# Preface

---

Read the following topics to learn about:

- The meanings of text formats used in this document.
- Where you can find additional information and help.
- How to reach us with questions and comments.

## Text Conventions

---

Unless otherwise noted, information in this document applies to all supported environments for the products in question. Exceptions, like command keywords associated with a specific software version, are identified in the text.

When a feature, function, or operation pertains to a specific hardware product, the product name is used. When features, functions, and operations are the same across an entire product family, such as Extreme Networks switches or SLX routers, the product is referred to as *the switch* or *the router*.

**Table 1: Notes and warnings**

Icon	Notice type	Alerts you to...
	Tip	Helpful tips and notices for using the product
	Note	Useful information or instructions
	Important	Important features or instructions
	Caution	Risk of personal injury, system damage, or loss of data
	Warning	Risk of severe personal injury

**Table 2: Text**

Convention	Description
screen displays	This typeface indicates command syntax, or represents information as it is displayed on the screen.
The words <i>enter</i> and <i>type</i>	When you see the word <i>enter</i> in this guide, you must type something, and then press the Return or Enter key. Do not press the Return or Enter key when an instruction simply says <i>type</i> .
<b>Key names</b>	Key names are written in boldface, for example <b>Ctrl</b> or <b>Esc</b> . If you must press two or more keys simultaneously, the key names are linked with a plus sign (+). Example: Press <b>Ctrl+Alt+Del</b>
<i>Words in italicized type</i>	Italics emphasize a point or denote new terms at the place where they are defined in the text. Italics are also used when referring to publication titles.
<b>NEW!</b>	New information. In a PDF, this is searchable text.

**Table 3: Command syntax**

Convention	Description
<b>bold</b> text	Bold text indicates command names, keywords, and command options.
<i>italic</i> text	Italic text indicates variable content.
[ ]	Syntax components displayed within square brackets are optional. Default responses to system prompts are enclosed in square brackets.
{ <b>x</b>   <b>y</b>   <b>z</b> }	A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options.
<b>x</b>   <b>y</b>	A vertical bar separates mutually exclusive elements.
< >	Nonprinting characters, such as passwords, are enclosed in angle brackets.
...	Repeat the previous element, for example, <i>member</i> [ <i>member</i> ...].
\	In command examples, the backslash indicates a “soft” line break. When a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.

## Documentation and Training

Find Extreme Networks product information at the following locations:

[Current Product Documentation](#)

[Release Notes](#)

[Hardware and Software Compatibility](#) for Extreme Networks products

[Extreme Optics Compatibility](#)

[Other Resources](#) such as articles, white papers, and case studies

## Open Source Declarations

Some software files have been licensed under certain open source licenses. Information is available on the [Open Source Declaration](#) page.

## Training

Extreme Networks offers product training courses, both online and in person, as well as specialized certifications. For details, visit the [Extreme Networks Training](#) page.

## Help and Support

---

If you require assistance, contact using one of the following methods:

### [Extreme Portal](#)

Search the GTAC (Global Technical Assistance Center) knowledge base; manage support cases and service contracts; download software; and obtain product licensing, training, and certifications.

### [The Hub](#)

A forum for customers to connect with one another, answer questions, and share ideas and feedback. This community is monitored by employees, but is not intended to replace specific guidance from GTAC.

### [Call GTAC](#)

For immediate support: (800) 998 2408 (toll-free in U.S. and Canada) or 1 (408) 579 2800. For the support phone number in your country, visit [www.extremenetworks.com/support/contact](http://www.extremenetworks.com/support/contact).

Before contacting for technical support, have the following information ready:

- Your service contract number, or serial numbers for all involved products
- A description of the failure
- A description of any actions already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

## Subscribe to Product Announcements

You can subscribe to email notifications for product and software release announcements, Field Notices, and Vulnerability Notices.

1. Go to [The Hub](#).
2. In the list of categories, expand the **Product Announcements** list.
3. Select a product for which you would like to receive notifications.
4. Select **Subscribe**.
5. To select additional products, return to the **Product Announcements** list and repeat steps 3 and 4.

You can modify your product selections or unsubscribe at any time.

## Send Feedback

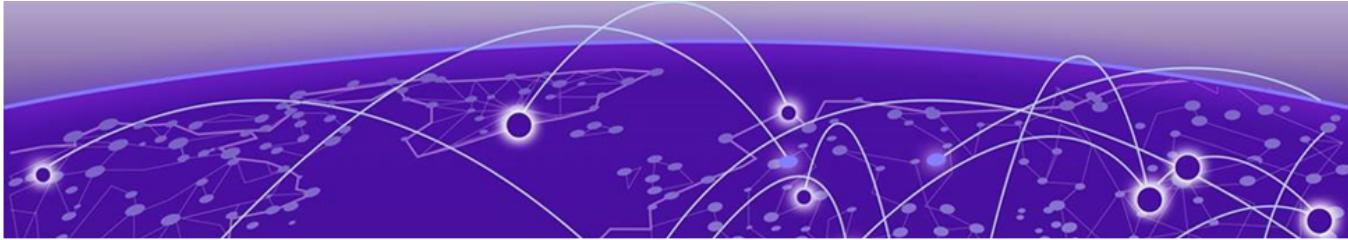

---

The User Enablement team at has made every effort to ensure that this document is accurate, complete, and easy to use. We strive to improve our documentation to help you in your work, so we want to hear from you. We welcome all feedback, but we especially want to know about:

- Content errors, or confusing or conflicting information.
- Improvements that would help you find relevant information.
- Broken links or usability issues.

To send feedback, email us at .

Provide as much detail as possible including the publication title, topic heading, and page number (if applicable), along with your comments and suggestions for improvement.

