusterName brcdlp.1.1.12.1.1.2.1.2 Syntax: DisplayString | Read-create | The name of the MCT cluster. The object cannot be modified after creation. Valid values: 1 - 64 |
| brcdMctClusterRbridgeld brcdlp.1.1.12.1.1.2.1.3 Syntax: Unsigned32 | Read-create | The remote bridge ID of the MCT cluster. The remote bridge ID is used by the peer to communicate with the cluster node. Valid values: 1 - 35535 |
| brcdMctClusterSessionVlan brcdlp.1.1.12.1.1.2.1.4 Syntax: BrcdVlanIdTC | Read-create | The session VLAN of the MCT cluster. The cluster session VLAN ranges from 1 through 4090, but it cannot be a default VLAN. The brcdMctClusterSessionVlan and brcdMctClusterKeepAliveVlan objects cannot be the same value. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctClusterKeepAliveVlan brcdlp.1.1.12.1.1.2.1.5 Syntax: BrcdVlanIdOrNoneTC | Read-create | <p>The keepalive VLAN of the MCT cluster. The keepalive VLAN ranges from 0 through 4090, but it cannot be a default VLAN.</p> <p>The brcdMctClusterSessionVlan and brcdMctClusterKeepAliveVlan objects cannot be the same value.</p> <p>The value 0 indicates the keepalive VLAN is not set for the particular cluster.</p> <p>If the brcdMctClusterClientIsolationMode object is set to strict(2), then the brcdMctClusterKeepAliveVlan object cannot be set to any value other than 0.</p> <p>Default: 0</p> |
| brcdMctClusterClientIsolationMode brcdlp.1.1.12.1.1.2.1.6 Syntax: Integer | Read-create | <p>The client isolation mode of the MCT cluster.</p> <ul style="list-style-type: none"> loose(1)—Indicates the Cluster Communication Protocol (CCP) is down and the client performs the master/slave negotiation. After negotiation, the slave shuts down the client ports, whereas the master client ports continue to forward the traffic. strict(2)—Indicates the CCP goes down and the client interface on both the cluster nodes is administratively shut down. In this mode, the client is isolated from the network if CCP is not operational. <p>If the brcdMctClusterKeepAliveVlan object is set to any value other than 0, then the brcdMctClusterClientIsolationMode object cannot be set to strict(2).</p> <p>Default: loose(1)</p> |
| brcdMctClusterClientShutdown brcdlp.1.1.12.1.1.2.1.7 Syntax: TruthVal | Read-create | <p>The client shutdown state of the MCT cluster.</p> <p>Shuts down the entire local client interface in the cluster when the value is set to true. This results in the failover of the traffic to the cluster peer.</p> <p>Default: false</p> |
| brcdMctClusterMemberVlans brcdlp.1.1.12.1.1.2.1.8 Syntax: DisplayString | Read-create | <p>The list of the member VLAN IDs on which the MCT cluster is operating. This is the range of VLANs that has MAC synchronization.</p> <ul style="list-style-type: none"> The VLANs that are not sequential are represented as separated by a space; for example, 2 5 100. The VLANs that are continuous and sequential are represented as a range; for example, 10 to 40. |
| brcdMctClusterActiveMemberVlans brcdlp.1.1.12.1.1.2.1.9 Syntax: DisplayString | Read-only | <p>The list of the active member VLANs of the MCT cluster.</p> <ul style="list-style-type: none"> The VLANs that are not sequential are represented as separated by a space; for example, 2 5 100. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> The VLANs that are continuous and sequential are represented as a range; for example, 10 to 40. |
| brcdMctClusterDeploy brcdlp.1.1.12.1.1.2.1.1.10 Syntax: BrcdDeployStatus | Read-create | <p>The administrator status of the MCT cluster.</p> <p>The consistency check of the entire cluster configuration is done when the object is set to the deploy(1) value. After the cluster is deployed, the configuration cannot be modified except for the brcdMctClusterMemberVlans, brcdMctClusterClientIsolationMode, and brcdMctClusterDeploy objects.</p> <p>Default: undeploy(2)</p> |
| brcdMctClusterDeployFailureReason brcdlp.1.1.12.1.1.2.1.1.11 Syntax: Integer | Read-only | <p>The last failure reasons for the cluster deploy operation through SNMP.</p> <p>The following failure reason codes are supported:</p> <ul style="list-style-type: none"> none(1)—Indicates the last deploy is successful. unknown(2)—Indicates the last deploy is failed for an unknown reason. rBridgeIdNotConfigured(3)—Indicates the remote bridge ID is not configured. sessionVlanNotConfigured(4)—Indicates the session VLAN is not configured. iclNotConfigured(5)—Indicates the Inter-Chassis Link (ICL) is not configured. peerNotConfigured(6)—Indicates the peer is not configured. icllsMrpSecondaryInterface(7)—The ICL should not be a Metro Ring Protocol (MRP) secondary interface. icllsErpRplInterface(8)—The ICL should not be a Ethernet Ring Protection (ERP) Ring Protection Link (RPL) interface. icllsErpMsInterface(9)—The ICL should not be a ERP MS interface. icllsErpFsInterface(10)—The ICL should not be a ERP FS interface. iclNotInSessionVlan(11)—Indicates the ICL is not in the session VLAN. iclNotInMemberVlans(12)—Indicates the ICL is not in the member VLANs. nonIclInterfacesInSessionVlan(13)—Indicates none of the ICL interfaces are present under the session VLAN. mgmtVeNotConfiguredInSessionVlan(14)—Indicates the management VE is not configured in the session VLAN. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> mgmtIpNotConfiguredInSessionVlan(15)—Indicates the management IP is not configured in the session VLAN. mgmtIplsUsedInPeerOrClientConfig(16)—Indicates the management IP is used in peer or client configurations. mgmtIpNotInSubnetOfPeerIp(17)—Indicates the management IP is not in the subnet of a peer IP. |
| brcdMctClusterDeployFailureReason (continued) | | <ul style="list-style-type: none"> rBridgeIdUsedInPeerOrClientConfig(18)—Indicates the remote bridge ID is used in peer or client configurations. clientInterfacesNotInMemberVlan(19)—Indicates the client interface is not in the member VLAN. defaultVlanConfigAsSessOrMemberVlan(20)—Indicates the default VLAN is configured as the session or member VLAN. |
| brcdMctClusterRowStatus brcdlp.1.1.12.1.1.2.1.12 Syntax: RowStatus | Read-create | <p>The row status of the MCT clusters. All the row status values are supported. The notInService(2) value indicates the cluster is not yet activated.</p> <p>The following objects must be present in the same SNMP SET request to create a row with the brcdMctClusterRowStatus object set to the createAndGo(4) value:</p> <ul style="list-style-type: none"> brcdMctClusterName brcdMctClusterRbridgeId brcdMctClusterSessionVlan brcdMctClusterMemberVlans <p>The brcdMctClusterName object must be present in the same SNMP SET request to create a row in the brcdMctClusterTable with the brcdMctClusterRowStatus object set to the createAndWait(5) value.</p> <p>If the cluster is deployed, then the brcdMctClusterRowStatus object cannot be set to destroy(6).</p> |

MCT cluster ICL table

The following table lists the Inter-Chassis Link (ICL) MCT cluster MIB objects supported on the Extreme Netiron devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|--------|---------------------------------------------------------|
| brcdMctClusterIclTable brcdlp.1.1.12.1.1.3 | None | The MCT cluster ICL table. |
| brcdMctClusterIclName brcdlp.1.1.12.1.1.3.1.1 Syntax: DisplayString | None | <p>The name of the ICL.</p> <p>Valid values: 1 - 64</p> |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctClusterIclIfIndex brcdlp.1.1.12.1.1.3.1.2 Syntax: InterfaceIndex | Read-create | The interface index of the ICL. The ICL interface can be a single Ethernet interface or trunk interface index. |
| brcdMctClusterIclRowStatus brcdlp.1.1.12.1.1.3.1.3 Syntax: RowStatus | Read-create | The row status of the MCT cluster ICL entry. It supports only the active(1), createAndGo(4), and destroy (6) values of the row status. If the cluster is deployed, then the brcdMctClusterIclRowStatus object cannot be set to destroy(6). If the brcdMctClusterIclName object is used in the peer configuration for the brcdMctClusterPeerIclName object, then the peer configuration must be removed before setting the brcdMctClusterIclRowStatus object to destroy(6). |

MCT cluster peer table

The following table lists the MCT cluster peer table MIB objects supported on the NetIron devices. Currently, the NetIron devices support only one cluster peer. The Layer 2 VPN peer is not supported.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctClusterPeerTable brcdlp.1.1.12.1.1.4 | None | The MCT cluster peer table. NOTE The objects in the table cannot be modified after the cluster is deployed. |
| brcdMctClusterPeerAddrType brcdlp.1.1.12.1.1.4.1.1 Syntax: InetAddressType | None | The address type of the MCT cluster peer. The supported address types are ipv4(1) and ipv6(2). |
| brcdMctClusterPeerAddr brcdlp.1.1.12.1.1.4.1.2 Syntax: InetAddress | None | The IPv4 or IPv6 address of the MCT cluster peer. |
| brcdMctClusterPeerRbridgeld brcdlp.1.1.12.1.1.4.1.3 Syntax: Unsigned32 | Read-create | The remote bridge ID of the MCT cluster peer. Valid values: 1 - 35535 |
| brcdMctClusterPeerIclName brcdlp.1.1.12.1.1.4.1.4 Syntax: DisplayString | Read-create | The ICL name of the MCT cluster peer. The ICL name must be similar to the brcdMctClusterIclName object. |
| brcdMctClusterPeerFastFailover brcdlp.1.1.12.1.1.4.1.5 Syntax: EnabledStatus | Read-create | The fast failover status of the MCT cluster peer. <ul style="list-style-type: none"> When the object is set to enable(1), the remote MACs are flushed as soon as the ICL interface and the CCP are down. When the object is set to disable(2), the remote MACs are flushed only when the CCP is down. Even if the ICL interface is down, CCP waits for |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | the hold time before making the CCP down. |
| brcdMctClusterPeerKeepAliveTime brcdlp.1.1.12.1.1.4.1.6 Syntax: Unsigned32 | Read-create | The keepalive time in seconds of the MCT cluster peer. The keepalive time ranges from 0 through 21845 seconds. Default: 30 seconds |
| brcdMctClusterPeerHoldTime brcdlp.1.1.12.1.1.4.1.7 Syntax: Unsigned32 | Read-create | The hold time in seconds of the MCT cluster peer. The hold time must be at least three times of the keepalive time. The hold time ranges from 3 through 65535 seconds. Default: 90 seconds |
| brcdMctClusterPeerActiveVlans brcdlp.1.1.12.1.1.4.1.8 Syntax: DisplayString | Read-only | The list of the active member VLANs of the MCT cluster peer. <ul style="list-style-type: none"> The VLANs that are not sequential are represented as separated by a space; for example, 2 5 100. The VLANs that are continuous and sequential are represented as a range; for example, 10 to 40. |
| brcdMctClusterPeerOperStatus brcdlp.1.1.12.1.1.4.1.9 Syntax: Integer | Read-only | The operational status of the MCT cluster peer. The following values are supported for the operational status: <ul style="list-style-type: none"> unknown(1)—Unknown state. noState(2)—The peer state machine is not started. init(3)—The peer state machine is initializing. ccpUp(4)—The CCP is up. ccpDown(5)—The CCP is down. reachable(6)—The CCP is down, but the peer is reachable through the keepalive VLAN. |
| brcdMctClusterPeerDownReason brcdlp.1.1.12.1.1.4.1.10 Syntax: Integer | Read-only | The reason for the brcdMctClusterPeerOperStatus object to be in the ccpDown(3) state. The following values are supported as the down reason: <ul style="list-style-type: none"> none(1)—Indicates the peer is not in the down state. loopbackInterfaceDown(2)—Indicates the loopback interface is down. iclInterfaceDown(3)—Indicates the ICL interface is down. upgradeInProgress(4)—Indicates all local client interfaces are disabled. routeNotAvailable(5)—Indicates the route to the cluster peer is not available. iclVeDown(6)—Indicates the ICL VE interface is down. |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> rBridgeIdMismatch(7)—Indicates the remote bridge ID does not match with the peer. clusterIdMismatch(8)—Indicates the cluster ID does not match with the peer. keepAliveTimeMismatch(9)—Indicates the keepalive time does not match with the peer. holdTimeMismatch(10)—Indicates the hold time does not match with the peer. fastFailoverMismatch(11)—Indicates the fast failover parameter does not match with the peer. shutdownMsgFromPeer(12)—Indicates a shutdown message is received from the peer. tcpKeepAliveTimeout(13)—Indicates a TCP keepalive timeout message is received. tclConnCloseMesg(14)—Indicates a TCP connection close message is received. holdTimeoutExpired(15)—Indicates the hold timeout is expired. sendStateTimeoutExpired(16)—Indicates the transmission state timeout is expired. recvStateTimeoutExpired(17)—Indicates the received state timeout is expired. initMesgSendFail(18)—Indicates failure to send the initializing message. keepAliveMesgSendFail(19)—Indicates failure to send the keepalive message. invalidAppMesgRecv(20)—Indicates an invalid application packet message is received from the peer. badProtocolVersionPktRecv(21)—Indicates a bad protocol version packet received message from the peer. badPduLengthPktRecv(22)—Indicates a bad PDU length packet received message from the peer. unknownCcpPktRecv(23)—Indicates an unknown CCP message type packet received message from the peer. invalidCcpPktRecv(24)—Indicates an invalid CCP message length packet received message from the peer. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> internalCcpErrorRecv(25)—Indicates an internal CCP error message from the peer. ccpTcpCommFail(26)—Indicates a cluster CCP TCP communication is failed. |
| brcdMctClusterPeerUpTime brcdlp.1.1.12.1.1.4.1.11 Syntax: TimeInterval | Read-only | The time since the MCT cluster peer is up and running. If the brcdMctClusterPeerOperStatus object is not in the ccpUp(2) state, then the value 0 is returned. |
| brcdMctClusterPeerRowStatus brcdlp.1.1.12.1.1.4.1.12 Syntax: RowStatus | Read-create | <p>The row status of the MCT cluster peer. Only the active(1), notInService(2), createAndGo(4), and destroy(6) values of the RowStatus are supported. The notInService(2) value indicates the cluster is not yet activated.</p> <p>The SNMP SET request to create a row with the brcdMctClusterPeerRowStatus object set to the createAndGo(4) value must contain the brcdMctClusterPeerRbridgeId and brcdMctClusterPeerIclName objects in the same SNMP SET request.</p> <p>If the cluster is deployed, then the brcdMctClusterPeerRowStatus object cannot be set to destroy(6).</p> |

MCT cluster client table

The following table lists the MCT cluster client MIB objects. The **deploy** command or SNMP SET request for the brcdMctClusterClientDeploy object with the deploy(2) value verifies if the configuration is set properly or not. The notReady(3) enum value for the brcdMctClusterClientRowStatus object indicates not all the required cluster client configuration objects are configured.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctClusterClientTable brcdlp.1.1.12.1.1.5 | None | The MCT cluster client table. |
| brcdMctClusterClientName brcdlp.1.1.12.1.1.5.1.1 Syntax: DisplayString | None | The name of the MCT cluster client. |
| brcdMctClusterClientRbridgeId brcdlp.1.1.12.1.1.5.1.2 Syntax: Unsigned32 | Read-create | <p>The remote bridge ID of the MCT cluster client. The remote bridge ID is used by the client to communicate with the cluster node.</p> <p>Valid values: 1 - 35535</p> |
| brcdMctClusterClientIfIndex brcdlp.1.1.12.1.1.5.1.3 Syntax: InterfaceIndex | Read-create | The interface index that is connected to the MCT cluster client. The interface must be an Ethernet interface or trunk interface. |
| brcdMctClusterClientOperStatus brcdlp.1.1.12.1.1.5.1.4 Syntax: Integer | Read-create | <p>The operational status of the MCT cluster client. The following values are supported by the operational status:</p> <ul style="list-style-type: none"> unknown(1)—Indicates the unknown state. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> noState(2)—Indicates the peer state machine is not started. init(3)—Indicates the peer state machine is initializing. localDeploy(4)—Indicates the client is up, but is not configured at the remote side. adminUp(5)—Indicates the client is up, but both the client interfaces are operationally down. remoteUp(6)—Indicates the client is remotely up and locally down. localUp(7)—Indicates the client is locally up and remotely down. up(8)—Indicates the client is up both locally and remotely. slave(9)—Indicates the client is down and it has taken the slave role. master(10)—Indicates the client is down and it has taken the master role. masterPeerUp(11)—Indicates the client is down, it has taken the master role, and the master peer is up. |
| brcdMctClusterClientDeploy brcdlp.1.1.12.1.1.5.1.5 Syntax: BrcdDeployStatus | Read-create | <p>The administration status of the MCT cluster client. When the object is set to deploy and the cluster is not deployed, the configuration happens but the client state machine will not get started.</p> <p>NOTE The objects in the table cannot be modified except the brcdMctClusterClientDeploy object, after the client is deployed.</p> |
| brcdMctClusterClientDeployFailureReason brcdlp.1.1.12.1.1.5.1.6 Syntax: Integer | Read-only | <p>The failure reasons for the last cluster client deploy operation through SNMP. The following failure reasons are supported:</p> <ul style="list-style-type: none"> none(1)—Indicates the last deploy is successful. unknown(2)—Indicates the last deploy is failed for an unknown reason. rBridgeIdNotConfigured(3)—Indicates the remote bridge ID is not configured. clientInterfaceNotConfigured(4)—Indicates the client interface is not configured. rBridgeIdUsedInClusterOrPeer(5)—Indicates the remote bridge ID is used in cluster or peer configurations. clientInterfaceNotPresent(6)—Indicates the client interface is physically not present. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> clientInterfacesMrpRingInterface(7)—Indicates the client interface is configured as an MRP ring interface. clientInterfacesErpInterface(8)—Indicates the client interface is configured as an ERP interface. iclIsNotInMemberVlan(9)—Indicates the ICL is not in the member VLAN. |
| brcdMctClusterClientRowStatus brcdlp.1.1.12.1.1.5.1.7 Syntax: RowStatus | Read-create | <p>The row status of the MCT cluster client. All the values of the row status are supported. The notInService(2) value indicates the cluster client is not deployed.</p> <p>The brcdMctClusterClientRbridgeId and brcdMctClusterClientIfIndex objects must be present in the same SNMP SET request to create a new row with the brcdMctClusterClientRowStatus object set to the createAndGo(4) value.</p> |

VSRP MIB Definition

| | |
|----------------------------------|-----|
| • Global VSRP objects..... | 331 |
| • VSRP interface table..... | 331 |
| • VSRP virtual router table..... | 332 |

Global VSRP objects

The following table contains the global VSRP objects. Use the **router vsrp** and **snmp-server enable traps vrp** CLI commands for information on global VSRP objects.

NOTE

Only one of the virtual router protocols can be enabled at any one time.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVsrpGroupOperModeVsrp brcdlp.1.1.3.21.1.1 Syntax: Integer | Read-write | Indicates if VSRP is enabled or disabled on this system: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: enabled(1) |
| snVsrplfStateChangeTrap brcdlp.1.1.3.21.1.2 Syntax: Integer | Read-write | Indicates whether the SNMP agent process is permitted to generate VSRP interface state change traps: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: enabled(1) |
| snVsrplfMaxNumVridPerIntf brcdlp.1.1.3.21.1.3 Syntax: Integer32 | Read-only | Indicates the maximum number of VRIDs that an interface can have. |
| snVsrplfMaxNumVridPerSystem brcdlp.1.1.3.21.1.4 Syntax: Integer32 | Read-only | Indicates the maximum number of VRIDs that a system can have. |
| snVsrpClearVrrpStat brcdlp.1.1.3.21.1.5 Syntax: Integer | Read-write | Clears the VSRP statistics: <ul style="list-style-type: none">• normal(0)• clear(1) |

VSRP interface table

The following table contains objects used to configure VSRP interfaces. The following objects are equivalent to the **vsrp auth-type** CLI command.

NOTE

Make sure that [Global VSRP objects](#) on page 331 is set to enable(1).

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVsrplfTable brcdlp.1.1.3.21.2.1 | None | The VSRP interface table. |
| snVsrplfVlanId brcdlp.1.1.3.21.2.1.1.1 Syntax: Integer32 | Read-only | VLAN ID used to index the entries in this table. |
| snVsrplfAuthType brcdlp.1.1.3.21.2.1.1.2 Syntax: Integer | Read-write | Indicates the authorization type used to verify access to the interface: <ul style="list-style-type: none"> • noAuth(0) • simpleTextPasswd(1) • ipAuthHeader(2) |
| snVsrplfAuthPassword brcdlp.1.1.3.21.2.1.1.3 Syntax: Octet String | Read-write | The simple text password is allowed only if the VSRP interface table is simpleTextPasswd(1) and the size should be greater than zero. This object can contain 0 to 8 octets and if the value is noAuth then zero length string is returned. |

VSRP virtual router table

The VSRP virtual router table describes the configuration of the VSRP virtual router. The following objects are equivalent to the **vsrp vrid** and **show vsrp** CLI commands.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVsrpVirRtrTable brcdlp.1.1.3.21.3.1 | None | The VSRP virtual router table. |
| snVsrpVirRtrVlanId brcdlp.1.1.3.21.3.1.1.1 Syntax: Integer32 | Read-only | VLAN index of the VSRP router. |
| snVsrpVirRtrId brcdlp.1.1.3.21.3.1.1.2 Syntax: Integer | Read-only | Shows a virtual router ID for the interface. |
| snVsrpVirRtrOwnership brcdlp.1.1.3.21.3.1.1.3 Syntax: Integer | Read-write | Indicates the owner of the VSRP router interface. The owner or master router owns the IP addresses associated with the VRID: <ul style="list-style-type: none"> • incomplete(0) - No IP address has been assigned to this interface. • owner(1) - This does not apply to VSRP. • backup(2) - The backup router is the owner of the interface. This is the only value that can be assigned to a VSRP router interface. |
| snVsrpVirRtrCfgPriority brcdlp.1.1.3.21.3.1.1.4 Syntax: Integer | Read-write | Indicates the preferability of a router for becoming the active router for the interface. A higher number indicates a higher priority. If two or more devices are tied with the highest priority, |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>the backup interface with the highest IP address becomes the active router for the VRID.</p> <p>This object can be set only if VSRP virtual router table is set to backup(2).</p> <p>Valid values: 8 - 255</p> <p>Default: 100</p> |
| snVsrpVirRtrTrackPriority brcdlp.1.1.3.21.3.1.1.5 Syntax: Integer | Read-write | <p>Indicates the amount by which the default track priority is reduced when a tracked interface goes down. The higher the number, the higher the priority.</p> <p>After this object is configured, the VSRP virtual router table object of this interface will be adjusted dynamically with this track priority the first time the track port state changes from up to down.</p> <p>Valid values: 1 - 254</p> |
| snVsrpVirRtrCurrPriority brcdlp.1.1.3.21.3.1.1.6 Syntax: Integer | Read-only | <p>The current VSRP priority of this Layer 3 Switch for the VRID. The current priority can differ from the configured priority for the following reasons:</p> <ul style="list-style-type: none"> • The VRID is still in the initialization stage and has not become a master or backup. In this case, the current priority is 0. • The VRID is configured with track ports and the link on a tracked interface has gone down. <p>A higher number indicates a higher priority.</p> <p>This object is adjusted dynamically when the tracked port first changes from up to down.</p> <p>Valid values: 1 - 254</p> |
| snVsrpVirRtrHelloInt brcdlp.1.1.3.21.3.1.1.7 Syntax: Integer | Read-write | <p>Shows the number of seconds between hello advertisements sent from the master and the backup.</p> <p>Valid values: 1 - 84</p> <p>Default: 1 second</p> <p>NOTE This object cannot be combined with either the snVsrpVirRtrDeadInt or snVsrpVirRtrHoldDownInt objects in one SNMP set request.</p> |
| snVsrpVirRtrDeadInt brcdlp.1.1.3.21.3.1.1.8 Syntax: Integer | Read-write | <p>Shows the number of seconds a Backup waits for a hello message from the master for the VRID before determining that the master is no longer active. If the master does not send a hello messages before the dead interval expires and the backups negotiate (compare priorities) to select a new master .</p> <p>Valid values: 1 - 84</p> <p>Default: 3 seconds</p> |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE This object cannot be combined with the snVsrpVirRtrHelloInt object in one SNMP set request.</p> |
| snVsrpVirRtrPreemptMode brcdlp.1.1.3.21.3.1.1.9 Syntax: Integer | Read-write | <p>Enables or disables preemption. When preemption is enabled, a higher priority backup router preempts a lower priority master.</p> <ul style="list-style-type: none"> disabled(0) enabled(1) <p>Default: enabled(1)</p> |
| snVsrpVirRtrState brcdlp.1.1.3.21.3.1.1.10 Syntax: Integer | Read-only | <p>Specifies the virtual router's interface state:</p> <ul style="list-style-type: none"> init(0) - Initialization state master(1) - Master state backup(2) - Backup state |
| snVsrpVirRtrIpAddrMask brcdlp.1.1.3.21.3.1.1.11 Syntax: Octet String | Read-write | <p>The numbers of IP addresses for this virtual router of this interface. This object is for Layer 3 VSRP.</p> <p>Valid values: Up to 64 octets</p> |
| snVsrpVirRtrActivate brcdlp.1.1.3.21.3.1.1.12 Syntax: Integer | Read-write | <p>Indicates if a VRRP or VRRP-E router has been activated.</p> <ul style="list-style-type: none"> disabled(0) - The router has not been activated. enabled(1) - The router has been activated. |
| snVsrpVirRtrTrackPortList brcdlp.1.1.3.21.3.1.1.13 Syntax: Octet String | Read-write | <p>Specifies the router's physical track port membership. The membership includes physical ports and virtual ports whose state is to be monitored.</p> <p>Each port index is an ifIndex. If there are four or more consecutive ifIndexes, then the encoding and decoding scheme is range-based, as follows:</p> <ul style="list-style-type: none"> Each range prefix with 0000 (2 octets) is not a valid ifIndex. The first two octets in a set of four octets indicate the beginning of the range. The next two octets show the end of the range. If indexes that are not in a range are displayed as individual indexes. <p>For example, you may see the following lists:</p> <ul style="list-style-type: none"> Port list: 0001..0005 0015 0032..0047 <p>0001..0005 and 0032..0047 show ranges of ifIndexes; whereas, 0015 is one ifIndex</p> <ul style="list-style-type: none"> Port list in PDU: 0000 0001 0005 000f 0000 0020 002f <p>The list contains ifIndexes not in a range.</p> <p>If this object is configured, then the preference level of this interface will be adjusted dynamically</p> |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | depending on the state of the track port. The interface's preference level is reduced by the value of preference level parameter when the track port states first changes from up to down. When the track port returns to the up state, the interface's preference level is increased by the amount specified by the preference level. |
| snVsrpVirRtrAdvertiseBackup brcdlp.1.1.3.21.3.1.1.14 Syntax: Integer | Read-write | Indicates if the ability for this backup to advertise itself to the current master is enabled: <ul style="list-style-type: none"> • disabled(0) • enabled(1) Default: disabled(0) |
| snVsrpVirRtrHoldDownInt brcdlp.1.1.3.21.3.1.1.15 Syntax: Integer | Read-write | The amount of time a bbackup that has sent a hello packet announcing its intent to become master waits before beginning to forward traffic for the VRID. The hold-down interval prevents Layer 2 loops from occurring during rapid failover of VSRP. The interval can be from 1 through 84 seconds. Default: 2 seconds NOTE This object cannot be combined with the snVsrpVirRtrHelloInt object in one SNMP set request. |
| snVsrpVirRtrInitTtl brcdlp.1.1.3.21.3.1.1.16 Syntax: Integer | Read-write | Indicates the time-to-live (TTL) value in the hello packets. TTL is the maximum number of hops a VSRP hello packet can traverse before being dropped. TTL in a packet helps regulate the distance that a hello packet can travel. It prevents the flooding of VSRP hello packets in the network. Valid values: 1 - 255 seconds Default: 1 second on most devices; 2 seconds in the NetIron devices |
| snVsrpVirRtrIncPortList brcdlp.1.1.3.21.3.1.1.17 Syntax: Octet String | Read-write | Groups all free ports of a VLAN into their control ports. |
| snVsrpVirRtrSave brcdlp.1.1.3.21.3.1.1.18 Syntax: Integer | Read-write | Sets VSRP to save current parameters value: <ul style="list-style-type: none"> • disabled(0) • enabled(1) Default: disabled(0) |
| snVrrpVirRtrBackupInt brcdlp.1.1.3.21.3.1.1.19 Syntax: Integer | Read-write | Indicates the time interval when backup routers send hello message advertisements. Valid values: 60 - 3600 seconds Default: 60 seconds |
| snVsrpVirRtrRowStatus brcdlp.1.1.3.21.3.1.1.20 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none"> • delete(3) - Delete the row. • create(4) - Create a new row. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> modify(5) - Modify an existing row. <p>If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately.</p> <p>The following values can be returned on reads:</p> <ul style="list-style-type: none"> noSuch(0) - No such row. invalid(1) - Row is inoperative. valid(2) - Row exists and is valid. |
| snVsrpVirRtrRxArpPktDropCnts brcdlp.1.1.3.21.3.1.1.21 Syntax: Counter32 | Read-only | The received VSRP ARP packet drop counts. |
| snVsrpVirRtrRxIpPktDropCnts brcdlp.1.1.3.21.3.1.1.22 Syntax: Counter32 | Read-only | The received VSRP IP packet drop counts. |
| snVsrpVirRtrRxPortMismatchCnts brcdlp.1.1.3.21.3.1.1.23 Syntax: Counter32 | Read-only | The received VSRP port mismatching counts. |
| snVsrpVirRtrRxNumOfIpMismatchCnts brcdlp.1.1.3.21.3.1.1.24 Syntax: Counter32 | Read-only | Shows the received number of mismatched IP addresses for VSRP. |
| snVsrpVirRtrRxIpMismatchCnts brcdlp.1.1.3.21.3.1.1.25 Syntax: Counter32 | Read-only | Shows the number of received VSRP IP addresses that are mismatched. |
| snVsrpVirRtrRxHelloIntMismatchCnts brcdlp.1.1.3.21.3.1.1.26 Syntax: Counter32 | Read-only | Shows the number of the virtual router interfaces with hello intervals that are mismatched. |
| snVsrpVirRtrRxPriorityZeroFromMasterCnts brcdlp.1.1.3.21.3.1.1.27 Syntax: Counter32 | Read-only | Shows the number of advertisements with priority of zero received from the master. |
| snVsrpVirRtrRxHigherPriorityCnts brcdlp.1.1.3.21.3.1.1.28 Syntax: Counter32 | Read-only | The counts of the virtual router interfaces with higher priority. |
| snVsrpVirRtrTransToMasterStateCnts brcdlp.1.1.3.21.3.1.1.29 Syntax: Counter32 | Read-only | Shows the number of times this interface has changed from the master state to the backup state for the VRID. |
| snVsrpVirRtrTransToBackupStateCnts brcdlp.1.1.3.21.3.1.1.30 Syntax: Counter32 | Read-only | Shows the number of times this interface has changed from the master state to the backup state. |
| snVsrpVirRtrCurrDeadInt brcdlp.1.1.3.21.3.1.1.31 Syntax: Integer32 | Read-only | Shows the current dead intervals in increments of 100 milliseconds for the virtual router. This is the time period that a backup waits for a hello message from the master before determining that the master is no longer active. If the master does not send a hello message before the dead interval expires and the backups negotiate (compare priorities) to select a new master. |
| snVsrpVirRtrCurHelloInt | Read-only | Shows the current backup router hello interval. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.1.1.321.3.1.1.32 Syntax: Integer | | |
| snVsrpVirRtrCurHoldDownInt brcdlp.1.1.321.3.1.1.33 Syntax: Integer | Read-only | Shows the current value of the hold-down interval. Valid values: 1 - 84 |
| snVsrpVirRtrCurInitTtl brcdlp.1.1.321.3.1.1.34 Syntax: Integer | Read-only | Shows the current TTL value. Valid values: 1 - 255 |
| snVsrpVirRtrHelloMacAddress brcdlp.1.1.321.3.1.1.35 Syntax: MAC address | Read-only | Shows the hello MAC address. |
| snVsrpVirRtrMasterIpAddress brcdlp.1.1.321.3.1.1.36 Syntax: IpAddress | Read-only | Shows the master router's real or virtual (primary) IP address. This is the IP address listed as the source in VSRP advertisement, which is last received by this virtual router. |

