ABOUT THIS GUIDE

This manual supports the following wireless controllers, service platformss, and access points:

- Wireless Controllers – RFS4000, RFS6000
- Service Platformss – NX5500, NX6500, NX6524, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000
- Access Points – AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP8122, AP8132, AP8163, AP8232, AP8432, AP8533

NOTE: In this document AP8122, AP8132, AP8163 are collectively referred to as AP81XX.

CAUTION: To configure a WE access point, exclusively use the WE UI. Do not use the *command line interface* (CLI) along with it. Similarly, when using the CLI to configure the WE access point, do not use the WE UI along with it.

A simplified version of the WiNG operating system *user interface* (UI) is available on the following access point and service platforms models:

- AP6521E, AP6522E, AP6562E, AP7502E, AP7522E, AP7532E, AP7562E
- NX5500E, NX7510E, and VX9000E

This new WiNG *Express* (WE) UI, simplifies configuration and monitoring of small access point deployments by limiting monitoring, analytics, and configuration capabilities. The WE UI is designed for single-site access point deployments not exceeding more than 24 access points of the same model.

CAUTION: To configure a WE access point, exclusively use the WE UI. Do not use the *command line interface* (CLI) along with it. Similarly, when using the CLI to configure the WE access point, do not use the WE UI along with it.

This section is organized into the following topics:

- *Document Conventions*
- *Notational Conventions*
- *End-User Software License Agreement*

Document Conventions

The following conventions are used in this document to draw your attention to important information:

NOTE: Indicates tips or special requirements.

CAUTION: Indicates conditions that can cause equipment damage or data loss.

WARNING! Indicates a condition or procedure that could result in personal injury or equipment damage.

Switch Note: Indicates caveats unique to a RFS4000, RFS6000, NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, or NX9600 model controller.

Notational Conventions

The following notational conventions are used in this document:

- Italics are used to highlight specific items in the general text, and to identify chapters and sections in this and related documents
- Bullets (•) indicate:
  - lists of alternatives
  - lists of required steps that are not necessarily sequential
  - action items
- Sequential lists (those describing step-by-step procedures) appear as numbered lists

Understanding Command Syntax

<variable>	Variables are described with a short description enclosed within a '<' and a '>' pair.
	For example, the command,
	`rfs7000-37FABE>show interface ge 1`
	is documented as:
	`show interface ge <1-4>`
	where:
	• show – is the command – displays information
	• interface – is the keyword – represents the interface type
	• <1-4> – is the variable – represents the ge interface index value

|	The pipe symbol. This is used to separate the variables/keywords in a list.
	For example, the command,
	`rfs7000-37FABE> show .....`
	is documented as:
	`show [adoption|bonjour|boot|`
	`......`
	where:
	• show – is the command – displays information
	• [adoption|bonjour|.....] – indicates the different keywords that can be combined with the show command. However, only one of the above option can be used at a time.
	`show adoption ...`
	`show bonjour ...`
	`show boot ...`

[]	Of the different keywords and variables listed inside a '[' & ']' pair, only one can be used. Each choice in the list is separated with a '|' (pipe) symbol.
	For example, the command,
	`rfs7000-37FABE#clear ...`
	is documented as:
	`clear [arp-cache|bonjour|cdp|counters|crypto|event-history|firewall|gre|ip|ipv6|l2tpv3-stats|license|lldp|logging|mac-address-table|mint|role|rtls|spanning-tree|traffic-shape|vrrp]`
	where:
	• clear – is the command
	• [arp-cache|cdp|bonjour|counters|crypto|event-history|firewall|gre|ip|ipv6|l2tpv3-stats|license|lldp|logging|mac-address-table|mint|role|rtls|spanning-tree|traffic-shape|vrrp] – indicates that these keywords are available for this command. However, only one can be used at a time.

{ }	Any command/keyword/variable or a combination of them inside a *'{' &'}'* pair is optional. All optional commands follow the same conventions as listed above. However, they are displayed italicized.
	For example, the command,
	`rfs7000-37FABE> show adoption ....`
	is documented as:
	`show adoption info {on <DEVICE-NAME>}`
	here:
	• show adoption info – is the command. This command can also be used as:
	`show adoption info`
	The command can also be extended as:
	`show adoption info {on <DEVICE-NAME>}`
	here:
	• {on <DEVICE-NAME>} – is the keyword, which is optional.

command / keyword	The first word is always a command. Keywords are words that must be entered as is. Commands and keywords are mandatory.
	For example, the command,
	`rfs7000-37FABE>show wireless`
	is documented as:
	`show wireless`
	where:
	• show – is the command
	• wireless – is the keyword

()	Any command/keyword/variable or a combination of them inside a *'(' & ')'* pair are recursive. All recursive commands can be listed in any order and can be used once along with the rest of the commands.
	For example, the command,
	`crypto pki export request generate-rsa-key test autogen-subject-name ...`
	is documented as:
	`rfs7000-37FABE#crypto pki export request generate-rsa-key test autogen-subject-name (<URL>,email <EMAIL>,fqdn <FQDN>,ip-address <IP>)`
	here:
	• crypto pki export request generate-rsa-key <RSA-KEYPAIR-NAME> auto-gen-subject-name – is the command
	• <RSA-KEYPAIR-NAME> – is the RSA keypair name (in this example, the keypair name is 'test'), and is a variable
	• *(<URL>,email <EMAIL>,fqdn <FQDN>,ip-address <IP>) – is the set of recursive parameters (separated by commas) that can be used in any order.*

End-User Software License Agreement

This document is an agreement ("Agreement") between You, the end user, and Extreme Networks, Inc., on behalf of itself and its Affiliates ("Extreme") that sets forth your rights and obligations with respect to the "Licensed Materials". BY INSTALLING SOFTWARE AND/OR THE LICENSE KEY FOR THE SOFTWARE ("License Key") (collectively, "Licensed Software"), IF APPLICABLE, COPYING, OR OTHERWISE USING THE LICENSED SOFTWARE AND/OR ANY OF THE LICENSED MATERIALS UNDER THIS AGREEMENT, YOU ARE AGREEING TO BE BOUND BY THE TERMS OF THIS AGREEMENT, WHICH INCLUDES THE LICENSE(S) AND THE LIMITATION(S) OF WARRANTY AND DISCLAIMER(S)/LIMITATION(S) OF LIABILITY. IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, RETURN THE LICENSE KEY (IF APPLICABLE) TO EXTREME OR YOUR DEALER, IF ANY, OR DO NOT USE THE LICENSED SOFTWARE AND/OR LICENSED MATERIALS AND CONTACT EXTREME OR YOUR DEALER WITHIN TEN (10) DAYS FOLLOWING THE DATE OF RECEIPT TO ARRANGE FOR A REFUND. IF YOU HAVE ANY QUESTIONS ABOUT THIS AGREEMENT, CONTACT EXTREME, Attn: LegalTeam@extremenetworks.com.

1 DEFINITIONS. "Affiliates" means any person, partnership, corporation, limited liability company, or other form of enterprise that directly or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with the party specified. "Server Application" means the software application associated to software authorized for installation (per License Key, if applicable) on one or more of Your servers as further defined in the Ordering Documentation. "Client Application" shall refer to the application to access the Server Application. "Network Device" for purposes of this Agreement shall mean a physical computer device, appliance, appliance component, controller, wireless access point, or virtual appliance as further described within the applicable product documentation, which includes the Order Documentation. "Licensed Materials" means the Licensed Software (including the Server Application and Client Application), Network Device (if applicable), Firmware, media embodying software, and the accompanying documentation. "Concurrent User" shall refer to any of Your individual employees who You provide access to the Server Application at any one time. "Firmware" refers to any software program or code embedded in chips or other media. "Standalone" software is software licensed for use independent of any hardware purchase as identified in the Ordering Documentation. "Licensed Software" collectively refers to the software, including Standalone software, Firmware, Server Application, Client Application or other application licensed with conditional use parameters as defined in the Ordering Documentation. "Ordering Documentation" shall mean the applicable price quotation, corresponding purchase order, relevant invoice, order acknowledgement, and accompanying documentation or specifications for the products and services purchased, acquired or licensed hereunder from Extreme either directly or indirectly.

2 TERM. This Agreement is effective from the date on which You accept the terms and conditions of this Agreement via click-through, commence using the products and services or upon delivery of the License Key if applicable, and shall be effective until terminated. In the case of Licensed Materials offered on a subscription basis, the term of "licensed use" shall be as defined within Your Ordering Documentation.

3 GRANT OF LICENSE. Extreme will grant You a non-transferable, non-sublicensable, non-exclusive license to use the Licensed Materials and the accompanying documentation for Your own business purposes subject to the terms and conditions of this Agreement, applicable licensing restrictions, and any term, user server networking device, field of use, or other restrictions as set forth in Your Ordering Documentation. If the Licensed Materials are being licensed on a subscription and/or capacity basis, the applicable term and/or capacity limit of the license shall be specified in Your Ordering Documentation. You may install and use the Licensed Materials as permitted by the license type purchased as described below in License Types. The license type purchased is specified on the invoice issued to You by Extreme

or Your dealer, if any. YOU MAY NOT USE, COPY, OR MODIFY THE LICENSED MATERIALS, IN WHOLE OR IN PART, EXCEPT AS EXPRESSLY PROVIDED IN THIS AGREEMENT.

4 LICENSE TYPES.

- *Single User, Single Network Device*. Under the terms of this license type, the license granted to You by Extreme authorizes You to use the Licensed Materials as bundled with a single Network Device as identified by a unique serial number for the applicable Term, if and as specified in Your Ordering Documentation, or any replacement for that network device for that same Term, for internal use only. A separate license, under a separate License Agreement, is required for any other network device on which You or another individual, employee or other third party intend to use the Licensed Materials. A separate license under a separate License Agreement is also required if You wish to use a Client license (as described below).
- *Single User, Multiple Network Device*. Under the terms of this license type, the license granted to You by Extreme authorizes You to use the Licensed Materials with a defined amount of Network Devices as defined in the Ordering Documentation.
- *Client*. Under the terms of the Client license, the license granted to You by Extreme will authorize You to install the License Key for the Licensed Materials on your server and allow the specific number of Concurrent Users as ordered by you and is set forth in Your Ordering Documentation. A separate license is required for each additional Concurrent User.
- *Standalone*. Software or other Licensed Materials licensed to You for use independent of any Network Device.
- *Subscription*. Licensed Materials, and inclusive Software, Network Device or related appliance updates and maintenance services, licensed to You for use during a subscription period as defined in Your applicable Ordering Documentation.
- *Capacity*. Under the terms of this license, the license granted to You by Extreme authorizes You to use the Licensed Materials up to the amount of capacity or usage as defined in the Ordering Documentation.

5 AUDIT RIGHTS. You agree that Extreme may audit Your use of the Licensed Materials for compliance with these terms and Your License Type at any time, upon reasonable notice. In the event that such audit reveals any use of the Licensed Materials by You other than in full compliance with the license granted and the terms of this Agreement, Extreme reserves the right to charge You for all reasonable expenses related to such audit in addition to any other liabilities and overages applicable as a result of such non-compliance, including but not limited to additional fees for Concurrent Users, excess capacity or usage over and above those specifically granted to You. From time to time, the Licensed Materials may upload information about the Licensed Materials and the associated usage to Extreme. This is to verify the Licensed Materials are being used in accordance with a valid license and/or entitlement. By using the Licensed Materials, you consent to the transmission of this information.

6 RESTRICTION AGAINST COPYING OR MODIFYING LICENSED MATERIALS. Except as expressly permitted in this Agreement, You may not copy or otherwise reproduce the Licensed Materials. In no event does the limited copying or reproduction permitted under this Agreement include the right to decompile, disassemble, electronically transfer, or reverse engineer the Licensed Materials, including the Licensed Software, or to translate the Licensed Materials into another computer language. The media embodying the Licensed Materials may be copied by You, in whole or in part, into printed or machine readable form, in sufficient numbers only for backup or archival purposes, or to replace a worn or defective copy. However, You agree not to have more than two (2) copies of the Licensed Software in whole or in part, including the original media, in your possession for said purposes without Extreme' prior written consent, and in no event shall You operate more copies of the Licensed Software than the specific licenses granted to You. You may not copy or reproduce the documentation. You agree to maintain appropriate records of the location of the original media and all copies of the Licensed Software, in whole or in part, made by You. Any portion of the Licensed Software included in any such modular work shall be used only on a single computer for internal purposes and shall remain subject to

all the terms and conditions of this Agreement. You agree to include any copyright or other proprietary notice set forth on the label of the media embodying the Licensed Software on any copy of the Licensed Software in any form, in whole or in part, or on any modification of the Licensed Software or any such modular work containing the Licensed Software or any part thereof.

7 TITLE AND PROPRIETARY RIGHTS

a The Licensed Materials are copyrighted works and are the sole and exclusive property of Extreme, any company or a division thereof which Extreme controls or is controlled by, or which may result from the merger or consolidation with Extreme (its "Affiliates"), and/or their suppliers. This Agreement conveys a limited right to operate the Licensed Materials and shall not be construed to convey title to the Licensed Materials to You. There are no implied rights. You shall not sell, lease, transfer, sublicense, dispose of, or otherwise make available the Licensed Materials or any portion thereof, to any other party.

b You further acknowledge that in the event of a breach of this Agreement, Extreme shall suffer severe and irreparable damages for which monetary compensation alone will be inadequate. You therefore agree that in the event of a breach of this Agreement, Extreme shall be entitled to monetary damages and its reasonable attorney's fees and costs in enforcing this Agreement, as well as injunctive relief to restrain such breach, in addition to any other remedies available to Extreme.

8 PROTECTION AND SECURITY. In the performance of this Agreement or in contemplation thereof, You and your employees and agents may have access to private or confidential information owned or controlled by Extreme relating to the Licensed Materials supplied hereunder including, but not limited to, product specifications and schematics, and such information may contain proprietary details and disclosures. All information and data so acquired by You or your employees or agents under this Agreement or in contemplation hereof shall be and shall remain Extreme' exclusive property, and You shall use all commercially reasonable efforts to keep, and have your employees and agents keep, any and all such information and data confidential, and shall not copy, publish, or disclose it to others, without Extreme' prior written approval, and shall return such information and data to Extreme at its request. Nothing herein shall limit your use or dissemination of information not actually derived from Extreme or of information which has been or subsequently is made public by Extreme, or a third party having authority to do so

You agree not to deliver or otherwise make available the Licensed Materials or any part thereof, including without limitation the object or source code (if provided) of the Licensed Software, to any party other than Extreme or its employees, except for purposes specifically related to your use of the Licensed Materials on a single computer as expressly provided in this Agreement, without the prior written consent of Extreme. You acknowledge that the Licensed Materials contain valuable confidential information and trade secrets, and that unauthorized use, copying and/or disclosure thereof are harmful to Extreme or its Affiliates and/or its/their software suppliers.

9 MAINTENANCE AND UPDATES. Except as otherwise defined below, updates and certain maintenance and support services, if any, shall be provided to You pursuant to the terms of an Extreme Service and Maintenance Agreement, if Extreme and You enter into such an agreement. Except as specifically set forth in such agreement, Extreme shall not be under any obligation to provide updates, modifications, or enhancements, or maintenance and support services for the Licensed Materials to You. If you have purchased Licensed Materials on a subscription basis then the applicable service terms for Your Licensed Materials are as provided in Your Ordering Documentation. Extreme will perform the maintenance and updates in a timely and professional manner, during the Term of Your subscription, using qualified and experienced personnel. You will cooperate in good faith with Extreme in the performance of the support services including, but not limited to, providing Extreme with: (a) access to the Extreme Licensed Materials (and related systems); and (b) reasonably requested assistance and

information. Further information about the applicable maintenance and updates terms can be found on Extreme's website at http://www.extremenetworks.com/company/legal/terms-of-support

10 DEFAULT AND TERMINATION. In the event that You shall fail to keep, observe, or perform any obligation under this Agreement, including a failure to pay any sums due to Extreme, or in the event that you become insolvent or seek protection, voluntarily or involuntarily, under any bankruptcy law, Extreme may, in addition to any other remedies it may have under law, terminate the License and any other agreements between Extreme and You.

a Immediately after any termination of the Agreement, Your licensed subscription term, or if You have for any reason discontinued use of Licensed Materials, You shall return to Extreme the original and any copies of the Licensed Materials and remove the Licensed Materials, including an Licensed Software, from any modular works made pursuant to Section 3, and certify in writing that through your best efforts and to the best of your knowledge the original and all copies of the terminated or discontinued Licensed Materials have been returned to Extreme

b Sections 1, 7, 8, 10, 11, 12, 13, 14 and 15 shall survive termination of this Agreement for any reason.

11 EXPORT REQUIREMENTS. You are advised that the Licensed Materials, including the Licensed Software is of United States origin and subject to United States Export Administration Regulations; diversion contrary to United States law and regulation is prohibited. You agree not to directly or indirectly export, import or transmit the Licensed Materials, including the Licensed Software to any country, end user or for any Use that is prohibited by applicable United States regulation or statute (including but not limited to those countries embargoed from time to time by the United States government); or contrary to the laws or regulations of any other governmental entity that has jurisdiction over such export, import, transmission or Use

12 UNITED STATES GOVERNMENT RESTRICTED RIGHTS. The Licensed Materials (i) were developed solely at private expense; (ii) contain "restricted computer software" submitted with restricted rights in accordance with section 52.227-19 (a) through (d) of the Commercial Computer Software-Restricted Rights Clause and its successors, and (iii) in all respects is proprietary data belonging to Extreme and/or its suppliers. For Department of Defense units, the Licensed Materials are considered commercial computer software in accordance with DFARS section 227.7202-3 and its successors, and use, duplication, or disclosure by the U.S. Government is subject to restrictions set forth herein.

13 LIMITED WARRANTY AND LIMITATION OF LIABILITY. Extreme warrants to You that (a) the initially-shipped version of the Licensed Materials will materially conform to the Documentation; and (b) the media on which the Licensed Software is recorded will be free from material defects for a period of ninety (90) days from the date of delivery to You or such other minimum period required under applicable law. Extreme does not warrant that Your use of the Licensed Materials will be error-free or uninterrupted.

NEITHER EXTREME NOR ITS AFFILIATES MAKE ANY OTHER WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, WITH RESPECT TO THE LICENSED MATERIALS, WHICH ARE LICENSED "AS IS". THE LIMITED WARRANTY AND REMEDY PROVIDED ABOVE ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WHICH ARE EXPRESSLY DISCLAIMED, AND STATEMENTS OR REPRESENTATIONS MADE BY ANY OTHER PERSON OR FIRM ARE VOID. IN NO EVENT WILL EXTREME OR ANY OTHER PARTY WHO HAS BEEN INVOLVED IN THE CREATION, PRODUCTION OR DELIVERY OF THE LICENSED MATERIALS BE LIABLE FOR SPECIAL, DIRECT, INDIRECT, RELIANCE, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING LOSS OF DATA OR PROFITS OR FOR INABILITY TO USE THE LICENSED MATERIALS, TO ANY PARTY EVEN IF EXTREME OR SUCH OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL

EXTREME OR SUCH OTHER PARTY'S LIABILITY FOR ANY DAMAGES OR LOSS TO YOU OR ANY OTHER PARTY EXCEED THE LICENSE FEE YOU PAID FOR THE LICENSED MATERIALS.

Some states do not allow limitations on how long an implied warranty lasts and some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation and exclusion may not apply to You. This limited warranty gives You specific legal rights, and You may also have other rights which vary from state to state.

14 JURISDICTION. The rights and obligations of the parties to this Agreement shall be governed and construed in accordance with the laws and in the State and Federal courts of the State of California, without regard to its rules with respect to choice of law. You waive any objections to the personal jurisdiction and venue of such courts. None of the 1980 United Nations Convention on the Limitation Period in the International Sale of Goods, and the Uniform Computer Information Transactions Act shall apply to this Agreement

15 FREE AND OPEN SOURCE SOFTWARE. Portions of the Software (Open Source Software) provided to you may be subject to a license that permits you to modify these portions and redistribute the modifications (an Open Source License). Your use, modification and redistribution of the Open Source Software are governed by the terms and conditions of the applicable Open Source License. More details regarding the Open Source Software and the applicable Open Source Licenses are available at www.extremenetworks.com/services/SoftwareLicensing.aspx. Some of the Open Source software may be subject to the GNU General Public License v.x (GPL) or the Lesser General Public Library (LGPL), copies of which are provided with the Licensed Materials and are further available for review at www.extremenetworks.com/services/SoftwareLicensing.aspx, or upon request as directed herein. In accordance with the terms of the GPL and LGPL, you may request a copy of the relevant source code. See the Software Licensing web site for additional details. This offer is valid for up to three years from the date of original download of the software.

16 GENERAL.

a This Agreement is the entire agreement between Extreme and You regarding the Licensed Materials, and all prior agreements, representations, statements, and undertakings, oral or written, are hereby expressly superseded and canceled.

b This Agreement may not be changed or amended except in writing signed by both parties hereto.

c You represent that You have full right and/or authorization to enter into this Agreement.

d This Agreement shall not be assignable by You without the express written consent of Extreme. The rights of Extreme and Your obligations under this Agreement shall inure to the benefit of Extreme' assignees, licensors, and licensees.

e Section headings are for convenience only and shall not be considered in the interpretation of this Agreement

f The provisions of the Agreement are severable and if any one or more of the provisions hereof are judicially determined to be illegal or otherwise unenforceable, in whole or in part, the remaining provisions of this Agreement shall nevertheless be binding on and enforceable by and between the parties hereto

g Extreme's waiver of any right shall not constitute waiver of that right in future. This Agreement constitutes the entire understanding between the parties with respect to the subject matter hereof, and all prior agreements, representations, statements and undertakings, oral or written, are hereby expressly superseded and canceled. No purchase order shall supersede this Agreement.

h Should You have any questions regarding this Agreement, You may contact Extreme at the address set forth below. Any notice or other communication to be sent to Extreme must be mailed by certified mail to the following address:

Extreme Networks, Inc.

1 INTRODUCTION

This chapter describes the commands available within a device's *Command Line Interface* (CLI) structure. CLI is available for wireless controllers, access points (APs), and service platformss.

Access the CLI by using:

- A terminal emulation program running on a computer connected to the serial port on the device (access point, wireless controller, and service platforms).
- A Telnet session through *Secure Shell* (SSH) over a network.

Configuration for connecting to a Controller using a terminal emulator

If connecting through the serial port, use the following settings to configure your terminal emulator:

Bits Per Second	19200 For AP8432, AP8533, AP7502, AP7522, AP7532, AP7562, AP6511, AP6522, AP6532, AP6562 model access points set this value to 115200.
Data Bits	8
Parity	None
Stop Bit	1
Flow Control	None

When a CLI session is established, complete the following (user input is in bold):

```
login as: <username>
administrator's login password: <password>
```

User Credentials

Use the following credentials when logging into a device for the first time:

User Name	**admin**
Password	**admin123**

When logging into the CLI for the first time, you are prompted to change the password.

Examples in this reference guide

Examples used in this reference guide are generic to each supported wireless controller, service platforms, and AP model. Commands that are not common, are identified using the notation "Supported in the following platforms:" For an example, see below:

Supported in the following platforms:

- Wireless Controller – RFS6000

The above example indicates the command is only available for an RFS6000 model wireless controller.

This chapter is organized into the following sections:

- *CLI Overview*
- *Getting Context Sensitive Help*
- *Using the No Command*
- *Using CLI Editing Features and Shortcuts*
- *Using CLI to Create Profiles and Enable Remote Administration*

1.1 CLI Overview

INTRODUCTION

The CLI is used for configuring, monitoring, and maintaining the network. The user interface allows you to execute commands on supported wireless controllers, service platformss, and APs, using either a serial console or a remote access method.

This chapter describes basic CLI features. Topics covered include an introduction to command modes, navigation and editing features, help features and command history.

The CLI is segregated into different command modes. Each mode has its own set of commands for configuration, maintenance, and monitoring. The commands available at any given time depend on the mode you are in, and to a lesser extent, the particular model used. Enter a question mark (?) at the system prompt to view a list of commands available for each command mode/instance.

Use specific commands to navigate from one command mode to another. The standard order is: USER EXEC mode, PRIV EXEC mode and GLOBAL CONFIG mode.

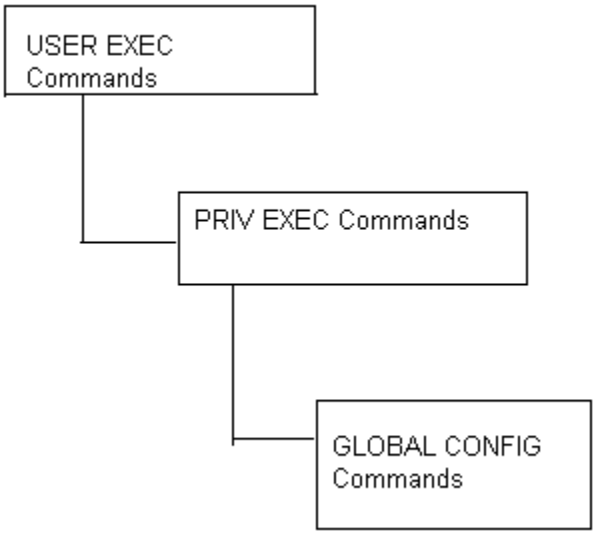

Figure 1-1 *Hierarchy of User Modes*

Command Modes

A session generally begins in the USER EXEC mode (one of the two access levels of the EXEC mode). For security, only a limited subset of EXEC commands are available in the USER EXEC mode. This level is

reserved for tasks that do not change the device's (wireless controller, service platforms, or AP) configuration.

```
rfs6000-6DB5D4>
```

The system prompt signifies the device name and the last three bytes of the device MAC address.

To access commands, enter the PRIV EXEC mode (the second access level for the EXEC mode). Once in the PRIV EXEC mode, enter any EXEC command. The PRIV EXEC mode is a superset of the USER EXEC mode.

```
rfs6000-6DB5D4>enable
rfs6000-6DB5D4#
```

Most of the USER EXEC mode commands are one-time commands and are not saved across device reboots. Save the command by executing 'commit' command. For example, the show command displays the current configuration and the clear command clears the interface.

Access the GLOBAL CONFIG mode from the PRIV EXEC mode. In the GLOBAL CONFIG mode, enter commands that set general system characteristics. Configuration modes, allow you to change the running configuration. If you save the configuration later, these commands are stored across device reboots.

Access a variety of protocol specific (or feature-specific) modes from the global configuration mode. The CLI hierarchy requires you to access specific configuration modes only through the global configuration mode.

```
rfs6000-6DB5D4#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
rfs6000-6DB5D4(config)#
```

You can also access sub-modes from the global configuration mode. Configuration sub-modes define specific features within the context of a configuration mode.

```
rfs6000-6DB5D4(config)#aaa-policy test
rfs6000-6DB5D4(config-aaa-policy-test)#
```

The following table summarizes available CLI commands:

Table 1.1 *Controller CLI Modes and Commands*

User Exec Mode	Priv Exec Mode	Global Configuration Mode
captive-portal-page-upload	archive	aaa-policy
change-passwd	boot	aaa-tacacs-policy
clear	captive-portal-page-upload	alias
clock	cd	ap6521
cluster	change-passwd	ap6522
commit	clear	ap6532
connect	clock	ap6562
create-cluster	cluster	ap7161
crypto	commit	ap7502
crypto-cmp-cert-update	configure	ap7522
database	connect	ap6521
database-backup	copy	ap7532

Table 1.1 *Controller CLI Modes and Commands*

User Exec Mode	Priv Exec Mode	Global Configuration Mode
database-restore	cpe (RFS4000, RFS6000, NX95XX, NX9600, VX9000)	ap7562

1.2 Getting Context Sensitive Help

INTRODUCTION

Enter a question mark (?) at the system prompt to display a list of commands available for each mode. Obtain a list of arguments and keywords for any command using the CLI context-sensitive help.

Use the following commands to obtain help specific to a command mode, command name, keyword or argument:

Command	Description
(prompt)#help	Displays a brief description of the help system
(prompt)#abbreviated-command-entry?	Lists commands in the current mode that begin with a particular character string
(prompt)#abbreviated-command-entry[TAB]	Completes a partial command name
(prompt)#?	Lists all commands available in the command mode
(prompt)#command ?	Lists the available syntax options (arguments and keywords) for the command
(prompt)#command keyword ?	Lists the next available syntax option for the command

NOTE: The system prompt varies depending on the configuration mode.

NOTE: Enter Ctrl + V to use ? as a regular character and not as a character used for displaying context sensitive help. This is required when the user has to enter a URL that ends with a ?

NOTE: The escape character used through out the CLI is “\”. To enter a "\" use "\\" instead.

When using context-sensitive help, the space (or lack of a space) before the question mark (?) is significant. To obtain a list of commands that begin with a particular sequence, enter the characters followed by a question mark (?). Do not include a space. This form of help is called word help, because it completes a word.

```
rfs6000-6DB5D4#service?
service Service Commands
rfs6000-6DB5D4#service
```

Enter a question mark (?) (in place of a keyword or argument) to list keywords or arguments. Include a space before the “?”. This form of help is called command syntax help. It shows the keywords or arguments available based on the command/keyword and argument already entered.

```
rfs6000-6DB5D4#service ?
  block-adopter-config-update       Block configuration updates from the
  bluetooth                         Bluetooth service commands
  clear                             Clear adoption history
  cli-tables-skin                   Choose a formatting layout/skin for CLI
```

```
                                    tabular outputs (EXPERIMENTAL-Applies only
                                    to certain commands)
  cluster                           Cluster Protocol
  copy                              Copy files or directories
  delete                            Delete sessions
  delete-offline-aps                Delete Access Points that are configured
                                    but offline

  pktcap                            Start packet capture
  pm                                Process Monitor
  radio                             Radio parameters
  radius                            Radius test
  request-full-config-from-adopter  Request full configuration from the
                                    adopter
  set                               Set global options
  show                              Show running system information
  signal                            Send a signal to a process
  smart-rf                          Smart-RF Management Commands
  snmp                              Snmp
  ssm                               Command related to ssm
  start-shell                       Provide shell access
  syslog                            Syslog service
  trace                             Trace a process for system calls and
                                    signals
  troubleshoot                      Troubleshooting
  wireless                          Wireless commands

rfs6000-6DB5D4#
```

It is possible to abbreviate commands and keywords to allow a unique abbreviation. For example, “configure terminal” can be abbreviated as **`config t`**. Since the abbreviated command is unique, the controller accepts the abbreviation and executes the command.

Enter the help command (available in any command mode) to provide the following description:

```
rfs6000-6DB5D4>help

When using the CLI, help is provided at the command line when typing '?'. If no
help is available, the help content will be empty. Backup until entering a '?'
shows the help content.
There are two styles of help provided:
1. Full help. Available when entering a command argument (e.g. 'show ?'). This will
   describe each possible argument.

2. Partial help. Available when an abbreviated argument is entered. This will
display which arguments match the input (e.g. 'show ve?').

rfs6000-6DB5D4>
```

1.3 Using the No Command

INTRODUCTION

Almost every command has a **`no`** form. Use no to disable a feature or function or return it to its default. Use the command without the **`no`** keyword to re-enable a disabled feature.

1.3.1 Basic Conventions

Keep the following conventions in mind while working within the CLI structure:

- Use ? at the end of a command to display available sub-modes. Type the first few characters of the sub-mode and press the tab key to add the sub-mode. Continue using ? until you reach the last sub-mode.
- Pre-defined CLI commands and keywords are case-insensitive: cfg = Cfg = CFG. However (for clarity), CLI commands and keywords are displayed (in this guide) using mixed case. For example, apPolicy, trapHosts, channelInfo.
- Enter commands in uppercase, lowercase, or mixed case. Only passwords are case sensitive.

1.4 Using CLI Editing Features and Shortcuts

INTRODUCTION

A variety of shortcuts and edit features are available. The following sections describe these features:

- *Moving the Cursor on the Command Line*
- *Completing a Partial Command Name*
- *Command Output Pagination*

1.4.1 Moving the Cursor on the Command Line

Using CLI Editing Features and Shortcuts

The following table shows the key combinations or sequences to move the command line cursor. Ctrl defines the control key, which must be pressed simultaneously with its associated letter key. Esc means the escape key (which must be pressed first), followed by its associated letter key. Keys are not case sensitive. Specific letters are used to provide an easy way of remembering their functions.

Table 1.2 *Keystrokes Details*

Keystrokes	Function Summary	Function Details
Left Arrow or Ctrl-B	Back character	Moves the cursor one character to the left When entering a command that extends beyond a single line, press the Left Arrow or Ctrl-B keys repeatedly to move back to the system prompt.
Right Arrow or Ctrl-F	Forward character	Moves the cursor one character to the right
Esc- B	Back word	Moves the cursor back one word
Esc- F	Forward word	Moves the cursor forward one word
Ctrl-A	Beginning of line	Moves the cursor to the beginning of the command line
Ctrl-E	End of line	Moves the cursor to the end of the command line
Ctrl-D		Deletes the current character
Ctrl-U		Deletes text up to cursor
Ctrl-K		Deletes from the cursor to end of the line
Ctrl-P		Obtains the prior command from memory

Table 1.2 *Keystrokes Details*

Keystrokes	Function Summary	Function Details
Ctrl-N		Obtains the next command from memory
Esc-C		Converts the letter at the cursor to uppercase
Esc-L		Converts the letter at the cursor to lowercase
Esc-D		Deletes the remainder of a word
Ctrl-W		Deletes the word up to the cursor
Ctrl-Z		Returns to the root prompt
Ctrl-T		Transposes the character to the left of the cursor with the character located at the cursor
Ctrl-L		Clears the screen

1.4.2 Completing a Partial Command Name

Using CLI Editing Features and Shortcuts

If you cannot remember a command name (or if you want to reduce the amount of typing you have to perform), enter the first few letters of a command, then press the Tab key. The command line parser completes the command if the string entered is unique to the command mode. If your keyboard does not have a Tab key, press Ctrl-L.

The CLI recognizes a command once you have entered enough characters to make the command unique. If you enter “conf” within the privileged EXEC mode, the CLI associates the entry with the configure command, since only the configure command begins with **conf**.

In the following example, the CLI recognizes a unique string in the privileged EXEC mode when the Tab key is pressed:

```
rfs6000-6DB5D4#conf[TAB]
rfs6000-6DB5D4#configure
```

When using the command completion feature, the CLI displays the full command name. The command is not executed until the [Return] or [Enter] key is pressed. Modify the command if the full command was not what you intended in the abbreviation. If entering a set of characters (indicating more than one command), the system lists all commands beginning with that set of characters.

Enter a question mark (?) to obtain a list of commands beginning with a particular set of characters. Do not leave a space between the last letter and the question mark (?).

In the following example, all commands, available in the current context, starting with the characters ‘co’ are listed:

```
rfs6000-6DB5D4#co?
  commit     Commit all changes made in this session
  configure  Enter configuration mode
  connect    Open a console connection to a remote device
  copy       Copy from one file to another

rfs6000-6DB5D4#
```

NOTE: The characters entered before the question mark are reprinted to the screen to complete the command entry.

1.4.3 Command Output Pagination

Using CLI Editing Features and Shortcuts

Output often extends beyond the visible screen length. For cases where output continues beyond the screen, the output is paused and a

```
--More--
```

prompt displays at the bottom of the screen. To resume the output, press the [Enter] key to scroll down one line or press the Spacebar to display the next full screen of output.

1.5 Using CLI to Create Profiles and Enable Remote Administration

INTRODUCTION

The following sections describe the following essential procedures:

- *Creating Profiles*
- *Changing the default profile by creating vlan 150 and mapping to ge3 Physical interface*
- *Enabling Remote Administration*

1.5.1 Creating Profiles

Using CLI to Create Profiles and Enable Remote Administration

Profiles are sort of a ‘template’ representation of configuration. The system has:

- a default profile for each of the following devices:
  - RFS4000, RFS6000
- a default profile for each of the following service platformss:
  - NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000
- a default profile for each of the following access points:
  - AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533

To modify the default profile assign an IP address to the management port:

```
rfs6000-6DB5D4(config)#profile rfs6000 default-rfs6000
rfs6000-6DB5D4(config-profile-default-rfs6000)#interface me1
rfs6000-6DB5D4(config-profile-default-rfs6000-if-me1)#ip address 172.16.10.2/24
rfs6000-6DB5D4(config-profile-default-rfs6000rfs6000-if-me1)#commit
rfs6000-6DB5D4(config-profile-default-rfs6000)#exit
rfs6000-6DB5D4(config)#
```

The following command displays a default AP7161 profile configuration:

```
rfs6000-6DB5D4(config)#profile ap71xx default-ap71xx
rfs6000-6DB5D4(config-profile-default-ap71xx)#
rfs6000-6DB5D4(config-profile-default-ap71xx)#show context
profile ap71xx default-ap71xx
 autoinstall configuration
 autoinstall firmware
 device-upgrade persist-images
 crypto ikev1 policy ikev1-default
  isakmp-proposal default encryption aes-256 group 2 hash sha
 crypto ikev2 policy ikev2-default
  isakmp-proposal default encryption aes-256 group 2 hash sha
 crypto ipsec transform-set default esp-aes-256 esp-sha-hmac
 crypto ikev1 remote-vpn
 crypto ikev2 remote-vpn
 crypto auto-ipsec-secure
 crypto remote-vpn-client
 interface radio1
 interface radio2

 interface ge1
  ip dhcp trust
  qos trust dscp
  qos trust 802.1p
 interface ge2
  ip dhcp trust
  qos trust dscp
--More--
```

1.5.2 Changing the default profile by creating vlan 150 and mapping to ge3 Physical interface

- *Using CLI to Create Profiles and Enable Remote Administration*

Logon to the controller in config mode and follow the procedure below:

```
rfs6000-6DB5D4(config-profile-default-rfs6000)#interface vlan 150
rfs6000-6DB5D4(config-profile-default-rfs6000-if-vlan150)#ip address
192.168.150.20/24
rfs6000-6DB5D4(config-profile-default-rfs6000-if-vlan150)#exit
rfs6000-6DB5D4(config-profile-default-rfs6000)#interface ge 3
rfs6000-6DB5D4(config-profile-default-rfs6000-if-ge3)#switchport access vlan 150
rfs6000-6DB5D4(config-profile-default-rfs6000-if-ge3)#commit write
[OK]
rfs6000-6DB5D4(config-profile-default-rfs6000-if-ge3)#show interface vlan 150
Interface vlan150 is UP
  Hardware-type: vlan, Mode: Layer 3, Address: 00-15-70-37-FA-BE
  Index: 8, Metric: 1, MTU: 1500
  IP-Address: 192.168.150.20/24
    input packets 43, bytes 12828, dropped 0, multicast packets 0
    input errors 0, length 0, overrun 0, CRC 0, frame 0, fifo 0, missed 0
    output packets 0, bytes 0, dropped 0
    output errors 0, aborted 0, carrier 0, fifo 0, heartbeat 0, window 0
    collisions 0
```

1.5.2.1 Viewing Configured APs

To view previously configured APs, enter the following command:

```
rfs6000-6DB5D4>show wireless ap configured
-------------------------------------------------------------------------------
----------
 IDX       NAME              MAC             PROFILE       RF-DOMAIN       ADOPTED-BY
-------------------------------------------------------------------------------
----------
  1   ap7532-A2A56C   74-67-F7-A2-A5-6C   default-ap7532   default     00-15-70-
81-74-2D
  2   ap6532-A2E6DC   B4-C7-99-A2-E6-DC   default-ap6532   default     un-adopted
-------------------------------------------------------------------------------
----------
rfs6000-6DB5D4>
```

1.5.3 Enabling Remote Administration

Using CLI to Create Profiles and Enable Remote Administration

A terminal server may function in remote administration mode if either the terminal services role is not installed on the machine or the client used to invoke the session has enabled the admin controller.

- A terminal emulation program running on a computer connected to the serial port on the controller. The serial port is located on the front of the controller.
- A Telnet session through a Secure Shell (SSH) over a network. The Telnet session may or may not use SSH depending on how the controller is configured. It is recommended you use SSH for remote administration tasks.

This section is organized into the following sub sections:

- *Configuring Telnet for Management Access*
- *Configuring SSH*

1.5.3.1 Configuring Telnet for Management Access

Enabling Remote Administration

To login through the serial console, perform the following:

Note, a session generally begins in the USER EXEC mode (one of the two access levels of the EXEC mode).

1 Access the GLOBAL CONFIG mode from the PRIV EXEC mode.

```
rfs6000-6DB5D4>en
rfs6000-6DB5D4#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
```

2 Go to ‘default-management-policy’ mode.

```
rfs6000-6DB5D4(config)#management-policy ?
rfs6000-6DB5D4(config)#management-policy default
rfs6000-6DB5D4(config-management-policy-default)#
```

3 Enter Telnet and the port number at the command prompt. The port number is optional. The default port is 23. Commit the changes after every command. Telnet is enabled.

```
rfs6000-6DB5D4(config-management-policy-default)#telnet
rfs6000-6DB5D4(config-management-policy-default)#commit write
```

4 Connect to the controller through Telnet using its configured IP address. Use the following credentials when logging on to the device for the first time:

User Name	admin
Password	admin123

When logging into the controller for the first time, you are prompted to change the password.

To change user credentials:

1 Enter the username, password, role and access details.

```
rfs6000-6DB5D4(config-management-policy-default)#user testuser password
test@123
 role helpdesk access all
rfs6000-6DB5D4(config-management-policy-default)#commit
rfs6000-6DB5D4(config-management-policy-default)#show context
management-policy default
 telnet
 http server
 https server
 ssh
 user admin password 1
ba7da2bf2f7945af1d3ae1b8b762b541bd5bac1f80a54cd4488f38ed44b91ecd role

0be97e9e30d29dfc4733e7c5f74a7be54570c2450e855cea1a696b0558a40401 role monitor
access all
 user testuser password 1
bca381b5b93cddb0c209e1da8a9d387fa09bfae14cc987438a4d144cb516ffcb role helpdesk
access all
 snmp-server community public ro
 snmp-server community private rw
 snmp-server user snmptrap v3 encrypted des auth md5 0 test@123
 snmp-server user snmpoperator v3 encrypted des auth md5 0 operator
 snmp-server user snmpmanager v3 encrypted des auth md5 0 test@123
rfs6000-6DB5D4(config-management-policy-default)#
```

2 Logon to the Telnet console and provide the user details configured in the previous step to access the controller.

```
rfs6000 release 5.9.0.0-012D
rfs6000-6DB5D4 login: testuser
Password:
Welcome to CLI
Starting CLI...
rfs6000-6DB5D4>
```

1.5.3.2 Configuring SSH

- *Enabling Remote Administration*

By default, SSH is enabled from the factory settings on the controller. The controller requires an IP address and login credentials.

To enable SSH access in the default profile, login through the serial console and perform the following:

1 Access the GLOBAL CONFIG mode from the PRIV EXEC mode.

```
rfs6000-6DB5D4>en
rfs6000-6DB5D4#configure
Enter configuration commands, one per line. End with CNTL/Z.
```

2 Go to ‘config-management-policy-default’ mode.

```
rfs6000-6DB5D4(config)#management-policy default
rfs6000-6DB5D4(config-management-policy-default)#
```

3 Enter SSH at the command prompt.

```
rfs6000-6DB5D4(config-management-policy-default)#ssh
```

4 Log into the controller through SSH using appropriate credentials.

5 Use the following credentials when logging on to the device for the first time:

User Name	admin
Password	admin123

When logging into the controller for the first time, you are prompted to change the password.

To change the user credentials:

```
rfs6000 release 5.9.0.0-012D
rfs6000-6DB5D4 login: testuser
Password:
Welcome to CLI
Starting CLI...
rfs6000-6DB5D4>
```

2 USER EXEC MODE COMMANDS

Logging in to the wireless controller places you within the USER EXEC command mode. Typically, a login requires a user name and password. You have three login attempts before the connection attempt is refused. USER EXEC commands (available at the user level) are a subset of the commands available at the privileged level. In general, USER EXEC commands allow you to connect to remote devices, perform basic tests, and list system information.

To list available USER EXEC commands, use ? at the command prompt. The USER EXEC prompt consists of the device host name followed by an angle bracket (>).

```
<DEVICE>>?
Command commands:
  captive-portal-page-upload  Captive portal advanced page upload
  change-passwd               Change password
  clear                       Clear
  clock                       Configure software system clock
  cluster                     Cluster commands
  commit                      Commit all changes made in this session
  connect                     Open a console connection to a remote device
  create-cluster              Create a cluster
  crypto                      Encryption related commands
  crypto-cmp-cert-update      Update the cmp certs
  database                    Database
  database-backup             Backup database
  database-restore            Restore database
  debug                       Debugging functions
  device-upgrade              Device firmware upgrade
  disable                     Turn off privileged mode command
  enable                      Turn on privileged mode command
  file-sync                   File sync between controller and adoptees
  help                        Description of the interactive help system
  join-cluster                Join the cluster
  l2tpv3                      L2tpv3 protocol
  logging                     Modify message logging facilities
  mint                        MiNT protocol
  no                          Negate a command or set its defaults
  on                          On RF-Domain
  opendns                     Opendns username/password configuration
  page                        Toggle paging
  ping                        Send ICMP echo messages
  ping6                       Send ICMPv6 echo messages
  revert                      Revert changes
  service                     Service Commands
  show                        Show running system information
  ssh                         Open an ssh connection
  telnet                      Open a telnet connection
  terminal                    Set terminal line parameters
  time-it                     Check how long a particular command took between
                              request and completion of response
  traceroute                  Trace route to destination
  traceroute6                 Trace route to destination(IPv6)
  virtual-machine             Virtual Machine
  watch                       Repeat the specific CLI command at a periodic
                              interval
  write                       Write running configuration to memory or
                              terminal

  clrscr                      Clears the display screen
  exit                        Exit from the CLI

<DEVICE>>
```

2.1 User Exec Commands

USER EXEC MODE COMMANDS

The following table summarizes the User Exec Mode commands:

Table 2.1 *User Exec Mode Commands*

Command	Description	Reference
captive-portal-page-upload	Uploads captive portal advanced pages to access points	*page 2-4*
change-passwd	Changes the password of a logged user	*page 2-7*
clear	Resets the last saved command	*page 2-8*
clock	Configures the system clock	*page 2-19*
cluster	Accesses the cluster context	*page 2-20*
connect	Establishes a console connection to a remote device	*page 2-21*
create-cluster	Creates a new cluster on a specified device	*page 2-22*
crypto	Enables encryption	*page 2-24*
crypto-cmp-cert-update	Triggers a CMP certificate update on a specified device or devices	*page 2-33*
database	Enables automatic repairing (vacuuming) and dropping of databases (Captive-portal and NSight)	*page 2-34*
database-backup	Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server	*page 2-38*
database-restore	Restores a previously exported database [captive-portal and/or NSight]. Previously exported databases (backed up to a specified FTP or SFTP server) are restored to the original database.	*page 2-40*
device-upgrade	Configures device firmware upgrade settings	*page 2-41*
disable	Turns off (disables) the privileged mode command set	*page 2-49*
enable	Turns on (enables) the privileged mode command set	*page 2-50*
file-sync	Configures parameters enabling syncing of PKCS#12 certificate between the staging-controller and adopted access points	*page 2-51*
join-cluster	Adds a device (access point, wireless controller, or service platform) to an existing cluster of devices	*page 2-54*
l2tpv3	Establishes or brings down *Layer 2 Tunneling Protocol Version 3* (L2TPV3) tunnels	*page 2-56*
logging	Modifies message logging facilities	*page 2-58*
mint	Configures MiNT protocol	*page 2-60*
no	Negates a command or sets its default	*page 2-62*
on	Executes the following commands in the RF Domain context: clrscr, do, end, exit, help, service, show	*page 2-64*

Table 2.1 *User Exec Mode Commands*

Command	Description	Reference
opendns	Connects to the OpenDNS site using OpenDNS registered credentials (username, password) OR OpenDNS API token to fetch the OpenDNS device_id. This command is a part of the process integrating access points, controllers, and service platforms with OpenDNS.	*page 2-65*
page	Toggles a device's (access point, wireless controller, or service platform) paging function	*page 2-67*
ping	Sends ICMP echo messages to a user-specified location	*page 2-68*
ping6	Sends ICMPv6 echo messages to a user-specified IPv6 address	*page 2-70*
ssh	Opens an SSH connection between two network devices	*page 2-71*
telnet	Opens a Telnet session	*page 2-72*
terminal	Sets the length and width of the terminal window	*page 2-73*
time-it	Verifies the time taken by a particular command between request and response	*page 2-74*
traceroute	Traces the route to its defined destination	*page 2-75*
traceroute6	Traces the route to a specified IPv6 destination	*page 2-76*
watch	Repeats a specific CLI command at a periodic interval	*page 2-77*

NOTE: For more information on common commands (clrscr, commit, help, revert, service, show, write, and exit), see *COMMON COMMANDS*.

NOTE: The input parameter <HOSTNAME>, if used in syntaxes across this chapter, cannot include an underscore (_) character.

2.1.1 captive-portal-page-upload

User Exec Commands

Uploads captive portal advanced pages to connected access points. Use this command to provide connected access points with specific captive portal configurations so that they can successfully provision login, welcome, and condition pages to requesting clients attempting to access the wireless network using the captive portal.

NOTE: Ensure that the captive portal pages uploaded are *.tar files.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
captive-portal-page-upload [<CAPTIVE-PORTAL-NAME>|cancel-upload|delete-file|
load-file]

captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all|rf-domain]
captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all]
{upload-time <TIME>}

captive-portal-page-upload <CAPTIVE-PORTAL-NAME> rf-domain [<DOMAIN-NAME>|all]
{from-controller} {(upload-time <TIME>)}

captive-portal-page-upload cancel-upload [<MAC/HOSTNAME>|all|on rf-domain
[<DOMAIN-NAME>|all]]

captive-portal-page-upload delete-file <CAPTIVE-PORTAL-NAME> <FILE-NAME>

captive-portal-page-upload load-file <CAPTIVE-PORTAL-NAME> <URL>
```

Parameters

```
• captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all]
{upload-time <TIME>}
```

captive-portal-page-upload <CAPTIVE-PORTAL-NAME>	Uploads advanced pages of the captive-portal identified by the <CAPTIVE-PORTAL-NAME> parameter • <CAPTIVE-PORTAL-NAME> – Specify the captive portal's name (should be existing and configured).
<MAC/HOSTNAME>	Uploads to a specified AP • <MAC/HOSTNAME> – Specify AP's MAC address or hostname.
all	Uploads to all APs

upload-time <TIME>	Optional. Schedules an AP upload time • <TIME> – Specify upload time in the MM/DD/YYYY-HH:MM or HH:MM format. The scheduled upload time is your local system's time. It is not the access point, controller, service platform, or virtual controller time and it is not synched with the device. To view a list of uploaded captive portal files, execute the *show > captive-portal-page-upload > list-files* <CAPTIVE-PORTAL-NAME> command.

• `captive-portal-page-upload <CAPTIVE-PORTAL-NAME> rf-domain [<DOMAIN-NAME>|all] {from-controller} {(upload-time <TIME>)}`

captive-portal-page-upload <CAPTIVE-PORTAL-NAME>	Uploads advanced pages of the captive portal identified by the <CAPTIVE-PORTAL-NAME> parameter • <CAPTIVE-PORTAL-NAME> – Specify captive portal's name (should be existing and configured).
rf-domain [<DOMAIN-NAME>|all]	Uploads to all APs within a specified RF Domain or all RF Domains • <DOMAIN-NAME> – Uploads to APs within a specified RF Domain. Specify the RF Domain name. • all – Uploads to APs across all RF Domains
from-controller	Optional. Uploads to APs from the adopted device
upload-time <TIME>	Optional. Schedules an AP upload time • <TIME> – Specify upload time in the MM/DD/YYYY-HH:MM or HH:MM format. The scheduled upload time is your local system's time. It is not the access point, controller, service platform, or virtual controller time and it is not synched with the device.

• `captive-portal-page-upload cancel-upload [<MAC/HOSTNAME>|all|on rf-domain [<DOMAIN-NAME>|all]]`

captive-portal-page-upload cancel-upload	Cancels a scheduled AP upload
cancel-upload [<MAC/HOSTNAME>|all|on rf-domain [<DOMAIN-NAME>|all]]	Select one of the following options: • <MAC/HOSTNAME> – Cancels scheduled upload to a specified AP. Specify the AP's MAC address or hostname. • all – Cancels all scheduled AP uploads • on rf- domain – Cancels all scheduled uploads within a specified RF Domain or all RF Domains • <DOMAIN-NAME> – Cancels scheduled uploads within a specified RF Domain. Specify RF Domain name. • all – Cancels scheduled uploads across all RF Domains

• `captive-portal-page-upload delete-file <CAPTIVE-PORTAL-NAME> <FILE-NAME>`

captive-portal-page-upload delete-file	Deletes a specified captive portal's uploaded captive-portal internal page files
<CAPTIVE-PORTAL-NAME> <FILE-NAME>	Deletes a captive portal's, identified by the <CAPTIVE-PORTAL-NAME> keyword, uploaded internal page files • <CAPTIVE-PORTAL-NAME> – Specify the captive portal's name. • <FILE-NAME> – Specify the file name. The specified internal captive portal page is deleted.

- `captive-portal-page-upload load-file <CAPTIVE-PORTAL-NAME> <URL>`

captive-portal-page-upload load-file	Loads captive-portal advanced pages
<CAPTIVE-PORTAL-NAME> <URL>	Specify the captive portal's name and location. The captive portal should be existing and configured. • <URL> – Specifies location of the captive-portal's Web pages. Use one of the following formats to specify the location: IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file http://<hostname|[IPv6]>[:port]/path/file **Note:** The captive portal pages are downloaded to the controller from the location specified here. After downloading use the *captive-portal-page-upload > <CAPTIVE-PORTAL-NAME> > <DEVICE-OR-DOMAIN-NAME>* command to upload these pages to APs.

Example

```
ap6562-B1A214>captive-portal-page-upload load-file captive_portal_test tftp://
89.89.89.17/pages_new_only.tar
ap6562-B1A214>

ap6562-B1A214>show captive-portal-page-upload load-image-status
Download of captive_portal_test advanced page file is complete
ap6562-B1A214>

ap6562-B1A214>captive-portal-page-upload captive_portal_test all
-------------------------------------------------------------------------------
         CONTROLLER             STATUS                  MESSAGE
-------------------------------------------------------------------------------
  FC-0A-81-B1-A2-14         Success         Added 6 APs to upload queue
-------------------------------------------------------------------------------
ap6562-B1A214>

ap6562-B1A214>show captive-portal-page-upload status
Number of APs currently being uploaded : 1
Number of APs waiting in queue to be uploaded : 0
-------------------------------------------------------------------------------
-------
        AP           STATE     UPLOAD TIME PROGRESS RETRIES LAST UPLOAD ERROR
UPLOADED BY
-------------------------------------------------------------------------------

  ap6562-B1A738   downloading   immediate   100      0       -                None
-------------------------------------------------------------------------------
-------
ap6562-B1A214>
```

2.1.2 change-passwd

User Exec Commands

Changes the password of the logged user. When this command is executed without any parameters, the password can be changed interactively.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
change-passwd {<OLD-PASSWORD>} <NEW-PASSWORD>
```

Parameters

- `change-passwd {<OLD-PASSWORD>} <NEW-PASSWORD>`

<OLD-PASSWORD>	Optional. Specify the password to be changed.
<NEW-PASSWORD>	Specify the new password. **Note:** The password can also be changed interactively. To do so, press [Enter] after the command.

Usage Guidelines

A password must be from 1 - 64 characters.

Example

```
rfs6000-81742D>change-passwd
Enter old password:
Enter new password:
Password for user 'admin' changed successfully
Please write this password change to memory(write memory) to be persistent.
rfs6000-81742D#write memory
OK
rfs6000-81742D>
```

2.1.3 clear

User Exec Commands

Clears parameters, cache entries, table entries, and other similar entries. The clear command is available for specific commands only. The information cleared, using this command, depends on the mode where the clear command is executed.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

NOTE: When using the *clear* command, refer to the interface details provided in *interface*.

Syntax

```
clear [arp-cache|bonjour|cdp|counters|crypto|eguest|event-history|gre|ip|
ipv6|lacp|lldp|mac-address-table|mint|role|rtls|spanning-tree|traffic-shape|
vrrp]

clear arp-cache {on <DEVICE-NAME>}

clear bonjour cache {on <DEVICE-NAME>}

clear [cdp|lldp] neighbors {on <DEVICE-NAME>}

clear counters [ap|radio|wireless-client]

clear counters [ap {<MAC>}|radio {<MAC/DEVICE-NAME>} {<1-X>}|wireless-client
{<MAC>}] {(on <DEVICE-OR-DOMAIN-NAME>)}

clear crypto [ike|ipsec] sa
clear crypto ike sa [<IP>|all] {on <DEVICE-NAME>}
clear crypto ipsec sa {on <DEVICE-NAME>}

clear eguest registration statistics

clear event-history

clear gre stats {on <DEVICE-NAME>}

clear ip [bgp|dhcp|ospf]

clear ip bgp [<IP>|all|external|process]
clear ip bgp [<IP>|all|external] {in|on|out|soft}
clear ip bgp [<IP>|all|external] {in prefix-filter} {on <DEVICE-NAME>}
clear ip bgp [<IP>|all|external] {out} {(on <DEVICE-NAME>)}
clear ip bgp [<IP>|all|external] {soft {in|out}} {on <DEVICE-NAME>}
clear ip bgp process {on <DEVICE-NAME>}

clear ip dhcp bindings [<IP>|all] {on <DEVICE-NAME>}
clear ip ospf process {on <DEVICE-NAME>}

clear ipv6 neighbor-cache {on <DEVICE-NAME>}

clear lacp [<1-4> counters|counters]
```

```
clear mac-address-table {address|interface|mac-auth-state|vlan} {on <DEVICE-NAME>}

clear mac-address-table {address <MAC>|vlan <1-4094>} {on <DEVICE-NAME>}

clear mac-address-table {interface [<IN-NAME>|ge <1-2>|port-channel <1-2>|vmif <1-8>]} {on <DEVICE-NAME>}

clear mac-address-table mac-auth-state address <MAC> vlan <1-4094> {on <DEVICE-NAME>}

clear mint mlcp history {on <DEVICE-NAME>}

clear role ldap-stats {on <DEVICE-NAME>}

clear rtls [aeroscout|ekahau]

clear rtls [aeroscout|ekahau] {<MAC/DEVICE-NAME> {on <DEVICE-OR-DOMAIN-NAME>}|on <DEVICE-OR-DOMAIN-NAME>}

clear spanning-tree detected-protocols {interface|on}

clear spanning-tree detected-protocols {on <DEVICE-NAME>}

clear spanning-tree detected-protocols {interface [<INTERFACE-NAME>|ge <1-X>|me1|port-channel <1-X>|pppoe1|up1|vlan <1-4094>|wwan1]} {on <DEVICE-NAME>}

clear traffic-shape statistics class <1-4> {(on <DEVICE-NAME>)}

clear vrrp [error-stats|stats] {on <DEVICE-NAME>}
```

Parameters

- `clear arp-cache {on <DEVICE-NAME>}`

arp-cache	Clears *Address Resolution Protocol* (ARP) cache entries on a device. This protocol matches layer 3 IP addresses to layer 2 MAC addresses.
on <DEVICE-NAME>	Optional. Clears ARP cache entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear bonjour cache {on <DEVICE-NAME>}`

bonjour cache	Clears all Bonjour cached statistics. Once cleared the system has to re-discover available Bonjour services.
on <DEVICE-NAME>	Optional. Clears all Bonjour cached statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear [cdp|lldp] neighbors {on <DEVICE-NAME>}`

cdp	Clears *Cisco Discovery Protoco*l (CDP) table entries
lldp	Clears *Link Layer Discovery Protocol* (LLDP) table entries
neighbors	Clears CDP or LLDP neighbor table entries based on the option selected in the preceding step
on <DEVICE-NAME>	Optional. Clears CDP or LLDP neighbor table entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear counters [ap {<MAC>}|radio {<MAC/DEVICE-NAME>} {<1-X>}|wireless-client {<MAC>}] {(on <DEVICE-OR-DOMAIN-NAME>)}`

counters	Clears counters based on the parameters passed. The options are: AP, radio, and wireless clients.
ap <MAC>	Clears counters for all APs or a specified AP • <MAC> – Optional. Specify the AP's MAC address. **Note:** If no MAC address is specified, all AP counters are cleared.
radio <MAC/DEVICE-NAME> <1-X>	Clears radio interface counters on a specified device or on all devices • <MAC/DEVICE-NAME> – Optional. Specify the device's hostname or MAC address. Optionally, append the radio interface number (to the radio ID) using one of the following formats: AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX (where RX is the interface number). • <1-X> – Optional. Identifies the radio interface by its index. Specify the radio interface index, if not specified as part of the radio ID. The number of radio interfaces available varies with the access point type. If no device name or MAC address is specified, all radio interface counters are cleared.
wireless-client <MAC>	Clears counters for all wireless clients or a specified wireless client • <MAC> – Optional. Specify the wireless client's MAC address. If no MAC address is specified, all wireless client counters are cleared.
on <DEVICE-OR-DOMAIN-NAME>	The following option is common to all of the above keywords: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Clears AP, radio, or wireless client counters on a specified device • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `clear crypto ike sa [<IP>|all] {on <DEVICE-NAME>}`

crypto	Clears encryption module database
ike sa [<IP>|all]	Clears *Internet Key Exchange* (IKE) *security associations* (SAs) • <IP> – Clears IKE SA entries for the peer identified by the <IP> keyword • all – Clears IKE SA entries for all peers
on <DEVICE-NAME>	Optional. Clears IKE SA entries, for a specified peer or all peers, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear crypto ipsec sa {on <DEVICE-NAME>}`

crypto	Clears encryption module database
ipsec sa on <DEVICE-NAME>	Clears *Internet Protocol Security* (IPSec) database SAs • on <DEVICE-NAME> – Optional. Clears IPSec SA entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear eguest registration statistics`

eguest registration statistics	Clears EGuest registration server counters. When cleared EGuest registration details are deleted, and the *show > eguest > registration > statistics* command output is null. This command is applicable only on the NX95XX, NX9600, and VX9000 model service platforms.

- `clear gre stats {on <DEVICE-NAME>}`

gre stats	Clears GRE tunnel statistics
on <DEVICE-NAME>	Optional. Clears GRE tunnel statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear event-history`

event-history	Clears event history cache entries

- `clear ip bgp [<IP>|all|external] {in prefix-filter} {on <DEVICE-NAME>}`

ip bgp [<IP>|all|external]	Clears on-going BGP sessions based on the option selected • <IP> – Clears BGP session with the peer identified by the <IP> keyword. Specify the BGP peer's IP address. • all – Clears all BGP peer sessions • external – Clears *external BGP* (eBGP) peer sessions This command is applicable only to the RFS4000, RFS6000, NX95XX, NX9600, and VX9000 platforms. Modifications made to BGP settings (BGP access lists, weight, distance, route-maps, versions, routing policy, etc.) take effect only after on-going BGP sessions are cleared. The *clear > ip > bgp* command clears BGP sessions. To reduce lose of route updates during the process, use the 'soft' option. Soft reconfiguration stores inbound/outbound route updates to be processed later and updated to the routing table. This requires high memory usage.
in prefix-filter	Optional. Clears inbound route updates • prefix-filter – Optional. Clears the existing *Outbound Route Filtering* (ORF) prefix-list
on <DEVICE-NAME>	Optional. Clears route updates on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip bgp [<IP>|all|external] {out} {(on <DEVICE-NAME>)}`

ip bgp [<IP>|all|external]	Clears on-going BGP sessions based on the option selected • <IP> – Clears BGP session with the peer identified by the <IP> keyword. Specify the BGP peer's IP address. • all – Clears all BGP peer sessions • external – Clears eBGP peer sessions This command is applicable only to the RFS4000, RFS6000, NX95XX, NX9600, and VX9000 platforms. Contd..

	Modifications made to BGP settings (BGP access lists, weight, distance, route-maps, versions, routing policy, etc.) take effect only after on-going BGP sessions are cleared. The *clear > ip > bgp* command clears BGP sessions. To reduce lose of route updates during the process, use the 'soft' option. Soft reconfiguration stores inbound/outbound route updates to be processed later and updated to the routing table. This requires high memory usage.
out	Optional. Clears outbound route updates. Optionally specify the device on which to execute this command.
on <DEVICE-NAME>	The following keyword is recursive and optional. • on <DEVICE-NAME> – Optional. Clears BGP sessions on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip bgp [<IP>|all|external] {soft {in|out}} {on <DEVICE-NAME>}`

ip bgp [<IP>|all|external]	Clears on-going BGP sessions based on the option selected • <IP> – Clears the BGP peer session with the peer identified by the <IP> keyword. Specify the BGP peer's IP address. • all – Clears all BGP peer sessions • external – Clears eBGP peer sessions This command is applicable only to the RFS4000, RFS6000, NX95XX, NX9600, and VX9000 platforms.
soft {in|out}	Optional. Initiates soft-reconfiguration of route updates for the specified IP address • in – Optional. Enables soft reconfiguration of inbound route updates • out – Optional. Enables soft reconfiguration of outbound route updates Modifications made to BGP settings (BGP access lists, weight, distance, route-maps, versions, routing policy, etc.) take effect only after on-going BGP sessions are cleared. The *clear > ip > bgp* command clears BGP sessions. To reduce loss of route updates during the process, use the 'soft' option. Soft reconfiguration stores inbound/outbound route updates to be processed later and updated to the routing table. This requires high memory usage.
on <DEVICE-NAME>	Optional. Initiates soft reconfiguration inbound/outbound route updates on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip bgp process {on <DEVICE-NAME>}`

ip bgp process	Clears all BGP processes running This command is applicable only to the RFS4000, RFS6000, NX95XX, NX9600, and VX9000 platforms.
on <DEVICE-NAME>	Optional. Clears all BGP processes on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip dhcp bindings [<IP>|all] {on <DEVICE-NAME>}`

ip	Clears a *Dynamic Host Configuration Protocol* (DHCP) server's IP address binding entries
dhcp bindings	Clears DHCP connections and server bindings
<IP>	Clears specific address binding entries. Specify the IP address to clear binding entries.

all	Clears all address binding entries
on <DEVICE-NAME>	Optional. Clears a specified address binding or all address bindings on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear ip ospf process` *{on <DEVICE-NAME>}*

ip ospf process	Clears already enabled *Open Shortest Path First* (OSPF) process and restarts the process
on <DEVICE-NAME>	Optional. Clears OSPF process on a specified device OSPF is a link-state *interior gateway protocol* (IGP). OSPF routes IP packets within a single routing domain (autonomous system), like an enterprise LAN. OSPF gathers link state information from neighboring routers and constructs a network topology. The topology determines the routing table presented to the Internet Layer, which makes routing decisions based solely on the destination IP address found in IP packets. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear ipv6 neighbor-cache` *{on <DEVICE-NAME>}*

clear ipv6 neighbor-cache	Clears IPv6 neighbor cache entries
on <DEVICE-NAME>	Optional. Clears IPv6 neighbor cache entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear lacp [<1-4> counters|counters]`

clear lacp [<1-4> counters| counters]	Clears *Link Aggregation Control Protocol* (LACP) counters for a specified port-channel group or all port-channel groups configured • <1-4> counters – Clears LACP counters for a specified port-channel. Specify the port-channel index number from 1 - 4. Note, LACP is supported only on the NX5500, NX7500, and NX9500 model service platforms. However, the NX9500 series service platforms support only two (2) port-channels, and the other model service platforms support four (4) port-channels. • counters – Clears LACP counters for all configured port-channels on the device

- `clear mac-address-table` *{address <MAC>|vlan <1-4094>} {on <DEVICE-NAME>}*

mac-address-table	Clears MAC address forwarding table data based on the parameters passed Use this command to clear the following: all or specified MAC addresses from the system, all MAC addresses on a specified interface, all MAC addresses on a specified VLAN, or the authentication state of a MAC address.
address <MAC>	Optional. Clears a specified MAC address from the MAC address table. • <MAC> – Specify the MAC address in one of the following formats: AA-BB-CC-DD-EE-FF or AA:BB:CC;DD:EE:FF or AABB.CCDD.EEFF If executed without specifying any MAC address(es), all MAC addresses from the MAC address table will be removed.

vlan <1-4094>	Optional. Clears all MAC addresses for a specified VLAN • <1-4094> – Specify the VLAN ID from 1 - 4094.
on <DEVICE-NAME>	Optional. Clears a single MAC entry or all MAC entries, for the specified VLAN on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `clear mac-address-table {interface [<IN-NAME>|ge <1-2>|port-channel <1-2>|vmif <1-8>]} {on <DEVICE-NAME>}`

mac-address-table	Clears MAC address forwarding table data based on the parameters passed Use this command to clear the following: all or specified MAC addresses from the system, all MAC addresses on a specified interface, all MAC addresses on a specified VLAN, or the authentication state of a MAC address.
interface	Clears all MAC addresses for the selected interface. Use the options available to specify the interface.
<IF-NAME>	Clears MAC address forwarding table for the specified layer 2 interface (Ethernet port) • <IF-NAME> – Specify the layer 2 interface name.
ge <1-X>	Clears MAC address forwarding table for the specified GigabitEthernet interface • <1-X> – Specify the GigabitEthernet interface index from 1 - X. The number of GE interfaces supported varies for different device types.
port-channel <1-X>	Clears MAC address forwarding table for the specified port-channel interface • <1-X> – Specify the port-channel interface index from 1 - X. The number of port-channel interfaces supported varies for different device types.
on <DEVICE-NAME>	Optional. Clears the MAC address forwarding table, for the selected interface, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `clear mac-address-table mac-auth-state address <MAC> vlan <1-4904> {on <DEVICE-NAME>}`

mac-address-table mac-auth-state address <MAC> vlan <1-4904>	Clears MAC addresses learned from a particular VLAN when WLAN MAC authentication and captive-portal fall back is enabled Access points/controllers provide WLAN access to clients whose MAC address has been learned and stored in their MAC address tables. Use this command to clear a specified MAC address on the MAC address table. Once cleared the client has to re-authenticate, and is provided access only on successful authentication. • <MAC> – Specify the MAC address to clear. • vlan <1-4904> – Specify the VLAN interface from 1 - 4094. In the AP/controller's MAC address table, the specified MAC address is cleared on the specified VLAN interface.
on <DEVICE-NAME>	Optional. Clears the specified MAC address on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. If a device is not specified, the system clears the MAC address on all devices.