# Introduction

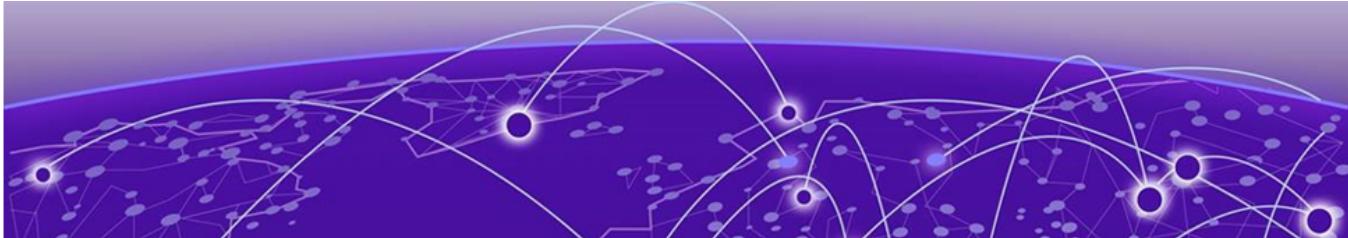

---

This document provides guidance for migrating from ERS Edge to a Universal (Fabric/VSP) Edge solution, including the deployment of multi-area boundary nodes, in systematic steps. The configurations and design practices documented here are fully validated and conform to Extreme best practices and recommendations.

Review other reference materials for a deeper understanding of the concepts described in this document.

Not all variations of the migration are covered in this document.

This document assumes that the reader has a good understanding of switching and routing features.

# Migration Overview

---

[Scenario on page 10](#)

[Topology on page 10](#)

[Hardware & Versions on page 12](#)

[Migration Summary on page 12](#)

The migration approach documented here uses a reference topology. A new campus with VSP Edge is brought up with connectivity first, followed by services and end user access. The summary of the migration steps is in [Migration Summary on page 12](#).

## Scenario

---

This document incorporates the following scenario:

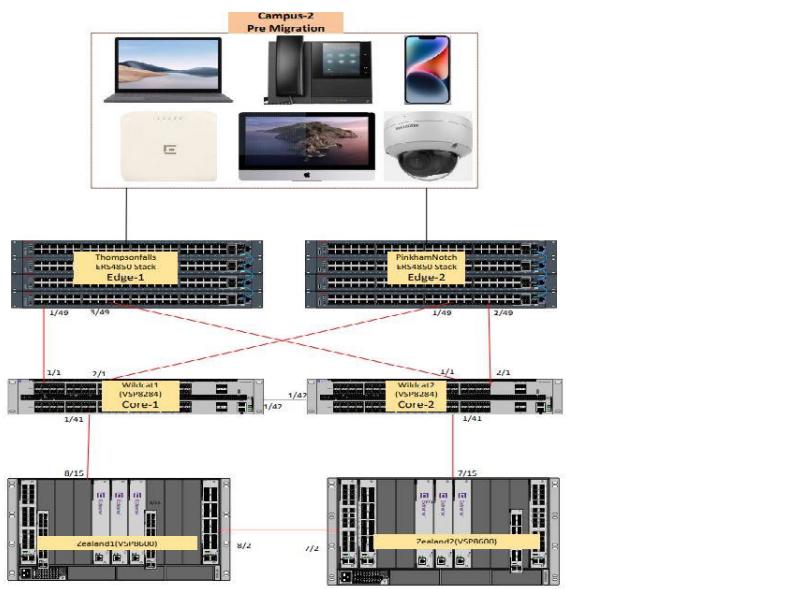

- Migrating from ERS4850 stacks and VSP8284s to 5420 running Fabric Engine and VSP7400s.
- The attached end client subnets are migrated retaining the same subnet/VLAN structure in the new fabric area.
- Uses *NOS Persona Change* in ZTP to convert Universal switches to Fabric Engine.
- Utilizes *Onboard Mgmt CLIP* workflow to onboard the Fabric Engine switches to their Site and assign a Mgmt CLIP.
- Utilizes *Onboard VSP* workflow to configure radius on the switch, add to NAC, and configure autosense parameters.
- Simplified multi-area redistribution command set.
- Utilizes Multicast-Lite configuration for multicast traffic.
- Utilizes NAC to dynamically create and assign VLANs/I-SIDs to ports after client authentication using new Post-VOSS 8.8 Radius VSA format.

## Topology

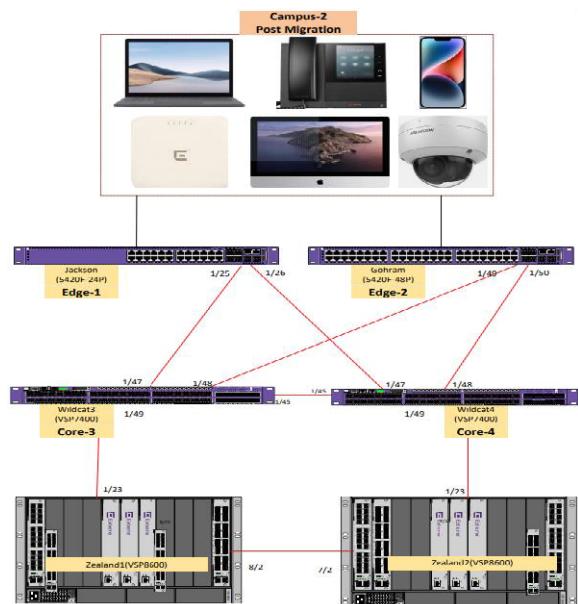

---

The reference topology illustrates a section of an enterprise network with Fabric Connect Core and an ERS Campus Edge. This campus with ERS Edge is migrated to Universal Fabric Engine (VSP) Edge. The key technology is Extreme Fabric Connect with Multi Area. The VSP Edge campus has two linked VSP7400 units, configured as BEBs, which is critical to deploy multi-area and are directly connected to dual homed 5420 running VOSS, functioning as the access layer.

