Preface

This section describes the text conventions used in this document, where you can find additional information, and how you can provide feedback to us.

Text Conventions

Unless otherwise noted, information in this document applies to all supported environments for the products in question. Exceptions, like command keywords associated with a specific software version, are identified in the text.

When a feature, function, or operation pertains to a specific hardware product, the product name is used. When features, functions, and operations are the same across an entire product family, such as ExtremeSwitching switches or SLX routers, the product is referred to as *the switch* or *the router*.

lcon	Notice type	Alerts you to
->	Тір	Helpful tips and notices for using the product.
	Note	Useful information or instructions.
-	Important	Important features or instructions.

Table 1: Notes and warnings

lcon	Notice type	Alerts you to
	Caution	Risk of personal injury, system damage, or loss of data.
	Warning	Risk of severe personal injury.

Table 1: Notes and warnings (continue	Table 1	1: Notes	and	warnings	(continued	J)
---------------------------------------	---------	----------	-----	----------	------------	----

Table 2: Text

Convention	Description
screen displays	This typeface indicates command syntax, or represents information as it appears on the screen.
The words <i>enter</i> and <i>type</i>	When you see the word <i>enter</i> in this guide, you must type something, and then press the Return or Enter key. Do not press the Return or Enter key when an instruction simply says <i>type</i> .
Key names	Key names are written in boldface, for example Ctrl or Esc . If you must press two or more keys simultaneously, the key names are linked with a plus sign (+). Example: Press Ctrl+Alt+Del
Words in italicized type	Italics emphasize a point or denote new terms at the place where they are defined in the text. Italics are also used when referring to publication titles.
NEW!	New information. In a PDF, this is searchable text.

Table 3: Command syntax

Convention	Description
bold text	Bold text indicates command names, keywords, and command options.
<i>italic</i> text	Italic text indicates variable content.
[]	Syntax components displayed within square brackets are optional. Default responses to system prompts are enclosed in square brackets.
{ x y z }	A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options.
х у	A vertical bar separates mutually exclusive elements.
< >	Nonprinting characters, such as passwords, are enclosed in angle brackets.
	Repeat the previous element, for example, <i>member</i> [<i>member</i>].
\	In command examples, the backslash indicates a "soft" line break. When a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.

Providing Feedback

The Information Development team at Extreme Networks has made every effort to ensure the accuracy and completeness of this document. We are always striving to improve our documentation and help you work better, so we want to hear from you. We welcome all feedback, but we especially want to know about:

- Content errors, or confusing or conflicting information.
- Improvements that would help you find relevant information in the document.
- Broken links or usability issues.

If you would like to provide feedback, you can do so in three ways:

- In a web browser, select the feedback icon and complete the online feedback form.
- Access the feedback form at https://www.extremenetworks.com/documentation-feedback/.
- Email us at documentation@extremenetworks.com.

Provide the publication title, part number, and as much detail as possible, including the topic heading and page number if applicable, as well as your suggestions for improvement.

Getting Help

If you require assistance, contact Extreme Networks using one of the following methods:

Extreme Portal

Search the GTAC (Global Technical Assistance Center) knowledge base; manage support cases and service contracts; download software; and obtain product licensing, training, and certifications.

The Hub

A forum for Extreme Networks customers to connect with one another, answer questions, and share ideas and feedback. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.

Call GTAC

For immediate support: (800) 998 2408 (toll-free in U.S. and Canada) or 1 (408) 579 2826. For the support phone number in your country, visit: www.extremenetworks.com/support/contact

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number, or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any actions already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

Subscribe to Service Notifications

You can subscribe to email notifications for product and software release announcements, Vulnerability Notices, and Service Notifications.

- 1. Go to www.extremenetworks.com/support/service-notification-form.
- 2. Complete the form (all fields are required).
- 3. Select the products for which you would like to receive notifications.

Note

You can modify your product selections or unsubscribe at any time.

4. Select Submit.

Documentation and Training

Find Extreme Networks product information at the following locations:

Current Product Documentation Release Notes Hardware and software compatibility for Extreme Networks products Extreme Optics Compatibility Other resources such as white papers, data sheets, and case studies

Extreme Networks offers product training courses, both online and in person, as well as specialized certifications. For details, visit www.extremenetworks.com/education/.