- `clear mint mlcp history {on <DEVICE-NAME>}`

mint	Clears MiNT related information
mlcp history	Clears *MiNT Link Creation Protocol* (MLCP) client history
on <DEVICE-NAME>	Optional. Clears MLCP client history on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear role ldap-stats {on <DEVICE-NAME>}`

role ldap-stats	Clears *Lightweight Directory Access Protocol* (LDAP) server statistics
on <DEVICE-NAME>	Optional. Clears LDAP server statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear rtls [aeroscout|ekahau] {<MAC/DEVICE-NAME> {on <DEVICE-OR-DOMAIN-NAME>}| on <DEVICE-OR-DOMAIN-NAME>}`

rtls	Clears *Real Time Location Service* (RTLS) statistics
aeroscout	Clears RTLS Aeroscout statistics
ekahau	Clears RTLS Ekahau statistics
<MAC/DEVICE-NAME>	This keyword is common to the 'aeroscout' and 'ekahau' parameters. • <MAC/DEVICE-NAME> – Optional. Clears Aeroscout or Ekahau RTLS statistics on a specified AP, wireless controller, or service platform. Specify the AP's MAC address or hostname.
on <DEVICE-OR-DOMAIN-NAME>	This keyword is common to the 'aeroscout', 'ekahau', and <MAC/DEVICE-NAME> parameters. • on <DEVICE-OR-DOMAIN-NAME> – Optional. Clears Aeroscout or Ekahau RTLS statistics on a specified device • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `clear spanning-tree detected-protocols {on <DEVICE-NAME>}`

spanning-tree	Clears spanning tree entries on an interface, and restarts protocol migration
detected-protocols	Restarts protocol migration
on <DEVICE-NAME>	Optional. Clears spanning tree entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear spanning-tree detected-protocols {interface [<INTERFACE-NAME>|ge <1-X>| me1|port-channel <1-X>|pppoe1|up1|vlan <1-4094>|wwan1]} {on <DEVICE-NAME>}`

spanning-tree	Clears spanning tree entries on an interface and restarts protocol migration
detected-protocols	Restarts protocol migration

interface [<INTERFACE-NAME>| ge <1-X>|me1| port-channel <1-X>| pppoe1|up1| vlan <1-4094>| wwan1]	Optional. Clears spanning tree entries on different interfaces • <INTERFACE-NAME> – Clears detected spanning tree entries on a specified interface. Specify the interface name. • ge <1-X> – Clears detected spanning tree entries for the selected GigabitEthernet interface. Select the GigabitEthernet interface index from 1 - X. • me1 – Clears FastEthernet interface spanning tree entries • port-channel <1-X> – Clears detected spanning tree entries for the selected port channel interface. Select the port channel index from 1 - X. The number of port-channel interfaces supported varies for different device types. For example, the RFS4000 model wireless controller supports 3 port-channels. • pppoe1 – Clears detected spanning tree entries for *Point-to-Point Protocol over Ethernet* (PPPoE) interface • up1 – Clears detected spanning tree entries for the WAN Ethernet interface • vlan <1-4094> – Clears detected spanning tree entries for the selected VLAN interface. Select a *Switch Virtual Interface* (SVI) VLAN ID from 1- 4094. • wwan1 – Clears detected spanning tree entries for wireless WAN interface.
on <DEVICE-NAME>	Optional. Clears spanning tree entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear traffic-shape statistics class <1-4> {(on <DEVICE-NAME>)}`

traffic-shape statistics	Clears traffic shaping statistics
class <1-4>	Clears traffic shaping statistics for a specific traffic class • <1-4> – Specify the traffic class from 1 - 4. **Note:** If the traffic class is not specified, the system clears all traffic shaping statistics.
on <DEVICE-NAME>	Optional. Clears traffic shaping statistics for the specified traffic class on a specified device • <DEVICE-NAME> – Specify the name of the access point, wireless controller, or service platform. **Note:** For more information on configuring traffic-shape, see *traffic-shape*.

- `clear vrrp [error-stats|stats] {on <DEVICE-NAME>}`

vrrp	Clears a device's *Virtual Router Redundancy Protocol* (VRRP) statistics VRRP allows a pool of routers to be advertized as a single virtual router. This virtual router is configured by hosts as their default gateway. VRRP elects a master router, from this pool, and assigns it a virtual IP address. The master router routes and forwards packets to hosts on the same subnet. When the master router fails, one of the backup routers is elected as the master and its IP address is mapped to the virtual IP address.
error-stats	Clears global error statistics
stats	Clears VRRP related statistics
on <DEVICE-NAME>	The following keywords are common to the 'error-stats' and 'stats' parameters: • on <DEVICE-NAME> – Optional. Clears VRRP statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs4000-229D58>clear event-history

rfs4000-229D58>clear spanning-tree detected-protocols interface port-channel 1

rfs4000-229D58>clear spanning-tree detected-protocols interface ge 1

2.1.4 clock

User Exec Commands

Sets a device's system clock. By default all WiNG devices are shipped with the time zone and time format set to UTC and 24-hour clock respectively. If a device's clock is set without resetting the time zone, the time is displayed relative to the *Universal Time Coordinated* (UTC) – Greenwich Time. To display time in the local time zone format, in the device's configuration mode, use the timezone command to reset the time zone. You can also reset the time zone at the RF Domain level. When configured as RF Domain setting, it applies to all devices within the domain. Configuring the local time zone prior to setting the clock is recommended. For more information on configuring RF Domain time zone, see *timezone*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
clock set <HH:MM:SS> <1-31> <MONTH> <1993-2035> {on <DEVICE-NAME>}
```

Parameters

- `clock set <HH:MM:SS> <1-31> <MONTH> <1993-2035> {on <DEVICE-NAME>}`

clock set	Sets a device's software system clock
<HH:MM:SS>	Sets the current time (in military format hours, minutes, and seconds) **Note:** By default, the WiNG software displays time in the 24-hour clock format. This setting cannot be changed.
<1-31>	Sets the numerical day of the month
<MONTH>	Sets the month of the year (Jan to Dec)
<1993-2035>	Sets a valid four digit year from 1993 - 2035
on <DEVICE-NAME>	Optional. Sets the clock on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

The following commands set the time zone and clock for the logged device:

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#timezone America/Los_Angeles

nx9500-6C8809>clock set 11:24:30 21 Jan 2017

nx9500-6C8809>show clock
2017-01-21 12:14:14 PDT
nx9500-6C8809>
```

Note, if the clock is set without resetting the time zone, the time displays as UTC time, as shown in the following example:

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#no timezone
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#commit

nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#show clock
2017-01-21 19:15:55 UTC

nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#
```

2.1.5 cluster

User Exec Commands

Initiates cluster context. The cluster context provides centralized management to configure all cluster members from any one member.

Commands executed under this context are executed on all members of the cluster.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
cluster start-election
```

Parameters

- `cluster start-election`

start-election	Starts a new cluster master election

Example

```
rfs4000-880DA7>cluster start-election
rfs4000-880DA7>
```

Related Commands

create-cluster	Creates a new cluster on the specified device
join-cluster	Adds a wireless controller or service platform, as a member, to an existing cluster of controllers

2.1.6 connect

User Exec Commands

Begins a console connection to a remote device using the remote device's MiNT ID or name

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
connect [mint-id <MINT-ID>|<REMOTE-DEVICE-NAME>]
```

Parameters

- `connect [mint-id <MINT-ID>|<REMOTE-DEVICE-NAME>]`

mint-id <MINT-ID>	Connects to the remote system using its MiNT ID • <MINT-ID> – Specify the remote device's MiNT ID.
<REMOTE-DEVICE-NAME>	Connects to the remote system using its name • <REMOTE-DEVICE-NAME> – Specify the remote device's name.

Example

```
rfs6000-81742D>show mint lsp-db
9 LSPs in LSP-db of 19.6D.B5.D4:

2.1.7 create-cluster

User Exec Commands

Creates a new device cluster with the specified name and assigns it an IP address and routing level

A cluster (or redundancy group) is a set of controllers or service platforms (nodes) uniquely defined by a profile configuration. Within the cluster, members discover and establish connections to other members and provide wireless network self-healing support in the event of member's failure.

A cluster's load is typically distributed evenly amongst its members. An administrator needs to define how often the profile is load balanced for radio distribution, as radios can come and go and members join and exit the cluster.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
create-cluster name <CLUSTER-NAME> ip <IP> {level [1|2]}
```

Parameters

- `create-cluster name <CLUSTER-NAME> ip <IP> {level [1|2]}`

create-cluster	Creates a cluster
name <CLUSTER-NAME>	Configures the cluster name • <CLUSTER-NAME> – Specify a cluster name. Define a name for the cluster name unique to its configuration or profile support requirements. The name cannot exceed 64 characters.
ip <IP>	Specifies the device's IP address used for cluster creation • <IP> – Specify the device's IP address in the A.B.C.D format.
level [1|2]	Optional. Configures the cluster's routing level • 1 – Configures level 1 (local) routing • 2 – Configures level 2 (inter-site) routing

Example

```
rfs4000-229D58>create-cluster name TechPubs ip 192.168.13.13 level 1

cluster	Initiates cluster context. The cluster context provides centralized management to configure all cluster members from any one member.
join-cluster	Adds a device, as a member, to an existing cluster of devices

2.1.8 crypto

User Exec Commands

Enables digital certificate configuration and RSA Keypair management. Digital certificates are issued by CAs and contain user or device specific information, such as name, public key, IP address, serial number, company name, etc. Use this command to generate, delete, export, or import encrypted RSA Keypairs and generate *Certificate Signing Request* (CSR).

This command also enables trustpoint configuration. Trustpoints contain the CA's identity and configuration parameters.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
crypto [key|pki]

crypto key [export|generate|import|zeroize]

crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL>
{background|on|passphrase}

crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|passphrase
<KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}

crypto key generate rsa <RSA-KEYPAIR-NAME> [2048|4096] {on <DEVICE-NAME>}

crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL>
{background|on|passphrase}

crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL> {background|passphrase
<KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}

crypto key zeroize rsa <RSA-KEYPAIR-NAME> {force} {(on <DEVICE-NAME>)}

crypto pki [authenticate|export|generate|import|zeroize]

crypto pki authenticate <TRUSTPOINT-NAME> <LOCATION-URL> {background}
{(on <DEVICE-NAME>)}

crypto pki export [request|trustpoint]

crypto pki export request [generate-rsa-key|short|use-rsa-key] <RSA-KEYPAIR-NAME>
[autogen-subject-name|subject-name]

crypto pki export request [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME>
autogen-subject-name (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,fqdn <FQDN>,
ip-address <IP>)

crypto pki export request [generate-rsa-key|short [generate-rsa-key|use-rsa-key]|
use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE>
<CITY> <ORGANIZATION> <ORGANIZATION-UNIT> (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,
fqdn <FQDN>,ip-address <IP>)

crypto pki export trustpoint <TRUSTPOINT-NAME> <EXPORT-TO-URL>
{background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME)}
```

```
crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key]
<RSA-KEYPAIR-NAME> [autogen-subject-name|subject-name]

crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key]
<RSA-KEYPAIR-NAME> autogen-subject-name {(email <SEND-TO-EMAIL>, fqdn <FQDN>,ip-
address <IP>,on <DEVICE-NAME>)}

crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key]
<RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY>
<ORGANIZATION> <ORGANIZATION-UNIT> {(email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address
<IP>,on <DEVICE-NAME>)}

crypto pki import [certificate|crl|trustpoint]

crypto pki import [certificate|crl] <TRUSTPOINT-NAME> <IMPORT-FROM-URL>
{background} {(on <DEVICE-NAME>})

crypto pki import trustpoint <TRUSTPOINT-NAME> <IMPORT-FROM-URL>
{background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}

crypto pki zeroize trustpoint <TRUSTPOINT-NAME> {del-key} {(on <DEVICE-NAME>)}
```

Parameters

- `crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.
export rsa <RSA-KEYPAIR-NAME>	Exports an existing RSA Keypair to a specified destination • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name.
<EXPORT-TO-URL>	Specify the RSA Keypair destination address. Both IPv4 and IPv6 address formats are supported. After specifying the destination address (where the RSA Keypair is exported), configure one of the following parameters: background or passphrase.
background	Optional. Performs export operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the export on.
passphrase <KEY-PASSPHRASE> background	Optional. Encrypts RSA Keypair before exporting • <KEY-PASSPHRASE> – Specify a passphrase to encrypt the RSA Keypair. • background – Optional. Performs export operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the export on.
on <DEVICE-NAME>	The following parameter is recursive and common to all of the above parameters: • on <DEVICE-NAME> – Optional. Performs export operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto key generate rsa <RSA-KEYPAIR-NAME> [2048|4096] {on <DEVICE-NAME>}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.

generate rsa <RSA-KEYPAIR-NAME> [2048|4096]	Generates a new RSA Keypair • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name. • [2048|4096] – Sets the size of the RSA key in bits. The options are 2048 bits and 4096 bits. The default size is 2048 bits. After specifying the key size, optionally specify the device (access point or controller) to generate the key on.
on <DEVICE-NAME>	Optional. Generates the new RSA Keypair on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.
import rsa <RSA-KEYPAIR-NAME>	Imports a RSA Keypair from a specified source • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name.
<IMPORT-FROM-URL>	Specify the RSA Keypair source address. Both IPv4 and IPv6 address formats are supported. After specifying the source address (where the RSA Keypair is imported from), configure one of the following parameters: background or passphrase.
background	Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the import on.
passphrase <KEY-PASSPHRASE> background	Optional. Decrypts the RSA Keypair after importing • <KEY-PASSPHRASE> – Specify the passphrase to decrypt the RSA Keypair. • background – Optional. Performs import operation in the background. After specifying the passphrase, optionally specify the device (access point, controller, or service platform) to perform the import on.
on <DEVICE-NAME>	The following parameter is recursive and common to the 'background' and 'passphrase' keywords: • on <DEVICE-NAME> – Optional. Performs import operation on a specific device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto key zeroize rsa <RSA-KEYPAIR-NAME> {force} {(on <DEVICE-NAME>)}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.
zeroize rsa <RSA-KEYPAIR-NAME>	Deletes a specified RSA Keypair • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name. **Note:** All device certificates associated with this key will also be deleted.
force	Optional. Forces deletion of all certificates associated with the specified RSA Keypair. Optionally specify a device on which to force certificate deletion.

on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Deletes all certificates associated with the RSA Keypair on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `crypto pki authenticate <TRUSTPOINT-NAME> <URL> {background} {(on <DEVICE-NAME>)}`

pki	Enables *Private Key Infrastructure* (PKI) management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated *Certificate Authority* (CA) certificates.
authenticate <TRUSTPOINT-NAME>	Authenticates a trustpoint and imports the corresponding CA certificate • <TRUSTPOINT-NAME> – Specify the trustpoint name.
<URL>	Specify CA's location. Both IPv4 and IPv6 address formats are supported. **Note:** The CA certificate is imported from the specified location.
background	Optional. Performs authentication in the background. If selecting this option, you can optionally specify the device (access point, controller, or service platform) to perform the export on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Performs authentication on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `crypto pki export request [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME> autogen-subject-name (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address <IP>)`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
export request	Exports CSR to the CA for digital identity certificate. The CSR contains applicant's details and RSA Keypair's public key.
[generate-rsa-key| use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
autogen-subject-name	Auto generates subject name from configuration parameters. The subject name identifies the certificate.
<EXPORT-TO-URL>	Specify the CA's location. Both IPv4 and IPv6 address formats are supported. **Note:** The CSR is exported to the specified location.
email <SEND-TO-EMAIL>	Exports CSR to a specified e-mail address • <SEND-TO-EMAIL> – Specify the CA's e-mail address.
fqdn <FQDN>	Exports CSR to a specified *Fully Qualified Domain Name* (FQDN) • <FQDN> – Specify the CA's FQDN.
ip-address <IP>	Exports CSR to a specified device or system • <IP> – Specify the CA's IP address.

- `crypto pki export request [generate-rsa-key|short [generate-rsa-key|use-rsa-key]| use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY> <ORGANIZATION> <ORGANIZATION-UNIT> (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>, fqdn <FQDN>,ip-address <IP>)`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
export request	Exports CSR to the CA for a digital identity certificate. The CSR contains applicant's details and RSA Keypair's public key.
[generate-rsa-key| short [generate-rsa-key|use-rsa-key]| use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • short [generate-rsa-key|use-rsa-key] – Generates and exports a shorter version of the CSR • generate-rsa-key – Generates a new RSA Keypair for digital authentication. If generating a new RSA Keypair, specify a name for it. • use-rsa-key – Uses an existing RSA Keypair for digital authentication. If using an existing RSA Keypair, specify its name. • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
subject-name <COMMON-NAME>	Configures a subject name, defined by the <COMMON-NAME> keyword, to identify the certificate • <COMMON-NAME> – Specify the common name used with the CA certificate. The name should enable you to identify the certificate easily (2 to 64 characters in length).
<COUNTRY>	Sets the deployment country code (2 character ISO code)
<STATE>	Sets the state name (2 to 64 characters in length)
<CITY>	Sets the city name (2 to 64 characters in length)
<ORGANIZATION>	Sets the organization name (2 to 64 characters in length)
<ORGANIZATION-UNIT>	Sets the organization unit (2 to 64 characters in length)
<EXPORT-TO-URL>	Specify the CA's location. Both IPv4 and IPv6 address formats are supported. The CSR is exported to the specified location.
email <SEND-TO-EMAIL>	Exports CSR to a specified e-mail address • <SEND-TO-EMAIL> – Specify the CA's e-mail address.
fqdn <FQDN>	Exports CSR to a specified FQDN • <FQDN> – Specify the CA's FQDN.
ip-address <IP>	Exports CSR to a specified device or system • <IP> – Specify the CA's IP address.

- `crypto pki export trustpoint <TRUSTPOINT-NAME> <EXPORT-TO-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.

export trustpoint <TRUSTPOINT-NAME>	Exports a trustpoint along with CA certificate, *Certificate Revocation List* (CRL), server certificate, and private key • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
<EXPORT-TO-URL>	Specify the destination address. Both IPv4 and IPv6 address formats are supported. The trustpoint is exported to the address specified here.
background	Optional. Performs export operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the export on
passphrase <KEY-PASSPHRASE> background	Optional. Encrypts the key with a passphrase before exporting • <KEY-PASSPHRASE> – Specify the passphrase to encrypt the trustpoint. • background – Optional. Performs export operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the export on.
on <DEVICE-NAME>	The following parameter is recursive and common to the 'background' and 'passphrase' keywords: • on <DEVICE-NAME> – Optional. Performs export operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME> autogen-subject-name` *`{(email <SEND-TO-EMAIL>,fqdn <FQDN>, ip-address <IP>,on <DEVICE-NAME>)}`*

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated certificates.
generate	Generates a certificate and a trustpoint
self-signed <TRUSTPOINT-NAME>	Generates a self-signed certificate and a trustpoint • <TRUSTPOINT-NAME> – Specify a name for the certificate and its trustpoint.
[generate-rsa-key| use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair, or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
autogen-subject-name	Auto generates the subject name from the configuration parameters. The subject name helps to identify the certificate.
email <SEND-TO-EMAIL>	Optional. Exports the self-signed certificate to a specified e-mail address • <SEND-TO-EMAIL> – Specify the e-mail address.
fqdn <FQDN>	Optional. Exports the self-signed certificate to a specified FQDN • <FQDN> – Specify the FQDN.
ip-address <IP>	Optional. Exports the self-signed certificate to a specified device or system • <IP> – Specify the device's IP address.
on <DEVICE-NAME>	Optional. Exports the self-signed certificate on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY> <ORGANIZATION> <ORGANIZATION-UNIT> {(email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address <IP>,on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated certificates.
generate self-signed <TRUSTPOINT-NAME>	Generates a self-signed certificate and a trustpoint • <TRUSTPOINT-NAME> – Specify a name for the certificate and its trustpoint.
[generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair, or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
subject-name <COMMON-NAME>	Configures a subject name, defined by the <COMMON-NAME> keyword, to identify the certificate • <COMMON-NAME> – Specify the common name used with this certificate. The name should enable you to identify the certificate easily and should not exceed 2 to 64 characters in length.
<COUNTRY>	Sets the deployment country code (2 character ISO code)
<STATE>	Sets the state name (2 to 64 characters in length)
<CITY>	Sets the city name (2 to 64 characters in length)
<ORGANIZATION>	Sets the organization name (2 to 64 characters in length)
<ORGANIZATION-UNIT>	Sets the organization unit (2 to 64 characters in length)
email <SEND-TO-EMAIL>	Optional. Exports the self-signed certificate to a specified e-mail address • <SEND-TO-EMAIL> – Specify the e-mail address.
fqdn <FQDN>	Optional. Exports the self-signed certificate to a specified FQDN • <FQDN> – Specify the FQDN.
ip-address <IP>	Optional. Exports the self-signed certificate to a specified device or system • <IP> – Specify the device's IP address.

- `crypto pki import [certificate|crl] <TRUSTPOINT-NAME> <IMPORT-FROM-URL> {background} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
import	Imports certificates, *Certificate Revocation List* (CRL), or a trustpoint to the selected device
[certificate|crl] <TRUSTPOINT-NAME>	Imports a signed server certificate or CRL • certificate – Imports signed server certificate • crl – Imports CRL • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
<IMPORT-FROM-URL>	Specify the signed server certificate or CRL source address. Both IPv4 and IPv6 address formats are supported. The server certificate or the CRL (based on the parameter passed in the preceding step) is imported from the location specified here.

background	Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the import on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Performs import operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki import trustpoint <TRUSTPOINT-NAME> <IMPORT-FROM-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
import	Imports certificates, CRL, or a trustpoint to the selected device
trustpoint <TRUSTPOINT-NAME>	Imports a trustpoint and its associated CA certificate, server certificate, and private key • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
<IMPORT-FROM-URL>	Specify the trustpoint source address. Both IPv4 and IPv6 address formats are supported.
background	Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the import on.
passphrase <KEY-PASSPHRASE> background	Optional. Decrypts trustpoint with a passphrase after importing • <KEY-PASSPHRASE> – Specify the passphrase. After specifying the passphrase, optionally specify the device to perform import on. • background – Optional. Performs import operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the import on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Performs import operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki zeroize trustpoint <TRUSTPOINT-NAME> {del-key} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
zeroize trustpoint <TRUSTPOINT-NAME>	Deletes a trustpoint and its associated CA certificate, server certificate, and private key • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
del-key	Optional. Deletes the private key associated with the server certificate. Optionally specify the device to perform deletion on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Deletes the trustpoint on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Usage Guidelines

The system supports both IPv4 and IPv6 address formats. Provide source and destination locations using any one of the following options:

- IPv4 URLs:
  tftp://<hostname|IP>[:port]/path/file
  ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
  sftp://<user>@<hostname|IP>[:port]>/path/file
  http://<hostname|IP>[:port]/path/file
  cf:/path/file
  usb<n>:/path/file
- IPv6 URLs:
  tftp://<hostname|[IPv6]>[:port]/path/file
  ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file
  sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file
  http://<hostname|[IPv6]>[:port]/path/file

Example

```
rfs6000-81742D>crypto key generate rsa key 1025
RSA Keypair successfully generated
rfs6000-81742D>

rfs6000-81742D>crypto key import rsa test123 url passphrase word background
RSA key import operation is started in background
rfs6000-81742D>

rfs6000-81742DE>crypto pki generate self-signed word generate-rsa-key word
autogen-subject-name fqdn word
Successfully generated self-signed certificate
rfs6000-81742D>

rfs6000-81742D>crypto pki zeroize trustpoint word del-key
Successfully removed the trustpoint and associated certificates
%Warning: Applications associated with the trustpoint will start using default-
trustpoint
rfs6000-81742D>

rfs6000-81742D>crypto pki authenticate word url background
Import of CA certificate started in background
rfs6000-81742D>

rfs6000-81742D>crypto pki import trustpoint word url passphrase word
Import operation started in background
rfs6000-81742D>
```

Related Commands

no	Removes server certificates, trustpoints and their associated certificates

2.1.9 crypto-cmp-cert-update

User Exec Commands

Triggers a *Certificate Management Protocol* (CMP) certificate update on a specified device or devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}
```

Parameters

- `crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}`

crypto-cmp-cert-update <TRUSTPOINT-NAME> on <DEVICE-NAME>	Triggers a CMP certificate update on a specified device or devices • <TRUSTPOINT-NAME> – Specify the target trustpoint name. A trustpoint represents a CA/identity pair containing the identity of the CA, CA specific configuration parameters, and an association with an enrolled identity certificate. Use the crypto-cmp-policy context mode to configure the trustpoint. • on <DEVICE-NAME> – Optional. Initiates a CMP certificate update and response on a specified device or devices. Specify the name of the AP, wireless controller, or service platform. Multiple devices can be provided as a comma separated list. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs4000-229D58>crypto-cmp-cert-update test on B4-C7-99-71-17-28
CMP Cert update success
rfs4000-229D58>
```

2.1.10 database

User Exec Commands

Enables automatic repairing (vacuuming) and dropping of captive-portal and NSight databases

If enforcing authenticated access to the *database*, use this command to generate the keyfile. Every keyfile has a set of associated users having a username and password. Access to the database is allowed only if the user credentials entered during database login are valid. For more information on enabling database authentication, see *Enabling Database Authentication*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
database [drop|keyfile|repair]

database drop [all|captive-portal|nsight]

database repair {on <DEVICE-NAME>}

database keyfile [export|generate|import|zerzoise]
database keyfile generate
database keyfile [export|import] <URL>
database keyfile zerzoise
```

Parameters

- `database drop [all|captive-portal|nsight]`

database drop [all|captive-portal| nsight]	Drops (deletes) all or a specified database. Execute the command on the database. • all – Drops all databases, captive portal and NSight • captive-portal – Drops only captive-portal database • nsight – Drops only NSight database

- `database repair {on <DEVICE-NAME>}`

database repair on <DEVICE-NAME>	Enables automatic repairing of all databases. Repairing (vacuuming a database refers to the process of finding and reclaiming space left over from previous DELETE statements. Execute the command on the database host. • on <DEVICE-NAME> – Optional. Specifies the name of the database host. When specified, databases on the specified host are periodically checked to identify and remove obsolete data documents. • <DEVICE-NAME> – Specify the name of the access point, wireless controller, or service platform. **Note:** If no device is specified, the system repairs all databases.

- `database keyfile generate`

database keyfile [generate|zerzoise]	Enables database keyfile management. This command is part of a set of configurations required to enforce database authentication. Use this command to generate database keyfiles. After generating the keyfile, create the username and password combination required to access the database. For information on creating database users see, *service*. For information on enabling database authentication, see *Enabling Database Authentication*. • generate – Generates the keyfile. In case of a replica-set deployment, execute the command on the primary database host. Once generated, export the keyfile to a specified location from where it is imported on to the replica-set hosts.

- `database keyfile [export|import] <URL>`

database keyfile [export|import] <URL>	Enables database keyfile management. This command is part of a set of configurations required to enforce database authentication. Use this command to exchange keyfiles between replica set members. • export – Exports the keyfile to a specified location on an FTP/SFTP/TFTP server. Execute the command on the database host on which the keyfile has been generated. • import – Imports the keyfile from a specified location. Execute the command on the replica set members. The following parameter is common to both of the above keywords: • <URL> – Specify the location to/from where the keyfile is to be exported/imported. Use one of the following options to specify the keyfile location: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file tftp://<hostname|IP>[:port]/path/file

- `database keyfile zerzoise`

database keyfile zerzoise	Enables database keyfile management. Use this command to delete keyfiles • zerzoise – Deletes an existing keyfile.

Example

```
nx9500-6C8809>database repair on nx9500-6C8809
nx9500-6C8809>

nx9500-6C8809>database keyfile generate
Database keyfile successfully generated
nx9500-6C8809>

nx9500-6C8809>database keyfile zeroize
Database keyfile successfully removed
nx9500-6C8809>

vx9000-1A1809>database keyfile generate
Database keyfile successfully generated
vx9000-1A1809>

vx9000-1A1809>database keyfile export ftp://1.1.1.111/db-key
Database keyfile successfully exported
vx9000-1A1809>

Database keyfile successfully imported
vx9000-D031F2>
```

Example Enabling Database Authentication

Follow the steps below to enable database authentication.

1 On the primary database host,
   a Generate the database keyfile.

```
Primary-DB-HOST>database keyfile generate
Database keyfile successfully generated
Primary-DB-HOST>
```

   b Use the show > database > keyfile to view the generated keyfile.
   c Export the keyfile to an external location. This is required only in case of database replica-set deployment.

```
Primary-DB-HOST>database keyfile export ftp://1.1.1.111/db-key
Database keyfile successfully exported
Primary-DB-HOST>
```

   d Create the users that are allowed access to the database.

```
Primary-DB-HOST#service database authentication create-user username techpubs
password techPubs@123
Database user [techpubs] created.
Primary-DB-HOST#
```

   e View the database user account created.

```
Primary-DB-HOST#show database users
--------------------------------
         DATABASE USER
--------------------------------
 techpubs
--------------------------------
Primary-DB-HOST#
```

2 On the replica set host, import the keyfile from the location specified in Step 1 c.

```
Secondary-DB-HOST#database keyfile import ftp://1.1.1.111/db-key
```

3 In the database-policy context, --- (used on the NSight/EGuest database hosts)
   a Enable authentication.

```
Primary-DB-HOST(config-database-policy-techpubs)#authentication
```

   b Configure the user accounts created in Step 1 d.

```
Primary-DB-HOST(config-database-policy-techpubs)#authentication username
techpubs
 password S540QFZz9LzSOdX1ZJEqDgAAAAy3b7GtyO4Z/Ih2ruxnOYnr
Primary-DB-HOST(config-database-policy-techpubs)#show context
database-policy techpubs
 authentication
 authentication username techpubs password 2
S540QFZz9LzSOdX1ZJEqDgAAAAy3b7GtyO4Z/Ih2ruxnOYnr
 replica-set member nx7500-A02B91 arbiter
 replica-set member vx9000-1A1809 priority 1
 replica-set member vx9000-D031F2 priority 20
Primary-DB-HOST(config-database-policy-techpubs)#
```

4 In the database-client policy context --- (used on the NSight/EGuest server host),

Note, this configuration is required only if the NSight/EGuest server and database are hosted on separate hosts.

a Configure the user credentials created in Step 1 d.

```
NOC-Controller(config-database-client-policy-techpubs)#authentication username
techpubs password S540QFZz9LzSOdX1ZJEqDgAAAAy3b7GtyO4Z/Ih2ruxnOYnr
```

b View the configuration.

```
NOC-Controller(config-database-client-policy-techpubs)#show context
database-client-policy techpubs
 authentication username techpubs password 2
S540QFZz9LzSOdX1ZJEqDgAAAAy3b7GtyO4Z/Ih2ruxnOYnr
nx9500-6C8809(config-database-client-policy-techpubs)#
```

Related Commands

database-backup	Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server
database-restore	Restores a previously exported database [captive-portal and/or NSight]
database-policy	Documents database-policy configuration commands. Use this option to enable the database.
database-client-policy	Documents database-client-policy configuration commands. Use this option to configure the database host details (IP address or hostname). If enforcing database authentication, use it to configure the users having database access. Once configured, use the policy in the NSight/EGuest server's device config context.
service	Documents the database user account configuration details

2.1.11 database-backup

User Exec Commands

Backs up captive-portal and/or NSight database to a specified location and file on an FTP, SFTP, or TFTP server. Execute this command on the database host.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
database-backup database [captive-portal|nsight|nsight-placement-info] <URL>

database-backup database [captive-portal|nsight] <URL>
database-backup database nsight-placement-info <URL>
```

Parameters

- `database-backup database [captive-portal|nsight] <URL>`

database-backup database [captive-portal| nsight]	Backs up captive portal and/or NSight database to a specified location. Select the database to backup: • captive-portal – Backs up captive portal database • nsight – Backs up NSight database After specifying the database type, configure the destination location.
<URL>	Configures the destination location. The database is backed up at the specified location. Specify the location URL in one of the following formats: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz

- `database-backup database nsight-placement-info <URL>`

database-backup database nsight-placement-info <URL>	Backs up the NSight access point placement related details to a specified location • <URL> – Specify the URL in one of the following formats: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz tftp://<hostname|IP>[:port]/path/file.tar.gz

Example

```
NS-DB-nx9510-6C87EF>database-backup database nsight tftp://192.168.9.50/testbckup
NS-DB-nx9510-6C87EF>show database backup-status

Last Database Backup Time   : Mon Apr 17 12:48:08 IST 2017
NS-DB-nx9510-6C87EF>Apr 17 12:48:17 2017: NS-DB-nx9510-6C87EF : %DATABASE-6-
OPERATION_COMPLETE: backup for database nsight successful
NS-DB-nx9510-6C87EF#
```

```
NS-DB-nx9510-6C87EF>database-backup database nsight-placement-info tftp://192.16
8.9.50/plmentinfo
NS-DB-nx9510-6C87EF>show database backup-status
Last Database Backup Status : Successful
Last Database Backup Time   : Mon Apr 17 12:48:48 IST 2017
NS-DB-nx9510-6C87EF>Apr 17 12:49:03 2017: NS-DB-nx9510-6C87EF : %DATABASE-6-
OPERATION_COMPLETE: backup for database nsight-placement-info successful

NS-DB-nx9510-6C87EF>
```

Related Commands

database	Enables automatic repairing (vacuuming) and dropping of databases (captive-portal and NSight)
database-restore	Restores a previously exported (backed up) database [captive-portal and/or NSight]

2.1.12 database-restore

User Exec Commands

Restores a previously exported database [captive-portal and/or NSight]. Previously exported databases (backed up to a specified FTP or SFTP server) are restored from the backed-up location to the original database.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
database-restore database [captive-portal|nsight] <URL>
```

Parameters

- `database-restore database [captive-portal|nsight] <URL>`

database-restore database [captive-portal| nsight]	Restores previously exported (backed up) captive-portal and/or NSight database. Specify the database type: • captive-portal – Restores captive portal database • nsight – Restores NSight database After specifying the database type, configure the destination location and file name from where the files are restored.
<URL>	Configures the destination location. The database is restored from the specified location. Specify the location URL in one of the following formats: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz tftp://<hostname|IP>[:port]/path/file.tar.gz

Example

```
nx9500-6C8809>database-restore database nsight ftp://
anonymous:anonymous@192.168.13.10/backups/nsight/nsight.tar.gz
```

Related Commands

database	Enables automatic repairing (vacuuming) and dropping of databases (captive-portal and NSight)
database-backup	Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server

2.1.13 device-upgrade

User Exec Commands

Enables firmware upgrade on an adopted device or a set of adopted devices (access points, wireless controllers, and service platforms).

In an *hierarchically managed* (HM) network, this command enables centralized device upgradation across the network. The WiNG HM network defines a three-tier structure, consisting of multiple wireless sites managed by a single *Network Operations Center* (NOC) controller. The NOC controller constitutes the first and the site controllers constitute the second tier of the hierarchy. The site controllers in turn adopt and manage access points that form the third tier of the hierarchy.

NOTE: Hierarchical management allows the NOC controller to upgrade controllers and access points that are directly or indirectly adopted to it. However, ensure that the NOC controller is loaded with the correct firmware version.

Use the device-upgrade command to schedule firmware upgrades across adopted devices within the network. Devices are upgraded based on their device names, MAC addresses, or RF Domain.

NOTE: If the *persist-images* option is selected, the RF Domain manager retains the old firmware image, or else deletes it. For more information on enabling device upgrade on profiles and devices (including the 'persist-images' option), see *device-upgrade*.

NOTE: A NOC controller's capacity is equal to, or higher than that of a site controller. The following devices can be deployed at NOC and sites:

- NOC controller – NX95XX (NX9500 and NX9510), NX9600
- Site controller – RFS4000, RFS6000, NX5500, or NX95XX

NOTE: Standalone devices have to be manually upgraded.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
device-upgrade [<MAC/HOSTNAME>|all|ap6521|ap6522|ap6532|ap6562|ap71xx|
ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|

nx9600|vx9000] {(<MAC/HOSTNAME>|force|from-controller|no-reboot|reboot-time
<TIME>|staggered-reboot|upgrade-time <TIME>)}
```

Parameters

- `device-upgrade <MAC/HOSTNAME> {no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-time <TIME>}}`

<MAC/HOSTNAME>	Upgrades firmware on the device identified by the <MAC/HOSTNAME> keyword • <MAC/HOSTNAME> – Specify the device's MAC address or hostname.
no-reboot	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME>	Optional. Schedules an automatic reboot after a successful upgrade • <TIME> – Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic device firmware upgrade on a specified day and time • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. The following actions can be performed after a scheduled upgrade: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.

- `device-upgrade all {force|no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-time <TIME>}} {(staggered-reboot)}`

all	Upgrades firmware on all devices
force	Optional. Select this option to force upgrade on the selected device(s). When selected, the devices are upgraded even if they have the same firmware as the upgrading access point, wireless controller, or service platform. If forcing a device upgrade, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or staggered-reboot.
no-reboot	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME>	Optional. Schedules an automatic reboot after a successful upgrade • <TIME> – Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.

upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic device firmware upgrade on all devices on a specified day and time • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. The following actions can be performed after a scheduled upgrade: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted). • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
staggered-reboot	This keyword is recursive and common to all of the above. • Optional. Enables staggered device reboot (one at a time) without network impact

• `device-upgrade [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000] all` *`{force|no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-time <TIME>}} {(staggered-reboot)}`*

device-upgrade <DEVICE-TYPE> all	Upgrades firmware on all devices of a specific type. Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After selecting the device type, schedule an automatic upgrade and/or an automatic reboot.
force	Optional. Select this option to force upgrade on the selected device(s). When selected, the devices are upgraded even if they have the same firmware as the upgrading access point, wireless controller, or service platform. If forcing a device upgrade, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or staggered-reboot.
no-reboot	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME>	Optional. Schedules an automatic reboot after a successful upgrade • <TIME> – Optional. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic firmware upgrade on all devices, of the specified type, on a specified day and time • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. The following actions can be performed after a scheduled upgrade: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
staggered-reboot	This keyword is recursive and common to all of the above. • Optional. Enables staggered device reboot (one at a time) without network impact

```
• device-upgrade cancel-upgrade [<MAC/HOSTNAME>|all|ap6521|ap6522|ap6532|ap6562|
ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|
nx5500|nx75xx|nx9000|nx9600|vx9000|on rf-domain [<RF-DOMAIN-NAME>| all]]
```

cancel-upgrade	Cancels a scheduled firmware upgrade based on the parameters passed. This command provides the following options to cancel scheduled firmware upgrades: • Cancels upgrade on specific device(s). The devices are identified by their MAC addresses or hostnames. • Cancels upgrade on all devices within the network • Cancels upgrade on all devices of a specific type. Specify the device type. • Cancels upgrade on specific device(s) or all device(s) within a specific RF Domain or all RF Domains. Specify the RF Domain name.
cancel-upgrade [<MAC/HOSTNAME>| all]	Cancels a scheduled firmware upgrade on a specified device or on all devices • <MAC/HOSTNAME> – Cancels a scheduled upgrade on the device identified by the <MAC/HOSTNAME> keyword. Specify the device's MAC address or hostname. • all – Cancels scheduled upgrade on all devices
cancel-upgrade <DEVICE-TYPE> all	Cancels scheduled firmware upgrade on all devices of a specific type. Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000.
cancel-upgrade on rf-domain [<RF-DOMAIN-NAME>|all]	Cancels scheduled firmware upgrade on all devices in a specified RF Domain or all RF Domains • <RF-DOMAIN-NAME> – Cancels scheduled device upgrade on all devices in a specified RF Domain. Specify the RF Domain name. • all – Cancels scheduled device upgrade on all devices across all RF Domains

```
• device-upgrade load-image [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|
ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx500|nx9000|nx9600|
vx9000] {<IMAGE-URL>|on <DEVICE-OR-DOMAIN-NAME>}
```

load-image <DEVICE-TYPE>	Loads device firmware image from a specified location. Use this command to specify the device type and the location of the corresponding image file. • <DEVICE-TYPE> – Specify the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After specifying the device type, provide the location of the required device firmware image.
<IMAGE-URL>	Specify the device's firmware image location in one of the following formats: IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file Contd..

	IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file http://<hostname|[IPv6]>[:port]/path/file
on <DEVICE-OR-DOMAIN-NAME>	Specify the name of the device or RF Domain. The image, of the specified device type is loaded from the device specified here. In case of an RF Domain, the image available on the RF Domain manager is loaded. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `device-upgrade rf-domain [<RF-DOMAIN-NAME>|all|containing <WORD>|filter location <WORD>] [all|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000] {(<MAC/HOSTNAME>|force|from-controller|no-reboot|reboot-time <TIME>|staggered-reboot|upgrade-time <TIME>)}`

rf-domain [<RF-DOMAIN-NAME>|all| containing <WORD>| filter location <WORD>]	Upgrades firmware on devices in a specified RF Domain or all RF Domains. Devices within a RF Domain are upgraded through the RF Domain manager. • <RF-DOMAIN-NAME> – Upgrades devices in the RF Domain identified by the <RF-DOMAIN-NAME> keyword. • <RF-DOMAIN-NAME> – Specify the RF Domain name. • all – Upgrades devices across all RF Domains • containing <WORD> – Filters RF Domains by their names. RF Domains with names containing the sub-string identified by the <WORD> keyword are filtered. Devices on the filtered RF Domains are upgraded. • filter location <WORD> – Filters devices by their location. All devices with location matching the <WORD> keyword are upgraded.
<DEVICE-TYPE>	After specifying the RF Domain, select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After specifying the RF Domain and the device type, configure any one of the following actions: force devices to upgrade, or initiate an upgrade through the adopting controller.
<MAC/HOSTNAME>	Optional. Use this option to identify specific devices for upgradation. Specify the device's MAC address or hostname. The device should be within the specified RF Domain and of the specified device type. After identifying the devices to upgrade, configure any one of the following actions: force devices to upgrade, or initiate an upgrade through the adopting controller. **Note:** If no MAC address or hostname is specified, all devices of the type selected are upgraded.
force	Optional. Select this option to force upgrade for the selected device(s). When selected, the devices are upgraded even if they have the same firmware as the upgrading access point, wireless controller, or service platform. If forcing a device upgrade, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or reboot-time.
from-controller	Optional. Upgrades a device through the adopted device. If initiating an upgrade through the adopting controller, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or reboot-time.

no-reboot {staggered-reboot}	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME> {staggered-reboot}	Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
staggered-reboot	This keyword is common to all of the above. Optional. Enables staggered reboot (one at a time) without network impact
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic firmware upgrade • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. After a scheduled upgrade, the following actions can be performed.
	• no-reboot – Optional. Disables automatic reboot after a successful upgrade the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.

```

2.1.14 disable

User Exec Commands

This command can be executed in the Priv Exec Mode only. This command turns off (disables) the privileged mode command set and returns to the User Executable Mode. The prompt changes from rfs6000-81742D# to rfs6000-81742D>.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
disable
```

Parameters

None

Example

```
rfs6000-81742D#disable
rfs6000-81742D>
```

2.1.15 enable

User Exec Commands

Turns on (enables) the privileged mode command set. The prompt changes from rfs6000-81742D> to rfs6000-81742D#. This command does not do anything in the Privilege Executable mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
enable
```

Parameters

None

Example

```
rfs6000-81742D>enable
rfs6000-81742D#
```

2.1.16 file-sync

User Exec Commands

Syncs trustpoint and/or EAP-TLS X.509 (PKCS#12) certificate between the staging-controller and adopted access points.

When enabling file syncing, consider the following points:

- The X.509 certificate needs synchronization only if the access point is configured to use EAP-TLS authentication.
- Execute the command on the controller adopting the access points.
- Ensure that the X.509 certificate file is installed on the controller.

Syncing of trustpoint/wireless-bridge certificate can to be automated. To automate file syncing, in the controller's device/profile configuration mode, execute the following command: *file-sync [auto|count <1-20>]*. For more information, see *file-sync*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
file-sync [cancel|load-file|trustpoint|wireless-bridge]

file-sync cancel [trustpoint|wireless-bridge]

file-sync cancel [trustpoint|wireless-bridge] [<DEVICE-NAME>|all|rf-domain
[<DOMAIN-NAME>|all]]

file-sync load-file [trustpoint|wireless-bridge]]

file-sync load-file [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] <URL>

file-sync [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|
rf-domain [<DOMAIN-NAME>|all] {from-controller}] {reset-radio|upload-time <TIME>}
```

Parameters

- `file-sync cancel [trustpoint|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all]]`

file-sync cancel [trustpoint| wireless-bridge] [<DEVICE-NAME>| all|rf-domain [<DOMAIN-NAME>| all]]	Cancels scheduled file synchronization • trustpoint – Cancels scheduled trustpoint synchronization on a specified AP, all APs, or APs within a specified RF Domain • wireless-bridge – Cancels scheduled wireless-bridge certificate synchronization on a specified AP, all APs, or APs within a specified RF Domain Contd..

	• <DEVICE-NAME> – Cancels scheduled trustpoint/certificate synchronization on a specified AP. Specify the AP's hostname or MAC address. • all – Cancels scheduled trustpoint/certificate synchronization on all APs • rf-domain [<DOMAIN-NAME>|all] – Cancels scheduled trustpoint/certificate synchronization on all APs in a specified RF Domain or in all RF Domains • <DOMAIN-NAME> – Cancels scheduled trustpoint/certificate synchronization on all APs within a specified RF Domain. Specify the RF Domain's name. • all – Cancels scheduled trustpoint/certificate synchronization on all RF Domains

• `file-sync load-file [trustpoint|wireless-bridge] <URL>`

file-sync load-file [trustpoint| wireless-bridge] <URL>	Loads the following files on to the staging controller: • trustpoint – Loads the trustpoint, including CA certificate, server certificate and private key • wireless-bridge – Loads the wireless-bridge certificate to the staging controller Use this command to load the certificate to the controller before scheduling or initiating a certificate synchronization. • <URL> – Provide the trustpoint/certificate location using one of the following formats: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file **Note:** Both IPv4 and IPv6 address types are supported.

• `file-sync [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all] {from-controller}] {reset-radio|upload-time <TIME>}`

file-sync trustpoint <TRUSTPOINT-NAME> [<DEVICE-NAME>| all|rf-domain [<DOMAIN-NAME> |all] from-controller]	Configures file-syncing parameters • trustpoint <TRUSTPOINT-NAME> – Syncs a specified trustpoint between controller and its adopted APs • <TRUSTPOINT-NAME> – Specify the trustpoint name. • wireless-bridge – Syncs wireless-bridge certificate between controller and its adopted APs After specifying the file that is to be synced, configure following file-sync parameters: • <DEVICE-NAME> – Syncs trustpoint/certificate with a specified AP. Specify the AP's hostname or MAC address. • all – Syncs trustpoint/certificate with all APs • rf-domain [<DOMAIN-NAME>|all] from-controller – Syncs trustpoint/certificate with all APs in a specified RF Domain or in all RF Domains • <DOMAIN-NAME> – Select to sync with APs within a specified RF Domain. Specify the RF Domain's name. • all – Select to sync with APs across all RF Domains • from-controller – Optional. Loads certificate to the APs from the adopting controller and not the RF Domain manager After specifying the access points, specify the following options: reset-radio and upload-time.

reset-radio	This keyword is recursive and applicable to all of the above parameters. Optional. Resets the radio after file synchronization. Reset the radio in case the certificate is renewed along with no changes made to the 'bridge EAP username' and 'bridge EAP password'.
upload-time <TIME>	This keyword is recursive and applicable to all of the above parameters. • upload-time – Optional. Schedules certificate upload at a specified time • <TIME> – Specify the time in the MM/DD/YYYY-HH:MM or HH:MM format. If no time is configured, the process is initiated as soon as the command is executed.

Example

```
rfs6000-81742D>file-sync wireless-bridge ap7131-11E6C4 upload-time 06/01/2017-
12:30
--------------------------------------------------------------------------------
          CONTROLLER               STATUS                  MESSAGE
--------------------------------------------------------------------------------
  B4-C7-99-6D-CD-4B           Success           Queued 1 APs to upload
--------------------------------------------------------------------------------
rfs6000-81742D>
```

The following command uploads certificate to all access points:

```
rfs6000-81742D>file-sync wireless-bridge all upload-time 06/01/2017-23:42
```

2.1.17 join-cluster

User Exec Commands

Adds a device (access point, wireless controller, or service platform), as a member, to an existing cluster of devices. Assign a static IP address to the device before adding to a cluster. Note, a cluster can be only formed of devices of the same model type.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
join-cluster <IP> user <USERNAME> password <WORD> {level|mode}
join-cluster <IP> user <USERNAME> password <WORD> {level [1|2]|mode
[active|standby]}
```

Parameters

```
• join-cluster <IP> user <USERNAME> password <WORD> {level [1|2]|mode
[active|standby]}
```

join-cluster	Adds an access point, wireless controller, or service platform to an existing cluster
<IP>	Specify the cluster member's IP address.
user <USERNAME>	Specify a user account with super user privileges on the new cluster member
password <WORD>	Specify password for the account specified in the user parameter
level [1|2]	Optional. Configures the routing level • 1 – Configures level 1 routing • 2 – Configures level 2 routing
mode [active|standby]	Optional. Configures the cluster mode • active – Configures this cluster as active • standby – Configures this cluster to be on standby mode

Usage Guidelines

To add a device to an existing cluster:

- Configure a static IP address on the device (access point, wireless controller, or service platform).
- Provide username and password for superuser, network admin, system admin, or operator accounts.

After adding the device to a cluster, execute the "write memory" command to ensure the configuration persists across reboots.

Example

```
rfs4000-880DA7>join-cluster 192.168.13.15 user admin password superuser level 1
mode standby
... connecting to 192.168.13.15
... applying cluster configuration
... committing the changes
... saving the changes
[OK]
rfs4000-880DA7>
```

```
rfs4000-880DA7>show context

!
!
end
rfs4000-880DA7>
```

Related Commands

cluster	Initiates cluster context. The cluster context enables centralized management and configuration of all cluster members from any one member.
create-cluster	Creates a new cluster on a specified device

2.1.18 l2tpv3

User Exec Commands

Establishes and/or brings down a *Layer 2 Tunnel Protocol Version 3* (L2TPV3) tunnel

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
l2tpv3 tunnel [<TUNNEL-NAME>|all]
l2tpv3 tunnel <TUNNEL-NAME> [down|session|up]
l2tpv3 tunnel <TUNNEL-NAME> [down|up] {on <DEVICE-NAME>}
l2tpv3 tunnel <TUNNEL-NAME> session <SESSION-NAME> [down|up] {on <DEVICE-NAME>}

l2tpv3 tunnel all [down|up] {on <DEVICE-NAME>}
```

Parameters

- `l2tpv3 tunnel <TUNNEL-NAME> [down|up] {on <DEVICE-NAME>}`

l2tpv3 tunnel	Establishes or brings down L2TPv3 tunnels
<TUNNEL-NAME> [down|up]	Specifies the tunnel name to establish or bring down • down – Brings down the specified tunnel • up – Establishes the specified tunnel
on <DEVICE-NAME>	Optional. Establishes or brings down a tunnel on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `l2tpv3 tunnel <TUNNEL-NAME> session <SESSION-NAME> [down|up] {on <DEVICE-NAME>}`

l2tpv3 tunnel	Establishes or brings down L2TPv3 tunnels
<TUNNEL-NAME> [session <SESSION-NAME>] [down|up]	Establishes or brings down a specified session inside an L2TPv3 tunnel • <TUNNEL-NAME> – Specify the tunnel name. • session <SESSION-NAME> – Identifies a specific session • <SESSION-NAME> – Specify the session name. • down – Brings down the session identified by the <SESSION-NAME> key-word • up – Establishes the session identified by the <SESSION-NAME> keyword
on <DEVICE-NAME>	Optional. Establishes or brings down a tunnel session on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `l2tpv3 tunnel all [down|up] {on <DEVICE-NAME>}`

l2tpv3 tunnel	Establishes or brings down L2TPv3 tunnels
all [down|up]	Establishes or brings down all L2TPv3 tunnels • down – Brings down all tunnels • up – Establishes all tunnels

on <DEVICE-NAME>	Optional. Establishes or brings down all tunnels on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D>l2tpv3 tunnel Tunnel1 session Tunnel1Session1 up on rfs6000-81742D
```

NOTE: For more information on the L2TPv3 tunnel configuration mode and commands, see *Chapter 22, L2TPV3-POLICY*.

2.1.19 logging

User Exec Commands

Modifies message logging settings

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
logging monitor {<0-7>|alerts|critical|debugging|emergencies|errors|
informational|notifications|warnings}
```

Parameters

```
• logging monitor {<0-7>|alerts|critical|debugging|emergencies|errors|
informational|notifications|warnings}
```

monitor	Sets the terminal lines logging levels. The logging severity levels can be set from 0 - 7. The system configures default settings, if no logging severity level is specified. • <0-7> – Optional. Specify the logging severity level from 0-7. The various levels and their implications are as follows: • alerts – Optional. Immediate action needed (severity=1) • critical – Optional. Critical conditions (severity=2) • debugging – Optional. Debugging messages (severity=7) • emergencies – Optional. System is unusable (severity=0) • errors – Optional. Error conditions (severity=3) • informational – Optional. Informational messages (severity=6) • notifications – Optional. Normal but significant conditions (severity=5) • warnings – Optional. Warning conditions (severity=4) **Note:** Before configuring the message logging level, ensure logging module is enabled. To enable message logging, in the device's configuration mode, execute the *logging > on* command. Message logging can also be enabled on a profile. All devices using the profile will have message logging enabled.

Example

```
rfs6000-81742D(config-device-00-15-70-81-74-2D)##logging on

rfs6000-81742D>logging monitor debugging

rfs6000-81742D>show logging

Logging module: enabled
    Aggregation time: disabled
    Console logging: level warnings
    Monitor logging: level debugging
    Buffered logging: level warnings
    Syslog logging: level warnings
        Facility: local7

Log Buffer (69317 bytes):
```

```

limit 2000 RPM
Apr 04 11:43:02 2017: %DIAG-4-FAN_UNDERSPEED: Fan fan 1 under speed: 0 RPM is under
limit 2000 RPM
--More--
rfs6000-81742D>
```

Related Commands

no	Resets terminal lines logging levels

2.1.20 mint

User Exec Commands

Uses MiNT protocol to perform a ping and traceroute to a remote device

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mint [ping|traceroute]

mint ping <MINT-ID> {(count <1-10000>|size <1-64000>|timeout <1-10>)}

mint traceroute <MINT-ID> {(destination-port <1-65535>|max-hops <1-255>|
   source-port <1-65535>|timeout <1-255>)}
```

Parameters

- `mint ping <MINT-ID> {(count <1-10000>|size <1-64000>|timeout <1-10>)}`

ping <MINT-ID>	Sends a MiNT echo message to a specified destination • <MINT-ID> – Specify the destination device's MiNT ID.
count <1-10000>	Optional. Sets the pings to the MiNT destination • <1- 10000> – Specify a value from 1 - 10000. The default is 3.
size <1-64000>	Optional. Sets the MiNT payload size in bytes • <1-64000> – Specify a value from 1 - 640000 bytes. The default is 64 bytes.
timeout <1-10>	Optional. Sets a response time in seconds • <1-10> – Specify a value from 1 sec - 10 sec. The default is 1 second.

- `mint traceroute <MINT-ID> {(destination-port <1-65535>|max-hops <1-255>| source-port <1-65535>|timeout <1-255>)}`

traceroute <MINT-ID>	Prints the route packets trace to a device • <MINT-ID> – Specify the destination device's MiNT ID.
destination-port <1-65535>	Optional. Sets the *Equal-cost Multi-path* (ECMP) routing destination port • <1- 65535> – Specify a value from 1 - 65535. The default port is 45.
max-hops <1-255>	Optional. Sets the maximum number of hops a traceroute packet traverses in the forward direction • <1- 255> – Specify a value from 1 - 255. The default is 30.
source-port <1-65535>	Optional. Sets the ECMP source port • <1- 65535> – Specify a value from 1 - 65535. The default port is 45.
timeout <1-255>	Optional. Sets the minimum response time period in seconds • <1- 255> – Specify a value from 1 sec - 255 sec. The default is 30 seconds.

Example

```
rfs6000-81742D>mint ping 19.6C.88.09
MiNT ping 19.6C.88.09 with 64 bytes of data.
 Response from 19.6C.88.09: id=1 time=0.219 ms
 Response from 19.6C.88.09: id=2 time=0.145 ms
 Response from 19.6C.88.09: id=3 time=0.127 ms

--- 19.6C.88.09 ping statistics ---
3 packets transmitted, 3 packets received, 0% packet loss
round-trip min/avg/max = 0.127/0.164/0.219 ms
rfs6000-81742D>
```

2.1.21 no

User Exec Commands

Use the `no` command to revert a command or to set parameters to their default. This command turns off an enabled feature or reverts settings to default.

NOTE: The commands have their own set of parameters that can be reset.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [adoption|captive-portal|crypto|debug|logging|page|service|terminal|
virtual-machine|wireless]

no adoption {on <DEVICE-OR-DOMAIN-NAME>}
```

NOTE: The *no > adoption* command resets the adoption state of a specified device (and all devices adopted to it) *or* devices within a specified RF Domain. When executed without specifying the device or RF Domain, the command resets the adoption state of the logged device and all devices, if any, adopted to it.

```
no captive-portal client [captive-portal <CAPTIVE-PORTAL-NAME>|mac <MAC>]
{on <DEVICE-OR-DOMAIN-NAME>}

no crypto pki [server|trustpoint]

no crypto pki [server|trustpoint] <TRUSTPOINT-NAME> {del-key {on <DEVICE-NAME>}|
on <DEVICE-NAME>}

no logging monitor

no page

no service [block-adopter-config-update|locator|snmp|ssm|wireless]

no service snmp sysoid wing5

no service block-adopter-config-update

no service ssm trace pattern {<WORD>} {on <DEVICE-NAME>}

no service wireless [trace pattern {<WORD>} {on <DEVICE-NAME>}|unsanctioned ap air-
terminate <BSSID> {on <DOMAIN-NAME>}]

no service locator {on <DEVICE-NAME>}

no terminal [length|width]

no virtual-machine assign-usb-ports {on <DEVICE-NAME>}

no wireless client [all|<MAC>]
```

```
no wireless client all {filter|on}
no wireless client all {filter [wlan <WLAN-NAME>]}
no wireless client all {on <DEVICE-OR-DOMAIN-NAME>} {filter [wlan <WLAN-NAME>]}
no wireless client mac <MAC> {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- no *<PARAMETERS>*

no <PARAMETERS>	Resets or reverts settings based on the parameters passed

Usage Guidelines

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

Example

```
rfs4000-880DA7>no adoption
rfs4000-880DA7>no page
```

2.1.22 on

User Exec Commands

Executes the following commands in the RF Domain context: clrscr, do, end, exit, help, service, and show

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
on rf-domain [<RF-DOMAIN-NAME>|all]
```

Parameters

- `on rf-domain [<RF-DOMAIN-NAME>|all]`

on rf-domain [<RF-DOMAIN-NAME>|all]	Enters the RF Domain context based on the parameter specified • <RF-DOMAIN-NAME> – Specify the RF Domain name. Enters the specified RF Domain context. • all – Specifies all RF Domains.

Example

```
nx9500-6C8809>on rf-domain TechPubs
nx9500-6C8809(TechPubs)>?
on RF-Domain Mode commands:

  clrscr   Clears the display screen
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  service  Service Commands
  show     Show running system information

nx9500-6C8809(TechPubs)>

nx9500-6C8809(rf-domain-all)>?
on RF-Domain Mode commands:

  clrscr   Clears the display screen
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  service  Service Commands
  show     Show running system information

nx9500-6C8809(rf-domain-all)>
```

2.1.23 opendns

User Exec Commands

Fetches the OpenDNS device_id from the OpenDNS site. Use this command to fetch the OpenDNS device_id. Once fetched, apply the device_id to WLANs that are to be OpenDNS enabled.

OpenDNS is a free DNS service that enables swift Web navigation without frequent outages. It is a reliable DNS service that provides the following services: DNS query resolution, Web-filtering, protection against virus and malware attacks, performance enhancement, etc.

This command is part of a set of configurations that are required to integrate WiNG devices with OpenDNS. When integrated, DNS queries going out of the WiNG device (access point, controller, or service platform) are re-directed to OpenDNS (208.67.220.220 or 208.67.222.222) resolvers that act as proxy DNS servers.

For more detailed information on integrating WiNG devices with OpenDNS site, see *Enabling OpenDNS Support*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
opendns [APIToken|username]

opendns APIToken <OPENDNS-APITOKEN>
opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>

Note, as per the current implementation both of the above commands can be used to
fetch the device_id from the OpenDNS site.
```

Parameters

- `opendns APIToken <OPENDNS-APITOKEN>`

opendns	Fetches the device_id from the OpenDNS site using the OpenDNS API token
APIToken <OPENDNS-APITOKEN>	Configures the OpenDNS APIToken. This is the token provided you by CISCO at the time of subscribing for their OpenDNS service. • <OPENDNS-APITOKEN> – Provide the OpenDNS API token (should be a valid token). For every valid OpenDNS API token provided a device_id is returned. Apply this device_id to WLANs that are to be OpenDNS enabled. Once applied, DNS queries originating from associating clients are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. For information on configuring the device_id in the WLAN context, see *opendns*.

- `opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>`

opendns	Fetches the device_id from the OpenDNS site using the OpenDNS credentials

username <USERNAME>	Configures the OpenDNS user name. This is your OpenDNS email ID provided by CISCO at the time of subscribing for their OpenDNS service. • <USERNAME> – Provide the OpenDNS user name (should be a valid OpenDNS username).
password <OPENDNS-PSWD>	Configures the password associated with the user name specified in the previous step • <OPENDNS-PSWD> – Provide the OpenDNS password (should be a valid OpenDNS password).
label <LABEL>	Configures the network label. This the label (the user friendly name) of your network, and should be the same as the label (name) configured on the OpenDNS portal. • <LABEL> – Specify your network label. For every set of user name, password, and label passed only one unique device_id is returned. Apply this device_id to WLANs that are to be OpenDNS enabled. Once applied, DNS queries originating from associating clients are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. For information on configuring the device_id in the WLAN context, see *opendns*.

Usage Guidelines

Use your OpenDNS credentials to logon to the *opendns.org* site and use the *labels*, *edit settings*, and *customize content filtering* options to configure Web filtering settings.

Example

```
ap7131-E6D512>opendns username bob@examplecompany.com password opendns label
company_name
Connecting to OpenDNS server...
device_id = 0014AADF8EDC6C59
ap7131-E6D512>

nx9600-7F3C7F>opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073 device_id
= 001480fe36dcb245
nx9600-7F3C7F>
```

2.1.24 page

User Exec Commands

Toggles a device's paging function. Enabling this command displays the CLI command output page by page, instead of running the entire output at once.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
page
```

Parameters

None

Example

```
rfs4000-880DA7>page
rfs4000-880DA7>
```

Related Commands

no	Disables device paging

2.1.25 ping

User Exec Commands

Sends *Internet Controller Message Protocol* (ICMP) echo messages to a user-specified location

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ping <IP/HOSTNAME> {count <1-10000>|dont-fragment {count|size}|size <1-64000>|
   source [<IP>|pppoe|vlan <1-4094>|wwan]}
```

Parameters

```
• ping <IP/HOSTNAME> {count <1-10000>|dont-fragment {count|size}|size <1-64000>|
source[<IP>|pppoe|vlan <1-4094>|wwan]}
```

<IP/HOSTNAME>	Specify the destination IP address or hostname. When entered without any parameters, this command prompts for an IP address or a hostname.
count <1-10000>	Optional. Sets the pings to the specified destination • <1-10000> – Specify a value from 1 - 10000. The default is 5.
dont-fragment {count|size}	Optional. Sets the don't fragment bit in the ping packet. Packets with the dont-fragment bit specified are not fragmented. When a packet, with the dont-fragment bit specified, exceeds the specified *maximum transmission unit* (MTU) value, an error message is sent from the device trying to fragment it. • count <1-10000> – Optional. Sets the pings to the specified destination from 1 - 10000. The default is 5. • size <1-64000> – Optional. Sets the ping payload size from 1 - 64000 bytes. The default is 100 bytes.
size <1-64000>	Optional. Sets the ping payload size in bytes • <1-64000> – Specify the ping payload size from 1 - 64000. The default is 100 bytes.
source [<IP>|pppoe| vlan <1-4094>| wwan]	Optional. Sets the source address or interface name. This is the source of the ICMP packet to the specified destination. • <IP> – Specifies the source IP address • pppoe – Selects the PPP over Ethernet interface • vlan <1-4094> – Selects the VLAN interface from 1 - 4094 • wwan – Selects the wireless WAN interface

Example

```
rfs6000-81742D>ping 192.168.13.13 count 4
PING 192.168.13.13 (192.168.13.13) 100(128) bytes of data.
108 bytes from 192.168.13.13: icmp_seq=1 ttl=64 time=0.291 ms
108 bytes from 192.168.13.13: icmp_seq=2 ttl=64 time=0.243 ms
108 bytes from 192.168.13.13: icmp_seq=3 ttl=64 time=0.239 ms
108 bytes from 192.168.13.13: icmp_seq=4 ttl=64 time=0.232 ms

--- 192.168.13.13 ping statistics ---
4 packets transmitted, 4 received, 0% packet loss, time 3000ms
rtt min/avg/max/mdev = 0.232/0.251/0.291/0.025 ms
rfs6000-81742D>

rfs6000-81742D>ping 10.233.89.182 source vlan 1
PING 10.233.89.182 (10.233.89.182) from 192.168.13.24 vlan1: 100(128) bytes of
data.
From 192.168.13.2 icmp_seq=1 Packet filtered
From 192.168.13.2 icmp_seq=2 Packet filtered
From 192.168.13.2 icmp_seq=3 Packet filtered
From 192.168.13.2 icmp_seq=4 Packet filtered
From 192.168.13.2 icmp_seq=5 Packet filtered

--- 10.233.89.182 ping statistics ---
5 packets transmitted, 0 received, +5 errors, 100% packet loss, time 3997ms

rfs6000-81742D>>
```

2.1.26 ping6

User Exec Commands

Sends ICMPv6 echo messages to a user-specified IPv6 address

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ping6 <IPv6/HOSTNAME> {<INTF-NAME>} {(count <1-10000>|size <1-64000>)}
```

Parameters

- `ping <IPv6/HOSTNAME> {<INTF-NAME>} {(count <1-10000>|size <1-64000>)}`

<IPv6/HOSTNAME>	Specify the destination IPv6 address or hostname.
<INTF-NAME>	Specify the interface name for link local/broadcast address
count <1-10000>	Optional. Sets the pings to the specified IPv6 destination • <1-10000> – Specify a value from 1 - 10000. The default is 5.
size <1-64000>	Optional. Sets the IPv6 ping payload size in bytes • <1-64000> – Specify the ping payload size from 1 - 64000. The default is 100 bytes.

Usage Guidelines

To configure a device's IPv6 address, in the VLAN interface configuration mode, use the *ipv6 > address <IPv6-ADDRESS> command.* After configuring the IPv6 address, use the *ipv6 > enable* command to enable IPv6. For more information, see *ipv6*.

Example

```
rfs4000-1B3596(config-device-00-23-68-1B-35-96-if-ge4)#show ipv6 interface brief
------------------------------------------------------------------------------
INTERFACE  IPV6 MODE  IPV6-ADDRESS/MASK              TYPE         STATUS  PROTOCOL

rfs4000-229D58>
```

2.1.27 ssh

User Exec Commands

Opens a *Secure Shell* (SSH) connection between two network devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ssh <IP/HOSTNAME> <USER-NAME> {<INF-NAME/LINK-LOCAL-ADD>}
```

Parameters

- `ssh <IP/HOSTNAME> <USER-NAME> {<INF-NAME/LINK-LOCAL-ADD>}`

<IP/HOSTNAME>	Specify the remote system's IP address or hostname.
<USERNAME>	Specify the name of the user requesting SSH connection with the remote system.
<INF-NAME/ LINK-LOCAL-ADD>	Optional. Specify the interface's name or link local address.

Example

```
nx9500-6C8809>ssh 192.168.13.24 admin
admin@192.168.13.24's password:
rfs6000-81742D>
```

2.1.28 telnet

User Exec Commands

Opens a Telnet session between two network devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
telnet <IP/HOSTNAME> {<TCP-PORT>} {<INTF-NAME>}
```

Parameters

- `telnet <IP/HOSTNAME> {<TCP-PORT>} {<INTF-NAME>}`

<IP/HOSTNAME>	Configures the destination remote system's IP (IPv4 or IPv6) address or hostname. The Telnet session is established between the connecting system and the remote system. • <IP/HOSTNAME> – Specify the remote system's IPv4 or IPv6 address or hostname.
<TCP-PORT>	Optional. Specify the *Transmission Control Protocol* (TCP) port number.
<INTF-NAME>	Optional. Specify the interface name for the link local address.

Example

```
nx9500-6C8809#telnet 192.168.13.10

```

2.1.29 terminal

User Exec Commands

Sets the length and width of the CLI display window on a terminal

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
terminal [length|width] <0-512>
```

Parameters

- `terminal [length|width] <0-512>`

length <0-512>	Sets the number of lines displayed on the terminal window • <0-512> – Specify a value from 0 - 512.
width <0-512>	Sets the width (the number of characters displayed in one line) of the terminal window • <0-512> – Specify a value from 0 - 512.