IP MIB Definition

| | |
|-----------------------------------|-----|
| • Global router MIB..... | 339 |
| • IP general group..... | 339 |
| • RARP table..... | 341 |
| • IP interface counter table..... | 342 |

Global router MIB

The following table contains a global MIB object covering the switching properties of the Layer 3 Switch, regardless of routing protocol.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snGblRtRouteOnly brcdlp.1.2.8.1.1 Syntax: Integer | Read-write | Determines if the Layer 3 Switch will route or switch packets: <ul style="list-style-type: none">disabled(0) - Router will first route the packets. If it cannot route them, it will switch the packets.enabled(1) - Router will only route the packets; it will not switch them. |

IP general group

The following table contains the general objects for the IP group.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtClearArpCache brcdlp.1.2.2.1.1 Syntax: ClearStatus NOTE This object is not supported on the Extreme NetIron series devices. | Read-write | Clears learned Address Resolution Protocol (ARP) entries but does not remove any static ARP entries: <ul style="list-style-type: none">normal(0) - Do not clear learned entries.clear(1) - Clear learned entries. |
| snRtClearIpCache brcdlp.1.2.2.1.2 Syntax: ClearStatus | Read-write | Clears the entries in the IP forwarding cache table: <ul style="list-style-type: none">normal(0) - Do not clear entries.clear(1) - Clear entries. |
| snRtClearIpRoute brcdlp.1.2.2.1.3 Syntax: ClearStatus | Read-write | Clears the IP route tables: <ul style="list-style-type: none">normal(0) - Do not clear entries.clear(1) - Clear entries. NOTE Beginning with NetIron 05.9.00 release, the snRtClearIpRoute MIB object has VRF support. |
| snRtArpAge brcdlp.1.2.2.1.6 Syntax: Integer | Read-write | Specifies the number of minutes that an ARP entry can be valid without having it to be relearned. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Valid values: Up to 240 minutes. A value of zero (0) means that the entry will not age out. |
| snRtIpIrdpEnable brcdlp.1.2.2.1.7 Syntax: Integer | Read-write | Indicates if router advertisement is enabled on this device: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snRtIpLoadShare brcdlp.1.2.2.1.8 Syntax: Integer | Read-write | Indicates if more than one route is enabled to share the loads: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snRtIpProxyArp brcdlp.1.2.2.1.9 Syntax: Integer | Read-write | Indicates if the proxy ARP function is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snRtIpRarp brcdlp.1.2.2.1.10 Syntax: Integer | Read-write | Indicates if the RARP server is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snRtIpTtl brcdlp.1.2.2.1.11 Syntax: Integer | Read-write | Indicates the time-to-live (TTL) value that will be used in the IP header of an IP packet that was generated by this device. Valid values: 1 - 255 |
| snRtIpFwdCacheMaxEntries brcdlp.1.2.2.1.13 Syntax: Integer32 | Read-only | Shows the maximum number of entries in the IP forwarding cache table. |
| snRtIpFwdCacheCurEntries brcdlp.1.2.2.1.14 Syntax: Integer32 | Read-only | Shows the current number of entries in the IP forwarding cache table. |
| snRtIpMaxStaticRouteEntries brcdlp.1.2.2.1.15 Syntax: Integer | Read-only | Shows the maximum number of entries in the IP static route table. |
| snRtIpDirBcastFwd brcdlp.1.2.2.1.16 Syntax: Integer | Read-write | Indicates if the directed broadcast forwarding feature is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) |
| snRtIpLoadShareNumOfPaths brcdlp.1.2.2.1.17 Syntax: Integer32 | Read-write | Specifies the number of routes to be used to share the load. |
| snRtIpLoadShareMaxPaths brcdlp.1.2.2.1.18 Syntax: Integer32 | Read-only | Indicates the maximum number of routes that can be configured to share the load. |
| snRtIpLoadShareMinPaths brcdlp.1.2.2.1.19 Syntax: Integer32 | Read-only | Indicates the minimum number of routes that can be configured to share the load. |
| snRtIpProtocolRouterId brcdlp.1.2.2.1.20 Syntax: IpAddress | Read-write | Shows the router ID for all Internet Protocols. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE Beginning with NetIron 05.9.00 release, the snRtpProtocolRouterId MIB object has VRF support.</p> |
| snRtpSourceRoute brcdlp.1.2.2.1.21 Syntax: Integer | Read-write | <p>Indicates if strict source routing is enabled to drop source routed packets:</p> <ul style="list-style-type: none"> • disabled(0) • enabled(1) |

RARP table

The Reverse Address Resolution Protocol (RARP) provides a simple mechanism for directly-attached IP hosts to boot over the network. RARP allows an IP host that does not have a means of storing its IP address across power cycles or software reloads to query a directly-attached router for an IP address.

RARP is enabled by default. However, there must be a static RARP entry for each host that will use the Layer 3 Switch for booting. The following table contains the objects that define each RARP entry.

NOTE

The following table is not supported on the MLX Series, MLX Series, and XMR Series devices.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtpRarpTable brcdlp.1.2.2.4 | None | IP RARP table. |
| snRtpRarpIndex brcdlp.1.2.2.4.1.1 Syntax: Integer | Read-only | An index for an entry in the RARP table. There can be up to 16 entries. |
| snRtpRarpMac brcdlp.1.2.2.4.1.2 Syntax: OCTET STRING | Read-write | Shows the MAC address of the RARP client. |
| snRtpRarpIp brcdlp.1.2.2.4.1.3 Syntax: IpAddress | Read-write | Shows the IP address for a RARP client. |
| snRtpRarpRowStatus brcdlp.1.2.2.4.1.4 Syntax: Integer | Read-write | <p>Controls the management of the table rows. The following values can be written:</p> <ul style="list-style-type: none"> • delete(3) - Delete the row. • create(4) - Create a new row. • modify(5) - Modify an existing row. <p>If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately.</p> <p>The following values can be returned on reads:</p> <ul style="list-style-type: none"> • noSuch(0) - No such row. • invalid(1) - Row is inoperative. • valid(2) - Row exists and is valid. |

IP interface counter table

The following MIB objects are supported on the Extreme NetIron devices.

| Name, OID, and Syntax | Access | Description |
|--------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------|
| agIpPortCounterTable brcdlp.1.2.2.21 | None | IP port counter table to display IP traffic statistics. At present, the system supports only IP statistics for Ethernet ports. |
| agIpPortCounterIpVersion brcdlp.1.2.2.21.1.1 Syntax: IpAddress | None | The version of IP for which this counter entry is returned. This table supports ipv4(1) and ipv6(2) enumerations. |
| agIpPortCounterRxPacket brcdlp.1.2.2.21.1.2 Syntax: Counter64 | Read-only | Total IP packets received on a given interface. |
| agIpPortCounterRxOctet brcdlp.1.2.2.21.1.3 Syntax: Counter64 | Read-only | Total IP octets received on a given interface. |
| agIpPortCounterTxPacket brcdlp.1.2.2.21.1.4 Syntax: Counter64 | Read-only | Total IP packets transmitted from a given interface. |
| agIpPortCounterTxOctet brcdlp.1.2.2.21.1.5 Syntax: Counter64 | Read-only | Total IP octets transmitted from a given interface. |

BGP4 MIB Definition

| | |
|---------------------------------------------|-----|
| • BGP4 general variables..... | 343 |
| • BGP4 neighbor distribute group table..... | 343 |
| • BGP4 neighbor filter group table..... | 344 |
| • BGP4 neighbor route map table..... | 346 |
| • BGP4 neighbor summary table..... | 346 |

BGP4 general variables

The BGP4 implementation complies with RFC 4273. The BGP4 implementation also supports the following RFCs:

- RFC 1745 (OSPF Interactions)
- RFC 1965 (BGP4 Confederations)
- RFC 1997 (BGP Communities Attributes)
- RFC 2385 (TCP MD5 Signature Option)
- RFC 2439 (Route Flap Dampening)
- RFC 2796 (Route Reflection)
- RFC 2842 (Capability Advertisement)

The BGP4 objects apply globally to a device's BGP4 process.

| Name, OID, and syntax | Access | Description |
|------------------------------|--------|-----------------------------------------------------------------------|
| snBgp4Gen brcdlp.1.2.11.1 | None | Beginning from NetIron 05.9.00 release, this MIB object supports VRF. |

BGP4 neighbor distribute group table

The following table lists the BGP4 neighbor distribute group table MIB objects.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snBgp4NeighDistGroupTable brcdlp.1.2.11.7.1 | None | The BGP4 neighbor distribute group table. |
| snBgp4NeighDistGroupNeighIp brcdlp.1.2.11.7.1.1.1 Syntax: ipAddress | Read-only | Shows the IP address for this entry. |
| snBgp4NeighDistGroupDir brcdlp.1.2.11.7.1.1.2 Syntax: Integer | Read-only | Indicates if the access list is applied to incoming or outgoing advertisements: <ul style="list-style-type: none">• out(0)• in(1) |
| snBgp4NeighDistGroupAccessList brcdlp.1.2.11.7.1.1.3 Syntax: OCTET STRING | Read-write | Indicates the access list that will be applied to advertisements. This is a number from 1 through 0xFFFF. Each integer is represented by two octets. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snBgp4NeighDistGroupRowStatus brcdlp.1.2.11.7.1.1.4 Syntax: Integer | Read-write | <p>Controls the management of the table rows. The following values can be written:</p> <ul style="list-style-type: none"> • delete(3) - Deletes the row. • create(4) - Creates a new row. • modify(5) - Modifies an existing row. <p>If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately.</p> <p>The following values can be returned on reads:</p> <ul style="list-style-type: none"> • noSuch(0) - No such row. • invalid(1) - Row is inoperative. • valid(2) - Row exists and is valid. |
| snBgp4NeighDistGroupInFilterList brcdlp.1.2.11.7.1.1.5 Syntax: OCTET STRING | Read-write | <p>Indicates the group filter list that will be applied to incoming advertisements.</p> <p>This is number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. Each integer is represented by two octets.</p> |
| snBgp4NeighDistGroupOutFilterList brcdlp.1.2.11.7.1.1.6 Syntax: OCTET STRING | Read-write | <p>Indicates the group filter list that will be applied to outgoing advertisements.</p> <p>This is number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. Each integer is represented by two octets.</p> |
| snBgp4NeighDistGroupInIpAccessList brcdlp.1.2.11.7.1.1.7 Syntax: OCTET STRING | Read-write | <p>Indicates the access list that will be applied to incoming advertisements. This is number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. Each integer is represented by two octets.</p> |
| snBgp4NeighDistGroupOutIpAccessList brcdlp.1.2.11.7.1.1.8 Syntax: OCTET STRING | Read-write | <p>Indicates the access list that will be applied to outgoing advertisements.</p> <p>This is number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. Each integer is represented by two octets.</p> |
| snBgp4NeighDistGroupInPrefixList brcdlp.1.2.11.7.1.1.9 Syntax: OCTET STRING | Read-write | <p>Specifies the prefix name list of incoming advertisements.</p> <p>Valid values: Up to 32 octets</p> |
| snBgp4NeighDistGroupOutPrefixList brcdlp.1.2.11.7.1.1.10 Syntax: OCTET STRING | Read-write | <p>Specifies the prefix name list of outgoing advertisements.</p> <p>Valid values: Up to 32 octets</p> |

BGP4 neighbor filter group table

The BGP4 neighbor filter group table controls the routes that the device learns or advertises.

| Name, OID, and syntax | Access | Description |
|-----------------------------|--------|---------------------------------------|
| snBgp4NeighFilterGroupTable | None | The BGP4 neighbor filter group table. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.1.2.11.8.1 | | |
| snBgp4NeighFilterGroupNeighIp brcdlp.1.2.11.8.1.1 Syntax: IpAddress | Read-only | Shows the IP address for a neighbor entry. |
| snBgp4NeighFilterGroupDir brcdlp.1.2.11.8.1.2 Syntax: Integer | Read-only | Shows the direction of advertisements to which the access list is applied: <ul style="list-style-type: none"> • out(0) - Outgoing • in(1) - Incoming |
| snBgp4NeighFilterGroupAccessList brcdlp.1.2.11.8.1.3 Syntax: OCTET STRING | Read-write | Identifies the access list that is being used to filter a neighbor group. This is a number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. This integer is represented by two octets. |
| snBgp4NeighFilterGroupRowStatus brcdlp.1.2.11.8.1.4 Syntax: IpAddress | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none"> • delete(3) - Deletes the row. • create(4) - Creates a new row. • modify(5) - Modifies an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none"> • noSuch(0) - No such row. • invalid(1) - Row is inoperative. • valid(2) - Row exists and is valid. |
| snBgp4NeighFilterGroupInFilterList brcdlp.1.2.11.8.1.5 Syntax: OCTET STRING | Read-write | Identifies the filter list that is being used to filter incoming routes from a neighbor group. This is a number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. This integer is represented by two octets. |
| snBgp4NeighFilterGroupOutFilterList brcdlp.1.2.11.8.1.6 Syntax: OCTET STRING | Read-write | Identifies the filter list that is being used to filter outgoing routes from a neighbor group. This is a number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. This integer is represented by two octets. |
| snBgp4NeighFilterGroupInAsPathAccessList brcdlp.1.2.11.8.1.7 Syntax: OCTET STRING | Read-write | Identifies the AS-Path list that is being used to filter incoming routes from a neighbor group. This is a number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. This integer is represented by two octets. |
| snBgp4NeighFilterGroupOutAsPathAccessList brcdlp.1.2.11.8.1.8 Syntax: OCTET STRING | Read-write | Identifies the AS-Path list that is being used to filter outgoing routes from a neighbor group. This is a number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. This integer is represented by two octets. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| snBgp4NeighFilterGroupWeight brcdlp.1.2.11.8.1.1.9 Syntax: Integer | Read-write | Assigns a weight to a neighbor filter. Valid values: 0 - 65535 |
| snBgp4NeighFilterGroupWeightAccessList brcdlp.1.2.11.8.1.1.10 Syntax: OCTET STRING | Read-write | This is a number from 1 through OxFFFF. The incoming and outgoing list can have a maximum of 16 entries each. This integer is represented by two octets. |

BGP4 neighbor route map table

A route map can be one of the parameters to be advertised by the BGP4 network. The Layer 3 Switch can use the route map to set or change BGP4 attributes when creating a local BGP4 route.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snBgp4NeighRouteMapTable brcdlp.1.2.11.9.1 | None | The BGP4 neighbor route map table. |
| snBgp4NeighRouteMapNeighIp brcdlp.1.2.11.9.1.1 Syntax: IpAddress | Read-only | Shows the IP address for a neighbor entry. |
| snBgp4NeighRouteMapDir brcdlp.1.2.11.9.1.1.2 Syntax: Integer | Read-only | Indicates the direction of the advertisement to which the access list is applied: <ul style="list-style-type: none">• out(0)• in(1) |
| snBgp4NeighRouteMapMapName brcdlp.1.2.11.9.1.1.3 Syntax: OCTET STRING | Read-write | Specifies the name of the route map you want to use. The value of this object is an octet string. Each character of the name is represented by one octet. There can be up to 32 octets in this object. |
| snBgp4NeighRouteMapRowStatus brcdlp.1.2.11.9.1.1.4 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">• delete(3) - Deletes the row.• create(4) - Creates a new row.• modify(5) - Modifies an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row.• invalid(1) - Row is inoperative.• valid(2) - Row exists and is valid. |

BGP4 neighbor summary table

The BGP4 neighbor summary table shows statistics for the router's BGP4 neighbors.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snBgp4NeighborSummaryTable brcdlp.1.2.11.17.1 | None | The BGP4 neighbor summary table. |
| snBgp4NeighborSummaryIndex brcdlp.1.2.11.17.1.1.1 Syntax: Integer32 | Read-only | The index for a route entry. |
| snBgp4NeighborSummaryIp brcdlp.1.2.11.17.1.1.2 Syntax: IpAddress | Read-only | Shows the IP address of the neighbor. |
| snBgp4NeighborSummaryState brcdlp.1.2.11.17.1.1.3 Syntax: Integer | Read-only | <p>Shows the state of the BGP4 process during the current session with the neighbor:</p> <ul style="list-style-type: none"> • noState(0) • idle(1) - The BGP4 process is waiting to be started. Usually, enabling BGP or establishing a neighbor session starts the BGP4 process. A minus sign (-) indicates that the session has gone down and the software is clearing or removing routes. • connect(2) - Waiting for the connection process for the TCP neighbor session to be completed. • active(3) - BGP4 is waiting for a TCP connection from the neighbor. • openSent(4) - BGP4 is waiting for an OPEN message from the neighbor. • openConfirm(5) - BGP4 has received an OPEN message from the neighbor and is now waiting for either a KEEPALIVE or NOTIFICATION message. If the router receives a KEEPALIVE message from the neighbor, the state changes to established(6). If the message is a NOTIFICATION, the state changes to idle(1). • established(6) - BGP4 is ready to exchange UPDATE messages with the neighbor. <p>NOTE If there is more BGP data in the TCP receiver queue, a plus sign (+) is also displayed.</p> |
| snBgp4NeighborSummaryStateChgTime brcdlp.1.2.11.17.1.1.4 Syntax: Integer32 | Read-only | Shows the number of times the state of this neighbor has changed. If the state frequently changes between CONNECT and ACTIVE, there may be a problem with the TCP connection. |
| snBgp4NeighborSummaryRouteReceived brcdlp.1.2.11.17.1.1.5 Syntax: Integer32 | Read-only | Shows the number of routes received from the neighbor during the current BGP4 session. |
| snBgp4NeighborSummaryRouteInstalled brcdlp.1.2.11.17.1.1.6 | Read-only | Indicates how many of the received routes were accepted and installed in the BGP4 route table. |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|-------------|
| Syntax: Integer32 | | |

OSPF MIB Definition

| | |
|-----------------------------|-----|
| • OSPF general objects..... | 349 |
| • Area range table..... | 349 |
| • Trap support objects..... | 350 |

OSPF general objects

The Open Shortest Path First (OSPF) general objects provide information about the OSPF process, and they apply globally to the routers.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snOspfGen brcdlp.1.2.4.1 | None | Beginning from Netiron 05.9.00 release, this MIB object supports VRF. |
| snOspfAdminStat brcdlp.1.2.4.1.2 Syntax: Integer | Read-write | Specifies the state of the OSPF in the router: <ul style="list-style-type: none">disabled(0) - OSPF is disabled on all interfaces.enabled(1) - OSPF is active on at least one interface. |

Area range table

The area range allows you to assign an aggregate value to a range of IP addresses. This aggregate value becomes the address that is advertised instead of all the individual addresses it represents being advertised. The area range table contains the aggregate value of the ranges of IP addresses that are configured to be propagated from an OSPF area.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snOspfAreaRangeTable brcdlp.1.2.4.3.1 | None | The area range table. |
| snOspfAreaRangeAreaID brcdlp.1.2.4.3.1.1.1 Syntax: Areaid | Read-only | Specifies the ID of the area where the address range can be found. The Area range table object determines the format of this object. |
| snOspfAreaRangeNet brcdlp.1.2.4.3.1.1.2 Syntax: IpAddress | Read-only | Specifies the IP address of the net or subnet indicated by the range. |
| snOspfAreaRangeMask brcdlp.1.2.4.3.1.1.3 Syntax: IpAddress | Read-write | Specifies the subnet mask that pertains to the net or subnet. |
| snOspfAreaRangeRowStatus brcdlp.1.2.4.3.1.1.4 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none">delete(3) - Deletes the row.create(4) - Creates a new row.modify(5) - Modifies an existing row. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none">• noSuch(0) - No such row.• invalid(1) - Row is inoperative.• valid(2) - Row exists and is valid. |
| snOspfAreaRangeArealdFormat brcdlp.1.2.4.3.1.1.5 Syntax: Integer | Read-only | Specifies the format of how area ID will be entered in the Area range table object: <ul style="list-style-type: none">• integer(0) - Integer• ipAddress(1) - IP Address |

Trap support objects

The following table contains the support objects for the OSPF traps.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snOspfSetTrap brcdlp.1.2.4.15.1 Syntax: Octet String | Read-write | Indicates if specific OSPF traps are enabled. The four octets serve as a bit map for the trap events defined by the OSPF traps. A value of 1 in the bit field indicates that the trap is enabled. The right-most bit (least significant) represents Trap 0. |
| snOspfConfigErrorType brcdlp.1.2.4.15.2 Syntax: Integer | Read-only | Indicates the potential types of configuration conflicts used by the ospfConfigError and ospfConfigVirtError traps: <ul style="list-style-type: none">• badVersion(1)• areaMismatch(2)• unknownNbmaNbr(3) - Router is eligible.• unknownVirtualNbr(4)• authTypeMismatch(5)• authFailure(6)• netMaskMismatch(7)• helloIntervalMismatch(8)• deadIntervalMismatch(9)• optionMismatch(10)} |
| snOspfPacketType brcdlp.1.2.4.15.3 Syntax: Integer | Read-only | Indicates the OSPF packet type in the trap: <ul style="list-style-type: none">• hello(1)• dbDescript(2)• lsReq(3)• lsUpdate(4)• lsAck(5)} |
| snOspfPacketSrc brcdlp.1.2.4.15.4 Syntax: IpAddress | Read-only | Shows the IP address of an inbound packet that cannot be identified by a neighbor instance. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snOspfTrapsGenerationMode brcdlp.1.2.4.15.5 Syntax: RtrStatus | Read-write | <p>Indicates if this router has been enabled to generate OSPF traps:</p> <ul style="list-style-type: none"> disabled(0) - OSPF traps cannot be generated by this router, even if the Trap support objects object is set to generate traps. enabled(1) - OSPF traps can be generated by the router. <p>This object provides global control on the generation of traps.</p> |

Broadcast Forwarding Group

- General UDP broadcast forwarding group.....353

General UDP broadcast forwarding group

NOTE

The following table is not supported on the MLX Series, MLX Series, and XMR Series devices.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtUdpBcastFwdEnable brcdlp.1.2.2.9 Syntax: RtrStatus | Read-write | <p>Indicates if the UDP broadcast forwarding feature is enabled:</p> <ul style="list-style-type: none">disabled(0) - When this object is set to disabled, entries in the UDP broadcast forwarding port table are deleted.enabled(1) - When UDP broadcast forwarding is enabled, default entries are added to the UDP broadcast forwarding port table. <p>Default: enabled(1)</p> |

Router IP MIB Definition

| | |
|-------------------------------------|-----|
| • IP RIP general group..... | 355 |
| • IP RIP redistribution table..... | 355 |
| • IP RIP neighbor filter table..... | 356 |

IP RIP general group

The Routing Information Protocol (RIP) is an IP route exchange protocol that uses a distance vector (a number representing distance) to measure the cost of a given route. The cost is a distance vector because the cost often is equivalent to the number of hops between the Layer 3 Switch and the destination network.

A Layer 3 Switch can receive multiple paths to a destination. A RIP route can have a maximum cost of 15.

The following objects are general objects for RIP. Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtIpRipEnable brcdlp.1.2.3.1.1 Syntax: Integer | Read-write | Indicates if IP RIP routing is enabled: <ul style="list-style-type: none">• disabled(0)• enabled(1) Default: disabled(0) |
| snRtIpRipUpdateTime brcdlp.1.2.3.1.2 Syntax: Integer | Read-write | Specifies the RIP update interval in seconds. Valid values: 1 - 21845 seconds |
| snRtIpRipRedisDefMetric brcdlp.1.2.3.1.4 Syntax: Integer | Read-write | Shows the default metric to be used when static routes are redistributed to RIP. Valid values: 1 - 15 |
| snRtIpRipDistance brcdlp.1.2.3.1.8 Syntax: Integer | Read-write | Shows the administrative distance of this filter. Valid values: 1 - 255 |

IP RIP redistribution table

The IP RIP redistribution table contains routes where RIP routes are redistributed. RIP can redistribute routes from other routing protocols such as OSPF and BGP4 into RIP. A redistributed route means that a Layer 3 Switch learns through another protocol, and then distributes into RIP.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------|
| snRtIpRipRedisTable brcdlp.1.2.3.3 | None | The IP RIP redistribution table. |
| snRtIpRipRedisIndex brcdlp.1.2.3.3.1.1 Syntax: Integer | Read-only | The table index for a IP RIP redistribution entry. There can be up to 64 entries in this table. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtIpRipRedisProtocol brcdlp.1.2.3.3.1.3 Syntax: Integer | Read-write | Indicates which protocol is to be distributed: <ul style="list-style-type: none"> other(1) - Cannot be used for SNMP-SET. all(2) static(3) ospf(4) bgp(5) isis(6) |
| snRtIpRipRedisSetMetric brcdlp.1.2.3.3.1.7 Syntax: Integer | Read-write | Specifies the new metric of the route to be advertised. Valid values: 0 - 15. A value of 0 indicates that the default metric will be used. |
| snRtIpRipRedisRowStatus brcdlp.1.2.3.3.1.8 Syntax: Integer | Read-write | Controls the management of the table rows. The following values can be written: <ul style="list-style-type: none"> delete(3) - Deletes the row. create(4) - Creates a new row. modify(5) - Modifies an existing row. If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately. The following values can be returned on reads: <ul style="list-style-type: none"> noSuch(0) - No such row. invalid(1) - Row is inoperative. valid(2) - Row exists and is valid. |
| snRtIpRipRedisRouteMapName brcdlp.1.2.3.3.1.9 Syntax: DisplayString | Read-write | Indicates the name of the route map used for this redistribution entry. |

IP RIP neighbor filter table

The IP RIP neighbor filter table specifies the routers from which a router will receive RIP routes. By default, RIP routes will be learned from all neighbors.

NOTE

Beginning with NetIron 05.9.00 release, the following MIB objects have VRF support.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snRtIpRipNbrFilterTable brcdlp.1.2.3.5 | None | The IP RIP neighbor filter table. |
| snRtIpRipNbrFilterId brcdlp.1.2.3.5.1.1 Syntax: Integer | Read-only | Indicates the ID of this entry in the table. There can be up to 64 entries in this table. |
| snRtIpRipNbrFilterAction brcdlp.1.2.3.5.1.2 Syntax: Integer | Read-write | Indicates what action to take if the source IP address in a packet matches the source IP address in this filter. The IP address to be matched is defined by the IP RIP neighbor filter table object: <ul style="list-style-type: none"> deny(0) |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • permit(1) |
| snRtIpRipNbrFilterSourceIp brcdlp.1.2.3.5.1.3 Syntax: ipAddress | Read-write | Shows the source IP address that needs to be matched by the RIP packet. An IP address of 0.0.0.0 always matches any source IP addresses in any IP RIP packets. |
| snRtIpRipNbrFilterRowStatus brcdlp.1.2.3.5.1.4 Syntax: Integer | Read-write | <p>Controls the management of the table rows. The following values can be written:</p> <ul style="list-style-type: none"> • delete(3) - Deletes the row. • create(4) - Creates a new row. • modify(5) - Modifies an existing row. <p>If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately.</p> <p>The following values can be returned on reads:</p> <ul style="list-style-type: none"> • noSuch(0) - No such row. • invalid(1) - Row is inoperative. • valid(2) - Row exists and is valid. |

PIM MIB Definition

| | |
|---------------------------|-----|
| • Common PIM objects..... | 359 |
| • PIM-SM | 360 |

Common PIM objects

NOTE

The following section describes the Protocol Independent Multicast (PIM) MIB objects that are supported on the Netiron IP MIB. The following objects are not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and Extreme Netiron CER Series devices.

The following table presents objects that are common to all PIM interfaces.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPimMIBObjects brcdlp.1.2.9.1 | None | Beginning from Netiron 05.9.00 release, this MIB object supports VRF. |
| snPimEnable brcdlp.1.2.9.1.1 Syntax: RtrStatus | Read-write | Determines if PIM is enabled on this Layer 3 Switch: <ul style="list-style-type: none">disabled(0)enabled(1) Default: disabled(0) The remaining objects apply only if this object is set to enabled(1). |
| snPimNeighborRouterTimeout brcdlp.1.2.9.1.2 Syntax: Integer | Read-write | Specifies the number of seconds the PIM Layer 3 Switch waits before it considers a neighbor to be absent. Absence of PIM hello messages from a neighboring Layer 3 Switch indicates that a neighbor is not present. Valid values: 3 - 65535 seconds Default: 180 seconds |
| snPimPruneTime brcdlp.1.2.9.1.4 Syntax: Integer | Read-write | Specifies the number of seconds that a PIM Layer 3 Switch will maintain a prune state for a forwarding entry. The first multicast that the Layer 3 Switch receives from an interface is forwarded to all other PIM interfaces on the Layer 3 Switch. If there is no presence of groups on that interface, the leaf node sends a prune message upstream and stores a prune state. This prune state travels up the tree and installs a prune state. A prune state is maintained until the prune timer expires or a graft message is received for the forwarding entry. Valid values: 60 - 3600 seconds Default: 60 seconds |
| snPimGraftRetransmitTime brcdlp.1.2.9.1.5 | Read-write | Specifies the number of seconds between the transmission of graft messages. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer snPimInactivityTime brcdlp.1.2.9.1.6 | | A graft message is sent by a Layer 3 Switch to cancel a prune state. When a Layer 3 Switch receives a graft message, the Layer 3 Switch responds with a Graft ACK (acknowledge) message. If this Graft ACK message is lost, the Layer 3 Switch that sent the graft message will resend it. <ul style="list-style-type: none"> • Valid values: 2 - 3600 seconds • Default: 180 seconds |
| Syntax: Integer snPimInactivityTime brcdlp.1.2.9.1.6 | Read-write | Defines how long a forwarding entry can remain unused before the Layer 3 Switch deletes it. The Layer 3 Switch deletes a forwarding entry if the entry is not used to send multicast packets. <p>This object is used only to keep the forwarding entries for the active sessions.</p> <p>Valid values: 10 - 3600 seconds</p> <p>Default: 180 seconds</p> |

PIM-SM

The following tables are available for the PIM Sparse feature.