## Pre-Migration Topology

## Post-Migration Topology

## Hardware & Versions

---

### Pre-Migration Hardware & Versions:

Product	FW Version	Enabled License Level	Naming
ERS4850-PreMigration	5.12.6.007	N/A	Thompson Falls
ERS4850-PreMigration	5.12.6.007	Advanced	Pinkham Notch
VSP8284XSQ-PreMigration	8.10.0.0	Premier	WildCat1
VSP8284XSQ-PreMigration	8.10.0.0	Premier	WildCat2
XIQ-C	10.03.02.0019	Permanent License	
XIQ-SE	23.4.12.3	EVAL	
NAC1-IA-V	23.4.12.3	EVAL	
NAC2- IA-V	23.4.12.3	EVAL	

### Post-Migration Hardware & Versions:

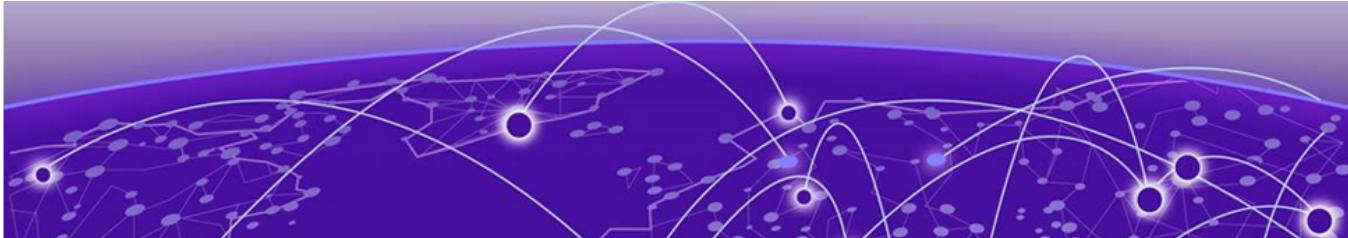

Product	FW Version	Enabled License Level	Naming
X5420-PostMigration	VOSS5420.8.10.1.0	Premier	Jackson
X5420-PostMigration	VOSS5420.8.10.1.0	Premier	Gorham
VSP7400-PostMigration	VOSS5420.8.10.1.0	Premier	WildCat3
VSP7400-PostMigration	VOSS5420.8.10.1.0	Premier	WildCat4

## Migration Summary

---

1. Configure Network connectivity and management on 7400's (Wildcat 3 and Wildcat 4)
2. Configure Vlans and DHCP relay on the 7400's
3. Onboard 7400's to XIQ-SE
4. Import Workflows to XIQ-SE
5. Configure workflows in XIQ-SE
6. Configure NAC in XIQ-SE
7. Configure ZTP+ in XIQ-SE
8. Onboard Edge switches (Gorham and Jackson)

9. Move Clients
10. Network Validation

# Core (VSP7400) configurations

[Configure Core connectivity on page 14](#)

[Redistribute Multi-Area on Wildcat3 & Wildcat4 on page 27](#)

[Connect Topology connections \(Core to Network\) on page 27](#)

## Configure Core connectivity

### Note

When you log in for the first time, you are prompted to set the CLI's default username and password. Set this to the desired fallback login information.

```

## Redistribute Multi-Area on Wildcat3 & Wildcat4

```
router isis
redistribute direct
redistribute direct enable
multi-area ip redistribute unicast
multi-area ip redistribute unicast enable
multi-area ip redistribute routed-multicast
multi-area ip redistribute routed-multicast enable
isis multi-area ip apply redistribute unicast
isis multi-area ip apply redistribute routed-multicast
multi-area 12 redistribute i-sid permit-all
isis multi-area 12 apply redistribute i-sid
isis apply redistribute direct
exit
write memory
```

## Connect Topology connections (Core to Network)

Connect the Network Links between the Core 7400s and Zealand (Uplink Router) as shown in the diagram.

Connect the inter 7400 link as shown in the diagram.

Refer to [Topology](#) on page 10.

### Note

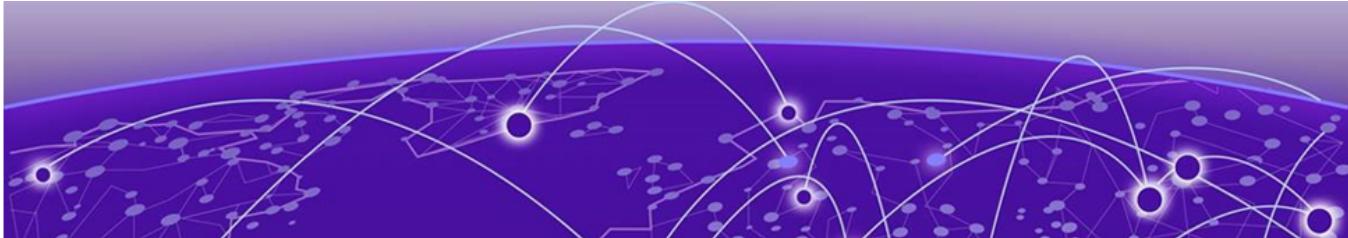

Do not make connections from Cores to New Edges until [Onboard New Edge Switches](#) on page 47 is complete, and Edges to Clients until [Move Client Devices](#) on page 47 is complete.

Run the following commands to verify that devices have all the expected isis adjacencies and can reach the ISIS remote area.