Example

```
rfs6000-81742D>terminal length 150

rfs6000-81742D>terminal width 215

rfs6000-81742D>show terminal
Terminal Type: xterm
Length: 150     Width: 215
rfs6000-81742D>
```

Related Commands

no	Resets the width or length of the terminal window

2.1.30 time-it

User Exec Commands

Verifies the time taken by a particular command between request and response

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
time-it <COMMAND>
```

Parameters

- `time-it <COMMAND>`

time-it <COMMAND>	Verifies the time taken by a particular command to execute and provide a result • <COMMAND> – Specify the command.

Example

```
rfs6000-81742D>time-it enable
That took 0.00 seconds..
rfs6000-81742D#
```

2.1.31 traceroute

User Exec Commands

Traces the route to a defined destination

Use '--help' or '-h' to display a complete list of parameters for the traceroute command

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
traceroute <LINE>
```

Parameters

```
• traceroute <LINE>
```

traceroute <LINE>	Traces the route to a destination IP address or hostname • <LINE> – Specify the destination IPv6 address or hostname.

Example

```
rfs6000-81742D>traceroute --help
BusyBox v1.14.4 () multi-call binary

Usage: traceroute [-FIldnrv] [-f 1st_ttl] [-m max_ttl] [-p port#] [-q nqueries]
        [-s src_addr] [-t tos] [-w wait] [-g gateway] [-i iface]
        [-z pausemsecs] HOST [data size]Options:
        -F      Set the don't fragment bit
        -I      Use ICMP ECHO instead of UDP datagrams
        -l      Display the ttl value of the returned packet
        -d      Set SO_DEBUG options to socket
        -n      Print hop addresses numerically rather than symbolically
        -r      Bypass the normal routing tables and send directly to a host
        -v      Verbose
        -m max_ttl      Max time-to-live (max number of hops)
        -p port#        Base UDP port number used in probes
                        (default is 33434)
        -q nqueries     Number of probes per 'ttl' (default 3)
        -s src_addr     IP address to use as the source address
        -t tos          Type-of-service in probe packets (default 0)
        -w wait         Time in seconds to wait for a response
                        (default 3 sec)
        -g              Loose source route gateway (8 max)

rfs6000-81742D>

rfs6000-81742D>traceroute 192.168.13.13
traceroute to 192.168.13.13 (192.168.13.13), 30 hops max, 38 byte packets
 1  192.168.13.13 (192.168.13.13)  1.150 ms  0.261 ms  0.214 ms
rfs6000-81742D>
```

2.1.32 traceroute6

User Exec Commands

Traces the route to a specified IPv6 destination

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
traceroute6 <LINE>
```

Parameters

- `traceroute6 <LINE>`

traceroute6 <LINE>	Traces the route to a destination IPv6 address or hostname • <LINE> – Specify the destination IPv6 address or hostname.

Example

```
rfs4000-229D58>traceroute6 2001:10:10:10:10:10:10:1
traceroute to 2001:10:10:10:10:10:10:1 (2001:10:10:10:10:10:10:1) from
2001:10:10:10:10:10:10:2, 30 hops max, 16 byte packets
 1  2001:10:10:10:10:10:10:1 (2001:10:10:10:10:10:10:1)  6.054 ms  0.448 ms  0.555
ms
rfs4000-229D58>
```

2.1.33 watch

User Exec Commands

Repeats the specified CLI command at periodic intervals

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
watch <1-3600> <LINE>
```

Parameters

- `watch <1-3600> <LINE>`

watch	Repeats a CLI command at a specified interval (in seconds)
<1-3600>	Select an interval from 1 - 3600 sec. Pressing CTRL-Z halts execution of the command.
<LINE>	Specify the CLI command.

Example

```
rfs6000-81742D>watch 40 ping 192.168.13.13
PING 192.168.13.13 (192.168.13.13) 100(128) bytes of data.
108 bytes from 192.168.13.13: icmp_seq=1 ttl=64 time=0.335 ms
108 bytes from 192.168.13.13: icmp_seq=2 ttl=64 time=0.217 ms
108 bytes from 192.168.13.13: icmp_seq=3 ttl=64 time=0.209 ms
108 bytes from 192.168.13.13: icmp_seq=4 ttl=64 time=0.202 ms
108 bytes from 192.168.13.13: icmp_seq=5 ttl=64 time=0.235 ms

--- 192.168.13.13 ping statistics ---
5 packets transmitted, 5 received, 0% packet loss, time 3999ms
rtt min/avg/max/mdev = 0.202/0.239/0.335/0.051 ms

rfs6000-81742D>
```

2.1.34 exit

User Exec Commands

Ends the current CLI session and closes the session window

For more information, see *exit*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
exit
```

Parameters

None

Example

```
rfs6000-81742D>exit
```

3 PRIVILEGED EXEC MODE COMMANDS

Most PRIV EXEC commands set operating parameters. Privileged-level access should be password protected to prevent unauthorized use. The PRIV EXEC command set includes commands contained within the USER EXEC mode. The PRIV EXEC mode also provides access to configuration modes, and includes advanced testing commands.

NOTE: To password-protect the Privilege mode, in the Management Policy, configure the privilege-mode-password. For more information, see *privilege-mode-password*.

The PRIV EXEC mode prompt consists of the hostname of the device followed by a pound sign (#).

To access the PRIV EXEC mode, enter the following at the prompt:

```
<DEVICE>>enable
<DEVICE>#
```

The PRIV EXEC mode is often referred to as the enable mode, because the enable command is used to enter the mode.

There is no provision to configure a password to get direct access to PRIV EXEC (enable) mode.

```
<DEVICE>#?
Privileged command commands:
  archive                       Manage archive files
  boot                          Boot commands
  captive-portal-page-upload    Captive portal internal and advanced page upload
  cd                            Change current directory
  change-passwd                 Change password
  clear                         Clear
  clock                         Configure software system clock
  cluster                       Cluster commands
  commit                        Commit all changes made in this session
  configure                     Enter configuration mode
  connect                       Open a console connection to a remote device
  copy                          Copy contents of one dir to another
  cpe                           T5 CPE configuration
  create-cluster                Create a cluster
  crypto                        Encryption related commands
  crypto-cmp-cert-update        Update the cmp certs
  database                      Database
  database-backup               Backup database
  database-restore              Restore database
  debug                         Debugging functions
  delete                        Deletes specified file from the system
  device-upgrade                Device firmware upgrade
  diff                          Display differences between two files
  dir                           List files on a filesystem
  disable                       Turn off privileged mode command
  edit                          Edit a text file
  enable                        Turn on privileged mode command
  erase                         Erase a filesystem
  ex3500                        EX3500 commands
  factory-reset                 Delete startup configuration on device(s),
                                reload the device(s) and remove configuration
                                entry from the controller
  file-sync                     File sync between controller and adoptees
  format                        Format file system
```

```
  halt                          Halt the system
  help                          Description of the interactive help system
  join-cluster                  Join the cluster
  l2tpv3                        L2tpv3 protocol
  logging                       Modify message logging facilities
  mint                          MiNT protocol
  mkdir                         Create a directory
  more                          Display the contents of a file
  no                            Negate a command or set its defaults
  on                            On RF-Domain
  opendns                       Opendns username/password configuration
  page                          Toggle paging
  ping                          Send ICMP echo messages
  ping6                         Send ICMPv6 echo messages
  pwd                           Display current directory
  raid                          RAID operations
  re-elect                      Perform re-election
  reload                        Halt and perform a warm reboot
  remote-debug                  Troubleshoot remote system(s)
  rename                        Rename a file
  revert                        Revert changes
  rmdir                         Delete a directory
  self                          Config context of the device currently logged
                                into
  service                       Service Commands
  show                          Show running system information
  ssh                           Open an ssh connection
  t5                            T5 commands
  telnet                        Open a telnet connection
  terminal                      Set terminal line parameters
  time-it                       Check how long a particular command took between
                                request and completion of response
  traceroute                    Trace route to destination
  traceroute6                   Trace route to destination(IPv6)
  upgrade                       Upgrade software image
  upgrade-abort                 Abort an ongoing upgrade
  virtual-machine               Virtual Machine
  watch                         Repeat the specific CLI command at a periodic
                                interval
  write                         Write running configuration to memory or
                                terminal

  clrscr                        Clears the display screen
  exit                          Exit from the CLI

<DEVICE>#
```

NOTE: The input parameter <HOSTNAME>, wherever used in syntaxes across this chapter, cannot include an underscore (_) character.

3.1 Privileged Exec Mode Commands

PRIVILEGED EXEC MODE COMMANDS

The following table summarizes the PRIV EXEC Mode commands:

Table 3.1 *Privileged Exec Commands*

Command	Description	Reference
archive	Manages file archive operations	*page 3-6*
boot	Specifies the image used after reboot	*page 3-8*
captive-portal-page-upload	Uploads captive portal advanced pages	*page 3-9*
cd	Changes the current directory	*page 3-13*
change-passwd	Changes the password of a logged user	*page 3-14*
clear	Clears parameters, cache entries, table entries, and other similar entries	*page 3-15*
clock	Configures the system clock	*page 3-28*
cluster	Initiates a cluster context	*page 3-29*
configure	Enters the global configuration mode	*page 3-30*
connect	Begins a console connection to a remote device	*page 3-31*
copy	Copies a file from any location to the wireless controller, service platform, or access point	*page 3-32*
cpe	Enables a WiNG controller to perform certain operations on an adopted T5 *Customer Premises Equipment* (CPE) device. This command is specific to the RFS4000, RFS6000, NX95XX devices.	*page 3-33*
create-cluster	Creates a new cluster on a specified device	*page 3-35*
crypto	Enables encryption	*page 3-37*
crypto-cmp-cert-update	Triggers a CMP certificate update on a specified device or devices	*page 3-46*
database	Enables automatic repairing (vacuuming) and dropping of databases (Captive-portal and NSight)	*page 3-47*
database-backup	Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server	*page 3-50*
database-restore	Restores a previously exported database [captive-portal and/or NSight]. Previously exported databases (backed up to a specified FTP or SFTP server) are restored to the original database.	*page 3-52*
delete	Deletes a specified file from the system	*page 3-53*
device-upgrade	Configures device firmware upgrade parameters	*page 3-54*
diff	Displays the differences between two files	*page 3-60*
dir	Displays the list of files on a file system	*page 3-61*
disable	Disables the privileged mode command set	*page 3-62*
edit	Edits a text file	*page 3-63*
enable	Turns on (enables) the privileged mode commands set	*page 3-64*

Table 3.1 *Privileged Exec Commands*

Command	Description	Reference
erase	Erases a file system	*page 3-65*
ex3500	Enables EX3500 switch firmware management. Use this command to perform the following operations: boot, copy, delete, and IP related configurations.	*page 3-67*
factory-reset	Erases startup configuration on a specified device or all devices within a specified RF Domain	*page 3-75*
file-sync	Configures parameters enabling syncing of PKCS#12 certificate between the staging-controller and adopted access points	*page 3-79*
halt	Halts a device (access point, wireless controller, or service platform)	*page 3-82*
join-cluster	Adds a device (access point, wireless controller, or service platform), as cluster member, to an existing cluster of devices	*page 3-83*
l2tpv3	Establishes or brings down *Layer 2 Tunneling Protocol Version* 3 (L2TPV3) tunnels	*page 3-85*
logging	Modifies message logging parameters	*page 3-87*
mint	Configures MiNT protocols	*page 3-89*
mkdir	Creates a new directory in the file system	*page 3-91*
more	Displays the contents of a file	*page 3-92*
no	Reverts a command or sets values to their default	*page 3-93*
on	Executes the following commands in the RF Domain context: clrscr, do, end, exit, help, service, show	*page 3-95*
opendns	Connects to the OpenDNS site using OpenDNS registered credentials (username, password) OR OpenDNS API token to fetch the OpenDNS device_id. This command is a part of the process integrating access points, controllers, and service platforms with OpenDNS.	*page 3-96*
page	Toggles a device's (access point, wireless controller, or service platform) paging function	*page 3-100*
ping	Sends ICMP echo messages to a user-specified location	*page 3-101*
ping6	Sends ICMPv6 echo messages to a user-specified location	*page 3-103*
pwd	Displays the current directory	*page 3-104*
re-elect	Re-elects the tunnel controller (wireless controller, service platform, or access point)	*page 3-105*
reload	Halts a device (wireless controller, service platform, or access point) and performs a warm reboot	*page 3-106*
rename	Renames a file in the existing file system	*page 3-111*
rmdir	Deletes an existing file from the file system	*page 3-112*
self	Displays the configuration context of the device	*page 3-113*
ssh	Connects to another device using a secure shell	*page 3-114*
t5	Executes the following operations on a T5 device: copy, rename, delete, and write. This command is specific to the RFS4000, RFS6000, NX95XX devices.	*page 3-115*
telnet	Opens a Telnet session	*page 3-117*

Table 3.1 *Privileged Exec Commands*

Command	Description	Reference
terminal	Sets the length and width of the terminal window	*page 3-118*
time-it	Verifies the time taken by a particular command between request and response	*page 3-119*
traceroute	Traces the route to a defined destination	*page 3-120*
traceroute6	Sends ICMPv6 echo messages to a user-specified location	*page 3-121*
upgrade	Upgrades the software image	*page 3-122*
upgrade-abort	Aborts an ongoing software image upgrade	*page 3-126*
watch	Repeats a specified CLI command at a periodic interval	*page 3-127*
raid	Enables RAID management This command is specific to the NX7530, NX9500, and NX9510 service platforms.	*page 3-129*

NOTE: For more information on common commands (clrscr, commit, help, revert, service, show, write, and exit), see *COMMON COMMANDS*.

NOTE: The input parameter <HOSTNAME>, if used in syntaxes across this chapter, cannot include an underscore (_) character.

3.1.1 archive

Privileged Exec Mode Commands

Manages file archive operations

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
archive tar /table [<FILE>|<URL>]
archive tar /create [<FILE>|<URL>] <FILE>
archive tar /xtract [<FILE>|<URL>] <DIR>
```

Parameters

- `archive tar /table [<FILE>|<URL>]`

tar	Manipulates (creates, lists, or extracts) a tar file
/table	Lists the files in a tar file
<FILE>	Defines a tar filename
<URL>	Sets the tar file URL

- `archive tar /create [<FILE>|<URL>] <FILE>`

tar	Manipulates (creates, lists or extracts) a tar file
/create	Creates a tar file
<FILE>	Defines tar filename
<URL>	Sets the tar file URL

- `archive tar /xtract [<FILE>|<URL>] <DIR>`

tar	Manipulates (creates, lists or extracts) a tar file
/xtract	Extracts content from a tar file
<FILE>	Defines tar filename
<URL>	Sets the tar file URL
<DIR>	Specify a directory name. When used with /create, dir is the source directory for the tar file. When used with /xtract, dir is the destination file where contents of the tar file are extracted.

Example

Following examples show how to zip the folder flash:/log/?

```
nx9500-6C8809#dir flash:/
Directory of flash:/

 -rw-   62937      Tue Nov 24 16:00:06 2015   run-config-backup.txt
  drwx             Mon Apr  3 12:40:23 2017   crashinfo
  drwx             Wed Mar 22 13:58:28 2017   upgrade

3.1.2 boot

Privileged Exec Mode Commands

Specifies the image used after reboot

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
boot system [primary|secondary] {on <DEVICE-NAME>}
```

Parameters

- `boot system [primary|secondary] {on <DEVICE-NAME>}`

system [primary|secondary]	Specifies the image used after a device reboot • primary – Uses the primary image after reboot • secondary – Uses the secondary image after reboot
on <DEVICE-NAME>	Optional. Specifies the primary or secondary image location on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show boot
------------------------------------------------------------------------------
     IMAGE            BUILD DATE              INSTALL DATE          VERSION
------------------------------------------------------------------------------
  Primary       03/26/2017 01:48:56     03/30/2017 15:02:18     5.9.0.0-012D
  Secondary     03/17/2017 13:13:38     03/22/2017 13:36:50     5.9.0.0-010D

nx9500-6C8809#
```

3.1.3 captive-portal-page-upload

Privileged Exec Mode Commands

Uploads captive portal advanced pages to connected access points. Use this command to provide connected access points with specific captive portal configurations so they can successfully provision login, welcome, and condition pages to requesting clients attempting to access the wireless network using the captive portal.

NOTE: Ensure that the captive portal pages to be uploaded are *.tar files.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
captive-portal-page-upload [<CAPTIVE-PORTAL-NAME>|cancel-upload|delete-file|
load-file]

captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all|rf-domain]

captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all]
{upload-time <TIME>}

captive-portal-page-upload <CAPTIVE-PORTAL-NAME> rf-domain [<DOMAIN-NAME>|all]
{from-controller} {(upload-time <TIME>)}

captive-portal-page-upload cancel-upload [<MAC/HOSTNAME>|all|on rf-domain
{<DOMAIN-NAME>|all]]

captive-portal-page-upload delete-file <CAPTIVE-PORTAL-NAME> <FILE-NAME>

captive-portal-page-upload load-file <CAPTIVE-PORTAL-NAME> <URL>
```

Parameters

```
• captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all]
{upload-time <TIME>}
```

captive-portal-page-upload <CAPTIVE-PORTAL-NAME>	Uploads advanced pages specified by the <CAPTIVE-PORTAL-NAME> parameter • <CAPTIVE-PORTAL-NAME> – Specify captive portal name (should be existing and configured).
<MAC/HOSTNAME>	Uploads to a specified AP • <MAC/HOSTNAME> – Specify the AP's MAC address or hostname.
all	Uploads to all APs

upload-time <TIME>	Optional. Schedules an upload time • <TIME> – Specify upload time in the MM/DD/YYYY-HH:MM or HH:MM format. The scheduled upload time is your local system's time. It is not the access point, controller, service platform, or virtual controller time and it is not synched with the device. To view a list of uploaded captive portal files, execute the *show > captive-portal-page-upload > list-files* <CAPTIVE-PORTAL-NAME> command.

• `captive-portal-page-upload <CAPTIVE-PORTAL-NAME> rf-domain [<DOMAIN-NAME>|all] {from-controller} {(upload-time <TIME>)}`

captive-portal-page-upload <CAPTIVE-PORTAL-NAME>	Uploads advanced pages specified by the <CAPTIVE-PORTAL-NAME> parameter • <CAPTIVE-PORTAL-NAME> – Specify captive portal name (should be existing and configured).
rf-domain [<DOMAIN-NAME>| all]	Uploads to all APs within a specified RF Domain or all RF Domains • <DOMAIN-NAME> – Uploads to APs within a specified RF Domain. Specify the RF Domain name. • all – Uploads to APs across all RF Domains
from-controller	Optional. Uploads to APs from the adopted device
upload-time <TIME>	Optional. Schedules an AP upload • <TIME> – Specify upload time in the MM/DD/YYYY-HH:MM or HH:MM format. The scheduled upload time is your local system's time. It is not the access point, controller, service platform, or virtual controller time and it is not synched with the device.

• `captive-portal-page-upload cancel-upload [<MAC/HOSTNAME>|all|on rf-domain [<DOMAIN-NAME>|all]]`

captive-portal-page-upload cancel-upload	Cancels a scheduled AP upload
cancel-upload [<MAC/ HOSTNAME>|all| on rf-domain [<DOMAIN-NAME>| all]]	Select one of the following options: • <MAC/HOSTNAME> – Cancels a scheduled upload to a specified AP. Specify the AP MAC address or hostname. • all – Cancels all scheduled AP uploads • on rf- domain – Cancels all scheduled uploads within a specified RF Domain or all RF Domains • <DOMAIN-NAME> – Cancels scheduled uploads within a specified RF Domain. Specify RF Domain name. • all – Cancels scheduled uploads across all RF Domains

• `captive-portal-page-upload delete-file <CAPTIVE-PORTAL-NAME> <FILE-NAME>`

captive-portal-page-upload delete-file	Deletes a specified captive portal's uploaded captive-portal internal page files
<CAPTIVE-PORTAL-NAME> <FILE-NAME>	Deletes a captive portal's, identified by the <CAPTIVE-PORTAL-NAME> keyword, uploaded internal page files • <CAPTIVE-PORTAL-NAME> – Specify the captive portal's name. • <FILE-NAME> – Specify the file name. The specified internal captive portal page is deleted.

- `captive-portal-page-upload load-file <CAPTIVE-PORTAL-NAME> <URL>`

captive-portal-page-upload load-file	Loads captive-portal advanced pages
<CAPTIVE-PORTAL-NAME> <URL>	Specify captive portal name (should be existing and configured) and location. • <URL> – Specifies location of the captive-portal's advanced pages. Use one of the following formats: IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file http://<hostname|[IPv6]>[:port]/path/file **Note:** The captive portal pages are downloaded to the controller from the location specified here. After downloading use the *captive-portal-page-upload> <CAPTIVE-PORTAL-NAME> > <DEVICE-OR-DOMAIN-NAME>* command to upload these pages to APs.

Example

```
ap6562-B1A214#captive-portal-page-upload load-file captive_portal_test tftp://
89.89.89.17/pages_new_only.tar
ap6562-B1A214#

ap6562-B1A214#show captive-portal-page-upload load-image-status
Download of captive_portal_test advanced page file is complete
ap6562-B1A214#

ap6562-B1A214#captive-portal-page-upload captive_portal_test all
-------------------------------------------------------------------------------
         CONTROLLER             STATUS                   MESSAGE
-------------------------------------------------------------------------------
  FC-0A-81-B1-A2-14         Success         Added 6 APs to upload queue
-------------------------------------------------------------------------------
ap6562-B1A214#

ap6562-B1A214#show captive-portal-page-upload status
Number of APs currently being uploaded : 1
Number of APs waiting in queue to be uploaded : 0
-------------------------------------------------------------------------------
-------
    AP          STATE    UPLOAD TIME PROGRESS RETRIES LAST UPLOAD ERROR UPLOADED BY
-------------------------------------------------------------------------------
-------
  ap6562-B1A738   downloading   immediate   100      0       -                None
-------------------------------------------------------------------------------

  CP-BW.tar.gz                 3370              2017-05-16 10:45:44
--------------------------------------------------------------------------------
nx7500-7F2C13#
```

3.1.4 cd

Privileged Exec Mode Commands

Changes the current directory

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
cd {<DIR>}
```

Parameters

- `cd {<DIR>}`

<DIR>	Optional. Changes the current directory to the directory identified by the <DIR> keyword. If a directory name is not provided, the system displays the current directory.

Example

```
rfs6000-81742D#cd flash:/log/
rfs6000-81742D#pwd
flash:/log/
rfs6000-81742D#
```

3.1.5 change-passwd

Privileged Exec Mode Commands

Changes the password of a logged user. When this command is executed without any parameters, the password can be changed interactively.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
change-passwd <OLD-PASSWORD> <NEW-PASSWORD>
```

Parameters

- `change-passwd <OLD-PASSWORD> <NEW-PASSWORD>`

<OLD-PASSWORD>	Specify the password to be changed.
<NEW-PASSWORD>	Specify the new password. **Note:** The password can also be changed interactively. To do so, press [Enter] after the command.

Usage Guidelines

A password must be from 1 - 64 characters in length.

Example

```
rfs6000-81742D#change-passwd
Enter old password:
Enter new password:
Password for user 'admin' changed successfully
Please write this password change to memory(write memory) to be persistent.
rfs6000-81742D#write memory
OK
rfs6000-81742D#
```

3.1.6 clear

Privileged Exec Mode Commands

Clears parameters, cache entries, table entries, and other entries. The clear command is available for specific commands only. The information cleared using this command varies depending on the mode where the clear command is executed.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

NOTE: When using the *clear* command, refer to the interface details provided in *interface*.

Syntax

```
clear [arp-cache|bonjour|cdp|counters|crypto|eguest|event-history|firewall|gre|
ip|ipv6|l2tpv3-stats|lacp|license|lldp|logging|mac-address-table|mint|role|rtls|
spanning-tree|traffic-shape|vrrp]

clear arp-cache {on <DEVICE-NAME>}

clear bonjour cache {on <DEVICE-NAME>}

clear mac-address-table interface [<IF-NAME>|ge <1-X>|port-channel <1-X>|t1e1 <1-
4> <1-1>|up <1-X>|xge <1-4>] {on <DEVICE-NAME>}

clear mint mlcp history {on <DEVICE-NAME>}

clear role ldap-stats {on <DEVICE-NAME>}

clear rtls [aeroscout|ekahau]

clear rtls [aeroscout|ekahau] {<MAC/DEVICE-NAME> {on <DEVICE-OR-DOMAIN-NAME>}|
on <DEVICE-OR-DOMAIN-NAME>}

clear spanning-tree detected-protocols {interface|on <DEVICE-NAME>}

clear spanning-tree detected-protocols {interface [<INTERFACE-NAME>|ge <1-x>|me1|
port-channel <1-x>|pppoe1|vlan <1-4094>|wwan1|xge <1-4>]} {on <DEVICE-NAME>}

clear traffic-shape statistics {class <1-4>} {(on <DEVICE-NAME>)}

clear vrrp [error-stats|stats] {on <DEVICE-NAME>}
```

The following clear command is specific to the NX95XX series service platforms:

```
clear logging analytics {on <DEVICE-NAME>}
```

Parameters

- `clear arp-cache {on <DEVICE-NAME>}`

arp-cache	Clears *Address Resolution Protocol* (ARP) cache entries on a device. This protocol matches layer 3 IP addresses to layer 2 MAC addresses.
on <DEVICE-NAME>	Optional. Clears ARP cache entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear bonjour cache {on <DEVICE-NAME>}`

bonjour cache	Clears all Bonjour cached statistics. Once cleared, the system has to re-discover available Bonjour services.
on <DEVICE-NAME>	Optional. Clears all Bonjour cached statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear [cdp|lldp] neighbors {on <DEVICE-NAME>}`

cdp	Clears *Cisco Discovery Protocol* (CDP) table entries
ldp	Clears *Link Layer Discovery Protocol* (LLDP) neighbor table entries
neighbors	Clears CDP or LLDP neighbor table entries based on the option selected in the preceding step
on <DEVICE-NAME>	Optional. Clears CDP or LLDP neighbor table entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear counters [all|bridge|router|thread]`

counters [all|bridge|router| thread]	Clears counters on a system • all – Clears all counters irrespective of the interface type • bridge – Clears bridge counters • router – Clears router counters • thread – Clears per-thread counters

- `clear counters [ap|wireless-client] {<MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

counters [ap|wireless-client]	Clears counters on a system • ap – Clears access point wireless counters • wireless-client – Clears wireless client counters
<MAC>	The following keyword is common to the 'ap' and 'wireless-client' parameters: • <MAC> – Optional. Clears counters of the AP/wireless client identified by the <MAC> keyword. Specify the MAC address of the AP or wireless client. The system clears all AP or wireless client counters, if no MAC address is specified.

on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and is applicable to the <MAC> parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Clears AP/wireless-client counters on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain. If no MAC address is specified, the system clears all AP or wireless client counters on the specified AP, wireless controller, service platform, or RF Domain.

- `clear counters interface [<INTERFACE-NAME>|all|ge <1-X>|me1|port-channel <1-X>|pppoe1|vlan <1-4094>|wwan1|xge <1-4>]`

counters interface [<INTERFACE-NAME>|all| ge <1-X>|me1| port-channel <1-X>| pppoe1|vlan <1-4094>| wwan1|xge <1-4>]	Clears interface counters for a specified interface • <INTERFACE-NAME> – Clears a specified interface counters. Specify the interface name. • all – Clears all interface counters • ge <1-X> – Clears GigabitEthernet interface counters. Specify the GigabitEthernet interface index from 1 - X. • me1 – Clears FastEthernet interface counters • port-channel <1- X> – Clears port-channel interface counters. Specify the port channel interface index from 1 - X. **Note:** The number of port-channel interfaces supported varies for different device types. For example, RFS4000 supports 3 port-channels. • pppoe1 – Clears *Point-to-Point Protocol over Ethernet* (PPPoE) interface counters • vlan <1-4094> – Clears interface counters. Specify the *Switch Virtual Interface* (SVI) VLAN ID from 1 - 4094. • wwan1 – Clears wireless WAN interface counters • xge <1-4> – Clears TenGigabitEthernet interface counters. Specify the GigabitEthernet interface index from 1 - 4.

- `clear counters radio {<MAC/HOSTNAME> <1-X>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

counters radio	Clears wireless radio counters
<MAC/HOSTNAME> <1-X>	Clears counters of a radio identified by the <MAC/HOSTNAME> keyword. • <MAC/HOSTNAME> – Optional. Specify the hostname or MAC address. Optionally, append the interface number to form radio ID in the form of AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX • <1-X> – Optional. Specify the radio index (if not specified as part of the radio ID). The maximum number of radio antennas supported varies with the access point type. If no MAC address or radio index is specified, the system clears all radio counters.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and is applicable to the <MAC> parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Clears AP/wireless-client counters on a specified device or RF Domain If no MAC address is specified, the system clears all AP or wireless client counters on the specified AP, wireless controller, service platform, or RF Domain.

- `clear crypto ike sa [<IP>|all] {on <DEVICE-NAME>}`

crypto	Clears encryption module database

ike sa [<IP>|all]	Clears *Internet Key Exchange* (IKE) *security associations* (SAs) • <IP> – Clears IKE SAs for a certain peer • all – Clears IKE SAs for all peers
on <DEVICE-NAME>	Optional. Clears IKE SA entries, for a specified peer or all peers, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear crypto ipsec sa {on <DEVICE-NAME>}`

crypto	Clears encryption module database
ipsec sa {on <DEVICE-NAME>}	Clears *Internet Protocol Security* (IPSec) database SAs • on <DEVICE-NAME> – Optional. Clears IPSec SA entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear eguest registration statistics`

eguest registration statistics	Clears EGuest registration server counters. When cleared EGuest registration details are deleted, and the *show > eguest > registration > statistics* command output is null. This command is applicable only on the NX95XX, NX9600, and the VX9000 model platforms.

- `clear event-history`

event-history	Clears event history cache entries

- `clear firewall [dhcp snoop-table|dos stats|flows [ipv4|ipv6]|neighbors snoop-table] {on <DEVICE-NAME>}`

firewall	Clears firewall event entries
dhcp snoop-table	Clears DHCP snoop table entries
dos stats	Clears denial of service statistics
flows [ipv4|ipv6]	Clears established IPv4 or IPv6 firewall sessions
neighbors snoop-table	Clears IPv6 neighbors snoop-table entries
on <DEVICE-NAME>	The following keywords are common to the DHCP, DOS, and flows parameters: • on <DEVICE-NAME> – Optional. Clears DHCP snoop table entries, denial of service statistics, or the established firewall sessions on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear gre stats {on <DEVICE-NAME>}`

gre stats	Clears GRE tunnel statistics
on <DEVICE-NAME>	Optional. GRE tunnel statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear ip bgp [<IP>|all|external] {in prefix-filter} {on <DEVICE-NAME>}`

ip bgp [<IP>|all|external]	Clears BGP routing table information based on the option selected • <IP> – Clears the BGP peer identified by the <IP> keyword. Specify the BGP peer's IP address. • all – Clears Route Updates Received From All BGP Peers • external – Clears route updates received from external BGP peers This command is applicable only to the RFS4000, RFS6000, NX95XX, and NX9600 series service platforms. In case of a change in routing policy it is necessary to clear BGP routing table entries in order for the new policy to take effect.
in prefix-filter	Optional. Clears soft-reconfiguration inbound route updates • prefix-filter – Optional. Clears the existing *Outbound Route Filtering* (ORF) prefix-list.
on <DEVICE-NAME>	Optional. Clears soft-reconfiguration inbound route updates on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip bgp [<IP>|all|external] {out} {(on <DEVICE-NAME>)}`

ip bgp [<IP>|all|external]	Clears BGP routing table information based on the option selected • <IP> – Clears the BGP peer identified by the <IP> keyword. Specify the BGP peer's IP address. • all – Clears route updates received from all BGP peers • external – Clears route updates received from external BGP peers This command is applicable only to the RFS4000, RFS6000, and NX95XX series service platforms. In case of a change in routing policy it is necessary to clear BGP routing table entries in order for the new policy to take effect.
out	Optional. Clears soft-reconfiguration outbound route updates. Optionally specify the device on which to execute this command.
on <DEVICE-NAME>	The following keyword is recursive and optional. • on <DEVICE-NAME> – Optional. Clears BGP sessions on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip bgp [<IP>|all|external] {soft {in|out}} {on <DEVICE-NAME>}`

ip bgp [<IP>|all|external]	Clears BGP routing table information based on the option selected • <IP> – Clears the BGP peer identified by the <IP> keyword. Specify the BGP peer's IP address. • all – Clears route updates received from all BGP peers • external – Clears route updates received from external BGP peers This command is applicable only to the RFS4000, RFS6000, and NX95XX series service platforms. In case of a change in routing policy it is necessary to clear BGP routing table entries in order for the new policy to take effect.

soft {in|out}	Optional. Enables soft-reconfiguration of route updates for the specified IP address. This option allows routing tables to be reconfigured without clearing BGP sessions. • in – Optional. Enables soft reconfiguration of inbound route updates • out – Optional. Enables soft reconfiguration of outbound route updates Modifications made to BGP settings (BGP access lists, weight, distance, route-maps, versions, routing policy, etc.) take effect only after on-going BGP sessions are cleared. The *clear > ip > bgp* command clears BGP sessions. To reduce loss of route updates during the process, use the 'soft' option. Soft reconfiguration stores inbound/outbound route updates to be processed later and updated to the routing table. This requires high memory usage.
on <DEVICE-NAME>	Optional. Clears soft-reconfiguration inbound/outbound route updates on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip bgp process` *{on <DEVICE-NAME>}*

ip bgp process	Clears all BGP processes running This command is applicable only to the RFS4000, RFS6000, NX95XX, NX9600 platforms.
on <DEVICE-NAME>	Optional. Clears all BGP processes on a specified device • <DEVICE-NAME> – Specify the name of the AP or service platform.

- `clear ip dhcp bindings [<IP>|all]` *{on <DEVICE-NAME>}*

ip	Clears a *Dynamic Host Configuration Protocol* (DHCP) server's IP address bindings entries
dhcp bindings	Clears DHCP server's connections and address binding entries
<IP>	Clears specific address binding entries. Specify the IP address to clear binding entries.
all	Clears all address binding entries
on <DEVICE-NAME>	Optional. Clears a specified address binding or all address bindings on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear ip ospf process` *{on <DEVICE-NAME>}*

ip ospf process	Clears already enabled *open shortest path first* (OSPF) process and restarts the process
on <DEVICE-NAME>	Optional. Clears OSPF process on a specified device OSPF is a link-state *interior gateway protocol* (IGP). OSPF routes IP packets within a single routing domain (autonomous system), like an enterprise LAN. OSPF gathers link state information from neighbor routers and constructs a network topology. The topology determines the routing table presented to the Internet layer which makes routing decisions based solely on the destination IP address found in IP packets. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear ipv6 neighbor-cache {on <DEVICE-NAME>}`

clear ipv6 neighbor-cache	Clears IPv6 neighbor cache entries
on <DEVICE-NAME>	Optional. Clears IPv6 neighbor cache entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear lacp [<1-4> counters|counters]`

clear lacp [<1-4> counters| counters]	Clears *Link Aggregation Control Protocol* (LACP) counters for a specified port-channel group or all port-channel groups configured • <1-4> counters – Clears LACP counters for a specified port-channel. Specify the port-channel index number from 1 - 4. Note, LACP is supported only on the NX5500, NX7500, and NX9500 model service platforms. However, the NX9500 series service platforms support only two (2) port-channels, and the other model service platforms support four (4) port-channels. • counters – Clears LACP counters for all configured port-channels on the device

- `clear l2tpv3-stats tunnel <L2TPV3-TUNNEL-NAME> {session <SESSION-NAME>} {(on <DEVICE-NAME>)}`

l2tpv3-stats	Clears L2TPv3 tunnel session statistics
tunnel <L2TPV3-TUNNEL-NAME>	Clears all sessions associated with a specified L2TPv3 tunnel • <L2TPV3-TUNNEL-NAME> – Specify the L2TPv3 tunnel name.
session <SESSION-NAME>	Optional. Clears a specified L2TPv3 tunnel session, identified by the <SESSION-NAME> keyword • <SESSION-NAME> – Specify the session name.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Specifies the device running the L2TPv3 tunnel session • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. If no optional parameters are specified, the system clears all L2TPv3 tunnel session statistics.

- `clear license borrowed {on <DEVICE-NAME>}`

license borrowed {on <DEVICE-NAME>}	Releases or revokes all licenses borrowed by a site controller • on <DEVICE-NAME> – Optional. Specifies the borrowing controller's name. • <DEVICE-NAME> – Specify the wireless controller's name. If no device name is specified, the system clears all borrowed licenses on the logged device.

- `clear license lent to <DEVICE-NAME> {on <DEVICE-NAME>}`

license lent	NOC controller releases or revokes all licenses loaned to a site controller
to <DEVICE-NAME>	Specifies the borrowing controller's name • <DEVICE-NAME> – Specify the controller's name.

on <DEVICE-NAME>	Optional. Specifies the controller's name • <DEVICE-NAME> – Specify the wireless controller's name. If no device name is specified, the system clears all loaned licenses on the logged device.

- `clear mac-address-table {address <MAC>|vlan <1-4094>} {on <DEVICE-NAME>}`

mac-address-table	Clears the MAC address forwarding table
address <MAC>	Optional. Clears a specified MAC address from the MAC address table. • <MAC> – Specify the MAC address in one of the following formats: AA-BB-CC-DD-EE-FF or AA:BB:CC;DD:EE:FF or AABB.CCDD.EEFF
vlan <1-4094>	Optional. Clears all MAC addresses for a specified VLAN • <1-4094> – Specify the VLAN ID from 1 - 4094.
on <DEVICE-NAME>	Optional. Clears a single entry or all MAC entries for the specified VLAN in the MAC address forwarding table on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear mac-address-table interface [<IF-NAME>|ge <1-X>|port-channel <1-X>|t1e1 <1-4> <1-1>|up <1-X>|xge <1-4>] {on <DEVICE-NAME>}`

mac-address-table	Clears the MAC address forwarding table
interface	Clears all MAC addresses for the selected interface. Use the options available to specify the interface.
<IF-NAME>	Clears MAC address forwarding table for the specified layer 2 interface (Ethernet port) • <IF-NAME> – Specify the layer 2 interface name.
ge <1-X>	Clears MAC address forwarding table for the specified GigabitEthernet interface • <1-X> – Specify the GigabitEthernet interface index from 1 - X.
port-channel <1-X>	Clears MAC address forwarding table for the specified port-channel interface • <1-X> – Specify the port-channel interface index from 1 - X.
up <1-X>	Clears MAC address forwarding table for the WAN Ethernet interface The number of WAN Ethernet interfaces supported varies for different devices. The RFS4000 and RFS6000 devices support 1 WAN Ethernet interface.
xge <1-4>	Clears MAC address forwarding table for the specified TenGigabitEthernet interface • <1-4> – Specify the GigabitEthernet interface index from 1 - 4.
on <DEVICE-NAME>	Optional. Clears the MAC address forwarding table, for the selected interface, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear mac-address-table mac-auth-state address <MAC> vlan <1-4904> {on <DEVICE-NAME>}`

mac-address-table mac-auth-state address <MAC> vlan <1-4904>	Clears MAC addresses learned from a particular VLAN when WLAN MAC authentication and captive-portal fall back is enabled Access points/controllers provide WLAN access to clients whose MAC address has been learned and stored in their MAC address tables. Use this command to clear a specified MAC address on the MAC address table. Once cleared the client has to re-authenticate, and is provided access only on successful authentication. • <MAC> – Specify the MAC address to clear. • vlan <1-4904> – Specify the VLAN interface from 1 - 4094. In the AP/controller's MAC address table, the specified MAC address is cleared on the specified VLAN interface.
on <DEVICE-NAME>	Optional. Clears the specified MAC address on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. If a device is not specified, the system clears the MAC address from the MAC address table of all devices.

- `clear mint mlcp history {on <DEVICE-NAME>}`

mint	Clears MiNT related information
mlcp history	Clears *MiNT Link Creation Protocol* (MLCP) client history
on <DEVICE-NAME>	Optional. Clears MLCP client history on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform

- `clear role ldap-stats {on <DEVICE-NAME>}`

role ldap-stats	Clears role based *Lightweight Directory Access Protocol* (LDAP) server statistics
on <DEVICE-NAME>	Optional. Clears role based LDAP server statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear rtls [aeroscout|ekahau] {<MAC/DEVICE-NAME> {on <DEVICE-OR-DOMAIN-NAME>}|on <DEVICE-OR-DOMAIN-NAME>}`

rtls	Clears *Real Time Location Service* (RTLS) statistics
aeroscout	Clears RTLS Aeroscout statistics
ekahau	Clears RTLS Ekahau statistics
<MAC/DEVICE-NAME>	This keyword is common to the 'aeroscout' and 'ekahau' parameters. • <MAC/DEVICE-NAME> – Optional. Clears Aeroscout or Ekahau RTLS statistics on a specified AP, wireless controller, or service platform. Specify the AP's MAC address or hostname.
on <DEVICE-OR-DOMAIN-NAME>	This keyword is common to the 'aeroscout' and 'ekahau' parameters. • on <DEVICE-OR-DOMAIN-NAME> – Optional. Clears Aeroscout or Ekahau RTLS statistics on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `clear spanning-tree detected-protocols {on <DEVICE-NAME>}`

spanning-tree	Clears spanning tree protocols on an interface, and also restarts protocol migration
detected-protocols	Restarts protocol migration
on <DEVICE-NAME>	Optional. Clears spanning tree protocols on a specified device • <DEVICE-NAME> – Optional. Specify the name of the AP, wireless controller, or service platform.

- `clear spanning-tree detected-protocols {interface [<INTERFACE-NAME>|ge <1-X>|me1|port-channel <1-X>|pppoe1|vlan <1-4094>|wwan1|xge <1-4>]} {on <DEVICE-NAME>}`

spanning-tree	Clears spanning tree protocols on an interface and restarts protocol migration
detected-protocols	Restarts protocol migration
interface [<INTERFACE-NAME>| ge <1-X>|me1| port-channel <1-X>| pppoe1|vlan <1-4094>| wwan1|xge <1-4>]	Optional. Clears spanning tree entries on different interfaces • <INTERFACE-NAME> – Clears detected spanning tree entries on a specified interface. Specify the interface name. • ge <1-X> – Clears detected spanning tree entries for the selected GigabitEthernet interface. Select the GigabitEthernet interface index from 1 - X • me1 – Clears FastEthernet interface spanning tree entries • port-channel <1- X> – Clears detected spanning tree entries for the selected port channel interface. Select the port channel index from 1 - X. The number of port-channel interfaces supported varies for different device types. For example, RFS4000 supports 3 port-channels. • pppoe1 – Clears detected spanning tree entries for PPPoE interface. • vlan <1-4094> – Clears detected spanning tree entries for the selected VLAN interface. Select a SVI VLAN ID from 1 - 4094. • wwan1 – Clears detected spanning tree entries for wireless WAN interface • xge <1-4> – Clears detected spanning tree entries for TenGigabitEthernet interfaces. Specify the GigabitEthernet interface index from 1 - 4.
on <DEVICE-NAME>	Optional. Clears spanning tree protocol entries on a selected device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `clear traffic-shape statistics {class <1-4>} {(on <DEVICE-NAME>)}`

traffic-shape statistics	Clears traffic shaping statistics
class <1-4>	Optional. Clears traffic shaping statistics for a specific traffic class • <1-4> – Specify the traffic class from 1 - 4. **Note:** If the traffic class is not specified, the system clears all traffic shaping statistics.
on <DEVICE-NAME>	Optional. Clears traffic shaping statistics for the specified traffic class on a specified device • <DEVICE-NAME> – Specify the name of the access point, wireless controller, or service platform. **Note:** For more information on configuring traffic-shape, see *traffic-shape*.

- `clear vrrp [error-stats|stats] {on <DEVICE-NAME>}`

vrrp	Clears *Virtual Router Redundancy Protocol* (VRRP) statistics for a device

error-stats {on <DEVICE-NAME>}	Clears global error statistics • on <DEVICE-NAME> – Optional. Clears VRRP global error statistics on a selected device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
stats {on <DEVICE-NAME>}	Clears VRRP related statistics • on <DEVICE-NAME> – Optional. Clears VRRP related statistics on a selected device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

3.1.7 clock

Privileged Exec Mode Commands

Sets a device's system clock. By default all WiNG devices are shipped with the time zone and time format set to UTC and 24-hour clock respectively. If a device's clock is set without resetting the time zone, the time is displayed relative to the *Universal Time Coordinated* (UTC) – Greenwich Time. To display time in the local time zone format, in the device's configuration mode, use the timezone command to reset the time zone. You can also reset the time zone at the RF Domain level. When configured as RF Domain setting, it applies to all devices within the domain. Configuring the local time zone prior to setting the clock is recommended. For more information on configuring RF Domain time zone, see *timezone*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
clock set <HH:MM:SS> <1-31> <MONTH> <1993-2035> {on <DEVICE-NAME>}
```

Parameters

- `clock set <HH:MM:SS> <1-31> <MONTH> <1993-2035> {on <DEVICE-NAME>}`

clock set	Sets a device's system clock
<HH:MM:SS>	Sets the current time (in military format hours, minutes and seconds) **Note:** By default the WiNG software displays time in the 24-hour clock format. This setting cannot be changed.
<1-31>	Sets the numerical day of the month
<MONTH>	Sets the month of the year from Jan - Dec
<1993-2035>	Sets a valid four digit year from 1993 - 2035
on <DEVICE-NAME>	Optional. Sets the clock on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

The following commands set the time zone and clock for the logged device:

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#timezone America/Los_Angeles

nx9500-6C8809#clock set 00:25:10 16 Jan 2017

nx9500-6C8809#show clock
2017-01-16 03:31:16 IST

nx9500-6C8809#
```

3.1.8 cluster

Privileged Exec Mode Commands

Initiates the cluster context. The cluster context provides centralized management to configure all cluster members from any one member.

Commands executed under this context are executed on all members of the cluster.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
cluster start-election
```

Parameters

- `cluster start-election`

start-election	Starts a new cluster master election

Example

```
rfs4000-880DA7#cluster start-election
rfs4000-880DA7#
```

Related Commands

create-cluster	Creates a new cluster on a specified device
join-cluster	Adds a controller, as cluster member, to an existing cluster of devices

3.1.9 configure

Privileged Exec Mode Commands

Enters the configuration mode. Use this command to enter the current device's configuration mode, or enable configuration from the terminal.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
configure {self|terminal}
```

Parameters

- `configure {self|terminal}`

self	Optional. Enables the current device's configuration mode
terminal	Optional. Enables configuration from the terminal

Example

```
rfs6000-81742D#configure self
Enter configuration commands, one per line.  End with CNTL/Z.
rfs6000-81742D(config-device-00-15-70-81-74-2D)#

rfs6000-81742D#configure terminal
Enter configuration commands, one per line.  End with CNTL/Z.
rfs6000-81742D(config)#
```

3.1.10 connect

Privileged Exec Mode Commands

Begins a console connection to a remote device using the remote device's MiNT ID or name

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
connect [mint-id <MINT-ID>|<REMOTE-DEVICE-NAME>]
```

Parameters

- `connect [mint-id <MINT-ID>|<REMOTE-DEVICE-NAME>]`

mint-id <MINT-ID>	Connects to a remote system using the MiNT ID • <MINT-ID> – Specify the remote device's MiNT ID.
<REMOTE-DEVICE-NAME>	Connects to a remote system using its name • <REMOTE-DEVICE-NAME> – Specify the remote device's name.

Example

```
nx9500-6C8809#show mint lsp-db
9 LSPs in LSP-db of 19.6C.88.09:
LSP 19.6C.88.09 at level 1, hostname "nx9500-6C8809", 8 adjacencies, seqnum 1294552

3.1.11 copy

Privileged Exec Mode Commands

Copies a file (config,log,txt...etc) from any location to the access point, wireless controller, or service platform and vice-versa

NOTE: Copying a new config file to an existing running-config file merges it with the existing running-config file on the wireless controller. Both the existing running-config and the new config file are applied as the current running-config.

Copying a new config file to a start-up config file replaces the existing start-up config file with the parameters of the new file. It is better to erase the existing start-up config file and then copy the new config file to the startup config.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
copy [<SOURCE-FILE>|<SOURCE-URL>] [<DESTINATION-FILE>|<DESTINATION-URL>]
```

Parameters

- `copy [<SOURCE-FILE>|<SOURCE-URL>] [<DESTINATION-FILE>|<DESTINATION-URL>]`

<SOURCE-FILE>	Specify the source file to copy.
<SOURCE-URL>	Specify the source file's location (URL).
<DESTINATION-FILE>	Specify the destination file to copy to.
<DESTINATION-URL>	Specify the destination file's location (URL).

Example

```
Transferring file snmpd.log to remote TFTP server.
rfs6000-81742D#copy flash:/log/snmpd.log
tftp://10.233.89.183:/snmpd.log
Accessing running-config file from remote TFTP server into switch running-config.
rfs6000-81742D#copy tftp://10.233.89.183:/running-config running-config
```

3.1.12 cpe

Privileged Exec Mode Commands

Enables a WiNG controller to perform certain operations on *Customer Premises Equipment* (CPEs) through an adopted T5 controller

A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS wireless controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the IPX operating system. These CPEs use a *Digital Subscriber Line* (DSL) as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
cpe [boot|reload|upgrade]
cpe boot system cpe [<1-24>|all] [primary|secondary] {on <T5-DEVICE-NAME>}
cpe [reload|upgrade <IMAGE-LOCATION>] cpe [<1-24>|all] {on <T5-DEVICE-NAME>}
```

NOTE: These commands can also be executed on the T5 profile and device context. For more information, see *T5 Profile Config Commands*.

Parameters

- `cpe boot system cpe [<1-24>|all] [primary|secondary] {on <T5-DEVICE-NAME>}`

cpe boot system	Changes the image used by a CPE to boot. When reloading, the CPE uses the specified image.
cpe [<1-24>|all]	Identifies the CPE(s) on which this change is implemented • <1-24> – Reloads only those CPEs whose IDs have been specified. Specify the ID from 1 - 24. • all – Reloads all CPEs
[primary|secondary]	Select the next boot image • primary – Uses the primary image when reloading • secondary – Uses the secondary image when reloading
on <T5-DEVICE-NAME>	Optional. Performs this operation on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname.

- `cpe [reload|upgrade <IMAGE-LOCATION>] cpe [<1-24>|all] {on <T5-DEVICE-NAME>}`

cpe [reload| upgrade <IMAGE-LOCATION>]	Performs the following operations on CPEs • reload – Reloads the device • upgrade <IMAGE-LOCATION> – Upgrades the device • <IMAGE-LOCATION> – Specify the location of the firmware image. Both IPv4 and IPv6 addresses are supported. Use one of the following options to provide the location: IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file http://<hostname|[IPv6]>[:port]/path/file **Note:** After specifying the operation to perform, identify the device(s).
cpe [<1-24>|all]	Identifies the CPE(s) on which the operation is performed • <1-24> – Configures the CPE's ID from 1 - 24 • all – Configures all CPEs
on <T5-DEVICE-NAME>	Optional. Performs this operation on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname.

Example

```
nx9500-6C8809#show t5 cpe boot on t5-ED7C6C
-------------------------------------------------------------------------------
--------------------
  DEVICE   PRIMARY VERSION   SECONDARY VERSION   NEXT BOOT   UPGRADE STATUS   UPGRADE

nx9500-6C8809#
```

3.1.13 create-cluster

Privileged Exec Mode Commands

Creates a new device cluster, with the specified name, and assigns it an IP address and routing level

A cluster (or redundancy group) is a set of controllers or service platforms (nodes) uniquely defined by a profile configuration. Within the cluster, members discover and establish connections to other members and provide wireless network self-healing support in the event of member's failure.

A cluster's load is typically distributed evenly amongst its members. An administrator needs to define how often the profile is load balanced for radio distribution, as radios can come and go and members join and exit the cluster.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
create-cluster name <CLUSTER-NAME> ip <IP> {level [1|2]}
```

Parameters

- `create-cluster name <CLUSTER-NAME> ip <IP> {level [1|2]}`

create-cluster	Creates a cluster
name <CLUSTER-NAME>	Configures the cluster name • <CLUSTER-NAME> – Specify a cluster name. Define a name for the cluster name unique to its configuration or profile support requirements. The name cannot exceed 64 characters.
ip <IP>	Specifies the device's IP address used for cluster creation • <IP> – Specify the device's IP address in the A.B.C.D format.
level [1|2]	Optional. Configures the routing level for this cluster • 1 – Configures level 1 (local) routing • 2 – Configures level 2 (inter-site) routing

Example

```
rfs4000-229D58#create-cluster name TechPubs ip 192.168.13.8 level 2
... creating cluster
... committing the changes
... saving the changes

Related Commands

cluster	Initiates the cluster context. The cluster context provides centralized management to configure all cluster members from any one member.
join-cluster	Adds a wireless controller, access point, or service platform, as cluster member, to an existing cluster of devices

3.1.14 crypto

Privileged Exec Mode Commands

Enables digital certificate configuration and RSA Keypair management. Digital certificates are issued by CAs and contain user or device specific information, such as name, public key, IP address, serial number, company name, etc. Use this command to generate, delete, export, or import encrypted RSA Keypairs and generate *Certificate Signing Request* (CSR).

This command also enables trustpoint configuration. Trustpoints contain the CA's identity and configuration parameters.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
crypto [key|pki]

crypto key [export|generate|import|zeroize]

crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL>
{background|on|passphrase}

crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|passphrase
<KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}

crypto key generate rsa <RSA-KEYPAIR-NAME> [2048|4096] {on <DEVICE-NAME>}

crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL>
{background|on|passphrase}

crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL> {background|passphrase
<KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}

crypto key zeroize rsa <RSA-KEYPAIR-NAME> {force} {(on <DEVICE-NAME>)}

crypto pki [authenticate|export|generate|import|zeroize]

crypto pki authenticate <TRUSTPOINT-NAME> <LOCATION-URL> {background} {(on
<DEVICE-NAME>)}

crypto pki export [request|trustpoint]

crypto pki export request [generate-rsa-key|short|use-rsa-key] <RSA-KEYPAIR-NAME>
[autogen-subject-name|subject-name]

crypto pki export request [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME>
autogen-subject-name (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-
address <IP>)

crypto pki export request [generate-rsa-key|short [generate-rsa-key|use-rsa-key]|
use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE>
<CITY> <ORGANIZATION> <ORGANIZATION-UNIT> (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,
fqdn <FQDN>,ip-address <IP>)

crypto pki export trustpoint <TRUSTPOINT-NAME> <EXPORT-TO-URL>
{background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME)}
```

```
crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key]
<RSA-KEYPAIR-NAME> [autogen-subject-name|subject-name]

crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key]
<RSA-KEYPAIR-NAME> autogen-subject-name {(email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-
address <IP>,on <DEVICE-NAME>)}

crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key]
<RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY>
<ORGANIZATION> <ORGANIZATION-UNIT> {(email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address
<IP>,on <DEVICE-NAME>)}

crypto pki import [certificate|crl|trustpoint]

crypto pki import [certificate|crl] <TRUSTPOINT-NAME> <IMPORT-FROM-URL>
{background} {(on <DEVICE-NAME>})

crypto pki import trustpoint <TRUSTPOINT-NAME> <IMPORT-FROM-URL>
{background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}

crypto pki zeroize trustpoint <TRUSTPOINT-NAME> {del-key} {(on <DEVICE-NAME>)}
```

Parameters

- `crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.
export rsa <RSA-KEYPAIR-NAME>	Exports an existing RSA Keypair to a specified destination • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name.
<EXPORT-TO-URL>	Specify the RSA Keypair destination address. Both IPv4 and IPv6 address formats are supported. After specifying the destination address (where the RSA keypair is exported), configure one of the following parameters: background or passphrase.
background	Optional. Performs export operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the export on.
passphrase <KEY-PASSPHRASE> background	Optional. Encrypts RSA Keypair before exporting • <KEY-PASSPHRASE> – Specify a passphrase to encrypt the RSA keypair. • background – Optional. Performs export operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the export on.
on <DEVICE-NAME>	The following parameter is recursive and common to all of the above parameters: • on <DEVICE-NAME> – Optional. Performs export operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto key generate rsa <RSA-KEYPAIR-NAME> [2048|4096] {on <DEVICE-NAME>}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.

generate rsa <RSA-KEYPAIR-NAME> [2048|4096]	Generates a new RSA Keypair • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name. • [2048|4096] – Sets the size of the RSA key in bits. The options are 2048 bits and 4096 bits. The default size is 2048 bits. After specifying the key size, optionally specify the device (access point or controller) to generate the key on.
on <DEVICE-NAME>	Optional. Generates the new RSA Keypair on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.
import rsa <RSA-KEYPAIR-NAME>	Imports a RSA Keypair from a specified source • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name.
<IMPORT-FROM-URL>	Specify the RSA Keypair source address. Both IPv4 and IPv6 address formats are supported. After specifying the source address (where the RSA Keypair is imported from), configure one of the following parameters: background or passphrase.
background	Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the import on.
passphrase <KEY-PASSPHRASE> background	Optional. Decrypts the RSA Keypair after importing • <KEY-PASSPHRASE> – Specify the passphrase to decrypt the RSA keypair. • background – Optional. Performs import operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the import on.
on <DEVICE-NAME>	The following parameter is recursive and common to the 'background' and 'passphrase' keywords: • on <DEVICE-NAME> – Optional. Performs import operation on a specific device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto key zeroize rsa <RSA-KEYPAIR-NAME> {force} {(on <DEVICE-NAME>)}`

key	Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.
zeroize rsa <RSA-KEYPAIR-NAME>	Deletes a specified RSA Keypair • <RSA-KEYPAIR-NAME> – Specify the RSA Keypair name. **Note:** All device certificates associated with this key will also be deleted.
force	Optional. Forces deletion of all certificates associated with the specified RSA Keypair. Optionally specify a device on which to force certificate deletion.

on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Deletes all certificates associated with the RSA Keypair on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `crypto pki authenticate <TRUSTPOINT-NAME> <URL> {background} {(on <DEVICE-NAME>)}`

pki	Enables *Private Key Infrastructure* (PKI) management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated *Certificate Authority* (CA) certificates.
authenticate <TRUSTPOINT-NAME>	Authenticates a trustpoint and imports the corresponding CA certificate • <TRUSTPOINT-NAME> – Specify the trustpoint name.
<URL>	Specify CA's location. Both IPv4 and IPv6 address formats are supported. **Note:** The CA certificate is imported from the specified location.
background	Optional. Performs authentication in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the authentication on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Performs authentication on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `crypto pki export request [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME> autogen-subject-name (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address <IP>)`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
export request	Exports CSR to the CA for digital identity certificate. The CSR contains applicant's details and RSA Keypair's public key.
[generate-rsa-key| use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
autogen-subject-name	Auto generates subject name from configuration parameters. The subject name identifies the certificate.
<EXPORT-TO-URL>	Specify the CA's location. Both IPv4 and IPv6 address formats are supported. **Note:** The CSR is exported to the specified location.
email <SEND-TO-EMAIL>	Exports CSR to a specified e-mail address • <SEND-TO-EMAIL> – Specify the CA's e-mail address.
fqdn <FQDN>	Exports CSR to a specified *Fully Qualified Domain Name* (FQDN) • <FQDN> – Specify the CA's FQDN.
ip-address <IP>	Exports CSR to a specified device or system • <IP> – Specify the CA's IP address.

- `crypto pki export request [generate-rsa-key|short [generate-rsa-key|use-rsa-key]|use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY> <ORGANIZATION> <ORGANIZATION-UNIT> (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>, fqdn <FQDN>,ip-address <IP>)`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
export request	Exports CSR to the CA for a digital identity certificate. The CSR contains applicant's details and RSA Keypair's public key.
[generate-rsa-key| short [generate-rsa-key|use-rsa-key]| use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • short [generate-rsa-key|use-rsa-key] – Generates and exports a shorter version of the CSR • generate-rsa-key – Generates a new RSA Keypair for digital authentication. If generating a new RSA Keypair, specify a name for it. • use-rsa-key – Uses an existing RSA Keypair for digital authentication. If using an existing RSA Keypair, specify its name. • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
subject-name <COMMON-NAME>	Configures a subject name, defined by the <COMMON-NAME> keyword, to identify the certificate • <COMMON-NAME> – Specify the common name used with the CA certificate. The name should enable you to identify the certificate easily (2 to 64 characters in length).
<COUNTRY>	Sets the deployment country code (2 character ISO code)
<STATE>	Sets the state name (2 to 64 characters in length)
<CITY>	Sets the city name (2 to 64 characters in length)
<ORGANIZATION>	Sets the organization name (2 to 64 characters in length)
<ORGANIZATION-UNIT>	Sets the organization unit (2 to 64 characters in length)
<EXPORT-TO-URL>	Specify the CA's location. Both IPv4 and IPv6 address formats are supported. The CSR is exported to the specified location.
email <SEND-TO-EMAIL>	Exports CSR to a specified e-mail address • <SEND-TO-EMAIL> – Specify the CA's e-mail address.
fqdn <FQDN>	Exports CSR to a specified FQDN • <FQDN> – Specify the CA's FQDN.
ip-address <IP>	Exports CSR to a specified device or system • <IP> – Specify the CA's IP address.

- `crypto pki export trustpoint <TRUSTPOINT-NAME> <EXPORT-TO-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.

export trustpoint <TRUSTPOINT-NAME>	Exports a trustpoint along with CA certificate, *Certificate Revocation List* (CRL), server certificate, and private key • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
<EXPORT-TO-URL>	Specify the destination address. Both IPv4 and IPv6 address formats are supported. The trustpoint is exported to the address specified here.
background	Optional. Performs export operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the export on.
passphrase <KEY-PASSPHRASE> background	Optional. Encrypts the key with a passphrase before exporting • <KEY-PASSPHRASE> – Specify the passphrase to encrypt the trustpoint. • background – Optional. Performs export operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the export on.
on <DEVICE-NAME>	The following parameter is recursive and common to the 'background' and 'passphrase' keywords: • on <DEVICE-NAME> – Optional. Performs export operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME> autogen-subject-name` *`{(email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address <IP>,on <DEVICE-NAME>)}`*

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated certificates.
generate	Generates a certificate and a trustpoint
self-signed <TRUSTPOINT-NAME>	Generates a self-signed certificate and a trustpoint • <TRUSTPOINT-NAME> – Specify a name for the certificate and its trustpoint.
[generate-rsa-key| use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair, or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
autogen-subject-name	Auto generates the subject name from the configuration parameters. The subject name helps to identify the certificate.
email <SEND-TO-EMAIL>	Optional. Exports the self-signed certificate to a specified e-mail address • <SEND-TO-EMAIL> – Specify the e-mail address.
fqdn <FQDN>	Optional. Exports the self-signed certificate to a specified FQDN • <FQDN> – Specify the FQDN.
ip-address <IP>	Optional. Exports the self-signed certificate to a specified device or system • <IP> – Specify the device's IP address.
on <DEVICE-NAME>	Optional. Exports the self-signed certificate on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki generate self-signed <TRUSTPOINT-NAME> [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY> <ORGANIZATION> <ORGANIZATION-UNIT> {(email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address <IP>,on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated certificates.
generate self-signed <TRUSTPOINT-NAME>	Generates a self-signed certificate and a trustpoint • <TRUSTPOINT-NAME> – Specify a name for the certificate and its trustpoint.
[generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME>	Generates a new RSA Keypair, or uses an existing RSA Keypair • generate-rsa-key – Generates a new RSA Keypair for digital authentication • use-rsa-key – Uses an existing RSA Keypair for digital authentication • <RSA-KEYPAIR-NAME> – If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.
subject-name <COMMON-NAME>	Configures a subject name, defined by the <COMMON-NAME> keyword, to identify the certificate • <COMMON-NAME> – Specify the common name used with this certificate. The name should enable you to identify the certificate easily and should not exceed 2 to 64 characters in length.
<COUNTRY>	Sets the deployment country code (2 character ISO code)
<STATE>	Sets the state name (2 to 64 characters in length)
<CITY>	Sets the city name (2 to 64 characters in length)
<ORGANIZATION>	Sets the organization name (2 to 64 characters in length)
<ORGANIZATION-UNIT>	Sets the organization unit (2 to 64 characters in length)
email <SEND-TO-EMAIL>	Optional. Exports the self-signed certificate to a specified e-mail address • <SEND-TO-EMAIL> – Specify the e-mail address.
fqdn <FQDN>	Optional. Exports the self-signed certificate to a specified FQDN • <FQDN> – Specify the FQDN.
ip-address <IP>	Optional. Exports the self-signed certificate to a specified device or system • <IP> – Specify the device's IP address.

- `crypto pki import [certificate|crl] <TRUSTPOINT-NAME> <IMPORT-FROM-URL> {background} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
import	Imports certificates, *Certificate Revocation List* (CRL), or a trustpoint to the selected device
[certificate|crl] <TRUSTPOINT-NAME>	Imports a signed server certificate or CRL • certificate – Imports signed server certificate • crl – Imports CRL • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
<IMPORT-FROM-URL>	Specify the signed server certificate or CRL source address. Both IPv4 and IPv6 address formats are supported. The server certificate or the CRL (based on the parameter passed in the preceding step) is imported from the location specified here.

background	Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the import on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Performs import operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki import trustpoint <TRUSTPOINT-NAME> <IMPORT-FROM-URL> {background|passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
import	Imports certificates, CRL, or a trustpoint to the selected device
trustpoint <TRUSTPOINT-NAME>	Imports a trustpoint and its associated CA certificate, server certificate, and private key • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
<IMPORT-FROM-URL>	Specify the trustpoint source address. Both IPv4 and IPv6 address formats are supported.
background	Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the export on.
passphrase <KEY-PASSPHRASE> background	Optional. Decrypts trustpoint with a passphrase after importing • <KEY-PASSPHRASE> – Specify the passphrase. After specifying the passphrase, optionally specify the device to perform import on. • background – Optional. Performs import operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the import on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Performs import operation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `crypto pki zeroize trustpoint <TRUSTPOINT-NAME> {del-key} {(on <DEVICE-NAME>)}`

pki	Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.
zeroize trustpoint <TRUSTPOINT-NAME>	Deletes a trustpoint and its associated CA certificate, server certificate, and private key • <TRUSTPOINT-NAME> – Specify the trustpoint name (should be authenticated).
del-key	Optional. Deletes the private key associated with the server certificate. Optionally specify the device to perform deletion on.
on <DEVICE-NAME>	The following parameter is recursive and optional: • on <DEVICE-NAME> – Optional. Deletes the trustpoint on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Usage Guidelines

The system supports both IPv4 and IPv6 address formats. Provide source and destination locations using any one of the following options:

- IPv4 URLs:

tftp://<hostname|IP>[:port]/path/file

ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file

sftp://<user>@<hostname|IP>[:port]>/path/file

http://<hostname|IP>[:port]/path/file

cf:/path/file

usb<n>:/path/file

- IPv6 URLs:

tftp://<hostname|[IPv6]>[:port]/path/file

ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file

sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file

http://<hostname|[IPv6]>[:port]/path/file

Example

```
rfs6000-81742D#crypto key generate rsa key 1025
RSA Keypair successfully generated
rfs6000-81742D#

rfs6000-81742D#crypto key import rsa test123 url passphrase word background
RSA key import operation is started in background
rfs6000-81742D#

rfs6000-81742D#crypto pki generate self-signed word generate-rsa-key word autogen-
subject-name fqdn word
Successfully generated self-signed certificate
rfs6000-81742D#

rfs6000-81742D#crypto pki zeroize trustpoint word del-key
Successfully removed the trustpoint and associated certificates
%Warning: Applications associated with the trustpoint will start using default-
trustpoint
rfs6000-81742D#

rfs6000-81742D#crypto pki authenticate word url background
Import of CA certificate started in background
rfs6000-81742D#

rfs6000-81742D#crypto pki import trustpoint word url passphrase word
Import operation started in background
rfs6000-81742D#
```

Related Commands

no	Removes server certificates, trustpoints and their associated certificates

3.1.15 crypto-cmp-cert-update

Privileged Exec Mode Commands

Triggers a *Certificate Management Protocol* (CMP) certificate update on a specified device or devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}
```

Parameters

- `crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}`

crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}	Triggers a CMP certificate update on a specified device or devices • <TRUSTPOINT-NAME> – Specify the target trustpoint name. A trustpoint represents a CA/identity pair containing the identity of the CA, CA specific configuration parameters, and an association with an enrolled identity certificate. Use the crypto-cmp-policy context to configure the trustpoint. • on <DEVICE-NAME> – Optional. Triggers a CMP certificate update and response on a specified device or devices. Specify the name of the AP, wireless controller, or service platform. Multiple devices can be provided as a comma separated list. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs4000-229D58#crypto-cmp-cert-update test on B4-C7-99-71-17-28
CMP Cert update success
rfs4000-229D58#
```

3.1.16 database

Privileged Exec Mode Commands

Enables automatic repairing (vacuuming) and dropping of databases (Captive-portal and NSight). Vacuuming a database refers to the process of finding and reclaiming space left over from previous DELETE statements.

If enforcing authenticated access to the database, use this command to generate the keyfile. Every keyfile has a set of associated users having a username and password. Database access is provided only if the keyfile and the user credentials entered during database longin match.

NOTE: For information on enabling database authentication, see *Enabling Database Authentication*.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
database [drop|keyfile|repair]

database drop [all|captive-portal|nsight]

database repair {on <DEVICE-NAME>}

database keyfile [export|generate|import|zerzoise]
database keyfile generate
database keyfile [export|import] <URL>
database keyfile zerzoise
```

Parameters

- `database drop [all|captive-portal|nsight]`

database drop [all|captive-portal| nsight]	Drops (deletes) all or a specified database. Execute the command on the database host. • all – Drops all databases, captive portal and NSight. • captive-portal – Drops captive-portal database only • nsight – Drops NSight database only

- `database repair {on <DEVICE-NAME>}`

database repair on <DEVICE-NAME>	Enables automatic repairing of all databases. Execute the command on the database host. • on <DEVICE-NAME> – Optional. Specifies the name of the access point, wireless controller, or service platform hosting the database. When specified, databases on the specified device are periodically checked through to identify and remove obsolete data documents. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. If no device is specified, the system repairs all databases.