NOTE

The following tables in this section are not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPimJoinPruneInterval brcdlp.1.2.9.2.1 | Read-write | The default interval in seconds at which periodic PIM Sparse join and prune messages are to be sent. These messages inform other PIM Sparse Layer 3 Switches about clients who want to become receivers (join) or stop being receivers (prune) for PIM Sparse groups. <ul style="list-style-type: none"> • Valid values: 10 - 3600 seconds • Default: 60 seconds |

PIM Sparse: candidate BSR table

The candidate Bootstrap Router (BSR) table contains information about BSRs that are candidates to become the active BSR for the domain. The BSR distributes Rendezvous Point (RP) information to the other PIM Sparse routers within the domain. Each PIM Sparse domain has one active BSR. For redundancy, you can configure ports on multiple routers as candidate BSRs. The PIM Sparse protocol uses an election process to select one of the candidate BSRs as the active BSR for the domain. The BSR with the highest BSR priority is elected. If the priorities result in a tie, the candidate BSR interface with the highest IP address is elected.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------|--------|---------------------------------------------|
| snPimCandidateBSRTable brcdlp.1.2.9.2.2 | None | The candidate bootstrap router (BSR) table. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPimCandidateBSRPortID brcdlp.1.2.9.2.2.1.1 Syntax: Integer32 | Read-write | Identifies the IP address of the PIM interface: <ul style="list-style-type: none">• Bit 0 to bit 7 - Port number• Bit 8 to bit 11 - Slot number |
| snPimCandidateBSRIPAddress brcdlp.1.2.9.2.2.1.2 Syntax: IpAddress | Read-only | Shows the unicast IP address of the candidate BSR. |
| snPimCandidateBSRHashMaskLen brcdlp.1.2.9.2.2.1.3 Syntax: Integer | Read-write | Indicates the hash mask value for this Layer 3 Switch as a candidate bootstrap router. Valid values: 1 - 32 |
| snPimCandidateBSRPreference brcdlp.1.2.9.2.2.1.4 Syntax: Integer | Read-write | Indicates the preference value for this Layer 3 Switch as a candidate bootstrap router. Valid values: 0 - 255 Default: 100 |

PIM RP set table

The PIM RP set table contains information about candidate Rendezvous Points (RPs) for IP multicast groups. When the local Layer 3 Switch is the BSR, this information is obtained from the advertisements received from the candidate-RP. When the local Layer 3 Switch is not the BSR, this information is obtained from the received RP-Set messages.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------|
| snPimRPSetTable brcdlp.1.2.9.2.3 | None | The PIM RP set table. |
| snPimRPSetGroupAddress brcdlp.1.2.9.2.3.1.1 Syntax: IpAddress | Read-only | Shows the IP multicast group address. This object plus snPimRPSetMask forms the group prefix for the candidate-RP. |
| snPimRPSetMask brcdlp.1.2.9.2.3.1.2 Syntax: IpAddress | Read-only | Shows the IP multicast group address mask. This object plus snPimRPSetGroupAddress forms the group prefix for the candidate-RP. |
| snPimRPSetIPAddress brcdlp.1.2.9.2.3.1.3 Syntax: IpAddress | Read-only | Shows the IP address of the candidate-RP. |
| snPimRPSetHoldTime brcdlp.1.2.9.2.3.1.4 Syntax: Integer | Read-only | Shows the holdtime, in seconds, of a candidate-RP. If the local router is not the BSR, this value is 0. Valid values: 0 - 255 |

PIM RP candidate table

The PIM RP candidate table lists the IP multicast groups for which the local router is to advertise itself as a candidate-RP. If this table is empty, the local router will advertise itself as a candidate-RP for all groups. The snPimEnable object must be "enabled" before this table is read or written.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------|--------|-----------------------------|
| snPimCandidateRPTable brcdlp.1.2.9.2.4 | None | The PIM RP candidate table. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snPimCandidateRPGroupAddress brcdlp.1.2.9.2.4.1.1 Syntax: ipAddress | Read-only | Shows the IP multicast group address mask. This object combined with snPimCandidateRPMask forms the group prefix for which the local router will advertise itself as a candidate-RP. |
| snPimCandidateRPMask brcdlp.1.2.9.2.4.1.2 Syntax: ipAddress | Read-only | Shows the multicast group address mask. This object combined with snPimCandidateRPGroupAddress forms the group prefix for which the local router will advertise itself as a candidate-RP. |
| snPimCandidateRPIPAddress brcdlp.1.2.9.2.4.1.3 Syntax: ipAddress | Read-write | Indicates the unicast IP address of the interface that will be advertised as a candidate-RP. |
| snPimCandidateRPRowStatus brcdlp.1.2.9.2.4.1.4 Syntax: Integer | Read-write | <p>Controls the management of the table rows. The following values can be written:</p> <ul style="list-style-type: none"> • delete(3) - Deletes the row. • create(4) - Creates a new row. • modify(5) - Modifies an existing row. <p>If the row exists, then a SET with a value of create(4) returns a "bad value" error. Deleted rows are removed from the table immediately.</p> <p>The following values can be returned on reads:</p> <ul style="list-style-type: none"> • noSuch(0) - No such row. • invalid(1) - Row is inoperative. • valid(2) - Row exists and is valid. |

IPSec MIB Definition

- Global IPSec MIB objects..... 363

Global IPSec MIB objects

The following MIB objects display the objects supported for IPSec tunnels.

NOTE

The objects in the following table are supported only on the MLX Series devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdIPSecSPValue brcdlp.1.1.15.1.1.1 Syntax: Unsigned32 | accessible-for-notify | Specifies a 4-byte field at the beginning of Encapsulating Security Payload Packet. |
| brcdIPSecSequenceNumber brcdlp.1.1.15.1.1.2 Syntax: Unsigned32 | accessible-for-notify | Denotes the ESP sequence number used for anti-replay check for the IPSec packets. |
| brcdIKEMessageType brcdlp.1.1.15.1.1.3 Syntax: Unsigned32 | accessible-for-notify | Specifies the type of notification message. Only IKE_SA_INIT(34), IKE_AUTH(35), CREATE_CHILD_SA(36) and INFORMATIONAL(37) are currently supported as per RFC5996. |
| brcdIKEPayloadType brcdlp.1.1.15.1.1.4 Syntax: Unsigned32 | accessible-for-notify | Specifies the type of IKE payload. As per RFC5996 current valid values are [0, 32 to 48]. |
| brcdIPSecSlotNumber brcdlp.1.1.15.1.1.5 Syntax: Unsigned32 | accessible-for-notify | Indicates the Slot ID of the LP. |
| brcdIPSecUnitNumber brcdlp.1.1.15.1.1.6 Syntax: Unsigned32 | accessible-for-notify | Indicates the unit number. |
| brcdIPSecVRFValue brcdlp.1.1.15.1.1.7 Syntax: Unsigned32 | accessible-for-notify | Indicates the VRF value. |
| brcdIPSecSessionState brcdlp.1.1.15.1.1.8 Syntax: DisplayString | accessible-for-notify | Indicates the state of IPsec/IKE session. |
| brcdIPSecModuleState brcdlp.1.1.15.1.1.9 Syntax: DisplayString | accessible-for-notify | Indicates the state of IPsec module. |

IPSec notifications

By default, IPsec (ESP) and IKEv2 notifications are enabled. To disable notification, issue the **no snmp-server enable traps ipsec** and **no snmp-server enable traps ikev2** commands at the device CLI.

The following traps are generated for the IPsec objects supported only on the MLX Series devices.

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdIPSecInvalidSANotification brcdlp.1.1.15.1.0.1 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue | Informational | The SNMP trap that is generated when no valid security association exists for a session. Sample format: Extreme trap: No IPsec SA Found for Received Packet with Source <source-address> Destination <destination-address> SPI <SPI-ID> |
| brcdIPSecFragmentedPacketNotification brcdlp.1.1.15.1.0.2 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue | Informational | The SNMP trap that is generated when a packet offered to ESP for processing appears to be an IP fragment, the OFFSET field is non-zero or the MORE FRAGMENTS flag is set. Sample format: Extreme trap: Received Fragmented Packet with Source <source address> Destination <destination address> SPI <SPI-ID> |
| brcdIPSecSequenceOverflowNotification brcdlp.1.1.15.1.0.3 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue | Informational | The SNMP trap that is generated when there is an attempt to transmit a packet that result in sequence number overflow. Sample format: Extreme trap: Sequence Number Overflow When Trying to Send Packet with SPI <SPI-ID> Source <source-address> Destination <destination address> . |
| brcdIPSecFailedAntiReplayCheckNotification brcdlp.1.1.15.1.0.4 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue,brcdIPSecSequenceNumber | Informational | The SNMP trap that is generated when the received packet fails the anti-replay checks. Sample format: Extreme trap: Anti-Replay Check Failed for Received Packet with Source <source-address> Destination <destination-address> SPI <SPI-ID> Sequence Number <sequence-number> |
| brcdIPSecFailedIntegrityCheckNotification brcdlp.1.1.15.1.0.5 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue,brcdIPSecSequenceNumber | Informational | The SNMP trap that is generated when the received packet fails the integrity check. Sample format: Extreme trap: Integrity Check Failed for Received Packet with Source |

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | <source-address> Destination <destination-address> SPI <SPI-ID> Sequence Number <sequence-number>. |
| brcdIPSecDeencapsulationFailedNotification brcdlp.1.1.15.1.0.6 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue, brcdIPSecSequenceNumber | Informational | The SNMP trap that is generated when the deencapsulation of received packet failed. Sample format: Extreme trap: Deencapsulation Failed for Received Packet with Source <source-address> Destination <destination-address> SPI <SPI-ID> Sequence Number <sequence-number>. |
| brcdIPSecLengthErrorNotification brcdlp.1.1.15.1.0.7 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue | Informational | The SNMP trap that is generated when the check on IP packet length fails for the received packet. The SPI value is always zero for this trap. Sample format: Extreme trap: Length Error Detected for Received Packet with SPI <SPI-ID> Source <source-address> Destination <destination-address>. |
| brcdIKEInvalidMsgTypeNotification brcdlp.1.1.15.1.0.8 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue, brcdIKEMessageType | Informational | The SNMP trap that is generated when an invalid IKE message Type is received. Sample format: Extreme trap: IKEv2: Invalid Message Type Received with Source <source-address> Destination <destination-address> SPI <SPI-ID> MessageType <xx>. Where <xx> is the value of unsupported message type in IKEv2 packet. It is UINT8 value. The value will not be one of the following (from RFC 5996): <ul style="list-style-type: none">• IKE_SA_INIT - 34• IKE_AUTH - 35• CREATE_CHILD_SA - 36• INFORMATIONAL - 37 |
| brcdIKEInvalidPayloadNotification brcdlp.1.1.15.1.0.9 | spdIPSourceType, spdIPSourceAddress, spdIPDestinationType, spdIPDestinationAddress, brcdIPSecSPIValue,brcdIKEPayloadType | Informational | The SNMP trap that is generated when an invalid IKE payload is received. Sample format: Extreme trap: IKEv2: Invalid Payload Type Received with Source |

| Trap name and number | Varbinds | Severity | Description and trap message |
|------------------------------------------------------------------|---------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | <source-address> Destination address type <type> Destination <destination-address> SPI <SPI-ID> PayloadType <x>. Where <x> is the value of unsupported payload type in IKEv2 packet. It is UINT8 value. The value will not be 0, and 32 - 42 that are current valid payload type. |
| brcdIKEMaxPeerReachedNotification brcdlp.1.1.15.1.0.10 | brcdIPSecSlotNumber | Warning | The SNMP trap that is generated when maximum IKE peer limit is reached a LP. Sample format: Extreme trap: IKEv2: Maximum IKE Peers Limit Reached on LP <n>. |
| brcdIKERecoveredMaxPeerLimitNotification brcdlp.1.1.15.1.0.11 | brcdIPSecSlotNumber | Warning | The SNMP trap that is generated when the system recovers from the maximum IKE peer limit condition on a LP. Sample format: Extreme trap: IKEv2: Recovered from Maximum IKE Peers Limit Condition on LP <n>. |

Counters support for IPSec

The following table lists the MIB counters supported for IPSec.

| Object name | Object identifier | Access/Description |
|------------------|-------------------------|--------------------|
| ifInOctets | 1.3.6.1.2.1.2.2.1.10 | Read-only |
| ifInUcastPkts | 1.3.6.1.2.1.2.2.1.11 | Read-only |
| ifOutOctets | 1.3.6.1.2.1.2.2.1.16 | Read-only |
| ifOutUcastPkts | 1.3.6.1.2.1.2.2.1.17 | Read-only |
| ifHCInOctets | 1.3.6.1.2.1.31.1.1.1.6 | Read-only |
| ifHCInUcastPkts | 1.3.6.1.2.1.31.1.1.1.7 | Read-only |
| ifHCOutOctets | 1.3.6.1.2.1.31.1.1.1.10 | Read-only |
| ifHCOutUcastPkts | 1.3.6.1.2.1.31.1.1.1.11 | Read-only |

The following MIB objects or tables are updated to extend support for IPSec.

| Object name | Object Identifier | Description |
|----------------------------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| tunnellfSecurity | 1.3.6.1.2.1.10.131.1.1.1.5 | Read-only. Returns ipsec(2) value for IPSec tunnels. |
| Counters support for IPSec | 1.3.6.1.2.1.153.1.2 | This table maps policies (groupings) onto an endpoint (interface). A new row is added for ipsec tunnel policy to an endpoint mapping. The |

| Object name | Object Identifier | Description |
|----------------------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | "spdEndGroupName" is formed by vrf_id, tunnel_id, dir, ip protocol name, spi value, authentication algorithm, and encryption algorithm. show ipsec sa and show ipsec policy commands can be used to see the corresponding entries from CLI. |
| Counters support for IPSec | 1.3.6.1.2.1.153.1.3 | This table contains a list of rules and/or subgroups contained within a given policy group. A new row is added to this table for each rule (or subgroup or a subgroup of rules) within a policy group for ipsec tunnel. The "spdGroupContComponentName" is formed by vrf_id, tunnel_id, dir, and priority. show ipsec sa and show ipsec policy commands can be used to see the corresponding entries from CLI. |
| Counters support for IPSec | 1.3.6.1.2.1.153.1.4 | This table defines a rule by associating a filter or a set of filters to an action to be executed. A new row is added to this table for each spdRuleDefName that is the administrative assigned name of the rule referred to by the spdGroupContComponentName. The "spdRuleDefDescription" is formed by vrf_id, tunnel_id, dir, and priority. show ipsec sa and show ipsec policy commands can be used to see the corresponding entries from CLI. |

Brocade Entity OID MIB Definition

- brcd-entity-oid MIB objects.....370

brcd-entity-oid MIB objects

Defined these MIB objects for assigning vendor type OIDs to various physical entities (Chassis, Power supply, Fan, sensor, various types of modules, port etc.).

| Object groups | Object Identifier |
|-------------------------|-------------------|
| brcdEntityOIDMIB | brcdlp.1.17 |
| brcdEntityOIDMIBObjects | brcdlp.1.17.1 |
| brcdEntityOIDOther | brcdlp.1.17.1.1 |
| brcdEntityOIDUnknown | brcdlp.1.17.1.2 |

Chassis OID assignments

| Object group | Object Identifier |
|------------------------------------------|---------------------|
| brcdEntityOIDChassis | brcdlp.1.17.1.3 |
| brcdEntityOIDChassisUnknown | brcdlp.1.17.1.3.1 |
| brcdEntityOIDChassisNetIronCes2000Family | brcdlp.1.17.1.3.2 |
| brcdEntityOIDChassisNetIronCes2024F | brcdlp.1.17.1.3.2.1 |
| brcdEntityOIDChassisNetIronCes2024C | brcdlp.1.17.1.3.2.2 |
| brcdEntityOIDChassisNetIronCes2048F | brcdlp.1.17.1.3.2.3 |
| brcdEntityOIDChassisNetIronCes2048C | brcdlp.1.17.1.3.2.4 |
| brcdEntityOIDChassisNetIronCes2048FX | brcdlp.1.17.1.3.2.5 |
| brcdEntityOIDChassisNetIronCes2048CX | brcdlp.1.17.1.3.2.6 |
| brcdEntityOIDChassisNetIronCes2024F4X | brcdlp.1.17.1.3.2.7 |

| • DOS attack statistics..... | 375 |
| • DOS attack port table..... | 375 |
| • Authorization and accounting..... | 376 |
| • HQoS statistics table..... | 377 |

DOS attack statistics

The following objects provide denial of service (DOS) attack statistics through SNMP.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------|-----------|--------------------------------------------------|
| snDosAttackICMPDropCount brcdlp.1.1.3.14.3.1.1 Syntax: Counter32 | Read-only | Provides the contents of the ICMP drop counter. |
| snDosAttackICMPBlockCount brcdlp.1.1.3.14.3.1.2 Syntax: Counter32 | Read-only | Provides the contents of the ICMP block counter. |
| snDosAttackSYNDropCount brcdlp.1.1.3.14.3.1.3 Syntax: Counter32 | Read-only | Provides the contents of the SYN drop counter. |
| snDosAttackSYNBlockCount brcdlp.1.1.3.14.3.1.4 Syntax: Counter32 | Read-only | Provides the contents of the SYN block counter. |

DOS attack port table

The following objects have been created to filter traffic for DOS-attacks through SNMP.

NOTE

The DOS attack port MIBs are supported only on the MLX Series, MLX Series, and XMR Series devices.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------|-----------|------------------------------------------|
| snDosAttackPortTable brcdlp.1.1.3.14.3.2 Syntax: Sequence of snDosAttackPortEntry | None | The denial of service attack port table. |
| snDosAttackPort brcdlp.1.1.3.14.3.2.1.1 Syntax: Integer32 | Read-only | The index value of a port. |
| snDosAttackPortICMPDropCount brcdlp.1.1.3.14.3.2.1.2 Syntax: Counter32 | Read-only | The value of the ICMP drop counter. |
| snDosAttackPortICMPBlockCount brcdlp.1.1.3.14.3.2.1.3 | Read-only | The value of the ICMP block counter. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------|-----------|-------------------------------------|
| Syntax: Counter32 | | |
| snDosAttackPortSYNDropCount brcdlp.1.1.3.14.3.2.1.4 | Read-only | The value of the SYN drop counter. |
| Syntax: Counter32 | | |
| snDosAttackPortSYNBlockCount brcdlp.1.1.3.14.3.2.1.5 | Read-only | The value of the SYN block counter. |
| Syntax: Counter32 | | |

Authorization and accounting

The following objects are for authorization and accounting functions.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snAuthorizationCommand Methods brcdlp.1.1.3.15.2.1 | Read-write | <p>Specifies the sequence of authorization methods.</p> <p>This object can have zero to three octets. Each octet represents a method to authorize the user command. Each octet has the following value:</p> <ul style="list-style-type: none"> radius(2) - Authorize by the requesting RADIUS server tacplus(5) - Authorize by the requesting TACACS+ server none(6) - Skip authorization <p>Setting a zero length octet string invalidates all previous authorization methods.</p> |
| snAuthorizationCommandLevel brcdlp.1.1.3.15.2.2 | Read-write | <p>Specifies the commands that must be authorized. Any command that is equal to or less than the selected level will be authorized:</p> <ul style="list-style-type: none"> level(0) - Privilege level 0 level(4) - Privilege level 4 level(5) - Privilege level 5 |
| snAuthorizationExec brcdlp.1.1.3.15.2.3 | Read-write | <p>Shows the sequence of authorization methods for EXEC programs.</p> <p>This object can have zero to three octets. Each octet represents a method for Telnet or SSH login authorization. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> radius(2) - Send EXEC authorization request to the RADIUS server . tacplus(5) - Send EXEC authorization request to the TACACS+ server . none(6) - No EXEC authorization method. <p>Setting a zero length octet string invalidates all authorization methods.</p> |
| snAccountingCommandMethods brcdlp.1.1.3.15.3.1 | Read-write | Shows a sequence of accounting methods. |
| Syntax: Octet String | | |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>This object can have zero to three octets. Each octet represents an accounting method. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> • radius(2) - Send accounting information to the RADIUS server. • tacplus(5) - Send accounting information to the TACACS+ server. • none(6) - No accounting method. <p>Setting a zero length octet string invalidates all authorization methods.</p> |
| snAccountingCommandLevel brcdlp.1.1.3.15.3.2 Syntax: Integer | Read-write | <p>Specifies the commands that need to be accounted for. Any command that is equal to or less than the selected level will be accounted for:</p> <ul style="list-style-type: none"> • level(0) - Privilege level 0 • level(4) - Privilege level 4 • level(5) - Privilege level 5 |
| snAccountingExec brcdlp.1.1.3.15.3.3 Syntax: Octet String | Read-write | <p>Shows the sequence of accounting methods for EXEC programs.</p> <p>This object can have zero to three octets. Each octet represents a method for Telnet or SSH login accounting. Each octet can have one of the following values:</p> <ul style="list-style-type: none"> • radius(2) - Send accounting information to the RADIUS server. • tacplus(5) - Send accounting information to the TACACS+ server. • none(6) - No accounting method. <p>Setting a zero length octet string invalidates all authorization methods.</p> |
| snAccountingSystem brcdlp.1.1.3.15.3.4 Syntax: Octet String | Read-write | <p>A sequence of accounting methods.</p> <p>This object can have zero to three octets. Each octet represents a method to account for the system-related events. Each octet has the following values:</p> <ul style="list-style-type: none"> • radius(2) - Send accounting information to the RADIUS server. • tacplus(5) - Send accounting information to the TACACS+ server. • none(6) - No accounting method. <p>Setting a zero length octet string invalidates all previous accounting methods.</p> |

HQoS statistics table

The MLX Series, XMR Series, and MLX Series devices are provided with Simple Network Management Protocol (SNMP) support for the Hierarchical Quality of Service (HQoS) Statistics Management Information Base (MIB).

The **clear qos statistics** command clears the HQoS statistics for CLI and SNMP. The HQoS statistics is supported for all the HQoS features except the HQoS support for VPLS. The cumulative HQoS statistics for LAG is not supported but the HQoS statistics for member ports of a LAG can be collected.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdHqosStatsTable brcdlp.1.1.14.1.1.1 | None | A list of brchqosPStats entries. The table contains information of various HQoS counters. The HQoS is supported on NI-MLX-10Gx8-M/D Line Processor (LP) modules. |
| brcdHqosIndex brcdlp.1.1.14.1.1.1.1.1 Syntax: InterfaceIndex | None | The interface index where the HQoS is configured. The LP module must be physically present and operationally up. |
| brcdHqosEndpointType brcdlp.1.1.14.1.1.1.1.2 Syntax: Integer | None | The object specifies the endpoint type for HQoS scheduler. <ul style="list-style-type: none"> • other(1) • singleTaggedVlan(2) • doubleTaggedVlan(3) • bVlanIsid(4)) |
| brcdHqosEndpointTag brcdlp.1.1.14.1.1.1.1.3 Syntax: Unsigned32 | None | The object specifies the HQoS endpoint tag. <ul style="list-style-type: none"> • If the index brcdHqosEndpointType is other(1), then the object has zero value. • If the index brcdHqosEndpointType is singleTaggedVlan(2), doubleTaggedVlan(3) or bVlanIsid(4), then the object has VLAN ID as value. The valid VLAN ID values ranges from 1 through 4094. |
| brcdHqosEndpointInnerTag brcdlp.1.1.14.1.1.1.1.4 Syntax: Unsigned32 | None | The object specifies the HQoS endpoint inner tag. <ul style="list-style-type: none"> • If the index brcdHqosEndpointType is other(1) or singleTaggedVlan(2), then the object has zero value. • If the index brcdHqosEndpointType is doubleTaggedVlan(3), then the object has VLAN ID as value. The valid VLAN ID values ranges from 1 through 4094. • If the index brcdHqosEndpointType is bVlanIsid(4), then the object has ISID as value. The valid ISID values ranges from 256 through 16777214. |
| brcdHqosStatsPriority brcdlp.1.1.14.1.1.1.1.5 Syntax: PortPriorityTC | Read-only | The priority of the packets that is stored in the queue. This is an 1-based index. The HQoS queue with brcdHqosEndpointType value as other(1) has eight priorities. All the other HQoS queues has four priorities, two consecutive priorities are stored in one queue. In this case, the valid values for the object are 1, 3, 5, and 7. The queue with priority 1 has the packets with priority 1 and 2 and the same applies for priorities 3, 5, and 7 as well. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------|
| brcdHqosStatsDescription brcdlp.1.1.14.1.1.1.1.6 Syntax: DisplayString | None | The object gives the HQoS scheduler node in full-path format with each node separated by dot(.) . |
| brcdHqosStatsEnquePkts brcdlp.1.1.14.1.1.1.7 Syntax: Counter 64 | Read-only | A count of all packets entering ingress queues on this queue. |
| brcdHqosStatsEnqueBytes brcdlp.1.1.14.1.1.1.8 Syntax: Counter 64 | Read-only | A count of all bytes entering ingress queues on this queue. |
| brcdHqosStatsDequeuePkts brcdlp.1.1.14.1.1.1.9 Syntax: Counter 64 | Read-only | A count of all packets dequeued from ingress queues and forwarded on this queue. |
| brcdHqosStatsDequeueBytes brcdlp.1.1.14.1.1.1.10 Syntax: Counter 64 | Read-only | A count of all bytes dequeued from ingress queues and forwarded on this queue. |
| brcdHqosStatsTotalDiscardPkts brcdlp.1.1.14.1.1.1.11 Syntax: Counter 64 | Read-only | A count of all packets failing to enter ingress queues on this queue. |
| brcdHqosStatsTotalDiscardBytes brcdlp.1.1.14.1.1.1.12 Syntax: Counter 64 | Read-only | A count of all bytes failing to enter ingress queues on this queue. |
| brcdHqosStatsOldestDiscardPkts brcdlp.1.1.14.1.1.1.13 Syntax: Counter 64 | Read-only | A count of all packets entering ingress queues, but deleted due to buffer full. |
| brcdHqosStatsOldestDiscardBytes brcdlp.1.1.14.1.1.1.14 Syntax: Counter 64 | Read-only | A count of all bytes entering ingress queues, but deleted due to buffer full. |
| brcdHqosStats WREDroppedPkts brcdlp.1.1.14.1.1.1.15 Syntax: Counter 64 | Read-only | A count of all packets entering ingress queue, but dropped due to Weighted random early detection (WRED). |
| brcdHqosStats WREDroppedBytes brcdlp.1.1.14.1.1.1.16 Syntax: Counter 64 | Read-only | A count of all bytes entering ingress queue, but dropped due to WRED. |
| brcdHqosStatsCurrentQDepth brcdlp.1.1.14.1.1.1.17 Syntax: Counter 64 | Read-only | The current queue depth. |
| brcdHqosStatsMaxQDepthSinceLastRead brcdlp.1.1.14.1.1.1.18 Syntax: Counter 64 | Read-only | The maximum queue depth since last access to read. |

CAR MIB Definition

| | |
|---------------------------------------|-----|
| • Rate limit counter table..... | 381 |
| • Rate limit counter index table..... | 381 |
| • BUM rate limit counter table..... | 382 |
| • VLAN CAR objects..... | 383 |

Rate limit counter table

The following table shows rate limit counter entries.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-----------|------------------------------------------------------|
| agRateLimitCounterTable brcdlp.1.1.3.16.1.2 | None | The rate limit counter table. |
| agRateLimitCounterFwdedOctets brcdlp.1.1.3.16.1.2.1.1 Syntax: Counter64 | Read-only | The forwarded octet count for this rate limit entry. |
| agRateLimitCounterDroppedOctets brcdlp.1.1.3.16.1.2.1.2 Syntax: Counter64 | Read-only | The dropped octet count for this rate limit entry. |
| agRateLimitCounterReMarkedOctets brcdlp.1.1.3.16.1.2.1.3 Syntax: Counter64 | Read-only | The remarked octet count for this rate limit entry. |
| agRateLimitCounterTotalOctets brcdlp.1.1.3.16.1.2.1.4 Syntax: Counter64 | Read-only | The total octet count for this rate limit entry. |

Rate limit counter index table

The following table objects map each rowindexes of rate limit counter table entries to their corresponding ACL or VLAN or VLAN Group ID.

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| agRateLimitCounterIndexTable brcdlp.1.1.3.16.1.3 | None | The rate limit counter index table. |
| agRateLimitCounterIndexRowIndex brcdlp.1.1.3.16.1.3.1.1 Syntax: Integer | Read-only | The table index for rate limit objects. It increases as the rate limit entries are added and skips the number when a row is deleted. Valid values: 1 – 2147483647 |
| agRateLimitCounterIndexDirection brcdlp.1.1.3.16.1.3.1.2 Syntax: PacketSource | Read-only | The input or output transmission direction for the rate limit object. <ul style="list-style-type: none">• input(0) – For inbound traffic• output(1) – For outbound traffic |
| agRateLimitCounterIndexACLLID brcdlp.1.1.3.16.1.3.1.3 | Read-only | The corresponding ACL ID to match the row index of the rate limit counter table. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer32 agRateLimitCounterIndexVLANID brcdlp.1.1.3.16.1.3.1.4 | Read-only | The corresponding VLAN ID to match the row index of the rate limit counter table. |
| Syntax: Integer32 agRateLimitCounterIndexVLANGroupID brcdlp.1.1.3.16.1.3.1.5 Syntax: Integer32 | Read-only | The corresponding VLAN Group ID to match the row index of the rate limit counter table. |
| agRateLimitCounterIndexMACAddress brcdlp.1.1.3.16.1.3.1.6 Syntax: MAC address | Read-only | The corresponding MAC Address for Source MAC-based rate limit to match the row index of the rate limit counter table. |

BUM rate limit counter table

The following table displays the objects supported for BUM rate limit counters.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| agRateLimitBUMCounterTable brcdlp.1.1.3.16.1.4 | None | <p>The table displays:</p> <p>1 - The number of bytes dropped due to BUM rate-limit on the port, based on configured packet type and VLANID.</p> <p>2 - Committed Burst Size(CBS) in bits.</p> <p>3 - Committed Information Rate(CIR) in bits.</p> <p>4 - Alert low level threshold in bits.</p> <p>5 - Alert high level threshold in bits.</p> <p>6 - Shutdown timeout in minutes.</p> <p>The following three parameters are used as the index:</p> <ul style="list-style-type: none"> • Ifindex • VLANID • Packet-Type |
| agRateLimitBUMCounterIfindex brcdlp.1.1.3.16.1.4.1.1 | None | <p>Ifindex, a count that uniquely identifies the ports in the chassis.</p> <p>Valid values ranges from 1 through 2048.</p> |
| agRateLimitBUMCounterVLANID brcdlp.1.1.3.16.1.4.1.2 | None | <p>An ID that is used to represent the corresponding VLAN in the chassis.</p> <p>Valid values ranges from 1 through 4096.</p> <p>NOTE Port-based BUM rate limit uses 4096.</p> |
| agRateLimitBUMCounterPacketType brcdlp.1.1.3.16.1.4.1.3 | None | <p>Used to represent the type of the packet.</p> <p>For example: U(1), M(2), UM(3), B(4), BU(5), BM(6), BUM(7), U?Unknown-Unicast, B? Broadcast-Broadcast, or M?Multicast-Multicast.</p> |
| agRateLimitBUMCounterDroppedOctets brcdlp.1.1.3.16.1.4.1.4 | Read-only | A count used to represent the number of bytes dropped due to BUM rate-limit in bytes. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Counter64 agRateLimitBUMCounterCBS brcdlp.1.1.3.16.1.4.1.5 | | |
| Syntax: Counter64 agRateLimitBUMCounterCIR brcdlp.1.1.3.16.1.4.1.6 | Read-only | A count used to represent the Committed Burst Size in bits. |
| Syntax: Counter64 agRateLimitBUMCounterAlertLowLevelThreshold brcdlp.1.1.3.16.1.4.1.7 | Read-only | A count used to represent the Committed Information Rate in bits. |
| Syntax: Counter64 agRateLimitBUMCounterAlertHighLevelThreshold brcdlp.1.1.3.16.1.4.1.8 | Read-only | A count used to represent the configured lower threshold level in bits, to generate the Alert. |
| Syntax: Counter64 agRateLimitBUMCounterShutdownTimeout brcdlp.1.1.3.16.1.4.1.9 | Read-only | A count used to represent the Higher threshold level in bits, to generate the Alert. |
| Syntax: Counter64 agRateLimitBUMcounterIncludeControl brcdlp.1.1.3.16.1.4.1.10 | Read-only | A count used to represent the Timeout value in terms of minutes that is the time interval after which the shutdown port is enabled. |
| Syntax: Enumeration | | TRUE(1) and FALSE(2) to represent if the option is enabled or disabled. |

VLAN CAR objects

The objects in the following table contain the rate limit configuration for VLANs. This table is indexed by the [VLAN CAR objects](#), [VLAN CAR objects](#), and [VLAN CAR objects](#) objects.