Overview

The guide describes how to configure and deploy the Extreme Campus Controller VE6120 and VE6125 Virtual Appliances. This guide is a reference for system administrators who install and manage the VE6120 and VE6125 Virtual Appliances.

Any administrator performing tasks described in this guide must have an account with administrative privileges.

Virtual Appliance Deployment

Deployment Requirements on page 10 Connectivity Requirements on page 11 Download a VE6120/VE6125 Image on page 12

This section provides an overview of the requirements for the Extreme Campus ControllerVirtual Appliances VE6120 and VE6125 deployments. It explains how to install the appliances on a VMware[®] vSphere[™] server (ESXi[™]) and how to run the initial configuration wizard.

Deployment Requirements

The VE6120/VE6125 are packaged in the .ova file format defined by VMware. The appliances must be deployed on a VMware ESXi host running vSphere.

Note

VE6120 and VE6125 use separate .ova files. You cannot upgrade from VE6120 to VE6125.

Note

The VE6125 requires an enterprise VMware license to launch and run the virtual machine.

The minimum supported version of vSphere for VE6120 is 5.1 and for VE6125 is 5.5.

Note

You only need to install the .ova file when you first install the appliance. All subsequent upgrades can be performed using the standard controller upgrade procedure to apply a .dle file to the VE6120 appliance and .rse file for the VE6125 appliance.

In addition, the appliances are configured with one Ethernet interface for administration and two data plane Ethernet interfaces for forwarding payload traffic.

If all three interfaces are used, it is recommended to connect them to separate virtual switches (vSwitches) in the host server.

Configuration Options:

• Small reflects the default configuration for VE6120.

• XLarge is the default and only configuration available for VE6125.

Extreme Application	VE6120		VE6125	
	Small	Medium	Large	X-Large
Total APs managed in Standalone mode	50	250	500	2000
Additional APs supported in high- availability mode	50	250	500	2000
Total managed APs per Appliance Pair	100	500	1000	4000
Total Switches managed per Appliance	50/100	100/200	200/400	200/400
Total simultaneous users in Standalone mode	1,000	4,000	8,000	16000
Additional simultaneous users in high- availability mode	1,000	4,000	8,000	16000
Total Simultaneous Users per Appliance Pair	2,000	8,000	16,000	32000
Hardware Requirements		•		
CPU	4 (4 distinct physical cores or 2 cores with hyper- threading)	6	8	32 (physical or hyper- threading cores)
RAM (GB)	8	16	24	32
Hard Disk (GB)	80	80	80	512
2x1Gbps Host (Open/Secure Mbps)	1,870/1,870	1,870/1,870	1,870/1,870	
2x10 Gbps Host (Open/Secure Mbps)	10,800/5,100	10,800/5,100	10,800/5,100	

Table 4: Virtual Extreme Campus Controller (VE6120 and VE6125)

- Consult VMWare ESXi for minimum host performance requirements for virtual environment. Performance depends on network interface characteristics of underlying host and on utilization on shared interfaces by other virtual appliances.
- Follow VMWare minimum installation requirements. 10 Gbps host recommended for best results. VE6120 supports VMware ESXi 5.1 or higher. VE6125 supports VMware ESXi 5.5 or higher.
- A VMware Enterprise license is required for the VE6125.

Connectivity Requirements

The appliances have one management interface (Admin) and two data plane interfaces (Port1, Port2). If all three interfaces are used, it is recommended to connect them to separate virtual switches (vSwitches) in the ESXi host.

The data plane interfaces have additional requirements on the vSwitches to which they connect:

• The vSwitch must be configured to accept promiscuous mode connections.

• The vSwitch must be configured to accept any VLAN tag traffic and forward it without changing or removing the VLAN tags.

Although configuring the necessary vSwitches does not have to be done before installing the appliance, the installation process will be simpler if it is.

See Configure vSwitches for the Virtual Appliance on page 40 for instructions on how to create and configure vSwitches that can be used by the Virtual Appliance's data plane ports.

Download a VE6120/VE6125 Image

About This Task

Download the VE6120/VE6125 software image to your local machine where you manage the vSphere.