- `database keyfile [generate|zerzoise]`

database keyfile [generate|zerzoise]	Enables management of database keyfiles. This command is part of a series of configurations that are required to enforce authentication on the database. Use this command to generate keyfiles associated with the database. After generating the keyfile, create the users having the database access. For information on creating database users, see *service*. • generate – Generates the keyfile. Execute the command on the primary database host. • zerzoise – Deletes a keyfile.

- `database keyfile [export|import] <URL>`

database keyfile [export|import] <URL>	Enables database keyfile management. This command is part of a series of configurations required to enforce database authentication. Use this command to exchange keyfiles between replica set members. • export – Exports the keyfile to a specified location on an FTP/SFTP/TFTP server. Execute the command on the primary database host. • import – Imports the keyfile from a specified location. Execute the command on the replica set members. The following parameter is common to both of the above keywords: • <URL> – Specify the location to/from where the keyfile is to be exported/imported. Use one of the following options: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file tftp://<hostname|IP>[:port]/path/file

- `database keyfile zerzoise`

database keyfile zerzoise	Enables the management of database keyfiles • zerzoise – Deletes an existing keyfile.

Example

```
nx9500-6C8809#database repair on nx9500-6C8809
nx9500-6C8809#

nx9500-6C8809#database keyfile generate
Database keyfile successfully generated
nx9500-6C8809#

nx9500-6C8809#database keyfile  zeroize
Database keyfile successfully removed
nx9500-6C8809#

vx9000-1A1809#database keyfile generate
Database keyfile successfully generated
vx9000-1A1809#

vx9000-1A1809#database keyfile export ftp://1.1.1.111/db-key
Database keyfile successfully exported
vx9000-1A1809#

vx9000-D031F2#database keyfile import ftp://1.1.1.111/db-key
Database keyfile successfully imported
vx9000-D031F2#
```

Related Commands

database-backup	Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server
database-restore	Restores a previously exported database [captive-portal and/or NSight]

3.1.17 database-backup

Privileged Exec Mode Commands

Backs up captive-portal/NSight database to a specified location and file on an FTP or SFTP server

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntaxf

```
database-backup database [captive-portal|nsight|nsight-placement-info] <URL>

database-backup database [captive-portal|nsight] <URL>
database-backup database nsight-placement-info <URL>
```

Parameters

- `database-backup database [captive-portal|nsight] <URL>`

database-backup database [captive-portal|nsight]	Backs up captive portal and/or NSight database to a specified location. Select the database to backup: • captive-portal – Backs up captive portal database • nsight – Backs up NSight database After specifying the database type, configure the destination location.
<URL>	Configures the destination location. The database is backed up at the specified location. Specify the location URL in one of the following formats: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz

- `database-backup database nsight-placement-info <URL>`

database-backup database nsight-placement-info <URL>	Backs up the NSight access point placement related details to a specified location • <URL> – Specify the URL in one of the following formats: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz tftp://<hostname|IP>[:port]/path/file.tar.gz

Example

```
NS-DB-nx9510-6C87EF#database-backup database nsight tftp://192.168.9.50/testbckup
NS-DB-nx9510-6C87EF#show database backup-status

```

Related Commands

database	Enables automatic repairing (vacuuming) and dropping of databases (captive-portal and NSight)
database-restore	Restores a previously exported (backed up) database [captive-portal and/or NSight]

3.1.18 database-restore

Privileged Exec Mode Commands

Restores a previously exported database [captive-portal and/or NSight]. Previously exported databases (backed up to a specified FTP or SFTP server) are restored from the backed-up location to the original database.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
database-restore database [captive-portal|nsight] <URL>
```

Parameters

- `database-restore database [captive-portal|nsight] <URL>`

database-restore database [captive-portal| nsight]	Restores previously exported (backed up) captive-portal and/or NSight database. Specify the database type: • captive-portal – Restores captive portal database • nsight – Restores NSight database After specifying the database type, configure the destination location and file name from where the files are restored.
<URL>	Configures the destination location. The database is restored from the specified location. Specify the location URL in one of the following formats: ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file.tar.gz

Example

```
nx9500-6C8809#database-restore database nsight
ftp://anonymous:anonymous@192.168.13.10/backups/nsight/nsight.tar.gz
```

Related Commands

database	Enables automatic repairing (vacuuming) and dropping of databases (captive-portal and NSight)
database-backup	Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server

3.1.19 delete

Privileged Exec Mode Commands

Deletes a specified file from the device's file system

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
delete [/force <FILE>|/recursive <FILE>|<FILE>]
```

Parameters

- `delete [/force <FILE>|/recursive <FILE>|<FILE>]`

/force <FILE>	Forces deletion without a prompt
/recursive <FILE>	Performs a recursive delete
<FILE>	Specifies the file name • Deletes the file specified by the <FILE> parameter

Example

```
rfs6000-81742D#delete flash:/out.tar flash:/out.tar.gz
Delete flash:/out.tar [y/n]? y
Delete flash:/out.tar.gz [y/n]? y

rfs6000-81742D#delete /force flash:/tmp.txt
rrfs6000-81742D#

rfs6000-81742D#delete /recursive flash:/backup/
Delete flash:/backup//fileMgmt_350_180B.core

[y/n]? y
Delete

flash:/backup//fileMgmt_350_18212X.core_bk

[y/n]? n

Delete flash:/backup//imish_1087_18381X.core.gz

[y/n]? n
rfs6000-81742D#
```

3.1.20 device-upgrade

Privileged Exec Mode Commands

Enables firmware upgrade on an adopted device or a set of adopted devices (access points, wireless controllers, and service platforms)

NOTE: A NOC controller's capacity is equal to, or higher than that of a site controller. The following devices can be deployed at NOC and sites:

- NOC controller – NX95XX (NX9500 and NX9510), NX9600
- Site controller – RFS4000, RFS6000, NX5500, NX75XX, or NX95XX

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
device-upgrade [<MAC/HOSTNAME>|all|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|
ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|
nx9000|nx9600|vx9000|cancel-upgrade|load-image|rf-domain]

device-upgrade <MAC/HOSTNAME> {no-reboot|reboot-time <TIME>|upgrade-time <TIME>
{no-reboot|reboot-time <TIME>}}

device-upgrade all {force|no-reboot|reboot-time <TIME>|upgrade-time <TIME>
{no-reboot|reboot-time <TIME>}} {(staggered-reboot)}

device-upgrade [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|
ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000]
all {force|no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-
time <TIME>}} {(staggered-reboot)}

device-upgrade cancel-upgrade [<MAC/HOSTNAME>|all|ap6521|ap6522|ap6532|ap6562|

nx9600|vx9000] {<IMAGE-URL>|on <DEVICE-OR-DOMAIN-NAME>}

device-upgrade rf-domain [<RF-DOMAIN-NAME>|all|containing <WORD>|filter location
<WORD>] [all|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|
ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000]
{(<MAC/HOSTNAME>|force|no-reboot|from-controller|reboot-time <TIME>|staggered-
reboot|upgrade-time <TIME>)}
```

Parameters

- `device-upgrade <MAC/HOSTNAME> {no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-time <TIME>}}`

<MAC/HOSTNAME>	Upgrades firmware on the device identified by the <MAC/HOSTNAME> keyword • <MAC/HOSTNAME> – Specify the device's MAC address or hostname.
no-reboot	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)

reboot-time <TIME>	Optional. Schedules an automatic reboot after a successful upgrade • <TIME> – Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic device firmware upgrade on a specified day and time • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. The following actions can be performed after a scheduled upgrade: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.

• `device-upgrade all {force|no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-time <TIME>}} {(staggered-reboot)}`

all	Upgrades firmware on all devices
force	Optional. Select this option to force upgrade on the selected device(s). When selected, the devices are upgraded even if they have the same firmware as the upgrading access point, wireless controller, or service platform. If forcing a device upgrade, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or staggered-reboot.
no-reboot	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME>	Optional. Schedules an automatic reboot after a successful upgrade • <TIME> – Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic device firmware upgrade on all devices on a specified day and time • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. The following actions can be performed after a scheduled upgrade: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
staggered-reboot	This keyword is recursive and common to all of the above. • Optional. Enables staggered device reboot (one at a time), without network impact

• `device-upgrade [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000] all {force|no-reboot|reboot-time <TIME>|upgrade-time <TIME> {no-reboot|reboot-time <TIME>}} {(staggered-reboot)}`

device-upgrade <DEVICE-TYPE> all	Upgrades firmware on all devices of a specific type. Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After selecting the device type, schedule an automatic upgrade and/or an automatic reboot.

force	Optional. Select this option to force upgrade on selected device(s). When selected, the devices are upgraded even if they have the same firmware as the upgrading access point, wireless controller, or service platform. If forcing a device upgrade, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or staggered-reboot.
no-reboot	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME>	Optional. Schedules an automatic reboot after a successful upgrade • <TIME> – Optional. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic firmware upgrade on all devices of the specified type, on a specified day and time • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. The following actions can be performed after a scheduled upgrade: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
staggered-reboot	This keyword is recursive and common to all of the above. • Optional. Enables staggered device reboot (one at a time), without network impact

• `device-upgrade cancel-upgrade [<MAC/HOSTNAME>|all|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000|on rf-domain [<RF-DOMAIN-NAME>|all]]`

cancel-upgrade	Cancels a scheduled firmware upgrade based on the parameters passed. This command provides the following options to cancel scheduled firmware upgrades: • Cancels upgrade on specific device(s). The devices are identified by their MAC addresses or hostnames. • Cancels upgrade on all devices within the network • Cancels upgrade on all devices of a specific type. Specify the device type. • Cancels upgrade on specific device or all device(s) within a specific RF Domain or all RF Domains. Specify the RF Domain name.
cancel-upgrade [<MAC/HOSTNAME>| all]	Cancels a scheduled firmware upgrade on a specified device or on all devices • <MAC/HOSTNAME> – Cancels a scheduled upgrade on the device identified by the <MAC/HOSTNAME> keyword. Specify the device's MAC address or hostname. • all – Cancels scheduled upgrade on all devices
cancel-upgrade <DEVICE-TYPE> all	Cancels scheduled firmware upgrade on all devices of a specific type. Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000.
cancel-upgrade on rf-domain [<RF-DOMAIN-NAME>| all]	Cancels scheduled firmware upgrade on all devices in a specified RF Domain or all RF Domains • <RF-DOMAIN-NAME> – Cancels scheduled device upgrade on all devices in a specified RF Domain. Specify the RF Domain name. • all – Cancels scheduled device upgrade on all devices across all RF Domains

- `device-upgrade load-image [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000] {<IMAGE-URL>|on <DEVICE-OR-DOMAIN-NAME>}`

load-image <DEVICE-TYPE>	Loads device firmware image from a specified location. Select the device type and provide the location of the required device firmware image. • <DEVICE-TYPE> – Specify the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After specifying the device type, provide the location of the required device firmware image.
<IMAGE-URL>	Specify the device's firmware image location in one of the following formats: IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file http://<hostname|[IPv6]>[:port]/path/file
on <DEVICE-OR-DOMAIN-NAME>	Optional. Specifies the name of a device or RF Domain. The image, of the specified device type is loaded from the device specified here. In case of an RF Domain, the image available on the RF Domain manager is loaded. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `device-upgrade rf-domain [<RF-DOMAIN-NAME>|all|containing <WORD>|filter location <WORD>] [all|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000] {(<MAC/HOSTNAME>|force|from-controller|no-reboot|reboot-time <TIME>|staggered-reboot|upgrade-time <TIME>)}`

rf-domain [<RF-DOMAIN-NAME>|all| containing <WORD>| filter location <WORD>]	Upgrades firmware on devices in a specified RF Domain or all RF Domains. Devices within a RF Domain are upgraded through the RF Domain manager.
	• <RF-DOMAIN-NAME> – Upgrades devices in the RF Domain identified by the <RF-DOMAIN-NAME> keyword.
	  • <RF-DOMAIN-NAME> – Specify the RF Domain name.
	• all – Upgrades devices across all RF Domains
	• containing <WORD> – Filters RF Domains by their names. RF Domains with names containing the sub-string identified by the <WORD> keyword are filtered. Devices on the filtered RF Domains are upgraded.
	  • filter location <WORD> – Filters devices by their location. All devices with location matching the <WORD> keyword are upgraded.

<DEVICE-TYPE>	After specifying the RF Domain, select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After specifying the RF Domain and the device type, configure any one of the following actions: force devices to upgrade, or initiate an upgrade through the adopting controller.
<MAC/HOSTNAME>	Optional. Use this option to identify specific devices for upgradation. Specify the device's MAC address or hostname. The device should be within the specified RF Domain and of the specified device type. After identifying the devices to upgrade, configure any one of the following actions: force devices to upgrade, or initiate an upgrade through the adopting controller. **Note:** If no MAC address or hostname is specified, all devices of the type selected are upgraded.
force	Optional. Select this option to force upgrade for the selected device(s). When selected, the devices are upgraded even if they have the same firmware as the upgrading access point, wireless controller, or service platform. If forcing a device upgrade, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or reboot-time.
from-controller	Optional. Upgrades a device through the adopted device. If initiating an upgrade through the adopting controller, optionally specify any one of the following options: no-reboot, reboot-time, upgrade-time, or reboot-time.
no-reboot {staggered-reboot}	Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted)
reboot-time <TIME> {staggered-reboot}	Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.
staggered-reboot	This keyword is common to all of the above. Optional. Enables staggered reboot (one at a time), without network impact
upgrade-time <TIME> {no-reboot| reboot-time <TIME>}	Optional. Schedules an automatic firmware upgrade • <TIME> – Specify the upgrade time in the MM/DD/YYYY-HH:MM or HH:MM format. After a scheduled upgrade, the following actions can be performed: • no-reboot – Optional. Disables automatic reboot after a successful upgrade (the device must be manually restarted) • reboot-time <TIME> – Optional. Schedules an automatic reboot after a successful upgrade. Specify the reboot time in the MM/DD/YYYY-HH:MM or HH:MM format.

Example

3.1.21 diff

Privileged Exec Mode Commands

Displays the differences between two files on a device's file system or a particular URL

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
diff [<FILE>|<URL>] [<FILE>|<URL>]
```

Parameters

- `diff [<FILE>|<URL>] [<FILE>|<URL>]`

<FILE>	The first <FILE> is the source file for the diff command. The second <FILE> is used for comparison.
<URL>	The first <URL> is the source file's URL. The second <URL> is the second file's URL.

Example

```
nx9500-6C8809#diff startup-config running-config
--- startup-config
+++ running-config

3.1.22 dir

Privileged Exec Mode Commands

Lists files on a device's file system

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dir {/all|/recursive|<DIR>|all-filesystems}
```

Parameters

- `dir {/all|/recursive|<DIR>|all-filesystems}`

/all	Optional. Lists all files
/recursive	Optional. Lists files recursively
<DIR>	Optional. Lists files in the named file path
all-filesystems	Optional. Lists files on all file systems

Example

```
nx9500-6C8809#dir flash:/
Directory of flash:/

  -rw-    62937     Tue Nov 24 16:00:06 2015   run-config-backup.txt

3.1.23 disable

Privileged Exec Mode Commands

Turns off (disables) the privileged mode command set. This command returns to the User Executable mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
disable
```

Parameters

None

Example

```
rfs6000-81742D#disable
rfs6000-81742D>
```

3.1.24 edit

Privileged Exec Mode Commands

Edits a text file on the device's file system

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
edit <FILE>
```

Parameters

```
• edit <FILE>
```

<FILE>	Specify the name of the file to modify.

Example

```
rfs4000-880DA7#edit startup-config
  GNU nano 1.2.4               File: startup-config

3.1.25 enable

Privileged Exec Mode Commands

Turns on (enables) the privileged mode command set. This command does not do anything in the Privilege Executable mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
enable
```

Parameters

None

Example

```
rfs6000-81742D#enable
rfs6000-81742D#
```

3.1.26 erase

Privileged Exec Mode Commands

Erases a device's (wireless controller, access point, and service platform) file system. Erases the content of the specified storage device. Also erases the startup configuration to restore the device to its default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
erase [flash:|nvram:|startup-config|usb1:|usb2:|usb3:|usb4:]

erase [flash:|nvram:|usb1:|usb2:|usb3:|usb4:]

erase startup-config {<HOSTNAME/MAC>|on <DOMAIN-NAME> {containing <SUB-STRING>|
exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}}
```

Parameters

- `erase [flash:|nvram:|usb1:|usb2:|usb3:|usb4:]`

flash:	Erases everything in the device's flash: file
nvram:	Erases everything in the device's nvram: file
startup-config	Erases the device's startup configuration file. The startup configuration file is used to configure the device when it reboots.
usb1:	Erases everything in the device's usb1: file
usb2:	Erases everything in the device's usb2: file
usb3:	Erases everything in the device's usb3: file
usb4:	Erases everything in the device's usb4: file

- `erase startup-config {<HOSTNAME/MAC>|on <DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}}`

startup-config:	Erases the startup configuration file on a specified device or devices in a specified RF Domain. The specified device(s) are reloaded after the startup configuration file is erased. Use the '<HOSTNAME/MAC>' or 'on <DOMAIN-NAME>' options to identify the device or RF Domain respectively. Once executed, the configuration file, for the targeted device or for all device(s) in the targeted RF Domain, is also erased from the adopting controller's configuration file. The are automatically reloaded once the startup configuration file has been erased.
<HOSTNAME/MAC>	Optional. Erases the startup configuration file on the device identified by the <HOSTNAME/MAC> keyword. Specify the device's hostname or MAC address.

on <DOMAIN-NAME> {containing <SUB-STRING>| exclude-controllers| exclude-rf-domain-manager| filter <DEVICE-TYPE>}	Optional. Erases the startup configuration file on all devices or specified device(s) in a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, the command is executed on all devices within the RF Domain. These filters are: • containing <SUB-STRING> – Optional. Executes the command on all devices containing a specified sub-string in their hostname • <SUB-STRING> – Specify the sub-string to match. The startup configuration file is erased on all devices whose hostname contains the sub-string specified here. • exclude-controllers – Optional. Executes the command on all devices excluding controllers. The startup configuration file is erased on all devices except controllers. • exclude-rf-domain-manager – Optional. Executes the command on all devices excluding RF Domain managers. The startup configuration file is erased on all devices except RF Domain managers. • filter <DEVICE-TYPE> – Optional. Executes the command on all devices of a specified type • <DEVICE-TYPE> – Specify the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. The startup configuration file is erased on all devices of the type specified here. For example, if AP6521 is the device-type specified, the startup configuration file on all AP6521s, within the RF Domain, is erased.

Example

```
nx9500-6C8809#erase ?
  cf:             Erase everything in cf:
  flash:          Erase everything in flash:
  nvram:          Erase everything in nvram:
  startup-config  Reset configuration to factory default
  usb1:           Erase everything in usb1:
  usb2:           Erase everything in usb2:

nx9500-6C8809#
```

3.1.27 ex3500

Privileged Exec Mode Commands

Enables EX3500 switch firmware management. Use this command to perform the following operations: boot, copy, delete, and IP-related configurations.

The copy keyword provides multiple copy options. It allows you to upload or download code images or configuration files between the switch's flash memory and an FTP/TFTP server. When you save the system code or configuration settings to a file on an FTP/TFTP server, that file can later be downloaded to the switch to restore system operation. The success of the file transfer depends on the accessibility of the FTP/TFTP server and the quality of the network connection.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600

Syntax

```
ex3500 [adoptd|boot|copy|delete|ip]

ex3500 adoptd upgrade <URL> on <EX3500-DEVICE-NAME>

ex3500 boot system <1-1> (config|opcode) <FILE-NAME> on <EX3500-DEVICE-NAME>

ex3500 copy [file|ftp|running-config|startup-config|tftp|unit]

ex3500 copy [file file <SOURCE-FILE-NAME> <DEST-FILE-NAME> on <EX3500-DEVICE-NAME>

ex3500 copy [ftp|tftp] [add-to-running-config|file|https-certificate|public-key|
running-config|startup-config]

ex3500 copy [ftp|tftp] add-to-running-config <FTP/TFTP-SERVER-IP> <USER-NAME>
<PASSWORD> <SOURCE-FILE-NAME> on <EX3500-DEVICE-NAME>

ex3500 copy [ftp|tftp] file <FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD> [1|2]
<SOURCE-FILE-NAME> <DEST-FILE-NAME> on <EX3500-DEVICE-NAME>

ex3500 copy [ftp|tftp] https-certificate <FTP/TFTP-SERVER-IP> <USER-NAME>
<PASSWORD> <SOURCE-CERT-FILE-NAME> <SOURCE-PVT-KEY-FILE-NAME> <PVT-PASS-WORD>
on <EX3500-DEVICE-NAME>

ex3500 copy [ftp|tftp] public-key <FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD>
[1|2] <SOURCE-PUB-KEY-FILE-NAME> <USER-NAME> on <EX3500-DEVICE-NAME>

ex3500 copy [ftp|tftp] [running-config|startup-config] <FTP/TFTP-SERVER-IP> <USER-
NAME> <PASSWORD> <SOURCE-CONFIG-FILE-NAME> on <EX3500-DEVICE-NAME>

ex3500 copy running-config [file <DEST-FILE-NAME>|ftp <FTP-SERVER-IP> <USER-NAME>
<PASSWORD> <DEST-FILE-NAME>|startup-config|tftp <TFTP-SERVER-IP> <DEST-FILE-
NAME>] on <EX3500-DEVICE-NAME>

ex3500 copy startup-config [file <DEST-FILE-NAME>|ftp <FTP-SERVER-IP> <USER-NAME>
<PASSWORD> <DEST-FILE-NAME>|running-config|tftp <TFTP-SERVER-IP> <DEST-FILE-
NAME>] on <EX3500-DEVICE-NAME>

ex3500 copy unit file <1-1> [1|2] <SOURCE-FILE-NAME> <DEST-FILE-NAME> on <EX3500-
DEVICE-NAME>

ex3500 delete [file|public-key]

ex3500 delete file [name <FILE-NAME>|unit <1-1> name <FILE-NAME>] on <EX3500-
DEVICE-NAME>

ex3500 delete public-key <USER-NAME> [dsa|rsa] on <EX3500-DEVICE-NAME>
```

```
ex3500 ip ssh [crypto|save]

ex3500 ip ssh crypto host-key generates [dsa|rsa] on <EX3500-DEVICE-NAME>

ex3500 ip ssh crypto zeroize [dsa|rsa] on <EX3500-DEVICE-NAME>

ex3500 ip ssh save host-key on <EX3500-DEVICE-NAME>
```

Parameters

- `ex3500 adoptd upgrade <URL> on <EX3500-DEVICE-NAME>`

ex3500 adoptd upgrade	Upgrades an adopted EX3500 switch **Note:** After an upgrade, reboot the EX3500 switch to initiate the new image. To view an EX3500's current image version, use the *show > version > on* <EX3500-*DEVICE-NAME*> command.
<URL>	Specifies the location and image file name in the following format: tftp://<IP>[/path]/file
on <EX3500-DEVICE-NAME>	Executes the command on a specified EX3500 switch • <EX3500-DEVICE-NAME> – Specify the EX3500 switch's hostname.

- `ex3500 boot system <1-1> (config|opcode) <FILE-NAME> on <EX3500-DEVICE-NAME>`

ex3500 boot system	Boots a EX3500 switch using a specified configuration file
<1-1>	Identifies the EX3500 unit by its ID number. Specify the EX3500 ID from 1 - 1. **Note:** As of now only one (1) EX3500 unit can be managed through a NOC controller.
(config|opcode) <FILE-NAME>	The following keywords are recursive: Specifies the image file to use for booting. The options are: • config – Uses the configuration file to boot the switch • opcode – Uses the *Operation Code* (opcode), which is the runtime code, to boot the switch. The opcode is like an operating system that enables the WiNG software to communicate with the EX3500 device. The following parameter is common to the 'config' and opcode' keywords: • <FILE-NAME> – Specify the configuration/runtime-code file name.
on <EX3500-DEVICE-NAME>	Reloads a specified EX3500 switch • <EX3500-DEVICE-NAME> – Specify the EX3500 switch's hostname. You can also specify its MAC address.

- `ex3500 copy file file <SOURCE-FILE-NAME> <DEST-FILE-NAME> on <EX3500-DEVICE-NAME>`

ex3500 copy	Copies a configuration file to another file

file file <SOURCE-FILE-NAME> <DEST-FILE-NAME>	Copies a specified file (this is the source configuration file) • file – Copies the specified source file to a specified file (this is the destination configuration file) • <SOURCE-FILE-NAME> – Specify the source configuration file's name • <DEST-FILE-NAME> – Specify the destination configuration file's name When specifying the destination file name, keep in mind the following points: - It should not contain slashes (\ or /), - It should not exceed 32 characters for files on the switch, or 127 characters for files on the server.
on <EX3500-DEVICE-NAME>	Copies the file to a specified EX3500 switch • <EX3500-DEVICE-NAME> – Specify the EX3500 switch's hostname. The specified source file is copied to specified destination file on the EX3500 identified here.

```
• ex3500 copy [ftp|tftp] add-to-running-config <FTP/TFTP-SERVER-IP> <USER-NAME>
<PASSWORD> <SOURCE-FILE-NAME> on <EX3500-DEVICE-NAME>
```

ex3500 copy [ftp|tftp]	Copies files from a FTP or TFTP server. This command allows you to copy the following types of files: HTTPS certificate, running configuration, startup configuration, public key, etc. This command also allows you to add a remote system's running configuration to the current system configuration.
add-to-running-config	Adds a remote system's running configuration to the current system
<FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD>	Configures the FTP or TFTP server details (depending on the option selected in the previous step), such as IP address and user credentials. This is the device running the FTP/TFTP server. • <FTP/TFTP-SERVER-IP> – Specify the FTP or TFTP server's IP address in the A.B.C.D format. • <USER-NAME> – If using a FTP server, specify the FTP server's user name (should be an authorized user) • <PASSWORD> – Specify the password applicable for the above specified FTP server user name.
<SOURCE-FILE-NAME>	After specifying the server details, specify the name of the running configuration file. • <SOURCE-FILE-NAME> – Specify the source file's name.
on <EX3500-DEVICE-NAME>	Copies the file to a specified EX3500 switch • <EX3500-DEVICE-NAME> – Specify the EX3500 switch's hostname. The specified source file is copied to specified destination file on the EX3500 identified here.

```
• ex3500 copy [ftp|tftp] file <FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD> [1|2]
<SOURCE-FILE-NAME> <DEST-FILE-NAME> on <EX3500-DEVICE-NAME>
```

ex3500 copy [ftp|tftp]	Copies files from a FTP or TFTP server. This command allows you to copy the following types of files: HTTPS certificate, running configuration, startup configuration, public key, etc.
file	Copies to a specified file system

<FTP/TFTP-SERVER-IP> <USER-NAME> <PASS-WORD>	Configures the FTP or TFTP server details (depending on the option selected in the previous step), such as IP address and user credentials. This is the device running the FTP/TFTP server. • <FTP/TFTP-SERVER-IP> – Specify the FTP or TFTP server's IP address in the A.B.C.D format. • <USER-NAME> – If using a FTP server, specify the FTP server's user name (should be an authorized user) • <PASSWORD> – Specify the password applicable for the above specified FTP server user name.
[1|2] <SOURCE-FILE-NAME> <DEST-FILE-NAME>	After specifying the server details, select the file type and specify the name of the source and destination file names. • [1|2] – Select the file type from 1 - 2. • 1 – Copies the EX3500 configuration file. • 2 – Copies the opcode, which is the runtime code. The opcode is like an operating system that enables the WiNG software to communicate with the EX3500 device. • <SOURCE-FILE-NAME> – Specify the source file's name. • <DEST-FILE-NAME> – Specify the destination file's name.
on <EX3500-DEVICE-NAME>	Copies the file to a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname. The specified source file is copied to specified destination file on the EX3500 identified here.

```
• ex3500 copy [ftp|tftp] https-certificate <FTP/TFTP-SERVER-IP> <USER-NAME>
<PASSWORD> <SOURCE-CERT-FILE-NAME> <SOURCE-PVT-KEY-FILE-NAME> <PVT-PASS-WORD> on
<EX3500-DEVICE-NAME>
```

ex3500 copy [ftp|tftp]	Copies files from a FTP or TFTP server. This command allows you to copy the following types of files: HTTPS certificate, running configuration, startup configuration, public key, etc.
https-certificate	Copies HTTPS secure site certificate from the FTP or TFTP server to the switch
<FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD>	Configures the FTP or TFTP server details (depending on the option selected in the previous step), such as IP address and user credentials. This is the device running the FTP/TFTP server. • <FTP/TFTP-SERVER-IP> – Specify the FTP or TFTP server's IP address in the A.B.C.D format. • <USER-NAME> – If using a FTP server, specify the FTP server's user name (should be an authorized user) • <PASSWORD> – Specify the password applicable for the above specified FTP server user name.
<SOURCE-CERT-FILE-NAME> <SOURCE-PVT-KEY-FILE-NAME> <PVT-PASS-WORD>	After identifying the FTP or TFTP server, specify the following: • <SOURCE-CERT-FILE-NAME> – Specify the source HTTPS secure site certificate file name. • <SOURCE-PVT-KEY-FILE-NAME> – Specify the source private-key file name. • <PVT-PASS-WORD> – Specify the private password.
on <EX3500-DEVICE-NAME>	Copies the file to a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

- `ex3500 copy [ftp|tftp] public-key <FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD> [1|2] <SOURCE-PUB-KEY-FILE-NAME> <USER-NAME> on <EX3500-DEVICE-NAME>`

ex3500 copy [ftp|tftp]	Copies files from a FTP or TFTP server. This command allows you to copy the following types of files: HTTPS certificate, running configuration, startup configuration, public key, etc.
public-key	Copies the SSH public key from the FTP or TFTP server to the switch
<FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD>	Configures the FTP or TFTP server details (depending on the option selected in the previous step), such as IP address and user credentials. This is the device running the FTP/TFTP server. • <FTP/TFTP-SERVER-IP> – Specify the FTP or TFTP server's IP address in the A.B.C.D format. • <USER-NAME> – If using a FTP server, specify the FTP server's user name (should be an authorized user) • <PASSWORD> – Specify the password applicable for the above specified FTP server user name.
[1|2] <SOURCE-PUB-KEY-FILE-NAME> <USER-NAME>	After identifying the FTP or TFTP server, specify the following: • [1|2] – Configures the SSH public key type as RS or DSA • 1 – Configures the public key type as RSA • 2 – Configures the public key type as DSA • <SOURCE-PUB-KEY-FILE-NAME> – Specifies the source public key file name • <USER-NAME> – Specifies the public key's user name.
on <EX3500-DEVICE-NAME>	Copies the public key to a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

- `ex3500 copy [ftp|tftp] [running-config|startup-config] <FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD> <DEST-FILE-NAME> on <EX3500-DEVICE-NAME>`

ex3500 copy [ftp|tftp]	Copies files from a FTP or TFTP server. This command allows you to copy the following types of files: HTTPS certificate, running configuration, startup configuration, public key, etc.
[running-config| startup-config]	Copies the running or startup configuration file to one of the following destinations: file system, FTP server, or TFTP server The running configuration file can be copied to the startup configuration file and vice versa.
<FTP/TFTP-SERVER-IP> <USER-NAME> <PASSWORD>	If copying to a FTP/TFTP server, configure the following parameters: • <FTP/TFTP-SERVER-IP> – Specify the FTP or TFTP server's IP address in the A.B.C.D format. • <USER-NAME> – If using a FTP server, specify the FTP server's user name (should be an authorized user) • <PASSWORD> – Specify the password applicable for the above specified FTP server user name.
<DEST-FILE-NAME>	Configures the destination file name. The running or startup configuration file is copied to the specified destination file. • <DEST-FILE-NAME> – Specify the destination file name. You can also copy the running configuration file to the startup configuration file and vice versa.
on <EX3500-DEVICE-NAME>	Copies the running or startup configuration file on to a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

```
• ex3500 copy unit file <1-1> [1|2] <SOURCE-FILE-NAME> <DEST-FILE-NAME>
on <EX3500-DEVICE-NAME>
```

ex3500 copy unit	Copies from a EX3500 switch
file <1-1> [1|2]	Copies the file system from the EX3500 switch identified by the unit number • <1-1> – Specify the unit number from 1 - 1. • [1|2] – Select the file type from 1 - 2. • 1 – Copies the selected unit's configuration file. • 2 – Copies the selected unit's opcode, which is the runtime code. The opcode is like an operating system that enables the WiNG software to communicate with the EX3500 device.
<SOURCE-FILE-NAME>	Configures the source file name • <SOURCE-FILE-NAME> – Specify the source file name. You can copy the running configuration file to the startup configuration file and vice versa.
<DEST-FILE-NAME>	Configures the destination file name. The running or startup configuration file is copied to the specified file. • <DEST-FILE-NAME> – Specify the destination file name. You can copy the running configuration file to the startup configuration file and vice versa.
on <EX3500-DEVICE-NAME>	Copies the running or startup configuration file on to a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

```
• ex3500 delete file [name <FILE-NAME>|unit <1-1> name <FILE-NAME>]
on <EX3500-DEVICE-NAME>
```

ex3500 delete file	Deletes a file or image on a specified EX3500 device
name <FILE-NAME>	Specifies the file to delete. The specified file is deleted. • <FILE-NAME> – Specify the file name.
unit <1-1> name <FILE-NAME>	Identifies the unit in the stackable system on which the file is located • <1-1> – Select the unit from 1 - 1. • name – After identifying the unit, specify the file to delete. The specified file is deleted. • <FILE-NAME> – Specify the file name.
on <EX3500-DEVICE-NAME>	Executes the command on a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

```
• ex3500 delete public-key <USER-NAME> [dsa|rsa] on <EX3500-DEVICE-NAME>
```

ex3500 delete public-key <USER-NAME> [dsa|rsa]	Deletes a specified user's public key • <USER-NAME> – Specify the SSH user's name. • dsa – Deletes the specified user's DSA (version 2) key • rsa – Deletes the specified user's RSA (version 1) key
on <EX3500-DEVICE-NAME>	Executes the command on a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

- `ex3500 ip ssh crypto host-key generates [dsa|rsa] on <EX3500-DEVICE-NAME>`

ex3500 ip ssh crypto host-key generates [dsa|rsa]	Generates the host-key pair (public and private). This host key is used by the SSH server to negotiate a session key and encryption method with the client trying to connect to it. • dsa – Generates DSA (version 2) key type • rsa – Generates RSA (version 1) key type **Note:** The RSA Version 1 is used only for SSHv1.5 clients, whereas DSA Version 2 is used only for SSHv2 clients. **Note:** This generated host-key pair is stored in the volatile memory (i.e RAM). To save the host-key pair in the flash memory, use the *ex3500 > ip > ssh > save > host-key* command.
on <EX3500-DEVICE-NAME>	Executes the command on a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

- `ex3500 ip ssh zeroize [dsa|rsa] <EX3500-DEVICE-NAME>`

ex3500 ip ssh zeroize [dsa|rsa]	Removes the host-key (DSA and RSA) from the volatile memory (i.e. RAM)
on <EX3500-DEVICE-NAME>	Executes the command on a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

- `ex3500 ip ssh save host-key on <EX3500-DEVICE-NAME>`

ex3500 ip ssh save host-key	Saves the host-key (DSA and RSA) to the flash memory
on <EX3500-DEVICE-NAME>	Executes the command on a specified EX3500 device • <EX3500-DEVICE-NAME> – Specify the EX3500 device's hostname.

Usage Guidelines

When using the ex3500 command and its parameters, keep in mind the following:

- Destination file names should not:
  - Contain slashes (\ or /),
  - Exceed 32 characters for files on the switch, or 127 characters for files on the server
- The FTP server's default user name is set as "anonymous".
- The Boot ROM and Loader cannot be uploaded or downloaded from the FTP/TFTP server. Follow instructions provided in the release notes for new firmware, or contact your distributor for help.
- The "Factory_Default_Config.cfg" can be used as the source to copy from, but cannot be used as the destination.
- Although the switch supports only two operation code files, the maximum number of user-defined configuration files supported is 16.

Example

```
nx9500-6C8809#ex3500 adopted upgrade tftp://192.168.0.99/ex3500-adopted-
5.8.5.0.img on
ex3524-ED5EAC
Flash programming started
Flash programming completed
Successful
nx9500-6C8809#

nx9500-6C8809#ex3500 copy tftp file 10.2.0.100 1 m360.bix m360.bix on ex3524-ED5EAC
\Write to FLASH Programming.
-Write to FLASH finish.
Success.
nx9500-6C8809#

nx9500-6C8809#ex3500 copy tftp startup-config 10.2.0.99 startup.01 startup on
ex3524-ED5EAC
TFTP server ip address: 10.1.0.99
Flash programming started.
Flash programming completed.
Success.
nx9500-6C8809#
```

3.1.28 factory-reset

Privileged Exec Mode Commands

Erases startup configuration on a specified device or all devices within a specified RF Domain

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
factory-reset [<HOSTNAME/MAC>|config-all|config-device-only|on <RF-DOMAIN-NAME>]

factory-reset <HOSTNAME/MAC> {<HOSTNAME/MAC>}

factory-reset on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|
exclude-rf-domain-manager|filter <DEVICE-TYPE>}

factory-reset [config-all|config-device-only] [<HOSTNAME/MAC> {<HOSTNAME/MAC>}|
on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|exclude-rf-
domain-manager|filter <DEVICE-TYPE>}]
```

Parameters

- `factory-reset <HOSTNAME/MAC> {<HOSTNAME/MAC>}`

factory-reset	Erases startup configuration and reloads device(s) based on the parameters passed For more information on the actions performed by this command, see *Actions performed by the factory-reset command.*
<HOSTNAME/MAC> *{<HOSTNAME/MAC>}*	Erases startup configuration and reloads the device identified by the <HOSTNAME/MAC> keyword. Specify the device's hostname or MAC address. • <HOSTNAME/MAC> – Optional. You can optionally specify multiple space-separated devices.

- `factory-reset on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}`

factory-reset	Erases startup configuration and reloads device(s) based on the parameters passed For more information on the actions performed by this command, see *Actions performed by the factory-reset command.*

on <RF-DOMAIN-NAME> {containing <SUB-STRING>| exclude-controllers| exclude-rf-domain-manager| filter <DEVICE-TYPE>]}	Erases startup configuration and reloads all devices or specified device(s) within a specified RF Domain identified by the <RF-DOMAIN-NAME> keyword • <RF-DOMAIN-NAME> – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, the command is executed on all devices within the RF Domain. These filters are: • containing <SUB-STRING> – Optional. Executes the command on all devices containing a specified sub-string in their hostname • <SUB-STRING> – Specify the sub-string to match. • exclude-controllers – Optional. Executes the command on all devices excluding controllers. Since only a NOC controller is capable of adopting other controllers, use this option when executing the command on a NOC controller. • exclude-rf-domain-manager – Optional. Executes the command on all devices excluding RF Domain managers. Use this option when executing the command on the NOC, site controller, or RF Domain manager. • filter <DEVICE-TYPE> – Optional. Executes the command on all devices of a specified type • <DEVICE-TYPE> – Specify the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. The startup configuration is erased on all devices of the type specified here. For example, if AP6521 is the device-type specified, the command is executed on all AP6521s within the specified RF Domain.

• `factory-reset [config-all|config-device-only] [<HOSTNAME/MAC> {<HOSTNAME/MAC>}|on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}]`

factory-reset	Erases startup configuration and reloads device(s) based on the parameters passed For more information on the actions performed by this command, see *Actions performed by the factory-reset command.*
[config-all| config-device-only]	Erases startup configuration and reloads only controller-adopted devices or the controller as well as its adopted devices • config-all – Erases startup configuration on the controller and all devices adopted by it • config-device-only – Erases startup configuration only on the devices adopted by the controller
<HOSTNAME/MAC> {<HOSTNAME/MAC>}	This parameter is common to the 'config-all' and 'config-device-only' keywords: • <HOSTNAME/MAC> – Erases startup configuration and reloads the device identified by the <HOSTNAME/MAC> keyword. Specify the device's hostname or MAC address. • <HOSTNAME/MAC> – Optional. You can optionally specify multiple space-separated devices.

on <RF-DOMAIN-NAME> {containing <SUB-STRING>| exclude-controllers| exclude-rf-domain-manager| filter <DEVICE-TYPE>]}	The following parameters are common to the 'config-all' and 'config-device-only' keywords: • on <RF-DOMAIN-NAME> – Erases startup configuration and reloads all devices or specified device(s) within a specified RF Domain • <RF-DOMAIN-NAME> – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, the command is executed on all devices within the RF Domain. These filters are: • containing <SUB-STRING> – Optional. Executes the command on all devices containing a specified sub-string in their hostname • <SUB-STRING> – Specify the sub-string to match. • exclude-controllers – Optional. Executes the command on all devices excluding controllers. Since only a NOC controller is capable of adopting other controllers, use this option when executing the command on a NOC controller. • exclude-rf-domain-manager – Optional. Executes the command on all devices excluding RF Domain managers. Use this option when executing the command on the NOC, Site controller, or RF Domain manager. • filter <DEVICE-TYPE> – Optional. Executes the command on all devices of a specified type • <DEVICE-TYPE> – Specify the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. The startup configuration is erased on all devices of the type specified here. For example, if AP6521 is the device-type specified, the command is executed on all AP6521s within the specified RF Domain.

Usage Guidelines Actions performed by the factory-reset command.

The action taken by this command depends on the parameters passed.

- For the '*factory-reset [<DEVICE-NAME>|on <RF-DOMAIN-NAME>]*' options, the command:
  - Erases startup configuration on the target device (or) all devices in the target RF Domain.
  - Erases the device configuration entries from the controller's configuration for the target device (or) for all the devices in the target RF Domain.
  - Reloads the target device (or) all devices in the target RF Domain.
- For the '*factory-reset config-all [<DEVICE-NAME>|on <RF-DOMAIN-NAME>]*' options, the command:
  - Erases startup configuration on the target device (or) all devices in the target RF Domain.
  - Erases the device configuration entries from the controller's configuration for the target device (or) for all the devices in the target RF Domain.
- For the '*factory-reset config-device-only [<DEVICE-NAME>|on <RF-DOMAIN-NAME>]*' options, the command:
  - Erases startup configuration on the target device (or) all devices in the target RF Domain.

Example

```
nx7500-7F3609#factory-reset config-all ap6522-5A873C
In progress ....
Erased startup-config - success 1 fail 0
Successful device deletion - total 1
nx7500-7F3609#

rfs6000-18072B# factory-reset B4-C7-99-5A-87-3C
In progress ....
Erased startup-config and initiated reload - success 1 fail 0
Successful device deletion - total 1
rfs6000-18072B#
```

The following example displays the access points in the RF Domain ‘rfd1’:

```
nx7500-7F3609#show wireless ap on rfd1

3.1.29 file-sync

Privileged Exec Mode Commands

Syncs trustpoint and/or EAP-TLS X.509 (PKCS#12) certificate between the staging-controller and adopted access points.

When enabling file syncing, consider the following points:

- The X.509 certificate needs synchronization only if the access point is configured to use EAP-TLS authentication.
- Execute the command on the controller adopting the access points.
- Ensure that the X.509 certificate file is installed on the controller.

Syncing of trustpoint/wireless-bridge certificate can to be automated. To automate file syncing, in the controller's device/profile configuration mode, execute the following command: *file-sync [auto|count <1-20>]*. For more information, see *file-sync*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
file-sync [cancel|load-file|trustpoint|wireless-bridge]

file-sync cancel [trustpoint|wireless-bridge]

file-sync cancel [trustpoint|wireless-bridge] [<DEVICE-NAME>|all|rf-domain
[<DOMAIN-NAME>|all]]

file-sync load-file [trustpoint|wireless-bridge]]

file-sync load-file [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] <URL>

file-sync [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|
rf-domain [<DOMAIN-NAME>|all] {from-controller}] {reset-radio|upload-time <TIME>}
```

Parameters

- `file-sync cancel [trustpoint|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all]]`

file-sync cancel [trustpoint| wireless-bridge] [<DEVICE-NAME>| all|rf-domain [<DOMAIN-NAME>| all]]	Cancels scheduled file synchronization • trustpoint – Cancels scheduled trustpoint synchronization on a specified AP, all APs, or APs within a specified RF Domain • wireless-bridge – Cancels scheduled wireless-bridge certificate synchronization on a specified AP, all APs, or APs within a specified RF Domain Contd..

	• <DEVICE-NAME> – Cancels scheduled trustpoint/certificate synchronization on a specified AP. Specify the AP's hostname or MAC address. • all – Cancels scheduled trustpoint/certificate synchronization on all APs • rf-domain [<DOMAIN-NAME>|all] – Cancels scheduled trustpoint/certificate synchronization on all APs in a specified RF Domain or in all RF Domains • <DOMAIN-NAME> – Cancels scheduled trustpoint/certificate synchronization on all APs within a specified RF Domain. Specify the RF Domain's name. • all – Cancels scheduled trustpoint/certificate synchronization on all RF Domains

• `file-sync load-file [trustpoint|wireless-bridge] <URL>`

file-sync load-file [trustpoint| wireless-bridge] <URL>	Loads the following files on to the staging controller: • trustpoint – Loads the trustpoint, including CA certificate, server certificate and private key • wireless-bridge – Loads the wireless-bridge certificate to the staging controller Use this command to load the certificate to the controller before scheduling or initiating a certificate synchronization. • <URL> – Provide the trustpoint/certificate location using one of the following formats: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file **Note:** Both IPv4 and IPv6 address types are supported.

• `file-sync [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all] {from-controller}] {reset-radio|upload-time <TIME>}`

file-sync trustpoint <TRUSTPOINT-NAME> [<DEVICE-NAME>| all|rf-domain [<DOMAIN-NAME> |all] from-controller]	Configures file-syncing parameters • trustpoint <TRUSTPOINT-NAME> – Syncs a specified trustpoint between controller and its adopted APs • <TRUSTPOINT-NAME> – Specify the trustpoint name. • wireless-bridge – Syncs wireless-bridge certificate between controller and its adopted APs After specifying the file that is to be synced, configure following file-sync parameters: • <DEVICE-NAME> – Syncs trustpoint/certificate with a specified AP. Specify the AP's hostname or MAC address. • all – Syncs trustpoint/certificate with all APs • rf-domain [<DOMAIN-NAME>|all] from-controller – Syncs trustpoint/certificate with all APs in a specified RF Domain or in all RF Domains • <DOMAIN-NAME> – Select to sync with APs within a specified RF Domain. Specify the RF Domain's name. • all – Select to sync with APs across all RF Domains • from-controller – Optional. Loads certificate to the APs from the adopting controller and not the RF Domain manager After specifying the access points, specify the following options: reset-radio and upload-time.

reset-radio	This keyword is recursive and applicable to all of the above parameters. Optional. Resets the radio after file synchronization. Reset the radio in case the certificate is renewed along with no changes made to the 'bridge EAP username' and 'bridge EAP password'.
upload-time <TIME>	This keyword is recursive and applicable to all of the above parameters. • upload-time – Optional. Schedules certificate upload at a specified time • <TIME> – Specify the time in the MM/DD/YYYY-HH:MM or HH:MM format. If no time is configured, the process is initiated as soon as the command is executed.

Example

```
rfs6000-81742D#file-sync wireless-bridge ap7131-11E6C4 upload-time 06/01/2017-
12:30
--------------------------------------------------------------------------------
          CONTROLLER               STATUS                  MESSAGE
--------------------------------------------------------------------------------
  B4-C7-99-6D-CD-4B           Success           Queued 1 APs to upload
--------------------------------------------------------------------------------
rfs6000-81742D#
```

The following command uploads certificate to all access points:

```
rfs6000-81742D#file-sync wireless-bridge all upload-time 06/01/2017-23:42
```

3.1.30 halt

Privileged Exec Mode Commands

Stops (halts) a device (access point, wireless controller, or service platform). Once halted, the system must be restarted manually.

This command stops the device immediately. No indications or notifications are provided while the device shuts down.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
halt {force} {(on <DEVICE-NAME>)}
```

Parameters

- `halt {force} {(on <DEVICE-NAME>)}`

halt	Halts a device
force	Optional. Forces a device to halt ignoring in-progress operations, such as firmware upgrades, downloads, unsaved configuration changes, etc.
on <DEVICE-NAME>	The following keywords are recursive and applicable to the 'force' parameter: • on <DEVICE-NAME> – Optional. Specifies the name of the device to be halted • <DEVICE-NAME> – Enter the name of the AP, wireless controller, or service platform. If the device name is not specified, the logged device is halted.

Example

```
nx9500-6C8809#halt on rfs6000-81742D
nx9500-6C8809#
```

3.1.31 join-cluster

Privileged Exec Mode Commands

Adds a device (access point, wireless controller, or service platform), as cluster member, to an existing cluster of devices. Assign a static IP address to the device before adding to a cluster. Note, a cluster can be only formed of devices of the same model type.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
join-cluster <IP> user <USERNAME> password <WORD> {level|mode}
join-cluster <IP> user <USERNAME> password <WORD> {level [1|2]|mode
[active|standby]}
```

Parameters

- `join-cluster <IP> user <USERNAME> password <WORD> {level [1|2]|mode [active|standby]}`

join-cluster	Adds a access point, wireless controller, or service platform to an existing cluster
<IP>	Specify the cluster member's IP address.
user <USERNAME>	Specify a user account with super user privileges on the new cluster member.
password <WORD>	Specify password for the account specified in the user parameter.
level [1|2]	Optional. Configures the routing level • 1 – Configures level 1 routing • 2 – Configures level 2 routing
mode [active|standby]	Optional. Configures the cluster mode • active – Configures cluster mode as active • standby – Configures cluster mode as standby

Usage Guidelines

To add a device to an existing cluster:

- configure a static IP address on the device (access point, wireless controller, or service platform).
- provide username and password for superuser, network admin, system admin, or operator accounts.

After adding the device to a cluster, execute the "write memory" command to ensure the configuration persists across reboots.

Example

```
rfs6000-81742D#join-cluster 192.168.13.16 user admin password superuser level 1
 mode standby
... connecting to 192.168.13.16
... applying cluster configuration
... committing the changes
... saving the changes
[OK]
rfs6000-81742D#

rfs6000-81742D#show context
!
! Configuration of RFS6000 version 5.9.0.0-012D

!

rfs6000-81742D#
```

Related Commands

cluster	Initiates the cluster context. The cluster context provides centralized management to configure all cluster members from any one member.
create-cluster	Creates a new cluster on a specified device

3.1.32 l2tpv3

Privileged Exec Mode Commands

Establishes or brings down an L2TPv3 tunnel

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
l2tpv3 tunnel [<TUNNEL-NAME>|all]

l2tpv3 tunnel <TUNNEL-NAME> [down|session|up]
l2tpv3 tunnel <TUNNEL-NAME> [down|up] {on <DEVICE-NAME>}
l2tpv3 tunnel <TUNNEL-NAME> session <SESSION-NAME> [down|up] {on <DEVICE-NAME>}

l2tpv3 tunnel all [down|up] {on <DEVICE-NAME>}
```

Parameters

- `l2tpv3 tunnel <TUNNEL-NAME> [down|up] {on <DEVICE-NAME>}`

l2tpv3 tunnel <TUNNEL-NAME> [down|up]	Establishes or brings down an L2TPv3 tunnel
	• <TUNNEL-NAME> – Specify the tunnel name.
	  • down – Brings down the specified tunnel
	  • up – Establishes the specified tunnel

on <DEVICE-NAME>	Optional. Establishes or brings down a tunnel on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `l2tpv3 tunnel <TUNNEL-NAME> session <SESSION-NAME> [down|up] {on <DEVICE-NAME>}`

l2tpv3 tunnel <TUNNEL-NAME>	Establishes or brings down an L2TPv3 tunnel • <TUNNEL-NAME> – Specify the tunnel name.

session <SESSION-NAME> [down|up]	Establishes or brings down a session in the specified tunnel
	• <SESSION-NAME> – Specify the session name.
	  • down – Brings down the specified tunnel session
	  • up – Establishes the specified tunnel session

on <DEVICE-NAME>	Optional. Establishes or brings down a tunnel session on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `l2tpv3 tunnel all [down|up] {on <DEVICE-NAME>}`

l2tpv3 tunnel	Establishes or brings down a L2TPv3 tunnel
all [down|up]	Establishes or brings down all L2TPv3 tunnels • down – Brings down all tunnels • up – Establishes all tunnels

on <DEVICE-NAME>	Optional. Establishes or brings down all tunnels on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D#l2tpv3 tunnel Tunnel1 session Tunnel1Session1 up on rfs6000-81742D
```

NOTE: For more information on the L2TPv3 tunnel configuration mode and commands, see *Chapter 22, L2TPV3-POLICY*.

3.1.33 logging

Privileged Exec Mode Commands

Modifies message logging settings

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
logging monitor {<0-7>|alerts|critical|debugging|emergencies|errors|
informational|warnings|notifications}
```

Parameters

```
• logging monitor {<0-7>|alerts|critical|debugging|emergencies|errors|
informational|notifications|warnings}
```

monitor	Sets terminal lines logging levels. The logging severity levels can be set from 0 - 7. The system configures default settings, if no logging severity level is specified. • <0-7> – Optional. Enter the logging severity level from 0 - 7. The various levels and their implications are: • alerts – Optional. Immediate action needed (severity=1) • critical – Optional. Critical conditions (severity=2) • debugging – Optional. Debugging messages (severity=7) • emergencies – Optional. System is unusable (severity=0) • errors – Optional. Error conditions (severity=3) • informational – Optional. Informational messages (severity=6) • notifications – Optional. Normal but significant conditions (severity=5) • warnings – Optional. Warning conditions (severity=4) **Note:** Ensure that the logging module is enabled, before configuring the message logging level. To enable message logging, in the device's configuration mode, execute the *logging > on* command. Message logging can also be enabled on a profile.

Example

```
rfs6000-81742D(config-device-00-15-70-81-74-2D)#logging on

rfs6000-81742D#logging monitor debugging

rfs6000-81742D#show logging

Logging module: enabled
    Aggregation time: disabled
    Console logging: level warnings
    Monitor logging: disabled
    Buffered logging: level warnings
    Syslog logging: level warnings
        Facility: local7

Log Buffer (70096 bytes):

Apr 04 12:43:02 2017: %DIAG-4-FAN_UNDERSPEED: Fan fan 1 under speed: 0 RPM is under
limit 2000 RPM
Apr 04 12:33:02 2017: %DIAG-4-FAN_UNDERSPEED: Fan fan 1 under speed: 0 RPM is under
limit 2000 RPM
--More--
rfs6000-81742D#
```

Related Commands

no	Resets terminal lines logging levels

3.1.34 mint

Privileged Exec Mode Commands

Uses MiNT protocol to perform a ping and traceroute to a remote device

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mint [ping|traceroute]

mint ping <MINT-ID> {count <1-10000>|size <1-64000>|timeout <1-10>}

mint traceroute <MINT-ID> {destination-port <1-65535>|max-hops <1-255>|source-port <1-65535>|timeout <1-255>}
```

Parameters

- `mint ping <MINT-ID> {count <1-10000>|size <1-64000>|timeout <1-10>}`

ping <MINT-ID>	Sends a MiNT echo message to a specified destination • <MINT-ID> – Specify the destination device's MiNT ID.
count <1-10000>	Optional. Sets the pings to the MiNT destination • <1-10000> – Specify a value from 1 - 60. The default is 3.
size <1-64000>	Optional. Sets the MiNT payload size in bytes • <1-64000> – Specify a value from 1 - 640000 bytes. The default is 64 bytes.
timeout <1-10>	Optional. Sets a response time in seconds • <1-10> – Specify a value from 1 - 10 seconds. The default is 1 second.

- `mint traceroute <MINT-ID> {destination-port <1-65535>|max-hops <1-255>|source-port <1-65535>|timeout <1-255>}`

traceroute <MINT-ID>	Prints the route packets trace to a device • <MINT-ID> – Specify the destination device's MiNT ID.
destination-port <1-65535>	Optional. Sets the *Equal-cost Multi-path* (ECMP) routing destination port • <1-65535> – Specify a value from 1 - 65535. The default port is 45.
max-hops <1-255>	Optional. Sets the maximum number of hops a traceroute packet traverses in the forward direction • <1-255> – Specify a value from 1 - 255. The default is 30.
source-port <1-65535>	Optional.Sets the ECMP source port • <1-65535> – Specify a value from 1 - 65535. The default port is 45.
timeout <1-255>	Optional. Sets the minimum response time period • <1-255> – Specify a value from 1 - 255 seconds. The default is 30 seconds.

Example

```
rfs4000-229D58#mint ping 68.88.0D.A7
MiNT ping 68.88.0D.A7 with 64 bytes of data.
 Response from 68.88.0D.A7: id=1 time=0.364 ms
 Response from 68.88.0D.A7: id=2 time=0.333 ms
 Response from 68.88.0D.A7: id=3 time=0.368 ms

--- 68.88.0D.A7 ping statistics ---
3 packets transmitted, 3 packets received, 0% packet loss
round-trip min/avg/max = 0.333/0.355/0.368 ms
rfs4000-229D58#
```

3.1.35 mkdir

Privileged Exec Mode Commands

Creates a new directory in the file system

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mkdir <DIR>
```

Parameters

```
• mkdir <DIR>
```

<DIR>	Specify a directory name. **Note:** A directory, specified by the <DIR> parameter, is created within the file system.

Example

```
rfs4000-880DA7#dir
Directory of flash:/.

  drwx             Tue Sep 27 06:25:15 2016   log
  drwx             Sat Jan  1 05:30:08 2000   configs

3.1.36 more

Privileged Exec Mode Commands

Displays files on the device's file system. This command navigates and displays specific files in the device's file system. Provide the complete path to the file `more <file>`.

The more command also displays the startup configuration file.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
more <FILE>
```

Parameters

- `more <FILE>`

<FILE>	Specify the file name and location.

Example

```
rfs4000-880DA7#more flash:/archived_logs/startup.5.log
00-07-42-05-30-17
May 30 05:37:43 2017: %PM-6-PROCSTART: Starting process "/usr/sbin/logd"
May 30 05:37:43 2017: %PM-6-PROCSTART: Starting process "/usr/sbin/isDiag"
May 30 05:37:48 2017: %PM-6-PROCSTART: Starting process "/usr/sbin/rim"
May 30 05:37:51 2017: %DIAG-4-FAN_UNDERSPEED: Fan fan 1 under speed: 0 RPM is under
limit 2000 RPM

rfs4000-880DA7#
```

3.1.37 no

Privileged Exec Mode Commands

Use the no command to revert a command or a set of parameters to their default. This command is useful to turn off an enabled feature or to revert to default settings.

The no commands have their own set of parameters that can be reset. These parameters depend on the context in which the command is being used.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [adoption|captive-portal|cpe|crypto|debug|logging|page|raid|service|
terminal|upgrade|virtual-machine|wireless]

no adoption {on <DEVICE-OR-DOMAIN-NAME>}
```

NOTE: The *no > adoption* command resets the adoption state of a specified device (and all devices adopted to it) or devices within a specified RF Domain. When executed without specifying the device or RF Domain, the command resets the adoption state of the logged device and all devices, if any, adopted to it.

```
no captive-portal client [captive-portal <CAPTIVE-PORTAL-NAME>|mac <MAC>]
{on <DEVICE-OR-DOMAIN-NAME>}

no crypto pki [server|trustpoint]

no crypto pki [server|trustpoint] <TRUSTPOINT-NAME> {del-key {on <DEVICE-NAME>}|
on <DEVICE-NAME>}

no logging monitor

no page

no service [block-adopter-config-update|locator|snmp|ssm|wireless]

no service block-adopter-config-update

no service locator {on <DEVICE-NAME>}

no service snmp sysoid wing5

no service ssm trace pattern {<WORD>} {(on <DEVICE-NAME>)}

no service wireless [trace pattern {<WORD>} {(on <DEVICE-NAME>)}|unsanctioned ap
air-terminate <BSSID> {on <DOMAIN-NAME>}]

no terminal [length|width]

no upgrade <PATCH-NAME> {on <DEVICE-NAME>}

no wireless client [all|<MAC>]

no wireless client all {filter|on}
```

```
no wireless client all {filter [wlan <WLAN-NAME>]}

no wireless client all {on <DEVICE-OR-DOMAIN-NAME>} {filter [wlan <WLAN-NAME>]}

no wireless client mac <MAC> {on <DEVICE-OR-DOMAIN-NAME>}
```

The following command is available only on the NX95XX series service platforms:

```
no cpe led cpe [<1-24>|all] {on <T5-DEVICE-NAME>}

no virtual-machine assign-usb-ports {on <DEVICE-NAME>}

no raid locate
```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Resets or reverts settings based on the parameters passed

Usage Guidelines

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

Example

```
rfs4000-229D58#no adoption
rfs4000-229D58#

rfs6000-81742D#no page
rfs6000-81742D#
```

3.1.38 on

Privileged Exec Mode Commands

Executes the following commands in the RF Domain context: clrscr, do, end, exit, help, service, and show

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
on rf-domain [<RF-DOMAIN-NAME>|all]
```

Parameters

- `on rf-domain [<RF-DOMAIN-NAME>|all]`

on rf-domain [<RF-DOMAIN-NAME>|all]	Enters the RF Domain context based on the parameter specified • <RF-DOMAIN-NAME> – Specify the RF Domain name. Enters the specified RF Domain context. • all – Specifies all RF Domains.

Example

```
nx9500-6C8809#on rf-domain TechPubs
nx9500-6C8809(TechPubs)#

nx9500-6C8809(TechPubs)#?
on RF-Domain Mode commands:

  clrscr   Clears the display screen
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  service  Service Commands
  show     Show running system information

```

3.1.39 opendns

Privileged Exec Mode Commands

Fetches the OpenDNS device_id from the OpenDNS site. Use this command to fetch the OpenDNS device_id. Once fetched, apply the device_id to WLANs that are to be OpenDNS enabled.

OpenDNS is a free DNS service that enables swift Web navigation without frequent outages. It is more reliable than other available DNS services, and provides the following services: DNS query resolution, Web-filtering, protection against virus and malware attacks, performance enhancement, etc.

This command is part of a set of configurations that are required to integrate WiNG devices with OpenDNS. When integrated, DNS queries going out of the WiNG device (access point, controller, or service platform) are re-directed to OpenDNS (208.67.220.220 or 208.67.222.222) resolvers that act as proxy DNS servers. For more information on enabling OpenDNS support, see *Enabling OpenDNS Support*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
opendns [APIToken|username]

opendns APIToken <OPENDNS-APITOKEN>
opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>

Note, you can use either of the above commands to fetch the device_id from the
OpenDNS site.
```

Parameters

- `opendns APIToken <OPENDNS-APITOKEN>`

opendns	Fetches the device_id from the OpenDNS site using the OpenDNS API token
APIToken <OPENDNS-APITOKEN>	Configures the OpenDNS APIToken. This is the token provided you by CISCO at the time of subscribing for their OpenDNS service. • <OPENDNS-APITOKEN> – Provide the OpenDNS API token (should be a valid token). For every valid OpenDNS API token provided a device_id is returned. Apply this device_id to WLANs that are to be OpenDNS enabled. Once applied, DNS queries originating from associating clients are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. For information on configuring the device_id in the WLAN context, see *opendns*.

- `opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>`

opendns	Fetches the device_id from the OpenDNS site using the OpenDNS credentials
username <USERNAME>	Configures the OpenDNS user name. This is your OpenDNS email ID provided by CISCO at the time of subscribing for their OpenDNS service. • <USERNAME> – Provide the OpenDNS user name (should be a valid OpenDNS username).

password <OPENDNS-PSWD>	Configures the password associated with the user name specified in the previous step • <OPENDNS-PSWD> – Provide the OpenDNS password (should be a valid OpenDNS password).
label <LABEL>	Configures the network label. This the label (the user friendly name) of your network, and should be the same as the label (name) configured on the OpenDNS portal. • <LABEL> – Specify your network label. For every set of username, password, and label passed only one unique device_id is returned. Apply this device_id to WLANs that are to be OpenDNS enabled. Once applied, DNS queries originating from associating clients are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. For information on configuring the device_id in the WLAN context, see *opendns*.

Example

```
ap7131-E6D512#opendns username bob@examplecompany.com password opendns label
company_name
Connecting to OpenDNS server...
device_id = 0014AADF8EDC6C59
ap7131-E6D512#

nx9600-7F3C7F#opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073
device_id = 001480fe36dcb245
nx9600-7F3C7F#
```

Example Enabling OpenDNS Support

The following example shows how to enable OpenDNS support'

1 Fetch the OpenDNS device_id from the OpenDNS site.

a In the User/Privilege executable mode execute one of the following commands:

```
nx9500-6C874D#opendns APIToken <OPENDNS-APITOKEN>
nx9500-6C8809#opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073
device_id = 001480fe36dcb245
nx9500-6C8809#
OR
nx9500-6C8809#opendns username <USERNAME> password <OPENDNS-PSWD> label
<LABEL>
```

Note, the *OpenDNS API token* and/or *user account credentials* are provided the OpenDNS service provider when subscribing for the OpenDNS service.

b Apply the device_id fetched in the step 1 to the WLAN.

```
nx9500-6C8809(config-wlan-opendns)#opendns device-id <OPENDNS-DEVICE-ID>
nx9500-6C8809(config-wlan-opendns)#opendns device-id 001480fe36dcb245
nx9500-6C8809(config-wlan-opendns)#show context
wlan opendns
 ssid opendns
 bridging-mode local
 encryption-type none
 authentication-type none
 opendns device-id 001480fe36dcb245
nx9500-6C8809(config-wlan-opendns)#
```

Once applied, DNS queries originating from wireless clients associating with the WLAN are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet.

2 Configure a DHCP server policy, and set the DHCP pool's DNS server configuration to point to the OpenDNS servers.

```
nx9500-6C8809(config-dhcp-policy-opendns-pool-opendnsPool)#dns-server
208.67.222.222
```

Note, you can configure any one of the following OpenDNS servers: **208.67.222.222** OR **208.67.222.220**

```
nx9500-6C8809(config-dhcp-policy-opendns-pool-opendnsPool)#show context
 dhcp-pool opendnsPool
  dns-server  208.67.222.222
nx9500-6C8809(config-dhcp-policy-opendns-pool-opendnsPool)#
```

3 Apply the DHCP server policy configured in step 2 on the access point, controller, or service platform.

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#use dhcp-server-policy
opendns
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#show context include-factory
| include use
 use profile default-nx9000
 use rf-domain TechPubs
 use database-policy default
 use nsight-policy noc
 use dhcp-server-policy opendns
 use auto-provisioning-policy TechPubs
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#
```

When configured, DNS queries are forwarded by the access point, controller, or service platform to the specified OpenDNS resolver.

4 Configure an IP Access Control List with the following permit and deny rules:

```
nx9500-6C8809(config-ip-acl-OpenDNS)#permit udp any host 208.67.222.222 eq
dns rule-precedence 1 rule-description "allow dns queries only to OpenDNS"

nx9500-6C8809(config-ip-acl-OpenDNS)#deny udp any any eq dns rule-precedence
10 rule-description "block all DNS queries"

nx9500-6C8809(config-ip-acl-OpenDNS)#permit ip any any rule-precedence 100
rule-description "allow all other ip packets"

nx9500-6C8809(config-ip-acl-OpenDNS)#show context
ip access-list OpenDNS
permit udp any host 208.67.222.222 eq dns rule-precedence 1 rule-description
"allow dns queries only to OpenDNS"
deny udp any any eq dns rule-precedence 10 rule-description "block all dns
queries"
permit ip any any rule-precedence 100 rule-description "allow all other ip
packets"
nx9500-6C8809config-ip-acl-OpenDNS)#
```

When configured and applied in the WLAN context, the IP ACL prevents wireless clients from adding their own DNS servers to bypass the Web filtering and network policies enforced by OpenDNS.

5 Apply the IP ACL configured in step 4 in the WLAN context.

```
nx9500-6C8809(config-wlan-opendns)#use ip-access-list out OpenDNS
nx9500-6C8809(config-wlan-opendns)#show context
wlan opendns
 ssid opendns
 vlan 1
 bridging-mode local
 encryption-type none
 authentication-type none
 use ip-access-list in OpenDNS
 use ip-access-list out OpenDNS
 opendns device-id 0014AADF8EDC6C59
nx9500-6C8809(config-wlan-opendns)#
```

When applied to the WLAN, only the DNS queries directed to the OpenDNS server are forwarded. All other DNS queries are dropped.

