Abstract

The Extreme Platform ONE MSP Release Notes version 2.10 outlines general release information, key enhancements, resolved issues. The platform is enabled for Extreme Networks applications such as ExtremeCloud IQ and the Universal/Cloud hardware managed by ExtremeCloud IQ. It provides seamless user experience, supports Software Defined Wide Area Network (SDWAN), and has a framework approach to feature design that allows new hardware and software solutions to integrate.

Introduction to Extreme Platform ONE for MSP

Use Extreme Platform ONE for MSP to:

- Link your license accounts.
- Onboard and manage customers.
- Manage licenses.
- Manage administrators.
- Migrate administrators, customers, and subscriptions.

Supported Platforms

Extreme Platform ONE for MSP is enabled for both ExtremeCloud IQ and Extreme Platform ONE Networking managed customers, and the Universal/Cloud hardware managed by ExtremeCloud IQ.

Extreme Platform ONE for MSP supports Software Defined Wide Area Network (SDWAN).

There is a framework approach to feature design that allows new hardware and software solutions to integrate.

ExtremeCloud IQ SE version 23.2.10 or higher is the minimum version for the MSP.

In ExtremeCloud IQ SE versions earlier than 23.2, stacks that did not consume licenses were not reported to ExtremeCloud IQ.

New Features

Extreme Platform ONE for MSP 2.10 introduces the following features and enhancements. For more information, see *Extreme Platform ONE for MSP v2.10 User Guide*.

Feature	Description
Single Sign-On (SSO) for MSP Workspace	Enables MSP administrators and users to authenticate to the MSP Workspace by using SAML 2.0 or OpenID Connect (OIDC) identity providers. This feature requires the latest version of the IAM Gateway service.
Global Filter Enhancements	Filters dashboard data by product classifications and tenant groups, allowing MSP admins to narrow the dashboard view to specific device categories or customer segments. The selected filters are applied across dashboard widgets and tabs to provide a consistent view.
Inventory Change State	MSP administrators can now change the onboarding state of devices directly from the Inventory page. Devices can be transitioned between Managed and Unmanaged states without switching to the tenant's ExtremeCloud IQ instance.
License Assignment	The license assignment workflow is enhanced to improve MSP management flexibility. MSPs can now assign licenses from the MSP Workspace even when a license is already assigned to the tenant in ExtremeCloud IQ (XIQ), eliminating the requirement to explicitly unlink the XIQ license account first.
Third-Party Management Engine (TPME) Support	MSP supports TPME for MSP tenants operating on Extreme Platform ONE Networking licenses, enabling streamlined license management and assignment for tenant deployments.
External API Support	Enables direct downloading of inventory data using external APIs.
Multi-Tenant Audit Log	Provides MSP administrators with a centralized view of user activity across all managed tenants.

Open Issues

The following issues are open in this release.

Issue ID	Description
MSP-8188	After selecting a tenant and applying the dashboard filter on the Inventory page, the display does not automatically refresh and continues to show all tenants. The filter works correctly after manual page refresh.

Known Limitations

- By default, no allocation is applied to tenants. The only exception is NAC, which is set to a default allocation of 0.

To avoid automatic consumption of licenses during assignment, follow these steps when assigning a license account with Extreme Platform ONE Networking entitlements to a tenant:

1. Unmanage the devices.
 2. Assign the license account.
 3. Set the license limit for pilot.
 4. Manage the devices again.
- The system fails to switch tenants properly when the customer's RDC differs from the MSP admin's Home VIQ, specifically when the Home VIQ and customer VIQ are in different regions.
 - MFA is not supported for user authentication.

Help and Support

If you require assistance, contact Extreme Networks using one of the following methods:

Extreme Portal

Search the GTAC (Global Technical Assistance Center) knowledge base; manage support cases and service contracts; download software; and obtain product licensing, training, and certifications.

The Hub

A forum for Extreme Networks customers to connect with one another, answer questions, and share ideas and feedback. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.

Call GTAC

For immediate support: (800) 998 2408 (toll-free in U.S. and Canada) or 1 (408) 579 2800. For the support phone number in your country, visit www.extremenetworks.com/support/contact.

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number, or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any actions already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

Subscribe to Product Announcements

You can subscribe to email notifications for product and software release announcements, Field Notices, and Vulnerability Notices.

1. Go to [The Hub](#).
2. In the list of categories, expand the **Product Announcements** list.

3. Select a product for which you would like to receive notifications.
4. Select **Subscribe**.
5. To select additional products, return to the **Product Announcements** list and repeat steps 3 and 4.

You can modify your product selections or unsubscribe at any time.