NOTE

The following table objects are not supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVLanCARTable brcdlp.1.1.3.17.1.1 | None | The VLAN rate limit table. |
| snVLanCARVlanId brcdlp.1.1.3.17.1.1.1.1 Syntax: Integer | Read-only | Shows the VLAN ID. VLAN ID is one of the indices of this table. Each VLAN ID can have a membership of multiple ports. Valid values: 1 - 4095 |
| snVLanCARDirection brcdlp.1.1.3.17.1.1.1.2 Syntax: Integer | Read-only | Specifies the transmission direction of the rate-limit object: <ul style="list-style-type: none">• input(0) - For inbound traffic.• output(1) - For outbound traffic. |
| snVLanCARRowIndex brcdlp.1.1.3.17.1.1.1.3 Syntax: Integer | Read-only | Shows the table index for rate limit objects for the VLAN. Rows are numbered in sequential order. When a row is added, it is assigned the next sequential number. When a row is deleted, the row is skipped. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snVLanCARType brcdlp.1.1.3.17.1.1.1.4 Syntax: Integer | Read-only | Shows the type of traffic to which the rate limit is applied: <ul style="list-style-type: none"> standardAcc(1) - Traffic matches standard access list. quickAcc(2) - Traffic matches the rate limit access list. all(3) - All traffic. |
| snVLanCARAccldx brcdlp.1.1.3.17.1.1.1.5 Syntax: Integer32 | Read-only | Indicates the index to the access list if the rate limit type is one of the following: <ul style="list-style-type: none"> standardAcc(1) - Traffic matches standard access list. quickAcc(2) - Traffic matches the rate limit access list. |
| snVLanCARRate brcdlp.1.1.3.17.1.1.1.6 Syntax: Integer32 | Read-only | Shows the committed access rate for long-term average transmission for this VLAN in bits per second. Traffic that falls under this rate always conforms to this rate. |
| snVLanCARLimit brcdlp.1.1.3.17.1.1.1.7 Syntax: Integer32 | Read-only | Shows the normal burst size in bytes. Normal burst size is the number of bytes that are guaranteed to be transported by the network at the average rate under normal conditions during the committed time interval. |
| snVLanCARExtLimit brcdlp.1.1.3.17.1.1.1.8 Syntax: Integer32 | Read-only | Shows the extended burst limit in bytes. The extended burst limit determines how large traffic bursts can be before all the traffic exceeds the rate limit. |
| snVLanCARConformAction brcdlp.1.1.3.17.1.1.1.9 Syntax: Integer | Read-only | Indicates what happens to packets when the traffic is within the rate limit: <ul style="list-style-type: none"> continue(1) - Continue to evaluate the subsequent rate limits. drop(2) - Drop the packet. precedCont(3) - Rewrite the IP precedence and allow it after evaluated by subsequent rate limits. precedXmit(4) - Rewrite the IP precedence and transmit the packet. xmit(5) - Transmit the packet. |
| snVLanCARExceedAction brcdlp.1.1.3.17.1.1.1.10 Syntax: Integer | Read-only | Indicates what happens to packets when the traffic exceeds the rate limit: <ul style="list-style-type: none"> continue(1) - Continue to evaluate the subsequent rate limits. drop(2) - Drop the packet. precedCont(3) - Rewrite the IP precedence and allow it after evaluated by subsequent rate limits. precedXmit(4) - Rewrite the IP precedence and transmit the packet. xmit(5) - Transmit the packet. |
| snVLanCARStatSwitchedPkts brcdlp.1.1.3.17.1.1.1.11 Syntax: Counter64 | Read-only | Indicates the number of packets permitted by this rate limit. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-----------|----------------------------------------------------------------|
| snVLanCARStatSwitchedBytes brcdlp.1.1.3.17.1.1.1.12 Syntax: Counter64 | Read-only | Indicates the number of bytes permitted by this interface. |
| snVLanCARStatFilteredPkts brcdlp.1.1.3.17.1.1.1.13 Syntax: Counter64 | Read-only | Indicates the number of packets that exceeded this rate limit. |
| snVLanCARStatFilteredBytes brcdlp.1.1.3.17.1.1.1.14 Syntax: Counter64 | Read-only | Indicates the number of bytes that exceeded this rate limit. |
| snVLanCARStatCurBurst brcdlp.1.1.3.17.1.1.1.15 Syntax: Gauge32 | Read-only | Shows the current burst size of received packets. |

LAG MIB Definition

| | |
|-----------------------------|-----|
| • LAG group table..... | 387 |
| • LAG group port table..... | 388 |

LAG group table

The fdryLinkAggregationGroupTable object replaces the **snLinkAggregationGroupTable** objects .

NOTE

SNMP SET request for the table always return hash based and ignores the trunk type parameter.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryLinkAggregationGroupTable brcdlp.1.1.3.33.1.1 | None | The Link Aggregation Group (LAG) table. |
| fdryLinkAggregationGroupName brcdlp.1.1.3.33.1.1.1.1 Syntax: DisplayString | None | Displays the name of a LAG. |
| fdryLinkAggregationGroupType brcdlp.1.1.3.33.1.1.1.2 Syntax: Integer | Read-create | Displays the LAG type. |
| fdryLinkAggregationGroupAdminStatus brcdlp.1.1.3.33.1.1.1.3 Syntax: Integer | Read-create | <p>Displays the desired deployed state of this LAG entry.</p> <p>NOTE This is not the operational status. Refer to ifTable for the operational status.</p> <ul style="list-style-type: none">deploy(1)—Deploy the LAG and set to LACP active if a dynamic LAG.deployPassive(2)—Deploy the LAG and set to LACP passive if a dynamic LAG.undeploy(3)—Undeploy the LAG if no more than two ports are enabled.undeployForced(4)—Undeploy the LAG regardless of the number of ports enabled. <p>NOTE undeployForced(4) status is a write-only value. In particular, a row cannot be deployed until the corresponding instances of fdryLinkAggregationGroupIfList have been set.</p> |
| fdryLinkAggregationGroupIfList brcdlp.1.1.3.33.1.1.1.4 Syntax: Octet String | Read-create | Displays a list of interface indices which are the port memberships of a trunk group. Each interface index is a 32-bit integer in big-endian order. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | NOTE This object accepts a 32-bit integer only. |
| fdryLinkAggregationGroupPrimaryPort brcdlp.1.1.33.1.1.1.5 Syntax: InterfaceIndexOrZero | Read-create | Displays the primary port for the Link Aggregation Group. This must be set before deploying the Link Aggregation Group unless this is a keepalive Link Aggregation Group. Zero is returned for primary ports that are not set. |
| fdryLinkAggregationGroupTrunkType brcdlp.1.1.33.1.1.1.6 Syntax: Integer | Read-create | Displays the trunk connection type, which specifies the scheme of load-sharing among the trunk ports. |
| fdryLinkAggregationGroupTrunkThreshold brcdlp.1.1.33.1.1.1.7 Syntax: Unsigned32 | Read-create | Displays the number of up ports needed to keep the trunk up. NOTE This object is not applicable to keepalive LAGs. |
| fdryLinkAggregationGroupLacpTimeout brcdlp.1.1.33.1.1.1.8 Syntax: Integer | Read-create | Displays the LACP timeout value this LACP LAG will use. Applicable for dynamic and keepalive LAGs only. |
| fdryLinkAggregationGroupIfIndex brcdlp.1.1.329.2.1.1.9 Syntax: InterfaceIndex | Read-only | After a LAG is deployed, this object displays information for the LAG entry in the ifTable. Use the variable to access the entry in the ifTable and ifXTable. Zero(0) is returned for LAGs that have not been deployed. |
| fdryLinkAggregationGroupPortCount brcdlp.1.1.33.1.1.1.10 Syntax: Unsigned32 | Read-only | Displays the number of member ports that belong to this LAG. |
| fdryLinkAggregationGroupRowStatus brcdlp.1.1.33.1.1.1.11 Syntax: RowStatus | Read-create | Displays the status of this conceptual row. createAndWait(5) is not supported. To create a row in this table, a manager must set this object to createAndGo(4) together with the setting of fdryLinkAggregationGroupType. After that, the row status becomes active(1) regardless of whether or not the LAG entry is deployed. To deploy the LAG entry, set the corresponding instance of fdryLinkAggregationGroupAdminStatus to deployActive or deployPassive. |
| fdryLinkAggregationGroupId brcdlp.1.1.33.1.1.1.12 Syntax: Unsigned 32 | Read-only | The numeric identifier assigned to this LAG. |

LAG group port table

The following table lists the MIB objects of LAG group port table.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryLinkAggregationGroupPortTable brcdlp.1.1.3.33.2.1 | None | This table contains the Link Aggregation Control Configuration information about every aggregation port associated with this device. A row is listed in this table for each physical port. |
| fdryLinkAggregationGroupPortLacpPriority brcdlp.1.1.3.33.2.1.1.1 Syntax: Integer | Read-write | The LACP priority value assigned to this link aggregation port. valid values: 0 - 65535 Default: 1. |

MPLS MIB Definition

| | |
|------------------------------------------|-----|
| • Pseudo wire MIB..... | 391 |
| • MPLS or BGP Layer 3 VPN MIB..... | 396 |
| • General MPLS objects..... | 401 |
| • MPLS LSP table..... | 402 |
| • MPLS LSP Auto-Bandwidth MIB table..... | 406 |
| • MPLS administrative group table..... | 408 |
| • MPLS interface table..... | 408 |

Pseudo wire MIB

Pseudo wire describe the SNMP MIB objects for the Multiprotocol Label Switching (MPLS) feature that is supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices..

pwTable

The following table contains the pseudo wire MIB objects for configuring and monitoring VLL, VLL-local, and VPLS services.

NOTE

Use the **snmp-server disable mibmib-table-keyword** command to disable the SNMP support for the table and use the **no** form of the command to re-enable the support. The overall SNMP-WALK performance is increased when the SNMP support is disabled for the table.

TABLE 7 Support for the pwTable

| Object | Object identifier | Support for VLL | Support for VLL-local | Support for VPLS |
|-------------------|----------------------|----------------------------------------------------|---------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pwIndex | brcdlp.3.1.2.1.2.1.1 | VPLS-specific coding | VPLS-specific coding | VPLS-specific coding |
| pwType | brcdlp.3.1.2.1.2.1.2 | Tagged: ethernetTagged(4) Untagged: ethernet(5) | etherent(5) for raw transport as PW acts as a switch | System supports raw mode only, no VLAN tagging. Returns ipLayer2Transport(11) if global command vpls-vc-type-ethernet-vpls is configured, otherwise Ethernet(5) [BID 84147] etherentTagged(4) for tagged VPLS |
| pwOwner | brcdlp.3.1.2.1.2.1.3 | pwldFecSignaling(2) | other(5) | Always pwldFecSignaling(2) |
| pwPsnType | brcdlp.3.1.2.1.2.1.4 | mpls(1) | other(6) | Always mpls(1) |
| pwSetUpPriority | brcdlp.3.1.2.1.2.1.5 | Always 0 | Always 0 | Always 0 |
| pwHoldingPriority | brcdlp.3.1.2.1.2.1.6 | Always 0 | Always 0 | Always 0 |
| pwPeerAddrType | brcdlp.3.1.2.1.2.1.8 | ipv4(1) only | unknown(0) | Always ipv4(1) |
| pwPeerAddr | brcdlp.3.1.2.1.2.1.9 | Supported | Always 0 | Supported For example, Peer IP 3.3.3.3 translates to string 0x03x03x03x03 (without commas) |

TABLE 7 Support for the pwTable (continued)

| Object | Object identifier | Support for VLL | Support for VLL-local | Support for VPLS |
|--------------------------------------------------------------------------------------------------------------------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Draft-ietf-pwe3-pw-mib-11.txt

The following pseudo Wire (PW) MIB objects, as defined in draft-ietf-pwe3-pw-mib-11.txt, are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

Draft-ietf-pwe3-pw-mib-11.txt obsoletes draft-ietf-pwe3-pw-mib-06.txt; however, some objects in draft-ietf-pwe3-pw-mib-06.txt are still supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. (Refer to [Supported objects in draft-ietf-pwe3-pw-mib-06.txt](#) on page 395)

Support for draft-ietf-pwe3-pw-mib-11.txt has been extended to VLL, VLL-local, and VPLS on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices. For additional objects, refer to [MPLS administrative group table](#) on page 408, and [Draft-ietf-pwe3-pw-mib-11.txt](#).

NOTE

Support for the following objects in draft-ietf-pwe3-pw-mib-11.txt provides read-only access.

| Object | Object identifier | Support for VLL | Support for VLL-local | Support for VPLS |
|------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| pwindex | brcdIp.3.1.2.1.2.1.1 | VLL-specific encoding. One row per VLL instance. | VLL-local-specific encoding. Two rows per VLL-local instance, one for each E. Ethernet endpoint for each instance. | VPLS-specific encoding. One row per VPLS instance and peer combination. |
| pwEnetPwInstance | brcdIp.3.1.4.1.1.1.1 | Always 1 | 1 for first endpoint, 2 for second | Always 1 |
| pwEnetPwVlan | brcdIp.3.1.4.1.1.1.2 | <ul style="list-style-type: none"> VLAN ID 4097 for pseudo wire in raw mode Default VLAN ID for PW untagged frames | Always 4096 for raw mode | VPLS works in raw mode. Always 4096 in raw mode. There is no VLAN tagging in outgoing packets. |
| pwEnetVlanMode | brcdIp.3.1.4.1.1.1.3 | <ul style="list-style-type: none"> portBased(1) - No VLAN tag | <ul style="list-style-type: none"> portBased(1) - no VLAN tag; | <ul style="list-style-type: none"> portBased(1) - no vlan tag; |

| Object | Object identifier | Support for VLL | Support for VLL-local | Support for VPLS |
|-------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| | | <ul style="list-style-type: none"> noChange(2) - Retain same VLAN ID changeVlan(3) - Change id addVlan(4) removeVlan(5) | <ul style="list-style-type: none"> noChange(2) - retain same VLAN ID changeVlan(3) - change non-default VLAN IDs between two instances addVlan(4) - instance ID 1 has default VLAN, Instance ID 2 has non-default VLAN removeVlan(5) - instance ID 1 has default VLAN, Instance ID 2 has non-default VLAN | |
| pwEnetPortVlan | brcdIp.3.1.4.1.1.1.4 | Endpoint VLAN ID, which can be 4096 or an actual VLAN ID. | Endpoint VLAN ID | Always 0. For end-point, use fdryVplsEndPointTable. |
| pwEnetPortIfIndex | brcdIp.3.1.4.1.1.1.5 | Endpoint ifIndex | Endpoint ifIndex | Always 0. For endpoint, use fdryVplsEndPointTable. |
| pwEnetPwlIndex | brcdIp.3.1.4.1.1.1.6 | Tunnel ifIndex | Because no tunnel, value 0 | Tunnel ifIndex |
| pwEnetRowStatus | brcdIp.3.1.4.1.1.1.7 | Always active(1) | Always active(1) | Always active(1) |
| pwEnetStorageType | brcdIp.3.1.4.1.1.1.8 | Always permanent(4) | Always permanent(4) | Always permanent(4) |

Values that affect some VLL services

The following table shows how the value of pwType for VLL services is determined.

| Pseudo Wire tag mode is | End Point tag mode is | Value of pwType is |
|-------------------------|-----------------------|--------------------|
| raw (untagged) | untagged | ethernet(5) |
| raw (untagged) | tagged | ethernet(5) |
| tagged | untagged | ethernetTagged(4) |
| tagged | tagged | ethernetTagged(4) |

The following table shows how the value of pwEnetPwVlan for VLL services is determined.

| Pseudo Wire tag mode is | End Point tag mode is | Value of pwEnetPwVlan is |
|-------------------------|-----------------------|--------------------------|
| raw (untagged) | untagged | 4097 |
| raw (untagged) | tagged | 4097 |
| tagged | untagged | Default VLAN ID |
| tagged | tagged | VLAN ID of endpoint |

The following table shows how the value of pwEnetVlanMode for VLL services is determined.

| Pseudo Wire tag mode is | End Point tag mode is | Value of pwEnetVlanMode is |
|-------------------------|-----------------------|----------------------------|
| raw (untagged) | untagged | portBased(1) - No VLAN tag |
| raw (untagged) | tagged | removeVlan(5) |
| tagged | untagged | addVlan(4) |
| tagged | tagged | noChange(2) |

The following table shows how the value of pwEnetPortVlan for VLL services is determined.

| Pseudo Wire tag mode is | End Point tag mode is | Value of pwEnetPortVlan is |
|-------------------------|-----------------------|----------------------------|
| raw (untagged) | untagged | 4096 |
| raw (untagged) | tagged | VLAN ID of endpoint VLAN |
| tagged | untagged | 4096 |
| tagged | tagged | VLAN ID of endpoint VLAN |

Supported objects in draft-ietf-pwe3-pw-mib-06.txt

The following pseudo Wire (PW) MIB objects are the only objects in draft-ietf-pwe3-pw-mib-06.txt that are supported on the MLX Series, MLX Series, and XMR Series devices. They are used to support draft-ietf-pwe3-pw-mib-11.txt. Read-only access is available for draft-ietf-pwe3-pw-mib-06.txt.

TABLE 8 Comparision of objects within drafts v.6 and v.11

| Object | Object identifier | Differences |
|-------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pwPsnType | brcdIp.3.1.2.1.2.1.4 | The pwPsnType object is now of IANAPwPsnTypeTC type. The changes are highlighted below. pwPsnType: <ul style="list-style-type: none">• mpls(1)• l2tp(2)• ip(3)• mplsOverlp(4)• gre(5)• other(6) IANAPwPsnTypeTC: <ul style="list-style-type: none">• mpls(1)• l2tp(2)• udpOverlp(3)• mplsOverlp(4)• mplsOverGre(5)• other(6) |
| pwAttachedPwIndex | brcdIp.3.1.2.1.2.1.10 | Type changed from PwIndexType to PwIndexOrZeroType. |
| pwFragmentCfgSize | brcdIp.3.1.2.1.2.1.26 | Added UNIT "bytes". |
| pwFcsRetentioncfg | brcdIp.3.1.2.1.2.1.28 | Name changed to pwFcsRetentionCfg. |
| pwOutboundVcLabel | brcdIp.3.1.2.1.2.1.30 | Renamed to pwOutboundLabel. |

TABLE 8 Comparision of objects within drafts v.6 and v.11 (continued)

| Object | Object identifier | Differences |
|-----------------------|-----------------------|--------------------------------------------------------------------------------------------------------------------|
| pwInboundVcLabel | brcdlp.3.1.2.1.2.1.31 | Renamed to pwInboundLabel. |
| pwStorageType | brcdlp.3.1.2.1.2.1.45 | Added DEFVAL nonvolatile |
| pwOamEnable | brcdlp.3.1.2.1.2.1.46 | Supported |
| pwIndexMappingVcType | brcdlp.3.1.2.1.7.1.1 | Replaced by pwIndexMappingEntry/ pwIndexMappingPwType Type has changed from PwTypeTC to IANAPwTypeTC. |
| pwIndexMappingVcID | brcdlp.3.1.2.1.7.1.2 | Replaced by pwIndexMappingEntry/ pwIndexMappingPwID. |
| pwIndexMappingVcIndex | brcdlp.3.1.2.1.7.1.5 | Replaced by pwIndexMappingEntry/ pwIndexMappingPwIndex. |
| pwPeerMappingVcType | brcdlp.3.1.2.1.8.1.3 | Replaced by pwPeerMappingEntry/ pwPeerMappingPwType Type changed from PwTypeTC to IANAPwTypeTC. |
| pwPeerMappingVcID | brcdlp.3.1.2.1.8.1.4 | Replaced by pwPeerMappingEntry/ pwPeerMappingPwID. |
| pwPeerMappingVcIndex | brcdlp.3.1.2.1.8.1.5 | Replaced by pwPeerMappingEntry/ pwPeerMappingPwIndex. |

Proprietary extension

The following table lists the proprietary extension MIB objects.

| Name | Access | Supported? |
|---------------------------------------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryPwServiceType brcdlp.3.1.2.1.20 Syntax: Integer | None | A L2VPN service type, used only for notification: <ul style="list-style-type: none">• vll(1)• vlliocal(2)• vpls(3) |

MPLS or BGP Layer 3 VPN MIB

The MPLS or BGP Layer 3 VPN MIB (draft-ietf-lwvpn-mpls-vpn-mib-07.txt) is supported on the XMR Series and the MLX Series devices.

NOTE

The following objects are implemented as read-only:

- mplsL3VpnIfConfTable
- mplsL3VpnVrfTable
- mplsL3VpnVrfRTTable
- mplsL3VpnVrfRteTable

| Object | Object identifier | Supported? |
|-------------------------|--------------------|---------------------|
| mplsL3VpnConfiguredVrfs | brcdlp.3.2.1.1.1.1 | Yes, but read-only. |

| Object | Object identifier | Supported? |
|--------------------------------|--------------------|---------------------|
| mplsL3VpnActiveVrfs | brcdlp.3.2.1.1.1.2 | Yes, but read-only. |
| mplsL3VpnConnectedInterfaces | brcdlp.3.2.1.1.1.3 | Yes, but read-only. |
| mplsL3VpnNotificationEnable | brcdlp.3.2.1.1.1.4 | Yes, Read-write. |
| mplsL3VpnVrfConfMaxPossRts | brcdlp.3.2.1.1.1.5 | Yes, but read-only. |
| mplsL3VpnVrfConfRteMxThrshTime | brcdlp.3.2.1.1.1.6 | No |
| mplsL3VpnIILblRcvThrsh | brcdlp.3.2.1.1.1.7 | No |

VPN interface configuration table

| Object | Object Identifier | Supported? |
|---------------------------------|------------------------|--------------------------------------------------------------------------------------------------------------------|
| mplsL3VpnConf | brcdlp.3.2.1.1.2 | Yes |
| mplsL3VpnIfConfTable | brcdlp.3.2.1.1.2.1 | Yes, but read-only. |
| mplsL3VpnIfConfEntry | brcdlp.3.2.1.1.2.1.1 | Yes |
| mplsL3VpnIfConfIndex | brcdlp.3.2.1.1.2.1.1.1 | Yes |
| mplsL3VpnIfVpnClassification | brcdlp.3.2.1.1.2.1.1.2 | YesOnly enterprise(2) is supported. |
| mplsL3VpnIfVpnRouteDistProtocol | brcdlp.3.2.1.1.2.1.1.3 | Yes <ul style="list-style-type: none"> • isis(4) - Not supported • static(5) - Always true |
| mplsL3VpnIfConfStorageType | brcdlp.3.2.1.1.2.1.1.4 | Yes |
| mplsL3VpnIfConfRowStatus | brcdlp.3.2.1.1.2.1.1.5 | Yes |

VRF configuration table

| Object | Object Identifier | Supported? |
|----------------------------------|-------------------------|---------------------------------------------------------------------------------------------------|
| mplsL3VpnVrfTable | brcdlp.3.2.1.1.2.2 | Yes, but read-only. |
| mplsL3VpnVrfEntry | brcdlp.3.2.1.1.2.2.1 | Yes |
| mplsL3VpnVrfName | brcdlp.3.2.1.1.2.2.1.1 | YesSupported in simple VRF textual name format. Not supported in format specified in RFC 2685. |
| mplsL3VpnVrfVpnId | brcdlp.3.2.1.1.2.2.1.2 | NoReturns null string |
| mplsL3VpnVrfDescription | brcdlp.3.2.1.1.2.2.1.3 | No Returns null string |
| mplsL3VpnVrfRD | brcdlp.3.2.1.1.2.2.1.4 | Read-only |
| mplsL3VpnVrfCreationTime | brcdlp.3.2.1.1.2.2.1.5 | NoReturns 0 |
| mplsL3VpnVrfOperStatus | brcdlp.3.2.1.1.2.2.1.6 | NoAlways returns up(1) |
| mplsL3VpnVrfActiveInterfaces | brcdlp.3.2.1.1.2.2.1.7 | Yes, but read-only. |
| mplsL3VpnVrfAssociatedInterfaces | brcdlp.3.2.1.1.2.2.1.8 | Yes, but read-only. |
| mplsL3VpnVrfConfMidRteThresh | brcdlp.3.2.1.1.2.2.1.9 | NoReturns 0 |
| mplsL3VpnVrfConfHightRteThresh | brcdlp.3.2.1.1.2.2.1.10 | NoReturns 0 |
| mplsL3VpnVrfConfMaxRoutes | brcdlp.3.2.1.1.2.2.1.11 | Read-only |
| mplsL3VpnVrfConfLastChanged | brcdlp.3.2.1.1.2.2.1.12 | NoReturns 0 |
| mplsL3VpnVrfConfRowStatus | brcdlp.3.2.1.1.2.2.1.13 | Yes, but read-only. |
| mplsL3VpnVrfConfAdminStatus | brcdlp.3.2.1.1.2.2.1.14 | Only Up(1) is supported. |

| Object | Object Identifier | Supported? |
|-----------------------------|-------------------------|-----------------------------------------------------------------|
| mplsL3VpnVrfConfStorageType | brcdlp.3.2.1.1.2.2.1.15 | Yes, but read-only. This object always returns permanent(4). |

VRF route target table

| Object | Object identifier | Supported? |
|---------------------------|------------------------|-----------------------------------------------------------------|
| mplsL3VpnVrfRTTable | brcdlp.3.2.1.1.2.3 | Yes, but read-only. |
| mplsL3VpnVrfRTEntry | brcdlp.3.2.1.1.2.3.1 | Yes |
| mplsL3VpnVrfRTIndex | brcdlp.3.2.1.1.2.3.1.2 | Yes |
| mplsL3VpnVrfRTType | brcdlp.3.2.1.1.2.3.1.3 | Yes, but read-only. |
| mplsL3VpnVrfRT | brcdlp.3.2.1.1.2.3.1.4 | Yes, but read-only. |
| mplsL3VpnVrfRTDescr | brcdlp.3.2.1.1.2.3.1.5 | No Returns null string |
| mplsL3VpnVrfRTRowStatus | brcdlp.3.2.1.1.2.3.1.6 | Yes, but read-only. |
| mplsL3VpnVrfRTStorageType | brcdlp.3.2.1.1.2.3.1.7 | Yes, but read-only. This object always returns permanent(4). |

VRF security table

| Object | Object identifier | Supported? |
|----------------------------------|------------------------|-------------|
| mplsL3VpnVrfSecTable | brcdlp.3.2.1.1.2.6 | Yes |
| mplsL3VpnVrfSecEntry | brcdlp.3.2.1.1.2.6.1 | Yes |
| mplsL3VpnVrfSecIllegalLblVltns | brcdlp.3.2.1.1.2.6.1.1 | NoReturns 0 |
| mplsL3VpnVrfSecDiscontinuityTime | brcdlp.3.2.1.1.2.6.1.2 | NoReturns 0 |

VRF performance table

| Object | Object identifier | Supported? |
|-------------------------------|------------------------|---------------------|
| mplsL3VpnPerf | brcdlp.3.2.1.1.3 | Yes |
| mplsL3VpnVrfPerfTable | brcdlp.3.2.1.1.3.1 | Yes |
| mplsL3VpnVrfPerfEntry | brcdlp.3.2.1.1.3.1.1 | Yes |
| mplsL3VpnVrfPerfRoutesAdded | brcdlp.3.2.1.1.3.1.1.1 | Yes, but read-only. |
| mplsL3VpnVrfPerfRoutesDeleted | brcdlp.3.2.1.1.3.1.1.2 | Yes, but read-only. |
| mplsL3VpnVrfPerfCurrNumRoutes | brcdlp.3.2.1.1.3.1.1.3 | Yes, but read-only. |
| mplsL3VpnVrfPerfRoutesDropped | brcdlp.3.2.1.1.3.1.1.4 | No |
| mplsL3VpnVrfPerfDiscTime | brcdlp.3.2.1.1.3.1.1.5 | No |

VRF routing table

| Object | Object identifier | Supported? |
|----------------|-------------------|------------|
| mplsL3VpnRoute | brcdlp.3.2.1.1.4 | Yes |

| Object | Object identifier | Supported? |
|----------------------------------|-------------------------|-------------------------------------|
| mplsL3VpnVrfRteTable | brcdlp.3.2.1.1.4.1 | Yes, but read-only. |
| mplsL3VpnVrfRteEntry | brcdlp.3.2.1.1.4.1.1 | Yes |
| mplsL3VpnVrfRtelnetCidrDestType | brcdlp.3.2.1.1.4.1.1.1 | IPv4 value |
| mplsL3VpnVrfRtelnetCidrDest | brcdlp.3.2.1.1.4.1.1.2 | Yes |
| mplsL3VpnVrfRtelnetCidrPfxLen | brcdlp.3.2.1.1.4.1.1.3 | Yes |
| mplsL3VpnVrfRtelnetCidrPolicy | brcdlp.3.2.1.1.4.1.1.4 | DefaultThe value {0 0} is returned. |
| mplsL3VpnVrfRtelnetCidrNHopType | brcdlp.3.2.1.1.4.1.1.5 | IPv4 value |
| mplsL3VpnVrfRtelnetCidrNextHop | brcdlp.3.2.1.1.4.1.1.6 | Yes |
| mplsL3VpnVrfRtelnetCidrlfIndex | brcdlp.3.2.1.1.4.1.1.7 | Yes, but read-only. |
| mplsL3VpnVrfRtelnetCidrType | brcdlp.3.2.1.1.4.1.1.8 | Yes, but read-only. |
| mplsL3VpnVrfRtelnetCidrProto | brcdlp.3.2.1.1.4.1.1.9 | Yes, but read-only. |
| mplsL3VpnVrfRtelnetCidrAge | brcdlp.3.2.1.1.4.1.1.10 | Yes, but read-only. |
| mplsL3VpnVrfRtelnetCidrNextHopAS | brcdlp.3.2.1.1.4.1.1.11 | NoReturns 0 |
| mplsL3VpnVrfRtelnetCidrMetric1 | brcdlp.3.2.1.1.4.1.1.12 | Yes, but read-only. |
| mplsL3VpnVrfRtelnetCidrMetric2 | brcdlp.3.2.1.1.4.1.1.13 | NoReturns 0 |
| mplsL3VpnVrfRtelnetCidrMetric3 | brcdlp.3.2.1.1.4.1.1.14 | NoReturns 0 |
| mplsL3VpnVrfRtelnetCidrMetric4 | brcdlp.3.2.1.1.4.1.1.15 | NoReturns 0 |
| mplsL3VpnVrfRtelnetCidrMetric5 | brcdlp.3.2.1.1.4.1.1.16 | NoReturns 0 |
| mplsL3VpnVrfRteXCPPointer | brcdlp.3.2.1.1.4.1.1.17 | NoReturns null string |
| mplsL3VpnVrfRtelnetCidrStatus | brcdlp.3.2.1.1.4.1.1.18 | Yes, but read-only. |

Supported objects in VPLS-generic-draft-01-mib

The following tables present the objects supported in the VPLS-generic-draft-01-mib module of draft-ietf-l2vpn-vpls-mib-01.

Tables and scalars in the draft that are not listed in the following tables are not supported.

Scalars

The following scalars are supported.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| vplsConfigIndexNext brcdlp.3.4.1.1.1 Syntax: Unsigned 32 | Read-only | Unique index for the conceptual row identifying a VPLS service. However, in the current implementation, this index is always 0. |
| vplsStatusNotifEnable brcdlp.3.4.1.1.5 Syntax: TruthValue | Read-write | If this object is set to true(1), then it enables vplsStatusChanged notification to be generated. Change notification is determined by the use of the snmp-server enable trap mpls vpls and no snmp-server enable trap mpls vpls commands. |
| vplsNotificationMaxRate brcdlp.3.4.1.1.6 Syntax: SnmpAdminString | Read-write | Always 0. |

vplsConfigTable

The following table below presents the objects supported in the vplsConfigTable. Refer to [vplsConfigTable](#) for objects that are not supported in this table.