3.1.40 page

Privileged Exec Mode Commands

Toggles controller paging. Enabling this command displays the CLI command output page by page, instead of running the entire output at once.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
page
```

Parameters

None

Example

```
rfs6000-81742D#page
rfs6000-81742D#
```

Related Commands

no	Disables controller paging

3.1.41 ping

Privileged Exec Mode Commands

Sends *Internet Controller Message Protocol* (ICMP) echo messages to a user-specified location

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ping <IP/HOSTNAME> {count <1-10000>|dont-fragment {count|size}|size <1-64000>|
source [<IP>|pppoe|vlan <1-4094>|wwan]}
```

Parameters

```
• ping <IP/HOSTNAME> {count <1-10000>|dont-fragment {count|size}|size <1-64000>|
source [<IP>|pppoe|vlan <1-4094>|wwan]}
```

<IP/HOSTNAME>	Specify the destination IP address or hostname to ping. When entered without any parameters, this command prompts for an IP address or a hostname.
count <1-10000>	Optional. Sets the pings to the specified destination • <1-10000> – Specify a value from 1 - 10000. The default is 5.
dont-fragment {count|size}	Optional. Sets the dont-fragment bit in the ping packet. Packets with the dont-fragment bit specified, are not fragmented. When a packet, with the dont-fragment bit specified, exceeds the specified *Maximum Transmission Unit* (MTU) value, an error message is sent from the device trying to fragment it. • count <1-10000> – Sets the pings to the specified destination from 1 - 10000. The default is 5. • size – <1-64000> – Sets the size of ping payload size from 1 - 64000 bytes. The default is 100 bytes.
size <1-64000>	Optional. Sets the ping packet's size in bytes • <1-64000> – Specify the ping payload size from 1 - 64000 bytes. The default is 100 bytes.
source [<IP>|pppoe|vlan <1-4094>|wwan]	Optional. Sets the source address or interface name. This is the source of the ICMP packet to the specified destination. • <IP> – Specifies the source IP address • pppoe – Selects the PPP over Ethernet interface • vlan <1-4094> – Selects the VLAN interface from 1 - 4094 • wwan – Selects the wireless WAN interface

Example

```
rfs6000-81742D#ping 192.168.13.13 count 4
PING 192.168.13.13 (192.168.13.13) 100(128) bytes of data.
108 bytes from 192.168.13.13: icmp_seq=1 ttl=64 time=0.356 ms
108 bytes from 192.168.13.13: icmp_seq=2 ttl=64 time=0.211 ms
108 bytes from 192.168.13.13: icmp_seq=3 ttl=64 time=0.199 ms
108 bytes from 192.168.13.13: icmp_seq=4 ttl=64 time=0.215 ms

--- 192.168.13.13 ping statistics ---
4 packets transmitted, 4 received, 0% packet loss, time 2999ms
rtt min/avg/max/mdev = 0.199/0.245/0.356/0.065 ms
rfs6000-81742D#

rfs6000-81742D#ping 10.233.89.182 source vlan 1
PING 10.233.89.182 (10.233.89.182) from 192.168.13.24 vlan1: 100(128) bytes of
data.
From 192.168.13.2 icmp_seq=1 Packet filtered
From 192.168.13.2 icmp_seq=2 Packet filtered
From 192.168.13.2 icmp_seq=3 Packet filtered
From 192.168.13.2 icmp_seq=4 Packet filtered
From 192.168.13.2 icmp_seq=5 Packet filtered

--- 10.233.89.182 ping statistics ---
5 packets transmitted, 0 received, +5 errors, 100% packet loss, time 3997ms

rfs6000-81742D#
```

3.1.42 ping6

Privileged Exec Mode Commands

Sends ICMPv6 echo messages to a user-specified IPv6 address

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ping6 <IPv6/HOSTNAME> {<INTF-NAME>|count <1-10000>|size <1-64000>}
```

Parameters

- `ping <IPv6/HOSTNAME> {<INTF-NAME>|count <1-10000>|size <1-64000>}`

<IPv6/HOSTNAME>	Specify the destination IPv6 address or hostname.
<INTF-NAME>	Optional. Specify the interface name for link local/broadcast address
count <1-10000>	Optional. Sets the pings to the specified IPv6 destination • <1-10000> – Specify a value from 1 - 10000. The default is 5.
size <1-64000>	Optional. Sets the IPv6 ping payload size in bytes • <1-64000> – Specify the ping payload size from 1 - 64000. The default is 100 bytes.

Usage Guidelines

To configure a device's IPv6 address, in the VLAN interface configuration mode, use the *ipv6 > address <IPv6-ADDRESS> command.* After configuring the IPv6 address, use the *ipv6 > enable* command to enable IPv6. For more information, see *ipv6*.

Example

```
rfs4000-880DA7#ping6 2001:10:10:10:10:10:10:2 count 6 size 200
PING 2001:10:10:10:10:10:10:2(2001:10:10:10:10:10:10:2) 200 data bytes
208 bytes from 2001:10:10:10:10:10:10:2: icmp_seq=1 ttl=64 time=0.509 ms
208 bytes from 2001:10:10:10:10:10:10:2: icmp_seq=2 ttl=64 time=0.323 ms
208 bytes from 2001:10:10:10:10:10:10:2: icmp_seq=3 ttl=64 time=0.318 ms
208 bytes from 2001:10:10:10:10:10:10:2: icmp_seq=4 ttl=64 time=0.317 ms
208 bytes from 2001:10:10:10:10:10:10:2: icmp_seq=5 ttl=64 time=0.314 ms
208 bytes from 2001:10:10:10:10:10:10:2: icmp_seq=6 ttl=64 time=0.318 ms

--- 2001:10:10:10:10:10:10:2 ping statistics ---
6 packets transmitted, 6 received, 0% packet loss, time 4999ms
rtt min/avg/max/mdev = 0.314/0.349/0.509/0.075 ms
rfs4000-880DA7#
```

3.1.43 pwd

Privileged Exec Mode Commands

Displays the full path of the present working directory, similar to the UNIX pwd command

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
pwd
```

Parameters

None

Example

```
rfs4000-229D58#pwd
flash:/
rfs4000-229D58#

rfs4000-229D58#dir
Directory of flash:/.

  drwx             Sat Jan  1 05:30:08 2000   tmptpd

rfs4000-229D58#
```

3.1.44 re-elect

Privileged Exec Mode Commands

Re-elects the tunnel controller (wireless controller or service platform)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
re-elect tunnel-controller {<WORD> {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

Parameters

- `re-elect tunnel-controller {<WORD> {on <DEVICE-NAME>}|on <DEVICE-NAME>}`

re-elect tunnel-controller	Re-elects the tunnel controller
<WORD> {on <DEVICE-NAME>}	Optional. Re-elects the tunnel controller on all devices whose preferred tunnel controller name matches <WORD> • on <DEVICE-NAME> – Optional. Re-elects the tunnel controller on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs4000-880DA7#re-elect tunnel-controller
OK
rfs4000-880DA7#
```

3.1.45 reload

Privileged Exec Mode Commands

Halts a device or devices and performs a warm reboot

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
reload {<DEVICE-MAC-OR-HOSTNAME>|at|cancel|force|in|on|staggered}

reload {(<DEVICE-MAC-OR-HOSTNAME>)}

reload {at <TIME> <1-31> <MONTH> <1993-2035> {on <DEVICE-OR-DOMAIN-NAME>}}

reload {cancel} {on <DEVICE-OR-DOMAIN-NAME>}

reload {force} {(<DEVICE-MAC-OR-HOSTNAME>|on <DOMAIN-NAME>|staggered)}

reload {force} {(<DEVICE-MAC-OR-HOSTNAME>)}

reload {force} {on <DOMAIN-NAME> {staggered}|staggered {<DEVICE-MAC-OR-HOSTNAME>|
on <DOMAIN-NAME>}} {containing <WORD>|exclude-controllers|exclude-rf-domain-
manager|filter <DEVICE-TYPE>}

reload {in <1-999>} {list|on}

reload {in <1-999>} {list {<LINE>|all}|on <DEVICE-OR-DOMAIN-NAME>}

reload {in <1-999>} {on <DEVICE-OR-DOMAIN-NAME>}

reload {on <DOMAIN-NAME>} {containing <WORD>|exclude-controllers|exclude-rf-
domain-manager|filter <DEVICE-TYPE>}

reload {staggered} {(<DEVICE-MAC-OR-HOSTNAME>)|on <DOMAIN-NAME>} {containing
<WORD>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}
```

Parameters

- `reload {(<DEVICE-MAC-OR-HOSTNAME>)}`

reload <DEVICE-MAC-OR-HOSTNAME>	Initiates device(s) reload and configures associated parameters The following keyword is recursive and allows you to specify multiple devices: • <DEVICE-MAC-OR-HOSTNAME> – Optional. Reloads a specified device(s), identified by the <DEVICE-MAC-OR-HOSTNAME> keyword. Specify the device's hostname or MAC address. **Note:** If no device is specified, the system reloads the logged device.

- `reload {at <TIME> <1-31> <MONTH> <1993-2035> {on <DEVICE-OR-DOMAIN-NAME>}}`

reload at	Initiates device(s) reload and configures associated parameters • at – Optional. Schedules a reload at a specified time and day. Use the following keywords to specify the time and day: <TIME>, <1-31>, <MONTH>, and <1993-2035>.
<TIME>	Specifies the time in the HH:MM:SS format

<1-31>	Specifies the day of the month from 1 - 31
<MONTH>	Specifies the month from Jan - Dec
<1993-2035>	Specifies the year from 1993 - 2035. It should be a valid 4 digit year.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Performs reload at the scheduled time, on a specified device or all devices within a specified RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain. When a RF Domain name is provided, all devices within the specified RF Domain are reloaded at the scheduled time. If no device is specified, the reload is scheduled on the logged device.

- `reload {cancel} {on <DEVICE-OR-DOMAIN-NAME>}`

reload cancel on <DEVICE-OR-DOMAIN-NAME>	Cancels pending/scheduled reloads of device(s) • cancel – Optional. Cancels all pending reloads • on <DEVICE-OR-DOMAIN-NAME> – Optional. Cancels reloads pending on a specified device or all devices within a specified RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain. If no device is specified, the system cancels reloads pending on the logged device.

- `reload {force} {(<DEVICE-MAC-OR-HOSTNAME>)}`

reload force	Initiates device(s) reload and configures associated parameters • force – Optional. Forces device(s) to reload, while ignoring conditions like upgrade in progress, unsaved changes, etc. Use the options provided to force a reload on a specified device or all devices in a RF Domain.
<DEVICE-MAC-OR-HOSTNAME>	This keyword is recursive and allows you to specify multiple devices. • <DEVICE-MAC-OR-HOSTNAME> – Optional. Forces a reload on a specified device identified by the <DEVICE-MAC-OR-HOSTNAME> keyword. Specify the device's hostname or MAC address. When executed, the specified device(s) are forced to halt and a warm reboot is performed. If no device is specified, the system forcefully reloads the logged device.

- `reload {force} {on <DOMAIN-NAME> {staggered}|staggered {<DEVICE-MAC-OR-HOSTNAME>|on <DOMAIN-NAME>}} {containing <WORD>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}`

reload force	Initiates device(s) reload and configures associated parameters • force – Optional. Forces device(s) to reload, while ignoring conditions like upgrade in progress, unsaved changes, etc. Use the options provided to force a reload on a specified device or all devices in a RF Domain.
on <DOMAIN-NAME> staggered	Optional. Forces a reload on all devices in a RF Domain • <DOMAIN-NAME> – Optional. Specify the name of the RF Domain. When executed, all devices within the specified RF Domain are forced to halt and a warm reboot is performed. • staggered – Optional. Enables staggered reload of devices (one at a time) without network impact. Use this option when rebooting multiple devices within an RF Domain. When executed, all devices within the specified RF Domain are forced to halt and reboot in a staggered manner.

staggered {<DEVICE-MAC-OR-HOSTNAME>| on <DOMAIN-NAME>}	Optional. Enables staggered reload of devices (one at a time) without network impact • <DEVICE-MAC-OR-HOSTNAME> – Optional. Forces a reload on specified device(s) identified by the <DEVICE-MAC-OR-HOSTNAME> keyword. Specify the device's hostname or MAC address. This is a recursive keyword that allows you to specify multiple devices. When executed, the specified device(s) are forced to halt and a warm reboot is performed. • on <DOMAIN-NAME> – Optional. Forces a reload on all devices in a RF Domain. Specify the name of the RF Domain. When executed, all devices within the specified RF Domain are forced to halt and a warm reboot is performed. If no device or RF Domain is specified, the system forcefully reloads the logged device.
{containing <WORD>| exclude-controllers| exclude-rf-domain-manager| filter <DEVICE-TYPE>}	When forcefully reloading devices in a RF Domain, you can use following options to filter specific devices or device types: • containing <WORD> – Optional. Filters out devices containing a specified sub-string in their hostnames • <WORD> – Optional. Provide the sub-string to match. All devices having host-names containing the provided sub-string are filtered and forcefully reloaded. • exclude-controllers – Optional. Excludes all controllers in the specified RF Domain from the reload process • exclude-rf-domain-manager – Optional. Excludes the RF Domain manager from the reload process • filter <DEVICE-TYPE> – Optional. Filters devices by the device type specified. Select the type of device. All devices, of the specified type, within the specified RF Domain, are forcefully reloaded. • <DEVICE-TYPE> – Select the type of device to reload. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, VX9000, t5.

- `reload {in <1-999>} {list {<LINE>|all}|on <DEVICE-OR-DOMAIN-NAME>}`

reload in <1-999>	Initiates device(s) reload and configures associated parameters • in – Optional. Performs a reload after a specified time period • <1-999> – Specify the time from 1 - 999 minutes
list {<LINE>|all}	Optional. Reloads all adopted devices or specified devices • <LINE> – Optional. Reloads listed devices. List all devices (to be reloaded) separated by a space. • all – Optional. Reloads all devices adopted by this controller
on <DEVICE-OR-DOMAIN-NAME>	Optional. Reloads a specified device or all devices within a specified RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `reload {on <DOMAIN-NAME>} {containing <WORD>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}`

reload on <DOMAIN-NAME>	Initiates device(s) reload and configures associated parameters • on <DOMAIN-NAME> – Optional. Enables reload of all devices in a RF Domain • <DOMAIN-NAME> – Specify the name of the RF Domain. When executed, all devices within the specified RF Domain are immediately halted and a warm reboot is performed. If no RF Domain is specified, the system reloads the logged device.
{containing <WORD>| exclude-controllers| exclude-rf-domain-manager| filter <DEVICE-TYPE>}	When reloading devices in a RF Domain, you can use following options to filter specific devices or device types: • containing <WORD> – Optional. Filters out devices containing a specified sub-string in their hostnames. • <WORD> – Optional. Provide the sub-string to match. All devices having hostnames containing the provided sub-string are filtered and forcefully reloaded. • exclude-controllers – Optional. Excludes all controllers in the specified RF Domain from the reload process • exclude-rf-domain-manager – Optional. Excludes the RF Domain manager from the reload process • filter <DEVICE-TYPE> – Optional. Filters devices by the device type specified. Select the type of device to reload. All devices, of the specified type, within the specified RF Domain, are forcefully reloaded. • <DEVICE-TYPE> – Select the type of device to reload. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, VX9000, t5. All devices of the type specified are reloaded.

- `reload {staggered} {(<DEVICE-MAC-OR-HOSTNAME>)|on <DOMAIN-NAME>} {containing <WORD>|exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}`

reload staggered	Initiates device(s) reload and configures associated parameters • staggered – Optional. Enables staggered reload of devices (one at a time) without network impact
{<DEVICE-MAC-OR-HOSTNAME>| on <DOMAIN-NAME>}	Use one of the following options to specify a single device, multiple devices, or a RF Domain • <DEVICE-MAC-OR-HOSTNAME> – Optional. Performs staggered reload on specified device(s) identified by the <DEVICE-MAC-OR-HOSTNAME> keyword. Specify the device's hostname or MAC address. This is a recursive keyword that allows you to specify multiple devices. When executed, the specified device(s) are halted and a warm reboot is performed. Multiple devices are halted and rebooted one at a time without impacting network functioning. • <DOMAIN-NAME> – Optional. Performs staggered reload of all devices in a RF Domain. Specify the name of the RF Domain. When executed, devices in the specified RF Domain are halted and rebooted one at a time without impacting network functioning. Use additional filter options to filter devices in the specified RF Domain. If no device or RF Domain is specified, the system reloads the logged device.

{containing <WORD>| exclude-controllers| exclude-rf-domain-manager| filter <DEVICE-TYPE>}	When reloading devices in a RF Domain, you can use following options to filter specific devices or device types: • containing <WORD> – Optional. Filters out devices containing a specified sub-string in their hostnames. • <WORD> – Optional. Provide the sub-string to match. All devices having host-names containing the provided sub-string are filtered and reloaded. • exclude-controllers – Optional. Excludes all controllers in the specified RF Domain from the reload process • exclude-rf-domain-manager – Optional. Excludes the RF Domain manager from the reload process • filter <DEVICE-TYPE> – Optional. Filters devices by the device type specified. Select the type of device. All devices, of the specified type, within the specified RF Domain, are reloaded. • <DEVICE-TYPE> – Select the type of device to reload. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, VX9000, t5.

Example

```
rfs7000-6DCD4B#reload at 12:30:00 31 Mar 2015 on rfs6000-81742D
Reload scheduled at 2015-03-31 12:30:00 UTC ...
rfs7000-6DCD4B#

rfs7000-6DCD4B#reload cancel on rfs6000-81742D
Scheduled reload cancelled.
rfs7000-6DCD4B#
```

The following example schedules a reload on all non-controller devices in the RF Domain ‘default’:

```
rfs7000-6DCD4B#reload on default exclude-controllers
ap8132-711728: OK

rfs7000-6DCD4B#
```

3.1.46 rename

Privileged Exec Mode Commands

Renames a file in the devices' file system

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rename <OLD-FILE-NAME> <NEW-FILE-NAME>
```

Parameters

- `rename <OLD-FILE-NAME> <NEW-FILE-NAME>`

<OLD-FILE-NAME>	Specify the file to rename.
<NEW-FILE-NAME>	Specify the new file name.

Example

```
rfs4000-880DA7#dir
Directory of flash:/.

  drwx             Wed Sep 14 13:54:10 2016   log

rfs4000-880DA7#
```

3.1.47 rmdir

Privileged Exec Mode Commands

Deletes an existing directory from the file system (only empty directories can be removed)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rmdir <DIR>
```

Parameters

- `rmdir <DIR>`

rmdir <DIR>	Specifies the directory name **Note:** The directory, specified by the <DIR> parameter, is removed from the file system.

Example

```
rfs4000-880DA7#dir
Directory of flash:/.

  drwx             Wed Sep 14 13:54:10 2016   log

3.1.48 self

Privileged Exec Mode Commands

Enters the logged device's configuration context

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
self
```

Parameters

None

Example

```
rfs6000-81742D#self
Enter configuration commands, one per line.  End with CNTL/Z.
rfs6000-81742D(config-device-00-15-70-81-74-2D)#
```

3.1.49 ssh

Privileged Exec Mode Commands

Opens a *Secure Shell* (SSH) connection between two network devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ssh <IP/HOSTNAME> <USERNAME> {<INF-NAME/LINK-LOCAL-ADD>}
```

Parameters

- `ssh <IP/HOSTNAME> <USERNAME> {<INF-NAME/LINK-LOCAL-ADD>}`

<IP/HOSTNAME>	Specify the remote system's IP address or hostname.
<USERNAME>	Specify the name of the user requesting the SSH connection.
<INF-NAME/ LINK-LOCAL-ADD>	Optional. Specify the interface's name or link local address.

Usage Guidelines

To exit the other device's context, use the command that is relevant to that device.

Example

```
nx9500-6C8809#ssh 192.168.13.16 admin
admin@192.168.13.16's password:
rfs6000-81742D>
```

3.1.50 t5

Privileged Exec Mode Commands

Executes following operations on a T5 device through the WiNG controller:

- copy, rename, and delete files on the T5 device's file system
- write running configuration to the T5 device's memory

The T5 switch is a means of providing cost-effective, high-speed, wall-to-wall coverage across a building. The T5 switch leverages the in-building telephone lines to extend Ethernet and Wireless LAN networks without additional expenditure on re-wiring. This setup is ideally suited for hotels, providing high-speed Wi-Fi coverage to guest rooms.

The entire setup consists of the DSL T5 switch, TW-510 Ethernet wallplates, and TW-511 wireless wallplate access points. Replace the phone jack plate in a room with the TW-511 delivers 802.11 a/b/g/n and extend wireless connectivity in that room and the neighboring rooms. These TW-511 wallplates (also referred to as the CPEs) are connected to the T5 switch over the DSL interface using a phone block.

The T5 switch is adopted and managed through a WiNG controller. The connection between the T5 and WiNG switches is over a WebSocket.

NOTE: For more information on other T5 CPE related commands, see *cpe*.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
t5 [copy <SOURCE-FILE-NAME> <DEST-FILE-NAME>|delete <FILE-NAME>|rename <SOURCE-FILE-NAME> <DEST-FILE-NAME>|write memory] {on <T5-DEVICE-NAME>}
```

Parameters

```
• t5 [copy <SOURCE-FILE-NAME> <DEST-FILE-NAME>|delete <FILE-NAME>|rename <SOURCE-FILE-NAME> <DEST-FILE-NAME>|write memory] {on <T5-DEVICE-NAME>}
```

copy <SOURCE-FILE-NAME> <DEST-FILE-NAME>	Copies file to an external server • <SOURCE-FILE-NAME> – Specify the source file name. • <DEST-FILE-NAME> – Specify the destination file name. The content from the source file is copied to the destination file. The source or destination files can be local or remote FTP or TFTP files. The source file also can be a pre-defined keyword. At least one of the files should be a local file. Use this command to copy the startup and/or running configurations to an external server.
delete <FILE-NAME>	Deletes files on the T5 device's file system • <FILE-NAME> – Specify the file name. The specified file is deleted.

rename <SOURCE-FILE-NAME> <DEST-FILE-NAME>	Renames a file on the T5 device's file system • <SOURCE-FILE-NAME> – Specify the source file name • <DEST-FILE-NAME> – Specify the new file name. The source file is renamed to the input provided here.
write memory	Writes running configuration to an adopted T5 device's memory • memory – Writes running configuration to the T5 device's *non-volatile* (NV) memory.
on <T5-DEVICE-NAME>	Optional. Executes these operation on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname.

Example

```
nx9500-6C8809#t5 write memory on t5-ED7C6C
Success
nx9500-6C8809#
```

3.1.51 telnet

Privileged Exec Mode Commands

Opens a Telnet session between two network devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
telnet <IP/HOSTNAME> {<TCP-PORT>} {<INTF-NAME>}
```

Parameters

- `telnet <IP/HOSTNAME> {<TCP-PORT>} {<INTF-NAME>}`

<IP/HOSTNAME>	Configures the remote system's IP (IPv4 or IPv6) address or hostname. The Telnet session will be established between the connecting system and the remote system. • <IP> – Specify the remote system's IPv4 or IPv6 address or hostname.
<TCP-PORT>	Optional. Specify the *Transmission Control Protocol* (TCP) port.
<INTF-NAME>	Optional. Specify the interface name for the link local address.

Usage Guidelines

To exit the other device's context, use the command relevant to that device.

Example

```
nx9500-6C8809#telnet 192.168.13.22

Entering character mode
Escape character is '^]'.

AP7131 release 5.9.0.0-012D
ap7131-11E6C4 login: admin
Password:
ap7131-11E6C4>
```

3.1.52 terminal

Privileged Exec Mode Commands

Sets the number of characters per line, and the number of lines displayed within the terminal window

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
terminal [length|width] <0-512>
```

Parameters

- `terminal [length|width] <0-512>`

length <0-512>	Sets the number of lines displayed on the terminal window • <0-512> – Specify a value from 0 - 512.
width <0-512>	Sets the width or number of characters displayed on the terminal window • <0-512> – Specify a value from 0 - 512.

Example

```
rfs6000-81742D#terminal length 150

rfs6000-81742D#terminal width 215

rfs6000-81742D#show terminal
Terminal Type: xterm
Length: 150     Width: 215
rfs6000-81742D#
```

Related Commands

no	Resets the width of the terminal window or the number of lines displayed on a terminal window

3.1.53 time-it

Privileged Exec Mode Commands

Verifies the time taken by a particular command between request and response

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
time-it <COMMAND>
```

Parameters

- `time-it <COMMAND>`

time-it <COMMAND>	Verifies the time taken by a particular command to execute and provide a result • <COMMAND> – Specify the command name.

Example

```
rfs6000-81742D#time-it config terminal
Enter configuration commands, one per line.  End with CNTL/Z.
That took 0.00 seconds..
rfs6000-81742D(config)#
```

3.1.54 traceroute

Privileged Exec Mode Commands

Traces the route to a defined destination

Use '--help' or '-h' to display a complete list of parameters for the traceroute command

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
traceroute <WORD>
```

Parameters

- `traceroute <WORD>`

<WORD>	Traces the route to a IP address or hostname • <WORD> – Specify the IPv4 address or hostname.

Example

```
nx9500-6C8809#traceroute 192.168.13.16
traceroute to 192.168.13.16 (192.168.13.16), 30 hops max, 46 byte packets
 1  192.168.13.16 (192.168.13.16)  0.479 ms  0.207 ms  0.199 ms
nx9500-6C8809#
```

3.1.55 traceroute6

Privileged Exec Mode Commands

Traces the route to a specified IPv6 destination

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
traceroute6 <WORD>
```

Parameters

- `traceroute6 <WORD>`

traceroute6 <WORD>	Traces the route to a IPv6 address or hostname • <WORD> – Specify the IPv6 address or hostname.

Example

```
rfs4000-880DA7#traceroute6 2001:10:10:10:10:10:10:2
traceroute to 2001:10:10:10:10:10:10:2 (2001:10:10:10:10:10:10:2) from
2001:10:10:10:10:10:10:1, 30 hops max, 16 byte packets
 1  2001:10:10:10:10:10:10:2 (2001:10:10:10:10:10:10:2)  0.622 ms  0.497 ms  0.531
ms
rfs4000-880DA7#
```

3.1.56 upgrade

Privileged Exec Mode Commands

Upgrades a device's software image

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
upgrade [<FILE>|<URL>|dhcp-vendor-options]

upgrade [<FILE>|<URL>] {background|on <DEVICE-NAME>|on <RF-DOMAIN-NAME>}

upgrade dhcp-vendor-options {<DEVICE-NAME>|on <RF-DOMAIN-NAME>}

upgrade dhcp-vendor-options {<DEVICE-NAME>} {<DEVICE-NAME>}

upgrade dhcp-vendor-options {on <RF-DOMAIN-NAME>} {containing <SUB-
STRING>|exclude-controllers|exclude-rf-domain-managers|filter <DEVICE-TYPE>}
```

Parameters

- `upgrade [<FILE>|<URL>] {background|on <DEVICE-NAME>|on <RF-DOMAIN-NAME>}`

<FILE>	Specify the target firmware image location in the following format: cf:/path/file usb1:/path/file usb2:/path/file usb<n>:/path/file
<URL>	Specify the target firmware image location. Use one of the following formats: IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file http://<hostname|IP>[:port]/path/file cf:/path/file usb<n>:/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file http://<hostname|[IPv6]>[:port]/path/file
background	Optional. Performs upgrade in the background

on <DEVICE-NAME>	Optional. Upgrades the software image on a specified remote device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
on <RF-DOMAIN-NAME>	Optional. Upgrades the software image on all devices within a specified RF Domain • <RF-DOMAIN-NAME> – Specify the name of the RF Domain.

• `upgrade dhcp-vendor-options {<DEVICE-NAME>} {<DEVICE-NAME>}`

dhcp-vendor-options	Uses DHCP vendor options to upgrade device(s)
<DEVICE-NAME> {<DEVICE-NAME>}	Optional. Uses DHCP vendor options to upgrade a specified device. Specify the name of the AP, wireless controller, or service platform. • <DEVICE-NAME> – Optional. You can optionally specify multiple comma-separated device names/MAC addresses to upgrade.

• `upgrade dhcp-vendor-options {on <RF-DOMAIN-NAME>} {containing <SUB-STRING>| exclude-controllers|exclude-rf-domain-managers|filter <DEVICE-TYPE>}`

dhcp-vendor-options	Uses DHCP vendor options to upgrade device(s)
on <RF-DOMAIN-NAME> {containing <SUB-STRING>| exclude-controllers| exclude-rf-domain-managers| filter <DEVICE-TYPE>}	Optional. Uses DHCP vendor options to upgrade all devices or specified device(s) within the RF Domain identified by the <RF-DOMAIN-NAME> keyword • <RF-DOMAIN-NAME> – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, all devices within the RF Domain are upgraded. These filters are: • containing <SUB-STRING> – Optional. Upgrades all devices, within the specified RF Domain, containing a specified sub-string in their hostname • <SUB-STRING> – Specify the sub-string to match. • exclude-controllers – Optional. Upgrades all devices, within the specified RF Domain, excluding controllers. Since only a NOC controller is capable of adopting other controllers, use this option when executing the command on a NOC controller. • exclude-rf-domain-manager – Optional. Upgrades all devices, within the specified RF Domain, excluding RF Domain managers. Use this option when executing the command on the NOC, Site controller, or RF Domain manager. • filter <DEVICE-TYPE> – Optional. Executes the command on all devices, within the specified RF Domain, of a specified type • <DEVICE-TYPE> – Specify the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. Upgrades all devices of the type specified here. For example, if AP6521 is the device-type specified, all AP6521s within the specified RF Domain are upgraded

Example

```

3.1.57 upgrade-abort

Privileged Exec Mode Commands

Aborts an ongoing software image upgrade

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
upgrade-abort {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `upgrade-abort {on <DEVICE-OR-DOMAIN-NAME>}`

upgrade-abort	Aborts an ongoing software image upgrade
on <DEVICE-OR-DOMAIN-NAME>	Optional. Aborts an ongoing software image upgrade on a specified device or domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
rfs4000-229D58#upgrade ftp://anonymous:anonymous@192.168.13.10/LatestBuilds/W59/
RFS4000-5.9.0.0-012D.img

Update error:  Aborted
rfs4000-229D58#
```

3.1.58 watch

Privileged Exec Mode Commands

Repeats a specified CLI command at periodic intervals

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
watch <1-3600> <LINE>
```

Parameters

- `watch <1-3600> <LINE>`

watch <1-3600>	Repeats a CLI command at a specified interval
<1-3600>	Select an interval from 1 - 3600 seconds. Pressing CTRL-Z halts execution of the command.
<LINE>	Specify the CLI command name.

Example

```
rfs6000-81742D#watch 1 show clock
rfs6000-81742D#
```

3.1.59 exit

Privileged Exec Mode Commands

Ends the current CLI session and closes the session window

For more information, see *exit*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
exit
```

Parameters

None

Example

```
rfs6000-81742D#exit
```

3.1.60 raid

Privileged Exec Mode Commands

Enables *Redundant Array of Independent Disks* (RAID) management

RAID is a group of one or more independent, physical drives, referred to as an array or drive group, These physically independent drives are linked together and appear as a single storage unit or multiple virtual drives. Replacing a single, large drive system with an array, improves performance (input and output processes are faster) and increases fault tolerance within the data storage system.

In an array, the drives can be organized in different ways, resulting in different RAID types. Each RAID type is identified by a number, which determines the RAID level. The common RAID levels are 0, 00, 1, 5, 6, 50 and 60. The WiNG MegaRAID implementation supports RAID-1, which provides data mirroring, but does not support data parity. RAID-1 consists of a two-drive array, where the data is simultaneously written on both drives, ensuring total data redundancy. In case of a drive failure the information on the other drive is used to rebuild the failed drive.

An array is said to be degraded when one of its drives has failed. A degraded array continues to function and can be rebooted using the one remaining functional drive. When a drive fails, the chassis sounds an alarm (if enabled), and the CLI prompt changes to “RAID degraded”. The failed drive is automatically replaced with a hot spare (provided a spare is installed). The spare is used to re-build the array.

Use this command to:

- Verify the current array status
- Start and monitor array consistency checks
- Retrieve date and time of the last consistency check
- Shut down drives before physically removing them
- Install new drives
- Assign drives as hot spares
- Identify a degraded drive
- Deactivate an alarm (triggered when a drive is removed from the array)

Supported in the following platforms:

- Service Platforms — NX7530, NX9500, NX9510

NOTE: RAID controller drive arrays are available within NX7530 and NX95XX series service platforms (NX9500 and NX9510 models) only. However, they can be administrated on behalf of a NX9500 profile by a different model service platform or controller. The NX9500 service platform includes a single Intel MegaRAID controller, configured to provide a single virtual drive. This virtual drive is of the RAID-1 type, and has a maximum of two physical drives. In addition to these two drives, there are three hot spares, which are used in case of a primary drive failure.

Syntax

```
raid [check|install|locate|remove|silence|spare]

raid [check|silence]

raid [install|locate|remove|spare] drive <0-4>
```

Parameters

- `raid [check|silence]`

check	Starts a consistency check on the RAID array. Use the *show > raid* command to view consistency check status. A consistency check verifies the data stored in the array. When regularly executed, it helps protect against data corruption, and ensures data redundancy. Consistency checks also warn of potential disk failures.
silence	Deactivates an alarm When enabled, an audible alarm is triggered when a drive in the array fails. The *silence* command deactivates the alarm (sound). To enable RAID alarm, in the device configuration mode, use the *raid > alarm > enable* command. A NX9500 profile can also have the RAID alarm feature activated. For more information on the enabling RAID alarm, see *raid*.

- `raid [install|locate|remove|spare] drive <0-4>`

install <0-4>	Installs a new drive, inserted in one of the available slots, in the array. Specify the drive number. Drives 0 and 1 are the array drives. Drives 2, 3, and 4 are the hot spare drives. You can include the new drive in a degraded array, or enable it as a hot spare. If the array is in a degraded state, the re-build process is triggered and the new drive is used to repair the degraded array.
locate <0-4>	Enables LEDs to blink on a specified drive. Specify the drive number. Blinking LEDs enable you correctly locate a drive.
remove <0-4>	Removes (shuts downs) a disk from the array, before it is physically removed from its slot. Specify the drive number containing the disk. Use this command to also remove a hot spare.
spare <0-4>	Converts an unused drive into a hot spare. Specify the drive number.

Example

```
nx9500-6C874D#raid install drive 0
Error: Input Error: Drive 0 is already member of array, can't be added
nx9500-6C874D#
```

4 GLOBAL CONFIGURATION COMMANDS

This chapter summarizes the global-configuration commands in the CLI command structure.

The term global indicates characteristics or features effecting the system as a whole. Use the Global Configuration Mode to configure the system globally, or enter specific configuration modes to configure specific elements (such as interfaces or protocols). Use the configure terminal command (under PRIV EXEC) to enter the global configuration mode.

The following example describes the process of entering the global configuration mode from the PRIV EXEC mode:

```
<DEVICE>#configure terminal
<DEVICE>(config)#
```

NOTE: The system prompt changes to indicate you are now in the global configuration mode. The prompt consists of the device host name followed by (config) and a pound sign (#).

Commands entered in the global configuration mode update the running configuration file as soon as they are entered. However, these changes are not saved in the startup configuration file until a *commit write memory* command is issued.

```
<DEVICE>(config)#?
Global configuration commands:
aaa-policy                              Configure a
                                          authentication/accounting/authorization
                                          policy

  bonjour-gw-forwarding-policy            Bonjour Gateway forwarding policy
  bonjour-gw-query-forwarding-policy      Bonjour Gateway Query forwarding policy
  captive-portal                          Configure a captive portal
  clear                                   Clear
  client-identity                         Client identity (DHCP Device
                                          Fingerprinting)
```

```
client-identity-group               Client identity group (DHCP Fingerprint
                                    Database)
clone                               Clone configuration object
crypto-cmp-policy                   CMP policy
customize                           Customize the output of summary cli
                                    commands
database-client-policy              Configure database client policy
database-policy                     Configure database policy
device                              Configuration on multiple devices
device-categorization               Configure a device categorization object
dhcp-server-policy                  DHCP server policy
dhcpv6-server-policy                DHCPv6 server related configuration
dns-whitelist                       Configure a whitelist
event-system-policy                 Configure a event system policy
ex3500                              Ex3500 device
ex3500-management-policy            Configure a ex3500 management policy
ex3500-qos-class-map-policy         Configure a ex3500 qos class-map policy
ex3500-qos-policy-map               Configure a ex3500 qos policy-map
ex3524                              EX3524 wireless controller
ex3548                              EX3548 wireless controller
firewall-policy                     Configure firewall policy
global-association-list             Configure a global association list
guest-management                    Configure a guest management policy
help                                Description of the interactive help
                                    system
host                                Enter the configuration context of a
                                    device by specifying its hostname
igmp-snoop-policy                   Create igmp snoop policy
inline-password-encryption          Store encryption key in the startup
                                    configuration file
ip                                  Internet Protocol (IP)
ipv6                                Internet Protocol version 6 (IPv6)
ipv6-router-advertisement-policy    IPv6 Router Advertisement related
                                    configuration
l2tpv3                              L2tpv3 tunnel protocol
mac                                 MAC configuration
management-policy                   Configure a management policy
meshpoint                           Create a new MESHPOINT or enter
                                    MESHPOINT configuration context for one
                                    or more MESHPOINTs
meshpoint-qos-policy                Configure a meshpoint quality-of-service
                                    policy
mint-policy                         Configure the global mint policy
nac-list                            Configure a network access control list
no                                  .
nsight-policy                       Configure a Nsight policy
nx45xx                              NX45XX integrated services platform
nx5500                              NX5500 wireless controller
nx65xx                              NX65XX integrated services platform
nx75xx                              NX75XX wireless controller
nx9000                              NX9000 wireless controller
passpoint-policy                    Configure a passpoint policy
password-encryption                 Encrypt passwords in configuration
profile                             Profile related commands - if no
                                    parameters are given, all profiles are
                                    selected
radio-qos-policy                    Configure a radio quality-of-service
                                    policy
radius-group                        Configure radius user group parameters
radius-server-policy                Create device onboard radius policy
radius-user-pool-policy             Configure Radius User Pool
rename                              Clone configuration object
replace                             Replace configuration object
rf-domain                           Create a RF Domain or enter rf-domain
                                    context for one or more rf-domains
rfs4000                             RFS4000 wireless controller
rfs6000                             RFS6000 wireless controller
rfs7000                             RFS7000 wireless controller
```

```
  roaming-assist-policy                Configure a roaming-assist policy
  role-policy                          Role based firewall policy
  route-map                            Dynamic routing route map Configuration
  routing-policy                       Policy Based Routing Configuration
  rtl-server-policy                    Configure a rtl server policy
  schedule-policy                      Configure a schedule policy
  self                                 Config context of the device currently
                                       logged into
  sensor-policy                        Configure a sensor policy
  smart-rf-policy                      Configure a Smart-RF policy
  t5                                   T5 DSL switch
  url-filter                           Configure a url filter
  url-list                             Configure a URL list
  vx9000                               VX9000 wireless controller
  web-filter-policy                    Configure a web filter policy
  wips-policy                          Configure a wips policy
  wlan                                 Create a new WLAN or enter WLAN
                                       configuration context for one or more
                                       WLANs
  wlan-qos-policy                      Configure a wlan quality-of-service
                                       policy
  write                                Write running configuration to memory or
                                       terminal

  clrscr                               Clears the display screen
  commit                               Commit all changes made in this session
  do                                   Run commands from Exec mode
  end                                  End current mode and change to EXEC mode
  exit                                 End current mode and down to previous
                                       mode
  revert                               Revert changes
  service                              Service Commands

```

4.1 Global Configuration Commands

- *GLOBAL CONFIGURATION COMMANDS*

The following table summarizes Global Configuration mode commands:

Table 4.1 *Global Config Commands*

Command	Description	Reference
aaa-policy	Creates a AAA policy and enters its configuration mode. This policy enables administrators to define access control within the network.	*page 4-9*
aaa-tacacs-policy	Creates a AAA-TACACS policy and enters its configuration mode. This policy provides access control to network devices such as routers, network access servers, and other computing devices through centralized servers.	*page 4-20*
alias	Creates various types of aliases, such as network, VLAN, network-group, network-service, encrypted-string, hashed -string, etc.	*page 4-11*
ap6521	Adds an AP6521 to the network	*page 4-22*
ap6522	Adds an AP6522 to the network	*page 4-23*
ap6532	Adds an AP6532 to the network	*page 4-24*
ap6562	Adds an AP6562 to the network	*page 4-25*
ap71xx	Adds an AP7161 to the network	*page 4-26*
ap7502	Adds an AP7502 to the network	*page 4-27*
ap7522	Adds an AP7522 to the network	*page 4-28*
ap7532	Adds an AP7532 to the network	*page 4-29*
ap7562	Adds an AP7562 to the network	*page 4-30*
ap81xx	Adds an AP81XX to the network	*page 4-31*
ap82xx	Adds an AP82XX to the network	*page 4-32*
ap8432	Adds an AP8432 to the network	*page 4-33*
ap8533	Adds an AP8533 to the network	*page 4-34*
application	Creates an application definition and enters its configuration mode. This command allows you to create a customized application detection definition.	*page 4-35*
application-group	Creates an application group and enters its configuration mode	*page 4-43*
application-policy	Creates an application policy and enters its configuration mode. This policy defines the actions executed on recognized HTTP (e.g. Facebook), enterprise (e.g. Webex) and peer-to-peer (e.g. gaming) applications or application-categories.	*page 4-50*
association-acl-policy	Creates an association ACL policy and enters its configuration mode. This policy restricts access by specifying a client MAC address or range of addresses to either include or exclude from WLAN connectivity.	*page 4-73*
auto-provisioning-policy	Creates an auto provisioning policy and enters its configuration mode. This policy defines the process by which an access point discovers controllers and associates with it.	*page 4-74*
bgp	Configures *Border Gateway Protocol* (BGP) settings	*page 4-76*

Table 4.1 *Global Config Commands*

Command	Description	Reference
bonjour-gw-discovery-policy	Creates a Bonjour GW Discovery policy and enters its configuration mode. This policy configures the VLANs on which Bonjour services are located.	*page 4-78*
bonjour-gw-forwarding-policy	Configures a Bonjour GW Forwarding policy and enters its configuration mode. This policy enables the discovery of services on VLANs not visible to the device running the Bonjour Gateway.	*page 4-80*
bonjour-gw-query-forwarding-policy	Creates a Bonjour GW Query Forwarding policy and enters its configuration mode. This policy enables Bonjour query forwarding across multiple VLANs.	*page 4-82*
captive portal	Creates a captive portal and enters its configuration mode	*page 4-83*
clear	Clears the event history	*page 4-136*
client-identity	Creates a client identity definition and enters its configuration mode. This feature enables client identification through DHCP device fingerprinting.	*page 4-137*
client-identity-group	Creates a new client identity group and enters its configuration mode	*page 4-146*
clone	Clones a specified configuration object	*page 4-154*
crypto-cmp-policy	Creates a crypto *Certificate Management Protocol* (CMP) policy and enters its configuration mode. CMP is an Internet protocol designed to obtain and manage digital certificates in a *Public Key Infrastructure* (PKI) network.	*page 4-155*
customize	Customizes the CLI command summary output	*page 4-156*
database-client-policy	Creates a database client policy and enters its configuration mode. The database client policy configures the IP address or hostname of the VX9000 hosting the *captive-portal/NSight database*. Use this option when deploying a split NSight/EGuest deployment.	*page 4-167*
database-policy	Creates a database policy and enters its configuration mode. This policy enables the database, and also configures the database replica set.	*page 4-174*
device	Specifies configuration on multiple devices	*page 4-182*
device-categorization	Creates a device categorization list and enters its configuration mode. The list categorizes devices as sanctioned or neighboring. Categorization of devices enables quick identification and blocking of unsanctioned devices in the network.	*page 4-184*
dhcp-server-policy	Creates a DHCP server policy and enters its configuration mode. This policy allows hosts on an IP network to request and be assigned IP addresses and discover information about the network.	*page 4-190*
dhcpv6-server-policy	Creates a DHCPv6 server policy and enters its configuration mode. This policy configures hosts with IPv6 addresses, IP prefixes and other configuration attributes required on an IPv6 network.	*page 4-191*
dns-whitelist	Creates a DNS whitelist and enters its configuration mode. A DNS whitelist is used with a captive portal to provide access services to requesting wireless clients.	*page 4-193*

Table 4.1 *Global Config Commands*

Command	Description	Reference
event-system-policy	Creates an Event system policy and enters its configuration mode. This policy enables administrators to create notification mechanisms using one, some, or all of the SNMP, syslog, controller forwarding, or email notification options available to the controller or service platform.	*page 4-199*
ex3500	Creates an EX3500 time range list and enters its configuration mode	*page 4-216*
ex3500-management-policy	Creates an EX3500 management policy and enters its configuration mode. This policy controls access to the EX3500 switch from management stations using SNMP.	*page 4-222*
ex3500-qos-class-map-policy	Creates an EX3500 QoS class map policy and enters its configuration mode. The QoS policy map assigns priority to mission critical EX3500 switch data traffic, prevent EX3500 switch bandwidth congestion, and prevent packet drops.	*page 4-243*
ex3500-qos-policy-map	Creates an EX3500 QoS policy map and enters its configuration mode. This policy defines rules that filter traffic exchanged between the EX3500 switch and its connected devices.	*page 4-251*
ex3524	Adds a EX3524 switch to the network	*page 4-266*
ex3548	Adds a EX3548 switch to the network	*page 4-268*
firewall-policy	Creates a firewall policy and enters its configuration mode. This policy configures safe guards against *denial of service* (DoS) attacks and packet storms. It also configures firewall parameters, such as logging, application layer gateway, TCP protocol checks, state flow checks, etc.	*page 4-269*
global-association-list	Creates a global list of client MAC addresses	*page 4-271*
guest-management	Creates a guest management policy and enters its configuration mode. This policy redirects guest users to a registration portal, upon association to a captive portal *Service Set Identifier* (SSID).	*page 4-275*
host	Sets the system's network name	*page 4-286*
inline-password-encryption	Stores the encryption key in the startup configuration file	*page 4-287*
ip	Creates a IP *access control list* (ACL) and/or a *Simple Network Management Protocol* (SNMP) ACL, and enters its configuration mode	*page 4-288*
ipv6	Creates a IPv6 ACL and enters its configuration mode	*page 4-290*
ipv6-router-advertisement-policy	Creates an IPv6 *router advertisement* (RA) policy and enters its configuration mode	*page 4-291*
l2tpv3	Creates *Layer 2 Tunneling Protocol Version 3* (L2TPV3) tunnel policy and enters its configuration mode. This policy defines control and encapsulation protocols for tunneling layer 2 frames between two IP nodes.	*page 4-309*
mac	Configures MAC access lists (goes to the MAC ACL mode)	*page 4-311*
management-policy	Creates a management policy and enters its configuration context. This policy configures services that run on a device, such as welcome messages, banners, etc.	*page 4-312*
meshpoint	Creates a meshpoint and enters its configuration mode	*page 4-314*

Table 4.1 *Global Config Commands*

Command	Description	Reference
meshpoint-qos-policy	Creates a meshpoint *quality of service* (QoS) policy and enters its configuration mode	*page 4-316*
mint-policy	Creates a MiNT security policy and enters its configuration mode	*page 4-317*
nac-list	Creates a network ACL and enters its configuration mode	*page 4-318*
no	Negates a command or sets its default	*page 4-324*
nsight-policy	Creates an NSight policy and enters its configuration mode	*page 4-328*
passpoint-policy	Creates a new passpoint policy and enters its configuration mode	*page 4-339*
password-encryption	Enables password encryption	*page 4-341*
profile	Creates a device profile and enters its configuration mode	*page 4-342*
radio-qos-policy	Creates a radio qos policy and enters its configuration mode	*page 4-346*
radius-group	Creates a RADIUS group and enters its configuration mode	*page 4-347*
radius-server-policy	Creates a RADIUS server policy and enters its configuration mode	*page 4-348*
radius-user-pool-policy	Creates a RADIUS user pool policy and enters its configuration mode	*page 4-350*
rename	Renames and existing *top-level object* (TLO)	*page 4-351*
replace	Selects an existing device by its MAC address or hostname and replaces it with a new device having a different MAC address	*page 4-353*
rf-domain	Creates an RF Domain and enters its configuration mode	*page 4-355*
rfs4000	Adds an RFS4000 to the network	*page 4-393*
rfs6000	Adds an RFS6000 to the network	*page 4-392*
nx5500	Adds an NX5500 to the network	*page 4-394*
nx75xx	Adds an NX75XX to the network	*page 4-395*
nx9000	Adds a NX9500 or NX9510 to the network	*page 4-396*
roaming-assist-policy	Configures a roaming assist policy and enters its configuration mode. This policy enables access points to assist wireless clients in making roaming decisions, such as which access point to connect, etc.	*page 4-397*
role-policy	Creates a role policy and enters its configuration mode	*page 4-399*
route-map	Creates a dynamic BGP route map and enters its configuration mode	*page 4-400*
routing-policy	Creates a routing policy and enters its configuration mode	*page 4-401*
rtl-server-policy	Creates an RTL server policy and enters its configuration mode. The RTL server policy provides the exact location (URL) at which the Euclid server can be reached.	*page 4-402*
schedule-policy	Creates a schedule policy and enters its configuration mode	*page 4-408*
self	Displays a logged device's configuration context	*page 4-415*
sensor-policy	Creates a sensor policy and enters its configuration mode	*page 4-416*
smart-rf-policy	Creates a Smart RF policy and enters its configuration mode	*page 4-425*

Table 4.1 *Global Config Commands*

Command	Description	Reference
t5	Configures a t5 wireless controller. This command is applicable only on the RFS4000, RFS6000, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, and VX9000 platforms.	*page 4-427*
web-filter-policy	Creates a Web Filtering policy and enters its configuration mode	*page 4-429*
wips-policy	Creates a WIPS policy and enters its configuration mode	*page 4-440*
wlan	Creates a *Wireless Local Area Network* (WLAN) and enters its configuration mode	*page 4-441*
wlan-qos-policy	Creates a WLAN QoS policy and enters its configuration mode	*page 4-539*
url-filter	Creates an URL filter and enters its configuration mode. URL filtering is a licensed feature.	*page 4-541*
url-list	Creates an URL list and enters its configuration mode.	*page 4-555*
vx9000	Configures a *Virtual WLAN Controller* (V-WLC) in a *virtual machine* (VM) environment	*page 4-561*

NOTE: For more information on common commands (clrscr, commit, help, revert, service, show, write, and exit), see *COMMON COMMANDS*.

NOTE: The input parameter <HOSTNAME>, wherever used in syntaxes across this chapter, cannot include an underscore (_) character.

4.1.1 aaa-policy

Global Configuration Commands

Configures an *Authentication, Accounting, and Authorization* (AAA) policy. Network administrators can use an AAA policy to define access control within the network.

A controller, service platform, or access point can interoperate with external RADIUS and LDAP servers (AAA Servers) to provide an additional user database and authentication resource. Each WLAN can maintain its own unique AAA configuration. Up to six servers can be configured for providing AAA services.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
aaa-policy <AAA-POLICY-NAME>
```

Parameters

- `aaa-policy <AAA-POLICY-NAME>`

<AAA-POLICY-NAME>	Specify the AAA policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#aaa-policy test
rfs6000-81742D(config-aaa-policy-test)#?
AAA Policy Mode commands:
  accounting            Configure accounting parameters
  attribute             Configure RADIUS attributes in access and accounting
                        requests
  authentication        Configure authentication parameters
  health-check          Configure server health-check parameters
  mac-address-format    Configure the format in which the MAC address must be
                        filled in the Radius-Request frames
  no                    Negate a command or set its defaults
  proxy-attribute       Configure radius attribute behavior when proxying
                        through controller or rf-domain-manager
  server-pooling-mode   Configure the method of selecting a server from the
                        pool of configured AAA servers
  use                   Set setting to use

  clrscr                Clears the display screen
  commit                Commit all changes made in this session
  do                    Run commands from Exec mode
  end                   End current mode and change to EXEC mode
  exit                  End current mode and down to previous mode
  help                  Description of the interactive help system
  revert                Revert changes
  service               Service Commands
  show                  Show running system information
  write                 Write running configuration to memory or terminal

rfs6000-81742D(config-aaa-policy-test)#
```

Related Commands

no	Removes an existing AAA policy

NOTE: For more information on the AAA policy commands, see *Chapter 8, AAA-POLICY*.

4.1.2 alias

Global Configuration Commands

Configures the following types of aliases: network, VLAN, host, string, network-service, etc.

Aliases are objects having a unique name and content that is determined by the alias type (network, VLAN, and network-service).

A typical large enterprize network consists of multiple sites (RF Domains) having similar configuration parameters with few elements that vary, such as networks or network ranges, hosts having different IP addresses, and VLAN IDs or URLs. These elements can be defined as aliases (object oriented wireless firewalls) and used across sites by applying overrides to the object definition. Using aliases results in a configuration that is easier to understand and maintain.

Multiple instances of an alias (same type and same name) can be defined at any of the following levels: global, RF Domain, profile, or device. An alias defined globally functions as a *top-level-object* (TLO). An alias defined on a device is applicable to that device only. An alias defined on a profile applies to every device using the profile. Similarly, aliases defined at the RF Domain level apply to all devices within that domain.

Aliases defined at any given level can be overridden at any of the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

The different aliases types supported are:

- address-range alias – Maps a user-friendly name to a range of IP addresses. An address-range alias can be utilized at different deployments. For example, if an ACL defines a pool of network addresses as 192.168.10.10 through 192.168.10.100 for an entire network, and a remote location's network range is 172.16.13.20 through 172.16.13.110, the remote location's ACL can be overridden using an alias. At the remote location, the ACL works with the 172.16.13.20-110 address range. A new ACL need not be created specifically for the remote deployment location.
- host alias – Maps a user-friendly name to a specific host (identified by its IP address. For example, 192.168.10.23). A host alias can be utilized at different deployments. For example, if a central network DNS server is set a static IP address, and a remote location's local DNS server is defined, this host can be overridden at the remote location. At the remote location, the network is functional with a local DNS server, but uses the name set at the central network. A new host need not be created at the remote location. This simplifies creating and managing hosts and allows an administrator to better manage specific local requirements.
- network alias – Maps a user-friendly name to a network. A network alias can be utilized at different deployments. For example, if a central network ACL defines a network as 192.168.10.0/24, and a remote location's network range is 172.16.10.0/24, the ACL can be overridden at the remote location to suit their local (but remote) requirement. At the remote location, the ACL functions with the 172.16.10.0/24 network. A new ACL need not be created specifically for the remote deployment. This simplifies ACL definition and allows an administrator to better manage specific local requirements.
- network-group alias – Maps a user-friendly name to a single or a range of addresses of devices, hosts, and network configurations. Network configurations are complete networks in the form 192.168.10.0/24 or IP address range in the form 192.168.10.10-192.168.10.20.

  A network-group alias can contain a maximum of eight (8) host entries, eight (8) network entries, and eight (8) IP address-range entries. A maximum of 32 network-group alias entries can be created.

A network-group alias can be used in IP firewall rules to substitute hosts, subnets, and IP address ranges.

- network-service alias – Maps a user-friendly name to service protocols and ports. Both source and destination ports are configurable. For each protocol, up to 2 source port ranges and up to 2 destination port ranges can be configured. A maximum of 4 protocol entries can be configured per network-service alias. When used with an ACL, the network-service alias defines the service-specific components of the ACL rule. Overrides can be applied to the service alias, at the device level, without modifying the ACL. Application of overrides to the service alias allows an ACL to be used across sites.

Use a network-service alias to associate more than one IP address to a network interface, providing multiple connections to a network from a single IP node.

- number alias – Maps a user-friendly name to a number
- vlan alias – Maps a user-friendly name to a VLAN ID. A VLAN alias can be used at different deployments. For example, if a named VLAN is defined as 10 for the central network, and the VLAN is set at 26 at a remote location, the VLAN can be overridden at the deployment location with an alias. At the remote deployment location, the network is functional with a VLAN ID of 26, but utilizes the name defined at the centrally managed network. A new VLAN need not be created specifically for the remote deployment.
- string alias – Maps a user-friendly name to a specific string (for example, RF Domain name). A host alias can be utilized at different deployments. For example, if the main domain at a remote location is called *loc1.domain.com* and at another deployment location it is called *loc2.domain.com*, the alias can be overridden at the remote location to suit the local (but remote) requirement. At one remote location, the alias functions with the *loc1.domain.com* domain and at the other with the *loc2.domain.com* domain.
- encrypted-string alias – Maps a user-friendly name to a string value. The string value of this alias is encrypted when "password-encryption" is enabled. Encrypted-string aliases can be used for string configuration parameters that are encrypted by the "password-encryption" feature.
- hashed-string alias – Maps a user-friendly name to a hashed-string value. Hashed-string aliases can be used for string configuration parameters that are hashed, such as passwords.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
alias [address-range|encrypted-string|hashed-string|host|network|network-group|
network-service|number|string|vlan]

alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>

alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>

alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>

alias host <HOST-ALIAS-NAME> <HOST-IP>

alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>

alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range|host|network]
```

```
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to
<ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|network
<NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]

alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport|ssh|telnet|tftp|www)}

alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|
tftp|www)}

alias number <NUMBER-ALIAS-NAME> <0-4294967295>

alias string <STRING-ALIAS-NAME> <LINE>

alias vlan <VLAN-ALIAS-NAME> <1-4094>
```

Parameters

- `alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>`

address-range <ADDRESS-RANGE-ALIAS-NAME>	Creates an address-range alias, defining a range of IP addresses • <ADDRESS-RANGE-ALIAS-NAME> – Specify the address-range alias name. Alias name should begin with '$'.
<STARTING-IP> to <ENDING-IP>	Associates a range of IP addresses with this address-range alias • <STARTING-IP> – Specify the first IP address in the range. • to <ENDING-IP> – Specify the last IP address in the range.

- `alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>`

encrypted-string <ENCRYPTED-STRING-ALIAS-NAME>	Creates an alias for an encrypted string. Use this alias for string configuration values that are encrypted when "password-encryption" is enabled. For example, in the management-policy, use it to define the SNMP community string. For more information, see *snmp-server*. • <ENCRYPTED-STRING-ALIAS-NAME> – Specify the encrypted-string alias name. Alias name should begin with '$'.

[0|2] <LINE>	Configures the value associated with the alias name specified in the previous step
	• [0|2] <LINE> – Configures the alias value
	Note, if password-encryption is enabled, in the *show > running-config* output, this clear text is displayed as an encrypted string, as shown below:
	`nx9500-6C8809(config)#show running-config`
	`!.............................`
	`alias encrypted-string $enString 2`
	`fABMK2is7UToNiZE3MQXbgAAAAxB0ZIysdqsEJwr6AH/Da//`
	`!`
	`--More--`
	`nx9500-6C8809`
	Cotnd..

	In the above *show > running-config* output, the '2' displayed before the encrypted-string alias value indicates that the displayed text is encrypted and not a clear text.
	However, if password-encryption is disabled the clear text is displayed as is:
	`nx9500-6C8809(config)#show running-config`
	`!.............................`
	`!`
	`alias encrypted-string $enString 0 test11223344`
	`!`
	`--More--`
	`nx9500-6C8809`
	For more information on enabling password-encryption, see *password-encryption*.

- `alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>`

hashed-string <HASHED-STRING-ALIAS-NAME>	Creates an alias for a hashed string. Use this alias for configuration values that are hashed strings, such as passwords. For example, in the management-policy, use it to define the privilege mode password. For more information, see *privilege-mode-password*. • <HASHED-STRING-ALIAS-NAME> – Specify the hashed-string alias name. Alias name should begin with '$'.

<LINE>	Configures the hashed-string value associated with this alias.
	`nx9500-6C8809(config)#show running-config`
	`!`
	`alias encrypted-string $WRITE 2`
	`sBqVCDAoxs3oByF5PCSuFAAAAAd7HT2+EiT/l/BXm9c4SBDv`
	`!`
	`alias hashed-string $PriMode 1`
	`faffdde27cb49ad634ea20df4f7c8ef2685894d10ffcb1b2efba054112ec`
	`fc75`
	`0--More--`
	`nx9500-6C8809`
	In the above *show > running-config* output, the '1' displayed before the hashed-string alias value indicates that the displayed text is hashed and not a clear text.

- `alias host <HOST-ALIAS-NAME> <HOST-IP>`

host <HOST-ALIAS-NAME>	Creates a host alias, defining a single network host • <HOST-ALIAS-NAME> – Specify the host alias name. Alias name should begin with '$'.
<HOST-IP>	Associates the network host's IP address with this host alias. For example, 'alias host $HOST 1.1.1.100'. In this example, the host alias name is: *$HOST* and the host IP address it is mapped to is: *1.1.1.100*. • <HOST-IP> – Specify the network host's IP address.

- `alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>`

network <NETWORK-ALIAS-NAME>	Creates a network alias, defining a single network address • <NETWORK-ALIAS-NAME> – Specify the network alias name. Alias name should begin with '$'.
<NETWORK-ADDRESS/MASK>	Associates a single network with this network alias. For example, 'alias network $NET 1.1.1.0/24'. In this example, the network alias name is: *$NET* and the network it is mapped to is: *1.1.1.0/24*. • <NETWORK-ADDRESS/MASK> – Specify the network's address and mask.

```
• alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to
<ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]
```

network <NETWORK-GROUP-ALIAS-NAME>	Creates a network-group alias • <NETWORK-GROUP-ALIAS-NAME> – Specify the network-group alias name. Alias name should begin with '$'. The network-group aliases are used in ACLs, to define the network-specific components. ACLs using aliases can be used across sites by re-defining the network-group alias elements at the device or profile level. After specifying the name, specify the following: a range of IP addresses, host addresses, or a range of network addresses.
address-range <STARTING-IP> to <ENDING-IP> {<STARTING-IP> to <ENDING-IP>}	Associates a range of IP addresses with this network-group alias • <STARTING-IP> – Specify the first IP address in the range. • to <ENDING-IP> – Specify the last IP address in the range. • <STARTING-IP> to <ENDING-IP> – Optional. Specifies more than one range of IP addresses. A maximum of eight (8) IP address ranges can be configured.
host <HOST-IP> {<HOST-IP>}	Associates a single or multiple hosts with this network-group alias • <HOST-IP> – Specify the hosts' IP address. • <HOST-IP> – Optional. Specifies more than one host. A maximum of eight (8) hosts can be configured.
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}	Associates a single or multiple networks with this network-group alias • <NETWORK-ADDRESS/MASK> – Specify the network's address and mask. • <NETWORK-ADDRESS/MASK> – Optional. Specifies more than one network. A maximum of eight (8) networks can be configured.

```
• alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|
eigrp|gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|
https|ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|
tftp|www)}
```

alias network-service <NETWORK-SERVICE-ALIAS-NAME>	Configures an alias that specifies available network services and the corresponding source and destination software ports • <NETWORK-SERVICE-ALIAS-NAME> – Specify a network-service alias name. Alias name should begin with '$'. Network-service aliases are used in ACLs, to define the service-specific components. ACLs using aliases can be used across sites by re-defining the network-service alias elements at the device or profile level.

proto [<0-254>|<WORD>|eigrp|gre|igmp|igp|ospf|vrrp]	Use one of the following options to associate an Internet protocol with this network-service alias: • <0-254> – Identifies the protocol by its number. Specify the protocol number from 0 - 254. This is the number by which the protocol is identified in the *Protocol* field of the IPv4 header and the *Next Header* field of IPv6 header. For example, the *User Datagram Protocol's* (UDP) designated number is 17. • <WORD> – Identifies the protocol by its name. Specify the protocol name. • eigrp – Selects *Enhanced Interior Gateway Routing Protocol* (EIGRP). The protocol number 88. • gre – Selects *Generic Routing Encapsulation* (GRE). The protocol number is 47. • igmp – Selects *Internet Group Management Protocol* (IGMP). The protocol number is 2. • igp – Selects *Interior Gateway Protocol* (IGP). The protocol number is 9. • ospf – Selects *Open Shortest Path First* (OSPF). The protocol number is 89. • vrrp – Selects *Virtual Router Redundancy Protocol* (VRRP). The protocol number is 112.
{(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|tftp|www)}	After specifying the protocol, you may configure a destination port for this service. These keywords are recursive and you can configure multiple protocols and associate multiple destination and source ports. • <1-65535> – Optional. Configures a destination port number from 1 - 65535 • <WORD> – Optional. Identifies the destination port by the service name provided. For example, the *secure shell* (SSH) service uses TCP port 22. • bgp – Optional. Configures the default *Border Gateway Protocol* (BGP) services port (179) • dns – Optional. Configures the default *Domain Name System* (DNS) services port (53) • ftp – Optional. Configures the default *File Transfer Protocol* (FTP) control services port (21) • ftp-data – Optional. Configures the default FTP data services port (20) • gopher – Optional. Configures the default gopher services port (70) • https – Optional. Configures the default HTTPS services port (443) • ldap – Optional. Configures the default *Lightweight Directory Access Protocol* (LDAP) services port (389) • nntp – Optional. Configures the default Newsgroup (NNTP) services port (119) • ntp – Optional. Configures the default *Network Time Protocol* (NTP) services port (123) • POP3 – Optional. Configures the default *Post Office Protocol* (POP3) services port (110) • proto – Optional. Use this option to select another Internet protocol in addition to the one selected in the previous step. • sip – Optional. Configures the default *Session Initiation Protocol* (SIP) services port (5060) Contd..

	• smtp – Optional. Configures the default *Simple Mail Transfer Protocol* (SMTP) services port (25)
	• sourceport [<1-65535>|<WORD>] – Optional. After specifying the destination port, you may specify a single or range of source ports.
	  • <1-65535> – Specify the source port from 1 - 65535.
	  • <WORD> – Specify the source port range, for example 1-10.
	• ssh – Optional. Configures the default SSH services port (22)
	• telnet – Optional. Configures the default Telnet services port (23)
	• tftp – Optional. Configures the default *Trivial File Transfer Protocol* (TFTP) services port (69)

- `alias number <NUMBER-ALIAS-NAME> <0-4294967295>`

alias number <NUMBER-ALIAS-NAME> <0-4294967295>	Creates a number alias identified by the <NUMBER-ALIAS-NAME> keyword. Number aliases map a name to a numeric value. For example, 'alias number $NUMBER 100' • The number alias name is: $NUMBER • The value assigned is: 100 The value referenced by alias $NUMBER, wherever used, is 100. • <NUMBER-ALIAS-NAME> – Specify the number alias name. • <0-4294967295> – Specify the number, from 0 - 4294967295, assigned to the number alias created. Alias name should begin with '$'.

- `alias string <STRING-ALIAS-NAME> <LINE>`

alias string <STRING-ALIAS-NAME>	Creates a string alias identified by the <STRING-ALIAS-NAME> keyword • <STRING-ALIAS-NAME> – Specify the string alias name. • <LINE> – Specify the string value. String aliases map a name to an arbitrary string value. For example, 'alias string $DOMAIN test.example_company.com'. • The string alias name is: $DOMAIN • The value assigned is: test.example_company.com (a domain name) The value referenced by alias $DOMAIN, wherever used, is test.example_company.com. Alias name should begin with '$'.

- `alias vlan <VLAN-ALIAS-NAME> <1-4094>`

alias vlan <VLAN-ALIAS-NAME>	Creates a VLAN alias identified by the <VLAN-ALIAS-NAME> keyword • <VLAN-ALIAS-NAME> – Specify the VLAN alias name. Alias name should begin with '$'.
<1-4094>	Maps the VLAN alias to a VLAN ID • <1-4094> – Specify the VLAN ID from 1 - 4094.

Example

```
rfs4000-229D58(config)##alias address-range $AddRanAlias 192.168.13.10 to
192.168.13.13

rfs4000-229D58(config)#alias network $NetworkAlias 192.168.13.0/24

rfs4000-229D58(config)#alias host $HostAlias 192.168.13.100

rfs4000-229D58(config)#alias vlan $VlanAlias 1

rfs4000-229D58(config)#alias address-range $AddRangeAlias 192.168.13.2 to 192.16
8.13.10

rfs4000-229D58(config)#alias network-service $NetServAlias proto igmp

rfs4000-229D58(config)#show running-config | include alias
alias network-group $NetGrAlias address-range 192.168.13.7 to 192.168.13.9
192.168.13.20 to 192.168.13.25
alias network $NetworkAlias 192.168.13.0/24
alias host $HostAlias 192.168.13.10
alias address-range $AddRangeAlias 192.168.13.2 to 192.168.13.10
alias network-service $NetServAlias proto igmp
alias vlan $VlanAlias 1
rfs4000-229D58(config)#

nx9500-6C8809(config)#alias number $NUMBER 100

nx9500-6C8809(config)#show context include-factory | include alias
alias string $DOMAIN test.examplecompany.com
alias string $DOMAIN2 test.example_company.com
alias number $NUMBER 100
alias string $SN B4C7996C8809
nx9500-6C8809(config)#
```

The following examples show encrypted-string alias configuration:

```
nx9500-6C8809(config)#alias encrypted-string $WRITE 0 private
nx9500-6C8809(config)#alias encrypted-string $READ 0 public

nx9500-6C8809(config)#show context | include alias
alias vlan $BLR-01 1
alias string $IN-Blr-EcoSpace-Floor-4 IBEF4
alias encrypted-string $READ 0 public
alias encrypted-string $WRITE 0 private
nx9500-6C8809(config)#
```

The following example shows the encrypted-string aliases, configured in the previous example, used in the management-policy:

```
nx9500-6C8809(config-management-policy-default)#snmp-server community 0 $WRITE rw
nx9500-6C8809(config-management-policy-default)#snmp-server community 0 $READ ro
```

```
nx9500-6C8809(config-management-policy-default)#show context
management-policy default

no	Removes an existing network, VLAN, service, string, etc. alias

4.1.3 aaa-tacacs-policy

Global Configuration Commands

Configures AAA *Terminal Access Controller Access-Control System+* (TACACS) policy. TACACS+ is a protocol created by CISCO Systems which provides access control to network devices such as routers, network access servers and other networked computing devices through one or more centralized servers. TACACS provides separate authentication, authorization, and accounting services running on different servers.