```
show isis adjacencies:
```

**show ip route**

In the output for `show ip route` we expect to see all subnets from the home area. To verify routing is working, pick a few subnets and ping their default gateways using the management interface on Wildcat3 or Wildcat4.

# XIQ-SE Management and Access Control

[Add 7400's to XIQ-SE \(Wildcat 3 and Wildcat 4\) on page 29](#)

[Add Both 7400's to XIQ-SE Control on page 30](#)

[Add 7400's to XIQ-SE Analytics on page 31](#)

[Verify XIQ-SE SNMP and RADIUS connectivity with the 7400's on page 34](#)

[Import the Onboard MGMT Clip and Onboard VSP workflows into XIQ-SE on page 35](#)

[Configure Workflows in XIQ-SE on page 36](#)

[Configure NAC Rules in XIQ-SE on page 40](#)

[Configure ZTP+ on page 44](#)

[Onboard New Edge Switches on page 47](#)

[Move Client Devices on page 47](#)

## Add 7400's to XIQ-SE (Wildcat 3 and Wildcat 4)

In XIQ-SE navigate to **Network > Devices > Campus 2**.

Select **Add Device**.

Status	Name	Site	IP Address	Poll Status	Poll Details	Device Type	Family	Firmware	Reference	Connector
Available	Pinkham_Notch	/World/OZ Campus 2	10.2.254.40	Up: 1807 Down: 0	ERS4850GTS-PWR+	ERS Series	v5.12.6.007			
Available	Thompson_Falls	/World/OZ Campus 2	10.2.254.30	Up: 1807 Down: 0	ERS4850GTS-PWR+	ERS Series	v5.12.6.007			
Available	Wildcat1	/World/OZ Campus 2	10.2.254.10	Up: 1807 Down: 0	VSP-8284XSQ	VSP Series	v8.8.1.0			
Available	Wildcat2	/World/OZ Campus 2	10.2.254.20	Up: 1808 Down: 0	VSP-8284XSQ	VSP Series	v8.8.1.0			

Fill in the pop-up window with the settings in the screenshots below. Repeat for both 7400's:

Add Device

---

IP Address:	10.2.254.12
Profile:	OZ_V3
Nickname:	Wildcat 3
<input type="checkbox"/> Poll Status Only	
<input type="checkbox"/> Run Site's Add Actions	

Add Device

---

IP Address:	10.2.254.13
Profile:	OZ_V3
Nickname:	Wildcat 4
<input type="checkbox"/> Poll Status Only	
<input type="checkbox"/> Run Site's Add Actions	

## Add Both 7400's to XIQ-SE Control

In XIQ-SE navigate to **Control > Access Control > Engines > Engine Groups > Default > Switches**.

Select **Add**.

IP Address	Nickname	Status	System Name	Primary Engine	Secondary Engine	Policy/VLAN	Policy Domain	Authentication Access Type

Fill in the pop-up window with the settings displayed in the following screenshot. To add both switches at the same time expand **My Network > All Devices**, then check both Wildcat 3 and 4.

### Note

When adding switches to NAC if you expand Campus 2, Wildcat 3 and 4 might not show up for an extended period of time. Use **All Devices** to find and add both.

## Add 7400's to XIQ-SE Analytics

In XIQ-SE navigate to **Analytics > Configuration > Engines > OZPurview > Configuration**.

Click **Add**.

Enter the settings from screenshots in the **Select Application Telemetry Source Device** window. Both 7400's must be added separately.

**Enforce Purview** using the button at the bottom right of the screen

## Verify XIQ-SE SNMP and RADIUS connectivity with the 7400's

In XIQ-SE navigate to **Networks > Devices > Campus 2**.

To verify SNMP connectivity, check the symbol next to Wildcat 3 and 4. Any symbol other than a white circle (device hasn't checked in) or a red down arrow (device unreachable) means the device is up and has SNMP contact

Status	Name	Site	IP Address	Poll Status	Poll Details	Device Type	Family	Firmware	Referer
Yellow	Wildcat1	/World/OZ Campus 2	10.2.254.10	Available: 1...	Up: 181 Do...	VSP-8284XSQ	VSP Series	8.10.0.0	✓
Yellow	Wildcat2	/World/OZ Campus 2	10.2.254.20	Available: 1...	Up: 181 Do...	VSP-8284XSQ	VSP Series	8.10.0.0	✓
Red	Wildcat3	/World/OZ Campus 2	10.2.254.12	Available: 1...	Up: 181 Do...	VSP-7400-4BY-8C	VSP Series	8.10.0.0	✓
Red	Wildcat4	/World/OZ Campus 2	10.2.254.13	Available: 1...	Up: 181 Do...	VSP-7400-4BY-8C	VSP Series	8.10.0.0	✓

To Verify RADIUS connectivity

In XIQ-SE navigate to **Networks > Devices > Campus 2**.

Right click on Wildcat 3 and select **terminal** – We expect a terminal window to pop up. It may take several seconds before you are given either the devices terminal prompt if successful, or an error if not. If we get the devices prompt RADIUS is working as this test uses the CLI credentials configured in the OZV3 SNMP profile to attempt an SSH connection.

## XIQ-SE Management and Access Control

Name	Status	IP Address	Poll Status	Poll Details	Device Type	Family	Firmware
Pinkham	Available: 99%	10.2.254.40	Up: 1991 Do...	ERS4850GTS-PWR+	ERS Series	v5.12.6.007	