NOTE

The following table is supported on MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Name, OID, and syntax | Access | Supported? |
|------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------|
| vplsConfigIndex brcdlp.3.4.1.1.2.1.1 Syntax: Unsigned 32 | Read-only | Yes |
| vplsConfigName brcdlp.3.4.1.1.2.1.2 Syntax: SnmpAdminString | Read-only | Yes |
| vplsConfigDescr brcdlp.3.4.1.1.2.1.3 Syntax: SnmpAdminString | Read-only | Always null string |
| vplsConfigAdminStatus brcdlp.3.4.1.1.2.1.4 Syntax: Integer | Read-only | Yes Always up(1) |
| vplsConfigMacLearning brcdlp.3.4.1.1.2.1.6 Syntax: TruthValue | Read-only | Yes Always true(1) |
| vplsConfigDiscardUnknownDest brcdlp.3.4.1.1.2.1.7 Syntax: TruthValue | Read-only | No Always false(2) |
| vplsConfigMacAging brcdlp.3.4.1.1.2.1.8 Syntax: TruthValue | Read-only | Ye Always true(1) |
| vplsConfigFwdFullHighWatermark brcdlp.3.4.1.1.2.1.10 Syntax: Unsigned 32 | Read-only | Always 0 |
| vplsConfigFwdFullLowWatermark brcdlp.3.4.1.1.2.1.11 Syntax: Unsigned 32 | Read-only | Always 0 |
| vplsConfigRowStatus brcdlp.3.4.1.1.2.1.12 Syntax: RowStatus | Read-only | Yes Always active (1) |
| vplsConfigMtu brcdlp.3.4.1.1.2.1.13 Syntax: Unsigned 32 | Read-only | Yes |
| vplsConfigVpnId brcdlp.3.4.1.1.2.1.14 Syntax: Octet string | Read-only | Always null |
| vplsConfigServiceType brcdlp.3.4.1.1.2.1.15 Syntax: Integer | Read-only | Yes: <ul style="list-style-type: none">• vlan(1)• ethernet(2) |

| Name, OID, and syntax | Access | Supported? |
|---------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • ethernetTagged(4) <p>NOTE vlan(1) if part of VLAN, otherwise ehternet(2) for tagged VPLS</p> |
| vplsConfigStorageType brcdlp.3.4.1.1.2.1.16 Syntax: StorageType | Read-only | Yes Always permanent(4) |

vplsStatusTable

The following table lists the objects that are supported for the vplsStatusTable.

| Name | Access | Supported? |
|-----------------------------------------------------------------------|-----------|------------|
| vplsStatusOperStatus brcdlp.3.4.1.1.3.1.1 Syntax: Integer | Read-only | Yes |
| vplsStatusPeerCount brcdlp.3.4.1.1.3.1.2 Syntax: Counter 32 | Read-only | Yes |

vplsPwBindTable

This vplsPwBindTable binds a given VPLS instance to various pseudo wires. It provides transport service for a VPLS.

| Name | Access | Supported? |
|--------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| vplsPwBindIndex brcdlp.3.4.1.1.4.1.1 Syntax: PWIndexType | Read-only | Yes PwIndex of corresponding PWTable. One VPLS may have multiple PWTable entries. |
| vplsPwBindConfigType brcdlp.3.4.1.1.4.1.2 Syntax: Integer | Read-only | Yes Always manual(1) |
| vplsPwBindType brcdlp.3.4.1.1.4.1.3 Syntax: Integer | Read-only | Yes Always mesh(1) |
| vplsPwBindRowStatus brcdlp.3.4.1.1.4.1.4 Syntax: RowStatus | Read-only | Yes. <ul style="list-style-type: none"> • active(1) - If PW state is operational • not-in-service(2) - If PW is not operational |
| vplsPwBindStorageType brcdlp.3.4.1.1.4.1.5 Syntax: StorageType | Read-only | Yes Only permanent(4) is supported |

General MPLS objects

The following table contains the general MPLS MIB objects.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------|
| mplsVersion brcdlp.1.2.15.1.1.1 Syntax: Unsigned32 | Read-only | The MPLS version number. |
| mplsConfiguredLsps brcdlp.1.2.15.1.2.1 Syntax: Unsigned32 | Read-only | The number of configured LSPs. This is calculated by adding the number of RSVPs and statically configured label switched paths (LSPs). |
| mplsActiveLsps brcdlp.1.2.15.1.2.2 Syntax: Unsigned32 | Read-only | The number of active LSPs. This is calculated by adding the number of RSVPs, LDPs, and statically configured LSPs. |

MPLS LSP table

The following table contains objects for the MPLS LSPs table.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLspTable brcdlp.1.2.15.1.2.3 | None | The MPLS LSP table. |
| mplsLspSignalingProto brcdlp.1.2.15.1.2.3.1.1 Syntax: Integer | None | MPLS signaling protocol used by this LSP: <ul style="list-style-type: none"> • ldp(1) • rsvp(2) |
| mplsLspIndex brcdlp.1.2.15.1.2.3.1.2 Syntax: Unsigned32 | None | The unique index of the LSP in the system for a given signaling protocol. The ifIndex value of the LSP's tunnel interface index holds true. |
| mplsLspName brcdlp.1.2.15.1.2.3.1.3 Syntax: DisplayString | Read-only | The name of the label switched path (LSP). |
| mplsLspState brcdlp.1.2.15.1.2.3.1.4 Syntax: Integer | Read-only | The operational state of the LSP: <ul style="list-style-type: none"> • unknown(1) • up(2) • down(3) |
| mplsLspPackets brcdlp.1.2.15.1.2.3.1.5 Syntax: Counter64 | Read-only | The number of egress Layer 3 VPN and IP MPLS packets that has been sent to outbound, meeting the in-label and tunnel criteria. This object is equivalent to show mpls statistics tunnel or show mpls ldp traffic command. |
| mplsLspAge brcdlp.1.2.15.1.2.3.1.6 Syntax: TimeStamp | Read-only | The age in 10-millisecond periods since the creation of the LSP. |
| mplsLspTimeUp brcdlp.1.2.15.1.2.3.1.7 Syntax: TimeStamp | Read-only | The total time in 10-millisecond units that this LSP has been operational. Calculate the percentage up-time using the following equation: $\text{mplsLspTimeUp or mplsLspAge} \times 100\%$ |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLspPrimaryTimeUp brcdlp.1.2.15.1.2.3.1.8 Syntax: TimeStamp | Read-only | The total time in 10-millisecond units that the primary path of the LSP has been operational. The percentage contribution of the primary path to the operational time is calculated using the following equation: mplsLspPrimaryTimeUp or mplsLspTimeUp x 100% |
| mplsLspTransitions brcdlp.1.2.15.1.2.3.1.9 Syntax: Counter32 | Read-only | The number of times the state of the LSP transitioned from up to down and down to up. |
| mplsLspLastTransition brcdlp.1.2.15.1.2.3.1.10 Syntax: TimeStamp | Read-only | The time in 10-millisecond units since the last transition occurred on this LSP. |
| mplsLspFrom brcdlp.1.2.15.1.2.3.1.11 Syntax: IpAddress | Read-only | Source IP address of this LSP. |
| mplsLspTo brcdlp.1.2.15.1.2.3.1.12 Syntax: IpAddress | Read-only | Destination IP address of this LSP. |
| mplsPathName brcdlp.1.2.15.1.2.3.1.13 Syntax: DisplayString | Read-only | The name of the active path for this LSP. If there is no name, this field should be empty and all the fields in this table do not apply. |
| mplsPathType brcdlp.1.2.15.1.2.3.1.14 Syntax: Integer | Read-only | The type of path that is active. This field is meaningless unless mplsPathName contains no value. Paths can be the following types: <ul style="list-style-type: none"> • other(1) • primary(2) • standby(3) • secondary(4) |
| mplsLspAdaptive brcdlp.1.2.15.1.2.3.1.15 Syntax: TruthVal | Read-only | Indicates if this LSP supports the Adaptive mechanism. |
| mplsLspBfdSessionId brcdlp.1.2.15.1.2.3.1.16 Syntax: Unsigned32 | Read-only | The BFD session associated to this LSP: <ul style="list-style-type: none"> • Zero indicates that no BFD session exists for this LSP. • Non-zero is an index to an entry in bfdSessTable. |
| mplsLspReoptimizeTimer brcdlp.1.2.15.1.2.3.1.17 Syntax: Unsigned32 | Read-only | The number of seconds from the beginning of one reoptimization attempt to the beginning of the next attempt. |
| mplsLspCoS brcdlp.1.2.15.1.2.3.1.18 Syntax: ClassOfService | Read-only | The Class of Service. |
| mplsLspHopLimit brcdlp.1.2.15.1.2.3.1.19 Syntax: Unsigned32 | Read-only | The number of hops this LSP can traverse. |
| mplsLspCspf brcdlp.1.2.15.1.2.3.1.20 | Read-only | Indicates if the CSPF path calculation is enabled on this LSP. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Syntax: Integer mplsLspCspfTieBreaker brcdlp.1.2.15.1.2.3.1.21 | Read-only | The tie-breaker to use for selecting the CSPF equal-cost paths. This field is not applicable if mplsLspCspf is disabled. |
| Syntax: Integer mplsLspFrrMode brcdlp.1.2.15.1.2.3.1.22 | Read-only | Indicates which protection method is to be used for MPLS Fast Reroute: <ul style="list-style-type: none"> "detour" for one-to-one backup "facility" for facility backup |
| Syntax: Unsigned32 mplsLspFrrSetupPriority brcdlp.1.2.15.1.2.3.1.23 | Read-only | The setup priority for the MPLS Fast Reroute. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: Unsigned32 mplsLspFrrHoldingPriority brcdlp.1.2.15.1.2.3.1.24 | Read-only | The hold priority for the MPLS Fast Reroute. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: Unsigned32 mplsLspFrrHopLimit brcdlp.1.2.15.1.2.3.1.25 | Read-only | The hop limit for the MPLS Fast Reroute. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: Unsigned32 mplsLspFrrBandwidth brcdlp.1.2.15.1.2.3.1.26 | Read-only | The bandwidth constraint for the MPLS Fast Reroute. The value zero indicates that the detour route uses a best-effort value for bandwidth. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: MplsTunnelAffinity mplsLspFrrAdmGrpIncludeAny brcdlp.1.2.15.1.2.3.1.27 | Read-only | The administrative group setting that the device includes any of the interfaces that are members of the group when calculating detour routes for this LSP. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: MplsTunnelAffinity mplsLspFrrAdmGrpIncludeAll brcdlp.1.2.15.1.2.3.1.28 | Read-only | The administrative group setting that an interface must be a member of all of the groups to be considered in a detour route for the LSP. Any interface that is not a member of all the groups is eliminated from consideration. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: MplsTunnelAffinity mplsLspFrrAdmGrpExcludeAny brcdlp.1.2.15.1.2.3.1.29 | Read-only | The administrative group setting that the device excludes any of the interfaces that are members of the group when calculating detour routes for this LSP. The value of this variable is not applicable if mplsLspFrrMode is "none". |
| Syntax: Integer mplsLspPathSelectMode brcdlp.1.2.15.1.2.3.1.30 | Read-only | Indicates the path selection mode to use: <ul style="list-style-type: none"> Auto-select is the default mode. In this mode, the primary path is always selected to carry traffic when the primary path has stayed operating in the working state for at least the amount of time specified in mplsLspPathSelectRevertTimer. |

| Name, OID, and syntax | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> For manual-select, the traffic is switched to a user-selected path specified in mplsLspPathSelectPathname after the selected path has stayed operating in the working state for at least the amount of time specified in mplsLspPathSelectRevertTimer. For unconditional-select, the traffic is switched to and stays on the selected path regardless of the path's condition, even if it is in a failure state. |
| mplsLspPathSelectPathname brcdlp.1.2.15.1.2.3.1.31 Syntax: DisplayString | Read-only | The user-selected secondary path for path-select mode "manual" and "unconditional". |
| mplsLspPathSelectRevertTimer brcdlp.1.2.15.1.2.3.1.32 Syntax: Unsigned32 | Read-only | The number of seconds to wait after the primary or selected path comes up before traffic reverts to that path. A value of zero indicates that it will switch immediately after the current working path goes down. |
| mplsLspShortcutOspfAllowed brcdlp.1.2.15.1.2.3.1.33 Syntax: TruthVal | Read-only | Indicates that this LSP allows a shortcut between nodes in an autonomous system (AS). The OSPF route includes the LSP in its SPF calculation. |
| mplsLspShortcutIsisAllowed brcdlp.1.2.15.1.2.3.1.34 Syntax: TruthVal | Read-only | <p>Indicates that this LSP allows a shortcut through the network to a destination based on the path's cost (metric).</p> <p>The traffic is forwarded through this LSP to destinations within the IS-IS routing domain. The IS-IS route includes the LSP in its SPF calculation.</p> |
| mplsLspShortcutIsisLevel brcdlp.1.2.15.1.2.3.1.35 Syntax: Integer | Read-only | <p>Indicates the level of the IS-IS routing enabled on the device.</p> <p>The value of this variable is not applicable if mplsLspShortcutIsisAllowed is "False".</p> |
| mplsLspShortcutIsisAnnounce brcdlp.1.2.15.1.2.3.1.36 Syntax: TruthVal | Read-only | <p>Indicates that this IS-IS shortcut will be announced or advertised. The metric to announce is specified by mplsLspShortcutIsisAnnounceMetric.</p> <p>The value of this variable is not applicable if mplsLspShortcutIsisAllowed is "False".</p> |
| mplsLspShortcutIsisAnnounceMetric brcdlp.1.2.15.1.2.3.1.37 Syntax: Unsigned32 | Read-only | <p>Indicates the metric value to announce for this shortcut.</p> <p>The value of this variable is not applicable if mplsLspShortcutIsisAnnounce is "False".</p> |
| mplsLspShortcutIsisRelativeMetric brcdlp.1.2.15.1.2.3.1.38 Syntax: Unsigned32 | Read-only | <p>Indicates the relative metric used to compute the LSP cost when announce is not enabled.</p> <p>The value of this variable is not applicable if mplsLspShortcutIsisAllowed is "False".</p> |

MPLS LSP Auto-Bandwidth MIB table

Monitors current auto-bandwidth parameters applied on the current active path of the tunnel.

Usage Guidelines

The following MIB objects are supported on the MLX Series and XMR Series devices.

`mplsLspAutoBWTable`

| Objects and OID | Access | Description |
|-------------------------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>mplsLspAutoBWTable</code> <code>brcdlp.1.2.15.1.2.4</code> | None | The table lists the auto-bandwidth configuration details. |
| <code>mplsLspAutoBWStatus</code> <code>brcdlp.1.2.15.1.2.4.1.1</code> Syntax: Integer | Read-only | <p>Indicates the operational status of the MPLS auto-bandwidth.</p> <ul style="list-style-type: none"> • <code>autoBWEnabled(1)</code> • <code>autoBWDISabledAndNotConfigured(2)</code> • <code>autoBWDISabledGlobally(3)</code> • <code>autoBWDISabledAndRateCountersNotAllocated(4)</code> <p>NOTE If the auto-bandwidth is disabled, the SNMP polling will not provide output for the <code>mplsLspAutoBWTable</code>.</p> |
| <code>mplsLspAutoBWMode</code> <code>brcdlp.1.2.15.1.2.4.1.2</code> Syntax: Integer | Read-only | Indicates the mode of the MPLS auto-bandwidth. |
| <code>mplsLspAutoBWAdjustmentThreshold</code> <code>brcdlp.1.2.15.1.2.4.1.3</code> Syntax: Unsigned32 | Read-only | Specifies the configured adjustment threshold value. |
| <code>mplsLspAutoBWMIn</code> <code>brcdlp.1.2.15.1.2.4.1.4</code> Syntax: Unsigned32 | Read-only | Specifies the minimum bandwidth that the auto-bandwidth algorithm can apply to a tunnel when the adjustment threshold has overcome. |
| <code>mplsLspAutoBWMax</code> <code>brcdlp.1.2.15.1.2.4.1.5</code> Syntax: Unsigned32 | Read-only | Specifies the maximum bandwidth that the auto-bandwidth algorithm can apply to a tunnel when the adjustment threshold has overcome. |
| <code>mplsLspAutoBWAdjustmentInterval</code> <code>brcdlp.1.2.15.1.2.4.1.6</code> Syntax: Unsigned32 | Read-only | Specifies the adjustment period for data rates. |
| <code>mplsLspAutoBWOverflowLimit</code> <code>brcdlp.1.2.15.1.2.4.1.7</code> Syntax: Unsigned32 | Read-only | Specifies the number of consecutive collections exceeding overflow threshold. |

| Objects and OID | Access | Description |
|-----------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLspAutoBWUnderflowLimit brcdlp.1.2.15.1.2.4.1.8 Syntax: Unsigned32 | Read-only | Specifies the number of consecutive collections under the underflow threshold. |
| mplsLspAutoBWCURRENTSignaledRate brcdlp.1.2.15.1.2.4.1.9 Syntax: Gauge32 | Read-only | Specifies the current signaled rate in kbps. |
| mplsLspAutoBWSampleCollected brcdlp.1.2.15.1.2.4.1.10 Syntax: Unsigned32 | Read-only | Specifies the number of samples collected. |
| mplsLspAutoBWMaxSampleBW brcdlp.1.2.15.1.2.4.1.11 Syntax: Unsigned32 | Read-only | Specifies the maximum sample bandwidth in kbps. |
| mplsLspAutoBWLastSample brcdlp.1.2.15.1.2.4.1.12 Syntax: Unsigned32 | Read-only | Specifies the last sample rate in kbps. |
| mplsLspAutoBWOverflowCount brcdlp.1.2.15.1.2.4.1.13 Syntax: Unsigned32 | Read-only | Specifies the overflow count. |
| mplsLspAutoBWUnderFlowCount brcdlp.1.2.15.1.2.4.1.14 Syntax: Unsigned32 | Read-only | Specifies the underflow count. |
| mplsLspAutoBWMaxUnderFlowSample brcdlp.1.2.15.1.2.4.1.15 Syntax: Unsigned32 | Read-only | Specifies the maximum underflow sample rate in kbps. |
| mplsLspAutoBWSampleRecordingEnable brcdlp.1.2.15.1.2.4.1.16 Syntax: TruthValue | Read-only | Specifies the auto-bandwidth sample recording status. Auto-bandwidth sample recording is enabled, if the object value is set to "true". Auto-bandwidth sample recording is disabled, if the object value is set to "false". |
| mplsLspAutoBWAdjustmentDue brcdlp.1.2.15.1.2.4.1.17 Syntax: Unsigned32 | Read-only | Specifies the adjustment due in seconds. |
| mplsLspAutoBWLastAdjustmentDateAndTime brcdlp.1.2.15.1.2.4.1.18 Syntax: DateAndTime | Read-only | Specifies date and time in which the sample entry is logged. |
| mplsLspAutoBWLastAdjustmentOldBW brcdlp.1.2.15.1.2.4.1.19 Syntax: Unsigned32 | Read-only | Specifies previous logged bandwidth. |
| mplsLspAutoBWLastAdjustmentNewBW brcdlp.1.2.15.1.2.4.1.20 Syntax: Unsigned32 | Read-only | Specifies current effective bandwidth. |

| Objects and OID | Access | Description |
|-----------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsLspAutoBWLastAdjustmentStatus brcdlp.1.2.15.1.2.4.1.21 Syntax: Integer | Read-only | Specifies auto-bandwidth adjustment status. <ul style="list-style-type: none"> • unknown(1) • enqueued (2) • suspended (3) • trying (4) • complete(5) |

History

| Release version | History |
|-----------------|--------------------------|
| 6.0.00a | This MIB was introduced. |

MPLS administrative group table

The administrative groups, also known as resource classes or link colors, allow MPLS-enabled interfaces to be assigned to various classes. A group name can be associated to up to 32 administrative groups on the device.

The following table contains the MPLS AdminGroup MIB objects that lists the Administrative Group ID that has a configured group name. This is indexed by the Group ID, and with only one columnar object, which is the group name in the DisplayString type. Use the **show mpls policy** command to display the configured information of the Admin Group name to IPD mapping.

NOTE

This MPLS administrative group table is a read-only table and supports the GET, GETBULK, and GETNEXT operations.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMplsAdminGroupTable brcdlp.1.2.15.1.1.2 | None | The list of administrative groups (by ID) that have a configured group name. |
| brcdMplsAdminGroupId brcdlp.1.2.15.1.1.2.1.1 Syntax: Unsigned32 | None | Identifies the administrative group ID in a 1-based index. The end user of this object must convert this to a 0-based because the index maps to the bit position in the constraint-based link selection. |
| brcdMplsAdminGroupName brcdlp.1.2.15.1.1.2.1.2 Syntax: DisplayString | Read-write | The group name with which this administrative group is associated. |
| brcdMplsAdminGroupRowStatus brcdlp.1.2.15.1.1.2.1.3 Syntax: RowStatus | Read-only | The row status of an entry. NOTE A set request to this table is not supported. Always returns "active" for the existing entries. |

MPLS interface table

The MPLS interface table contains all configured MPLS interfaces. It will be indexed by the ifIndex of the MPLS-enabled port or the VE interface. Use the **show mpls interface** command to display the configured information of interfaces and Admin Group settings.

NOTE

The MPLS interface table is a read-only table and supports the GET, GETBULK, and GETNEXT operations.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMplsInterfaceTable brcdlp.1.2.15.1.1.3 | None | The list of MPLS-enabled interfaces. |
| brcdMplsInterfaceIndex brcdlp.1.2.15.1.1.3.1.1 Syntax: Unsigned32 | None | The ifIndex of the MPLS-enabled port or VE interface. |
| brcdMplsInterfaceAdminGroup brcdlp.1.2.15.1.1.3.1.2 Syntax: MplsTunnelAffinity | Read-write | Specifies to which administrative groups this MPLS-enabled interface belongs to. It is represented in bitmapped format where each bit from 0 through 31 maps to the (internal) group ID. If a bit is set, it indicates that the corresponding group ID is configured for a particular MPLS interface. |
| brcdMplsInterfaceRowStatus brcdlp.1.2.15.1.1.3.1.3 Syntax: RowStatus | Read-only | <p>The row status of an entry.</p> <p>NOTE A set request to this table is not supported. Always returns "active" for the existing entries.</p> |

VLL endpoint table

The following table (fdryVllEndPointTable) contains objects for VLL and VLL-local endpoints that are not available in the pseudo Wire MIB.

NOTE

Use the **snmp-server disable mib mib-table-keyword** command to disable the SNMP support for the table and use the **no** form of the command to re-enable the support. The overall SNMP-WALK performance is increased when the SNMP support is disabled for the table.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pwIndex brcdlp.3.1.2.1.1 Syntax: pwIndexType | None | pwIndex of pwTable and pwEnetTable (foreign index) |
| pwEnetPwInstance brcdlp.3.1.4.1.1.1.1 Syntax: Unsigned32 | None | The second index of pwEnetTable (foreign index) to support VLL-local: <ul style="list-style-type: none">• VLL - 1• vlllocal - 1 and 2 |
| fdryVllEndPointServiceType brcdlp.1.2.15.2.1.1.1.1 Syntax: Integer | None | Indicates the service type for the endpoint: <ul style="list-style-type: none">• vll(1)• vlllocal(2) |
| fdryVllEndPointVlanTagMode brcdlp.1.2.15.2.1.1.1.2 Syntax: Integer32 | Read-only | Indicates the VLAN mode of this endpoint. Ports can have only the following modes: <ul style="list-style-type: none">• tagged(1)• untagged(2) |
| fdryVllEndPointClassOfService brcdlp.1.2.15.2.1.1.1.3 Syntax: Unsigned32 | Read-only | For VLL, this value is used to select the appropriate tunnel whose CoS value is the same as, or almost approaching this value. For VLL-local, this value is applied to the inbound traffic of an endpoint. Valid values: 0 - 7 |
| fdryVllEndPointInHCPkts brcdlp.1.2.15.2.1.1.1.4 Syntax: Counter64 | Read-only | This object indicates the number of packets ingressing into this endpoint. This is available in the output for show mpls statistics vll . |
| fdryVllEndPointOutHCPkts brcdlp.1.2.15.2.1.1.1.5 Syntax: Counter64 | Read-only | This object indicates the number of ingress packets from this endpoint as shown in the show mpls statistics vll-local output. For VLL-local, this value is the fdryVllEndPointInHCPkts of the other endpoint. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryVIIEndPointAdminStatus brcdlp.1.2.15.2.1.1.6 Syntax: Integer32 | Read-only | The desired administrative status of the endpoint. <ul style="list-style-type: none">• up(1)• down(2) |
| fdryVIIEndPointOperStatus brcdlp.1.2.15.2.1.1.7 Syntax: PwOperStatusTC | Read-only | Indicates the operational status of the endpoint: <ul style="list-style-type: none">• up(1)• down(2) |
| fdryVIIEndPointRowStatus brcdlp.1.2.15.2.1.1.8 Syntax: RowStatus | Read-only | Status will be active(1) if the endpoint is up; otherwise it will be not in service. |
| fdryVIIEndPointInnerVlanId brcdlp.1.2.15.2.1.1.9 Syntax: PwVlanCfg | Read-only | This value indicates the inner VLAN ID for this endpoint. Default: 0 (not configured or not supported.) |
| fdryVIIEndPointInHCOctets brcdlp.1.2.15.2.1.1.10 Syntax: Counter64 | Read-only | This value indicates the number of octets into the endpoint from a Customer Edge device. This object is supported only on the CES 2000 Series and CER 2000 Series devices. |
| fdryVIIEndPointOutHCOctets brcdlp.1.2.15.2.1.1.11 Syntax: Counter64 | Read-only | This value indicates the number of octets egressing out from the endpoint towards the Customer Edge device. |

VPLS endpoint2 table

The following table supports VPLS ISID mapping that is configured in the inner VLAN at the endpoint level. It contains objects for the VPLS endpoints that are not available in the pseudo Wire or draft-ietf-pwe3-pw-mib-11.txt MIB. The VPLS endpoint table replaces **fdryVplsEndPointTable**.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryVplsEndPoint2Table brcdlp.1.2.15.2.2.3 | None | This table specifies information about the VPLS endpoints that are not available in the PW MIB or the VPLS draft MIB. This table replaces fdryVplsEndPointTable , as inner VLAN or ISID has been added as an index of this table. |
| fdryVplsEndPoint2VlanId brcdlp.1.2.15.2.2.3.1.1 Syntax: PwVlanCfg | None | This value specifies the VLAN ID value of this endpoint. |
| fdryVplsEndPoint2InnerTagType brcdlp.1.2.15.2.2.3.1.2 Syntax: Integer | None | This value indicates the inner ID for the endpoint: <ul style="list-style-type: none">• invalid(1)• innerVlan(2)• isid(3) If no inner tag is specified, the value invalid(1) is returned. |
| fdryVplsEndPoint2InnerTag brcdlp.1.2.15.2.2.3.1.3 Syntax: Unsigned32 | None | This value indicates the inner ID for this endpoint. If the index fdryVplsEndPoint2InnerTagType has the value isid(3), then this object will have the ISID value for that endpoint. The valid ISID value is between |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | 256 (0x100) and 16777214 (0xFFFFFE). If no inner tag is specified, the value 0 is returned. |
| fdryVplsEndPoint2IfIndex brcdlp.1.2.15.2.2.3.1.4 Syntax: InterfaceIndex | None | This value specifies the ifIndex value of this endpoint. |
| fdryVplsEndPoint2VlanTagMode brcdlp.1.2.15.2.2.3.1.5 Syntax: VlanTagMode | Read-create | This value indicates the VLAN mode for this endpoint. The values dual(3) and other(4) are not used in this table. |
| fdryVplsEndPoint2InHCOctets brcdlp.1.2.15.2.2.3.1.6 Syntax: Counter64 | Read-only | This counter indicates the number of octets ingressing into this endpoint from the Customer Edge device. This object is supported only on the CES 2000 Series and CER 2000 Series devices. |
| fdryVplsEndPoint2Layer2State brcdlp.1.2.15.2.2.3.1.7 Syntax: Layer2StateTC | Read-only | The Layer 2 state of this VPLS endpoint. |
| fdryVplsEndPoint2OperStatus brcdlp.1.2.15.2.2.3.1.8 Syntax: PwOperStatusTC | Read-only | This object indicates the operational status of this endpoint: <ul style="list-style-type: none"> • up(1) • down(2) No other values are used in this table. |
| fdryVplsEndPoint2RowStatus brcdlp.1.2.15.2.2.3.1.9 Syntax: RowStatus | Read-create | This variable is used to create, modify, and delete a row in this table. When a row in this table is in active(1) state, no objects in that row can be modified except this object and the fdryVplsEndPointAdminStatus object. |

VPLS instance table

The following table can be used to configure additional virtual circuit properties that are not supported in vplsConfigTable.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| vplsConfigIndex brcdlp.3.4.1.1.2.1.1 Syntax: Unsigned32 | None | This object is the index for this table. |
| fdryVplsClassOfService brcdlp.1.2.15.2.2.2.1.1 Syntax: Unsigned 32 | Read-write | Indicates the Class of Service for this VPLS instance. This value is used to select the appropriate tunnel that has a CoS value less than or equal to this value. |
| fdryVplsMaxMacLearned brcdlp.1.2.15.2.2.2.1.2 Syntax: Unsigned 32 | Read-only | This value indicates the maximum number of MAC addresses that can be learned by this VPLS instance. No default value is specified as the system default can change. |
| fdryVplsClearMac brcdlp.1.2.15.2.2.2.1.3 Syntax: TruthValue | Read-only | The Set value of TRUE tells the system to clear all the MAC addresses learned by this VPLS instance. Setting a value of FALSE(2) returns an error. During read operations, FALSE(2) is returned at all times. |
| fdryVplsVclId | Read-only | The VPLS Instance ID of a given VPLS session. |

| Name, OID, and syntax | Access | Description |
|----------------------------------------------|--------|-------------|
| brcdlp.1.2.15.2.2.1.4 Syntax: Unsigned 32 | | |

VPLS MAC age timer configuration scalar objects

The scalar objects in the following table helps to configure a global timer that controls MAC aging in the system for local/remote entries. A new branch (brcdVplsScalarObjects) is created that contains these scalar objects.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdVplsMacAgeTimeLocal brcdlp.1.2.15.2.2.5.1 Syntax: Unsigned32 | Read-write | The age timer for local entries of VPLS MAC addresses in the system. Default value: 300 Configurable range: From 60 through 65535 |
| brcdVplsMacAgeTimeRemote brcdlp.1.2.15.2.2.5.2 Syntax: Unsigned32 | Read-write | The age timer for remote entries of VPLS MAC addresses in the system. Default value: 600 Configurable range: From 60 through 65535 |

Route map configuration table

The following table contains MIB objects of the route map entries.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdRouteMapTable brcdlp.1.1.3.39.1.1.1 | None | The route map entries configuration table. |
| brcdRouteMapName brcdlp.1.1.3.39.1.1.1.1.1 Syntax: DisplayString | None | Identifies the route map on the Extreme NetIron devices. A maximum of 80 characters is allowed. |
| brcdRouteMapSequence brcdlp.1.1.3.39.1.1.1.1.2 Syntax: Unsigned32 | None | Identifies the sequence to insert or delete from the existing route map entry. |
| brcdRouteMapAction brcdlp.1.1.3.39.1.1.1.1.3 Syntax: Action | Read-create | Identifies the action to be taken for the route map entry: <ul style="list-style-type: none">• deny(0)• permit(1) |
| brcdRouteMapRuleName brcdlp.1.1.3.39.1.1.1.1.4 Syntax: DisplayString NOTE This object is not supported on the CES 2000 Series and CER 2000 Series devices. | Read-create | Identifies the path name for the route map. A maximum of 127 characters is allowed. |
| brcdRouteMapRowStatus brcdlp.1.1.3.39.1.1.1.1.5 Syntax: RowStatus | Read-create | The following options are supported: <ul style="list-style-type: none">• active(1)—To return GET and GET-NEXT requests.• createAndGo(4)—To add a new row.• destroy(6)—To remove a row. The other values in the enumeration are not supported. |

Route map match configuration table

The following table contains MIB objects of the route map match configuration table.