TACACS controls user access to devices and network resources while providing separate accounting, authentication, and authorization services. Some of the services provided by TACACS are:

- Authorizing each command with the TACACS+ server before execution.
- Accounting each session's logon and log off events.
- Authenticating each user with the TACACS+ server before enabling access to network resources.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
aaa-tacacs-policy <AAA-TACACS-POLICY-NAME>
```

Parameters

- `aaa-tacacs-policy <AAA-TACACS-POLICY-NAME>`

<AAA-TACACS-POLICY-NAME>	Specify the AAA-TACACS policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#aaa-tacacs-policy testpolicy
rfs6000-81742D(config-aaa-tacacs-policy-testpolicy)#?
AAA TACACS Policy Mode commands:
  accounting      Configure accounting parameters
  authentication  Configure authentication parameters
  authorization   Configure authorization parameters
  no              Negate a command or set its defaults

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  do              Run commands from Exec mode
  end             End current mode and change to EXEC mode
  exit            End current mode and down to previous mode
  help            Description of the interactive help system
  revert          Revert changes
  service         Service Commands
  show            Show running system information
  write           Write running configuration to memory or terminal

rfs6000-81742D(config-aaa-tacacs-policy-testpolicy)#
```

Related Commands

no	Removes an existing AAA TACACS policy

NOTE: For more information on the AAA-TACACS policy commands, see *Chapter 25, AAA-TACACS-POLICY*.

4.1.4 ap6521

Global Configuration Commands

Adds an AP6521 to the network. If a profile for the AP is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ap6521 <MAC>
```

Parameters

- `ap6521 <MAC>`

<MAC>	Specify the AP6521's MAC address.

Example

```
nx9500-6C8809(config)#ap6521 FC-0A-81-42-93-6C
nx9500-6C8809(config-device-FC-0A-81-42-93-6C)#show context
ap6521 FC-0A-81-42-93-6C
 use profile default-ap6521
 use rf-domain default
 hostname ap6521-42936C
nx9500-6C8809(config-device-FC-0A-81-42-93-6C)#

nx9500-6C8809(config)#show wireless ap configured
-------------------------------------------------------------------------------
-------
 IDX       NAME              MAC            PROFILE      RF-DOMAIN      ADOPTED-BY
-------------------------------------------------------------------------------
-------
  1   ap6521-42936C      FC-0A-81-42-93-6C   default-ap6521     default     B4-C7-

-------------------------------------------------------------------------------
-------
nx9500-6C8809(config)#
```

Related Commands

no	Removes an AP6521 from the network

4.1.5 ap6522

Global Configuration Commands

Adds an AP6522 to the network. If a profile for the AP is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ap6522 <MAC>
```

Parameters

- `ap6522 <MAC>`

<MAC>	Specify the AP6522's MAC address.

Example

```
nx9500-6C8809(config)#ap6522 B4-C7-99-58-72-58
nx9500-6C8809(config-device-B4-C7-99-58-72-58)#show context

Related Commands

no	Removes an AP6522 from the network

4.1.6 ap6532

Global Configuration Commands

Adds an AP6532 to the network. If a profile for the AP is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ap6532 <MAC>
```

Parameters

- `ap6532 <MAC>`

<MAC>	Specify the AP6532's MAC address.

Example

```
nx9500-6C8809(config)#ap6532 00-23-68-31-16-59
nx9500-6C8809(config-device-B4-C7-99-58-72-58)#show context

Related Commands

no	Removes an AP6532 from the network

4.1.7 ap6562

Global Configuration Commands

Adds an AP6562 to the network. If a profile for the AP is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ap6562 <MAC>
```

Parameters

- `ap6562 <MAC>`

<MAC>	Specify the AP6562's MAC address.

Example

```
nx9500-6C8809(config)#ap6562 00-23-09-0E-12-60
nx9500-6C8809(config-device-00-23-09-0E-12-60)#show context

Adds an AP8533 series to the network. If a profile for the AP is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ap8533 <MAC>
```

Parameters

- `ap8533 <MAC>`

<MAC>	Specify the AP8533's MAC address.

Example

```
nx9500-6C8809(config)#ap8533 B4-C7-99-74-B4-5C)
nx9500-6C8809(config-device-B4-C7-99-74-B4-5C)#show context
ap8533 B4-C7-99-74-B4-5C
 use profile default-ap8533
 use rf-domain default
 hostname ap8533-74B45C
nx9500-6C8809(config-device-B4-C7-99-74-B4-5C)#

nx9500-6C8809(config)#show wireless ap configured
-------------------------------------------------------------------------------
-------
IDX        NAME               MAC             PROFILE       RF-DOMAIN    ADOPTED-BY
-------------------------------------------------------------------------------
-------
 1   ap8533-74B45C      B4-C7-99-74-B4-5C   default-ap8533   default     un-adopted
-------------------------------------------------------------------------------
-------
nx9500-6C8809(config)#
```

Related Commands

no	Removes an AP8533 from the network

4.1.17 application

Global Configuration Commands

The following table lists the commands that enable you to enter the Application definition configuration mode:

Table 4.2 *Application-Policy Config Command*

Command	Description	Reference
application	Creates a new application definition and enters its configuration mode. This command allows you to create a customized application detection definition.	*page 4-36*
application-config-mode commands	Summarizes application definition configuration mode commands	*page 4-37*

4.1.17.1 application

application

Creates a new application definition and enters its configuration mode

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
application <APPLICATION-NAME>
```

Parameters

- `application <APPLICATION-NAME>`

application <APPLICATION-NAME>	Creates a new application definition and enters its configuration mode • <APPLICATION-NAME> – Specify a name of the new application definition. It is created if not already existing in the system.

Example

```
nx9500-6C8809(config)#application Bing
nx9500-6C8809(config-application-Bing)#?
Application Mode commands:
  app-category  Set application category (default is custom)
  description   Add application description
  https         Secure HTTP
  no            Negate a command or set its defaults
  use           Set setting to use

  clrscr        Clears the display screen
  commit        Commit all changes made in this session
  do            Run commands from Exec mode
  end           End current mode and change to EXEC mode
  exit          End current mode and down to previous mode
  help          Description of the interactive help system
  revert        Revert changes
  service       Service Commands
  show          Show running system information
  write         Write running configuration to memory or terminal

nx9500-6C8809(config-application-Bing)#
```

Related Commands

no	Deletes an existing application definition

4.1.17.2 application-config-mode commands

- *application*

The following table summarizes Application definition configuration mode commands:

Table 4.3 *Application- Config-Mode Commands*

Command	Description	Reference
app-category	Configures the category for this application definition	*page 4-38*
description	Configures a description for this application definition	*page 4-39*
https	Configures the HTTPS common-name attribute value for this application category's server certificate. Applicable only to applications using HTTPS protocol.	*page 4-40*
use	Associates a network-service alias or a URL list with this application definition. Applicable for applications using protocols other than HTTPS.	*page 4-41*
no	Removes or resets this application definition's configured settings	*page 4-42*

4.1.17.2.1 app-category

application-config-mode commands

Configures the category for this application definition

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
app-category <APP-CATEGORY-NAME>
```

Parameters

- `app-category <APP-CATEGORY-NAME>`

app-category <APP-CATEGORY-NAME>	Select the category best suited for this application definition. There are twenty three categories. These are: business, conference, custom, database, filetransfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and Web. **Note:** The default setting is custom. Use this option to categorize your internal custom applications, so that they do not appear as unknown traffic.

Example

```
nx9500-6C8809(config-application-Bing)#app-category [TAB]
business              conference            custom
database              filetransfer          gaming
generic               im                    mail
mobile                network\ management   other
p2p                   remote_control        sharehosting
social\ networking    streaming             tunnel
voip                  web

nx9500-6C8809(config-application-Bing)#

nx9500-6C8809(config-application-Bing)#app-category streaming

nx9500-6C8809(config-application-Bing)#show context
application Bing
 app-category streaming
nx9500-6C8809(config-application-Bing)#
```

Related Commands

no	Resets application category to default (custom)

4.1.17.2.2 description

application-config-mode commands

Configures a description for this application definition

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <WORD>
```

Parameters

- `description <WORD>`

description <WORD>	Configures a description for this application • <WORD> – Specify a description not exceeding 80 characters in length. Enter the descriptive text within double quotes.

Example

```
nx9500-6C8809(config-application-Bing)#description "Bing is Microsoft's Web search
engine"

nx9500-6C8809(config-application-Bing)#show context
application Bing
 description "Bing is Microsoft's Web search engine"
 app-category streaming
nx9500-6C8809(config-application-Bing)#
```

Related Commands

no	Removes this description configured for this application

4.1.17.2.3 https

application-config-mode commands

Configures the HTTPS parameter type, attribute type, match criteria for the HTTPS server name and 64 character maximum server name attribute used in the HTTPS server message exchange

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
https server-cert common-name [contains|ends-with] <WORD>
```

Parameters

- `https server-cert common-name [contains|ends-with] <WORD>`

https server-cert	Configures the HTTPS parameter type as server certificate
common-name [contains|ends-with] <WORD>	Configures the HTTPS attribute match criteria as common name. This is the only option applicable when the HTTPS parameter type is set to server-cert. Use one of the following options to provide the common-name attribute value used as the match criteria: • contains – Filters applications having common-name attributes containing the string specified here • ends-with – Filters applications ending with the string specified here • <WORD> – Specify the string to match (should not exceed 64 characters).

Example

```
nx9500-6C8809(config-application-Bing)#https server-cert common-name exact
bing.com

nx9500-6C8809(config-application-Bing)#show context
application Bing
 description "Bing is Microsoft's web search engine"
 app-category streaming
 https server-cert common-name exact bing.com
nx9500-6C8809(config-application-Bing)#
```

Related Commands

no	Removes the HTTPS common-name attribute value configured with this application category

4.1.17.2.4 use

application-config-mode commands

Associates a network-service alias or a URL list with this application definition

For applications using protocols other than HTTPS, use this command to define the protocols, ports, and/or URL host name to match.

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
use [network-service <NETWORK-SERVICE-ALIAS-NAME>|url-list <URL-LIST-NAME>]
```

Parameters

- `use [network-service <NETWORK-SERVICE-ALIAS-NAME>|url-list <URL-LIST-NAME>]`

use	Configures this application definition to use a network-service alias or a URL list
network-service <NETWORK-SERVICE-ALIAS-NAME>	Associates a network-service alias with this application definition • <NETWORK-SERVICE-ALIAS-NAME> – Specify the network-service alias name (should be existing and configured). The network-service alias should specify the protocols and ports to match.
url-list <URL-LIST-NAME>	Associates a URL list with this application definition. URL lists are utilized for whitelisting and blacklisting Web application URLs from being launched and consuming bandwidth within the WiNG managed network. • <URL-LIST-NAME> – Specify the URL list name (should be existing and configured). The URL list should specify the HTTP URL host names to match.

Example

```
nx9500-6C8809(config-application-Bing)#use url-list Bing

nx9500-6C8809(config-application-Bing)#show context
application Bing
 description "Bing is Microsoft's web search engine"
 app-category streaming
 use url-list Bing
 https server-cert common-name exact bing.com
nx9500-6C8809(config-application-Bing)#
```

Related Commands

no	Removes the network-service alias or the URL list associated with this application definition

4.1.17.2.5 no

application-config-mode commands

Removes or resets this application definition's configured settings

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [app-category|description|https|use]

no [app-category|description]

no https server-cert common-name [contains|ends-with] <WORD>

no use [network-service <NETWORK-SERVICE-ALIAS-NAME>|url-list <URL-LIST-NAME>]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes or resets this application definition's configured settings based on the parameters passed

Example

The following example displays the application definition 'Bing' parameters before the 'no' commands are executed:

```
nx9500-6C8809(config-application-Bing)#show context
application Bing
 description "Bing is Microsoft's web search engine"
 app-category streaming
 use url-list Bing
 https server-cert common-name exact bing.com
nx9500-6C8809config-application-Bing)#

nx9500-6C8809(config-application-Bing)#no description
nx9500-6C8809(config-application-Bing)#no https server-cert common-name exact
bing.com
```

The following example displays the application definition 'Bing' parameters after the 'no' commands are executed:

```
nx9500-6C8809(config-application-Bing)#show context
application Bing
 app-category streaming
 use url-list Bing
nx9500-6C8809(config-application-Bing)#
```

4.1.18 application-group

Global Configuration Commands

The following table lists the commands that enable you to create a new application group and enter its configuration mode:

Table 4.4 *Application-Group Config Command*

Command	Description	Reference
application-group	Creates a new application group and enters its configuration mode	*page 4-44*
application-group-mode commands	Summarizes application group configuration mode commands	*page 4-45*

4.1.18.1 application-group

application-group

An application group is a collection of system-provided and/or user-defined applications. It is a subset of the total number of supported applications. There are a total of 299 system-provided applications.

Supported in the following platforms:

- Access Points — AP7522, AP7532, AP7562, AP8432, AP8533
- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
application-group <APPLICATION-GROUP-NAME>
```

Parameters

- `application-group <APPLICATION-GROUP-NAME>`

application-group <APPLICATION-GROUP-NAME>	Creates an application group and enters its configuration mode • <APPLICATION-GROUP-NAME – Specify the application group name. If an application group with the specified name does not exist, it is created. The name should not exceed 32 characters in length.

Example

```
nx9500-6C8809(config)#application-group amazon
nx9500-6C8809(config-app-group-amazon)#?
Application Group Mode commands:
  application  Add application to group
  description  Add application-group description
  no           Negate a command or set its defaults

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-app-group-amazon)#
```

Related Commands

no	Removes an existing application group

4.1.18.2 application-group-mode commands

application-group

The following table summarizes the application group configuration mode commands:

Table 4.5 *Application-Group-Config-Mode Commands*

Command	Description	Reference
application	Adds an application to this application group	*page 4-46*
description	Configures a description for this application group	*page 4-48*
no	Removes this application group's configured parameters (application and/or description)	*page 4-49*

4.1.18.2.6 application

application-group-mode commands

Adds an application to this application group. You can add a system-provided or user-defined application.

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
application <APPLICATION-NAME>
```

Parameters

- `application <APPLICATION-NAME>`

application <APPLICATION-NAME>	Configures the application to be added to this application group • <APPLICATION-NAME> – Provide the application name (should be available as an option in the system). A maximum of eight (8) applications can be added to a group. If the desired application is not available as an option, use the *application* command to add it.

Example

To view all applications available in the system, use [TAB], as shown in the following example:

```
nx9500-6C8809(config-app-group-test)#application [TAB]
Display all 299 possibilities? (y or n)
1-clickshare-com                1-upload-com
1-upload-to                     10upload-com
123upload                       123upload_ddl

--More--
nx9500-6C8809(config-app-group-test)#
```

Select the desired application from the list displayed, as shown in the following examples:

```
nx9500-6C8809(config-app-group-amazon)#application amazon [TAB]
amazon-prime-music  amazon-prime-video  amazon_cloud  amazon_shop
nx9500-6C8809(config-app-group-amazon)#

nx9500-6C8809(config-app-group-amazon)#application amazon-prime-music
nx9500-6C8809(config-app-group-amazon)#application amazon-prime-video
nx9500-6C8809(config-app-group-amazon)#application amazon_cloud
nx9500-6C8809(config-app-group-amazon)#application amazon_shop

nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
 application amazon-prime-music
 application amazon-prime-video
 application amazon_cloud
 application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
```

Note, the system returns an error message if the application entered is not listed, as shown in the following example:

```
nx9500-6C8809(config-app-group-test)#application bing
% Error: application 'bing' is not defined
nx9500-6C8809(config-app-group-test)#
```

Related Commands

no	Removes a specified application from this application group

4.1.18.2.7 description

application-group-mode commands

Configures a description for this application group

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <WORD>
```

Parameters

- `description <WORD>`

description <WORD>	Configures a description for this application group that uniquely differentiates it from other existing application groups • <WORD> – Provide a description not exceeding 80 characters in length.

Example

```
nx9500-6C8809(config-app-group-amazon)#description "This application-group lists
 all Amazon applications."

nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
 description "This application-group lists all Amazon applications."
 application amazon-prime-music
 application amazon-prime-video
 application amazon_cloud
 application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
```

Related Commands

no	Removes the description configured for this application group

4.1.18.2.8 no

application-group-mode commands

Removes this application group's configured parameters (application and/or description)

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [application <APPLICATION-NAME>|description]
```

Parameters

- `no [application <APPLICATION-NAME>|description]`

no <PARAMETERS>	Removes an application associated with this group, and removes this group's description

Example

The following example displays the application-group 'amazon' configuration before the execution of 'no' commands:

```
nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
 description "This application-group lists all Amazon applications."
 application amazon-prime-music
 application amazon-prime-video
 application amazon_cloud
 application amazon_shop
nx9500-6C8809(config-app-group-amazon)#

nx9500-6C8809(config-app-group-amazon)#no application amazon_cloud
nx9500-6C8809(config-app-group-amazon)#no description
```

The following example displays the application-group 'amazon' configuration after the execution of 'no' commands:

```
nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
 application amazon-prime-music
 application amazon-prime-video
 application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
```

4.1.19 application-policy

Global Configuration Commands

The following table lists the commands that enable you to enter the Application policy configuration mode:

Table 4.6 *Application-Policy Config Command*

Command	Description	Reference
application-policy	Creates an application policy and enters its configuration mode	*page 4-51*
application-policy-mode commands	Summarizes the application policy configuration mode commands	*page 4-53*

4.1.19.1 application-policy

application-policy

When an application is recognized and classified by the WiNG application recognition engine, administrator defined actions can be applied to that specific application. An application policy defines the rules or actions executed on recognized applications (for example, Facebook) or application-categories (for example, social-networking). The following are the rules/actions that can be applied in an application policy:

- *Allow* - Allow packets for a specific application or application category
- *Deny* - Deny packets for a a specific application or application category
- *Mark* - Mark packets with DSCP/8021p value for a specific application or application category
- *Rate-limit* - Rate limit packets from specific application types.

For each rule defined, a precedence is assigned to resolve conflicting rules for applications and categories. A *deny* rule is exclusive, as no other action can be combined with a deny. An *allow* rule is redundant with other actions, since the default action is allow. An allow rule is useful when wanting to deny packets for a category, but wanting to allow a few applications in the same category to proceed. In such a cases, add an allow rule for applications with a higher precedence then a deny rule for that category.

Mark actions mark packets for a recognized application and category with DSCP/8021p values used for QoS. *Rate-limits* create a rate-limiter applied to packets recognized for an application and category. Ingress and egress rates need to be specified for the rate-limiter, but both are not required. Mark and rate-limit are the only two actions that can be combined for an application and category. All other combinations are invalid.

Once created and configured, apply the application policy at the following levels within the network to enforce application assurance:

- RADIUS CoA usage – In the device/profile configuration mode, use the *application-policy > radius > <APPLICATION-POLICY-NAME>* command to apply the policy to every user successfully authenticated by the RADIUS server.
- User role – In the role-policy-user-role configuration mode, use the *use > application-policy <APPLICATION-POLICY-NAME>* command to apply the policy to all users assigned to the role.
- WLAN – In the WLAN configuration mode, use the *use > application-policy <APPLICATION-POLICY-NAME>* command to apply the policy to all users accessing the WLAN.
- Bridge VLAN – In the bridge VLAN configuration mode, use the *use > application-policy <APPLICATION-POLICY-NAME>* command to apply the policy for the traffic corresponding to the bridged VLAN.

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
application-policy <APPLICATION-POLICY-NAME>
```

Parameters

- `application-policy <APPLICATION-POLICY-NAME>`

application-policy <APPLICATION-POLICY-NAME>	Specify the application policy name. If an application policy with the specified name does not exist, it is created. The name should not exceed 32 characters in length.

Example

```
nx9500-6C8809(config)#application-policy TestAppliPolicy
nx9500-6C8809(config-app-policy-TestAppliPolicy)#?
Application Policy Mode commands:
  allow              Allow packets
  deny               Deny packets
  description        Application policy description
  enforcement-time   Configure policy enforcement based on time
  logging            Application recognition logging
  mark               Mark packets
  no                 Negate a command or set its defaults
  rate-limit         Rate-limit packets

  clrscr             Clears the display screen
  commit             Commit all changes made in this session
  do                 Run commands from Exec mode
  end                End current mode and change to EXEC mode
  exit               End current mode and down to previous mode
  help               Description of the interactive help system
  revert             Revert changes
  service            Service Commands
  show               Show running system information
  write              Write running configuration to memory or terminal

nx9500-6C8809(config-app-policy-TestAppliPolicy)#
```

Related Commands

no	Removes an existing application policy

4.1.19.2 application-policy-mode commands

application-policy

The following table summarizes Application policy configuration mode commands:

Table 4.7 *Application- Policy-Mode Commands*

Command	Description	Reference
allow	Creates an allow rule and configures the match criteria based on which packets are filtered and the allow access action applied	*page 4-54*
deny	Creates a deny rule and configures the match criteria based on which packets are filtered and the deny access action applied	*page 4-57*
description	Configures a brief description for this application policy that enables you to differentiate it from other application policies	*page 4-60*
enforcement-time	Configures an enforcement time period in days and hours for this application policy. The policy is enforced only during the specified time period.	*page 4-61*
logging	Enables logging of application recognition hits made by the DPI engine. It also sets the logging level.	*page 4-63*
mark	Creates a mark rule and configures the match criteria based on which packets are filtered and marked with 802.1p priority value or *Differentiated Service Code Point* (DSCP) code	*page 4-65*
rate-limit	Creates a rate-limit rule and configures the match criteria based on which incoming and outgoing packets are filtered and the configured rate limits applied	*page 4-68*
no	Removes or resets this application policy's settings	*page 4-71*

4.1.19.2.9 allow

application-policy-mode commands

Creates an allow rule and configures the match criteria based on which packets are filtered and the allow access action applied

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
allow [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

Parameters

```
• allow [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

allow	Creates an allow rule and configures the match criteria. The options are app-category and application.
app-category [<APP-CATEGORY-NAME>|all]	Uses application category as the match criteria • <APP-CATEGORY-NAME> – Specify the application category. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system forwards the packet or else drops it. • all – The system forwards all packets irrespective of the application category.
application <APPLICATION-NAME>	Uses application name as the match criteria • <APPLICATION-NAME> – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system forwards the packet. The WiNG database provides approximately 381 canned applications. In addition to these, the database also includes custom-made applications. These are application definitions created using the *application* command.
schedule <SCHEDULE-POLICY-NAME>	Schedules an enforcement time for this allow rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time. • schedule <SCHEDULE-POLICY-NAME> – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the application-policy > enforcement-time command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all'). Contd..

	• <SCHEDULE-POLICY-NAME> – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule. In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see *enforcement-time*.

precedence <1-256>	Assigns a precedence value for this allow rule. The precedence value differentiates between rules applicable to applications and the application categories to which they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.
	Let us consider application *youtube* belonging to app-category *streaming*.
	The action required is: Allow *youtube* packets and deny all other applications belonging to app-category *streaming*.
	The rules can be defined as:
	`#allow application youtube precedence 1`
	`#deny app-category streaming precedence 2`
	The following configuration is incorrect:
	`#deny app-category streaming precedence 1`
	`#allow application youtube precedence 2`
	Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.
	The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.

Example

The following example shows how to view all built-in, system provided applications:

```
nx9500-6C8809(config-app-policy-test)#allow application [TAB]
Display all 366 possibilities? (y or n)
1-clickshare-com                    1-upload-com
1-upload-to                         10upload-com
123upload-pl                        139pan-com
163pan-com                          1clickshare-net
1fichier-com                        1kxun
2channel                            2gis
2shared-com                         360mobile
4fastfile-com                       4share-ws
Dota\ 2                             EA\ Origin
--More--
nx9500-6C8809(config-app-policy-test)#
```

The following examples show two *allow* rules, allowing access to all packets belonging to the *application category* 'business' and the *application* 'Bing':

```
nx9500-6C8809(config-app-policy-Bing)#allow application Bi [TAB]
Bing                        BitTorrent                  BitTorrent_encrypted
BitTorrent_plain            BitTorrent_uTP              BitTorrent_uTP_encrypted
nx9500-6C8809(config-app-policy-Bing)#
```

Note: Bing is not one of the WiNG built-in database applications. It is a customized application created using the *application* command.

```
nx9500-6C8809(config-app-policy-Bing)#allow application Bing precedence 1
```

```
nx9500-6C8809(config-app-policy-Bing)#allow app-category [TAB]
all                  antivirus\ update    audio
business             conference           custom
database             filetransfer         gaming
generic              im                   mail
mobile               network\ management   other
p2p                  remote_control       social\ networking
standard             streaming            tunnel
video                voip                 web
nx9500-6C8809(config-app-policy-Bing)#

nx9500-6C8809(config-app-policy-Bing)#allow app-category business precedence 2

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 allow application Bing precedence 1
 allow app-category business precedence 2
nx9500-6C8809(config-app-policy-Bing)#
```

The following example shows an application policy 'SocialNet' having an allow rule with an associated schedule policy named 'FaceBook':

```
nx9500-6C8809(config-app-policy-SocialNet)#allow application facebook schedule
Facebook precedence 1

nx9500-6C8809(config-app-policy-SocialNet)#show context
application-policy SocialNet
 description "This application policy relates to Social Networking sites."
 allow application facebook schedule FaceBook precedence 1
nx9500-6C8809(config-app-policy-SocialNet)#
```

The schedule policy 'FaceBook' configuration is as follows. As per this policy, the above allow rule will apply to all FaceBook packets every Friday between 13:00 and 18:00 hours.

```
nx9500-6C8809(config-schedule-policy-FaceBook)#show context
schedule-policy FaceBook
 description "Allows FaceBook traffic on Fridays."
 time-rule days friday start-time 13:00 end-time 18:00
nx9500-6C8809(config-schedule-policy-FaceBook)#
```

Related Commands

no	Removes this allow rule from the application policy

4.1.19.2.10 deny

application-policy-mode commands

Creates a deny rule and configures the match criteria based on which packets are filtered and the deny access action applied

Syntax

```
deny [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

Parameters

```
• deny [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

deny	Creates a deny rule and configures the match criteria. The options are app-category and application.
app-category [<APP-CATEGORY-NAME>|all]	Uses application category as the match criteria • <APP-CATEGORY-NAME> – Specify the application category name. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system drops the packet. • all – The system drops all packets irrespective of the application category.
application <APPLICATION-NAME>	Uses application name as the match criteria • <APPLICATION-NAME> – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system drops the packet. There are approximately some 381 canned applications in the database. In addition to these, the database displays custom-made applications also. These are application definitions created using the application command.
schedule <SCHEDULE-POLICY-NAME>	Schedules an enforcement time for this deny rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time. • schedule <SCHEDULE-POLICY-NAME> – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the application-policy > enforcement-time command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all'). • <SCHEDULE-POLICY-NAME> – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule. In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see *enforcement-time*.

precedence <1-256>	Assigns a precedence value for this deny rule. The precedence value differentiates between rules applicable to applications and the application categories to which they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.
	Let us consider application *youtube* belonging to app-category *streaming*.
	The action required is: Allow *youtube* packets and deny all other applications belonging to app-category *streaming*.
	The rules can be defined as:
	`#allow application youtube precedence 1`
	`#deny app-category streaming precedence 2`
	The following configuration is incorrect:
	`#deny app-category streaming precedence 1`
	`#allow application youtube precedence 2`
	Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.
	The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.

Example

The following example shows one *deny* rule, denying access to all packets belonging to the application category 'social\ networking':

```
nx9500-6C8809(config-app-policy-Bing)#deny app-category social\ networking
precedence 3

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
nx9500-6C8809(config-app-policy-Bing)#
```

The following example displays the schedule policy 'DenyS-N' settings. The time-rule defined in the policy is *all weekdays from 9:30 AM to 11:30 PM*.

```
nx9500-6C8809(config-schedule-policy-DenyS-N)#show context
schedule-policy DenyS-N
 description "Denies all social Networking sites on weekdays."
 time-rule days weekdays start-time 09:30 end-time 23:30
nx9500-6C8809(config-schedule-policy-DenyS-N)#
```

The following example displays the schedule policy 'FaceBook' settings. The time-rule defined in the policy is *Friday from 1:00 PM to 6:00 PM*.

```
nx9500-6C8809(config-schedule-policy-FaceBook)#show context
schedule-policy FaceBook
 description "Allows FaceBook traffic on Fridays."
 time-rule days friday start-time 13:00 end-time 18:00
nx9500-6C8809(config-schedule-policy-FaceBook)#
```

The following example shows an application policy 'SocialNet' defining an *allow* and *deny* rule. Both rules have different enforcement time, which is defined by their respective schedule policies (DentS-N and FaceBook). As per these two schedule policy settings, this application policy:

- Denies all social\ networking sites on weekdays (barring Fridays between 1:00 PM to 6:00 PM) from 9:30 AM to 11:30 PM.

On Fridays, between 1:00 PM to 6:00 PM, it:

- Denies all social\ networking sites except Facebook.

```
nx9500-6C8809(config-app-policy-SocialNet)#show context
application-policy SocialNet
 description "This application policy relates to Social Networking sites."
 allow application facebook schedule FaceBook precedence 1
 deny app-category "social networking" schedule DenyS-N precedence 2
nx9500-6C8809(config-app-policy-SocialNet)#
```

Related Commands

no	Removes this deny rule from the application policy

4.1.19.2.11 description

application-policy-mode commands

Configures a brief description for this application policy that enables you to differentiate it from other application policies

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <LINE>
```

Parameters

- `description <LINE>`

description <LINE>	Configures this application policy's description • <LINE> – Specify a brief description not exceeding 80 characters in length.

Example

```
nx9500-6C8809(config-app-policy-Bing)#description "This application policy allows
Bing search engine packets"

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
nx9500-6C8809(config-app-policy-Bing)#
```

Related Commands

no	Removes this application policy's description

4.1.19.2.12 enforcement-time

application-policy-mode commands

Configures an enforcement time period in days and hours for this application policy. The enforcement time is applicable only to those rules, within the application policy, that do not have a schedule policy associated. By default an application policy is enforced on all days.

NOTE: Schedule policies are a means of enforcing allow/deny/mark/rate-limit rules at different time periods. If no schedule policy is applied, all rules within an application policy are enforced at the time specified using this enforcement-time command. For more information on configuring a schedule policy, see *schedule-policy*.

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
enforcement-time days [sunday|monday|tuesday|wednesday|thursday|friday|
saturday|all|weekends|weekdays] {start-time <HH:MM> end-time <HH:MM>}
```

Parameters

```
• enforcement-time days [sunday|monday|tuesday|wednesday|thursday|friday|
saturday|all|weekends|weekdays] {start-time <HH:MM> end-time <HH:MM>}
```

enforcement-time days	Enforces this application policy on only on the days specified here • sunday – Enforces the policy only on Sundays • monday – Enforces the policy only on Mondays • tuesday – Enforces the policy only on Tuesdays • wednesday – Enforces the policy only on Wednesdays • thursday – Enforces the policy only on Thursdays • friday – Enforces the policy only on Fridays • saturday – Enforces the policy only on Saturdays • all – Enforces the policy on all days. This is the default setting. • weekends – Enforces the policy only on weekends • weekdays – Enforces the policy only on weekdays In case no enforcement time is specified, the application policy is enforced on all days (i.e., always active). If using schedule policies with the allow/deny/mark/rate-limit rules, the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting of 'all').
start-time <HH:MM> end-time <HH:MM>	Optional. Configures this application policy's enforcement period • start-time – Configures the start time. This is the time at which the application policy enforcement begins. • end-time – Configures the end time. This is the time at which the application policy enforcement ends. • <HH:MM> – Specify the start and end time in the HH:MM format.

Example

```
nx9500-6C8809(config-app-policy-Bing)#enforcement-time days weekdays start-time
10:30 end-time 20:00

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 enforcement-time days weekdays start-time 10:30 end-time 20:00
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
nx9500-6C8809(config-app-policy-Bing)#
```

Related Commands

no	Removes this application policy's enforcement period

4.1.19.2.13 logging

application-policy-mode commands

Enables DPI application recognition logging. It also sets the logging level.

DPI is an advanced packet analysis technique, which analyzes packet and packet content headers to determine the nature of network traffic. When enabled, DPI inspects packets of all flows to identify applications (such as, Netflix, Twitter, Facebook, etc.) and extract metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
logging [level|on]

logging on

logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings]
```

Parameters

- `logging on`

logging on	Enables logging of application recognition hits made by the DPI engine. This option is disabled by default.

- `logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|notifications|warnings]`

logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|notifications|warnings]	Sets the logging level for application recognition hits made by the DPI engine. This option is disabled by default. • <0-7> – Sets the message logging severity level on a scale of 0 - 7 • emergencies – Severity level 0: System is unusable • alerts – Severity level 1: Requires immediate action • critical – Severity level 2: Critical conditions • errors – Severity level 3: Error conditions • warnings – Severity level 4: Warning conditions • notifications – Severity level 5: Normal but significant conditions (this is the default setting) • informational – Severity level 6: Informational messages • debugging – Severity level 7: Debugging messages

Example

```
nx9500-6C8809(config-app-policy-Bing)#logging level critical

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 enforcement-time days weekdays start-time 12:30 end-time 20:00
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
 logging level critical
nx9500-6C8809(config-app-policy-Bing)#
```

Related Commands

no	Resets the logging level to default (notifications). And the *no > logging > on* command disables DPI logging.

4.1.19.2.14 mark

application-policy-mode commands

Creates a mark rule and configures the match criteria based on which packets are marked

Marks packets, matching a specified set of application categories or applications/protocols, with 802.1p priority level or *Differentiated Services Code Point* (DSCP) *type of service* (ToS) code. Marking packets is a means of identifying them for specific actions, and is used to provide different levels of service to different traffic types.

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mark [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
[8021p <0-7>|dscp <0-63>] schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

Parameters

```
• mark [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
[8021p <0-7>|dscp <0-63>] schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

mark	Creates a mark rule and configures the match criteria. When applied, the rule marks packets, matching the criteria configured here, with 802.1p priority value or DSCP code. The match criteria options are: app-category and application.
app-category [<APP-CATEGORY-NAME>|all]	Uses application category as the match criteria • <APP-CATEGORY-NAME> – Specify the application category. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system marks the packet. • all – The system marks all packets irrespective of the application category.
application <APPLICATION-NAME>	Uses application name as the match criteria • <APPLICATION-NAME> – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system marks the packet. The WiNG database provides approximately 381 canned applications. In addition to these, the database includes custom-made applications. These are application definitions created using the *application* command.
8021p <0-7>	Marks packets matching the specified criteria with 802.1p priority value • <0-7> – Specify a value from 0 - 7. The IEEE 802.1p signaling standard enables marking of layer 2 network traffic. Layer 2 network devices (such as switches), using 802.1p standards, group traffic into classes based on their 802.1p priority value, which is appended to the packet's MAC header. In case of traffic congestion, packets with higher priority get precedence over lower priority packets and are forwarded first.

dscp <0-63>	Marks packets matching the specified criteria with DSCP ToS code • <0-63> – Specify a value from 0 - 63. The DSCP protocol marks layer 3 network traffic. Layer 3 network devices (such as routers) using DSCP, mark each layer 3 packet with a six-bit DSCP code, which is appended to the packet's IP header. Each DSCP code is assigned a corresponding level of service, enabling packet prioritization.
schedule <SCHEDULE-POLICY-NAME>	Schedules an enforcement time for this mark rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time. • schedule <SCHEDULE-POLICY-NAME> – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the application-policy > enforcement-time command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all'). • <SCHEDULE-POLICY-NAME> – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule. In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see *enforcement-time*.

precedence <1-256>	Assigns a precedence value for this mark rule. The precedence value differentiates between rules applicable to applications and the application categories they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.
	Let us consider application *youtube* belonging to app-category *streaming*.
	The action required is: Allow *youtube* packets and deny all other applications belonging to app-category *streaming*.
	The rules can be defined as:
	`#allow application youtube precedence 1`
	`#deny app-category streaming precedence 2`
	The following configuration is incorrect:
	`#deny app-category streaming precedence 1`
	`#allow application youtube precedence 2`
	Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.
	The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.

Example

```
nx9500-6C8809(config-app-policy-Bing)#mark app-category video dscp 9 precedence 4

nx9500-6C8809(config-app-policy-Bing)#mark application facetime dscp 10 precedence
5

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 enforcement-time days weekdays start-time 12:30 end-time 20:00
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
 mark app-category video dscp 9 precedence 4
 mark application facetime dscp 10 precedence 5
 logging level critical
nx9500-6C8809(config-app-policy-Bing)#
```

Related Commands

no	Removes this mark rule from the application policy

4.1.19.2.15 rate-limit

application-policy-mode commands

Creates a rate-limit rule and configures the match criteria

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rate-limit [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-
NAME>] ([egress|ingress]) rate <50-1000000> max-burst-size <2-1024> schedule
<SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

Parameters

```
• rate-limit [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-
NAME>] ([egress|ingress]) rate <50-1000000> max-burst-size <2-1024> schedule
<SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

rate-limit	Creates a rate-limit rule and configures the match criteria. When applied, the rule applies a rate-limit to packets that match the criteria configured here. These packets could be incoming, outgoing, or both. The match criteria options are: app-category and application.
app-category [<APP-CATEGORY-NAME>|all]	Uses application category as the match criteria • <APP-CATEGORY-NAME> – Specify the application category. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system rate-limits the packet. • all – The system rate-limits all packets irrespective of the application category.
application <APPLICATION-NAME>	Uses application name as the match criteria • <APPLICATION-NAME> – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system rate-limits the packet.
[egress|ingress]	The egress and ingress parameters are recursive and can be used to rate limit either incoming, outgoing, or both incoming and outgoing traffic. • egress – Selects the traffic type as outgoing • ingress – Selects the traffic type as outgoing After selecting the traffic type (incoming/outgoing) configure the rate and maximum burst size.
rate <50-1000000>	The following parameters are common to the 'egress' and 'ingress' keywords: • rate – Configures the rate limit, in Kbps, for both incoming and outgoing packets • <50-1000000> – Specify the rate limit from 50 - 1000000 Kbps.
max-burst-size	The following parameters are common to the 'egress' and 'ingress' keywords: • max-burst-size – Configures the maximum burst size, in Kbytes, for both incoming and outgoing packets • <2-1024> – Specify the maximum burst size from 2 - 1024 Kbytes.

schedule <SCHEDULE-POLICY-NAME>	Schedules an enforcement time for this rate-limit rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time. • schedule <SCHEDULE-POLICY-NAME> – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the application-policy > enforcement-time command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all'). • <SCHEDULE-POLICY-NAME> – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule. In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see *enforcement-time*.

precedence <1-256>	Assigns a precedence value for this mark rule. The precedence value differentiates between rules applicable to applications and the application categories they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.
	Let us consider application *youtube* belonging to app-category *streaming*.
	The action required is: Allow *youtube* packets and deny all other applications belonging to app-category *streaming*.
	The rules can be defined as:
	`#allow application youtube precedence 1`
	`#deny app-category streaming precedence 2`
	The following configuration is incorrect:
	`#deny app-category streaming precedence 1`
	`#allow application youtube precedence 2`
	Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.
	The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.

Example

```
nx9500-6C8809(config-app-policy-Bing)#rate-limit application BGP ingress rate 100
max-burst-size 25 egress rate 50 max-burst-size 25 precedence 6

nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 enforcement-time days weekdays start-time 12:30 end-time 20:00
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
 mark app-category video dscp 9 precedence 4
 mark application facetime dscp 10 precedence 5
 rate-limit application BGP ingress rate 100 max-burst-size 25 egress rate 50 max-
burst-size 25 precedence 6
 logging level critical

nx9500-6C8809(config-app-policy-Bing)#
```

Related Commands

no	Removes this rate-limit rule from the application policy

4.1.19.2.16 no

application-policy-mode commands

Removes or resets this application policy's settings

Supported in the following platforms:

- Access Points — AP7522, AP7532
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [allow|deny|description|enforcement-time|logging|mark|rate-limit]

no allow [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
precedence <1-256>

no deny [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
precedence <1-256>

no description

no enforcement-time days [sunday|monday|tuesday|wednesday|thursday|friday|
saturday|all|weekends|weekdays]

no logging [level|on]

no mark [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
precedence <1-256>

no rate-limit [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-
NAME>] precedence <0-256>
```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Removes or resets this application policy settings based on the parameters passed

Example

The following example shows the application policy 'Bing' settings before the 'no' commands are executed:

```
nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 enforcement-time days weekdays start-time 12:30 end-time 20:00
 allow application Bing precedence 1
 allow app-category business precedence 2
 deny app-category "social networking" precedence 3
 mark app-category video dscp 9 precedence 4
 mark application facetime dscp 10 precedence 5
 rate-limit application BGP ingress rate 100 max-burst-size 25 egress rate 50 max-
burst-size 25 precedence 6
 logging level critical

nx9500-6C8809(config-app-policy-Bing)#

nx9500-6C8809(config-app-policy-Bing)#no allow app-category business precedence 2
nx9500-6C8809(config-app-policy-Bing)#no deny app-category social\ networking
precedence 3
```

The following example shows the application policy ‘Bing’ settings after the ‘no’ commands are executed:

```
nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
 description "This application policy allows Bing search engine packets"
 enforcement-time days weekdays start-time 12:30 end-time 20:00
 allow application Bing precedence 1
 mark app-category video dscp 9 precedence 4
 mark application facetime dscp 10 precedence 5
 rate-limit application BGP ingress rate 100 max-burst-size 25 egress rate 50 max-
burst-size 25 precedence 6
 logging level critical
nx9500-6C8809(config-app-policy-Bing)#
```

4.1.20 association-acl-policy

Global Configuration Commands

Configures an association ACL policy. This policy defines a list of devices allowed or denied access to the network.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
association-acl-policy <ASSOCIATION-ACL-POLICY-NAME>
```

Parameters

- `association-acl-policy <ASSOCIATION-ACL-POLICY-NAME>`

<ASSOCIATION-ACL-POLICY-NAME>	Specify the association ACL policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#association-acl-policy test
rfs6000-81742D(config-assoc-acl-test)#?
Association ACL Mode commands:
  deny      Specify MAC addresses to be denied
  no        Negate a command or set its defaults
  permit    Specify MAC addresses to be permitted

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

rfs6000-81742D(config-assoc-acl-test)#
```

Related Commands

no	Resets values or disables commands

NOTE: For more information on the association-acl-policy, see *Chapter 10, ASSOCIATION-ACL-POLICY*.

4.1.21 auto-provisioning-policy

Global Configuration Commands

Configures an auto provisioning policy. This policy configures the automatic provisioning of device adoption. The policy configures how an AP is adopted based on its type.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
auto-provisioning-policy <AUTO-PROVISIONING-POLICY-NAME>
```

Parameters

- `auto-provisioning-policy <AUTO-PROVISIONING-POLICY-NAME>`

<AUTO-PROVISIONING-POLICY-NAME>	Specify the auto provisioning policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#auto-provisioning-policy test
rfs6000-81742D(config-auto-provisioning-policy-test)#?
Auto-Provisioning Policy Mode commands:
  Auto-Provisioning Policy Mode commands:
  adopt                       Add rule for device adoption
  auto-create-rfd-template    When RF Domain specified by the matching rule
                              template does not exist create new RF Domain
                              automatically
  default-adoption            Adopt devices even when no matching rules are
                              found.  Assign default profile and default
                              rf-domain
  deny                        Add rule to deny device adoption
  evaluate-always             Set the flag to evaluate the policy everytime,
                              regardless of previous adoption status
  no                          Negate a command or set its defaults
  redirect                    Add rule to redirect device adoption
  upgrade                     Add rule for device upgrade

  clrscr                      Clears the display screen
  commit                      Commit all changes made in this session
  do                          Run commands from Exec mode
  end                         End current mode and change to EXEC mode
  exit                        End current mode and down to previous mode
  help                        Description of the interactive help system
  revert                      Revert changes
  service                     Service Commands
  show                        Show running system information
  write                       Write running configuration to memory or terminal

rfs6000-81742D(config-auto-provisioning-policy-test)#
```

Related Commands

no	Removes an existing Auto Provisioning policy

NOTE: For more information on the auto-provisioning-policy, see *Chapter 9, AUTO-PROVISIONING-POLICY*.

4.1.22 bgp

Global Configuration Commands

Configures *Border Gateway Protocol* (BGP) settings

BGP is an inter-ISP routing protocol which establishes routing between *Internet Service Providers* (ISPs). ISPs use BGP to exchange routing and reachability information between *Autonomous Systems* (AS) on the Internet. BGP makes routing decisions based on paths, network policies and/or rules configured by network administrators. The primary role of a BGP system is to exchange network reachability information with other BGP peers. This information includes information on AS that the reachability information traverses. This information is sufficient to create a graph of AS connectivity from which routing decisions can be created and rules enforced.

An AS is a set of routers under the same administration that use *Interior Gateway Protocol* (IGP) and common metrics to define how to route packets within the AS. AS uses inter-AS routing to route packets to other ASs. For an external AS, an AS appears to have a single coherent interior routing plan and presents a consistent picture of the destinations reachable through it.

Routing information exchanged through BGP supports only destination based forwarding (it assumes a router forwards packets based on the destination address carried in the IP header of the packet).

BGP uses TCP as its transport protocol. This eliminates the need to implement explicit update fragmentation, retransmission, acknowledgment, and sequencing. BGP listens on TCP port 179. The error notification mechanism used in BGP assumes that TCP supports a *graceful* close (all outstanding data is delivered before the connection is closed).

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bgp [as-path-list|community-list|extcommunity-list|ip-access-list|ip-prefix-list]
<LIST-NAME>
```

Parameters

```
• bgp [as-path-list|community-list|extcommunity-list|ip-access-list|ip-prefix-
list] <LIST-NAME>
```

as-path-list <LIST-NAME>	Creates an AS path list and enters its configuration mode • <LIST-NAME> – Provide the AS-PATH-LIST name.
community-list <LIST-NAME>	Creates a community list and enters its configuration mode • <LIST-NAME> – Provide the COMMUNITY-LIST name.
extcommunity-list <LIST-NAME>	Creates an extended community list and enters its configuration mode • <LIST-NAME> – Provide the EXTCOMMUNITY-LIST name.
ip-access-list <LIST-NAME>	Creates a BGP IP access list and enters its configuration mode • <LIST-NAME> – Provide the BGP IP-ACCESS-LIST name.
ip-prefix-list <LIST-NAME>	Creates a BGP IP prefix list and enters its configuration mode • <LIST-NAME> – Provide the BGP IP-PREFIX-LIST name.

Example

```
nx9500-6C8809(config)#bgp ?
  as-path-list       BGP AS path list Configuration
  community-list     Add a community list entry
  extcommunity-list  Add a extended community list entry (EXPERIMENTAL)
  ip-access-list     Add an access list entry
  ip-prefix-list     Build a prefix list

nx9500-6C8809(config)#

nx9500-6C8809(config)#bgp as-path-list AS-TEST-PATH
nx9500-6C8809(config-bgp-as-path-list-AS-TEST-PATH)#?
BGP AS Path List Mode commands:
  deny     Specify packets to reject
  no       Negate a command or set its defaults
  permit   Specify packets to forward

  clrscr   Clears the display screen
  commit   Commit all changes made in this session
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  revert   Revert changes
  service  Service Commands
  show     Show running system information
  write    Write running configuration to memory or terminal

nx9500-6C8809(config-bgp-as-path-list-AS-TEST-PATH)#
```

Related Commands

no	Modifies BGP settings, based on the parameters passed

NOTE: For more information on configuring BGP *Top-Level Objects* (TLOs), see *Chapter 28, BORDER GATEWAY PROTOCOL*.

4.1.23 bonjour-gw-discovery-policy

Global Configuration Commands

Bonjour is Apple's zero-configuration networking (Zeroconf) implementation. Zeroconf is a group of technologies that include service discovery, address assignment and hostname resolution. Bonjour locates the devices (printers, computers, etc.) and services these computers provide over a local network.

Bonjour provides a method to discover services on a *local area network* (LAN). Bonjour allows users to set up a network without any configuration. Services such as printers, scanners and file-sharing servers can be found using Bonjour. Bonjour only works within a single broadcast domain. However, with a special DNS configuration, it can be extended to find services across broadcast domains

This command configures a Bonjour GW Discovery policy. The policy defines a list of services clients can discover across subnets. A maximum of 8 (eight) policies can be created on access points, wireless controllers, or service platforms.

When configured and applied, this feature enables discovery of Bonjour services on local and/or tunneled VLANs.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bonjour-gw-discovery-policy <POLICY-NAME>
```

Parameters

- `bonjour-gw-discovery-policy <POLICY-NAME>`

<POLICY-NAME>	Specify the Bonjour GW Discovery policy name. If the policy does not exist, it is created. In the Bonjour GW Discovery policy configuration mode, use the allow-service keyword to configure the services that the Bonjour gateway is allowed to discover. A maximum of 16 (sixteen) service rules can be created. Optionally, you can restrict this facility for users on specific VLANs. To do so, specify the VLAN IDs. **Note:** Execute the bonjour-gw-forwarding-policy command to enable forwarding of Bonjour service responses across VLANs. To associate a Bonjour GW Discovery policy with a WLAN, in the WLAN configuration mode, execute the following command: *use > bonjour-gw-discovery-policy > <POLICY-NAME>*. For more information, see *use*. To associate a Bonjour GW Discovery policy with a VLAN, in the interface VLAN configuration mode, execute the following command: *use > bonjour-gw-discovery-policy > <POLICY-NAME>*. For more information, see *use*. To associate a Bonjour GW Discovery policy with a user role, in the role-policy - user-role - configuration mode, execute the following command: *use > bonjour-gw-discovery-policy > <POLICY-NAME>*. For more information, see *use*.

Example

```
rfs6000-81742D(config)#bonjour-gw-discovery-policy TestPolicy
rfs6000-81742D(config-bonjour-gw-discovery-policy-TestPolicy)#?
 commands:
  allow-service  Allow Bonjour Service on local or tunneled vlan,Optionally
                 VLAN IDs can be given so service will be discovered for those
                 vlan only
  no             Negate a command or set its defaults

  clrscr         Clears the display screen
  commit         Commit all changes made in this session
  do             Run commands from Exec mode
  end            End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service        Service Commands
  show           Show running system information
  write          Write running configuration to memory or terminal

rfs6000-81742D(config-bonjour-gw-discovery-policy-TestPolicy)#
```

Related Commands

no	Removes an existing Bonjour GW Discovery policy

4.1.24 bonjour-gw-forwarding-policy

Global Configuration Commands

Configures a Bonjour GW Forwarding policy. When configured and applied on the controller, the policy defines the service VLANs (the VLANs on which Bonjour services are running) and client VLANs where clients are present. All Bonjour responses from service VLANs are forwarded to client VLANs. A maximum of 2 (two) policies can be created on a wireless controller or service platform. And only 1 (one) policy can be created on an access point.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bonjour-gw-forwarding-policy <POLICY-NAME>
```

Parameters

- `bonjour-gw-forwarding-policy <POLICY-NAME>`

<POLICY-NAME>	Specify the Bonjour GW Forwarding policy name. If the policy does not exist, it is created. To receive Bonjour service responses from specific VLANs, specify the VLAN IDs. In the Bonjour GW Forwarding policy configuration mode, provide a list of VLAN IDs from which Bonjour responses can be received (format: 10-20, 25, 30-35). And then specify the list of client VLANs that can access Bonjour services. **Note:** Execute the bonjour-gw-discovery-policy command to define the Bonjour services allowed on local and tunneled VLANs. To associate a Bonjour GW Forwarding policy with a device or profile, in the profile/device configuration mode, execute the *use > bonjour-gw-forwarding-policy > <POLICY-NAME>* command. For more information, see *use*.

Example

```
rfs6000-81742D(config)#bonjour-gw-forwarding-policy TestPolicy
rfs6000-81742D(config-bonjour-gw-forwarding-policy-TestPolicy)#?
 commands:
  forward-bonjour-response  Forwards bonjour service response across vlans
  no                        Negate a command or set its defaults

  clrscr                    Clears the display screen
  commit                    Commit all changes made in this session
  do                        Run commands from Exec mode
  end                       End current mode and change to EXEC mode
  exit                      End current mode and down to previous mode
  help                      Description of the interactive help system
  revert                    Revert changes
  service                   Service Commands
  show                      Show running system information
  write                     Write running configuration to memory or terminal

rfs6000-81742D(config-bonjour-gw-forwarding-policy-TestPolicy)#
```

Related Commands

no	Removes an existing Bonjour GW Forwarding policy

4.1.25 bonjour-gw-query-forwarding-policy

Global Configuration Commands

Configures a Bonjour GW Query Forwarding policy and enters its configuration mode. When created and applied, this policy enables forwarding of Bonjour queries across VLANs.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bonjour-gw-query-forwarding-policy <POLICY-NAME>
```

Parameters

- `bonjour-gw-query-forwarding-policy <POLICY-NAME>`

<POLICY-NAME>	Specify the Bonjour GW Query Forwarding policy name. If the policy does not exist, it is created. **Note:** In the Bonjour GW Query Forwarding policy configuration mode, specify the 'from' and 'to' VLAN(s). The *from-vlans* option configures the VLAN(s) that are the source of the Bonjour queries. The *to-vlans* option configures the destination VLAN(s) that can access the Bonjour queries. To associate a Bonjour GW Query Forwarding policy with a device or profile, in the profile/device configuration mode, execute the *use > bonjour-gw-query-forwarding-policy > <POLICY-NAME>* command. For more information, see *use*.

Example

```
rfs6000-81742D(config)#bonjour-gw-query-forwarding-policy TestPolicy
rfs6000-81742D(config-bonjour-gw-query-forwarding-policy-test)#?
(config-bonjour-gw-query-forwarding-policy) commands:
  forward-bonjour-query  Forwards bonjour query across vlans
  no                     Negate a command or set its defaults

  clrscr                 Clears the display screen
  commit                 Commit all changes made in this session
  do                     Run commands from Exec mode
  end                    End current mode and change to EXEC mode
  exit                   End current mode and down to previous mode
  help                   Description of the interactive help system
  revert                 Revert changes
  service                Service Commands
  show                   Show running system information
  write                  Write running configuration to memory or terminal

rfs6000-81742D(config-bonjour-gw-query-forwarding-policy-test)#
```

Related Commands

no	Removes an existing Bonjour GW Query Forwarding policy

4.1.26 captive portal

Global Configuration Commands

The following table lists the commands that enable you to create a new captive portal policy and enter its configuration mode:

Table 4.8 *Captive-Portal Config Commands*

Command	Description	Reference
captive-portal	Creates a new captive portal and enters its configuration mode	*page 4-84*
captive-portal-mode commands	Summarizes captive portal configuration commands	*page 4-86*

4.1.26.1 captive-portal

captive portal

Configures a captive portal policy and enters its configuration mode. Once created and configured, use the captive portal policy in the WLAN context, and in the device/profile contexts of the access point or controller hosting the captive portal server.

A captive portal provides secure access using a standard Web browser. Captive portals provide authenticated access by capturing and re-directing a wireless user's Web browser session to a captive portal login page where the user must enter valid credentials to access to the wireless network. Once logged into the captive portal, additional Acknowledgment, Agreement, Welcome, No Service, and Fail pages provide the administrator options to customize the screen flow and user appearance.

Captive portals are recommended for providing guests or visitors authenticated access to network resources when 802.1X EAP is not a viable option. Captive portal authentication does not provide end-user data encryption, but it can be used with static WEP, WPA-PSK or WPA2-PSK encryption.

Authentication for captive portal access requests is performed using a username and password pair, authenticated by an integrated RADIUS server. Authentication for private network access is conducted either locally on the requesting wireless client, or centrally at a data center.

Captive portals use a Web provisioning tool to create guest user accounts directly on the controller, service platform, or access point. The connection medium defined for the Web connection is either HTTP or HTTPS. Both HTTP and HTTPS use a request and response procedure to disseminate information to and from requesting wireless clients.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
captive-portal <CAPTIVE-PORTAL-NAME>
```

Parameters

- `captive-portal <CAPTIVE-PORTAL-NAME>`

<CAPTIVE-PORTAL-NAME>	Specify the captive portal name. If a captive portal with the specified name does not exist, it is created.

Example

```
rfs6000-81742D(config)#captive-portal test
rfs6000-81742D(config-captive-portal-test)#?
Captive Portal Mode commands:
access-time                  Allowed access time for the client. Used when
                               there is no session time in radius response
  access-type                Access type of this captive portal
  accounting                 Configure how accounting records are created for
                             this captive portal policy
  bypass                     Bypass captive portal
  connection-mode            Connection mode for this captive portal
  custom-auth                Custom user information
  data-limit                 Enforce data limit for clients
  inactivity-timeout         Inactivity timeout in seconds. If a frame is not
                             received from client for this amount of time,
                             then current session will be removed
  ipv6                       Internet Protocol version 6 (IPv6)
  localization               Configure the FQDN address to get the
                             localization parameters for the client
  logout-fqdn                Configure the FQDN address to logout the session
                             from client
  no                         Negate a command or set its defaults
  oauth                      OAuth 2.0 authentication configuration
  php-helper                 Configure the captive portal to use a server for
                             help with php
  post-authentication-vlan   Configure post authentication vlan for captive
                             portal users
  radius-vlan-assignment     Enable radius vlan assignment for captive portal
                             users
  redirection                Configure connection redirection parameters
  report-loyalty-application Report customer loyalty application presence in
                             clients
  server                     Configure captive portal server parameters
  simultaneous-users         Particular username can only be used by a
                             certain number of MAC addresses at a time
  terms-agreement            User needs to agree for terms and conditions
  use                        Set setting to use
  webpage                    Configure captive portal webpage parameters
  webpage-auto-upload        Enable automatic upload of internal and advanced
                             webpages
  webpage-location           The location of the webpages to be used for
                             authentication. These pages can either be hosted
                             on the system or on an external web server.
  welcome-back               Welcome back page settings

  clrscr                     Clears the display screen
  commit                     Commit all changes made in this session
  do                         Run commands from Exec mode
  end                        End current mode and change to EXEC mode
  exit                       End current mode and down to previous mode
  help                       Description of the interactive help system
  revert                     Revert changes
  service                    Service Commands
  show                       Show running system information
  write                      Write running configuration to memory or
                             terminal

rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Removes an existing captive portal

4.1.26.2 captive-portal-mode commands

captive portal

The following table summarizes captive portal configuration mode commands:

Table 4.9 *Captive-Portal-Mode Commands*

Command	Description	Reference
access-time	Defines a client's access time. It is used when no session time is defined in the RADIUS response.	*page 4-88*
access-type	Configures a captive portal's access type	*page 4-89*
accounting	Enables a captive portal's accounting records	*page 4-90*
bypass	Enables bypassing of captive portal detection requests from wireless clients	*page 4-92*
connection-mode	Configures a captive portal's connection mode	*page 4-93*
custom-auth	Configures custom user information	*page 4-94*
data-limit	Enforces data limit on captive portal clients	*page 4-95*
inactivity-timeout	Defines an inactivity timeout in seconds	*page 4-96*
ipv6	Configures the IPv6 address of the internal captive portal server	*page 4-97*
localization	Configures an FQDN address string that enables the client to receive localization parameters. This command also allows the configuration of a response message.	*page 4-98*
logout-fqdn	Clears the logout FQDN address	*page 4-100*
no	Reverts the selected captive portal's settings to default	*page 4-101*
oauth	Enables OAuth-based authentication support on the captive portal. When enabled, OAuth allows captive-portal users to sign in to guest WLANs using their Facebook or Google credentials.	*page 4-103*
php-helper	Configures a PHP helper to serve the captive portal's PHP splash pages to guest users using social-media to login to the captive portal.	*page 4-105*
post-authentication-vlan	Assigns a post authentication RADIUS VLAN for this captive portal's users	*page 4-107*
radius-vlan-assignment	Assigns a RADIUS VLAN for this captive portal	*page 4-108*
redirection	Enables redirection of client connections to specified destination ports	*page 4-109*
report-loyalty-application	Enables detection of captive portal client's *loyalty application* presence and stores this information in the captive portal's user database	*page 4-110*
server	Configures the captive portal server settings	*page 4-111*
simultaneous-users	Specifies a username used by a MAC address pool	*page 4-113*
terms-agreement	Enforces the user to agree to terms and conditions (included in login page) for captive portal access	*page 4-114*
use	Associates a AAA policy and a DNS whitelist with a captive portal	*page 4-115*
webpage	Configures captive portal Web page settings	*page 4-117*

Table 4.9 *Captive-Portal-Mode Commands*

Command	Description	Reference
webpage-auto-upload	Enables automatic upload of advanced Web pages on a captive portal	*page 4-125*
webpage-location	Specifies the location of Web pages used for captive portal authentication	*page 4-126*
welcome-back	Enables the provision of direct Internet access to once-registered, captive-portal guest users on subsequent log-ins	*page 4-127*
configuring device registration with dynamic VLAN assignment	Documents configuration details required to enable device registration with dynamic VLAN assignment in a multi-vendor environment	*page 4-129*
configuring WeChat Wi-Fi hotspot support in WiNG captive portal	Documents configuration details required to support the WeChat WiFi hotspot, so that WeChat users, on their first connect to a WiNG access point, can automatically authenticate with the WeChat server through an intermediate server	*page 4-131*
configuring ExtremeGuest captive-portal	Documents the basic configurations required to deploy an ExtremeGuest setup	*page 4-133*

4.1.26.2.17 access-time

captive-portal-mode commands

Defines the permitted access time for a client. It is used when no session time is defined in the RADIUS response.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
access-time <10-10080>
```

Parameters

- `access-time <10-10080>`

access-time <10-10080>	Defines the duration wireless clients are allowed access to the Internet using this captive portal policy • <10-10080> – Specify a value from 10 - 10080 minutes. The default is 1440 minutes.

Example

```
rfs6000-81742D(config-captive-portal-test)#access-time 35

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-time 35
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Reverts to the default permitted access time (1440 minutes)

4.1.26.2.18 access-type

captive-portal-mode commands

Defines the captive portal's access type. The authentication scheme configured here is applied to wireless clients using this captive portal.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
access-type [custom-auth-radius|logging|no-auth|radius|registration]
```

Parameters

- `access-type [custom-auth-radius|logging|no-auth|radius|registration]`

custom-auth-radius	Specifies the custom user information used for authentication (RADIUS lookup of given information, such as name, e-mail address, telephone, etc.). When configured, accessing clients are required to provide a 1-32 character lookup data string used to authenticate their credentials. When selecting this option, use the custom-auth command to configure the required user information.
logging	Provides users access without authentication. The system logs access details of users allowed access.
no-auth	Defines no authentication required for a guest (guest is redirected to welcome message). Provides users access to the captive portal without authentication.
radius	Enables RADIUS authentication for wireless clients. Provides captive portal access to successfully authenticated users only. This is the default setting.
registration	Enables captive portal's clients to self register in the captive portal's database. When configured, a requesting client's user credentials require authentication locally or through social media credential exchange and validation. If enabled, use the *webpage > internal > registration > field* command to customize the registration page. If not customized, the default, built-in registration Web page is displayed.

Example

```
rfs6000-81742D(config-captive-portal-test)#access-type logging

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-type logging
 access-time 35
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Removes the captive portal access type or reverts to default (radius)

4.1.26.2.19 accounting

captive-portal-mode commands

Enables support for accounting messages for this captive portal

When enabled, accounting for clients entering and exiting the captive portal is initiated. Accounting is the method of collecting and sending security server information for billing, auditing, and reporting user data. This data includes information, such as start and stop times, executed commands (such as PPP), number of packets and number of bytes transmitted, etc. Accounting enables tracking of captive portal services consumed by clients.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
accounting [radius|syslog]

accounting radius

accounting syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none|through-controller|through-rf-domain-manager]}
```

Parameters

- `accounting radius`

radius	Enables support for RADIUS accounting messages. When enabled, this option uses an external RADIUS resource for AAA accounting. This option is disabled by default.

- `accounting syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none|through-controller|through-rf-domain-manager]}`

syslog host <IP/ HOSTNAME>	Enables support for syslog accounting messages. When enabled, data relating to wireless client usage of remote access services is logged on the specified external syslog resource. This information assists in differentiating between local and remote users. Remote user information can be archived to an external location for periodic network and user administration. This option is disabled by default. • host <IP/HOSTNAME> – Specifies the destination where accounting messages are sent. Specify the destination's IP address or hostname.
port <1-65535>	Optional. Specifies the syslog server's listener port • <1-65535> – Specify the UDP port from 1- 65535. The default is 514.
proxy-mode [none| through-controller| through-rf-domain-manager]	Optional. Specifies the mode of proxying the syslog server • none – Accounting messages are sent directly to the syslog server • through-controller – Accounting messages are sent through the controller configuring the device • through-rf-domain-manager – Accounting messages are sent through the local RF Domain manager

Example

```
rfs6000-81742D(config-captive-portal-test)#accounting syslog host 172.16.10.13
port 1

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-type logging
 access-time 35
 accounting syslog host 172.16.10.13 port 1
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Disables accounting records for this captive portal

4.1.26.2.20 bypass

captive-portal-mode commands

Enables bypassing of captive portal detection requests from wireless clients

Certain devices, such as Apple IOS devices send *Captive Network Assistant* (CNA) requests to detect existence of captive portals. When enabled, the bypass option does not allow CNA requests to be redirected to the captive portal pages.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bypass captive-portal-detection
```

Parameters

- `bypass captive-portal-detection`

bypass captive-portal-detection	Bypasses captive portal detection requests

Example

```
rfs4000-229D58(config-captive-portal-test)#bypass captive-portal-detection

rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
 bypass captive-portal-detection
rfs4000-229D58(config-captive-portal-test)#
```

Related Commands

no	Disables bypassing of captive portal detection requests

4.1.26.2.21 connection-mode

captive-portal-mode commands

Configures a captive portal's mode of connection to the Web server. HTTP uses plain unsecured connection for user requests. HTTPS uses an encrypted connection to support user requests.

Both HTTP and HTTPS use the same *Uniform Resource Identifier* (URI), so controller and client resources can be identified. However, the use of HTTPS is recommended, as it affords controller and client transmissions some measure of data protection HTTP cannot provide.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
connection-mode [http|https]
```

Parameters

- `connection-mode [http|https]`

http	Sets HTTP as the default connection mode. This is the default setting.
https	Sets HTTPS as the default connection mode HTTPS is a more secure version of HTTP, and uses encryption while sending and receiving requests.

Example

```
rfs6000-81742D(config-captive-portal-test)#connection-mode https

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-type logging
 access-time 35
 connection-mode https
 accounting syslog host 172.16.10.13 port 1
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Removes this captive portal's connection mode

4.1.26.2.22 custom-auth

captive-portal-mode commands

Configures custom user information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
custom-auth info <LINE>
```

Parameters

- `custom-auth info <LINE>`

info <LINE>	Configures information used for RADIUS lookup when custom-auth RADIUS access type is configured • <LINE> – Guest data needs to be provided. Specify the name, e-mail address, and telephone number of the user.

Example

```
rfs6000-81742D(config-captive-portal-test)#custom-auth info bob
bob@examplecompany.com

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-type logging
 access-time 35
 custom-auth info bob bob@examplecompany.com
 connection-mode https
 accounting syslog host 172.16.10.13 port 1
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Removes custom user information configured with this captive portal

4.1.26.2.23 data-limit

captive-portal-mode commands

Enforces data transfer limits on captive portal clients. This feature enables the tracking and logging of user usage. Users exceeding the allowed bandwidth are restricted from the captive portal.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
data-limit <1-102400> {action [log-and-disconnect|log-only]}
```

Parameters

- `data-limit <1-102400> {action [log-and-disconnect|log-only]}`

data-limit <1-102400>	Sets a captive portal client's data transfer limit in megabytes. This limit is applicable for both upstream and downstream data transfer. • <1-102400> – Specify a value from 1 - 102400 MB.
action [log-and-disconnect| log-only]	Optional. Specifies the action taken when a client exceeds the configured data limit. The options are: • log-and-disconnect – When selected, an entry is added to the log file any time a captive portal client exceeds the data limit, and the client is disconnected. • log-only – When selected, an entry is added to the log file any time a captive portal client exceeds the data limit. the client, however, remains connected to the captive portal. This is the default setting.

Example

```
rfs6000-81742D(config-captive-portal-test)#data-limit 200 action log-and-
disconnect

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 data-limit 200 action log-and-disconnect
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Removes data limit enforcement for captive portal clients

4.1.26.2.24 inactivity-timeout

captive-portal-mode commands

Defines the inactivity timeout in seconds. If a frame is not received from a client for the specified interval the current session is terminated.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
inactivity-timeout <60-86400>
```

Parameters

- `inactivity-timeout <60-86400>`

<60-86400>	Defines the interval for which a captive portal session is kept alive without receiving a frame from the client. The session is automatically terminated once this interval is over. • <60-86400> – Specify a value from 60 - 86400 seconds. The default is 10 minutes or 600 seconds.

Example

```
rfs6000-81742D(config-captive-portal-test)#inactivity-timeout 750

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-type logging
 access-time 35
 custom-auth info bob bob@examplecompany.com
 connection-mode https
 inactivity-timeout 750
 accounting syslog host 172.16.10.13 port 1
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Removes the client inactivity-timeout configured with this captive portal

4.1.26.2.25 ipv6

captive-portal-mode commands

Configures the internal captive portal server's (running on the centralized mode) IPv6 address. If using centralized server mode, use this option to define the controller, service platform, or access point resource's (hosting the captive portal) IPv6 address. For information on configuring the server mode, see *server*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ipv6 server host <IPv6>
```

Parameters

- `ipv6 server host <IPv6>`

ipv6 server host <IPv6>	Configures the IPv6 address of the internal captive portal server • <IPv6> – Specify the captive portal server's global IPv6 address.

Example

```
rfs6000-81742D(config-captive-portal-test2)#ipv6 server host
2001:10:10:10:6d:33:fa:8b

4.1.26.2.26 localization

captive-portal-mode commands

Configures an FQDN address string that enables the client to receive localization parameters. Use this option to add a URL to trigger a one-time redirect on demand. The defined URL is triggered from a mobile application to derive location information from the wireless network so an application can be localized to a particular store or region.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
localization [fqdn <WORD>|response <WORD>]
```

Parameters

- `localization [fqdn <WORD>|response <WORD>]`

localization	Configures an FQDN address string that enables the client to receive localization parameters. This command also allows the configuration of a response message.
fqdn <WORD>	Configures the FQDN address string, which is used to obtain localization parameters for the captive portal's client. • <WORD> – Specify the FQDN address string. For example, local.guestaccess.com
response <WORD>	Configures a message, which is sent back to the client in response to the client's localization HTTP requests • <WORD> – Specify the response message (should not exceed 512 characters in length). The following built-in query tags can be included in the response message: WING_TAG_CLIENT_IP' -Captive portal client IPv4 address 'WING_TAG_CLIENT_MAC' - Captive portal client MAC address 'WING_TAG_WLAN_SSID ' - Captive portal client WLAN ssid 'WING_TAG_AP_MAC' - Captive portal client AP MAC address 'WING_TAG_AP_NAME' - Captive portal client AP Name 'WING_TAG_RF_DOMAIN' - Captive portal client RF Domain 'WING_TAG_USERNAME' - Captive portal authentication username 'WING_TAG_USERTYPE' - Captive portal usertype (new/return/refresh) Example:- <local><site>WING_TAG_RF_DOMAIN</site><ap>WING_TAG_AP_NAME</ap></local

Example

```
nx9500-6C8809(config-captive-portal-test)#localization fqdn local.guestaccess.com

nx9500-6C8809(config-captive-portal-test)#localization response
<local><site>SJExtreme</site><ap>ap8132-74B45C</ap><user>Bob</user><local>

4.1.26.2.27 logout-fqdn

captive-portal-mode commands

Configures the *Fully Qualified Domain Name* (FQDN) address to logout of the session from the client

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
logout-fqdn <WORD>
```

Parameters

- `logout-fqdn <WORD>`

logout-fqdn <WORD>	Configures the FQDN address used to logout • <WORD> – Provide the FQDN address (for example, logout.guestaccess.com).

Example

```
rfs6000-81742D(config-captive-portal-test)#logout-fqdn logout.testuser.com

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 logout-fqdn logout.testuser.com
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Clears the logout FQDN address

4.1.26.2.28 no

captive-portal-mode commands

The `no` command reverts the selected captive portal's settings or resets settings to default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [access-time|access-type|accounting|bypass|connection-mode|custom-auth|

captive-portal test
 access-time 35
 custom-auth info bob bob@examplecompany.com
 connection-mode https
 inactivity-timeout 750
rfs6000-81742D(config-captive-portal-test)#
```

4.1.26.2.29 oauth

captive-portal-mode commands

Enables OAuth-driven Google and/or Facebook authentication on captive portals that use internal Web pages.

To enable Google and Facebook captive-portal authentication:

- Enforce captive-portal authentication on the WLAN to which wireless-clients associate. For information, see *captive-portal-enforcement*.
- Set captive-portal Web page location to internal. For more information, see *webpage-location*.
- Register your captive-portal individually on Google/FaceBook APIs and generate a *client-id* and *client-secret*. The client-ids retrieved during registration are the IDs for the WiNG application running on the access point/controller. The WiNG application uses these client-ids to access the Google and Facebook Auth APIs, and authenticate the guest client on behalf of the user.

If enabling OAuth-driven Google and/or Facebook authentication on the captive portal, use this command to configure the Google/Facebook client-ids. Once enabled, the captive portal landing page, displayed on the client's browser, provides the Facebook and Google login buttons.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
oauth

oauth client-id [facebook|google] <WORD>
```

Parameters

- `oauth`

oauth	Execute this command without the associated keywords to enable OAuth on this captive-portal. If enabling OAuth, ensure the captive-portal Web page location is configured as advanced or external.