Procedure

- 1. Access the VE6120/VE6125 download page at https://extremeportal.force.com/.
- 2. Download the image from **Downloads > Downloads Home** tab.
 - a. Log into the **Downloads Home** using your Extreme Portal login credentials.
 - b. Type VE6120/VE6125 in the search tab and select the search icon. The image list is displayed.
 - c. Download the latest VE6120/VE6125 Virtual Appliance image.

Log into the vSphere Client

About This Task

To login to the vSphere server:

Procedure

 Launch a web browser and enter the vSphere address to access the vSphere application. The Web Client login screen displays.

vm ware [.]	Ă	
User name:	example@domain.local	VMware vCenter Single Sign-On
Password:	Use Windows session authentication	

Figure 1: VMware vSphere Web Client Login Screen

- 2. On the VMware vSphere Web Client login screen:
 - Enter the User name and Password of an account that has full administrative access to the vSphere (ESXi) server.
 - Click Login.

Install and Deploy the Virtual Appliance Image

About This Task

To install the Virtual Appliance image:

Procedure

1. From the **Navigator** tab in the vSphere Web Client, right-click the host machine and select **Deploy OVF Template**.

Virtual Appliance Configuration

Access the Virtual Appliance Console on page 21 Configure the VE6120/VE6125 using the Basic Configuration Wizard on page 25 Set up the VE6120/VE6125 Appliance using the Basic Configuration Wizard on page 25 Upgrade the VE6120/VE6125 Software on page 28 Set Up the Virtual Appliance to Accept USB Flash Drives on page 31 Generate and Install the Activation Package on page 36 Subscription License on page 38 Permanent Capacity License on page 38

After the Virtual Appliance has been deployed on a VMware ESXi server using the instructions in Virtual Appliance Deployment on page 10 you are ready to perform initial server configuration.

Access the Virtual Appliance Console

About This Task

To log in to the Virtual Appliance and perform the initial configuration, access the vSphere client's console window as follows:

Procedure

Launch a web browser and enter vSphere address to open the vSphere web client application.
 The VMware vSphere Web Client login screen is displayed.

vm ware [.]	Ă	
		VMware vCenter Single Sign-On
User name: Password:	example@domain.iocal	
	Logn	

Figure 9: VMware vSphere Web Client Login Screen

- 2. On the VMware vSphere Web Client login screen:
 - Enter the User name and Password of an account that has full administrative access to the vSphere (ESXi) server.
 - Click Login.

 On the vSphere Web Client screen, in the left Navigator pane, expand the host mode, right-click the Virtual Appliance and select Power > Power On.

Figure 10: vSphere Web Client Power On option

Note

If the **Power On** option is greyed out, press the **vSphere Web Client** tool bar.

The Green icon indicates that the virtual appliance is powered on.

4. After the Virtual Appliance has been started and completes its boot process, right-click the appliance name, and from the drop-down menu, click **Open Console**.

Figure 11: Open Console option

The VE6120 Command Line Interface (CLI) opens in a new window.

5. Enter your login credentials.

Note

Click inside the console window once or twice to make the window interactive. If the prompt is not visible, press **[Enter]**.

- For User Name, enter admin.
- For **Password**, enter abc123.

You now are working in the VE6120's CLI.

Configure the VE6120/VE6125 using the Basic Configuration Wizard

The Extreme Campus Controller software provides a Basic Configuration Wizard that can help administrators configure the minimum settings necessary to deploy a fully functioning VE6120/VE6125 appliance on a network.

Administrators can use the wizard to quickly configure the appliances for deployment, and then after the installation is complete, continue to revise the configuration accordingly.

The wizard is automatically launched when an administrator logs on to the VE6120/VE6125 CLI for the first time, including after the system has been reset to the factory default settings.

The configuration wizard prompts with a set of **Yes** or **No** questions. The default value is indicated in parenthesis. To accept the default value, press **Enter**.

For more information about using the Basic Configuration Wizard, see Set up the VE6120/VE6125 Appliance using the Basic Configuration Wizard on page 25.

Set up the VE6120/VE6125 Appliance using the Basic Configuration Wizard

About This Task

After logging into the CLI of the VE6120/VE6125 Basic Configuration Wizard, you will be able to set it up using a set of **Yes** or **No** commands.

Procedure

- After logging into the CLI of VE6120/VE6125, you will be prompted to change the admin password. To begin the admin password setup, press Enter. The Admin password Configuration screen is displayed.
 - a. To change the password for the admin account, press Enter.
 - b. Enter the new password for the admin account.