| Name, OID, and syntax | Access | Description |
|----------------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdRouteMapMatchTable brcdlp.1.1.3.39.1.1.2 | None | The route map match clause configuration table. |
| brcdRouteMapMatchSequence brcdlp.1.1.3.39.1.1.2.1.1 Syntax: Integer32 | None | <p>Identifies the position in the table where the match rule is added.</p> <ul style="list-style-type: none"> If the brcdRouteMapMatchRowStatus is set to createAndGo(4), then a row is inserted if there is no match rule present at the brcdRouteMapMatchIndex position. If any rule is present, then it must be of same kind. If not, then the SET request fails. The application obtains the value for the object in the last row and uses the next value to insert a new row in the table. |
| brcdRouteMapMatchType brcdlp.1.1.3.39.1.1.2.1.2 Syntax: Integer | None | A pair of brcdRouteMapMatchType and brcdRouteMapMatchValue objects specifies a particular match clause. |
| brcdRouteMapMatchValue brcdlp.1.1.3.39.1.1.2.1.3 Syntax: DisplayString | Read-create | <p>Specifies the value corresponding to the brcdRouteMapMatchType object. A maximum of 255 characters is allowed.</p> <p>The following values are supported:</p> <ul style="list-style-type: none"> matchAsPath(1)—Identifies one or more BGP AS-Paths to be matched. The list of AS-Path names is separated by one or more spaces. matchBgpCommunityName(2)—Identifies one or more BGP community ACL names to be matched. The list of BGP community ACL names is separated by one or more spaces. matchBgpCommunityNameExact(3)—Identifies one or more BGP community ACL names to be matched (exact matches only). The list of BGP community ACL names are separated by one or more spaces. matchBgpExtCommunityNumber(4)—Identifies one or more BGP community list numbers to be matched. The list of BGP community list numbers is separated by one or more spaces. matchInterfaces(5)—Identifies the list of IfIndices to be matched in the route map. The value 0 matches to the null0 interface. The interfaces Ethernet, POS, VE, loopback, and tunnel are supported on the Extreme Netiron devices. Each IfIndex is a 32-bit integer in big-endian order. One or more interface IfIndices are specified by separating each IfIndex with one or more spaces. matchIpv4AddressAclNames(6)—Matches the IPv4 address of the route. Identifies the list of IPv4 standard or extended ACL names to be matched. The value is the list of ACL names separated by one or more spaces. matchIpv4AddressAclNumbers(7)—Matches the IPv4 address of the route. Identifies the list of IPv4 ACL numbers to be matched. The value is the list of ACL numbers separated by one or more spaces. |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • matchIpv4AddressPrefixList(8)—Matches the IPv4 address of the route. Identifies the list of IPv4 prefix-lists to be matched. The value is the list of IPv4 prefix-list names separated by one or more spaces. • matchIpv4NextHopAclNames(9)—Matches the next hop IPv4 address of the route. Identifies the list of IPv4 standard or extended ACL names to be matched. The value is the list of ACL names separated by one or more spaces. • matchIpv4NextHopAclNumbers(10)—Matches the next hop IPv4 address of the route. Identifies the list of IPv4 ACL numbers to be matched. The value is the list of ACL numbers separated by one or more spaces. • matchIpv4NextHopPrefixList(11)—Matches the next hop IPv4 address of the route. Identifies the list of IPv4 prefix-lists to be matched. The value is the list of IPv4 prefix-list names separated by one or more spaces. • matchIpv4RouteSourceAclNames(12)—Matches the advertising source IPv4 address of the route. Identifies the list of IPv4 standard or extended ACL names to be matched. The value is the list of ACL names separated by one or more spaces. • matchIpv4RouteSourceAclNumbers(13)—Matches the advertising source IPv4 address of the route. Identifies the list of IPv4 ACL numbers to be matched. The value is the list of ACL numbers separated by one or more spaces. • matchIpv4RouteSourcePrefixList(14)—Matches the advertising source IPv4 address of the route. Identifies the list of IPv4 prefix-lists to be matched. The value is the list of IPv4 prefix-list names separated by one or more spaces. • matchIpv6AddressAclNames(15)—Matches the IPv6 address of the route. Identifies the list of IPv6 ACL names to be matched. The value is the list of ACL names separated by one or more spaces. • matchIpv6AddressPrefixList(16)—Matches the IPv6 address of the route. Identifies the list of IPv6 prefix-lists to be matched. The value is the list of IPv6 prefix-list names separated by one or more spaces. • matchIpv6NextHopPrefixList(17)—Matches the next hop IPv6 address of the route. Identifies the list of IPv6 prefix-lists to be matched. The value is the list of IPv6 prefix-list names separated by one or more spaces. • matchIpv6RouteSourcePrefixList(18)—Matches the advertising source IPv6 address of the route. Identifies the list of IPv6 prefix-lists to be matched. The value is the list of IPv6 prefix-list names separated by one or more spaces. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> matchMetric(19)—Specifies the route metric used to match. The value is a string representation of the decimal metric. The SNMP agent does ASCII to integer conversion before using the value. matchRoutingProtocol(20)—Specifies the routing protocol used to match. The value is a string representation of one of the following decimal values: static-BGP(1), iBGP(2), eBGP(3), non-staticBGP(4), isisLevel1(5), isisLevel2(6), isis(7), rip(8), and static(9). The other values are not supported. The SNMP agent does ASCII to integer conversion before using the value. matchRouteType(21)—Specifies the route type used to match. The value is a string representation of one of the following decimal values: ospfExternalType1(2), ospfExternalType2(3), ospfInternal(4), isisLevel1(5), or isisLevel2(6). The other values are not supported. The SNMP agent does ASCII to integer conversion before using the value. matchTags(22)—Specifies a list of tag values matched (string representation of decimal values). Each tag value is separated by one or more spaces. There cannot be more than 16 values. |
| brcdRouteMapMatchCliString brcdlp.1.1.3.39.1.1.2.1.4 Syntax: DisplayString | Read-only | Represents an equivalent CLI route map match command for a pair of brcdRouteMapMatchType and brcdRouteMapMatchValue objects. |
| brcdRouteMapMatchRowStatus Syntax: RowStatus brcdlp.1.1.3.39.1.1.2.1.5 | Read-create | <p>The following options are supported:</p> <ul style="list-style-type: none"> active(1)—To return GET and GET-NEXT requests. createAndGo(4)—To add a new row. destroy(6)—To remove a row. <p>The other values in the enumeration are not supported.</p> |

Route map set configuration table

The following table contains MIB objects of the route map set configuration table.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdRouteMapSetTable brcdlp.1.1.3.39.1.1.3 | None | The route map set clause configuration table for a given route map. |
| brcdRouteMapSetSequence brcdlp.1.1.3.39.1.1.3.1.1 Syntax: Integer32 | None | <p>Identifies the position in the table where the match rule is added.</p> <ul style="list-style-type: none"> If the brcdRouteMapSetRowStatus object is set to the createAndGo(4) value, and if there is no match rule present at the brcdRouteMapSetIndex position, then a row is inserted. |

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> If a match rule is present, it must be of same kind. If not, then the SET request fails. The application obtains the value for the object in the last row and uses the next value to insert a new row in the table. |
| brcdRouteMapSetType brcdlp.1.1.3.39.1.1.3.1.2 Syntax: Integer | None | A pair of brcdRouteMapSetType and brcdRouteMapSetValue objects specify a particular set clause. |
| brcdRouteMapSetValue brcdlp.1.1.3.39.1.1.3.1.3 Syntax: DisplayString | Read-create | <p>Specifies the value corresponding to the brcdRouteMapSetType object.</p> <p>The following values are supported:</p> <ul style="list-style-type: none"> setAsPath(1)—Identifies the prefix string for the BGP AS-Path attribute. The value is a string representation of the BGP Autonomous System (AS) number to be appended with the AS-Path. If the value specified is a string instead of the AS-Path number, then the value is set as an AS-Path attribute. setAutomaticTag(2)—Specifies that the route map tag is computed automatically. The value is a string representation of a truth value 0 or 1. The value 0 is used to mark its deletion. setDeleteCommunityList(3)—Specifies the name of the BGP community list set for deletion. setCommunityNumber(4)—Specifies the BGP community number that is added. The format is either "AA:NN" or <i>community number</i>. setCommunityFlag(5)—Specifies that the BGP community number in the setCommunityNumber value has behaviors similar to noExport(1), noAdvertise(2), localAs(3), and additive(4). For additive(4), the number is followed by the community number in either "AA:NN" or <i>community number</i> format. The value is a string representation of one of the decimal values. setDampening(6)—Consists of 4 values separated by a space. <ul style="list-style-type: none"> The first value specifies the string representation of the decimal value for the BGP route flap dampening. It must be enabled with half-time in minutes for the penalty. Valid values range from 1 through 45 minutes. Default value is 15 minutes. The second value relates to the first value and specifies the string |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>representation of the decimal value to start reusing a BGP route. Valid values range from 1 through 20000. Default value is 750, with each flap penalty at 1000.</p> <ul style="list-style-type: none"> - The third value relates to the first value and specifies the string representation of the decimal value to start suppressing a BGP route. Valid values range from 1 through 20000. Default value is 2000, with each flap penalty at 1000. - The fourth value relates to the first value and specifies the string representation of maximum duration in minutes to suppress a stable route. Valid values range from 1 through 255. The default value is 40 minutes. The default value is used if a value is not provided. • setDistance(7)—Specifies the string representation of admin distance set for matching OSPF routes. • setExtCommunityRT(8)—Specifies one or more VPN extended community attributes (separated by a space). Each VPN community is formatted as "ASN:nn". • setExtCommunityRTAdditive(9)—This value relates to the setExtCommunityRT value and specifies that the VPN communities earlier must be added to the existing extended community. • setExtCommunitySOO(10)—Specifies the site-of-origin VPN extended community attributes. The VPN community is formatted as "ASN:nn". • setOutputInterfaces(11)—Identifies the list of output IfIndices. The value 0 matches to the null0 interface. Each IfIndex is a 32-bit integer in big-endian order. One or more interface IfIndices can be specified by separating each Ifindex by one or more spaces. If the ifindex is not null0, then the preserve VLAN flag is mandatory and that is always implicitly set. • setNextHopIpv4Addr(12)—Identifies the string representation of the next hop IPv4 address without the preserve VLAN flag. • setNextHopIpv4AddrWithPreserveVlan(13)—Identifies the string |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>representation of the next hop IPv4 address with the preserve VLAN flag.</p> <ul style="list-style-type: none"> • setNextHopIpv6Addr(14)—Identifies the string representation of the next hop IPv6 address without the preserve VLAN flag. • setNextHopIpv6AddrWithPreserveVlan(15)—Identifies the string representation of the next hop IPv6 address with the preserve VLAN flag. • setNextHopIpPeerAddr(16)—Specifies the string representation of a truth value. The object gets deleted when the value is set to 0 (zero). Identifies the next hop of a BGP IPv4 peer address. • setIsisLevel(17)—Identifies the level to which to import the IS-IS route. The value is a string representation of one of the following decimal values: level1(1), level2(2), or level1or2(3). • setLocalPreference(18)—Identifies the BGP local preference path attribute value to be set. The value is a string representation of the decimal preference value. • setMetricType(19)—Specifies the route metric type for the destination routing protocol. The value is a string representation of one of the following values: internal(1), external(2), type1(3), or type2(4). • setMetric(20)—Specifies the metric value set for the destination routing protocol. The value is a string representation of the following values: <ul style="list-style-type: none"> - n : Metric value - $+n$: Add n to metric - $-n$: Subtract n to metric - None : remove metric value • setNextHopFloodVlan(21)—Specifies the next hop VLAN without the preserve VLAN to be set. The value is a string representation of the VLAN ID (1 through 4090). • setNextHopFloodVlanPreserveVlan(22)—Specifies the next hop VLAN with the preserve VLAN to be set. The value is a string representation of the VLAN ID (1 through 4090). • setNextHopFloodVlanOutgoingDa(23)—Specifies the next hop VLAN with the outgoing destination address flag set. The value is a string representation of the VLAN ID (1 through 4090) followed with a MAC address. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> setNextHopIpTunnel(24)—Specifies the next hop IP tunnel that is configured for configured GRE tunnels. The value is a string representation of the decimal tunnel ID. setNextHopLsp(25)—Specifies the next hop LSP name. setBgpOrigin(26)—Specifies the BGP origin code. The value is a string representation of the igp(1) and incomplete(2) decimal values. setTag(27)—Specifies the string representation of the decimal tag value for the destination routing protocol. setWeight(28)—Specifies the string representation of the decimal value for BGP weight for the routing table. |
| brcdRouteMapSetCliString brcdlp.1.1.3.39.1.1.3.1.4 Syntax: DisplayString | Read-only | Represents an equivalent CLI route map set command for a pair of brcdRouteMapSetType and brcdRouteMapSetValue objects. |
| brcdRouteMapSetRowStatus brcdlp.1.1.3.39.1.1.3.1.5 Syntax: RowStatus | Read-create | <p>The following options are supported:</p> <ul style="list-style-type: none"> active(1)—To return GET and GET-NEXT requests. createAndGo(4)—To add a new row. destroy(6)—To remove a row. <p>The other values in the enumeration are not supported.</p> |

Route map bind table

The following table contains MIB objects of the route map bind entries.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdRouteMapBindTable brcdlp.1.1.3.39.1.1.4 | None | <p>The table contains the bindings for the route map entries to the interfaces.</p> <p>Only one route map can be bound to a given interface. Attempting to bind a second route map to the same interface returns an error.</p> |
| brcdRouteMapBindIfIndex brcdlp.1.1.3.39.1.1.4.1.1 Syntax: InterfaceIndex | None | Identifies an interface to bind a route map. The interface can only be a physical or virtual type. |
| brcdRouteMapBindIpType brcdlp.1.1.3.39.1.1.4.1.2 Syntax: InetAddressType | None | Identifies an IP type for the bind. The route map can be bound only to an IPv4 or IPv6 policy. |
| brcdRouteMapBindMapName brcdlp.1.1.3.39.1.1.4.1.3 Syntax: DisplayString | Read-create | Identifies the route map name. A maximum of 80 characters is allowed on the Extreme Netiron devices. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdRouteMapBindRowStatus brcdlp.1.1.3.39.1.1.4.1.4 Syntax: RowStatus | Read-create | <p>The following options are supported:</p> <ul style="list-style-type: none"> active(1)—To return GET and GET-NEXT requests. createAndGo(4)—To add a new row. destroy(6)—To remove a row. <p>The other values in the enumeration are not supported.</p> |

Route map rule display table

The following table contains MIB objects of the route map rule display entries. Use the **show telemetry rule-name** command to display entries.

NOTE

This is a read-only table. The route map rule display table is not supported on the CES 2000 Series and CER 2000 Series devices.

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdRMapRuleDisplayTable brcdlp.1.1.3.39.1.2.1 Syntax: DisplayString | None | The table contains various route map rule entries. A route map rule instance (map and sequence number) contains only one rule name and the same rule name is applied to multiple route maps. |
| brcdRMapRuleDisplayRuleName brcdlp.1.1.3.39.1.2.1.1.1 Syntax: DisplayString | None | Identifies the rule name. |
| brcdRMapRuleDisplayRouteMapName brcdlp.1.1.3.39.1.2.1.1.2 Syntax: DisplayString | None | Identifies the route map containing the rule. |
| brcdRMapRuleDisplaySequence brcdlp.1.1.3.39.1.2.1.1.3 Syntax: Unsigned32 | None | Identifies the instance sequence number. |
| brcdRMapRuleDisplayIpType brcdlp.1.1.3.39.1.2.1.1.4 Syntax: InetAddressType | None | <p>Identifies the IP type for the rule display:</p> <ul style="list-style-type: none"> 1 - IPv4, or 2 - IPv6 <p>A row is present if the corresponding IPv4 or IPv6 match ACL filter is present.</p> |
| brcdRMapRuleDisplayInputInterfaceList brcdlp.1.1.3.39.1.2.1.1.5 Syntax: DisplayString | Read-only | A list of space-separated interface indices is the port membership of the rule. An asterisk (*) indicates that the path is configured but disabled. |
| brcdRMapRuleDisplayAclMatchFilter brcdlp.1.1.3.39.1.2.1.1.6 Syntax: DisplayString | Read-only | A list of space-separated ACL match filter names or numbers used in the rule. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>NOTE</p> <p>Any instances of route maps that are not bound, and have no IPv4 or IPv6 match ACL filter (brcdRMapRuleDisplayAclMatchFilter), are not displayed in the brcdRMapRuleDisplay table.</p> |
| brcdRMapRuleDisplayOutputVlan brcdlp.1.1.3.39.1.2.1.1.7 Syntax: DisplayString | Read-only | Identifies the next hop flood VLAN selected by the interface card. Returns an empty string if there is no value. |
| brcdRMapRuleDisplayOutputPort brcdlp.1.1.3.39.1.2.1.1.8 Syntax: DisplayString | Read-only | Identifies the selected (by the interface card) egress interface. Returns an empty value if there is no value. |
| brcdRMapRuleDisplayOutputIPAddress brcdlp.1.1.3.39.1.2.1.1.9 Syntax: DisplayString | Read-only | Identifies the selected IPv4 or IPv6 next hop address. Returns an empty value if there is no value. |

BFD MIB Definition

| • BFD session mapping table..... | 428 |
| • BFD scalar objects..... | 429 |

BFD session table

The following table specifies information about the Bidirectional Forwarding Detection (BFD) session.

| Name, OID, and syntax | Access | Description |
|--------------------------------------------------------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bfdsessTable brcdlp.3.3.1.1.2 | None | Describes the BFD sessions. |
| bfdsessIndex brcdlp.3.3.1.1.2.1.1 Syntax: BfdSessIndexTC | None | Contains an index used to represent a unique BFD session on this device. |
| bfdsessApplicationId brcdlp.3.3.1.1.2.1.2 Syntax: Unsigned32 | Read-only | Contains an index used to indicate a local application which owns or maintains this BFD session. For instance, the MPLS VPN process may maintain a subset of the total number of BFD sessions. This application ID provides a convenient way to segregate sessions by the applications which maintain them. |
| bfdsessDiscriminator brcdlp.3.3.1.1.2.1.3 Syntax: Unsigned32 | Read-only | Specifies the local discriminator for this BFD session, used to uniquely identify it. |
| bfdsessRemoteDiscr brcdlp.3.3.1.1.2.1.4 Syntax: Unsigned32 | Read-only | Specifies the session discriminator chosen by the remote system for this BFD session. |
| bfdsessUdpPort brcdlp.3.3.1.1.2.1.5 Syntax: InetPortNumber | Read-only | The UDP port for BFD. Default: The well-known value for this port. |
| bfdsessState brcdlp.3.3.1.1.2.1.6 Syntax: Integer | Read-only | The perceived state of the BFD session: <ul style="list-style-type: none">• adminDown(1)• down(2) - BFD session is down.• init(3) - BFD session is initializing.• up(4) - BFD session is up. |
| bfdsessRemoteHeardFlag brcdlp.3.3.1.1.2.1.7 Syntax: TruthValue | Read-only | Status of BFD packet reception from the remote system: <ul style="list-style-type: none">• true(1) - The local device is actively receiving BFD packets from the remote device.• false(0) - Either the local device has not received BFD packets recently (within the detection time) or the local device is attempting to tear down the BFD session. |

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------------------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bfDSessDiag brcdlp.3.3.1.2.1.8 Syntax: Unsigned32 | Accessible-for-notify | <p>A diagnostic code specifying the local system's reason for the last transition of the session from up(1) to some other state.</p> <p>The following values are applicable in the implementation of this MIB object:</p> <ul style="list-style-type: none"> • No Diagnostic(1) • Control Detection Time Expired(2) • Echo Failed(3) • Neighbor Signaled Session Down(4) • Forwarding Plan Reset(5) • Path Down(6) • Concatenated Path Down(7) • Admin Down(8) • Reverse Concatenated Path Down(9) <p>Each notification uses one of the following varbinds:</p> <ul style="list-style-type: none"> • bfDSessUp - High range value • bfDSessDown - Low range value |
| bfDSessOperMode brcdlp.3.3.1.2.1.9 Syntax: Integer | Read-only | Specifies the current operating mode of the BFD session: |
| bfDSessDemandModeDesiredFlag brcdlp.3.3.1.2.1.10 Syntax: TruthValue | Read-only | Indicates if the device uses the demand mode: |
| bfDSessEchoFuncModeDesiredFlag brcdlp.3.3.1.2.1.11 Syntax: TruthValue | Read-only | Indicates if the device uses Echo mode: |
| bfDSessControPlanIndepFlag brcdlp.3.3.1.2.1.12 Syntax: TruthValue | Read-only | Indicates if the device can continue to function when there is a disruption of the control plane: |
| bfDSessAddrType brcdlp.3.3.1.2.1.13 Syntax: InetAddressType | Read-only | <p>The IP address type of the interface associated with this BFD session:</p> <ul style="list-style-type: none"> • unknown(0) - Allowed only when the outgoing interface is of the type point-to-point, or when the BFD session is not associated with a specific interface. • ipv4(1) - IP address is IPv4. |

| Name, OID, and syntax | Access | Description |
|-------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <ul style="list-style-type: none"> • ipv6(2) - IP address is IPv6. |
| bfdSessAddr brcdlp.3.3.1.2.1.14 Syntax: InetAddress | Read-only | <p>The IP address of the interface associated with this BFD session.</p> <p>Also used to enable BFD on a specific interface.</p> <p>The value is set to zero when the BFD session is not associated with a specific interface.</p> |
| bfdSessDesiredMinTxInterval brcdlp.3.3.1.2.1.15 Syntax: Unsigned32 | Read-only | Specifies the minimum interval, in microseconds, that the local system would like to use when transmitting BFD Control packets. |
| bfdSessReqMinRxInterval brcdlp.3.3.1.2.1.16 Syntax: Unsigned32 | Read-only | Specifies the minimum interval, in microseconds, between received BFD Control packets the local system is capable of supporting. |
| bfdSessReqMinEchoRxInterval brcdlp.3.3.1.2.1.17 Syntax: BfdInterval | Read-only | Specifies the minimum interval, in microseconds, between received BFD Echo packets that this system is capable of supporting. |
| bfdSessDetectMult brcdlp.3.3.1.2.1.18 Syntax: Unsigned32 | Read-only | Specifies the Detect time multiplier. |
| bfdSessStorType brcdlp.3.3.1.2.1.19 Syntax: StorageType | Read-only | Indicates the storage type for this object. Conceptual rows having the value "permanent" need not allow write-access to any columnar objects in the row. |
| bfdSessRowStatus brcdlp.3.3.1.2.1.20 Syntax: RowStatus | Read-only | Creates, modifies, or deletes a row in this table. When a row in this table has a row in the active(1) state, no objects in this row can be modified except bfdSessRowStatus and bfdSessStorageType. |
| bfdSessAuthPressFlag brcdlp.3.3.1.2.1.21 Syntax: TruthValue | Read-only | Indicates if the device wants the BFD sessions to be authenticated: <ul style="list-style-type: none"> • true(1) - BFD sessions will be authenticated. • false(0) - BFD sessions will not be authenticated. |
| bfdSessAuthenticationType brcdlp.3.3.1.2.1.22 Syntax: Integer | Read-only | Indicates the authentication type used for this BFD session, if BFD sessions are authenticated: <ul style="list-style-type: none"> • simplePassword(1) • keyedMD5(2) • meticulousKeyedMD5(3) • keyedSHA1(4) • meticulousKeyedSHA1(5) |

BFD session performance table

This table specifies the performance counters for BFD sessions.

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|------------------------------------|
| bfdSessPerfTable | None | The BFD session performance table. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.3.3.1.1.3 | | |
| bfdSessPerfPktIn brcdlp.3.3.1.3.1.1 Syntax: Counter32 | Read-only | The total number of BFD messages received for this BFD session. |
| bfdSessPerfPktOut brcdlp.3.3.1.3.1.2 Syntax: Counter32 | Read-only | The total number of BFD messages sent for this BFD session. |
| bfdSessPerfUpTime brcdlp.3.3.1.3.1.3 Syntax: TimeStamp | Read-only | The value of sysUpTime on the most recent occasion at which the session came up. If no such up event exists, this object contains a zero value. |
| bfdSessPerfLastSessDownTime brcdlp.3.3.1.3.1.4 Syntax: TimeStamp | Read-only | The value of sysUpTime on the most recent occasion at which the last time communication was lost with the neighbor. If no such down event exists, this object contains a zero value. |
| bfdSessPerfLastCommLostDiag brcdlp.3.3.1.3.1.5 Syntax: BfdDiag | Read-only | The BFD diag code for the last time communication was lost with the neighbor. If no such down event exists, this object contains a zero value. |
| bfdSessPerfSessUpCount brcdlp.3.3.1.3.1.6 Syntax: Counter32 | Read-only | The number of times this session has gone into the up state since the router last rebooted. |
| bfdSessPerfDiscTime brcdlp.3.3.1.3.1.7 Syntax: TimeStamp | Read-only | The value of sysUpTime on the most recent occasion at which any one or more of the session counters suffered a discontinuity. The relevant counters are the specific instances associated with this BFD session of any Counter32 object contained in BfdSessPerfTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value. |
| bfdSessPerfPktInHC brcdlp.3.3.1.3.1.8 Syntax: Counter64 | Read-only | This value represents the total number of BFD messages received for this BFD session. It must be equal to the least significant 32 bits of bfdSessPerfPktIn if bfdSessPerfPktInHC is supported according to the rules spelled out in RFC 2863. |
| bfdSessPerfPktOutHC brcdlp.3.3.1.3.1.9 Syntax: Counter64 | Read-only | This value represents the total number of BFD messages transmitted for this BFD session. It must be equal to the least significant 32 bits of bfdSessPerfPktIn if bfdSessPerfPktOutHC is supported according to the rules spelled out in RFC 2863. |

BFD session mapping table

The BFD session mapping table maps the complex indexing of the BFD sessions to the flat BFDIndex used in the BfdSessionTable.

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|--------------------------------|
| BfdSessMapTable | None | The BFD session mapping table. |

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdlp.3.3.1.1.4 | | <p>NOTE</p> <p>If the value of the bfdSessAddr (an OID) has more than 111 sub-identifiers, then OIDs of column instances in this table will have more than 128 sub-identifiers and cannot be accessed using SNMPv1, SNMPv2c, or SNMPv3.</p> |
| bfdSessMapBfdIndex brcdlp.3.3.1.1.4.1.1 Syntax: Unsigned32 | Read-only | Specifies the BFD index referred to by the indexes of this row. In essence, a mapping is provided between these indexes and the BFD session table. |

BFD scalar objects

The following table presents the BHFD scalar objects that are supported.

| Name, OID, and syntax | Access | Description |
|------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bfdAdminStatus brcdlp.3.3.1.1.1.1 Syntax: Integer | Read-only | <p>The global administrative status of BFD in this router:</p> <ul style="list-style-type: none"> enabled(1) - BFD process is active on at least one interface. disabled(2) - BFD is disabled on all interfaces. <p>Default: enabled(1)</p> |
| bfdSessNotificationsEnable brcdlp.3.3.1.1.1.4 Syntax: TruthValue | Read-write | <p>Indicates if notification messages are sent when BFD sessions are up and when they are down:</p> <ul style="list-style-type: none"> true(1) - Notification messages are sent. false(2) - Notifications messages are not sent. <p>Default: false(2)</p> |

Trap MIB Definition

| | |
|------------------------------------------------------|-----|
| • Objects to enable or disable standard traps..... | 431 |
| • Standard traps..... | 432 |
| • Proprietary traps..... | 436 |
| • General traps for the Extreme NetIron devices..... | 458 |

Objects to enable or disable standard traps

NOTE

By default, all the traps are enabled.

The following objects from RFC 1213 are the standard objects that are supported in the NetIron IP MIB. They are used to set SNMP traps.

| Name, OID, and syntax | Access | Description |
|---------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snmplnTraps 1.3.6.1.2.1.11.19 | Read-only | Shows the total number of SNMP trap PDUs that have been accepted and processed by SNMP. |
| snmpOutTraps 1.3.6.1.2.1.11.29 | Read-only | Shows the total number of SNMP trap PDUs that have been generated by SNMP. |
| snmpEnableAuthenTraps 1.3.6.1.2.1.11.30 | Read-write | Indicates if the SNMP agent process is permitted to generate authentication failure traps. The value of this object overrides any configuration information. This objects provides a way to disable all authentication failure traps. NOTE It is strongly recommended that this object to be stored in the nonvolatile memory so that it remains constant between re-initializations of the network management system. |
| lldpRemTablesChange 1.0.8802.1.1.2.1.4.1 | None | An lldpRemTablesChange notification is sent when the value of lldpStatsRemTableLastChangeTime changes. It can be used by an NMS to trigger LLDP remote systems table maintenance polls. NOTE Transmission of lldpRemTablesChange notifications is throttled by the agent, as specified by the lldpNotificationInterval object. |
| lldpXMedTopologyChangeDetected 1.0.8802.1.1.2.1.5.4795.0.1 | None | Allows a device to transfer information related to topology changes to management applications in an asynchronous manner. Specifically, this enables notification of the fact that a new remote device was connected to the local port of an LLDP-MED network connectivity device, or that a remote device was removed from the local port. The purpose of this notification is efficient. |

| Name, OID, and syntax | Access | Description |
|-----------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | near-real-time transmission of information regarding moves and changes to the management applications. Information carried by the list of objects (varbind) contained in the notification allows the receiving management application to uniquely identify the local port where the topology change occurred, as well as the device capability of the remote endpoint device that was attached to or removed from the port. |

Standard traps

This section describes the supported standard traps.

System status traps

Extreme supports the following traps from RFC 1215 and RFC 2863.

| Trap name and number | Varbind | Description |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| coldStart 1.3.6.1.6.3.1.1.5.1 | None | Indicates that the sending protocol entity is reinitializing itself; the agent's configuration or the protocol entity implementation may be altered. |
| warmStart 1.3.6.1.6.3.1.1.5.2 | None | Indicates that the sending protocol entity is reinitializing itself; however, the agent configuration or the protocol entity implementation is not altered. |
| linkDown 1.3.6.1.6.3.1.1.5.3 | ifEntry.ifIndex, ifEntry.ifDescr, ifEntry.ifAdminStatus, ifEntry.ifOperStatus, ifXEntry.ifAlias | A linkDown trap signifies that the SNMP entity acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus. |
| linkUp 1.3.6.1.6.3.1.1.5.4 | ifEntry.ifIndex, ifEntry.ifDescr, ifEntry.ifAdminStatus, ifEntry.ifOperStatus, ifXEntry.ifAlias | A linkUp trap signifies that the SNMP entity acting in an agent role, has detected that the ifOperStatus object for one of its communication links left the down state and transitioned into some other state (but not into the notPresent state). This other state is indicated by the included value of ifOperStatus. |
| authenticationFailure 1.3.6.1.6.3.1.1.5.5 | None | Indicates that the sending protocol entity is the addressee of a protocol message that is not properly authenticated. While implementations of SNMP must be capable of generating this trap, they must also be capable of suppressing the emission of such traps through an implementation-specific mechanism. |

Traps for STP

Extreme supports the following traps for Spanning Tree Protocol (STP) from RFC 1493.

| Trap name and number | Description |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| newRoot 1.3.6.1.2.1.17.0.1 | Indicates that the sending agent has become the new root of the Spanning Tree. The trap is sent by a bridge soon after its election as the new root, for example, upon expiration of the Topology Change Timer immediately subsequent to its election. |
| topologyChange 1.3.6.1.2.1.17.0.2 | Sent by a bridge when any of its configured ports transitions from the Learning state to the Forwarding state, or from the Forwarding state to the Blocking state. The trap is not sent if a newRoot trap is sent for the same transition. |

Traps for alarms

Extreme supports the following traps for alarms from RFC 1757.

NOTE

On XMR Series and MLX Series devices, the RFC 1757 has been obsoleted by RFC 2819. The following traps are not supported on the MLX Series devices.

| Trap name and number | Description |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| alarmRisingThreshold 1.3.6.1.2.1.16.3.1.1.7 | A threshold for the sampled statistic. This object generates an event when the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold. This object also generates an event if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated alarmStartupAlarm is equal to risingAlarm(1) or risingOrFallingAlarm(3). After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the alarmFallingThreshold. |
| alarmFallingThreshold 1.3.6.1.2.1.16.3.1.1.8 | A threshold for the sampled statistic. This object generates an event when the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold. This object also generates an event if the first sample after this entry becomes valid is less than or equal to this threshold and the associated alarmStartupAlarm is equal to fallingAlarm(2) or risingOrFallingAlarm(3). After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the alarmRisingThreshold. |

Pseudo wire traps

The following are the PW traps.

NOTE

The following traps are supported on the XMR Series, MLX Series, and MLX Series devices.