- `oauth client-id [facebook|google] <WORD>`

oauth client-id [facebook|google] <WORD>	Configures the client-ids retrieved from the Google and Facebook API manager portals during registration • facebook – Configures the Facebook API client-id (is a 15 digit entity) • google – Configures the Google API client-id (is a 12 digit number) • <WORD> – Provide the Facebook/Google client-id. If the captive-portal Web page location is advanced or external, and you are enabling OAuth support, you need not configure the client-id. In such a scenario, the client-id is configured through the EGuest server UI and not the WiNG CLI.

Example

```
nx7500-6DCD39(config-captive-portal-test2)#OAuth

nx7500-6DCD39(config-captive-portal-test2)#OAuth client-id Google
xxxxxxxxxxxx.apps.googleusercontent.com Facebook yyyyyyyyyyyyyyy

nx7500-6DCD39(config-captive-portal-test2)#show context
captive-portal test2
 server host guest.social.com
  oauth
  oauth client-id Google xxxxxxxxxxxx.apps.googleusercontent.com Facebook
yyyyyyyyyyyyyyy

nx7500-6DCD39(config-captive-portal-test)#
```

In the above example:

- xxxxxxxxxxxx - Is the 12 digit numeric part of your Google client-id.
- yyyyyyyyyyyyyyy - Is the 15 digit Facebook client-id

Related Commands

no	Removes all OAuth client identities configured for this captive portal

4.1.26.2.30 php-helper

captive-portal-mode commands

Configures a PHP helper to serve the PHP splash pages to guest users logging in to the captive portal using social-media credentials. Configure a PHP helper only if the following criteria are fulfilled:

- OAuth-based authentication is enabled on the captive portal.
- The captive-portal server mode is “self”.
- The access point, hosting the captive-portal server, has low memory space (for example, the AP6511, AP6521, AP6522, AP6532, and AP7502 model access points).
- A hotspot server, hosting the captive-portal PHP splash pages, is up and running.

The WiNG software introduces HybridAuth support on captive portals. HybridAuth is an open-source, social-sign on PHP Library. In addition to Google and Facebook, it allows a variety of third-party social authentications, such as LinkedIn, Twitter, Live, Yahoo, OpenID, etc. However, HybridAuth uses space-consuming PHP splash pages that cannot be loaded on access points with low memory space. These access points can only serve the initial landing page, where guests clicking on a social login button are redirected by the *php-helper* to a PHP page hosted on the *PHP-helper.*

To create PHP splash pages, use the splash template configuration tool available on the *ExtremeGuest* (EGuest) dashboard. Upload the generated tar to both the hotspot server and the php helper. Note, the EGuest dashboard can be launched from the WiNG controller (NX9500/NX9600/VX9000) enabled as the EGuest server.

For more information on enabling the EGuest server, see *eguest-server (VX9000 only)*.

For more information on configuring an EGuest captive portal, see *configuring ExtremeGuest captive-portal*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
php-helper [controller|domain-manager]

php-helper controller <IP/HOSTNAME> hosting-vlan-interface <0-4096>

php-helper domain-manager <IP/HOSTNAME>
```

Parameters

- `php-helper controller <IP/HOSTNAME> hosting-vlan-interface <0-4094>]`

php-helper	Configures the php-helper parameters
controller <IP/ HOSTNAME>	Configures the controller adopting the captive-portal access point as the php-helper • <IP/HOSTNAME> – Specify the adopting controller’s IP address or host name.
hosting-vlan-interface <0-4096>	Optional. Configures the VLAN on which the php-helper is reachable • <0-4096> – Specify the VLAN hosting the php-helper from 0 - 4096.

- `php-helper domain-manager <IP/HOSTNAME>`

php-helper	Configures the php-helper parameters
domain-manager <IP/HOSTNAME>	Configures the captive-portal access point's RF Domain manager as the php-helper • <IP/HOSTNAME> – Specify the RF Domain manager's IP address or host name.

Example

To enable php-helper configure the following parameters in the captive-portal context:

```
ap6532-3163A4(config-captive-portal-php-helper)#oauth

ap6532-3163A4(config-captive-portal-php-helper)#php-helper controller nx9500-
6C8809

ap6532-3163A4(config-captive-portal-php-helper)#server mode self

ap6532-3163A4(config-captive-portal-php-helper)#server host cpsocial.extreme.com
```

Note, when configuring the server, specify the server's hostname and not the IP address, because some social media do not allow IP address as a redirect URI.

```
ap6532-3163A4(config-captive-portal-php-helper)#show running-config captive-
portal php-helper
captive-portal php-helper
 server host cpsocial.extreme.com
 php-helper controller nx9500-6C8809
 oauth
 webpage internal registration field city type text enable label "City" placeholder
"Enter City"
 webpage internal registration field street type text enable label "Address"
placeholder "123 Any Street"
 webpage internal registration field name type text enable label "Full Name"
placeholder --More--
ap6532-3163A4(config-captive-portal-php-helper)#
```

Related Commands

no	Removes the PHP helper configuration

4.1.26.2.31 post-authentication-vlan

captive-portal-mode commands

Configures the VLAN that is assigned to this captive portal's users upon successful authentication

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
post-authentication-vlan [<1-4096>|<VLAN-ALIAS>]
```

Parameters

- `post-authentication-vlan [<1-4096>|<VLAN-ALIAS>]`

post-authentication-vlan [<1-4096>| <VLAN-ALIAS>]	Configures the post authentication VLAN. The VLAN specified here is assigned to this captive portal's users after they have authenticated and logged on to the network. Provide the VLAN ID, or use an existing VLAN alias to identify the post authentication VLAN. • <1-4096> – Specify the VLAN's number from 1 - 4096. • <VLAN-ALIAS> – Specify the VLAN alias (should be existing and configured). VLAN alias names begin with a '$'.

Example

```
rfs4000-229D58(config-captive-portal-test)#post-authentication-vlan 1

rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
 post-authentication-vlan 1
rfs4000-229D58(config-captive-portal-test)#
```

Related Commands

no	Removes the post authentication RADIUS VLAN assigned to this captive portal's users
radius-vlan-assignment	Enables assignment of a RADIUS VLAN for this captive portal

4.1.26.2.32 radius-vlan-assignment

captive-portal-mode commands

Enables assignment of a RADIUS VLAN for this captive portal

When enabled, if the RADIUS server as part of the authentication process returns a client's VLAN-ID in a RADIUS access-accept packet, all client traffic is forwarded on the post authentication VLAN. If disabled, the RADIUS server's VLAN assignment is ignored and the VLAN configuration defined within the WLAN configuration is used instead. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radius-vlan-assignment
```

Parameters

None

Example

```
rfs4000-229D58(config-captive-portal-test)#radius-vlan-assignment

rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
 post-authentication-vlan 1
 radius-vlan-assignment
rfs4000-229D58(config-captive-portal-test)#
```

Related Commands

no	Disables assignment of a RADIUS VLAN for this captive portal
post-authentication-vlan	Assigns a post authentication RADIUS VLAN for this captive portal's users

4.1.26.2.33 redirection

captive-portal-mode commands

Configures a list of destination ports (separated by commas, or using a dash for a range) that are taken into consideration when redirecting client connections

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
redirection ports <LIST-OF-PORTS>
```

Parameters

- `redirection ports <LIST-OF-PORTS>`

ports <LIST-OF-PORTS>	Configures destination ports considered for redirecting client connection A maximum of 16 ports can be specified in a comma-separated list. Standard ports 80 and 443 are always considered for client connections regardless of what's entered by the administrator.

Example

```
rfs4000-229D58(config-captive-portal-test)#redirection ports 1,2,3

rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
 redirection ports 1-3
rfs4000-229D58(config-captive-portal-test)#
```

Related Commands

no	Disables redirection of client connection

4.1.26.2.34 report-loyalty-application

captive-portal-mode commands

Enables detection of captive portal client's usage of a selected (preferred) loyalty application

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
report-loyalty-application {custom-app <APPLICATION-NAME>}
```

Parameters

- `report-loyalty-application {custom-app <APPLICATION-NAME>}`

report-loyalty-application {custom-app <APPLICATION-NAME>}	Reports a captive portal client's loyalty application presence and stores this information in the captive portal's user database. The client's loyalty application detection occurs on the access point to which the client is associated. Retail administrators can use this information to assess whether patrons' loyalty application usage is as per expectation within specific retail environments. This option is disabled by default. • custom-app <APPLICATION-NAME> – Optional. Uses a custom application definition as match criteria. • <APPLICATION-NAME> – Specify the custom application name (should be existing and configured). Ensure that the application specified is available and configured. If not, create an application definition. For more information, see *application*. If no custom application definition is specified, the system uses localization to detect application presence.

Example

```
nx9500-6C8809(config-captive-portal-test)#report-loyalty-application custom-app
AntiVirus

nx9500-6C8809(config-captive-portal-test)#show context include-factory | include
 report-loyalty-application
 report-loyalty-application custom-app AntiVirus
nx9500-6C8809(config-captive-portal-test)#
```

Related Commands

no	Disables detection of customer-loyalty application presence

4.1.26.2.35 server

captive-portal-mode commands

Configures captive portal server parameters, such as the hostname, IP address, and mode of operation. This is the captive-portal server hosting the captive portal Web pages.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
server [host|mode]

server host <IP/HOSTNAME>

server mode [centralized|centralized-controller {hosting-vlan-interface <0-4096>}|self]
```

Parameters

- `server host <IP/HOSTNAME>`

host <IP/HOSTNAME>	Configures the internal captive portal server (wireless controller, access point, service platform) • <IP/HOSTNAME> – Specify the IPv4/IPv6 address or hostname of the captive portal server. **Note:** For centralized-controller mode, the server host should be a virtual hostname and not an IP address. If enabling OAuth (social-media login) on the captive portal, configure the server's hostname and not the IP address. This is because some social media do not allow IP address as redirect-uri. For more information, see *oauth* and *php-helper*.

- `server mode [centralized|centralized-controller {hosting-vlan-interface <0-4096>}|self]`

mode	Configures the captive portal server mode. This parameter identifies the device that will capture and redirect a wireless user's Web browser session to a landing page where the user has to provide login credentials in order to access the managed network. The WiNG captive portal implementation is very flexible and allows captive portal services to reside anywhere within the WiNG managed network. For example, the capture and redirection can be performed directly by the access points at the edge of the network, centrally on the controllers or service platforms managing the access points, or on dedicated wireless controller deployed within an isolated network.
centralized	Select this option if capture and redirection is provided by a designated wireless controller/service platform on the network defined using an IPv4/IPv6 address or hostname. This dedicated device can either be managing the dependent/independent access points or be a dedicated device deployed over the intermediate network. Ensure the IPv4 address or hostname of the WiNG wireless controller performing the capture and redirection is defined in the captive portal policy. And also, that the wireless controller is reachable via MINT.

centralized-controller {hosting-vlan-interface <0-4096>}	Select this option if capture and redirection is on a cluster of wireless controller/ service platforms managing dependent/independent access points when redundancy is required. The capture and redirection is provided by one of the controllers in the cluster that is operating as the designated forwarder for the tunneled VLAN. The cluster can be configured as active/active or active/standby as required. If using this option, ensure a non-resolvable virtual hostname is defined in the captive portal policy which is shared between the controllers in the cluster. • hosting-vlan-interface – Optional. Configures the VLAN where the client can reach the captive-portal server. This option is available only for the centralized-controller mode. • <0-4096> – Specify the VLAN number (0 implies the controller is available on the client's VLAN).
self	Select this option if capture and redirection is provided by the access point that is servicing the captive portal enabled Wireless LAN. This is the default setting. When enabled each remote access point servicing the captive portal enabled WLAN performs the captive portal capture and redirection internally. The WLAN users are mapped to a locally bridged VLAN for which each access point has a *Switched Virtual Interface* (SVI) defined. The SVI can either have a static or dynamic (DHCP) IPv4 address assigned. The capture, redirection, and presentation of the captive portal pages are performed using the SVI on each access point the wireless device is associated to.

Example

```
rfs6000-81742D(config-captive-portal-test)#server host 172.16.10.9

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-time 35

4.1.26.2.36 simultaneous-users

captive-portal-mode commands

Specifies the number of users (client MAC addresses) that can simultaneously logon to the captive portal. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
simultaneous-users <1-8192>
```

Parameters

- `simultaneous-users <1-8192>`

simultaneous-users <1-8192>	Specifies the number of MAC addresses that can simultaneously access the captive portal • <1-8192> – Select a number from 1 - 8192.

Example

```
rfs6000-81742D(config-captive-portal-test)#simultaneous-users 5

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test

```

Related Commands

no	Resets or disables captive portal commands

4.1.26.2.37 terms-agreement

captive-portal-mode commands

Enforces the user to agree to terms and conditions (included in the login page) for captive portal access. This feature is disabled by default.

When enabled, the system enforces a previously registered user to re-confirm the terms of agreement, on successive log ins, only if the interval between the last log out and the current log in exceeds the *agreement-refresh* timeout configured in the WLAN context. For more information on configuring the agreement-refresh timeout value, see *registration*.

For example:

If the agreement-refresh timeout is set at 20 minutes, the following two possibilities can arise:

- The interval between logging out and re-logging *exceeds* 20 minutes - in which case the user is served the Terms of Agreement page on successful authentication.
- The interval between logging out and re-logging is *less than* 20 minutes - in which case the user is provided direct Internet access.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
terms-agreement
```

Parameters

None

Example

```
rfs6000-81742D(config-captive-portal-test)#terms-agreement

```

Related Commands

no	Resets or disables captive portal commands

4.1.26.2.38 use

captive-portal-mode commands

Configures a AAA policy and DNS whitelist with this captive portal policy. AAA policies are used to configure authentication and accounting servers for this captive portal. DNS whitelists restrict users to a set of configurable domains on the Internet.

For more information on AAA policies, see *AAA-POLICY*.

For more information on DNS whitelists, see *dns-whitelist*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
use [aaa-policy <AAA-POLICY-NAME>|dns-whitelist <DNS-WHITELIST-NAME>]
```

Parameters

- `use [aaa-policy <AAA-POLICY-NAME>|dns-whitelist <DNS-WHITELIST-NAME>]`

aaa-policy <AAA-POLICY-NAME>	Associates a AAA policy with this captive portal. AAA policies validate user credentials and provide captive portal access to the network. • <AAA-POLICY-NAME> – Specify the AAA policy name.
dns-whitelist <DNS-WHITELIST-NAME>	Associates a DNS whitelist to use with this captive portal. A DNS whitelist defines a set of allowed destination IP addresses. DNS whitelists restrict captive portal access. • <DNS-WHITELIST-NAME> – Specify the DNS whitelist name. To effectively host captive portal pages on an external Web server, the IP address of the destination Web server(s) should be added to the DNS whitelist.

Example

```
rfs6000-81742D(config-captive-portal-test)#use aaa-policy test

rfs6000-81742D(config-captive-portal-test)#use dns-whitelist test

dns-whitelist	Configures a DNS whitelist
aaa-policy	Configures a AAA policy

4.1.26.2.39 webpage

captive-portal-mode commands

Use this command to define the appearance and flow of Web pages requesting clients encounter when accessing a controller, service platform, or access point managed captive portal. Define whether the Web pages are maintained locally or externally to the managing device as well as messages displayed requesting clients.

Configures Web pages displayed when interacting with a captive portal. These pages are:

- acknowledgment – This page displays details for the user to acknowledge
- agreement – This page displays “Terms and Conditions” that a user accepts before allowed access to the captive portal.
- fail – This page is displayed when the user is not authenticated.
- login – This page is displayed when the user connects to the captive portal. It fetches login credentials from the user.
- no-service – This page is displayed when a captive portal user is unable to access the captive portal due to unavailability of critical services.
- registration – This page is displayed when users are redirected to a Web page where they have to register in the captive portal’s database.
- welcome – This page is displayed to welcome an authenticated user to the captive portal.

These Web pages, which interact with captive portal users, can be located either on the controller or an external location.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
webpage [external|internal]

webpage external [acknowledgment|agreement|fail|login {post}|no-service|
registration|welcome] <URL>

webpage internal [acknowledgment|agreement|fail|login|no-service|org-name|
org-signature|registration|welcome]

[checkbox|date|dropdown-menu|e-address|number|radio-button|text] enable {label
<LINE>|mandatory|title <LINE>|placeholder <LINE>}
```

```
webpage internal welcome use-external-success-url

webpage internal [org-name|org-signature] <LINE>
```

Parameters

```
• webpage external [acknowledgment|agreement|fail|login {post}|no-service|
registration|welcome] <URL>
```

external	Indicates Web pages being served are hosted on an external (to the captive portal) server resource
acknowledgment	Indicates the page is displayed for user acknowledgment of details. Users are redirected to this page to acknowledge information provided.
agreement	Indicates the page is displayed for “Terms & Conditions” The agreement page provides conditions that must be agreed to before captive portal access is permitted.
fail	Indicates the page is displayed for login failure The fail page asserts authentication attempt has failed, the user is not allowed to access the Internet (using this captive portal) and must provide the correct login information again to access the Internet.
login {post}	Indicates the page is displayed for getting user credentials. This page is displayed by default. • post – Optional. Redirects users to post externally during authentication The login page prompts the user for a username and password to access the captive portal and proceed to either the agreement page (if used) or the welcome page.
no-service	Indicates the page is displayed when certain critical services are unavailable and the user fails to access the captive portal. The no-service page asserts the captive portal service is temporarily unavailable due to technical reasons. Once the services become available, the captive portal user is automatically connected back to the services available through the captive portal. The possible scenarios are: • The RADIUS server (on-board or external) is not reachable and the user cannot be authenticated • The external captive portal server is not reachable • The connectivity between the adopted AP and controller is lost • The external DHCP server is not reachable To provide this service, enable the following: • External captive portal server monitoring • AAA server monitoring. This enables detection of RADIUS server failure. • External DHCP server monitoring For more information on enabling these critical resource monitoring, see *service*.
registration	Indicates the page is displayed when users are redirected to a Web page where they have to register in the captive portal’s database Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register.
welcome	Indicates the page is displayed after a user has been successfully authenticated The welcome page asserts a user has logged in successfully and can access the captive portal.

<URL>	This parameter is common to all of the above mentioned Web pages, and specifies the Web page URL. The Web page is retrieved and served from the specified external location. The URL can include following query tags: 'WING_TAG_CLIENT_IP' - Captive portal client IPv4 address 'WING_TAG_CLIENT_MAC' - Captive portal client MAC address 'WING_TAG_WLAN_SSID ' - Captive portal client WLAN ssid 'WING_TAG_AP_MAC' - Captive portal client AP MAC address 'WING_TAG_AP_NAME' - Captive portal client AP Name 'WING_TAG_RF_DOMAIN' - Captive portal client RF Domain 'WING_TAG_CP_SERVER' - Captive portal server address 'WING_TAG_USERNAME' - Captive portal authentication username Example: http://cportal.com/policy/login.html?client_ip=WING_TAG_CLIENT_IP&ap_mc=WING_TAG_AP_MAC. Use '&' or '?' character to separate field-value pair. Enter 'ctrl-v' followed by '?' to configure query string.

- `webpage internal [acknowledgment|agreement|fail|login|no-service|registration|welcome] [description|footer|header|title] <CONTENT>`

internal	Indicates the Web pages are hosted on an internal server resource. This is the default setting.
acknowledgment	Indicates the Web page is displayed for users to acknowledge the information provided
agreement	Indicates the page is displayed for “Terms & Conditions”
fail	Indicates the page is displayed for login failure
login	Indicates the page is displayed for entering user credentials
no-service	Indicates the page is displayed when certain critical services are unavailable and the user fails to access the captive portal. The possible scenarios are: • The RADIUS server (on-board or external) is not reachable and the user cannot be authenticated • The external captive portal server is not reachable • The connectivity between the adopted AP and controller is lost • The external DHCP server is not reachable To provide this service, enable the following: • External captive portal server monitoring • AAA server monitoring. This enables detection of RADIUS server failure. • External DHCP server monitoring • AP to controller connectivity monitoring For more information on enabling these critical resource monitoring, see *service*.

registration	Indicates the page is displayed when users are redirected to a Web page where they have to register in the captive portal's database Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register.
welcome	Indicates the page is displayed after a user has been successfully authenticated
description	Indicates the content is the description portion of each of the following internal Web pages: acknowledgment, agreement, fail, login, no-service, and welcome
footer	Indicates the content is the footer portion of each of the following internal Web pages: acknowledgment, agreement, fail, no-service, and welcome page. The footer portion contains the signature of the organization that hosts the captive portal.
header	Indicates the content is the header portion of each of the following internal Web pages: acknowledgment, agreement, fail, no-service, and welcome page. The header portion contains the heading information for each of these pages.
title	Indicates the content is the title of each of the following internal Web pages: acknowledgment, agreement, fail, no-service, and welcome page. The title for each of these pages is configured here.
<CONTENT>	The following keyword is common to all of the above internal Web page options: • <CONTENT> – Specify the content displayed for each of the different components of the internal Web page. Enter up to 900 characters for the description and 256 characters each for header, footer, and title.

• `webpage internal [acknowledgment|agreement|fail|login|no-service| registration|welcome] [main-logo use-as-banner|small-logo] <URL>`

internal	Indicates the Web pages are hosted on an internal server resource
agreement	Indicates the page is displayed for "Terms & Conditions"
acknowledgment	Indicates the Web page is displayed for users to acknowledge the information provided
fail	Indicates the page is displayed for login failure
login	Indicates the page is displayed for user credentials
no-service	Indicates the page is displayed when certain critical services are unavailable and the user fails to access the captive portal. The possible scenarios are: • The RADIUS server (on-board or external) is not reachable and the user cannot be authenticated • The external captive portal server is not reachable • The connectivity between the adopted AP and controller is lost • The external DHCP server is not reachable To provide this service, enable the following: • External captive portal server monitoring • AAA server monitoring. This enables detection of RADIUS server failure. • External DHCP server monitoring • AP to controller connectivity monitoring For more information on enabling these critical resource monitoring, see *wlan*.

registration	Indicates the page displayed is the registration page to which users are redirected in order to register in the captive portal's database Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register.
welcome	Indicates the page is displayed after a user has been successfully authenticated
main-logo use-as-banner	The following keyword is common to all of the above internal Web page options: • main-logo – Indicates the main logo displayed in the header of each Web page • use-as-banner – Uses the image, specified here, as the Web page banner, in place of the logo and organization name
small-logo	The following keyword is common to all of the above internal Web page options: • small-logo – Indicates the logo image displayed in the footer of each Web page, and constitutes the organization's signature
<URL>	This parameter is common to the 'main-logo' and 'small-logo' keywords and provides the complete URL from where the main-logo and small-logo files are loaded and subsequently cached on the system. • <URL> – Specify the location and name of the main-logo and the small-logo image files.

• `webpage internal registration field [age-range|city|country|custom|disclaimer|dob|email|gender|member|mobile|name|optout|street|via-email|via-sms|zip] type [checkbox|date|dropdown-menu|e-address|number|radio-button|text] enable` *`{label <LINE>|mandatory|title <LINE>|placeholder <LINE>}`*

internal	Indicates the Web pages are hosted on an internal server resource
registration	Allows you to customize the user registration page. Select this option if the captive-portal's access-type is set to registration. Use the *field* and *type* options to define the input fields (for example, age-range, city, email, etc.) and the field type (for example, text, checkbox, dropdown-menu, radio-button, etc.) **Note:** Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register. If the registration Web page is not customized, the built-in, default registration page is displayed to the client.
field [age-range| city|country| custom <WORD >| disclaimer|]	Configures the captive portal's registration page fields Following are the available fields and the field type for each: • age-range – Creates the age-range input field (enabled by default and included in the built-in registration page) • dropdown-menu – Configures the age-range field as a drop-down menu • radio-button – Configures the age-range field as a radio button menu • city – Creates the *postal address: city name* input field (enabled by default and included in the built-in registration page) • text – Configures the city field as only alpha-numeric and special characters input field Contd..

	• country – Creates the *postal address: country name* input field (disabled by default)
	  • text – Configures the country field as only alpha-numeric and special characters input field
	• custom <WORD> – Creates a customized field (as per your requirement). Use the 'custom' option to create a field not included in the built-in list.
	  • <WORD> – Provide a name for the field. On the registration page, the field is displayed under the name specified here.
	• disclaimer – Creates client's disclaimer-confirmation input field (disabled by default)
	• checkbox – Configures the disclaimer field as a check box

field [dob|email|gender|member|mobile|name|optout|street|via-email|via-sms|zip]	• dob – Creates the client's *date of birth* (DoB) input field (disabled by default)
	  • date – Configures the DoB field as only date-format input field
	  • dropdown-menu – Configures the DoB field as a drop-down menu
	  • text – Configures the DoB field as only alpha-numeric and special characters input field
	• email – Creates the e-mail address input field (enabled by default and included in the built-in registration page)
	  • e-address – Configures the e-mail field as only e-mail address format input field
	• gender – Creates client's gender input field (disabled by default)
	  • dropdown-menu – Configures the gender field as a drop-down menu
	  • radio-button – Configures the gender field as a radio button menu
	• member – Creates client's loyalty or captive-portal membership card number input field (disabled by default)
	  • number – Configures the member field as only-numeric characters input field
	  • text – Configures the member field as only alpha-numeric and special characters input field
	• mobile – Creates the mobile number input field (enabled by default and included in the built-in registration page)
	  • number – Configures the mobile field as only-numeric characters input field
	  • text – Configures the mobile field as only alpha-numeric and special characters input field
	• name – Creates the client name input field (enabled by default and included in the built-in registration page)
	  • text – Configures the name field as only alpha-numeric and special characters input field
	• optout – Creates an input field that enables clients to opt out from registering
	  • checkbox – Configures the optout field as a check box
	• street – Creates the *postal address: street name/number* input field (enabled by default and included in the built-in registration page)
	  • text – Configures the street field as only alpha-numeric and special characters input field
	• via-email – Creates the client's preferred mode of communication as e-mail input field (enabled by default and included in the built-in registration page)
	  • checkbox – Configures the via-email field as a check box
	• via-sms – Creates the client's preferred mode of communication as SMS input field (enabled by default and included in the built-in registration page)
	  • checkbox – Configures the via-sms field as a check box
	Contd..

	• zip – Creates the *postal address: zip* input field (enabled by default and included in the built-in registration page) • number – Configures the zip field as only-numeric characters input field • text – Configures the zip field as only alpha-numeric and special characters input field
type [checkbox| date| dropdown-menu| e-address|number| radio-button|text]	After specifying the field, configure the field type. The options displayed depend on the field selected in the previous step. These options are: checkbox, date, dropdown-menu, e-address, number, radio-button, and text. • checkbox – Configures the field as a check box • date – Configures the field as only date-format input field • dropdown-menu – Configures the field as a drop-down menu • e-address – Configures the field as an e-mail address input field • number – Configures the field as only-numeric characters input field • radio-button – Configures the field as a radio button • text – Configures the field as only alpha-numeric and special characters input field **Note:** Some of the fields can have more than one field type options. For example, the field 'zip' can either be a numerical field or a text. Select the one best suited for your captive-portal.
enable {label <LINE>| mandatory| title <LINE>| placeholder <LINE>}	Enables the field. When enabled, the field is displayed on the registration page. After enabling the field, optionally configure the following parameters: • label <LINE> – Optional. Configures the field's label • mandatory – Optional. Makes the field mandatory • title – Optional. Configures the comma-separated list of items to include in the drop-down menu. • placeholder <LINE> – Optional. Configures a string, not exceeding 300 characters, that is displayed within the field. If not configured, the field remains blank.

- `webpage internal welcome use-external-success-url`

internal	Indicates the Web pages are hosted on an internal server resource
welcome	Indicates the page is displayed after a user has been successfully authenticated
use-external-success-url	When configured, redirects the user, on successful authentication, to an externally hosted success URL from the locally-hosted landing page. **Note:** Use the *webpage > external > welcome > <URL>* command to specify the location of the Welcome page.

- `webpage internal [org-name|org-signature] <LINE>`

internal	Indicates the Web pages are hosted on an internal server resource
org-name	Specifies the company's name, included on Web pages along with the main image
org-signature	Specifies the company's signature information, included in the bottom of Web pages along with a small image
<LINE>	Specify the company's name or signature depending on the option selected.

Example

```
rfs6000-81701D(config-captive-portal-guest)#webpage external welcome http://
192.168.9.46/welcome.html

rfs6000-81701D(config-captive-portal-guest)#show context

Related Commands

no	Resets or disables captive portal configurations

4.1.26.2.40 webpage-auto-upload

captive-portal-mode commands

Enables automatic upload of advanced Web pages to requesting clients on association. Enable this option if the webpage-location is selected as *advanced*. For more information, see *webpage-location*.

If this feature is enabled, access points shall request for Web pages from the controller during adoption. If the controller has a different set of Web pages, than the ones existing on the access points, the controller shall distribute the Web pages uploaded on it to the access points.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
webpage-auto-upload
```

Parameters

None

Example

```
rfs6000-81742D(config-captive-portal-test)#webpage-auto-upload

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 webpage-auto-upload
 logout-fqdn logout.testuser.com
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Disables automatic upload of advanced Web pages on a captive portal
webpage	Configures Web pages displayed when interacting with a captive portal
webpage-location	Specifies the location of the Web pages used for authentication

4.1.26.2.41 webpage-location

captive-portal-mode commands

Specifies the location of the Web pages used for authentication. These pages can either be hosted on the system or on an external Web server.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
webpage-location [advanced|external|internal]
```

Parameters

- `webpage-location [advanced|external|internal]`

advanced	Uses Web pages for login, welcome, failure, and terms created and stored on the controller. Select *advanced* to use a custom-developed directory full of Web page content that can be copied in and out of the controller, service platform, or access point. If selecting advanced, enable the *webpage-auto-upload* option to automatically launch the advanced pages to requesting clients upon association. For more information, see *webpage-auto-upload*.
external	Uses Web pages for login, welcome, failure, and terms located on an external server. Provide the URL for each of these pages.
internal	Uses Web pages for login, welcome, and failure that are automatically generated

Example

```
rfs6000-81742D(config-captive-portal-test)#webpage-location external

rfs6000-81742D(config-captive-portal-test)#show context
captive-portal test
 access-time 35
 custom-auth info bob bob@examplecompany.com
 connection-mode https
 inactivity-timeout 750
 server host 172.16.10.9
 simultaneous-users 5
 terms-agreement
 webpage-location external
 use aaa-policy test
rfs6000-81742D(config-captive-portal-test)#
```

Related Commands

no	Resets or disables captive portal Web page settings
webpage	Configures a captive portal's Web page (acknowledgment, agreement, login, welcome, fail, no-service, and terms) settings
webpage-auto-upload	Enables an automatic upload of advanced Web pages on a captive portal

4.1.26.2.42 welcome-back

captive-portal-mode commands

Enables the provision of direct Internet access to once-registered, captive-portal guest users on subsequent log-ins. When enabled, a registered captive-portal guest user, on subsequent logins, is served the *Acknowledgement* page only if:

- The *agreement-refresh* option is enabled for device-based (device and device-OTP) registration, and
- The interval between logout and login is *lesser* than the *agreement-refresh* timeout configured in the WLAN context. If this interval *exceeds* the agreement-refresh timeout, the user is served the *Agreement* page. For more information on configuring the agreement-refresh timeout value, see *registration*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
welcome-back pass-through
```

Parameters

- `welcome-back pass-through`

welcome-back pass-through	Enables display of the Acknowledgement page to an already registered user on subsequent captive-portal log-ins, provided the interval between logout and login is lesser than the *agreement-refresh* timeout • pass-through – Provides user direct Internet access, from the Welcome-back page, without any user action

Example

```
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
 welcome-back pass-through
 webpage internal registration field city type text enable label "City" placeholder
"Enter City"
 webpage internal registration field street type text enable label "Address"
placeholder "123 Any Street"
 webpage internal registration field name type text enable label "Full Name"
placeholder "Enter First Name, Last Name"
 webpage internal registration field zip type number enable label "Zip" placeholder
"Zip"
 webpage internal registration field via-sms type checkbox enable title "SMS
Preferred"
 webpage internal registration field mobile type number enable label "Mobile"
placeholder "Mobile Number with Country code"
 webpage internal registration field age-range type dropdown-menu enable label "Age
Range" title "Age Range"
 webpage internal registration field email type e-address enable mandatory label
"Email" placeholder "you@domain.com"
 webpage internal registration field via-email type checkbox enable title "Email
Preferred"
nx9500-6C8809(config-captive-portal-test)#
```

Related Commands

no	Disables the provision of direct Internet access to once-registered, captive-portal guest users on subsequent log-ins

4.1.26.2.43 configuring device registration with dynamic VLAN assignment

captive-portal-mode commands

This section provides the configurations required to enable device registration with dynamic VLAN assignment in a multi-vendor environment.

1 Create vendor-specific RADIUS user groups and assign an allowed VLAN to each group, as shown in the following examples:

```
nx9500-6C8809(config)#radius-group Apple
nx9500-6C8809(config-radius-group-Apple)#policy vlan 200
nx9500-6C8809(config)#radius-group Samsung
nx9500-6C8809(config-radius-group-Samsung)#policy vlan 100
nx9500-6C8809(config)#radius-group Devices
nx9500-6C8809(config-radius-group-Devices)#policy vlan 1

Note, if necessary, configure the session-time for each of the above configured
RADIUS group. This is the duration for which a RADIUS group client's session
remains active after successful authentication. Upon expiration, the RADIUS
session is terminated. Use the policy > session-time > <5-144000> command to
specify the session-time.
```

2 Create a RADIUS user pool, add users to the pool, and assign the users to the vendor-specific user groups: as shown in the following examples:

```
nx9500-6C8809(config)#radius-user-pool-policy Vendor-Devices
nx9500-6C8809(config-radius-user-pool-Vendor-Devices)#user Samsung password 0
samsung group Samsung
nx9500-6C8809(config-radius-user-pool-Vendor-Devices)#user test password 0
test123 group Apple
```

3 Create a RADIUS server policy, and associate the RADIUS groups and user pool created in steps 1 and 2 respectively, as shown in the following examples:

```
nx9500-6C8809(config)#radius-server-policy Guest-Radius
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-user-pool-
policy Vendor-Devices
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-group
Samsung
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-group Sony
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-group
Apple
```

4 Create an AAA Policy, on the controller, and configure the authentication server as self, as shown in the following example:

```
nx9500-6C8809(config)#aaa-policy OnBoard-NX
nx9500-6C8809(config-aaa-policy-OnBoard-NX)#authentication server 1 onboard
controller
nx9500-6C8809(config-aaa-policy-OnBoard-NX)#show context
aaa-policy OnBoard-NX
 authentication server 1 onboard self
nx9500-6C8809(config-aaa-policy-OnBoard-NX)#
```

5 Create a captive-portal, and point to the captive-portal's server, enable RADIUS VLAN assignment, and associate the AAA policy, as shown in the following examples:

```
nx9500-6C8809(config)#captive-portal DeviceRegistration
nx9500-6C8809(config-captive-portal-DeviceRegistration)#server host
captive.extremenoc.com
nx9500-6C8809(config-captive-portal-DeviceRegistration)#radius-vlan-
assignment
nx9500-6C8809(config-captive-portal-DeviceRegistration)#use aaa-policy
OnBoard-NX
nx9500-6C8809(config-captive-portal-DeviceRegistration)#access-type radius
```

6 Configure a WLAN and enable RADIUS VLAN assignment, as shown in the following examples:

```
nx9500-6C8809(config)#wlan CP-OnBoarding
nx9500-6C8809(config-wlan-CP-OnBoarding)#ssid CP-OnBoarding
nx9500-6C8809(config-wlan-CP-OnBoarding)#radius vlan-assignment
nx9500-6C8809(config-wlan-CP-OnBoarding)#use aaa-policy OnBoard-NX
nx9500-6C8809(config-wlan-CP-OnBoarding)#use captive-portal
DeviceRegistration
nx9500-6C8809(config-wlan-CP-OnBoarding)#captive-portal-enforcement fall-back
nx9500-6C8809(config-wlan-CP-OnBoarding)#registration device group-name
Devices expiry-time 4320
nx9500-6C8809(config-wlan-CP-OnBoarding)#authentication-type mac
```

7 Create an access point profile, associate the RADIUS server policy, captive-portal policy to it, and also assign the WLAN to the AP radio, as shown in the following examples:

```
nx9500-6C8809(config-profile-SITE-10)#use radius-server-policy Guest-Radius
nx9500-6C8809(config-profile-SITE-10)#use captive-portal server
DeviceRegistration
nx9500-6C8809(config-profile-SITE-10-if-radio2)#wlan CP-OnBoarding bss 1
primary
nx9500-6C8809(config-profile-SITE-10-if-ge1)#switchport mode trunk
nx9500-6C8809(config-profile-SITE-10-if-ge1)#switchport trunk native vlan 90
nx9500-6C8809(config-profile-SITE-10-if-ge1)#switchport trunk allowed vlan
1,90,1000-1002
nx9500-6C8809(config-profile-SITE-10-if-ge1)#no switchport trunk native
tagged
```

8 Use the access point profile in the access point's device context.

4.1.26.2.44 configuring WeChat Wi-Fi hotspot support in WiNG captive portal

captive-portal-mode commands

WeChat is a popular messaging app used in China with more than 500 million installations. WeChat's WiFi hotspot solution allows businesses to provide Internet access to their customers. The WiNG captive portal can be configured to incorporate the WeChat WiFi hotspot, so that WeChat users, on their first connect to a WiNG access point, can automatically authenticate with the WeChat server through an intermediate server.

This section provides an example that shows the configurations required to be made on the WiNG portal to enable WeChat Wi-Fi hotspot.

1 Create an AAA policy re-directing the WiNG captive portal user to WeChat's AAA server for authentication, as shown in the following example:

```
nx9500-6C8809(config)#aaa-policy cloud2
nx9500-6C8809(config-aaa-policy-cloud2)#authentication server 1 host
cloud2.synchroweb.com secret 0 firmware
nx9500-6C8809(config-aaa-policy-cloud2)#show context
aaa-policy cloud2
authentication server 1 host cloud2.synchroweb.com secret 0 firmware
nx9500-6C8809(config-aaa-policy-cloud2)#

Note, Synchroweb is an independent software vendor (ISV), whose third-party
software is being used as the intermediate server. The AAA server and RADIUS
accounting server configured in AAA policy must be as per the specification
provided by the ISV.
```

2 Create a DNS whitelist, whitelisting WeChat's server name in order to initiate RADIUS authentication. The "qq.com" domain name is where WeChat server can be reached.

```
nx9500-6C8809(config)#dns-whitelist wxWL
nx9500-6C8809(config-dns-whitelist-wxWL)#permit cloud2.synchroweb.com
nx9500-6C8809(config-dns-whitelist-wxWL)#permit qq.com suffix
nx9500-6C8809(config-dns-whitelist-wxWL)#show context
dns-whitelist wxWL
permit qq.com suffix
permit cloud2.synchroweb.com
nx9500-6C8809(config-dns-whitelist-wxWL)#
```

3 Create a captive portal and associate the AAA policy and DNS whitelist created in steps 1 & 2, as shown in the following example:

```
nx9500-6C8809(config)#captive-portal wxCP
nx9500-6C8809(config-captive-portal-wxCP)#use aaa-policy cloud2
nx9500-6C8809(config-captive-portal-wxCP)#use dns-whitelist wxWL
```

4 Configure the following captive portal parameters:

```
nx9500-6C8809(config)#captive-portal wxCP
nx9500-6C8809(config-captive-portal-wxCP)#access-time 10
nx9500-6C8809(config-captive-portal-wxCP)#server host guest.extreme.com
nx9500-6C8809(config-captive-portal-wxCP)#webpage-location external
nx9500-6C8809(config-captive-portal-wxCP)#webpage external login http://
cloud2.synchroweb.com/wechat.nx/index.phpc=WING_TAG_CLIENT_MAC
```

```
nx9500-6C8809(config-captive-portal-wxCP)#)#show context
captive-portal wxCP
access-time 10
server host guest.extreme.com
webpage-location external
webpage external login http://cloud2.synchroweb.com/wechat.nx/
index.phpc=WING_TAG_CLIENT_MAC
use aaa-policy cloud2
use dns-whitelist wxWL
--More--
nx9500-6C8809(config-captive-portal-wxCP)#
```

Note, the login URL configured here must be as per the specifications provided by the ISV.

Note, the access-type remains unchanged (i.e radius, which is the default setting). The *access-time* is set to a minimum value (10 minutes in this example) in order to avoid the default value of 24 hours being applied, in case the RADIUS response does not contain the session-timeout attribute.

5 Create a WLAN and associate the captive portal created in step 3:

```
nx9500-6C8809(config)#wlan wxOpen
nx9500-6C8809(config-wlan-wxOpen)#ssid wxOpen
nx9500-6C8809(config-wlan-wxOpen)#vlan 200
nx9500-6C8809(config-wlan-wxOpen)##use captive-portal wxCP
nx9500-6C8809(config-wlan-wxOpen)#captive-portal-enforcement
nx9500-6C8809(config-wlan-wxOpen)#show context
wlan wxOpen
ssid wxOpen
vlan 200
bridging-mode local
encryption-type none
authentication-type none
use captive-portal wxCP
captive-portal-enforcement
nx9500-6C8809(config-wlan-wxOpen)#
```

Note, the modes of authentication and encryption remain unchanged (i.e none, which is the default setting for both parameters). Ensure captive-portal-enforcement is enabled on the WLAN.

4.1.26.2.45 configuring ExtremeGuest captive-portal

captive-portal-mode commands

This section documents the basic configurations required to deploy an *ExtremeGuest* (EGuest) setup. A typical EGuest deployment consists of the EGuest server, EGuest captive-portal database, and NOC adopting the access points. The EGuest server and database can be hosted only on the VX9000 platform.

In the following example, the EGuest server and database are hosted on the same device.

1 On the EGuest server/database host,
   a enable the EGuest daemon. When enabled, the EGuset server is up and running.

```
EG-Server-DB(config-device-02-EE-1A-7E-AE-5B)#eguest-server
```

   b apply a database-policy to enable the EGuest database.

```
EG-Server-DB(config-device-02-EE-1A-7E-AE-5B)#use database-policy default
```

   c configure the NTP server. This is to ensure time synchronization across replica-set members (this is mandatory in replica-set deployments and should be configured either on the replica-set members' device or profile context).

```
EG-Server-DB(config-device-02-EE-1A-7E-AE-5B)#ntp server time.nist.govt
```

2 On the NOC,
   a create an AAA policy with the following configurations:
      - Configure the EGuest server (configured in Step 1) as the authentication and accounting RADIUS server.

```
NOC(config-aaa-policy-EguestAAA)#authentication server 1 host EG-Server secret 0 extreme123
NOC(config-aaa-policy-EguestAAA)#accounting server 1 host EG-Server secret 0 extreme123
```

      - Configure the proxy-mode as 'through-controller'. When configured, all requests to the server are proxied through the NOC.

```
NOC(config-aaa-policy-EguestAAA)#authentication server 1 proxy-mode through-controller
NOC(config-aaa-policy-EguestAAA)#accounting server 1 proxy-mode through-controller

NOC(config-aaa-policy-EguestAAA)#show context
aaa-policy EguestAAA
accounting server 1 host EG-OnBServer secret 0 extreme123
accounting server 1 proxy-mode through-controller
authentication server 1 host EG-Server secret 0 extreme123
authentication server 1 proxy-mode through-controller
NOC(config-aaa-policy-EguestAAA)#
```

   b Create a DNS whitelist. Note, DNS whitelist configuration is required only if enabling OAuth on the EGuest captive-portal. When created and used on the EGuest captive-portal, the DNS whitelist renders social plugin buttons on the client prior to successful captive portal authentication.
      - Configure the following permit rules:

```
NOC(config-dns-whitelist-EguestDNS)#permit fbstatic-a.akamaihd.net
NOC(config-dns-whitelist-EguestDNS)#permit connect facebook.net
NOC(config-dns-whitelist-EguestDNS)#permit facebook.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit fbcdn.net suffix
NOC(config-dns-whitelist-EguestDNS)#permit googleapis.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit google.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit googleusercontent.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit linkedin.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit static.licdn.com
NOC(config-dns-whitelist-EguestDNS)#permit twitter.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit twimg.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit instagramstatic-a.akamaihd.net
NOC(config-dns-whitelist-EguestDNS)#permit instagram.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit ssl.gstatic.com
NOC(config-dns-whitelist-EguestDNS)#permit extremenetworks.com suffix
NOC(config-dns-whitelist-EguestDNS)#permit local.extreme.com
```

c Create a captive-portal with the following configurations:

- Specify the captive-portal server.

```
NOC(config-captive-portal-EguestCP)#server host guest.extreme.com
```

- Use the AAA policy created in Step 2 a.

```
NOC(config-captive-portal-EguestCP)#use aaa-policy EguestAAA
```

- Enable social-media authentication. This setting is optional.

```
NOC(config-captive-portal-EguestCP)#oauth
```

- Use the DNS whitelist created in Step 2 b. Note, the DNS whitelist is required only if enabling OAuth on the captive-portal.

```
NOC(config-captive-portal-EguestCP)#use dns-whitelist EguestDNS
```

- Configure the webpage-location as advanced. Note, webpage-location should be 'advanced' if using pages created with EGuest splash templates.

```
NOC(config-captive-portal-EguestCP)#webpage-location advanced
```

d Create a WLAN policy with the following configurations:

- Enable MAC authentication.

```
NOC(config-wlan-EguestWLAN)#authentication-type mac
```

- Use the AAA policy created in Step 2 a.

```
NOC(config-wlan-EguestWLAN)#use aaa-policy EguestAAA

--When used, access points/controllers forward registration requests to the EGuest
server specified in the AAA policy. However, ensure that the registration >
external > follow-aaa option is configured on the WLAN. See below.

NOC(config-wlan-EguestWLAN)#registration external follow-aaa

--This enables the use of the Authentication and Accounting servers specified
in the AAA policy applied on the WLAN.
```

- Use the captive-portal created in Step 2 c.

```
NOC(config-wlan-EguestWLAN)#use captive-portal EguestCP
```

- Enable captive-portal enforcement with fall-back.

```
NOC(config-wlan-EguestWLAN)#captive-portal-enforcement fall-back
```

- Configure the following guest registration parameters:

```
NOC(config-wlan-EguestWLAN)#registration device group-name Eguest expiry-time
4320 agreement-refresh 1440

--This is the RADIUS group assigned to registered users post authentication.

NOC(config-wlan-EguestWLAN)#show context
wlan EguestWLAN
ssid _EXTREME-GUEST-NRF2017
vlan 1
bridging-mode local
encryption-type none
authentication-type mac
no answer-broadcast-probes
no client-client-communication
wireless-client hold-time 300
use aaa-policy EguestAAA
use captive-portal EguestCP
captive-portal-enforcement fall-back
registration device group-name Eguest expiry-time 4320 agreement-refresh 1440
registration external follow-aaa
mac-authentication cached-credentials
NOC(config-wlan-EguestWLAN)#
```

e In the NOC's self context, configure the EGuest server.

```
NOC(config-device-74-67-F7-5C-64-4A)#eguest-server host 1 EG-Server https
```

3 In the Access Point's device or profile context,

a Use the captive-portal configured in Step 2 c.

```
Eguest-AP(config-device-74-67-F7-5C-64-4A)#use captive-portal EguestCP
```

4 To view EGuest registration status and statistics, on the EGuest server, use the following commands:

```
EG-Server-DB#show eguest registration statistics
EG-Server-DB#show eguest registration status
```

5 To clear EGuest registration statistics, on the EGuest server, use the following command:

```
EG-Server-DB#clear eguest registration statistics
```

Related Commands

eguest-server (VX9000 only)	Documents the eguest-server command. When used in the EGuest server's device/profile context, without the 'host' option, it enables the EGuest daemon. When used on the NOC along with the 'host' option, it points to the EGuest server.

4.1.27 clear

Global Configuration Commands

Clears parameters, cache entries, table entries, and other similar entries. The clear command is available for specific commands only. The information cleared using this command varies depending on the mode where executed.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
clear event-history
```

Parameters

```
• clear event-history
```

event-history	Clears the event history file

Example

```
rfs4000-880DA7(config)#show event-history

4.1.28 client-identity

Global Configuration Commands

With an increase in *Bring Your Own Device* (BYOD) corporate networks, there is a parallel increase in the number of possible attack scenarios within the network. BYOD devices are inherently unsafe, as the organization's security mechanisms do not extend to these personal devices deployed in the corporate wireless network. Organizations can protect their network by limiting how and what these BYODs can access on and through the corporate network.

Device fingerprinting assists administrators by controlling how BYOD devices access a corporate wireless domain.

Device fingerprinting uses DHCP options sent by the client in request or discover packets to derive a unique signature specific to device class. For example, Apple devices have a different signature from Android devices. The signature is used to classify the devices and assign permissions and restrictions on each device class.

The following table summarizes the commands available for creating and configuring a set of new client identity parameters:

Table 4.10 *Client-Identity-Config Commands*

Command	Description	Reference
client-identity	Creates a new client identity and enters its configuration mode	*page 4-138*
client-identity-mode commands	Invokes the client identity policy configuration mode commands	*page 4-140*
client-identity-group	Creates a new client identity group and enters its configuration mode	*page 4-146*

4.1.28.1 client-identity

client-identity

Creates a new client identity and enters its configuration mode. Client identity is a set of unique fingerprints used to identify a class of devices. This information is used to configure permissions and access rules for the identified class of devices in the network. The client-identity feature enables device fingerprinting.

Device fingerprinting is a technique of collecting, analyzing, and identifying traffic patterns originating from remote computing devices. When enabled, device fingerprinting helps to identify a wireless client's device type. There are two methods of fingerprinting devices: Active and Passive.

Active fingerprinting is based on the fact that traffic patterns vary with varying device types. It involves the sending of requests (HTTP, etc.) to devices (clients) and analyzing their response to determine the device type. For example, an invalid request is sent to a device, and its error response is analyzed to identify the device type. Since active device fingerprinting involves sending of packets, the probability of the network getting flooded is very high, especially when many devices are being fingerprinted simultaneously.

Passive fingerprinting involves monitoring of devices to check for known traffic patterns specific to devices based on the protocol, driver implementation, etc. This method accurately classifies a client's TCP/IP configuration, OS fingerprints, wireless settings etc. No packets are sent to the device. Some of the commonly used protocols for passive device fingerprinting are, TCP, DHCP, HTTP, etc.

This feature implements DHCP device fingerprinting, which relies on specific information sent by a wireless client when acquiring IP address and other configuration information from a DHCP server. The feature uses the DHCP options sent by the wireless client in the DHCP request or discover packets to derive a unique signature specific to the class of devices. For example, Apple devices have a different signature than Android devices. This unique signature can then be used to classify the devices and assign permissions and restrictions on each device class.

The WiNG software provides a set of built-in device fingerprints that load by default and identify client device types. Use the *service > show > client-identity-defaults* command to view default client identity fingerprints.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
client-identity <CLIENT-IDENTITY-NAME>
```

Parameters

- `client-identity <CLIENT-IDENTITY-NAME>`

client-identity <CLIENT-IDENTITY-NAME>	Creates a new client identity policy and enters its configuration mode • <CLIENT-IDENTITY--NAME> – Specify a client identity policy name. If the client identity policy does not exist, it is created.

Usage Guidelines

The following points should be considered when configuring the client identity (device fingerprinting) feature:

- Ensure that DHCP is enforced on the WLANs. For more information on enforcing DHCP on WLANs, see *enforce-dhcp*.
- Successful identification of different device types depends on the uniqueness of the configured fingerprints. DHCP fingerprinting identifies clients based on the patterns (fingerprints) in the DHCP discover and request messages sent by clients. If different operating systems have the same fingerprints. it will be difficult to identity the device type.
- When associating client identities with a role policy, ensure that the profile/device, under which the role policy is being used, also has an associated client identity group (containing all the client identities used by the role policy).

Example

```
rfs4000-229D58(config)#client-identity test
rfs4000-229D58(config-client-identity-test)#?
Client Identity Mode commands:
  dhcp                      Add a DHCP option based match criteria
  dhcp-match-message-type   Specify DHCP message type to match
  no                        Negate a command or set its defaults

  clrscr                    Clears the display screen
  commit                    Commit all changes made in this session
  do                        Run commands from Exec mode
  end                       End current mode and change to EXEC mode
  exit                      End current mode and down to previous mode
  help                      Description of the interactive help system
  revert                    Revert changes
  service                   Service Commands
  show                      Show running system information
  write                     Write running configuration to memory or terminal

rfs4000-229D58(config-client-identity-test)#
```

Use the *service > show > client-identity-defaults* command to view default, built-in, system-provided client identity fingerprints:

```
nx9500-6C8809#service show client-identity-defaults
client-identity Android-2-1
 dhcp 1 message-type request option 55 exact hexstring 0103061c21333a3b79
 dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.1
client-identity Android-2-2
 dhcp 1 message-type request option 55 exact hexstring 01792103061c333a3b
 dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.15
client-identity Android-2-3
 dhcp 3 message-type request option 55 exact hexstring 01792103061c333a3b
 dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.15
 dhcp 1 message-type request option-codes exact hexstring 353d32393c37
 dhcp 2 message-type request option-codes exact hexstring 353d3236393c37
 dhcp 10 message-type request option-codes exact hexstring 353d3236393c0c37
--More--
nx9500-6C8809#
```

4.1.28.2 client-identity-mode commands

client-identity

The following table summarizes client identity configuration mode commands:

Table 4.11 *Client-Identity-Mode Commands*

Command	Description	Reference
dhcp	Configures the DHCP option match criteria for device fingerprinting	*page 4-141*
dhcp-match-message-type	Configures the DHCP message type for device fingerprinting	*page 4-144*
no	Removes the DHCP option (used for client identification) configurations	*page 4-145*

4.1.28.2.46 dhcp

client-identity-mode commands

Configures the DHCP option match criteria (signature) for the discover and request message types received from wireless clients

When accessing a network, DHCP discover and request messages are passed between wireless clients and the DHCP server. These messages contain DHCP options and option values that differ from device to device and are based on the DHCP implementation in the device's *operating system* (OS). Options and option values contained in a client's messages are parsed and compared against the configured DHCP option values to identify the device. Once a device type is identified, the wireless client database is updated with the discovered device type.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dhcp <1-16> message-type [discover|request] [option|option-codes]
dhcp <1-16> message-type [discover|request] [option <1-254>|option-codes]
[contains|exact|starts-with] [ascii|hexstring] <WORD>
```

Parameters

```
• dhcp <1-16> message-type [discover|request] [option <1-254>|option-codes]
[contains|exact|starts-with] [ascii|hexstring] <WORD>
```

dhcp <1-16>	Adds a DHCP option match criteria signature • <1-16> – Specify an index for this DHCP match criteria from 1 - 16. A maximum of 16 match criteria can be configured.
message-type [discover|request]	Specifies the message type to which this DHCP match criteria is applicable • discover – Applies this match criteria to DHCP discover messages only. Indicates that the fingerprint is only checked with any DHCP discover messages received from any device. • request – Applies this match criteria to DHCP request messages only. Indicates that the fingerprint is only checked with any DHCP request messages received from any device. It is recommended to configure client-identity with request messages, because clients rarely send discover messages. If the message type is not specified, the fingerprint is checked with all message types (DHCP request and DHCP discover).
option <1-254>	The following keywords are common to the 'discover' and 'request' message types: • option – Configures a DHCP option value, which is used as the match criteria • <1-254> – Configures a code for this DHCP option from 1 - 254 (except option 53)

option-codes	The following keyword is common to the 'discover' and 'request' message types: • option-codes – Matches criteria based on the DHCP option codes contained in the client's discover/request messages Devices pass options in their DHCP discover/request messages as option codes, option types, and option value sets. These option codes are extracted and matched against the configured DHCP option codes and a fingerprint is derived. This derived fingerprint is used to identify the device.
contains	The following keyword is common to the 'discover' and 'request' message types: • contains – Specifies that the DHCP options received in the client's discover/request messages contains the configured option code string
exact	The following keyword is common to the discover and request message types: • exact – Specifies that the DHCP options received in the client's discover/request messages is an exact match with the configured option code string
starts-with	The following keyword is common to the 'discover' and 'request' message types: • starts-with – Specifies that the DHCP options received in the client's discover/request messages starts with the configured option code string
ascii <WORD>	The following keywords are common to the 'contains', 'exact', and 'starts-with' parameters: • ascii – Configures the DHCP option in the ASCII format • <WORD> – Specify the DHCP option ASCII value to match.
hexstring <WORD>	The following keywords are common to the 'contains', 'exact', and 'starts-with' parameters: • hexstring – Configures the DHCP option in the hexa-decimal format • <WORD> – Specify the DHCP option hexstring value to match.

Usage Guidelines

The following DHCP options are useful for identifying different device types:

- Option 55: Used by a DHCP client to request values for specific configuration parameters. It is a list of DHCP option codes and can be in the client's order of preference.
- Client configured list of DHCP options (all options parsed into a hex string).
- Option 60: Vendor class identifier. Used to identify the vendor and functionality of a DHCP client (some devices do not set the value of this field).

Though it is possible to use any option to configure a device fingerprint, the use of a combination of one or more of the preceding options to define a device is recommended.

Example

```
rfs4000-229D58(config-client-identity-test)#dhcp 1 message-type request option
60 exact ascii MSFT\5.0
rfs4000-229D58(config-client-identity-test)#dhcp 2 message-type discover option
 2 exact hexstring 012456c22c44

rfs4000-229D58(config-client-identity-test)#show context
client-identity test
 dhcp 2 message-type discover option 2 exact hexstring 012456c22c44
 dhcp 1 message-type request option 60 exact ascii MSFT5.0
rfs4000-229D58(config-client-identity-test)#
```

Related Commands

no	Removes a DHCP option signature (match criteria)

4.1.28.2.47 dhcp-match-message-type

client-identity-mode commands

Configures the DHCP message type to match

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dhcp-match-message-type [all|any|discover|request]
```

Parameters

- `dhcp-match-message-type [all|any|discover|request]`

dhcp-match-message-type [all|any|discover|request]	Specifies the DHCP message type to consider for matching • all – Matches all message types: discover and request. Indicates that the fingerprint is checked with both the DHCP request and the DHCP discover message. • any – Matches any message type: discover or request. Indicates that the fingerprint is checked with either the DHCP request or the DHCP discover message. • discover – Matches discover messages only. Client matches the client identity only if the discover message sent by the client matches. Values configured for request messages are ignored. • request – Matches request messages only. Client matches the client identity only if the request message sent by the client matches. Values configured for discover messages are ignored.

Example

```
rfs4000-229D58(config-client-identity-test)#dhcp-match-message-type all

rfs4000-229D58(config-client-identity-test)#show context
client-identity test
 dhcp 2 message-type discover option 2 exact hexstring 012456c22c44
 dhcp 1 message-type request option 60 exact ascii MSFT5.0
 dhcp-match-message-type all
rfs4000-229D58(config-client-identity-test)#
```

Related Commands

no	Removes the DHCP message type to match

4.1.28.2.48 no

client-identity-mode commands

Removes the DHCP options match criteria configurations

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [dhcp <1-16>|dhcp-match-message-type]
```

Parameters

- `no [dhcp <1-16>|dhcp-match-message-type]`

dhcp <1-16>	Removes the DHCP option match criteria rule identified by the <1-16> keyword • <1-16> – Specify the DHCP option match criteria rule index
dhcp-match-message-type	Removes the DHCP message type to match

Example

The following example shows the client identity 'test' settings before the 'no' commands are executed:

```
rfs4000-229D58(config-client-identity-test)#show context
client-identity test
 dhcp 2 message-type discover option 2 exact hexstring 012456c22c44
 dhcp 1 message-type request option 60 exact ascii MSFT5.0
 dhcp-match-message-type all
rfs4000-229D58(config-client-identity-test)#
```

The following example shows the client identity 'test' settings after the 'no' commands are executed:

```
rfs4000-229D58(config-client-identity-test)#no dhcp 2

rfs4000-229D58(config-client-identity-test)#no dhcp-match-message-type

rfs4000-229D58(config-client-identity-test)#show context
client-identity test
 dhcp 1 message-type request option 60 exact ascii MSFT5.0
rfs4000-229D58(config-client-identity-test)#
```

Related Commands

4.1.29 client-identity-group

client-identity

The following table summarizes commands available to enter the client identity group configuration mode:

Table 4.12 *Client-Identity-Group Config Commands*

Command	Description	Reference
client-identity-group	Creates a new client identity group and enters its configuration mode	*page 4-147*
client-identity-group-mode commands	Invokes the client identity group configuration mode commands	*page 4-148*
client-identity	Creates new client identity policy and enters its configuration mode	*page 4-137*

4.1.29.1 client-identity-group

client-identity-group

Configures a new client identity group

A client identity group is a collection of client identities. Each client identity included in a client identity group is set a priority value that indicates the priority for that identity when device fingerprinting.

Device Fingerprinting relies on specific information sent by a wireless client when acquiring IP address and other configuration information from a DHCP server. The feature uses the DHCP options sent by the wireless client in the DHCP request or discover packets to derive a unique signature specific to the class of devices. For example, Apple devices have a different signature than Android devices. This unique signature can then be used to classify the devices and assign permissions and restrictions on each device class.

A client identity group can be attached to a profile or device, enabling device fingerprinting on them.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
client-identity-group <CLIENT-IDENTITY-GROUP-NAME>
```

Parameters

- `client-identity-group <CLIENT-IDENTITY-GROUP-NAME>`

client-identity-group <CLIENT-IDENTITY-GROUP-NAME>	Creates a new client identity group and enters its configuration mode • <CLIENT-IDENTITY-GROUP-NAME> – Specify a client identity group name. If the group does not exist, it is created.

Example

```
rfs4000-229D58(config)#client-identity-group test
rfs4000-229D58(config-client-identity-group-test)#
Client Identity group Mode commands:
  client-identity  Client identity (DHCP Device Fingerprinting)
  load             Load Client identity Fingerprints
  no               Negate a command or set its defaults

  clrscr           Clears the display screen
  commit           Commit all changes made in this session
  do               Run commands from Exec mode
  end              End current mode and change to EXEC mode
  exit             End current mode and down to previous mode
  help             Description of the interactive help system
  revert           Revert changes
  service          Service Commands
  show             Show running system information
  write            Write running configuration to memory or terminal

rfs4000-229D58(config-client-identity-group-test)#
```

4.1.29.2 client-identity-group-mode commands

client-identity-group

The following table summarizes client identity group configuration mode commands:

Table 4.13 *Client-Identity-Group-Mode Commands*

Command	Description	Reference
client-identity	Associates an existing and configured client identity (device fingerprint) with this client identity group	*page 4-149*
load	Loads default (system-provided) client identity fingerprints	*page 4-151*
no	Removes the client identity associated with this client identity group	*page 4-145*

4.1.29.2.49 client-identity

client-identity-group-mode commands

Associates an existing and configured client identity (device fingerprint) with this client identity group

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>
```

Parameters

- `client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>`

client-identity <CLIENT-IDENTITY-NAME>	Associates a client identity with this group • <CLIENT-IDENTITY-NAME> – Specify a client identity name (should be existing and configured)
precedence <1-10000>	Determines the order in which client identity is used • <1-10000> – Specify this client identity precedence from <1-10000>. The client identity rule is applied based on its precedence value. Lower the value, higher is the precedence. Therefore, a client identity with precedence 5 gets precedence over a client identity having precedence 20.

Example

The following example shows two client identities created and configured:

```
rfs4000-229D58(config)#show context
!
! Configuration of RFS4000 version 5.9.0.0-029R
!
!

 permit tcp any any rule-precedence 10 rule-description "permit all TCP traffic"
 --More--
rfs4000-229D58(config)#
```

The following example associates client identity ‘test’ with the client identity group ‘test’:

```
rfs4000-229D58(config-client-identity-group-test)#client-identity test precedence
1
```

The following example shows the client identity group ‘test’ with two associated client identities having precedence 1 and 2:

```
rfs4000-229D58(config-client-identity-group-test)#client-identity
TestClientIdentity precedence 2
rfs4000-229D58(config-client-identity-group-test)#show context
client-identity-group test
 client-identity test precedence 1
 client-identity TestClientIdentity precedence 2
rfs4000-229D58(config-client-identity-group-test)#
```

Related Commands

no	Removes the client identity associated with the client identity group

4.1.29.2.50 load

client-identity-group-mode commands

Loads default (built-in, system-provided) client identity fingerprints. This option is enabled by default.

The WiNG software provides some built-in client identity fingerprints that are automatically loaded when the client identity group if applied to a device (either directly or through the profile).

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
load default-fingerprints
```

Parameters

- `load default-fingerprints`

load default-fingerprints	Loads client identity default fingerprints. This option is enabled by default.