Thompson	Available: 100%	10.2.254.30	Up: 1992 Do...	ERS4850GTS-PWR+	ERS Series	v5.12.6.007

## Import the *Onboard MGMT Clip* and *Onboard VSP* workflows into XIQ-SE

Download Workflow from the Extreme Networks Github Page

### Note

The Change Persona workflow is only needed if you are running XIQ-SE 22 or older. For this MOP we are running version 22 so we will need the Change Persona workflow.

Starting in XIQ-SE 23.2 Changing a universal switch's persona can be done in the ZTP+ tab.

**Note**

Workflow version will be increment by 1 for each save commit in workflow input.

[https://github.com/extremenetworks/ExtremeScripting/blob/master/XMC\\_XIQ-SE/oneview\\_workflows/README.md](https://github.com/extremenetworks/ExtremeScripting/blob/master/XMC_XIQ-SE/oneview_workflows/README.md)

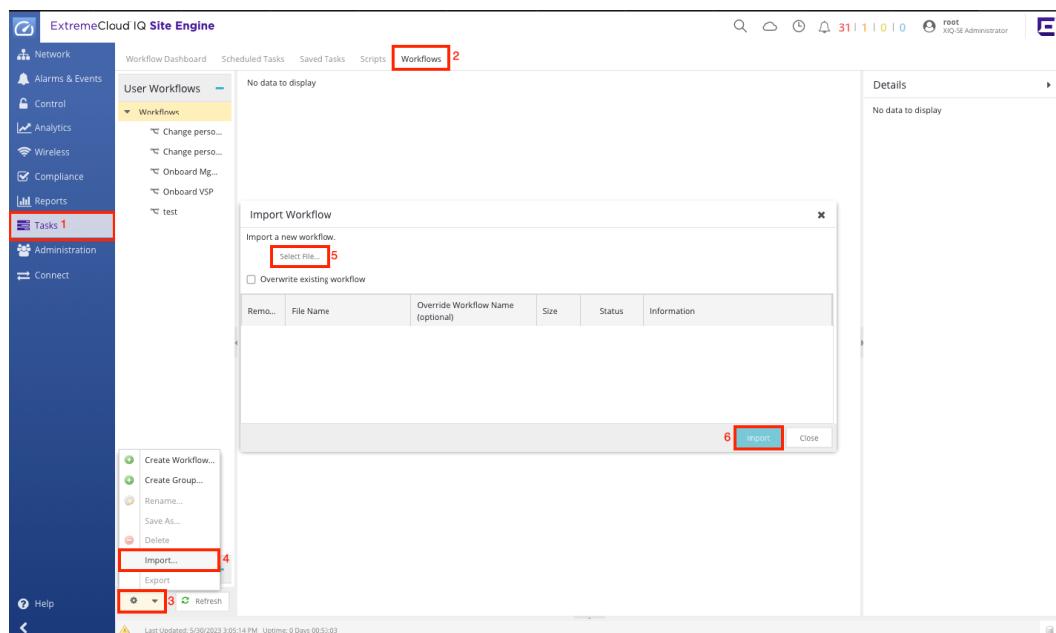

## Upload the Workflow to XIQ-SE

**Note**

The workflows we are using require root access to XIQ-SE.

To upload workflows to XIQ-SE follow the steps below.

Navigate to **Tasks > Workflows** > click on **Setting gear button > Import**.

Provide the **Authorization Groups** and **Category** to Workflow.

## Configure Workflows in XIQ-SE

### Create Custom Variables for the Onboard VSP workflow

Custom variables are required to be configured for each service requiring a VLAN or I-SID at the site. These are used during the initial onboarding and configuration of the new Fabric Engines by the workflows.

In XIQ-SE Navigate to **Network > Devices > OZ Campus 2 > OZ Campus 2 > Custom Variables**.

Input the following custom variables as shown in the screenshot:

### SiteRadiusTemplate

Category: Site

Site: Global

Name: SiteRadiusTemplate

Type: String

Value: VSPEdge

Scope			Variable		
Category	Site	Type	Name ↑	Type	Value
Site	Global		SiteRadiusTemp	String	VSPEdge

### Create a CSV to give permanent IP's to onboarding switches

We need to create a CSV, then upload it to XIQ-SE's file structure. The CSV has three fields as shown in the table below. These values are set using the workflows we have uploaded in previous steps. Each switch to be onboarded needs its own entry in this CSV.

1. Create CSV using the data in the table below. Name it 'mgmtdataC2.csv'
2. SFTP 'mgmtdataC2.csv' to XIQ-SE. It can be left in the root directory. Note the directory containing the csv, 'pwd' shows the current file path.
3. In XIQ-SE's GUI Navigate the to **Tasks > Workflows > Onboard Mgmt CLIP > Details > Inputs**.
4. Input the settings in the screenshot below into the workflows inputs

#### Example CSV Format:

serial number	mgmt clip	sysname
JA022113G-00014	10.22.255.31	Jackson
JA142233G-00320	10.22.255.32	Gorham

#### Example Workflow Inputs:

**Details**

---

General   Variables   **Inputs**   Outputs   Menus   Network OS

 Manage Inputs...

**CSV data file:**  
/root/mgmtdataC2.csv

**Index into CSV file:**  
Serial Number

**Mgmt CLIP VRF:**  
GlobalRouter

**Mgmt CLIP IP:**  
\$<mgmt clip>

**Existing mgmt VLAN IP:**  
Delete

**System Name to configure on device:**  
\$<sysname>

**Follow on workflow notes:**  
If it is desired to launch another workflow after this one has completed, provide the workflow path/name like for example (without the quotes): "Provisioning/Onboard VSP"

**Follow on workflow to execute:**  
Provisioning/Onboard VSP

## Edit inputs for the *Onboard VSP* workflow in XIQ-SE

In XIQ-SE Navigate to **Tasks > Workflows > Onboard VSP > Details > Inputs.**

Fill in the workflow inputs as seen in the screenshot below. DVR Leaf, NAC, and RADIUS are dropdowns, the rest are fields for strings. In additional CLI commands we input the custom variables we created earlier for our VLAN/I-SID's.

**Details**

---

General   Variables   **Inputs**   Outputs   Menus   Network OS

Manage Inputs...

**DVR Leaf:**  
disable

**Network Access Control - NAC:**  
**enable**

**NAC Notes:**  
Inputs below are required if NAC is enabled. Location Group name is optional. To configure a given Engine, of the NAC Engine Group, as primary RADIUS server on the switch, add "primary" to any of userData1-4 for that Engine under its Device Annotation.

**NAC Engine Group name:**  
**Default**

**RADIUS Attributes Template name:**  
**#{SiteRadiusTemplate}**

**RADIUS Shared Secret:**  
\*\*\*\*\*

**On switch create RADIUS server for:**  
**eapol cli**

Input the commands below in the **additional CLI commands** box:

#### Note

Below commands are used in Multicast Vlans to Create VLAN Manually and enable multicast. Regular VLANs are created by Radius VSA used in Policies.