Note

The password must be between 8-24 characters.

c. Repeat the new password for the admin account and press Enter.

If the passwords match, the password gets accepted.

d. Press Enter to accept the changes.

The AP access password screen is displayed.

2. To reset the AP access password, type a new password in the CLI.

Note

The password must be between 5-30 alphanumeric characters and can include period, dash, underscore, and space.

a. Retype the AP access password. Click Enter.

Your AP access password is now reset and the Current Data Port Settings CLI is displayed.

Current Data Port Settings

About This Task

Once you set up the **Admin Password configuration**, you will be prompted to set up the **Current Data Port Settings**. To set up the data port,

Procedure

- 1. In the **Current Data Port Settings**, you will determine the port settings. The default port is **Port1**. Click **Enter** to select **Port1**.
- 2. Set IP Address to the default value. The default value is **10.0.0.1**. Press **Enter**.

The IP Address is selected.

3. Set Netmask to default value of 255.255.255.0. Press Enter.

The Netmask is set.

- 4. Press Enter to set the default VLAN. The tagged frames command is displayed.
- 5. Press Enter to keep the default tagged frames value to No.
- 6. To enable management on the interface, press Enter to select the default value, Yes.
- 7. To enable device registration, press **Enter** to select the default value, **yes**. The updated Data Port Interface settings is displayed.
- To accept the changes and keep the data port settings to the values you have chosen, press Enter.
 The Data Port Interface is now set. The CLI navigates to the Current Host Attributes Settings screen.

Current Host Attributes

About This Task

To set up the current host attributes,

Procedure

- 1. Press **Enter** to change the Host Attributes.
- 2. Press Enter to enter the host name for the application.
- 3. Type **Y** to set up a dedicated Admin port for out-of-band management. The default option is **no**. A note is displayed that the Admin port does not allow device registration.
- 4. Type the IP address in the following format **xx.xx.xx** to set up the IP address for the Admin Port.
- 5. Press Enter to accept the default IP netmask for the Admin Port.
- 6. Press **Enter** to accept the default domain name for the appliance. The default domain name is **extremenetworks.com**.
- 7. Press **Enter** to configure your Primary DNS server.
- 8. Type another IP address **xx.x.xx** to set up the IP address of the Primary DNS and press **Enter**.
- The default option to set up a Secondary DNS server is no. Press Enter to accept the default option. The updated Host Attribute settings are displayed. To accept the changes you have made, press Enter. The Current Global Default Gateway Settings CLI is displayed.

Current Global Default Gateway Settings

About This Task

The global default gateway may be on any Admin or data port topology/subnet.

Procedure

- 1. Type an IP address.
- Press Enter to accept the changes.
 You are navigated to the Current Time Settings CLI.

Current Time Settings

About This Task

The Current Time Settings option allows you to change the time zone as per your location.

Procedure

- 1. Press **Enter** to change the Time settings.
- 2. Press Enter again if you would like to change the Time Zone. The Region number list is displayed.
- Pick a number according to the region numbers that is displayed on screen to pick you continent. Then, enter a number that corresponds to the Region. You can enter n to move down the list, or p to move up the list. To go back to the Region selection, press c.
- 4. Press Enter to run NTP as a client.
- 5. Provide the fully qualified domain name of the NTP server. Press Enter.
- 6. You are prompted to enter a second NTP server and the default option is **y**. Type **n** and press **Enter**. NTP Client is enabled.

7. Accept the changes you have made to the time zone and NTP server by pressing Enter.

You are navigated to the **Controller Post Installation Configuration** screen along with the menu.

8. If you want to revisit any of the previous screens or exit without applying the configuration changes, enter one of the corresponding numbers/alphabets displayed on screen.

When you revisit any other screen, you will have to reconfigure all subsequent area settings. For example, if you decide to reconfigure the Admin Password, which is at the beginning of the configuration wizard, you will have to reconfigure all the subsequent configuration wizard settings.

Press **Enter** to accept the settings. The default option for accepting the settings is **A**. Your settings are now applied successfully.

Upgrade the VE6120/VE6125 Software

About This Task

If you are not installing the **latest** Extreme Campus Controller release, you need to upgrade the software to the latest patch release.