Additional MPLS-related traps are listed in [MPLS notifications](#) on page 450, and [MPLS/RSPV-signaled LSP notifications](#) on page 450.

| Trap name and number | Supported? | Varbind | Description |
|-------------------------------|------------|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pwDown brcdlp.3.1.2.0.1 | Yes | pwOperStatus (for start of range) pwOperStatus (for end of range) fdryPWServiceType | This notification is generated when the pwOperStatus object for one or more contiguous entries in pwTable are about to enter the down(2) state from some other state. The included values of pwOperStatus must all be set equal to this down(2) state. On the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices, this object is available for VPLS, VLL, and VLL local services. |
| pwUp brcdlp.3.1.2.0.2 | Yes | pwOperStatus (for start of range) pwOperStatus (for end of range) fdryPWServiceType | This notification is generated when the pwOperStatus object for one or more contiguous entries in pwTable are about to enter the up(1) state from some other state. On the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices, this object is available for VPLS, VLL, and VLL local services. |
| pwDeleted brcdlp.3.1.2.0.3 | Yes | pwID pwPeerAddrType pwPeerAddr fdryPWServiceType pwName | This notification is generated when the PW has been deleted. NOTE The pwname varbind is an extension added by Extreme; it is not a part of the Draft PW MIB Version 11. On the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices, this object is available for VPLS, VLL, and VLL local services. |

MPLS Layer 3 VPN traps

The following table lists the MPLS Layer 3 VPN traps.

| Trap name | Supported? | Varbind | Description |
|-----------------------------------------------|------------|-------------------------------------------------------------|----------------------------------------------------------------------------------------|
| mplsL3VpnVrfUp 1.3.6.1.2.1.10.166.11.0.1 | Yes | mplsL3VpnIfConfRowS tatus, mplsL3VpnVrfOperStat us | Generated when ifOperStatus of any interface within the VRF changes to the up state. |
| mplsL3VpnVrfDown 1.3.6.1.2.1.10.166.11.0.2 | Yes | mplsL3VpnIfConfRowS tatus, mplsL3VpnVrfOperStat us | Generated when ifOperStatus of any interface within the VRF changes to the down state. |

| Trap name | Supported? | Varbind | Description |
|---------------------------------------------------------------------------|------------|-------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsL3VpnVrfRouteMidThreshExc eeded 1.3.6.1.2.1.10.166.11.0.3 | No | mplsL3VpnVrfPerfCurr NumRoutes, mplsL3VpnVrfConfMid RteThresh | This notification is generated when the number of routes contained by the specified VRF exceeds the value indicated by mplsL3VpnVrfMidRouteThreshold. A single notification must be generated when this threshold is exceeded, and no other notifications of this type should be issued until the value of mplsL3VpnVrfPerfCurrNumRoutes has fallen below that of mplsL3VpnVrfConfMidRteThresh. |
| mplsL3VpnVrfNumVrfRouteMaxTh reshExceeded 1.3.6.1.2.1.10.166.11.0.4 | No | mplsL3VpnVrfPerfCurr NumRoutes, mplsL3VpnVrfConfHig hRteThresh | This notification is generated when the number of routes contained by the specified VRF exceeds or attempts to exceed the maximum allowed value as indicated by mplsL3VpnVrfMaxRouteThreshold. In cases where mplsL3VpnVrfConfHighRteThresh is set to the same value as mplsL3VpnVrfConfMaxRoutes, mplsL3VpnVrfConfHighRteThresh need not be exceeded; rather, just reached for this notification to be issued. Note that the mplsL3VpnVrfConfRteMxThrshTime object denotes the interval at which this notification will be reissued after the maximum value has been exceeded (or reached if mplsL3VpnVrfConfMaxRoutes and mplsL3VpnVrfConfHighRteThresh are equal) and the initial notification has been issued. This value is intended to prevent continuous generation of notifications by an agent in the event that routes are continually added to a VRF after it has reached its maximum value. The default value is 0 minutes. If this value is set to 0, the agent should only issue a single notification at the time that the maximum threshold has been reached, and should not issue any more notifications until the value of routes has fallen below the configured threshold value. |
| mplsL3VpnNumVrfSecIllegILblThrsh Excd 1.3.6.1.2.1.10.166.11.0.5 | No | mplsL3VpnVrfSecIllega ILblVltns | This notification is generated when the number of illegal label violations on a VRF as indicated by mplsL3VpnVrfSecIllegalLblVltns has exceeded mplsL3VpnIIIlblRcvThrsh. The threshold is not included in the varbind here because the value of mplsL3VpnVrfSecIllegalLblVltns should be one greater than the threshold at the time this notification is issued. |
| mplsL3VpnNumVrfRouteMaxThres hCleared 1.3.6.1.2.1.10.166.11.0.6 | No | mplsL3VpnVrfPerfCurr NumRoutes, mplsL3VpnVrfConfHig hRteThresh | This notification is generated only after the number of routes contained by the specified VRF exceeds or attempts to exceed the maximum allowed value as indicated by mplsVrfMaxRouteThreshold, and then falls below this value. The notification informs the operator that the error condition has been cleared without the operator having to query the device. Note that the mplsL3VpnVrfConfRteMxThrshTime object denotes the interval at which the mplsNumVrfRouteMaxThreshExceeded notification will be reissued after the maximum value has been exceeded (or reached if mplsL3VpnVrfConfMaxRoutes and mplsL3VpnVrfConfHighRteThresh are equal) and the initial notification has been issued. Thus, the generation of this notification should also be emitted with this same frequency (assuming that the error condition is cleared). Specifically, if the error condition is reached and cleared several times during the period of time specified in mplsL3VpnVrfConfRteMxThrshTime, only a single notification is issued to indicate the first instance of the error condition as well as the first time the error condition is cleared. This behavior is intended to prevent continuous generation of notifications by an agent in the event that routes. This notification is generated only after the number of routes contained by the specified VRF exceeds or attempts to exceed |

| Trap name | Supported? | Varbind | Description |
|-----------|------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | the maximum allowed value as indicated by mplsVrfMaxRouteThreshold, and then falls below this value. The default value is 0. If this value is set to 0, the agent should issue a notification whenever the maximum threshold has been cleared. |

Proprietary traps

This section presents the proprietary traps supported on devices running proprietary software.

NOTE

The traps in the proprietary MIBs include the following lines in their description:
--#TYPE "Extreme Trap: Power Supply Failure"--#SUMMARY "Power supply fails, error status %d"--#ARGUMENTS { 0 }--#SEVERITY MINOR--#STATE OPERATIONAL

General traps

The table below lists the general traps generated by devices. Refer to the previous sections in this chapter to determine if traps for a feature must be enabled (for example, OSPF traps must be enabled).

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------|----------------------------------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapModuleInserted brcdlp.0.28 | snAgentBrdIndex | Informational | A module was inserted into the chassis while the system is running. Sample trap message: Module <snAgentBrdIndex> was inserted to the chassis during system running |
| snTrapModuleRemoved brcdlp.0.29 | snAgentBrdIndex | Informational | A module was removed from the chassis while the system is running. Sample trap message: Module <snAgentBrdIndex> was removed from the chassis during system running |
| snTrapChasPwrSupplyFailed brcdlp.0.30 | snChasPwrSupplyIndex snChasPwrSupplyDescription | Minor | A power supply in the device failed. Sample trap message: Power supply <snChasPwrSupplyIndex> (<snChasPwrSupplyDescription>) failed |
| snTrapChasFanFailed brcdlp.0.31 | snChasFanIndex snChasFanDescription | Minor | A fan in the device failed. Sample trap message: Fan <snChasFanIndex> (<snChasFanDescription>) failed |
| snTrapMgmtModuleRedunStateChange brcdlp.0.35 | snAgGblTrapMessage | Warning | The management module changed its redundancy state. Sample trap message: Management module at slot <slot-num> state changed from <old-state> to <new-state> |
| snTrapTemperatureWarning brcdlp.0.36 | snAgGblTrapMessage | Critical | The actual temperature reading is above the warning temperature threshold. Sample trap message: |

| Trap name and number | Varbinds | Severity | Description and trap message |
|---------------------------------------------|-----------------------------------------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | Temperature <actual-temp> C degrees, warning level <warning-temp> C degrees, shutdown level <shutdown-temp> C degrees |
| snTrapAccessListDeny brcdlp.0.37 | snAgGblTrapMessage | Warning | A packet was denied by an access list. Sample trap message: (for RIP): rip filter list <id> in rip denied <IP>, <n> event(s) |
| snTrapDuplicateIp brcdlp.0.56 | | Major | A duplicate IP address was detected. Sample trap message: Duplicate IP address detect. |
| snTrapRunningConfigChanged brcdlp.0.73 | snAgGblTrapMessage | Informational | The running configuration has been changed. Sample trap message: Running-config was changed from telnet. |
| snTrapStartupConfigChanged brcdlp.0.74 | snAgGblTrapMessage | Informational | The startup configuration has been changed. Sample trap message: Startup-config was changed from console. |
| snTrapUserLogin brcdlp.0.75 | snAgGblTrapMessage | Informational | A user logged in to a device. Sample trap message: <user1> login to USER EXEC mode. |
| snTrapUserLogout brcdlp.0.76 | snAgGblTrapMessage | Informational | A user logged out of a device. Sample trap message: <user1> logout from USER EXEC mode. |
| snTrapChasPwrSupplyOK brcdlp.0.81 | snChasPwrSupplyIndex, snChasPwrSupplyDescription | Notification | The SNMP trap that is generated when a power supply operational status changes from failure to normal Sample trap message: Power supply <device> OK |
| snTrapClientLoginReject brcdlp.0.110 | snAgGblTrapMessage | Informational | A login by a Telnet or SSH client failed. Sample trap message: telnet SSH access [by <username>] from src IP <ip>, src MAC <mac> rejected, <n> attempt(s) |
| snTrapLocalUserConfigChange brcdlp.0.111 | snAgGblTrapMessage | Informational | The configuration of a local user account has been changed. Sample trap message: user <name> added deleted modified from console telnet ssh web snmp |
| snTrapVlanConfigChange brcdlp.0.112 | snAgGblTrapMessage | Informational | A VLAN configuration has been changed. FSample trap message: vlan <vlan-id> added deleted modified from console telnet ssh web snmp session |
| snTrapAclConfigChange brcdlp.0.113 | snAgGblTrapMessage | Informational | An ACL configuration has been changed. Sample trap message: ACL <acl-id> added deleted modified from console telnet ssh web snmp session |

| Trap name and number | Varbinds | Severity | Description and trap message |
|-----------------------------------------------|--------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| snTrapLACPLinkStateChange brcdlp.0.155 | ifIndex, snAgGbITrapMessage | Notification | This trap is generated when LACP port changes its state. |
| snTrapPBRConfigChanged brcdlp.0.173 | snAgGbITrapMessage | Alert | This trap is generated when a Policy Based Routing (PBR) routemap is bound or unbound either globally or to an interface.. |
| snTrapSysmaxReverted brcdlp.0.178 | snAgGbITrapMessage | Warning | This trap is generated when the revertible sysmax elements are reverted during the card bringup if they cannot be accomodated in the available memory. |
| snTrapSysmaxLeftLowMem brcdlp.0.179 | snAgGbITrapMessage | Warning | This trap is generated when that the configured sysmax set can leave less than 10% available memory free during bootup. |
| snTrapSysMemoryLowThreshold brcdlp.0.180 | snAgGbITrapMessage | Warning | This trap is generated when the available dynamic memory in a card is below 5% of the installed physical memory. |
| snTrapSysMemoryOutThreshold brcdlp.0.181 | snAgGbITrapMessage | Warning | This trap is generated when the dynamic memory fails to be allocated in a system. |
| snTrapLinkOAMLinkDown brcdlp.0.182 | ifIndex, snAgGbITrapMessage | Notification | This trap is generated when Link-OAM port link status is changed to down. |
| snTrapLinkOAMLinkUp brcdlp.0.183 | ifIndex, snAgGbITrapMessage | Notification | This trap is generated when Link-OAM port link status is changed to up. |
| snTrapLinkOAMLoopbackEntered brcdlp.0.185 | ifIndex, dot3OamLoopbackStatus, snAgGbITrapMessage | Notification | This trap is generated when Link-OAM port has entered the loopback mode. The link is not useful for data transfer any more. |
| snTrapLinkOAMLoopbackCleared brcdlp.0.186 | ifIndex, dot3OamLoopbackStatus, snAgGbITrapMessage | Notification | This trap is generated when Link-OAM port has cleared the loopback mode. |

Traps for optics

The following table presents the general optics traps on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------|--------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapOpticalMonitoringWarning brcdlp.0.1003 | snAgGbITrapMessage | Warning | <p>A warning occurred during optical monitoring.</p> <p>Sample trap message:</p> <p>Latched high Temperature alarm, port <slot>/<port></p> |
| snTrapOpticalMonitoringAlarm brcdlp.0.1004 | snAgGbITrapMessage | Alerts | <p>An alarm occurred during optical monitoring due to a low temperature in the device.</p> <p>Sample trap message:</p> <p>Latched low Temperature alarm, port <slot>/<port></p> |
| snTrapOpticalMonitoringError brcdlp.0.1005 | snAgGbITrapMessage | Informational | <p>An error occurred during optical monitoring.</p> <p>Samples trap message:</p> <p>OPTICAL MONITORING: sys_create_timer failed, slot <n>, port mask <portmask></p> <p>OPTICAL MONITORING: sys_set_timer failed, slot <n>, port mask <portmask></p> <p>OPTICAL MONITORING: THRESHOLDS READ FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: AUX AD TYPE READ FAILED, port <slot>/<port>"</p> <p>OPTICAL MONITORING: INT UNMASK ALL WRITE FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: INT MASK WRITE FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: XFP INT MASK WRITE FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: port <slot>/<port>: sys_create_timer failed</p> <p>OPTICAL MONITORING: port <slot>/<port>: sys_create_timer2 failed</p> <p>OPTICAL MONITORING: port <slot>/<port>: sys_set_timer failed</p> |
| snTrapOpticalMonitoringError (continued) | | | OPTICAL MONITORING: port <slot>/<port>, failed to get latched flags(<n>) |

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------|--------------------|----------|---------------------------------------------------------------|
| | | | OPTICAL MONITORING: port <slot>/<port>: sys_set_timer1 failed |
| snTrapXfpSfpIncompatibleOptics brcdlp.0.1009 | snAgGblTrapMessage | Alerts | The optics are incompatible with the port configuration. |

Traps for Traffic Manager

The following table contains Traffic Manager traps that are supported on the Extreme NetIron devices.

| Trap name and number | Varbinds | Severity | Description and trap message |
|--------------------------------------------|--------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapTMLoggingStart brcdlp.0.1015 | snAgGblTrapMessage | Informational | Traffic Manager logging started, triggered by an event. |
| snTrapTMLoggingRestart brcdlp.0.1017 | snAgGblTrapMessage | Informational | Traffic Manager logging restarted after the log was cleared. |
| snTrapTMRecoverySlotReset brcdlp.0.1019 | snAgGblTrapMessage | Informational | This trap is generated when the Traffic Manager recovery slot reset is triggered. |
| snTrapTMEgressDataError brcdlp.0.1020 | snAgGblTrapMessage | Major | <p>This trap is generated when the system detects egress data errors on the Traffic Manager.</p> <p>Sample trap message:</p> <pre>Health Monitoring : TM Egress data errors detected on LP <num>/TM <num></pre> |
| snTrapSFMLoggingRestart brcdlp.0.1021 | snAgGblTrapMessage | Informational | <p>This trap is generated if SFM logging restarted after user clearing the log.</p> <p>Sample trap message:</p> <pre>Extreme Trap: SFM Logging Restart</pre> |
| snTrapSFMLinkDown brcdlp.0.1100 | snAgGblTrapMessage | Warning | <p>A link from the LP Traffic Manager to an SFM Fabric Element is down.</p> <p>Sample trap message:</p> <pre>Fabric Monitoring Link Down : SFM <num>/FE <num>/ Link <num>, LP <num>/TM <num></pre> |
| snTrapSFMLinkUp brcdlp.0.1101 | snAgGblTrapMessage | Informational | <p>A link from the LP Traffic Manager to an SFM Fabric Element is up.</p> <p>Sample trap message:</p> <pre>Fabric Monitoring Link Up : SFM <num>/FE <num>/ Link <num>, LP <num>/TM <num></pre> |

| Trap name and number | Varbinds | Severity | Description and trap message |
|----------------------------------------|-------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapSFMAccessError brcdlp.0.1102 | snAgGblTrapMessage | Major | <p>This trap is generated when the system fails to access an SFM Fabric Element.</p> <p>Sample trap message:</p> <p>Health Monitoring: FE accessfailure on SFM <num>/FE <num></p> |
| snTrapSFMStatusChange brcdlp.0.1103 | snAgentBrdIndex, snAgentBrdModuleStatus, snAgGblTrapMessage | Notification | <p>The SNMP notification that is generated when there is a change in the operational state of the Switch Fabric Module (SFM).</p> <p>NOTE For 100G modules, the string SNM5/FE1/Link16 -> LP15/TM1/Link4 is changed to SNM5/FE1/Link16 -> LP15/FE1/Link4 in syslog or Traffic Manager log or in trap.</p> <p>Sample trap message:</p> <p>System: Health Monitoring: SFM <num> powered off due to failure detection</p> |

NP buffer error notifications

The following table contains Network Processor (NP) buffer error notifications that are supported only on the CES 2000 Series and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description |
|-----------------------------------------------------------------|------------------------------------------------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPBufferErrorIngressThreshold Exceeded brcdlp.1.14.2.0.1 | brcdNPBufferErrorDescription, brcdNPBufferErrorIngressCurrentEvents | Alerts | <p>The SNMP trap is generated when the NP ingress buffer error event count within a window exceeds the configured threshold value.</p> <p>Sample trap message:</p> <p>Extreme Trap: NP ingress buffer has 11 error events, exceeding configured threshold for interfaces 1/1 to 1/24.</p> |
| brcdNPBufferErrorEgressThreshold Exceeded brcdlp.1.14.2.0.2 | brcdNPBufferErrorDescription, brcdNPBufferErrorEgressCurrentEvents | Alerts | <p>The SNMP trap is generated when the NP egress buffer error event count within a window exceeds the configured threshold value.</p> <p>Sample trap message: Extreme Trap: NP egress buffer has 11 error events, exceeding configured threshold for interfaces 1/1 to 1/24.</p> |

| Trap name and number | Varbinds | Severity | Description |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPSCSRAMErrorThresholdExceeded brcdlp.1.14.2.0.3 | brcdNPSCSRAMErrorDescription, brcdNPSCSRAMErrorCurrentEvents | Alerts | <p>The SNMP trap is generated when the NP CSRAM error event count within a window exceeds the configured threshold value.</p> <p>Sample trap message:</p> <p>Extreme Trap: NP CSRAM has 11 error events, exceeding configured threshold for interfaces 1/1 to 1/24.</p> |
| brcdNPLPMRAMErrorThresholdExceeded brcdlp.1.14.2.0.4 | brcdNPLPMRAMErrorName, brcdNPLPMRAMErrorDescription, brcdNPLPMRAMErrorCurrentEvents | Alerts | <p>The SNMP trap is generated when the NP LPM RAM error event count within a window exceeds the configured threshold value.</p> <p>Sample trap message:</p> <p>Extreme Trap: NP LPMRAM has 11 error events, exceeding configured threshold for interfaces 1/1 to 1/24.</p> |

Traps for NP memory error monitoring

The following table contains Network Processor (NP) error notifications that are supported only on the MLX Series, MLX Series, and XMR Series devices.

| Trap name and number | Varbinds | Severity | Description |
|---------------------------------------------------|----------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPMemoryParityErrorTrap brcdlp.1.14.2.0.6 | brcdNPNotificationSupportDescriptor, brcdNPNotificationSupportErrorType | Alerts | <p>The SNMP trap that is generated when a memory parity error occurs in a NP device.</p> <p>Sample trap message:</p> <p>Extreme Trap: Memory parity error on NP device</p> |
| brcdNPMemoryMiscErrorTrap brcdlp.1.14.2.0.7 | brcdNPNotificationSupportDescriptor, brcdNPNotificationSupportErrorType | Alerts | <p>The SNMP trap that is generated when a miscellaneous memory error occurs in a NP device.</p> <p>Sample trap message:</p> <p>Extreme Trap: Memory Miscellaneous error on NP device</p> |
| brcdNPBuffOverFlowErrorTrap brcdlp.1.14.2.0.8 | brcdNPNotificationSupportDescriptor, brcdNPNotificationSupportErrorType | Alerts | <p>The SNMP trap that is generated when a buffer overflow error occurs in a NP device.</p> <p>Sample trap message:</p> <p>Extreme Trap: Buffer Overflow error on NP device</p> |
| brcdNPBuffUnderFlowErrorTrap brcdlp.1.14.2.0.9 | brcdNPNotificationSupportDescriptor, brcdNPNotificationSupportErrorType | Alerts | <p>The SNMP trap that is generated when a buffer underflow error occurs in a NP device.</p> <p>Sample trap message:</p> |

| Trap name and number | Varbinds | Severity | Description |
|--------------------------------------------------|-----------------------------------------------------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | Extreme Trap: Buffer underflow error on NP device |
| brcdNPECCSingleErrorTrap brcdlp.1.14.2.0.10 | brcdNPNotificationSupportDescription, brcdNPNotificationSupportErrorType | Warning | The SNMP trap that is generated when a single ECC error occurs in a NP device. Sample trap message: Extreme Trap: ECC single error on NP device" |
| brcdNPECCMultipleErrorTrap brcdlp.1.14.2.0.11 | brcdNPNotificationSupportDescription, brcdNPNotificationSupportErrorType | Alerts | The SNMP trap that is generated when multiple ECC error occurs in a NP device. Sample trap message: Extreme Trap: Multiple ECC error on NP device |

Traps for Data Integrity Protection

The following new traps are added to report the CSRAM and LPMRAM errors on the CES 2000 Series and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdNPSCSRAMErrorThresholdExceeded brcdlp.1.14.2.0.3 | brcdNPSCSRAMErrorDescription, brcdNPSCSRAMErrorCurrentEvents | Alerts | The SNMP trap that is generated when the Network Processor CSRAM error event count within a window exceeds the configured threshold. Sample syslog message: NP CSRAM has 4 error events, exceeding configured threshold for interfaces 1/1 to 1/24. |
| brcdNPLPMRAMErrorThresholdExceeded brcdlp.1.14.2.0.4 | brcdNPLPMRAMErrorName, brcdNPLPMRAMErrorDescription, brcdNPLPMRAMErrorCurrentEvents | Alerts | The SNMP trap that is generated when the Network Processor LPMRAM error event count within a window exceeds the configured threshold. Sample syslog message: NP LPM 1 has 4 error events, exceeding configured threshold for interfaces 1/1 to 1/24. |

Packet over SONET traps

The following contains packet over SONET traps that are supported on the Extreme Netiron devices.

| Trap name and number | Varbinds | Severity | Description |
|---------------------------------------------|--------------------|---------------|-------------------------------------------------|
| snTrapPosMonitoringWarning brcdlp.0.1006 | snAgGblTrapMessage | Informational | A warning occurred during POS alarm monitoring. |

| Trap name and number | Varbinds | Severity | Description |
|-------------------------------------------|--------------------|---------------|--------------------------------------------------------------------------|
| snTrapPosMonitoringAlarm brcdIp.0.1007 | snAgGblTrapMessage | Alert | An alarm up or alarm down incident occurred during POS alarm monitoring. |
| snTrapPosMonitoringError brcdIp.0.1008 | snAgGblTrapMessage | Informational | An error occurred during POS alarm monitoring. |

MCT notifications

The following traps are generated for the MCT objects supported only on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

Use the **[no]snmp-server enable traps** command to enable or disable MCT notifications.

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------|---------------------------------------------------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdMctClusterPeerStatus brcdIp.1.12.1.0.1 | brcdMctClusterPeerOperStatus, brcdMctClusterPeerDownReason | Notification | Generates when the brcdMctClusterPeerOperStatus object for peer entry in brcdMctClusterPeerTable changes the state to ccpUp(2), ccpDown(3), or reachable(4) from any other state. |
| brcdMctClusterClientStatus brcdIp.1.12.1.0.2 | brcdMctClusterClientOperStatus | Notification | <p>Generates when the brcdMctClusterClientOperStatus object for peer entry in brcdMctClusterClientTable changes the state to remoteUp(4), localUp(5), up(6), slave(7), master(8), or masterPeerUp(9) from any other state.</p> <p>Sample syslog message: Extreme-MCT-CLUSTER-MIB:brcdMctClusterClientOperStatus. 10.99.105.101.110.116. 49 : (up) Syntax: INTEGER, Instance IDs: (10 client1)</p> <p>NOTE The change in the cluster peer state from ccpUp(2) to ccpDown(3) or vice versa changes the state of all the clients. This creates the brcdMctClusterClientStatus notification storm. The brcdMctClusterClientStatus notification will not be sent when the client state change happens due to a cluster peer state change from ccpUp(2) to ccpDown(3) or vice versa.</p> |

Auto-HSFM walk notifications

The following traps are generated for the SFM objects supported only on the MLX Series, MLX Series, and XMR Series devices.

Use the **[no]sysmon sfm walk** command to enable or disable SFM notifications.

| Trap name and number | Varbinds | Severity | Description and trap message |
|----------------------------------------------------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| brcdFabricAutoSFMWalkInitiated brcdlp.1.1.13.1.0.1 | snAgentBrdIndex | Alerts | The SNMP trap that is generated when SFM walk is started. Sample format: Extreme Trap: SFM walk initialized |
| brcdFabricSFMRemovedFromData path brcdlp.1.1.13.1.0.2 | snAgentBrdIndex | Alerts | The SNMP trap that is generated when an Error - SFM removed from data path based on SFM walk. Sample format: Extreme Trap: SFM removed from data path |

MEF Service OAM notifications

The following are the Metro Ethernet Forum (MEF) Service OAM (SOAM) traps.

NOTE

The following traps are supported on the MLX Series, MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name and number | Supported? | Varbind | Description |
|---------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mefSoamDmSessionStartStop 1.3.6.1.4.1.15007.1.3.0.3 | Yes | mefSoamDmCfgSessionStatus, mefSoamNotificationDateAndTime | Generated when the state of the delay measurement (DM) session changes. The notification is sent when the DM session is started and stopped. Sample trap message: DOT1AG: The CFM session started for MA index 1, MD index 1, MEP id 1 |
| mefSoamDmThresholdCrossing 1.3.6.1.4.1.15007.1.3.0.5 | Yes | mefSoamThresholdNotificationId, mefSoamThresholdNotificationCfg, mefSoamThresholdNotificationCount, mefSoamThresholdSuspect, mefSoamNotificationDateAndTime | Generated when the value of the crossing object from the mefSoamDmThresholdTable (as indicated by the mefSoamThresholdNotificationId) is exceeded during the current measurement interval. The notification is sent when the threshold crosses as per mefSoamDmThresholdCrossing. Sample trap message: DOT1AG: The CFM session for MA index 1, MD index 1, MEP id 1 has crossed the maximum threshold value |

| Trap name and number | Supported? | Varbind | Description |
|---------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mefSoamLmSessionStartStop 1.3.6.1.4.1.15007.1.3.0.2 | Yes | mefSoamLmCfgSessionStatus mefSoamNotificationDateAndTime | Generated when the state of the loss measurement (LM) session changes. The notification is sent when the LM session is started and stopped. Sample trap message: The SLM session started for MA index 1, MD index 1, MEP id 11 Session index 1 |
| mefSoamLmThresholdCrossing 1.3.6.1.4.1.15007.1.3.0.4 | Yes | mefSoamThresholdNotificationId mefSoamThresholdNotificationCfg mefSoamThresholdNotificationCount mefSoamThresholdSuspect mefSoamNotificationDateAndTime | Generated when the value of the crossing object from the mefSoamLmThresholdTable (as indicated by the mefSoamThresholdNotificationId) is exceeded during the current measurement interval. Sample trap message: The LMM session started for MA index 1, MD index 1, MEP id 11 Session index 1 has crossed the maximum threshold value. |

VRRP traps

The following table contains VRRP trap that can be used only by the devices that support VRRP.

| Trap name and number | Varbinds | Severity | Description and trap message |
|----------------------------------------|--------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapVrrplfStateChange brcdlp.0.34 | snAgGbITrapMessage | Warning | A VRRP routing device changed state from master to backup or vice versa. Sample trap message: VRRP intf state changed, intf <port>, vrid <id>, state <new-state>. |

VSRP traps

The following trap can be used by the devices that support VSRP.

| Trap name and number | Varbinds | Severity | Description |
|--------------------------------------|--------------------|---------------|------------------------------------------|
| snTrapVsdpStateChange brcdlp.0.83 | snAgGbITrapMessage | Informational | A VSRP routing device changed its state. |

BUM rate limit traps

The following BUM rate limit traps are supported on the Extreme NetIron devices.

| Trap name and number | Varbinds | Severity | Description |
|---------------------------------------------------------------|---------------------------------------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapBUMratelimitAlertLowThreshold brcdlp.1.1.3.16.1.5.1 | agRateLimitBUM CounterCIR, agRateLimitBUM CounterAlertLowLevel Threshold | Informational | A snTrapBUMratelimitAlert LowThreshold trap signifies that the ingress packets in terms of bits have reached the configured low level threshold. |
| snTrapBUMratelimitAlertHighThreshold brcdlp.1.1.3.16.1.5.2 | agRateLimitBUM CounterCIR, agRateLimitBUM CounterAlertHighLevel Threshold | Informational | A snTrapBUMratelimitAlert HighThreshold trap signifies that the ingress packets in terms of bits, have reached the configured high level threshold. |
| snTrapBUMratelimitShutdownLinkDown brcdlp.1.1.3.16.1.5.3 | agRateLimitBUM CounterCIR | Informational | A snTrapBUMratelimit ShutdownLinkDown trap signifies that the port is shutdown after reaching the configured CIR in bps. |
| snTrapBUMratelimitShutdownLinkUp brcdlp.1.1.3.16.1.5.4 | agRateLimitBUM CounterCIR | Informational | A snTrapBUMratelimitAlert HighThreshold trap signifies that the port is up after the specified shutdown timeout in minutes. |

ICMP traps

The following traps are generated for ICMP functionalities.

| Trap name and number | Varbinds | Severity | Description and trap message |
|---------------------------------------------|--------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapIcmpLocalExceedBurst brcdlp.0.51 | snAgGbITrapMessage | Warning | Incoming ICMP exceeded the maximum local burst packets. Sample trap message: Local ICMP exceeds <num> burst packets, stopping for <num> seconds!! |
| snTrapIcmpTransitExceedBurst brcdlp.0.52 | snAgGbITrapMessage | Warning | Transit ICMP exceeded the maximum transit burst packets. Sample trap message: Transit ICMP in interface <port-num> exceeds <num> burst packets, stopping for <num> seconds!! |

TCP traps

The following traps are generated for TCP functionalities.

| Trap name and number | Varbinds | Severity | Description and trap message |
|------------------------------------------|--------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapTcpLocalExceedBurst brcdlp.0.53 | snAgGbITrapMessage | Warning | Incoming TCP exceeded the maximum local burst packets. Sample trap message: Local TCP exceeds <num> burst packets, stopping for <num> seconds!! |

| Trap name and number | Varbinds | Severity | Description and trap message |
|--------------------------------------------|--------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapTcpTransitExceedBurst brcdlp.0.54 | snAgGblTrapMessage | Warning | <p>Transit TCP exceeded the maximum transit burst packets.</p> <p>Sample trap message:</p> <p>Transit TCP in interface <port-num> exceeds <num> burst packets, stopping for <num> seconds!!</p> <p>Sample trap message:</p> <p>Locked address violation at <port-name> <port-num>, address <mac></p> |

BGP4v2 notifications

The following table contains BGP4v2 traps that are supported only on the MLX Series, XMR Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description |
|----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bgp4V2EstablishedNotification brcdlp.3.5.1.0.1 | bgp4V2PeerState, bgp4V2PeerLocalPort, bgp4V2PeerRemotePort | Notification | The Border Gateway Protocol (BGP) established event is generated when the BGP finite state machine (FSM) enters the established state. |
| bgp4V2BackwardTransitionNotification brcdlp.3.5.1.0.2 | bgp4V2PeerState, bgp4V2PeerLocalPort, bgp4V2PeerRemotePort, bgp4V2PeerLastErrorCodeReceived, bgp4V2PeerLastErrorSubCodeReceived, bgp4V2PeerLastErrorReceivedText | Notification | <p>The BGP backward transition event is generated when the BGP FSM moves from a higher-numbered state to a lower-numbered state.</p> <p>The current implementation generates this notification only when the state machine moves out of the established state.</p> |

Port security traps

The port security feature enables a device to learn a limited number of “secure” MAC addresses on an interface. The interface forwards only those packets with source MAC addresses that match the secure addresses. The following traps are generated, if the interface receives MAC addresses that are included in its secure MAC list.