```
enable
config t
no auto-sense eapol voice lldp-auth
vlan create 2097 name "AV" type port-mstprstp 0
vlan i-sid 2097 120977
int vlan 2097
mvpn-isid 0
ip spb-multicast enable
exit
vlan create 2129 name "Students" type port-mstprstp 0
vlan i-sid 2129 121297
int vlan 2129
mvpn-isid 0
ip spb-multicast enable
exit
```

## Details

General Variables Inputs Outputs Menus Network OS

Manage Inputs...

	✖
--	---

### Auto-sense Wait Interval:

--

### Additional CLI commands:

```
enable
config t
no auto-sense eapol voice lldp-auth
vlan create 2097 name "AV" type port-mstprstp 0
```

## Add the Workflows to ZTP+ Onboarding

Uploaded Workflows must be added under Custom Configuration in the site to take effect.

To Add a Workflow to the Device onboarding procedure, follow the steps below:

Navigate to **Network > Devices > OZ Campus 2 > Actions > Custom Configuration > Add.**

Provide details of Vendor, Family, Topology and Task from drop down.

Custom Configuration				
Enabled	Vendor	Family	Topology	Task
<input checked="" type="checkbox"/>	Extreme	Universal Platform Fabric Engine	Any	Provisioning/Onboard Mgmt CLIP

## Configure NAC Rules in XIQ-SE

In XIQ-SE Navigate to **Control > Access Control > Configurations > Default > Rules.**

**Radius VSA Extreme Dynamic Client Assignments**

Update Organization 3 with below VSA format:

For Statically configured VLANs (Auto-sense Voice or Data VLANs or VLANs requiring multicast):

Extreme-Dynamic-Client-Assignments=pv=2097, ev=0, vni=120977, vn=AV

If VLAN Is not configured with multicast (spb-multicast enable) in 3.1.3 & 3.1.4 use below.

For all other VLANs that are created dynamically:

Extreme-Dynamic-Client-Assignments=create=vlan, pv=2064, ev=0, vni=120647, vn=Cameras

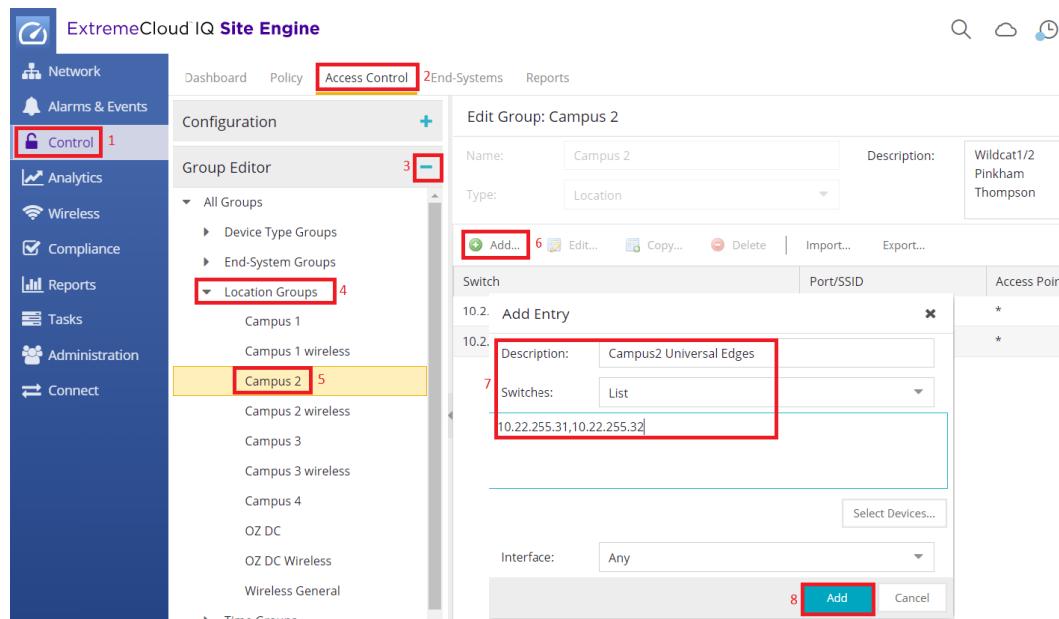

Edit Policy Mapping		Edit Policy Mapping	
Custom 1:	0	Custom 1:	0
Custom 2:	120977	Custom 2:	120647
Custom 3:		Custom 3:	
Custom 4:	AV	Custom 4:	Cameras
Custom 5:	0	Custom 5:	0
<b>RADIUS Attribute Lists</b>			
Organization 1:	Extreme-Dynamic-Config=DHCPSNOOP Extreme-Dynamic-Config=DAI Extreme-Dynamic-Config=SLPPGUARD Extreme-Dynamic-Config=IGMPSONOOP		
Organization 2:			
Organization 3:	Extreme-Dynamic-Client-Assignments=pv=2097, ev=0, vni=120977, vn=AV		
Radius VSA for Multicast VLAN			
Show Ad			
<a href="#">Preview with RADIUS Attributes</a>		<b>Save</b>	<b>Apply</b>
<a href="#">Preview with RADIUS Attributes</a>		<b>Save</b>	<b>Apply</b>

### Update Location Group:

Update Location Group (Campus 2), add IP addresses of Universal Edge switches.

To Update location group navigate to **Control > Access Control > Group Editor > Location Groups > Campus 2 > Add**.

Provide the required details. (Provide a list of CLIP IP addresses of switches to be automated. This group is used by Control to determine where an end user is connecting and what rules should be applied).

## Create Radius Attributes for ZTP+ Edge Switches

**Radius Attributes** required to authentication of Onboard Edge switches.

To create **Radius Attributes**, navigate to **Control > Access Control > Engines > Engine Groups > Default > double click any device > Radius Attributes to send > New > provide details.**

The screenshot shows the ExtremeCloud IQ Site Engine interface under the Access Control tab. On the left sidebar, the 'Control' section is selected. In the main pane, the 'Engines' section is expanded, showing the 'Default' engine group. A specific engine entry, '10.0.254.10' with the nickname 'Zealand1', is highlighted with a red box. The right side of the screen displays the 'Configure Device: 10.0.254.10' configuration page. Under the 'RADIUS Attributes to Send' section, a dropdown menu is open, showing 'Extreme VOSS' and a 'New...' option, which is also highlighted with a red box.

### Edit RADIUS Attribute Configuration

The dialog box shows the following fields:

- Name: VSPEdge (highlighted with a red box)
- Enable Port Link Control:
- Attributes:  (highlighted with a red box)
- Substitutions:  (highlighted with a red box)
- Content area (highlighted with a red box):
 