Procedure

- 1. Go to the Extreme Networks Support site and download the most recent Extreme Campus Controller software patch.
- 2. Log in to the virtual appliance using the admin user and password that you configured in the Set up the VE6120/VE6125 Appliance using the Basic Configuration Wizard on page 25 section.

Extreme Campus Co	ntroller

3. Go to Administration > System.

The **System** screen is displayed.

4. Select Software Upgrade tab, and navigate to the Upgrade section.

5. To add the image file, select the plus icon.

Select Image		× 🕀 🗈
Backup System Image to	Local	*
Upgrade	Now	•
	UPGRADE NOW	

Figure 15: Upgrade section

The Copy Upgrade Image window is displayed.

6. To copy an upgrade or backup image to Extreme Campus Controller, configure the following parameters:

Image Type

Indicates the type of image file used. Valid values are:

- Upgrade
- Backup

Destination

Destination of the uploaded image file:

- Local
- Flash (The Flash drive must be mounted.)

Upload Method

Method used to upload image file to appliance. Valid values are:

- HTTP Indicates to upload from a local workstation.
- FTP Indicates to upload from the corresponding server.
- SCP Indicates to upload from the corresponding server.

When the Upload Method is FTP or SCP, configure the server properties.

Copy Image from Local Drive

When the Upload Method is **HTTP**, drag image onto Extreme Campus Controller or select field to navigate to local file directory.

Select Image

Due to a storage space limitation, Extreme Campus Controller limits the number of locally available upgrade archives. If necessary, you can delete an older image before you upgrade to the latest image. To delete an image fromExtreme Campus Controller, from the **Select Image** field, select an image and select **a**.

What to Do Next

For more information about the **Software Upgrade** options, see the Extreme Campus Controller User Guide.

Perform a Backup

The backup and restore procedure is limited to configuration files and, optionally, logs and audit files. A system backup is a full system snapshot rescue file (*-rescue-user.tgz). Creating a rescue file is an option during the system upgrade process. For more information on system upgrade, see Upgrade the Virtual Appliance Software.

Before you perform a backup procedure, decide what to backup and where to save the backup file:

- Select back up configs, logs, and audit or back up configuration only.
- Select a location to store the backup file.
- (Optional) Configure a backup schedule.

On-demand backups can only be stored locally, while scheduled backups can be stored on a mounted flash drive or on a remote server.

Copy Backup

To copy a backup image to Extreme Campus Controller, configure the following parameters:

Upload Method

Method used to upload file to appliance. Valid values are:

- HTTP Indicates to upload from a local workstation.
- FTP Indicates to upload from the corresponding server.
- SCP Indicates to upload from the corresponding server.

When the Upload Method is FTP or SCP, configure the server properties.

Copy Image from Local Drive

When the Upload Method is **HTTP**, drag image onto Extreme Campus Controller or select field to navigate to local file directory.

Set Up the Virtual Appliance to Accept USB Flash Drives

About This Task

The Virtual Appliance has a (virtual) USB controller and can accept USB flash drives. The flash drive can be used for backing up, restoring, upgrading, and collecting log information. A USB drive can be inserted, assigned to a virtual appliance, and removed from the virtual appliance while the appliance is in service.

To enable the Virtual Appliance to use a USB flash drive:

Procedure

1. Format the flash drive to FAT32.

2. Insert the flash drive into a USB port on the host.

1	-0	Ю	0	
	-	_	_	
	Ξ	-	=	
	-		•	

Note

The vSphere client application requires that a USB device be plugged in before it can be added to a virtual machine.

- 3. Log in to the vSphere client using an account that grants full administrative access to the VE6120.
- 4. From the list of guest operating systems (virtual machines), right-click on VE6120, and from the drop-down menu, select **Edit Settings**.

Figure 17: Host USB Device Selection

6. If running vSphere and a USB device has been inserted and is not assigned to another guest, the **USB Device** option will be listed. Select that option and click **OK**.

The **USB Device** dialog appears. The dialog lists all USB devices plugged into the host that are not assigned to guest operating systems.

Select a USB Flash drive (as other devices are not supported by VE6120), and click OK.
 The Ready to Complete dialog appears.