NOTE

The following traps apply to ports that have the port security feature enabled.

| Trap name and number | Varbinds | Severity | Description and trap message |
|--------------------------------------------|--------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| snTrapPortSecurityViolation brcdlp.0.77 | snAgGblTrapMessage | Minor | <p>Packets from an unknown MAC address are dropped.</p> <p>Sample trap message:</p> <p>Extreme Trap: Port Security Violation</p> |
| snTrapPortSecurityShutdown brcdlp.0.78 | snAgGblTrapMessage | Minor | The port is disabled for the amount of time configured using the |

| Trap name and number | Varbinds | Severity | Description and trap message |
|----------------------|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | Violation shutdown <minutes> port security CLI command. Sample trap message: Extreme Trap: Port Security Violation Cause Shutdown |

MRP traps

The following traps are generated for MRP functionalities.

| Trap name and number | Varbinds | Severity | Description |
|-------------------------------------|--------------------|---------------|----------------------------|
| snTrapMrpStateChange brcdlp.0.79 | snAgGblTrapMessage | Informational | An MRP state occurred. |
| snTrapMrpCamError brcdlp.0.80 | snAgGblTrapMessage | Warning | An MRP CAM error occurred. |

MPLS notifications

The following traps are supported on the Extreme NetIron devices.

| Trap name and number | Varbinds | Severity | Description |
|----------------------------------------|--------------------------------------------------------------------------------------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| fdryVplsCreated brcdlp.1.2.15.2.0.1 | vplsConfigName fdryVplsVclId | Informational | Generated when an entry is created in the fdryVplsTable. It is not generated during system bootup time. |
| fdryVplsDeleted brcdlp.1.2.15.2.0.2 | vplsConfigName fdryVplsVclId | Informational | An entry in the fdryVplsTable has been marked for deletion. It indicates the deletion of an existing VPLS instance. |
| fdryPwCreated brcdlp.1.2.15.2.0.3 | fdryPwServiceType (vll(1), vlllocal(2), vpls(3)) pwName (The instance name) pwID (VD ID) | Informational | Generated when an instance of VLL or VLL-Local pseudo-wire entry is created in the pwTable. The fdryPwServiceType varbind shows the service type that originated this notification. This notification is not used for VPLS service. This notification is not generated during device boot-up. |

MPLS/RSPV-signaled LSP notifications

The following traps are generated for the MPLS LSP feature supported on the Extreme NetIron devices. The RSVP-signaled LSP notifications are supported only on the MLX Series and XMR Series devices.

NOTE

Do not use the following traps if you are using the snTrapTMLogging traps.

| Trap name and number | Varbinds | Severity | Description |
|----------------------------------|---------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snMplsLspUp brcdlp.0.1010 | mplsLspName, mplsPathName | Informational | <p>Specifies the LSP is up. The current active path for the LSP is the value of mplsPathName.</p> <p>Sample trap message: Name of the notification received: snMplsLspUp Foundry-MPLS-MIB:mplsLspName.2.1 : (mlx8tobottomcer) Syntax: SNMPv2-TC:DisplayString, Instance IDs: (2 1)</p> <p>Foundry-MPLS-MIB:mplsLspPathName.2.1 : () Syntax: SNMPv2-TC:DisplayString, Instance IDs: (2 1)</p> |
| snMplsLspDown brcdlp.0.1011 | mplsLspName, mplsPathName | Informational | <p>Specifies the LSP is down, because the current active path specified by the mplsPathName went down.</p> <p>Sample trap message: Name of the notification received: snMplsLspDown Foundry-MPLS-MIB:mplsLspName.2.1 : (mlx8tobottomcer) Syntax: SNMPv2-TC:DisplayString, Instance IDs: (2 1)</p> <p>Foundry-MPLS-MIB:mplsLspPathName.2.1 : () Syntax: SNMPv2-TC:DisplayString, Instance IDs: (2 1)</p> |
| snMplsLspChange brcdlp.0.1012 | mplsLspName, mplsPathName | Informational | <p>Specifies the particular LSP that has switched traffic to the new active path "toLspPath". The LSP maintains an up state before and after the switchover.</p> <p>Sample trap message: Name of the notification received: snMplsLspChange Foundry-MPLS-MIB:mplsLspName.2.1 : (mlx8tobottomcer) Syntax: SNMPv2-TC:DisplayString, Instance IDs: (2 1)</p> <p>Foundry-MPLS-MIB:mplsLspPathName.2.1 : (testpath1) Syntax: SNMPv2-TC:DisplayString, Instance IDs: (2 1)</p> |

MPLS LSR notification

The following traps are generated for the MPLS LSR feature supported only on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

Enable the mplsXCNotificationsEnable (OID 1.3.6.1.2.1.10.166.2.1.15) object to true(1) to generate mplsXCUp and mplsXCDOWN notifications. Use the **lsp-xc-traps enable** command to enable or disable the MPLS cross-connect traps and syslog messages. The **show mpls config** command displays the status of the LSP XC notifications.

| Trap name and number | Varbinds | Severity | Description and trap message |
|----------------------------------------|------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mplsXCUp 1.3.6.1.2.1.10.166.2.0.1 | mplsXCOperStatus | Notification | <p>Generates when the mplsXCOperStatus object for one entry in mplsXCTable are about to enter the up(1) state from down(2) state.</p> <p>The included values of the mplsXCOperStatus object must be set equal to the new up(1) state. The two instances of the mplsXCOperStatus object in the notification indicate the range of indexes that are affected.</p> <p>Sample syslog message: MPLS: The LSP XC with id <n1>, in segment id <n2> and out segment id <n3> has come up</p> |
| mplsXCDOWN 1.3.6.1.2.1.10.166.2.0.2 | mplsXCOperStatus | Notification | <p>Generates when the mplsXCOperStatus object for one entry in mplsXCTable are about to enter the down(2) state from up(1) state.</p> <p>The included values of the mplsXCOperStatus object must be set equal to the down(2) state. The two instances of the mplsXCOperStatus object in the notification indicate the range of indexes that are affected.</p> <p>Sample syslog message: MPLS: The LSP XC with id <n1>, in segment id <n2> and out segment id <n3> has went down</p> |

Traps for BFD

The following Bidirectional Forwarding Detection (BFD) traps are supported only on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description |
|-------------------------------|-----------------------------------------------------------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bfdSessUp brcdlp.3.3.1.0.1 | bfdSessDiag - Low range value bfdSessDiag - High range value | Notification | <p>This notification is generated when the bfdSessState object for one or more contiguous entries in bfdSessTable are about to enter the up(2) state from some other state. The included values of bfdSessDiag must both be set equal to this new state (for example, up(1)).</p> |

| Trap name and number | Varbinds | Severity | Description |
|---------------------------------|-----------------------------------------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | <p>The two instances of bfdSessDiag in this notification indicate the range of indexes that are affected.</p> <p>NOTE All the indexes of the two ends of the range can be derived from the instance identifiers of these two objects. For the cases where a contiguous range of sessions has transitioned into the up(1) state at roughly the same time, the device must issue a single notification for each range of contiguous indexes in an effort to minimize the emission of a large number of notifications. If a notification has to be issued for just a single bfdSessEntry, then the instance identifier (and values) of the two bfdSessDiag objects must be the identical.</p> |
| bfdSessDown brcdlp.3.3.1.0.2 | bfdSessDiag - Low range value bfdSessDiag - High range value | Notification | This notification is generated when the bfdSessState object for one or more contiguous entries in bfdSessTable are about to enter the down(4) or adminDown(5) states from some other state. The included values of bfdSessDiag must both be set equal to this new state (for example, down(4) or adminDown(5)). The two instances of bfdSessDiag in this notification indicate the range of indexes that are affected. |

| Trap name and number | Varbinds | Severity | Description |
|----------------------|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | <p>NOTE</p> <p>All the indexes of the two ends of the range can be derived from the instance identifiers of these two objects. For cases where a contiguous range of sessions has transitioned into the down(4) or adminDown(5) states at roughly the same time, the device should issue a single notification for each range of contiguous indexes in an effort to minimize the emission of a large number of notifications. If a notification has to be issued for just a single bfdSessEntry, then the instance identifier (and values) of the two bfdSessDiag objects must be the identical.</p> |

Traps for CAM overflow

The following CAM overflow trap is supported only on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description and trap message |
|------------------------------------|--------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapCAMOverflow brcdlp.0.1002 | snAgGblTrapMessage | Alerts | <p>Displays the SNMP trap that is generated when any CAM partition becomes full.</p> <p>Sample trap message: CAM partition full</p> |

BPDU guard and root guard traps

The following are the traps for BPDU guard and root guard.

| Trap name and number | Varbinds | Severity | Description and trap message |
|------------------------------------------|-------------------------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapStpRootGuardDetect brcdlp.0.150 | ifIndex, snVLanByPortCfgVLanId, snAgGblTrapMessage | Notification | <p>The SNMP trap that is generated when a Root-Guarded port receives a superior BPDU.</p> <p>Sample trap message: Extreme Trap: Stp root guard detect</p> |

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------|-------------------------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapStpRootGuardExpire brcdlp.0.151 | ifIndex, snVLanByPortCfgVLanId, snAgGblTrapMessage | Notification | The SNMP trap that is generated when a port's Root-Guard expires. Sample trap message: Extreme Trap: Stp root guard expire |
| snTrapStpBPDUGuardDetect brcdlp.0.152 | ifIndex, snVLanByPortCfgVLanId, snAgGblTrapMessage | Notification | The SNMP trap that is generated when a BPDU-guarded is disabled because it received a BPDU. Sample trap message: Extreme Trap: STP BPDU guard |
| snTrapMstpBPDUGuardDetect brcdlp.0.153 | ifIndex, snAgGblTrapMessage | Notification | The SNMP trap that is generated when a BPDU-guarded port receiveds a BPDU. Sample trap message: Extreme Trap: MSTP BPDU guard. |
| snTrapErrorDisableAction brcdlp.0.154 | ifIndex, snAgGblTrapMessage | Notification | The SNMP trap that is generated when an interface error-disable is hit or recovery times out. Sample trap message: Extreme Trap: Error-disable hit or recovery times out. |
| snTrapStpRootGuardExpire brcdlp.0.160 | ifIndex, snVLanByPortCfgVLanId, snAgGblTrapMessage | Notification | The SNMP trap that is generated when a port is re-enabled after it has been disabled because it received a BPDU packet and BPDU Guard is enabled. Sample trap message: Extreme Trap: STP BPDU Guard Expire. |
| snTrapPortLoopDetection brcdlp.0.161 | ifIndex, snVLanByPortCfgVLanId, snAgGblTrapMessage | Notification | The SNMP notification is generated when a port loop is detected. Sample trap message: Extreme Trap: LOOP DETECTION: VLAN <id>, port <slot>/<port> detect, putting into err-disable state |

Traps for optics

The following table contains traps that are supported on the Extreme NetIron Series devices.

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------|--------------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapOpticalMonitoringWarning brcdlp.0.1003 | snAgGblTrapMessage | Warning | <p>A warning occurred during optical monitoring.</p> <p>Sample trap message:</p> <p>Latched high Temperature alarm, port <slot>/<port></p> |
| snTrapOpticalMonitoringAlarm brcdlp.0.1004 | snAgGblTrapMessage | Alerts | <p>An alarm occurred during optical monitoring due to a low temperature in the device.</p> <p>Sample trap message:</p> <p>Latched low Temperature alarm, port <slot>/<port></p> |
| snTrapOpticalMonitoringError brcdlp.0.1005 | snAgGblTrapMessage | Informational | <p>An error occurred during optical monitoring.</p> <p>Samples trap message:</p> <p>OPTICAL MONITORING: sys_create_timer failed, slot <n>, port mask <portmask></p> <p>OPTICAL MONITORING: sys_set_timer failed, slot <n>, port mask <portmask></p> <p>OPTICAL MONITORING: THRESHOLDS READ FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: AUX AD TYPE READ FAILED, port <slot>/<port>"</p> <p>OPTICAL MONITORING: INT UNMASK ALL WRITE FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: INT MASK WRITE FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: OPTICAL INT MASK WRITE FAILED, port <slot>/<port></p> <p>OPTICAL MONITORING: port <slot>/<port>: sys_create_timer failed</p> <p>OPTICAL MONITORING: port <slot>/<port>: sys_create_timer2 failed</p> <p>OPTICAL MONITORING: port <slot>/<port>: sys_set_timer failed</p> |

| Trap name and number | Varbinds | Severity | Description and trap message |
|----------------------------------------------------------------|--------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | OPTICAL MONITORING: port <slot>/<port>, failed to get latched flags(<n>) OPTICAL MONITORING: port <slot>/<port>: sys_set_timer1 failed |
| snTrapXfpSfpIncompatibleOptics brcdlp.0.1009 | snAgGbITrapMessage | Alerts | The optics are incompatible with the port configuration. |
| snTrapTMLoggingStart brcdlp.0.1015 | snAgGbITrapMessage | Informational | Traffic Manager logging started, triggered by an event. |
| snTrapTMLoggingStop brcdlp.0.1016 | snAgGbITrapMessage | Informational | Traffic Manager logging stopped because the storage is full. |
| snTrapTMLoggingRestart brcdlp.0.1017 | snAgGbITrapMessage | Informational | Traffic Manager logging restarted after the log was cleared. |
| snTrapSFMLinkDown brcdlp.0.1100 | snAgGbITrapMessage | Warning | A link from the LP Traffic Manager to an SFM Fabric Element is down. Sample trap message: Fabric Monitoring Link Down : SFM <num>/FE <num>/Link <num>, LP <num>/TM <num>" |
| snTrapSFMLinkUp brcdlp.0.1101 | snAgGbITrapMessage | Informational | A link from the LP Traffic Manager to an SFM Fabric Element is up. Sample trap message: Fabric Monitoring Link Up : SFM <num>/FE <num>/Link <num>, LP <num>/TM <num>" |
| snTrapXfpSfpNotFoundryOptics brcdlp.0.1018 | snAgGbITrapMessage | Alerts | The SNMP trap that is generated if the optics vendor is not from Extreme. |
| snTrapOpticalMonitoringFoundryOpticsNotCapable brcdlp.0.157 | snAgGbITrapMessage | Alerts | The SNMP trap that is generated if optical monitoring is enabled but the optic device is not capable. Sample trap message: Extreme Trap: Optical Monitoring Optics Not Capable |

Software licensing traps

The following traps apply to devices that support software licensing.

| Trap name and number | Varbinds | Severity | Description |
|------------------------------------|----------------------------------------|--------------|-----------------------------------------------------------------------|
| snTrapLicenseAdded brcdlp.0.187 | snAgGbITrapMessage, snChasUnitIndex | Notification | The SNMP trap is generated when a new license is added to the system. |

| Trap name and number | Varbinds | Severity | Description |
|--------------------------------------|----------------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapLicenseRemoved brcdlp.0.188 | snAgGblTrapMessage, snChasUnitIndex | Notification | The SNMP trap is generated when a license is removed from the system. |
| snTrapLicenseExpires brcdlp.0.189 | snAgGblTrapMessage, snChasUnitIndex | Notification | The SNMP trap that is generated when a trial license is about to expire. This trap is generated daily for the last 3 days of the license, and every 2 hours on the day when the license expires. |
| snTrapLicenseExpired brcdlp.0.190 | snAgGblTrapMessage, snChasUnitIndex | Notification | The SNMP trap that is generated when a trial license has expired. |

General traps for the Extreme Netiron devices

The following table presents the general traps for the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name and number | Varbinds | Severity | Description and trap message |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapIfIndexAssignment Changed brcdlp.0.172 | snAgGblTrap Message | Informational | <p>The SNMP trap is generated when the interface index (ifIndex) assignment for a physical interface is changed.</p> <p>Sample trap message:</p> <p>System: IfIndex assignment was changed</p> |
| snTrapModuleStatus Change brcdlp.0.176 | snChasUnit Index, snAgentBrd Index, snAgentBrd ModuleStatus, and snAgGblTrap Message | Notification | <p>The operational state of a module is changed. The management entity receiving the notification can identify the module and the event by referencing snChasUnitIndex, snAgentBrdIndex, and snAgentBrdModuleStatus.</p> <p>If the module is down, the snAgGblTrapMessage varbind contains a text string that describes the cause.</p> <p>If the module is up, nothing is displayed for snAgGblTrapMessage.</p> <p>Sample trap message:</p> <p>For module up: System: Module up in slot <slot-number></p> <p>For module down: System: Module down in slot <slot-number>, reason <reason. Error Code <error-code></p> <p>For standby MP up: System: Standby Management Module was ready</p> <p>For standby MP down: System: Standby Management Module was down, reason <reason>. Error Code <error-code></p> |

| Trap name and number | Varbinds | Severity | Description and trap message |
|--------------------------------------------------------|---------------------------------------------------------------------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapI2CAccessLog brcdlp.0.184 | snAgGblTrap Message | Notification | <p>This trap is generated to provide information about the state of the I2C access of the management module.</p> <p>Sample trap message:</p> <pre>last good i2c access, Mux index 0, Mux tap 0, ID 0x9, Addr 0x1, (SNM2TEMP)</pre> <pre>bad i2c access (GIEI = set), Severity Minor, Mux index 0, Mux tap2, ID 0x9, Addr 0x1, (SNM3TEMP)</pre> |
| snTrapDot1agCfmRemote MEPAgeOut brcdlp.0.192 | dot1agCfm MdName, dot1agCfm MaNetName, dot1agCfm MepDbRMep State, snAgGblTrap Message | Warning | <p>This trap is generated when the 802.1ag Remote MEP ages out.</p> <p>Sample trap message:</p> <pre>System: Remote MEP 2 in Domain maint_domain, MA maint_asso aged out</pre> |
| snTrapDot1agCfmRemote MEPUp brcdlp.0.193 | dot1agCfm MdName, dot1agCfm MaNetName, dot1agCfm MepDbRMepStat e, snAgGblTrap Message | Informational | <p>This trap is generated when the 802.1ag Remote MEP is up.</p> <p>Sample trap message:</p> <pre>System: Remote MEP 2 in Domain maint_domain, MA maint_asso become UP state</pre> |
| snTrapDot1agCfmDomain CrossConnection brcdlp.0.194. | dot1agCfm MdName, dot1agCfm MaNetName, snAgGblTrap Message | Warning | <p>This trap is generated when the 802.1ag domain gets cross-connected.</p> <p>Sample trap message:</p> <pre>System: Cross Connection in Domain MLX4maintDomain, MA MLX4maintAsso</pre> |
| snTrapDot1agCfmDuplicate MEPId brcdlp.0.195 | dot1agCfm MdName, dot1agCfm MaNetName, dot1agCfm MepDbRMep State, snAgGblTrap Message | Warning | <p>This trap is generated when the 802.1ag Remote MEP reports a duplicate MEP ID that conflicts with a local MEP ID.</p> <p>Sample trap message:</p> <pre>System: Remote MEP ID 1 in Domain MLX4maintDomain, MA MLX4maintAsso is same as ours</pre> |
| snTrapChasFanOK brcdlp.0.1000 | snChasFan Index, snChasFan Description | Minor | <p>One of the following occurred on the device:</p> <ul style="list-style-type: none"> • The status of the fan operation changed from failure to normal. • Fan speed changed due to a decrease in the operating temperature. <p>Sample trap message:</p> <pre>Right fan tray (fan1) OK</pre> |

| Trap name and number | Varbinds | Severity | Description and trap message |
|------------------------------------------------|---------------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapTemperatureOK brcdlp.0.1001 | snAgGblTrap Message | Critical | <p>The actual temperature reading on the device is below the warning temperature threshold.</p> <p>Samples trap message:</p> <pre>Switch Fabric 2 temperature 30.2 C degrees is normal</pre> <pre>Switch Fabric 2 temperature 30.2 C degrees is normal</pre> <pre>Linecard Module %d PCB temperature 30.2 C degrees is normal</pre> <pre>Linecard Module %d XPP temperature 30.2 C degrees is normal</pre> <pre>Active mgmt CPU temperature 30.2 C degrees is normal</pre> <pre>Standby mgmt CPU temperature 30.2 C degrees is normal</pre> |
| snTrapCAMOverflow brcdlp.0.1002 | snAgGblTrap Message | Alerts | <p>One of the IP CAM levels is full.</p> <p>Sample trap message:</p> <pre>NO MORE FREE CAM SPACE for IP level <level>.</pre> |
| snTrapNPILKNCRCError brcdlp.0.1113 | snAgGblTrap Message | Informational | <p>This trap is generated when packet drops are observed in 2x100G ports because of Interlaken CRC errors.</p> <p>Sample trap message Extreme Trap: 2x100 NP Interlaken CRC Error Detected</p> |
| snTrapARPMACMovement brcdlp.0.1114 | snAgGblTrap Message | Informational | <p>This trap is generated when the MAC address associated with a host IP is changed.</p> <p>Sample trap message:</p> <pre>Extreme Trap: ARP MAC Movement Detected</pre> |
| snTrapChassisFanSpeed Low brcdlp.0.1200 | snAgGblTrap Message | Informational | <p>The speed of all chassis fans changed to low.</p> <p>Sample trap message:</p> <pre>System: Set fan speed to LOW (50%%)</pre> |
| snTrapChassisFanSpeed Medium brcdlp.0.1201 | snAgGblTrap Message | Informational | <p>The speed of all chassis fans changed to medium.</p> <p>Sample trap message:</p> <pre>System: Set fan speed to MED (75%%)</pre> |
| snTrapChassisFanSpeed MedHigh brcdlp.0.1202 | snAgGblTrap Message | Informational | <p>The speed of all chassis fans changed to medium high.</p> <p>Sample trap message:</p> |

| Trap name and number | Varbinds | Severity | Description and trap message |
|--------------------------------------------------|----------------------------------------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | System: Set fan speed to MED-HI (90%%) |
| snTrapChassisFanSpeed High brcdlp.0.1203 | snAgGblTrap Message | Informational | The speed of all the chassis fans changed to high. Sample trap message: System: Set fan speed to HI (100%%) |
| fdryTrapLagDeployed brcdlp.0.1204 | fdryLAG Name, fdryLink Aggregation GroupIfIndex | Informational | The SNMP trap is generated when a LAG is deployed. |
| fdryTrapLagUndeployed brcdlp.0.1205 | fdryLAG Name, fdryLink Aggregation GroupIfIndex | Informational | The SNMP trap is generated when a LAG is undeployed. |
| snTrapFIPSModeEnable brcdlp.0.1207 | snAgGbl Trap Message | Informational | The SNMP trap is generated when Federal Information Processing Standard (FIPS) mode is enabled. |
| snTrapFIPSModeDisable brcdlp.0.1208 | snAgGbl TrapMessage | Informational | The SNMP trap is generated when FIPS mode is disabled. |
| snTrapFIPSHostZeroized brcdlp.0.1209 | snAgGblTrap Message | Informational | The SNMP trap is generated when host keys are set to zero(0) in FIPS mode. |
| snTrapFIPSSharedSecret Zeroized brcdlp.0.1210 | snAgGblTrap Message | Informational | The SNMP trap is generated when shared secrets are set to zero(0) in FIPS mode. |
| snTrapFIPSPOSTStatus brcdlp.0.1211 | snAgGblTrap Message | Informational | The SNMP trap is generated after POST. |
| snTrapFIPSCryptoModule Failure brcdlp.0.1212 | snAgGblTrap Message | Critical | The SNMP trap is generated when the cryptographic module fails. |
| snTrapLicense2PortNot Supported brcdlp.0.1213 | snAgGblTrap Message | Notifications | The SNMP trap is generated when at two-port licenses cannot be applied due to hardware limitation. |
| snTrapOpticalMonitoringOK brcdlp.0.1214 | snAgGblTrap Message, ifIndex | Informational | The SNMP trap is generated when an interface transitions from an error state to the normal state because the alarms or warnings are below the threshold value. The snTrapOpticalMonitoringError is generated when the interface transitioned to the error state. The first varbind snAgGblTrapMessage, will have a detailed message on the cause of event. The second varbind ifIndex, points to the affected interface that originates the event. If an event does not have associated port or has multiple associated ports, then ifIndex has the maximum value 0x7fffff. |
| snTrapSFMAccessOK brcdlp.0.1215 | snAgGblTrap Message | Informational | The SNMP trap is generated when system can successfully access an SFM Fabric Element (FE). The snTrapSFMAccessError is generated when the system failed to access the FE. |

| Trap name and number | Varbinds | Severity | Description and trap message |
|------------------------------------------------|------------------------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| snTrapUpgradeSingleCmd Start brcdlp.0.1216 | snAgGblTrap Message | Informational | The SNMP trap is generated when a single-command package upgrade is started. This happens after a successful download and validation of the manifest file and before the first image download takes place. |
| snTrapUpgradeSingleCmd Done brcdlp.0.1217 | snAgGblTrap Message | Informational | The SNMP trap is generated when a single-command package upgrade is completed or partially completed. Refer to brcdSwPackageLoadResultTable for the results of the upgrade. |
| snTrapAutoUpgradeStart brcdlp.0.1218 | snAgentBrd Index | Informational | The SNMP trap is generated when an auto-upgrade on a line card is started. |
| snTrapAutoUpgradeDone brcdlp.0.1219 | snAgentBrd Index, snAgGblTrap Message | Informational | The SNMP trap is generated when an auto-upgrade of the interface module is completed. |
| snTrapTcamParityError brcdlp.0.1220 | snAgentBrd Index, snAgGblTrap Message | Alerts | The SNMP trap is generated when the TCAM parity errors are detected on LP. |
| snTrapLPResetOnTcam Error brcdlp.0.1221 | snAgentBrd Index, snAgGblTrap Message | Critical | The SNMP trap is generated when the LP reset happens due to TCAM parity errors crossing the threshold or TCAM integrity check failure. |
| snTrapSTPRootGuard Violation brcdlp.0.1230 | snAgGblTrap Message | Informational | The SNMP trap is generated when STP Root Guard Violation occurs on a port. Sample trap message: Foundry Trap: STP Root Guard Violation |
| snTrapRSTPRootGuard Violation brcdlp.0.1231 | snAgGblTrap Message | Informational | The SNMP trap is generated when RSTP Root Guard Violation occurs on a port. Sample trap message: Foundry Trap: RSTP Root Guard Violation |

Unsupported MIB Objects

- [Unsupported MIBs](#)..... 463
- [Traps](#)..... 471

Unsupported MIBs

The following table lists the proprietary and standard MIB objects that are not supported on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Object | Object identifier |
|---------------------------------|-------------------------------|

Traps

The following table lists the traps that are added in the NetIron IP MIB file but not supported on the MLX Series, XMR Series, MLX Series, CES 2000 Series, and CER 2000 Series devices.

| Trap name | Trap number |
|---------------------------------------------|-------------|
| snTrapChasPwrSupply | brcdlp.0.1 |
| snTrapLockedAddressViolation | brcdlp.0.2 |
| snTrapOspfIfStateChange | brcdlp.0.3 |
| snTrapOspfVirtIfStateChange | brcdlp.0.4 |
| snOspfNbrStateChange | brcdlp.0.5 |
| snOspfVirtNbrStateChange | brcdlp.0.6 |
| snOspfIfConfigError | brcdlp.0.7 |
| snOspfVirtIfConfigError | brcdlp.0.8 |
| snOspfIfAuthFailure | brcdlp.0.9 |
| snOspfVirtIfAuthFailure | brcdlp.0.10 |
| snOspfIfRxBadPacket | brcdlp.0.11 |
| snOspfVirtIfRxBadPacket | brcdlp.0.12 |
| snOspfTxRetransmit | brcdlp.0.13 |
| ospfVirtIfTxRetransmit | brcdlp.0.14 |
| snOspfOriginateLsa | brcdlp.0.15 |
| snOspfMaxAgeLsa | brcdlp.0.16 |
| snOspfLsdbOverflow | brcdlp.0.17 |
| snOspfLsdbApproachingOverflow | brcdlp.0.18 |
| snTrapL4MaxSessionLimitReached | brcdlp.0.19 |
| snTrapL4TcpSynLimitReached | brcdlp.0.20 |
| snTrapL4RealServerUp | brcdlp.0.21 |
| snTrapL4RealServerDown | brcdlp.0.22 |
| snTrapL4RealServerPortUp | brcdlp.0.23 |
| snTrapL4RealServerPortDown | brcdlp.0.24 |
| snTrapL4RealServerMaxConnectionLimitReached | brcdlp.0.25 |
| snTrapL4BecomeStandby | brcdlp.0.26 |
| snTrapL4BecomeActive | brcdlp.0.27 |
| snTrapLockedAddressViolation2 | brcdlp.0.32 |
| snTrapFsrpIfStateChange | brcdlp.0.33 |
| snTrapL4GslbRemoteUp | brcdlp.0.39 |
| snTrapL4GslbRemoteDown | brcdlp.0.40 |
| snTrapL4GslbRemoteControllerUp | brcdlp.0.41 |
| snTrapL4GslbRemoteControllerDown | brcdlp.0.42 |
| snTrapL4GslbHealthCheckIpUp | brcdlp.0.43 |
| snTrapL4GslbHealthCheckIpDown | brcdlp.0.44 |
| snTrapL4GslbHealthCheckIpPortUp | brcdlp.0.45 |
| snTrapL4GslbHealthCheckIpPortDown | brcdlp.0.46 |
| snTrapL4FirewallBecomeStandby | brcdlp.0.47 |
| snTrapL4FirewallBecomeActive | brcdlp.0.48 |
| snTrapL4FirewallPathUp | brcdlp.0.49 |
| snTrapL4FirewallPathDown | brcdlp.0.50 |
| snTrapL4ContentVerification | brcdlp.0.55 |

| Trap name | Trap number |
|-------------------------------------------------|--------------|
| snTrapBgpPeerUp | brcdlp.0.65 |
| snTrapBgpPeerDown | brcdlp.0.66 |
| snTrapL4RealServerResponseTimeLowerLimit | brcdlp.0.67 |
| snTrapL4RealServerResponseTimeUpperLimit | brcdlp.0.68 |
| snTrapL4TcpAttackRateExceedMax | brcdlp.0.69 |
| snTrapL4TcpAttackRateExceedThreshold | brcdlp.0.70 |
| snTrapL4ConnectionRateExceedMax | brcdlp.0.71 |
| snTrapL4ConnectionRateExceedThreshold | brcdlp.0.72 |
| snTrapMacAuthEnable | brcdlp.0.85 |
| snTrapMacAuthDisable | brcdlp.0.86 |
| snTrapMacAuthMACAccepted | brcdlp.0.87 |
| snTrapMacAuthMACRejected | brcdlp.0.88 |
| snTrapMacAuthPortDisabled | brcdlp.0.89 |
| snTrapL4RealServerPortMaxConnectionLimitReached | brcdlp.0.119 |
| snTrapL4LinkDown | brcdlp.0.120 |
| snTrapL4LinkUp | brcdlp.0.121 |
| snTrapPortPriorityChange | brcdlp.0.122 |
| snTrapAutoPortDisableTrigger | brcdlp.0.123 |
| snTrapAutoPortDisableRelease | brcdlp.0.124 |
| snTrapPnPStatusChange | brcdlp.0.125 |
| snTrapWirelessIsrpPeerStateChange | brcdlp.0.126 |
| snTrapWirelessStationStateChange | brcdlp.0.127 |
| snTrapWirelessStationRoamingEventTriggered | brcdlp.0.128 |
| snTrapWirelessSappStateChange | brcdlp.0.129 |
| snTrapExternalPowerConnectionStatus | brcdlp.0.130 |
| snTrapWebAuthEnabled | brcdlp.0.139 |
| snTrapWebAuthDisabled | brcdlp.0.140 |
| snTrapIpConfigChange | brcdlp.0.141 |
| snTrapIpv6ConfigChange | brcdlp.0.142 |
| snTrapMacAuthRadiusTimeout | brcdlp.0.143 |
| snTrapDot1xRadiusTimeout | brcdlp.0.144 |
| snTrapMacBasedVlanEnabled | brcdlp.0.147 |
| snTrapMacBasedVlanDisabled | brcdlp.0.148 |
| snTrapChasFanNormal | brcdlp.0.149 |
| snTrapMstpBPDUGuardDetect | brcdlp.0.153 |
| snTrapErrorDisableAction | brcdlp.0.154 |
| snTrapStaticMulticastMacConfigAdd | brcdlp.0.158 |
| snTrapStaticMulticastMacConfigRemove | brcdlp.0.159 |
| snTrapPortLoopDetection | brcdlp.0.161 |
| snTrapNoFreeTcamEntry | brcdlp.0.162 |
| snTrapStackingMasterElected | brcdlp.0.163 |
| snTrapStackingUnitAdded | brcdlp.0.164 |

| Trap name | Trap number |
|------------------------------------|--------------|
| snTrapStackingUnitDeleted | brcdlp.0.165 |
| snTrapStackingChasPwrSupplyOK | brcdlp.0.166 |
| snTrapStackingChasPwrSupplyFailed | brcdlp.0.167 |
| snTrapStackingChasFanNormal | brcdlp.0.168 |
| snTrapStackingChasFanFailed | brcdlp.0.169 |
| snTrapStackingManagementMACChanged | brcdlp.0.170 |
| snTrapStackingTemperatureWarning | brcdlp.0.171 |
| snTrapChasPwrSupplyRPSAdd | brcdlp.0.174 |
| snTrapChasPwrSupplyRPSRemove | brcdlp.0.175 |