```
Service-Type=%MGMT_SERV_TYPE%
Passport-Access-Priority=%MGMT_SERV_TYPE%
%ORG3_RADIUS_ATTRS_LIST%
```

At the bottom are 'Save' and 'Close' buttons.

Radius details:

Name: VSPEdge

Attributes:

- Service-Type=%MGMT\_SERV\_TYPE%
- Passport-Access-Priority=%MGMT\_SERV\_TYPE%
- %ORG3\_RADIUS\_ATTRS\_LIST%

Enforce XIQ-SE Control - **Control > Access Control > Engines > Enforce > Enforce All .**

## Configure ZTP+

### Enable ZTP+ Globally

ZTP has to be enabled globally and per campus on XIQ-SE

To enable ZTP+ Globally, navigate to **Network > Devices > World > ZTP+ Device Defaults**.

Select **Use Discovered to IP and Management Interface**.

Select **Site Assignment Precedence to LLDP Only**.

Save the site using the save button at the bottom right

The screenshot shows the XIQ-SE Site Engine interface. On the left, there's a navigation sidebar with 'Network' selected. In the main area, under 'Devices', 'World' is selected. The 'ZTP+ Device Defaults' tab is active. The 'Basic Management' section contains fields for 'Use Discovered' (set to 'IP and Management'), 'Domain Name', 'System Contact', 'System Location', 'Admin Profile' (set to 'public\_v2\_Profile'), 'Poll Group' (set to 'Default'), 'Poll Type' (set to 'SNMP'), and 'Site Assignment Precedence' (set to 'LLDP Only'). Other tabs like 'Site Summary', 'Endpoint Locations', and 'FlexReports' are also visible.

Change the Configuration/Upgrade as below.

This screenshot shows the 'Configuration/Upgrade' section for the 'World' site. It includes fields for 'Configuration Updates' (set to 'Always'), 'Firmware Upgrades' (set to 'Never'), 'Update Date' (5/24/2023), 'Upgrade Date' (5/24/2023), 'Update Time' (05:00 AM), 'Upgrade Time' (05:00 AM), 'Update UTC Offset' (UTC-04:00), 'Upgrade UTC Offset' (UTC-04:00), and 'NOS Persona Change' (set to 'None'). The 'ZTP+ Device Defaults' tab is also highlighted.

### Enable ZTP+ for Campus 2

In XIQ-SE navigate to **Network > Devices > OZ Campus 2 > OZ Campus 2 > ZTP+ Device Defaults**.

- Use Discovered: IP and Management Interface
- Admin Profile: OZ\_V3

- Poll Type: SNMP
- NTP Server: 10.151.251.254

Save the Site using the button on the bottom right

Change the Configuration/Upgrade as below.

## Select ZTP+ Switching Protocols

To Configure switching protocols on Campus 2

Navigate to **Network > Devices > OZ Campus 2 > ZTP+ Device Defaults**.

**Uncheck MVRP :** to avoid learning MAC on wrong ports, which breaks ZTP+

**Check MSTP :** MSTP to enable protocol in port templates

Device Protocols			
Telnet: <input checked="" type="checkbox"/> Enabled	HTTP: <input checked="" type="checkbox"/> Enabled	LACP: <input type="checkbox"/> Enabled	MSTP: <input checked="" type="checkbox"/> Enabled
SSH: <input checked="" type="checkbox"/> Enabled	HTTPS: <input checked="" type="checkbox"/> Enabled	LLDP: <input checked="" type="checkbox"/> Enabled	POE: <input checked="" type="checkbox"/> Enabled
SNMP: <input checked="" type="checkbox"/> Enabled	FTP: <input checked="" type="checkbox"/> Enabled	MVRP: <input type="checkbox"/> Enabled	VXLAN: <input type="checkbox"/> Enabled

## Upload Firmware into XIQ-SE

Configured on: XIQ-SE

XIQ-SE can perform Switch firmware upgrades automatically during the on-boarding process.

Select the reference image for a particular model after uploading the necessary firmware files to the XIQ-SE.

### Note

When uploading firmware to XIQ-SE you are prompted to select the file transfer type the firmware uses to download to switches. Selecting the correct value is important as it changes where the firmware lives inside the XIQ-SE file structure. For Universal switches running Switch Engine TFTP is used by default so we need to place the Fabric Engine image used during the persona flip in the TFTP directory. If you would like to also upgrade devices already running Fabric Engine to the version being uploaded, we need to also upload it to the SFTP directory.