8. Review the settings and then click **Finish** to add the USB device to VE6120 or click **Cancel** to abort the operation.

The **Virtual Machine Properties** dialog displays that the USB device is in the process of being added to the virtual machine. The new USB device will be shown in bold and "adding" appears after the USB device name.

- 9. Click **OK** to save the configuration.
- 10. Open the VE6120 **Virtual Machine Properties** dialog from the main vSphere client screen and click the **Hardware** tab.

The USB device will be listed under **Hardware**. You can now use the USB flash drive on the VE6120 just as you would on a physical controller.

Manage the Flash Memory

About This Task

Follow these steps to manage flash memory:

Procedure

1. Log into the Extreme Campus Controller using your credentials.

2. In the left pane, from the **Administration** drop-down, select **System > Maintenance > External Flash** option.

Extreme Dashboard INTERFACES NETWORK TIME SOFTWARE UPGRADE MAINTENANCE AVAILABILITY 1 Monitor ~ Configure ~ **Reset Configuration** RESET CONFIGURATION & OnBoard ÷ Restart System REBOOT 🔧 Tools Halt System SHUTDOWN & Administration Web Session Timeout 1 : 0 (hh:mm) 2 System Accounts Device SSH Password Mask **III** Applications **Onboarding Diagnostics** License Web View OPEN WEB VIEW Web View admin user password Mask External Flash MOUNT Current status unmounted **Tech Support** ECA 0 Wireless AP ۲ Log 0 All 0 ~ No Stats <

Use the **Mount/Unmount** options to mount and unmount flash memory respectively.

Figure 18: Flash memory maintenance window

Remove the Flash Drive

About This Task

Follow these steps to remove the flash drive.

1	-000-	
	_	
	_	

Note

The Virtual Appliance can be in service when the USB flash drive is assigned to it using the vSphere client. Within a few seconds of the USB flash drive being assigned to it, the VE6120 will detect the flash drive and mount it for use.

Procedure

- 1. When you are ready to remove the USB Flash drive, click **Un-Mount** from the Maintenance page.
- 2. Remove the drive.
- 3. You can delete the USB flash drive from the VE6120's **Virtual Machine Properties** dialog after unmounting it from the VE6120 appliance.

Generate and Install the Activation Package

How to generate and install an Activation Package.

About This Task

All customers must generate and install an Activation Package for Extreme Campus Controller. Regardless of whether you obtain a new license or upgrade to Extreme Campus Controller. Take the following steps to generate and install the Activation Package:

Procedure

- 1. Log in to Extreme Campus Controller
- 2. Go to Administration > License to obtain the system Locking ID.
- 3. Log into the Extreme Support Portal: https://extremeportal.force.com/ExtrLicenseLanding.
- 4. Go to **Assets** > **Licenses Home** and select the Extreme Campus Controller Voucher ID line item from the list.

5. On the Voucher Details page, select Generate Activation Key.

support	Products	Downloads	Assets	
				٩

Figure 19: Generate Activation Key

- 6. Provide the Locking ID for the Extreme Campus Controller that will be activated.
- 7. Check the box to accept Terms and Conditions and select Submit.
- 8. The Activation package is generated, and the **Save As** dialogue displays.
- 9. Download the Activation Package to your local machine.

Note

The Activation Package *file name* includes the Locking ID for the specific Extreme Campus Controller.

Install the Activation Package

About This Task

Stage your Extreme Campus Controller instance. Install the Activation Package to activate Extreme Campus Controller:

Procedure

- 1. Return to the Extreme Campus Controller instance from where you obtained the Locking ID.
- 2. Go to Administration > License.
- 3. Select the plus sign next to the Activation License field.
- 4. Drag the Activation Package to the Upload License dialog to install the Activation Package.

What to Do Next

For more information on licensing, refer to the Extreme Campus Controller User Guide.

Related Topics

Subscription License Permanent Capacity License

Subscription License

Learn about Subscription Licensing.

Subscription licensing is available for Extreme Campus Controller for both access point and switch management. Upon purchase of a new Extreme Campus Controller you will receive a welcome email and activation instructions.

Each appliance obtains capacity Right to Use (RTU) entitlements regarding managed devices, subject to the system limits of the appliance instance and the total number of activations purchased. The total consumed RTU across all Extreme Campus Controller instances cannot exceed the number of RTU you have subscribed to. Each appliance provides visualization on specific RTU allocation and overall balance. For subscription management, Extreme Campus Controller requires a configured DNS server and constant connection to the Internet in order to be operational.

Related Topics

Generate and Install the Activation Package on page 36

Permanent Capacity License

Learn about a Capacity License.

About This Task

A Permanent Capacity License is a one-time license that allows permanent activation, and it works with a separate Capacity key. The alternative to a Permanent Capacity License is a Subscription License. The activation process is the same regardless of the license model you choose.

The Extreme Campus Controller permanent capacity works on simple software-based key strings. A key string consists of a series of numbers and/or letters. Using these key strings, you can enhance the capacity of the controller to manage additional APs.

Note

The controller does not require internet access with Permanent Capacity Licensing.

 Capacity key — Enhances the capacity of the appliance to manage devices. Extreme Campus Controller supports capacity enhancement keys for 5, 25, 100, 500 or 2000 APs. Max capacity on an Extreme Campus Controller instance is subject to the appliance type and the capacity tier configured (based on hypervisor resources for Virtual instances).

Capacity applies to all managed devices (access points and switches). A capacity license is shared between nodes in an Availability Pair. Install the capacity license on only one of the nodes in the Availability Pair. Extreme Campus Controller and availability pair will restrict the user from installing the same capacity key again if it exists on either appliance.

Note

A capacity license cannot be installed on an Extreme Campus Controller if its peer has the same capacity key applied.

To obtain a Permanent Capacity License:

Procedure

- 1. Go to the Support portal to generate an Activation Package. For more information, see #unique_35.
- 2. From the Support portal, obtain your capacity keys. For more information, see #unique_36.
 - There is no connection to the licensing server when an Activation Package for Permanent Capacity Licensing is installed. Therefore, the Extreme Campus Controller displays a connection failure message. This message can be ignored for Permanent Capacity Licensing. Simply select the **Switch to Permanent Licensing** link to clear the message.

Dashboard		• License warning Failure to establish connection with Licensing Server. Please correct within 3 days

Configure vSwitches for the Virtual Appliance

Create a New Virtual Switch or Port Group on the ESXi Server on page 40 Configuring the Virtual Switch for Promiscuous Connections on page 43

The Virtual Appliance has some specific requirements on the virtual switches (vSwitch) to which its data plane ports are connected. The following section explains how to create a vSwitch on an ESXi host that satisfies these requirements.

This does not replace the vSphere ESXi documentation. Before performing this procedure, you must log into the vSphere client using credentials that grant full administrative access to the vSphere ESXi host server.

Create a New Virtual Switch or Port Group on the ESXi Server

About This Task

This is an optional procedure since it is possible to reconfigure the virtual switch created by default when ESXi is installed to support VLANs or when another custom vSwitch is configured on the host. However, using separate vSwitches for the data plane traffic helps to isolate that traffic from other virtual devices and permits the switch to be configured specifically to meet the needs of the VE6120 appliance.

Note

Alternatively, it is also possible to define more than one network (port group) on a single vSwitch. All networks on the same vSwitch share the NICs assigned to the vSwitch.

To create a new switch or a port group:

Procedure

1. Login to the vSphere web client.

For more information, see Access the Virtual Appliance Console on page 21.

- 2. On the vSphere web client screen, select the vSphere server's IP address or host name in the left pane. The **Configure** tab displays on the right pane.
- 3. Select Networking > Virtual switches.

4. Select the globe icon to Add host networking.

Figure 22: How to add a virtual switch

5. Select the connection type: Select Virtual Machine Port Group for a Standard Switch.

6. Select target device:

You can create a new switch or create a new port group on an existing switch.

- To create a port group on an existing switch:
 - a. Select, Select an existing standard switch.
 - b. Select Browse, and select a switch from the list.
 - c. Select Next.
- To create a new switch:
 - a. Select New standard switch.
 - b. Select Next.
 - c. Select Assigned adapters to add new adapters.
 - d. Select the adapter, and select **OK**.

Create a Standard Switch

Figure 24: Ready to complete

9. The new switch is listed in the Virtual switches list.

A diagram of the Port Groups and Physical Adapters displays.

Figure 25: Switch Diagram

What to Do Next

Next, configure the virtual switch for promiscuous connections.