Navigate to **Network > Firmwares > Upload**.

Upload the firmware image to XIQ-SE

### Note

Upload Firmware using both the TFTP and the SFTP option during upload.

Select the required firmware image as reference image.

1. Navigate to **Network > Firmware > Expand the Device Type** navigation tree and select the folder for the type of device.
2. Right-click the firmware file you downloaded and select **Set as Reference Image**.

### Note

Use the SFTP image (/root/firmware/images) as the reference image rather than TFTP (/tftpboot/firmware/images/).

Name	Referenced	Image Name	Image Filename	Image Path
Device Type (15 images)		5420.8.10.0.0.voss	5420.8.10.0.0.voss	/root/firmware...
Avaya (Rapid City) (5 images)				
Avaya (SynOptics) (2 images)				
Extreme (8 images)				
Fabric Manager (1 image)				
Universal Platform EXOS (1 image)				
Universal Platform Fabric Engine (4 images)				
Fabric Engine 5320 (2 images)				
Fabric Engine 5420 (2 images)				
5420F-16MW-32P-4XE-FabricEngine (2 im...)				
5420.8.10.0.0.voss				
5420.8.10.0.0.voss(2)				

## Onboard New Edge Switches

Connect uplinks from all Edge switches.

1. Connect edge switch uplink to the primary 7400 (Wildcat 3)
2. Go the the XIQ-SE GUI and navigate to **Network > Campus 2**.
3. Wait for the edge switches to appear with their final names and Ips

During the onboarding process you can check the **Discovered** tab in XIQ-SE to monitor the device status.

## Move Client Devices

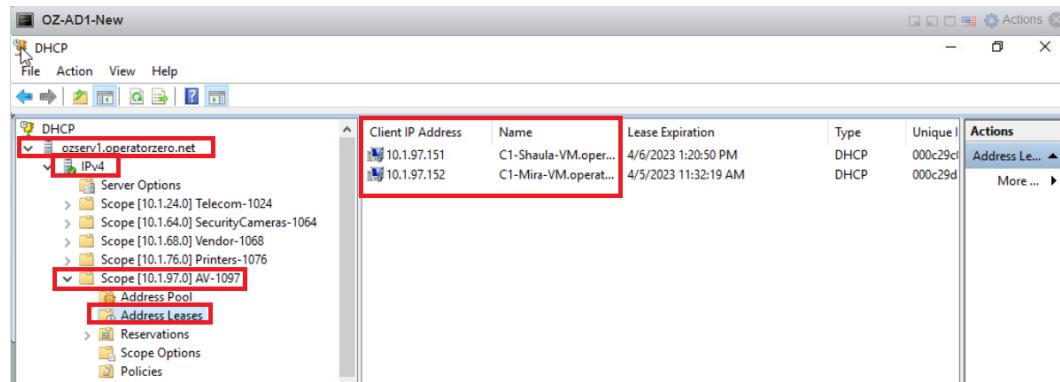

**Migrate one AP, Camera, Windows VM & IP Phone and check the Network Reachability**

Physically move one Client Uplink cable to New Edge and check below:

- DHCP IP address
- Authentication status
- Internet access
- Policy hitting on NAC

**DHCP IP Address:**

Verify the IP address DHCP leases in DHCP servers.

### Authentication Status:

Verify authentication status in XIQ-SE.

The screenshot shows the ExtremeCloud IQ Site Engine interface. In the 'Control' section, there are two green icons. Below them, a table lists two clients:

State	Last Seen	MAC Address	MAC CUI Vendor	Device Family	Device Type	IP Address	Host Name	User Name	Authentication Type
Online	3/30/2023 1:26:57...	00:0C:29:C0:28:63	VMware, Inc.	Windows	Windows 8...	10.1.97.151	C1-Shaula-VM		MAC (PAP)
Online	3/30/2023 12:54:22...	00:0C:29:D4:6C:9A	VMware, Inc.	Windows	Windows 8...	10.1.97.152	C1-Mira-VM		MAC (PAP)

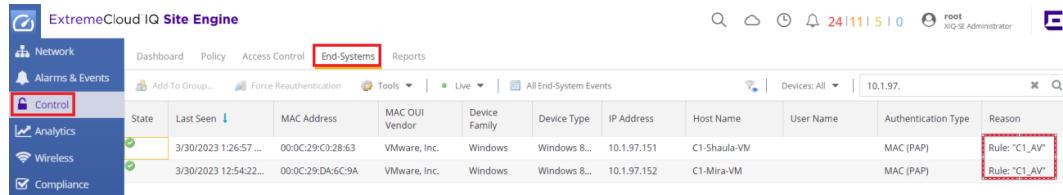

### Internet Access:

Verify Internet access for the client.

The screenshot shows a web browser window titled 'C1\_Shaula\_AV\_client'. The address bar contains 'google.com'. The main content area displays the Google homepage with the 'Google' logo. The status bar at the bottom shows 'Carbon neutral since 2007' and other standard browser information.

### Extreme Control Rules:

Verify the client is getting both the expected rule, and an appropriate IP address for that VLAN.

State	Last Seen	MAC Address	MAC OUI Vendor	Device Family	Device Type	IP Address	Host Name	User Name	Authentication Type	Reason
Online	3/30/2023 1:26:57 ...	00:0C:29:C0:28:63	VMware, Inc.	Windows	Windows 8...	10.1.97.151	C1-Shaula-VM		MAC (PAP)	Rule: "C1_AV"
Online	3/30/2023 12:54:22...	00:0C:29:D4:6C:9A	VMware, Inc.	Windows	Windows 8...	10.1.97.152	C1-Mira-VM		MAC (PAP)	Rule: "C1_AV"

### Migrate all Clients one by one

Physically move all clients one by one to New Edges.