Configuring the Virtual Switch for Promiscuous Connections

About This Task

ESXi virtual switches collect ports into port groups. Every virtual switch must have at least one port group, and one is automatically created by ESXi when the vSwitch is created. The VE6120 data plane ports always operate in promiscuous mode, so it is mandatory to change this default. The new virtual switch and port group will be configured to accept MAC address changes and forged transmits.

To change the security settings of a virtual switch:

Procedure

1. Login to the vSphere web client host network.

For more information on vSphere login, see Access the Virtual Appliance Console on page 21.

2. On the vSphere web client screen, select the vSphere server's IP address or host name. The **Configure** tab is displayed.

3. On the right pane, select Networking > Virtual switches, and select a switch from the list.

Figure 26: Switch Diagram

- 4. Select the pencil icon to edit properties:
 - To configure properties for the entire switch, select **switch** in the switch list, then select the pencil icon above the list.
 - To configure properties for a port group, select the port group in the diagram, then select the pencil icon above the diagram.

Standard switch: vSwitch4 (WirelessDomain 9)

Figure 27: Editing properties

- 5. On the Edit Settings dialog, select the Security tab, and set all options to Accept.
- 6. Select **OK** to close the **Edit Settings** dialog.

NewSwitch_4 - Edit Setting:	\$

Teaming and failover		1000		

Figure 28: Promiscuous mode setting

Configure a Virtual Machine to Gain Networking Performance

About This Task

Configuring a virtual machine to gain more networking performance allows you to increase the networking throughput, especially if you use 10 Gbps or faster NICs on the server.

Note

Perform this task after every .ova deployment since the settings cannot be exported with an .ova image.

vSphere uses single receive thread and single transmit thread, regardless of the number of virtual devices configured on it. It is necessary to scale vSphere to prevent packet loss, core overload, and degraded performance.

This configuration creates a special transmit queue on the host server (ESXi) per appliance data plane networking interface. If you do not use both Port 1 and Port 2 on the appliance, the configuration can be applied only on the port that is being used.

If there is a vNIC is overload, you can configure additional cores to parallelize the threads by using the **ethernetX.ctxPerDev** command in the virtual machine file.

Note

Use this command only on vNICs that will handle high packet loads.

To configure and enable the **ethernetX**.ctxPerDev command on a vNIC:

Procedure

1. Shutdown the virtual machine.

2. Select VM Options.

Edit settings - VE6125-XL (ESXi 5.5 vir	tual machine)

Shut Down and Restart a Virtual Machine

Shut Down and Restart a Virtual Machine Using the Graphical User Interface (GUI) on page 51 Shut Down and Restart a Virtual Machine on a ESXi server on page 52

About This Task

You need to shut down a virtual machine before configuring it to gain more networking performance. The following task will outline the various ways through which you can shut down and reboot a virtual machine.

For information on how to access the Basic Configuration Wizard, see Access the Virtual Appliance Console on page 21.

To shut down and reboot the virtual machine using the Command Line Interface (CLI) in the Basic Configuration Wizard:

Procedure

1. Type **shutdown halt** and press **Enter** in the Basic Configuration Wizard.

The virtual machine shuts down.

2. To reboot the virtual machine, type **shutdown reboot** and press **Enter**.

The virtual machine restarts.

Shut Down and Restart a Virtual Machine Using the Graphical User Interface (GUI)

About This Task

To shut down and restart a virtual machine using the GUI:

Procedure

- 1. Navigate to Administration > System > Maintenance.
- 2. Select Halt System (SHUTDOWN).

The machine shuts down.

 To restart the machine, select **Restart System (REBOOT)**. The machine restarts.

Shut Down and Restart a Virtual Machine on a ESXi server

About This Task

You can shut down and restart a virtual machine through the ESXi server.

Procedure

- 1. To shut down the virtual machine, right-click the virtual machine listed under **Virtual Machines**, select **Guest OS** > **Shut down**.
- 2. To restart the virtual machine, right-click the virtual machine listed under **Virtual Machines**, select **Guest OS** > **Restart**.

Figure 32: Shut down or restart a virtual appliance through ESXi server

3. You can shut down or restart a virtual machine by directly selecting the **Shut down** or **Restart** option on the ESXi server.