Example

The auto-load default fingerprints option is enabled by default, as shown in the following example:

```
nx9500-6C8809(config-client-identity-group-test)#show context
client-identity-group test
 load default-fingerprints
nx9500-6C8809(config-client-identity-group-test)#
```

In scenarios where only customized client identities are to be applied, use the *no > load > default-fingerprints* command to disable auto-loading of default device fingerprints.

```
nx9500-6C8809(config-client-identity-group-test)#no load default-fingerprints

nx9500-6C8809(config-client-identity-group-test)#show context
client-identity-group test
 no load default-fingerprints
nx9500-6C8809(config-client-identity-group-test)#
```

Use the *service > show > client-identity-defaults* command to view default client identity fingerprints:

```
nx9500-6C8809#service show client-identity-defaults
client-identity Android-2-1
 dhcp 1 message-type request option 55 exact hexstring 0103061c21333a3b79
 dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.1
client-identity Android-2-2
 dhcp 1 message-type request option 55 exact hexstring 01792103061c333a3b
 dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.15
client-identity Android-2-3
 dhcp 3 message-type request option 55 exact hexstring 01792103061c333a3b
 dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.15
 dhcp 1 message-type request option-codes exact hexstring 353d32393c37
 dhcp 2 message-type request option-codes exact hexstring 353d3236393c37
 dhcp 10 message-type request option-codes exact hexstring 353d3236393c0c37
--More--
nx9500-6C8809#
```

Related Commands

no	Disables automatic loading of default client identity fingerprints

4.1.29.2.51 no

client-identity-group-mode commands

Removes the client identity associated with the client identity group

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [client-identity|load]

no client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>

no load default-fingerprints
```

Parameters

- `no client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>`

no client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>	Disassociates a specified client identity from this client identity group • <CLIENT-IDENTITY-NAME> – Specify the client identity name. • precedence <1-10000> – Specify the above specified client identity's precedence value from <1-10000>. The client identity rule is applied based on its precedence value. Lower the value, higher is the precedence. Therefore, a client identity with precedence 5 gets precedence over a client identity having precedence 20.

- `no load default-fingerprints`

no load default-fingerprints	Disables automatic loading of built-in, system-provided client identity fingerprints

Example

```
rfs4000-229D58(config-client-identity-group-test)#show context
client-identity-group test
 client-identity test precedence 1
rfs4000-229D58(config-client-identity-group-test)#

rfs4000-229D58(config-client-identity-group-test)#no client-identity test
rfs4000-229D58(config)#
```

Related Commands

client-identity	Associates an existing and configured client identity (device fingerprint) with this client identity group
load	Loads default (built-in, system-provided) client identity fingerprints. This option is enabled by default.

4.1.30 clone

Global Configuration Commands

Creates a replica of an existing object or device. The configuration of the new object or device is an exact copy of the existing object or device configuration. Use this command to copy existing configurations and then modifying only the required parameters.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
clone [TLO|device]

clone TLO <EXISTING-OBJECT-NAME> <NEW-OBJECT-NAME>

clone device <EXISTING-DEVICE-MAC/NAME> <NEW-DEVICE-MAC>
```

Parameters

- `clone TLO <EXISTING-OBJECT-NAME> <NEW-OBJECT-NAME>`

TLO <EXISTING-OBJECT-NAME> <NEW-OBJECT-NAME>	Creates a new TLO by cloning an existing top-level object. The new object has the same configuration as the cloned object. • <EXISTING-OBJECT-NAME> – Specify the existing object's (to be cloned) name • <NEW-OBJECT-NAME> – Provide the new object's name. **Note:** Enter *clone* and press Tab to list objects available for cloning.

- `clone device <EXISTING-DEVICE-MAC/NAME> <NEW-DEVICE-MAC>`

device <EXISTING-DEVICE-MAC/NAME> <NEW-DEVICE-MAC>	Configures a new device based on an existing device configuration • <EXISTING-DEVICE-MAC/NAME> – Specify the existing device's name or MAC address (the device to be cloned) • <NEW-DEVICE-MAC> – Provide the new device's MAC address. **Note:** Enter *clone > device* and press Tab to list devices available for cloning.

Example

```
nx9500-6C8809(config)#clone rf_domain TechPubs Cloned_TechPubs2
nx9500-6C8809(config)#show context
!
! Configuration of NX9500 version 5.9.0.0-008B
!
!
version 2.5
!
.....................................................................................
rf-domain TechPubs
 location SanJose
 timezone America/Los_Angeles
 country-code us
!
rf-domain Cloned_TechPubs2
 location SanJose
--More--
nx9500-6C8809(config)#
```

4.1.31 crypto-cmp-policy

Global Configuration Commands

Creates a crypto *Certificate Management Protocol* (CMP) policy and enters its configuration mode

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
crypto-cmp-policy <CRYPTO-CMP-POLICY-NAME>
```

Parameters

- `crypto-cmp-policy <CRYPTO-CMP-POLICY-NAME>`

<CRYPTO-CMP-POLICY-NAME>	Specify the crypto CMP policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config)#crypto-cmp-policy CMP
nx9500-6C8809(config-cmp-policy-CMP)#?
CMP Policy Mode commands:
  ca-server              CMP CA Server configuration commands
  cert-key-size          Set key size for certificate request
  cert-renewal-timeout   Trigger a cert renewal request on timeout
  cross-cert-validate    Validate cross-cert using factory-cert
  no                     Negate a command or set its defaults
  subjectAltName         Configure subjectAltName value
  trustpoint             Trustpoint for CMP
  use                    Set setting to use

  clrscr                 Clears the display screen
  commit                 Commit all changes made in this session
  do                     Run commands from Exec mode
  end                    End current mode and change to EXEC mode
  exit                   End current mode and down to previous mode
  help                   Description of the interactive help system
  revert                 Revert changes
  service                Service Commands
  show                   Show running system information
  write                  Write running configuration to memory or terminal

nx9500-6C8809(config-cmp-policy-CMP)#
```

Related Commands

no	Resets values or disables commands

NOTE: For more information on the crypto CMP policy, see *Chapter 29, CRYPTO-CMP-POLICY*.

4.1.32 customize

Global Configuration Commands

Customizes the output of the summary CLI commands. Use this command to define the data displayed as a result of various show commands.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
customize [cdp-lldp-info-column-width|hostname-column-width|show-adoption-status|
show-wireless-client|show-wireless-client-stats|show-wireless-client-stats-rf|

customize show-wireless-radio-stats (radio-alias <3-67>,radio-id,radio-mac,
rx-bytes,rx-errors,rx-packets,rx-throughput,tx-bytes,tx-dropped,tx-packets,
tx-throughput)

customize show-wireless-radio-stats-rf (average-retry-number,error-rate,noise,
q-index,radio-alias <3-67>,radio-id,radio-mac,rx-rate,signal,snr,t-index,tx-rate)
```

Parameters

- `customize [cdp-lldp-info-column-width|hostname-column-width] <1-64>`

hostname-column-width <1-64>	Configures default width of the hostname column in all show command outputs • <1-64> – Sets the hostname column width from 1 - 64 characters
cdp-lldp-info-column-width <1-64>	Configures the column width in the *show > cdp/lldp > [neighbor|report]* command output • <1-64> – Sets the column width from 1 - 64 characters

- `customize show-adoption-status (adopted-by,ap-name <1-64>,cdp-lldp-info,config-status,last-adoption,msgs,uptime,version)`

show-adoption-status	Configures the information displayed in the *show > adoption > status* command output. Select the columns (information) displayed from the following options: adopted-by, ap-name, cdp-lldp-info, config-status, last-adoption, msgs, uptime, and version. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Device-Name, Version, Config-Status, MSGS, Adopted-By, Last-Adoption, and Uptime. Where ever available, you can optionally use the <1-64> parameter to set the column width.

- `customize show-wireless-client (ap-name <1-64>,auth,client-identity <1-32>,bss,enc,hostname <1-64>,ip,last-active,location <1-64>,mac,radio-alias <3-67>,radio-id,radio-type,role <1-32>,state,username <1-64>,vendor,vlan,wlan)`

show-wireless-client	Customizes the *show > wireless > client* command output The columns displayed by default are: MAC, IPv4, Vendor, Radio-ID, WLAN. VLAN, and State.
ap-name <1-64>	Includes the ap-name column, which displays the name of the AP with which this client associates • <1-64> – Sets the ap-name column width from 1 - 64 characters
auth	Includes the auth column, which displays the authorization protocol used by the wireless client

client-identity <1-32>	Includes the client-identity (device type) column, which displays details gathered from DHCP device fingerprinting feature (when enabled). For more information, see *client-identity*. • <1-32> – Sets the client-identity column width from 1 - 32 characters
bss	Includes the BSS column, which displays the BSS ID the wireless client is associated with
enc	Includes the enc column, which displays the encryption suite used by the wireless client
hostname <1-64>	Includes the hostname column, which displays the wireless client's hostname • <1-64> – Sets the hostname column width from 1 - 64 characters
ip	Includes the IP column, which displays the wireless client's current IP address
last-active	Includes the last-active column, which displays the time of last activity seen from the wireless client
location <1-64>	Includes the location column, which displays the location of the client's associated access points • <1-64> – Sets the location column width from 1 - 64 characters
mac	Includes the MAC column, which displays the wireless client's MAC address
radio-alias <3-67>	Includes the radio-alias column, which displays the radio alias with the AP's hostname and radio interface number in the "HOSTNAME:RX" format • <3-64> – Sets the radio-alias column width from 3 - 67 characters
radio-id	Includes the radio-id column, which displays the radio ID with the AP's MAC address and radio interface number in the "AA-BB-CC-DD-EE-FF:RX" format
radio-type	Includes the radio-type column, which displays the wireless client's radio type
role <1-32>	Includes the role column, which displays the client's role • <1-32> – Sets the role column width from 1 - 32 characters
state	Includes the state column, which displays the wireless client's current availability state
username <1-64>	Includes the username column, which displays the wireless client's username • <1-64> – Specify the username column width from 1 - 64 characters.
vendor	Includes the vendor column, which displays the wireless client's vendor ID
vlan	Includes the VLAN column, which displays the wireless client's assigned VLAN
wlan	Includes the WLAN column, which displays the wireless client's assigned WLAN

```
• customize show-wireless-client-stats (hostname <1-64>,mac,rx-bytes,rx-errors,
rx-packets,rx-throughput,t-index,tx-bytes,tx-dropped,tx-packets,tx-throughput)
```

show-wireless-client-stats	Customizes the *show > wireless > client > statistics* command output The columns displayed by default are: MAC, Tx bytes, RX bytes, Tx pkts, Rx pkts, and Tx bps, RX bps, T-Index, and Dropped pkts.
hostname <1-64>	Includes the hostname column, which displays the wireless client's hostname • <1-64> – Sets the hostname column width from 1 - 64 characters
mac	Includes the MAC column, which displays the wireless client's MAC address
rx-bytes	Includes the rx-bytes column, which displays the total number of bytes received by the wireless client

rx-errors	Includes the rx-error column, which displays the total number of errors received by the wireless client
rx-packets	Includes the rx-packets column, which displays the total number of packets received by the wireless client
rx-throughput	Includes the rx-throughput column, which displays the receive throughput at the wireless client
t-index	Includes the t-index column, which displays the traffic utilization index at the particular wireless client
tx-bytes	Includes the tx-bytes column, which displays the total number of bytes transmitted by the wireless client
tx-dropped	Includes the tx-dropped column, which displays the total number of dropped packets by the wireless client
tx-packets	Includes the tx-packets column, which displays the total number of packets transmitted by the wireless client
tx-throughput	Includes the tx-throughput column, which displays the transmission throughput at the wireless client

- `customize show-wireless-client-stats-rf (average-retry-number,error-rate,host-name <1-64>,mac,noise,q-index,rx-rate,signal,snr,tx-rate)`

show-wireless-client-stats-rf	Customizes the *show > wireless > client > statistics > rf* command output The columns displayed by default are: MAC, Signal (dBm), Noise (dBm), SNR (dB), TX Rate (Mbps), Retry Avg, Errors (pps), and Q-Index (%).
average-retry-number	Includes the average-retry-number column, which displays the average number of retransmissions made per packet
error-rate	Includes the error-rate column, which displays the rate of error for the wireless client
hostname <1-64>	Includes the hostname column, which displays the wireless client's hostname • <1-64> – Sets the hostname column width from 1 - 64 characters
mac	Includes the MAC column, which displays the wireless client's MAC address
noise	Includes the noise column, which displays the noise (in dBm) as detected by the wireless client
q-index	Includes the q-index column, which displays the RF quality index **Note:** Higher values indicate better RF quality.
rx-rate	Includes the rx-rate column, which displays the receive rate at the particular wireless client
signal	Includes the signal column, which displays the signal strength (in dBm) at the particular wireless client
snr	Includes the snr column, which displays the *signal to noise* (SNR) ratio (in dB) at the particular wireless client
tx-rate	Includes the tx-rate column, which displays the packet transmission rate at the particular wireless client

```
• customize show-wireless-meshpoint-accelerated-multicast (ap-hostname,group-
addr,mesh-name,neighbor-hostname,neighbor-ifid,radio-alias,radio-id,radio-mac,
subscriptions)
```

show-wireless-meshpoint-accelerated-multicast	Configures the information displayed in the *show > wireless > meshpoint > accelerated multicast* command output. Select the columns (information) displayed from the following options: ap-hostname, group-addr, mesh-name, neighbor-hostname, neighbor-ifid, radio-alias, radio-id, radio-mac, subscriptions. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Mesh, Radio, Neighbor-IFID, Neighbor-Hostname, Group-MAC, and Subscriptions.

```
• customize show-wireless-meshpoint (ap-mac,cfg-as-root,hops,hostname <1-64>,
interface-ids,is-root,mesh-name <1-64>,mpid,next-hop-hostname <1-64>,next-hop-
ifid,next-hop-use-time,path-metric,root-bound-time,root-hostname <1-64>,root-
mpid)
```

show-wireless-meshpoint	Customizes the *show > wireless > meshpoint* command output The columns displayed by default are: Mesh, Hostname, Hops, Is-Root, Config-As-Root, Root-Hostname, Root-Bound-Time, Path-Metric, Next-Hop-Hostname, and Next-Hop-Use-Time.
ap-mac	Includes the ap-mac column, which displays the AP's MAC address in the AA-BB-CC-DD-EE-FF format. Applicable only in case of non-controller meshpoints
cfg-as-root	Includes the cfg-as-root column, which displays the configured root state of the meshpoint
hops	Includes the hops column, which displays the number of hops to the root for this meshpoint
hostname <1-64>	Includes the hostname column, which displays the AP's hostname. Applicable only in case of non-wireless controller meshpoints • <1-64> – Sets the hostname column width from 1 - 64 characters
interface-ids	Includes the interface-ids column, which displays the interface identifiers (interfaces used by this meshpoint)
is-root	Includes the is-root column, which displays the current root state of the meshpoint
mesh-name <1-64>	Includes the mesh-name column, which displays the meshpoint's name • <1-64> – Sets the mesh-name column width from 1 - 64 characters
mpid	Includes the mpid column, which displays the meshpoint identifier in the AA-BB-CC-DD-EE-FF format
next-hop-hostname <1-64>	Includes the next-hop-hostname column, which displays the next-hop AP's name (the AP next in the path to the bound root) • <1-64> – Sets the next-hop-hostname column width from 1 - 64 characters
next-hop-ifid	Includes the next-hop-ifid column, which displays the next-hop interface identifier in the AA-BB-CC-DD-EE-FF format
next-hop-use-time	Includes the next-hop-use-time column, which displays the time since this meshpoint started using this next hop
root-bound-time	Includes the root-bound-time column, which displays the time since this meshpoint has been bound to the current root

root-hostname <1-64>	Includes the root-hostname column, which displays the root AP's hostname to which this meshpoint is bound • <1-64> – Sets the root-hostname column width from 1 - 64 characters
root-mpid	Includes the root-mpid column, which displays the bound root meshpoint identifier in the AA-BB-CC-DD-EE-FF format

```
• customize show-wireless-meshpoint-neighbor-stats (ap-hostname <1-64>,
neighbor-hostname <1-64>,neighbor-ifid,rx-bytes,rx-errors,rx-packets,rx-
throughput,t-index,tx-bytes,tx-dropped,tx-packets,tx-throughput)
```

show-wireless-meshpoint-neighbor-stats	Customizes the *show > wireless > meshpoint > neighbor > statistics* command output The columns displayed by default are: AP Hostname, Neighbor-IFID, TX bytes, RX bytes, Tx pkts, Rx pkts, Tx (bps), Rx (bps), T-Index (%), and Dropped pkts.
ap-name <1-64>	Includes the ap-name column, which displays name of the AP reporting a neighbor • <1-64> – Sets the ap-name column width from 1 - 64 characters
neighbor-hostname <1-64>	Includes the neighbor-hostname column, which displays the reported neighbor's hostname • <1-64> – Sets the neighbor-hostname column width from 1 - 64 characters
neighbor-ifid	Includes the neighbor-ifid column, which displays the neighbor's interface ID
rx-bytes	Includes the rx-bytes column, which displays the total bytes received
rx-errors	Includes the rx-error column, which displays the total bytes of error received
rx-packets	Includes the rx-packets column, which displays the number of packets received
rx-throughput	Includes the rx-throughput column, which displays neighbor's received throughput
t-index	Includes the t-index column, which displays the traffic utilization index at the neighbor end
tx-bytes	Includes the tx-bytes column, which displays the total bytes transmitted
tx-dropped	Includes the tx-dropped column, which displays the total bytes dropped
tx-packets	Includes the tx-packets column, which displays the number of packets transmitted
tx-throughput	Includes the tx-throughput column, which displays neighbor's transmitted throughput

```
• customize show-wireless-meshpoint-neighbor-stats-rf (ap-hostname <1-64>,
average-retry-number,error-rate,neighbor-hostname <1-64>,neighbor-ifid,noise,
q-index,rx-rate,signal,snr,t-index,tx-rate)
```

show-wireless-meshpoint-neighbor-stats-rf	Customizes the *show > wireless > meshpoint > neighbor > statistics > rf* command output The columns displayed by default are: AP Hostname, Neighbor-IFID, Signal (dBm), Noise (dBm), SNR (dB), Tx-Rate (Mbps), Rx-Rate (Mbps), Retry Avg, Errors (pps), and Q-Index (%).
ap-name <1-64>	Includes the ap-name column, which displays name of the AP reporting a neighbor • <1-64> – Sets the ap-name column width from 1 - 64 characters
average-retry-number	Includes the average-retry-number column, which displays the average number of retransmissions made per packet.
error-rate	Includes the error-rate column
neighbor-hostname <1-64>	Includes the neighbor-hostname, which displays reported neighbor's hostname • <1-64> – Sets the neighbor-hostname column width from 1 - 64 characters

noise	Includes the noise column, which displays the noise level in dBm
q-index	Includes the q-index column, which displays the q-index
rx-rate	Includes the rx-rate column, which displays rate of receiving
signal	Includes the signal column, which displays the signal strength in dBm
snr	Includes the snr column, which displays the signal-to-noise ratio
t-index	Includes the t-index column, which displays t-index
tx-rate	Includes the tx-rate column, which displays rate of transmission

- `customize show-wireless-mint-client (client-alias <1-64>,client-bss,portal-alias <1-64>,portal-bss,up-time)`

show-wireless-mint-client	Configures the information displayed in the *show > wireless > mint > client* command output. Select the columns (information) displayed from the following options: client-alias, client-bss, portal-alias, portal-bss, and up-time. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Portal, Portal-Radio-MAC, Client, Client-Radio-MAC, and Up-Time.

- `customize show-wireless-mint-client-stats (client-alias <1-64>,portal-alias <1-64>,portal-bss,rx-bytes,rx-errors,rx-packets,rx-throughput,t-index,tx-bytes,tx-dropped,tx-packets,tx-throughput)`

show-wireless-mint-client-stats	Configures the information displayed in the *show > wireless > mint > client > statistics* command output. Select the columns (information) displayed from the following options: client-alias, portal-alias, portal-bss, rx-bytes, rx-errors, rx-packets, rx-throughput, t-index, tx-bytes, tx-dropped, tx-packets, tx-throughput. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Portal, Portal-Radio-MAC, Client, Tx bytes, Rx bytes, TX pkts, Rx pkts, TX (bps), Rx (bps), T-Index (%), and Dropped pkts. Where ever available, you can optionally use the <1-64> parameter to set the column width.

- `customize show-wireless-mint-client-stats-rf (average-retry-number,client-alias <1-64>,error-rate,noise,portal-alias <1-64>,portal-bss,q-index,rx-rate,signal,snr,tx-rate)`

show-wireless-mint-client-stats-rf	Configures the information displayed in the *show > wireless > mint > client > statistics > rf* command output. Select the columns (information) displayed from the following options: average-retry-number, client-alias, error-rate, noise, portal-alias, portal-bss, q-index, rx-rate, signal, snr, and tx-rate. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: MAC, Signal (dBm), Noise (dBm), SNR (dB), Tx-Rate (Mbps), Rx-rate (Mbps), Retry Avg, Errors (pps), and Q-Index (%). Where ever available, you can optionally use the <1-64> parameter to set the column width.

```
• customize show-wireless-mint-portal (client-alias <1-64>,client-bss,portal-
alias <1-64>,portal-bss,up-time)
```

show-wireless-mint-portal	Configures the information displayed in the *show > wireless > mint > portal* command output. Select the columns (information) displayed from the following options: client-alias, client-bss, portal-alias, portal-bss, and up-time. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Client, Client-Radio-MAC, Portal, Portal-Radio-MAC, and Up-Time. Where ever available, optionally use the <1-64> parameter to set the column width.

```
• customize show-wireless-mint-portal-stats (client-alias <1-64>,client-bss,
portal-alias <1-64>,rx-bytes,rx-errors,rx-packets,rx-throughput,t-index,
tx-bytes,tx-dropped,tx-packets,tx-throughput)
```

show-wireless-mint-portal-stats	Configures the information displayed in the *show > wireless > mint > portal > statistics* command output. Select the columns (information) displayed from the following options: client-alias, client-bss, portal-alias, rx-bytes, rx-errors, rx-packets, rx-throughput, t-index, tx-bytes, tx-dropped, tx-packets, tx-throughput. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Client, Client-Radio-MAC, Portal, Tx bytes, Rx bytes, TX pkts, Rx pkts, TX (bps), Rx (bps), T-Index (%), and Dropped pkts. Where ever available, optionally use the <1-64> parameter to set the column width.

```
• customize show-wireless-mint-portal-stats-rf (average-retry-number,client-alias
<1-64>,client-bss,error-rate,noise,portal-alias <1-64>,q-index,rx-rate,signal,
snr,tx-rate)
```

show-wireless-mint-portal-stats-rf	Configures the information displayed in the *show > wireless > mint > portal > statistics > rf* command output. Select the columns (information) displayed from the following options: average-retry-number, client-alias, client-bss, error-rate, noise, portal-alias, q-index, rx-rate, signal, snr, tx-rate. These are recursive parameters and you can select multiple options at a time. The columns displayed by default are: Client, Client-Radio-MAC, Portal, Signal (dBm), Noise (dBm), SNR (dB), Tx-Rate (Mbps), Rx-rate (Mbps), Retry Avg, Errors (pps), and Q-Index (%). Where ever available, optionally use the <1-64> parameter to set the column width.

```
• customize show-wireless-radio (adopt-to,ap-name <1-64>,channel,location <1-64>,
num-clients,power,radio-alias <3-67>,radio-id,radio-mac,rf-mode,state)
```

show-wireless-radio	Customizes the show wireless radio command output
adopt-to	Includes the adopt-to column, which displays information about the wireless controller adopting this AP
ap-name <1-64>	Includes the ap-name column, which displays information about the AP this radio belongs • <1-64> – Sets the ap-name column width from 1 - 64 characters
channel	Includes the channel column, which displays information about the configured and current channel for this radio
location <1-64>	Includes the location column, which displays the location of the AP this radio belongs • <1-64> – Sets the location column width from 1 - 64 characters
num-clients	Includes the num-clients column, which displays the number of clients associated with this radio

power	Includes the power column, which displays the radio's configured and current transmit power
radio-alias <3-67>	Includes the radio-alias column, which displays the radio's alias (combination of AP's hostname and radio interface number in the "HOSTNAME:RX" formate) • <3-67> – Sets the radio-alias column width from 3 - 67 characters
radio-id	Includes the radio-id column, which displays the radio's ID (combination of AP's MAC address and radio interface number in the "AA-BB-CC-DD-EE-FF:RX" format)
radio-mac	Includes the radio-mac column, which displays the radio's base MAC address
rf-mode	Includes the rf-mode column, which displays the radio's operating mode. The radio mode can be 2.4 GHz, 5.0 GHz, or sensor.
state	Includes the state column, which displays the radio's current operational state

```
• customize show-wireless-radio-stats (radio-alias <3-67>,radio-id,radio-mac,
rx-bytes,rx-errors,rx-packets,rx-throughput,tx-bytes,tx-dropped,tx-packets,
tx-throughput)
```

show-wireless-radio-stats	Customizes the show wireless radio statistics command output
radio-alias <3-67>	Includes the radio-alias column, which displays the radio's alias (combination of AP's hostname and radio interface number in the "HOSTNAME:RX" format) • <3-67> – Sets the radio-alias column width from 3 - 67 characters
radio-id	Includes the radio-id column, which displays the radio's ID (combination of AP's MAC address and radio interface number in the "AA-BB-CC-DD-EE-FF:RX" format)
radio-mac	Includes the radio-mac column, which displays the radio's base MAC address
rx-bytes	Includes the rx-bytes column, which displays the total number of bytes received by the radio
rx-errors	Includes the rx-error column, which displays the total number of errors received by the radio
rx-packets	Includes the rx-packets column, which displays the total number of packets received by the radio
rx-throughput	Includes the rx-throughput column, which displays the receive throughput at the radio
tx-bytes	Includes the tx-bytes column, which displays the total number of bytes transmitted by the radio
tx-dropped	Includes the tx-dropped column, which displays the total number of packets dropped by the radio
tx-packets	Includes the tx-packets column, which displays the total number of packets transmitted by the radio
tx-throughput	Includes the tx-throughput column, which displays the transmission throughput at the radio

```
• customize show-wireless-radio-stats-rf (average-retry-number,error-rate,noise,
q-index,radio-alias <3-67>,radio-id,radio-mac,rx-rate,signal,snr,t-index,tx-rate)
```

show-wireless-radio-stats-rf	Customizes the show wireless radio stats RF command output
average-retry-number	Includes the average-retry-number column, which displays the average number of retransmissions per packet

error-rate	Includes the error-rate column, which displays the rate of error for the radio
noise	Includes the noise column, which displays the noise detected by the radio
q-index	Includes the q-index column, which displays the RF quality index **Note:** Higher values indicate better RF quality.
radio-alias <3-67>	Includes the radio-alias column, which displays the radio's alias (combination of AP's hostname and radio interface number in the "HOSTNAME:RX" format) • <3-67> – Sets the radio-alias column width from 3 - 67 characters
radio-id	Includes the radio-id column, which displays the radio's ID (combination of AP's MAC address and radio interface number in the "AA-BB-CC-DD-EE-FF:RX" format)
radio-mac	Includes the radio-mac column, which displays the radio's base MAC address
rx-rate	Includes the rx-rate column, which displays the receive rate at the particular radio
signal	Includes the signal column, which displays the signal strength at the particular radio
snr	Includes the snr column, which displays the signal-to-noise ratio at the particular radio
t-index	Includes the t-index column, which displays the traffic utilization index at the particular radio
tx-rate	Includes the tx-rate column, which displays the packet transmission rate at the particular radio

Example

The following example shows the shows the *show > adoption > status* command output before customizing the output:

Related Commands

no	Restores custom CLI settings to default
wireless (show commands)	Displays wireless configuration and other information

4.1.33 database-client-policy

Global Configuration Commands

The following table summarizes the config database client policy commands:

Table 4.14 *Database-Client-Policy Config Commands*

Command	Description	Reference
database-client-policy	Creates a database-client policy and enters its configuration mode	*page 4-168*
database-client-policy-mode commands	Summarizes the database client policy mode commands	*page 4-170*

4.1.33.1 database-client-policy

database-client-policy

Creates a database-client-policy and enters its configuration mode. The database-client-policy configures the IP address or hostname of the *database* host, and is used on the NSight/EGuest server's device cortext. However, the database-client-policy is required only in a split deployment, where the server and database are hosted on separate boxes. In such a scenario, the database-client-policy enables the server to identify the database host.

If enforcing database authentication, configure the user-name and password required to access the database on the database-client-policy. For more information on enabling database authentication, see *database*.

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000

Syntax

```
database-client-policy <DATABASE-CLIENT-POLICY-NAME>
```

Parameters

- `database-client-policy <DATABASE-CLIENT-POLICY-NAME>`

database-policy <DATABASE-CLIENT-POLICY-NAME>	Specify the database-client-policy name. If the policy does not exist, it is created. Once created and configured, use this policy in the NSight/EGuest server's device context.

Example

```
vx9000-34B78B(config)#database-client-policy DBClientPolicy
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#?
Database Client Policy Mode commands:
  authentication   Database authentication
  database-server  Add database server
  no               Negate a command or set its defaults

  clrscr           Clears the display screen
  commit           Commit all changes made in this session
  do               Run commands from Exec mode
  end              End current mode and change to EXEC mode
  exit             End current mode and down to previous mode
  help             Description of the interactive help system
  revert           Revert changes
  service          Service Commands
  show             Show running system information
  write            Write running configuration to memory or terminal

vx9000-34B78B(config-database-client-policy-DBClientPolicy)#
```

To setup a database/server environment, with the database and the server hosted n separate hosts:

1 On the database host, use the database policy. This brings up the database server.

2 On the NSight/EGuest server, create the database-client-policy, and configure the database host's IP address or hostname.

```
vx9000-34B78B(config)#database-client-policy DBClientPolicy
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#database-server
192.168.13.10
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#show context
database-client-policy DBClientPolicy
  database-server 192.168.13.10
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#
```

3 Use this database-client-policy in the NSight/EGuest server's device configuration context. Once applied, the server posts details to the database specified in the policy.

```
vx9000-34B78B(config-device-00-0C-29-34-B7-8B)#use database-client-policy
DBClientPolicy

vx9000-34B78B(config-device-00-0C-29-34-B7-8B)#show context include-factory |
include database-client-policy
 use database-client-policy DBClientPolicy
vx9000-34B78B(config-device-00-0C-29-34-B7-8B)#
```

Related Commands

no	Removes an existing database-client-policy
database-policy	Documents database policy configuration commands. If enforcing authenticated database access, use this command to enable authentication on the database and configure the username and password.
nsight-policy	Documents NSight policy configuration commands. The NSight policy is a tool, which when created and applied at the RF Domain level allows the RF Domain manager to send statistics (polled from devices within the RF Domain) to the NOC. The NOC, when enabled as the NSight server, stores this data in a locally or externally hosted database.
use (profile/device context)	Uses a database-client-policy in the VX9000's device or profile context
database	Drops or repairs a database. Also provides database keyfile management capabilities. If enforcing authenticated access to the database, use this command to generate, export, import, and zerzoise the keyfile.

4.1.33.2 database-client-policy-mode commands

database-client-policy

The following table summarizes database-client-policy configuration mode commands:

Table 4.15 *Database-Client-Policy-Config-Mode Commands*

Command	Description	Reference
authentication	Configures the captive-portal/NSight database users	*page 4-171*
database-server	Configures the database host's IP address or hostname. Use this command to configure the IP address or hostname of the VM hosting the database.	*page 4-172*
no	Removes the database host's IP/hostname configuration	*page 4-173*

4.1.33.2.52 authentication

database-client-policy-mode commands

Configures the database's username and password

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000

Syntax

```
authentication username <USER-NAME> password <PASSWORD>
```

Parameters

- `authentication username <USER-NAME> password <PASSWORD>`

authentication username <USER-NAME> password <PASSWORD>	Configures the username and password required to access the database. Note, username and password specified here should be the same as those already created on the database host. For more information on creating database users, see *service*. • username <USER-NAME> – Configures the user name • password <PASSWORD> – Configures the password for the username specified above. However, ensure database authentication is enabled in the database-policy. For more information on database-policy, see *database-policy*. For more information on enabling database authentication, see *database*

Example

```
vx9000-65672(config-database-client-policy-DBClientPolicy)# authentication
username extreme password 2 test@12345

vx9000-656725#show running-config database-client-policy replica-set
database-client-policy replica-set
 database-server 13.13.13.3
 database-server 14.14.14.2
 authentication username extreme password 2 q4cUyedmA4BFsn1kg/
xjCQAAAAliMbdrXKblQbsyrwMGdVzv
vx9000-656725#
```

Related Commands

no	Removes an existing database username and password

4.1.33.2.53 database-server

database-client-policy-mode commands

Configures the IPv4/IPv6 address or hostname of the VM hosting the database

Supported in the following platforms:

- Service Platforms — VX9000

Syntax

```
database-server [<IP>|<HOSTNAME>|<IPv6>]
```

Parameters

- `database-server [<IP>|<HOSTNAME>|<IPv6>]`

database-server [<IP>|<HOSTNAME>|<IPv6>]	Identifies the database host using one of the following options: • <IP> – Specifies the host's IPv4 address • <HOSTNAME> – Specifies the host's hostname • <IPv6> – Specifies the host's IPv6 address.

Example

```
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#database-server
192.168.13.10

vx9000-34B78B(config-database-client-policy-DBClientPolicy)#show context
database-client-policy DBClientPolicy
database-server 192.168.13.10
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#
```

Related Commands

no	Removes the database server's (the VM hosting the database) IP/hostname configuration

4.1.33.2.54 no

database-client-policy-mode commands

Removes the database host's IP/hostname configuration

Supported in the following platforms:

- Service Platforms — VX9000

Syntax

```
no [authentication|database-server]

no authentication username <USER-NAME>

no database-server [<IP>|<HOST-NAME>|<IPv6>]
```

Parameters

- `no [authentication|database-server]`

no database-server	Removes the database VM's IPv4/Ipv6 address or hostname associated with this database client policy. Also removes database user details.

Example

```
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#show context
database-client-policy DBClientPolicy
database-server 192.168.13.10
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#

vx9000-34B78B(config-database-client-policy-DBClientPolicy)#no database-server

vx9000-34B78B(config-database-client-policy-DBClientPolicy)#show context
database-client-policy DBClientPolicy
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#
```

4.1.34 database-policy

Global Configuration Commands

The following table summarizes the config database policy commands:

Table 4.16 *Database-Policy Config Commands*

Command	Description	Reference
database-policy	Creates a database policy and enters its configuration mode	*page 4-175*
database-policy-mode commands	Lists database policy configuration mode commands	*page 4-176*

4.1.34.1 database-policy

database-policy

Creates a database-policy and enters its configuration mode. After creating the database-policy, use it on the database host. This enables the database. If deploying a database replica-set, use this command to define the replica set configurations.

To enforce database authentication, enable authentication on the database-policy, and configure the username and password required to access the database. Note, this command is part of a set of configurations that are required to enable authentication. For more information on the entire set of configurations, see *database*.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, VX9000

Syntax

```
database-policy <DATABASE-POLICY-NAME>
```

Parameters

- `database-policy <DATABASE-POLICY-NAME>`

database-policy <DATABASE-POLICY-NAME>	Specify the database policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config-database-policy-test)#?
Database Policy Mode commands:
  authentication  Database authentication
  no              Negate a command or set its defaults
  replica-set     Replica Set
  shutdown        Disable database server

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  do              Run commands from Exec mode
  end             End current mode and change to EXEC mode
  exit            End current mode and down to previous mode
  help            Description of the interactive help system
  revert          Revert changes
  service         Service Commands
  show            Show running system information
  write           Write running configuration to memory or terminal
nx9500-6C8809(config-database-policy-test)#
```

Related Commands

no	Removes an existing database policy

4.1.34.2 database-policy-mode commands

database-policy

The following table summarizes database-policy configuration mode commands:

Table 4.17 *Database-Policy-Config-Mode Commands*

Command	Description	Reference
authentication	Enables database authentication and configures the username and password required to access the database	*page 4-177*
replica-set	Adds a member to a database replica set	*page 4-178*
shutdown	Shuts down the database server	*page 4-180*
no	Removes a member from the database replica set	*page 4-181*

4.1.34.2.55 authentication

database-policy-mode commands

Enables database authentication. When enabled and applied on the database host, this policy enforces authenticated access to the database. This command also configures the username and password required to access the database.

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000

Syntax

```
authentication
authentication username <USER-NAME> password <PASSWORD>
```

Parameters

- `authentication`

authentication	Enables database authentication on this database-policy. When executed without the associated keywords, the command enables authentication on the database host using the policy. Execute the command along with the username and password inputs to configure the user credentials required for access the database.

- `authentication username <USER-NAME> password <PASSWORD>`

authentication username <USER-NAME> password <PASSWORD>	Configures the username and password required to access the database. Note, username and password specified here should be the same as those already created on the database host. For more information, see *service*. • username <USER-NAME> – Configures the database username • password <PASSWORD> – Configures the password for the username specified above Users using these credentials are allowed database access. In case of a split NSight/EGuest deployment, ensure that the database-client-policy running on the NSight/EGuest server has the same user details configured. For information on creating database-client-policy, see *database-client-policy* For more information on enabling database authentication, see *database*.

Example

```
nx9500-6C8809(config-database-policy-test)#authentication
nx9500-6C8809(config-database-policy-test)#no shutdown
nx9500-6C8809(config-database-policy-test)#authentication username user1 password
uesr@123

nx9500-6C8809(config-database-policy-test)#show context
database-policy test
 authentication
 authentication username user1 password 2 f20/dTjYiMnR/tqbGFaO5gAAAAjL/
xo8clisk1TZjimo128t
nx9500-6C8809(config-database-policy-test)#
```

Related Commands

no	Disables database authentication, and removes the username and password configuration.

4.1.34.2.56 replica-set

database-policy-mode commands

Adds a member to a database replica set. A replica-set is a group of devices (replica-set members) running the database instances that maintain the same data set. Replica sets provide redundancy and high availability and are the basis for all production deployments. The replica set usually consists of: an arbiter, a primary member, and one or more secondary members. The primary member and the secondary member(s) maintain replicas of the data set.

Before deploying a replica set, ensure that each of the replica-set member:

- has the DB instances installed, and
- is able to communicate with every other member in the set.

After ensuring the above,

- Create a database policy (with identical replica-set configuration) on each of the member devices, and
- Use the database policy in the member device's configuration mode.

These member devices elect a primary member, which begins accepting client-write operations. Remaining devices in the replica-set, with the exception of the arbiter, are designated as secondary members.

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000, NX7500, NX5500

Syntax

```
replica-set member [<IP>|<FQDN>] {arbiter|priority <0-255>}
```

Parameters

- `replica-set member [<IP>|<FQDN>] {arbiter|priority <0-255>}`

replica-set member [<IP>|<FQDN>] {arbiter|priority <0-255>}	Adds a member to the database replica set. To identify the member, use one of the following options: • <IP> – Specify the member's IP address. • <FQDN> – Specify the member's *Fully Qualified Domain Name* (FQDN). After specifying the IP address or FQDN, specify the following: • arbiter – Optional. Select to configure the member as the arbiter. • priority <0-255> – Optional. Configures the priority of a non-arbiter member of the replica set • <0-255> – Specify the priority from 0 - 255. This value determines the member's position within the replica set as primary or secondary. It also helps in electing the fall-back primary member in the eventuality of the current primary member being unreachable. A replica set should have at least three members. The maximum number of members can go up to fifty (50). However, configuring a three-member replica set is recommended. Replica sets should have odd number of members. In case of an even-numbered replica set, add an arbiter to make the member count odd. This ensures that at least one member gets a majority vote in the primary-member election.

Example

```
nx9500-6C8809(config-database-policy-test)#replica-set member 192.168.13.14
arbiter

nx9500-6C8809(config-database-policy-test)#replica-set member 192.168.13.16
priority 1

nx9500-6C8809(config-database-policy-test)#replica-set member 192.168.13.12
priority 2

nx9500-6C8809(config-database-policy-test)#show context
database-policy test
 replica-set member 192.168.13.12 priority 2
 replica-set member 192.168.13.14 arbiter
 replica-set member 192.168.13.16 priority 1
nx9500-6C8809(config-database-policy-test)#
```

Related Commands

no	Removes a member from the database replica set

4.1.34.2.57 shutdown

database-policy-mode commands

Shuts down the database server. The factory default is set as *no shutdown*.

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000, NX7500, NX5500

Syntax

```
shutdown
```

Parameters

None

Example

```
nx9500-6C8809(config-database-policy-test)#shutdown

nx9500-6C8809(config-database-policy-test)#show context
database-policy test
 shutdown
nx9500-6C8809(config-database-policy-test)#
```

Related Commands

no	Enables the database server

4.1.34.2.58 no

database-policy-mode commands

Removes or reverts the database policy settings to default values

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000, NX7500, NX5500

Syntax

```
no [authentication|replica-set|shutdown]

no authentication {username <USER-NAME>}

no replica-set member [<IP>|<FQDN>]

no shutdown
```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Removes a member from the database replica set, or brings up a database server that is down. Also disables database authentication and removes user

Example

The following example shows a three-member replica set:

```
nx9500-6C8809(config-database-policy-test)#show context
database-policy test
 replica-set member 192.168.13.12 priority 2
 replica-set member 192.168.13.14 arbiter
 replica-set member 192.168.13.16 priority 1
nx9500-6C8809(config-database-policy-test)#
```

In the following example the arbiter is being removed, leaving the replica set with only two members:

```
nx9500-6C8809(config-database-policy-test)#no replica-set member 192.168.13.14

nx9500-6C8809(config-database-policy-test)#show context
database-policy test
 replica-set member 192.168.13.12 priority 2
 replica-set member 192.168.13.16 priority 1
nx9500-6C8809(config-database-policy-test)#
```

Since a replica set must have at least three members, another member must be added to this replica set. This member may or may not be an arbiter.

```
nx9500-6C8809(config-database-policy-test)#replica-set member 192.168.13.8
priority 3

nx9500-6C8809(config-database-policy-test)#show context
database-policy test
 replica-set member 192.168.13.12 priority 2
 replica-set member 192.168.13.16 priority 1
 replica-set member 192.168.13.8 priority 3
nx9500-6C8809(config-database-policy-test)#
```

4.1.35 device

Global Configuration Commands

Enables simultaneous configuration of multiple devices

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
device {containing|filter}

device {containing <STRING>} {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|
ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|ex3524|ex3548|rfs4000|
rfs6000|nx5500|nx75xx|nx9000|nx9600|t5|vx9000]}

device {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|
ap7562|ap81xx|ap82xx|ap8432|ap8533|ex3524|ex3548|rfs4000|rfs6000|nx5500|nx75xx|
nx9000|nx9600|t5|vx9000]}
```

Parameters

- `device {containing <STRING>} {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|ex3524|ex3548|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|t5|vx9000]}`

device	Enters a device's configuration mode. Use this command to simultaneously configure devices having similar configuration.
containing <STRING>	Optional. Configures the string to search for in the device's hostname. All devices having hostnames containing the string specified here are filtered, and can be configured simultaneously. • <STRING> – Specify the string to search for in the device's hostname.
filter type <DEVICE-TYPE>	Optional. Filters out a specific device type. After specifying the hostname string, select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, EX3524, EX3548, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, t5, and VX9000 (V-WLC). The t5 option is applicable only on the NX7500, NX7510, NX7520, NX7530, NX95XX, NX9500, NX9510, and NX9600 platforms. The VX9000 option is applicable only to the NX9500, NX9510, and NX9600 platforms.

- `device {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|ex3524|ex3548|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|t5|vx9000]}`

device	Configures a basic device profile

filter type <DEVICE-TYPE>	Optional. Filters out a specific device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, EX3524, EX3548, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, t5, and VX9000 (V-WLC). The t5 option is applicable only on the NX7500, NX7510, NX7520, NX7530, NX95XX, NX9500, NX9510, and NX9600 platforms. The VX9000 option is applicable only to the NX9500, NX9510, and NX9600 platforms.

Example

```
rfs6000-81742D(config)#device filter type ap7532
rfs6000-81742D(config-device-{'type': 'ap7532'})#
```

Related Commands

no	Removes multiple devices from the network

4.1.36 device-categorization

Global Configuration Commands

Categorizes devices as sanctioned or neighboring. Categorization of devices enables quick identification and blocking of unsanctioned devices in the network.

The following table summarizes the device categorization mode commands:

Table 4.18 *Device-Categorization Config Command*

Command	Description	Reference
device-categorization	Creates a device categorization list and enters its configuration mode	*page 4-185*
device-categorization-mode commands	Summarizes device categorization list configuration mode commands	*page 4-186*

4.1.36.1 device-categorization

device-categorization

Configures a device categorization list

Proper classification and categorization of devices (access points, clients, etc.) helps suppress unnecessary unauthorized access point alarms, allowing network administrators to focus on alarms on devices actually behaving in a suspicious manner. An intruder with a device erroneously authorized could potentially perform activities that harm your organization.

Authorized access points and clients are generally known to you and conform with your organization's security policies. Unauthorized devices are those detected as interoperating within the network, but are not approved. These devices should be filtered to avoid jeopardizing the data within a managed network. Use this command to apply the neighboring and sanctioned (approved) filters on peer devices operating within a wireless controller or access point's radio coverage area. Detected client MAC addresses can also be filtered based on their classification.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
device-categorization <DEVICE-CATEGORIZATION-LIST-NAME>
```

Parameters

- `device-categorization <DEVICE-CATEGORIZATION-LIST-NAME>`

<DEVICE-CATEGORIZATION-LIST-NAME>	Specify the device categorization list name. If a list with the same name does not exist, it is created.

Example

```
rfs6000-81742D(config)#device-categorization rfs6000
rfs6000-81742D(config-device-categorization-rfs6000)#?
Device Category Mode commands:
  mark-device  Add a device
  no           Negate a command or set its defaults

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

rfs6000-81742D(config-device-categorization-rfs6000)#
```

Related Commands

no	Removes an existing device categorization list

4.1.36.2 device-categorization-mode commands

device-categorization

The following table summarizes device categorization configuration mode commands:

Table 4.19 *Device-Categorization-Mode Commands*

Command	Description	Reference
mark-device	Adds a device to the device categorization list	*page 4-187*
no	Removes a device from the device categorization list	*page 4-189*

4.1.36.2.59 mark-device

device-categorization-mode commands

Adds a device to the device categorization list as sanctioned or neighboring. Devices are further classified as AP or client.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mark-device <1-1000> [sanctioned|neighboring] [ap|client]

mark-device <1-1000> [sanctioned|neighboring] ap {mac <MAC>|ssid <SSID> {mac <MAC>}}

mark-device <1-1000> [sanctioned|neighboring] client {mac <MAC>}
```

Parameters

- `mark-device <1-1000> [sanctioned|neighboring] ap {mac <MAC>|ssid <SSID> {mac <MAC>}}`

<1-1000>	Configures the device categorization entry index number
sanctioned	Marks a device as sanctioned. A sanctioned device is authorized to use network resources.
neighboring	Marks a device as neighboring. A neighboring device is a neighbor in the same network as this device.
ap {mac <MAC>| ssid <SSID>}	Marks a specified AP as sanctioned or neighboring based on its MAC address or SSID • mac <MAC> – Optional. Specify the AP's MAC address • ssid <SSID> – Optional. Specify the AP's SSID. After specifying the SSID, you can optionally specify its MAC SSID. **Note:** All APs are marked if no specific MAC address or SSID is provided.

- `mark-device [sanctioned|neighboring] client {mac <MAC>}`

<1-1000>	Configures the device categorization entry index number
sanctioned	Marks the wireless client as sanctioned. A sanctioned device is authorized to use network resources.
neighboring	Marks the wireless client as neighboring. A neighboring device is a neighbor in the same network as this device.
client {mac <MAC>}	Marks a specified wireless client as sanctioned or neighboring based on its MAC address • mac <MAC> – Optional. Specify the wireless client's MAC address.

Example

```
rfs6000-81742D(config-device-categorization-rfs6000)#mark-device 1 sanctioned ap
 mac 11-22-33-44-55-66

rfs6000-81742D(config-device-categorization-rfs6000)#show context
device-categorization rfs6000
 mark-device 1 sanctioned ap mac 11-22-33-44-55-66
rfs6000-81742D(config-device-categorization-rfs6000)#
```

Related Commands

no	Removes an entry from the device categorization list

4.1.36.2.60 no

device-categorization-mode commands

Removes a device from the device categorization list

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no mark-device <1-1000> [neighboring|sanctioned] [ap|client]
no mark-device <1-1000> [sanctioned|neighboring] client {mac <MAC>}
no mark-device <1-1000> [sanctioned|neighboring] ap {mac <MAC>|ssid <SSID> {mac <MAC>}}
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes a mark device (AP or wireless client) entry from this device categorization list

Example

The following example shows the device categorization list ‘rfs6000’ settings before the ‘no’ command is executed:

```
rfs6000-81742D(config-device-categorization-rfs6000)#show context
device-categorization rfs6000
 mark-device 1 sanctioned ap mac 11-22-33-44-55-66
rfs6000-81742D(config-device-categorization-rfs6000)#

rfs6000-81742D(config-device-categorization-rfs6000)#no mark-device 1 sanctioned
ap mac 11-22-33-44-55-66
```

The following example shows the device categorization list ‘rfs6000’ settings after the ‘no’ command is executed:

```
rfs6000-81742D(config-device-categorization-rfs6000)#show context
device-categorization rfs6000
rfs6000-81742D(config-device-categorization-rfs6000)#
```

Related Commands

mark-device	Adds a device to a list of sanctioned or neighboring devices

4.1.37 dhcp-server-policy

Global Configuration Commands

Configures DHCPv4 server policy parameters, such as class, address range, and options. A new policy is created if it does not exist.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dhcp-server-policy <DHCP-SERVER-POLICY-NAME>
```

Parameters

- `dhcp-server-policy <DHCP-SERVER-POLICY-NAME>`

<DHCP-SERVER-POLICY-NAME>	Specify the DHCPv4 server policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#dhcp-server-policy test
rfs6000-81742D(config-dhcp-policy-test)#?
DHCP policy Mode commands:
  bootp         BOOTP specific configuration
  dhcp-class    Configure DHCP class (for address allocation using DHCP
                user-class options)
  dhcp-pool     Configure DHCP server address pool
  dhcp-server   Activating dhcp server based on criteria
  no            Negate a command or set its defaults
  option        Define DHCP server option
  ping          Specify ping parameters used by DHCP Server

  clrscr        Clears the display screen
  commit        Commit all changes made in this session
  do            Run commands from Exec mode
  end           End current mode and change to EXEC mode
  exit          End current mode and down to previous mode
  help          Description of the interactive help system
  revert        Revert changes
  service       Service Commands
  show          Show running system information
  write         Write running configuration to memory or terminal

rfs6000-81742D(config-dhcp-policy-test)#
```

Related Commands

no	Removes an existing DHCP server policy

NOTE: For more information on DHCP policy, see *Chapter 12, DHCP-SERVER-POLICY*.

4.1.38 dhcpv6-server-policy

Global Configuration Commands

Creates a DHCPv6 server policy and enters its configuration mode

DHCPv6 is a networking protocol for configuring IPv6 hosts with IP addresses, IP prefixes, or other configuration attributes required on an IPv6 network.

DHCPv6 servers pass IPv6 network addresses to IPv6 clients. The DHCPv6 address assignment feature manages non-duplicate addresses in the correct prefix based on the network where the host is connected. Assigned addresses can be from one or multiple pools. Additional options, such as the default domain and DNS name-server address, can be passed back to the client. Address pools can be assigned for use on a specific interface or on multiple interfaces, or the server can automatically find the appropriate pool.

When configured and applied to a device, the DHCPv6 server policy enables the device to function as a stateless DHCPv6 server.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dhcpv6-server-policy <DHCPv6-SERVER-POLICY-NAME>
```

Parameters

- `dhcpv6-server-policy <DHCPv6-SERVER-POLICY-NAME>`

<DHCPv6-SERVER-POLICY-NAME>	Specify the DHCPv6 server policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config-dhcpv6-server-policy-test)#?
DHCPv6 server policy Mode commands:
  dhcpv6-pool              Configure DHCPV6 server address pool
  no                       Negate a command or set its defaults
  option                   Define DHCPv6 server option
  restrict-vendor-options  Restrict vendor specific options to be sent in
                           server reply
  server-preference        Server preference value sent in the reply, by the
                           server to client

  clrscr                   Clears the display screen
  commit                   Commit all changes made in this session
  do                       Run commands from Exec mode
  end                      End current mode and change to EXEC mode
  exit                     End current mode and down to previous mode
  help                     Description of the interactive help system
  revert                   Revert changes
  service                  Service Commands
  show                     Show running system information
  write                    Write running configuration to memory or terminal

rfs6000-81742D(config-dhcpv6-server-policy-test)#
```

Related Commands

no	Removes an existing DHCPv6 server policy

NOTE: For more information on DHCP policy, see *Chapter 12, DHCP-SERVER-POLICY*.

4.1.39 dns-whitelist

Global Configuration Commands

Configures a DNS whitelist. A DNS whitelist is a list of domains allowed access to the network.

The following table lists DNS Whitelist configuration mode commands:

Table 4.20 *DNS-Whitelist Config Commands*

Command	Description	Reference
dns-whitelist	Creates a DNS whitelist and enters its configuration mode	*page 4-194*
dns-whitelist-mode commands	Summarizes DNS whitelist configuration mode commands	*page 4-195*

4.1.39.1 dns-whitelist

dns-whitelist

Configures a DNS whitelist. A DNS whitelist is a list of allowed DNS destination IP addresses pre-approved to access a controller, service platform, or access point managed captive portal.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dns-whitelist <DNS-WHITELIST-NAME>
```

Parameters

- `dns-whitelist <DNS-WHITELIST-NAME>`

<DNS-WHITELIST-NAME>	Specify the DNS whitelist name. If the whitelist does not exist, it is created.

Example

```
rfs6000-81742D(config)#dns-whitelist test
rfs6000-81742D(config-dns-whitelist-test)#?
DNS Whitelist Mode commands:
  no       Negate a command or set its defaults
  permit   Match a host

  clrscr   Clears the display screen
  commit   Commit all changes made in this session
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  revert   Revert changes
  service  Service Commands
  show     Show running system information
  write    Write running configuration to memory or terminal

rfs6000-81742D(config-dns-whitelist-test)#
```

Related Commands

no	Removes an existing DNS Whitelist

4.1.39.2 dns-whitelist-mode commands

dns-whitelist

The following table summarizes DNS Whitelist configuration mode commands:

Table 4.21 *DNS-Whitelist-Mode Commands*

Command	Description	Reference
permit	Permits a host, existing on a DNS whitelist, access to the network or captive portal	*page 4-196*
no	Negates a command or reverts to default	*page 4-197*

4.1.39.2.61 permit

dns-whitelist-mode commands

A whitelist is a list of host names and IP addresses permitted access to the network or captive portal. This command adds a host or destination IP address to the DNS whitelist.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
permit <IPv4/IPv6/HOSTNAME> {suffix}
```

Parameters

- `permit <IPv4/IPv6/HOSTNAME> {suffix}`

<IPv4/IPv6/ HOSTNAME>	Adds a device to the DNS whitelist • <IPv4/IPv6/HOSTNAME> – Provide a hostname or numerical IPv4 or IPv6 address for each destination IP address or host included in the whitelist. A maximum of 256 entries can be made.
suffix	Optional. Matches any hostname or domain name including the specified name as suffix

Example

```
rfs6000-81742D(config-dns-whitelist-test)#permit example_company.com suffix

rfs6000-81742D(config-dns-whitelist-test)#show context
dns-whitelist test
permit example_company.com suffix
rfs6000-81742D(config-dns-whitelist-test)#
```

Related Commands

no	Removes a DNS whitelist entry

4.1.39.2.62 no

dns-whitelist-mode commands

Removes a specified host or IP address from the DNS whitelist, and prevents it from accessing network resources

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no permit <IPv4/IPv6/HOSTNAME>
```

Parameters

- `no permit <IPv4/IPv6/HOSTNAME>`

<IPv4/IPv6/ HOSTNAME>	Removes a device from the DNS whitelist (identifies the device by its IP address or hostname) • <IPv4/IPv6/HOSTNAME> – Specify the device's IPv4/IPv6 address or hostname.

Example

```
rfs6000-81742D(config-dns-whitelist-test)#show context
dns-whitelist test
permit example_company.com suffix
rfs6000-81742D(config-dns-whitelist-test)#

rfs6000-81742D(config-dns-whitelist-test)#no permit example_company.com

rfs6000-81742D(config-dns-whitelist-test)#show context
dns-whitelist test
rfs6000-81742D(config-dns-whitelist-test)#
```

Related Commands

permit	Adds a device to the DNS whitelist

4.1.40 end

Global Configuration Commands

Ends and exits the current mode and moves to the PRIV EXEC mode

The prompt changes to the PRIV EXEC mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
end
```

Parameters

None

Example

```
rfs4000-229D58(config)#end
rfs4000-229D58#
```

4.1.41 event-system-policy

Global Configuration Commands

The following table lists event system configuration mode commands:

Table 4.22 *Event-System-Policy Config Command*

Command	Description	Reference
event-system-policy	Creates an event system policy and enters its configuration mode	*page 4-200*
event-system-policy-mode commands	Summarizes event system policy configuration mode commands	*page 4-201*

4.1.41.1 event-system-policy

event-system-policy

Configures a system wide events handling policy

Event system policies enable administrators to create notification mechanisms using one, some, or all of the SNMP, syslog, controller forwarding, or email notification options available to the controller or service platform. Each listed event can have customized notification settings defined and saved as part of an event policy. Thus, policies can be configured and administrated in respect to specific sets of client association, authentication or encryption, and performance events. Once policies are defined, they can be mapped to device profiles strategically as the likelihood of an event applies to particular devices.

To view an existing event system policy configuration details, use the *show > event-system-policy* command.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
event-system-policy <EVENT-SYSTEM-POLICY-NAME>
```

Parameters

- `event-system-policy <EVENT-SYSTEM-POLICY-NAME>`

<EVENT-SYSTEM-POLICY-NAME>	Specify the event system policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81701D(config)#event-system-policy event-testpolicy
rfs6000-81701D(config-event-system-policy-event-testpolicy)#?
Event System Policy Mode commands:
  event    Configure an event
  no       Negate a command or set its defaults

  clrscr   Clears the display screen
  commit   Commit all changes made in this session
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  revert   Revert changes
  service  Service Commands
  show     Show running system information
  write    Write running configuration to memory or terminal

rfs6000-81701D(config-event-system-policy-event-testpolicy)#
```

Related Commands

no	Removes an event system policy

4.1.41.2 event-system-policy-mode commands

event-system-policy

The following table summarizes event system policy configuration mode commands:

Table 4.23 *Event-System-Policy Mode Commands*

Command	Description	Reference
event	Configures an event	*page 4-202*
no	Negates a command or reverts to default	*page 4-214*

4.1.41.2.63 event

event-system-policy-mode commands

Configures an event and sets the action performed when the event happens

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
event <EVENT-TYPE> <EVENT-NAME> (email,forward-to-switch,snmp,syslog)
[default|on|off]
The event types are:

rfs6000-81742D(config-event-system-policy-testpolicy)#event ?

rfs6000-81742D(config-event-system-policy-testpolicy)#
```

NOTE: The parameter values for <EVENT-TYPE> and <EVENT-NAME> are summarized in the table under the Parameters section.

Parameters

```
• event <EVENT-TYPE> <EVENT-NAME> (email,forward-to-switch,snmp,syslog)
[default|on|off]
```

<event-type>	<event-name>
aaa	Enables and configures the logging of authentication, authorization, and accounting related event messages • radius-discon-msg – RADIUS disconnection message • radius-session-expired – RADIUS session expired message • radius-session-not-started – RADIUS session not started message • radius-vlan-update – RADIUS VLAN update message
adapt	Enables and configures the logging of adaptivity module related events • adaptivity-change – Event adaptivity change message • adaptivity-rehome – Event adaptivity rehome message
adopt-services	Enables and configures the logging of adopted services related events
adv-wips	Enables and configures the logging of advanced WIPS related events
ap	Enables and configures the logging of AP related event messages • adopted – Event AP adopted message • adopted-to-controller – Event AP adopted to wireless controller message • ap-adopted – Event access port adopted message • ap-autoup-done – Event AP autoup done message • ap-autoup-fail – Event AP autoup fail message • ap-autoup-needed – Event AP autoup needed message • ap-autoup-no-need – Event AP autoup not needed message • ap-autoup-reboot – Event AP autoup reboot message • ap-autoup-timeout – Event AP autoup timeout message • ap-autoup-ver – Event AP autoup version message • ap-reset-detected – Event access port reset detected message • ap-reset-request – Event access port user requested reset message • ap-timeout – Event access port timed out message • ap-unadopted – Event access port unadopted message • image-parse-failure – Event image parse failure message • legacy-auto-update – Event legacy auto update message • no-image-file – Event no image file message • offline – Event AP detected as offline • online – Event offline AP detected as online • reset – Event reset message • sw-conn-lost – Event software connection lost message • unadopted – Event unadopted message

<event-type>	<event-name>
bt	Enables and configures the logging of bluetooth related event messages • bt-started – Event *bluetooth* (bt) started • bt-state-change – Event bt state change
captive-portal	Enables and configures the logging of captive portal (hotspot) related event messages • allow-access – Event client allowed access message • auth-failed – Event authentication failed message • auth-success – Event authentication success message • client-disconnect – Event client disconnected message • client-removed – Event client removed message • data-limit-exceed – Event client data limit exceed message • flex-log-access – Event flexible log access granted to client message • inactivity-timeout – Event client time-out due to inactivity message • page-cre-failed – Event page creation failure message • purge-client – Event client purged message • session-timeout – Event session timeout message • vlan-switch – Event client switched VLAN
cdp	Enables and configures the logging of *CISCO Discovery Protocol* (cdp) related event messages • duplex-mismatch – Event duplex mismatch detected between CDP neighbors message
certmgr	Enables and configures the logging of certificate manager related event messages (Not applicable to AP6511 and AP6521) • ca-cert-actions-failure – Event CA certificate actions failure message • ca-cert-actions-success – Event CA certificate actions success message • ca-key-actions-failure – Event CA key actions failure message • ca-key-actions-success – Event CA key actions success message • cert-expiry – Event certificate expiry message • crl-actions-failure – Event *Certificate Revocation List* (CRL) actions failure message • crl-actions-success – Event CRL actions success message • csr-export-failure – Event CSR export failure message • csr-export-success – Event CSR export success message • delete-trustpoint-action – Event delete trustpoint action message • export-trustpoint – Event export trustpoint message • import-trustpoint – Event import trustpoint message • rsa-key-actions-failure – Event RSA key actions failure message • rsa-key-actions-success – Event RSA key actions success message • svr-cert-actions-success – Event server certificate actions success message • svr-cert-actions-failure – Event server certificate actions failure message
certmgr-lite	Enables and configures logging of certificate manager (lite version) related event messages (applicable only to AP6521 and AP6511)

<event-type>	<event-name>
cfgd	Enables and configures the logging of configuration daemon module related event messages • acl-attached-altered – Event *Access List* (ACL) attached altered message • acl-rule-altered – Event ACL rule altered message
cluster	Enables and configures logging of cluster module related event messages • cmaster-cfg-update-fail – Event cluster master config update failed message • max-exceeded – Event maximum cluster count exceeded message • state-change – Event cluster state change (active/inactive) • state-change-active – Event cluster state change to active • state-change-inactive – Event cluster state change to inactive • state-retain-active – Event cluster state retained as active
crm	Enables and configures the logging of *Critical Resource Monitoring* (CRM) related event messages • critical-resource-down – Event Critical Resource Down message • critical-resource-up – Event Critical Resource Up message
device	Enables and configures the logging of device module related event messages
database	Enables and configures the logging of error conditions in the captive-portal/NSIght database • database-election-fail – Event primary database node selection failure message. Requires manual intervention to select primary database node. • database-exception – Event database may need to be dropped and device restarted message • database-low-disk-space – Event database low disk space restarted message • Database-new-state – Event database state change message • database-op-failure – Event database failure message • database-set-name-mismatch – Event replica-set not enabled on host message • database-storage-mismatch – Event database mismatch message. All database files must be removed. • operation-complete – Event database operation completed successfully message • operation-failed – Event database operation failure message
dhcpsvr	Enables and configures the logging of DHCP server related event messages • dhcp-start – Event DHCP server started message • dhcpsvr-stop – Event DHCP sever stopped message • relay-iface-no-ip – Event no IP address on DHCP relay interface message • relay-no-iface – Event no interface for DHCP relay message • relay-start – Event relay agent started • relay-stop – Event DHCP relay agent stopped

<event-type>	<event-name>
diag	Enables and configures the logging of diagnostics module related event messages • autogen-tech-sprt – Event autogen technical support message • buf-usage – Event buffer usage message • cpu-load – Event CPU load message • cpu-usage-too-high – Event CPU usage high message • cpu-usage-too-high-recover – Event recovery from high CPU usage message • disk-usage – Event disk usage message • elapsed-time – Event elapsed time message • fan-underspeed – Event fan underspeed message • fd-count – Event forward count message • free-flash-disk – Event free flash disk message • free-flash-inodes – Event free flash inodes message • free-nvram-disk – Event free nvram disk message • free-nvram-inodes – Event free nvram inodes message • free-ram – Event free ram message • free-ram-disk – Event free ram disk message • free-ram-inodes – Event free ram inodes message • head-cache-usage – Event head cache usage message • high-temp – Event high temp message • ip-dest-usage – Event ip destination usage message • led-identify – Event led identify message • low-temp – Event low temp message • mem-usage-too-high – Event memory usage high message • mem-usage-too-high-recover – Event recovery from high memory usage message • new-led-state – Event new led state message • over-temp – Event over temp message • over-voltage – Event over voltage message • poe-init-fail – Event PoE init fail message • poe-power-level – Event PoE power level message • poe-read-fail – Event PoE read fail message • poe-state-change – Event PoE state change message • poe-state-change – Event PoE state change message • pwrsply-fail – Event failure of power supply message • raid-degraded – Event *Redundant Array of Independent Disks* (RAID) degraded message • raid-error – Event RAID error message • ram-usage – Event ram usage message • under-voltage – Event under voltage message • wd-reset-sys – Event wd reset system message • wd-state-change – Event wd state change message

<event-type>	<event-name>
dot11	Enables and configures the logging of 802.11 management module related event messages • client-assoc-ignored – Wireless client association ignored event message • client-associated – Wireless client associated event message • client-denied-assoc – Event client denied association message • client-disassociated – Wireless client disassociated message • country-code – Event country code message • country-code-error – Event country code error message • eap-cached-keys – Event *Extensible Authentication Protocol* (EAP) cached keys message • eap-client-timeout – Event EAP client timeout message • eap-failed – Event EAP failed message • eap-opp-cached-keys – Event EAP opp cached keys message • eap-preauth-client-timeout – Event EAP pre authentication client timeout message • eap-preauth-failed – Event EAP pre authentication failed message • eap-preauth-server-timeout – Event EAP pre authentication server timeout message • eap-preauth-success – Event EAP pre authentication success message • eap-server-timeout – Event EAP server timeout message • eap-success – Event EAP success message • ft-roam-success – Event client fast BSS transition message • gal-rx-request – Event GAL request received event message • gal-tx-response – Event response sent to GAL request message • gal-validate-failed – Event GAL validation failed message • gal-validate-req – Event GAL validation request message • gal-validate-success – Event GAL validation success message • kerberos-client-success – Event client Kerberos authentication success message • kerberos-wlan-failed – Event WLAN Kerberos authentication failed message • kerberos-wlan-success – Event WLAN Kerberos authentication success message • kerberos-wlan-timeout – Event Kerberos authentication timed out message • move-operation-success – Event move operation success message • neighbor-denied-assoc – Event neighbor denied association message • tkip-cntrmeas-end – Event TKIP countermeasures ended message • tkip-cntrmeas-start – Event TKIP countermeasures initiated message • tkip-mic-fail-report – Event TKIP MIC failure report • tkip-mic-failure – Event TKIP MIC check failed message • voice-call-completed – Event voice call completed message • voice-call-established – Event voice call established message • voice-call-failed – Event voice call failed message • wlan-time-access-disable – Event WLAN disabled by time-based-access message • wlan-time-access-enable – Event WLAN re-enabled by time-based-access message Contd..

<event-type>	<event-name>
	• wlan-time-access-disable – Event WLAN disabled by time-based-access message • wlan-time-access-enable – Event WLAN re-enabled by time-based-access message • wpa-wpa2-failed – Event WPA-WPA2 failed message • wpa-wpa2-key-rotn – Event WPA-WPA2 key rotn message • wpa-wpa2-success – Event WPA-WPA2 success message
dot1x	Enables and configures the logging of 802.1X authentication related event messages • dot1x-failed – Event EAP authentication failure message • dot1x-success – Event dot1x-success message
fwu	Enables and configures the logging of *firmware update* (fwu) related event messages • fwuaborted – Event fwu aborted message • fwubadconfig – Event fwu aborted due to bad config message • fwucorruptedfile – Event fwu aborted due to corrupted file message • fwucouldntgetfile – Event fwu aborted because the system could not get file message • fwudone – Event fwu done message • fwufileundef – Event fwu aborted due to file undefined message • fwunoneed – Event fwu no need message • fwuprodmismatch – Event fwu aborted due to product mismatch message • fwuserverundef – Event fwu aborted due to server undefined message • fwuserverunreachable – Event fwu aborted due to server unreachable message • fwusignmismatch – Event fwu aborted due to signature mismatch message • fwusyserr – Event fwu aborted due to system error message • fwuunsupportedhw – Event fwu aborted due to unsupported hardware message • fwuunsupportedmodelnum – Event fwu aborted due to unsupported FIPS model number message • fwuvermismatch – Event fwu aborted due to version mismatch message
isdn	Enables and configures the logging of file *Integrated Service Digital Network* (ISDN) module related event messages • isdn-alert – Event ISDN alert message • isdn-crit – Event ISDN critical message • isdn-debug – Event ISDN debug message • isdn-emerg – Event ISDN emergency message • isdn-err – Event ISDN error message • isdn-info – Event ISDN info message • isdn-notice – Event ISDN notice message • isdn-warning – Event ISDN warning message
l2gre	Enables and configures the logging of Layer 2 GRE tunnel related event messages • l2gre-tunnel-down – Event L2GRE tunnel down message • l2gre-tunnel-failover – Event L2GRE tunnel failover message • l2gre-tunnel-up – Event L2GRE tunnel up message
l2tpv3	Enables and configures the logging of L2TPv3 related event messages • l2tpv3-tunnel-down – Event L2TPv3 tunnel down message • l2tpv3-tunnel-up – Event L2TPv3 tunnel up message

<event-type>	<event-name>
licmgr	Enables and configures the logging of license manager module related event messages • lic-installed-count – Event total number of license installed count message • lic-installed-default – Event default license installation message • lic-installed – Event license installed message • lic-invalid – Event license installation failed message • lic-removed – Event license removed message
lldp	Enables and configures the logging of *Link Layer Discovery Protocol* (LLDP) related event messages • lldp-loop-detected – Event layer 2 switching loop message • lldp-loop-recovery – Event recovery from layer 2 switching loop message
mgmt	Enables and configures the logging of management services module related event messages • log-http-init – Event Web server started • log-http-local-start – Event Web server started in local mode • log-http-start – Event Web server started in external mode • log-https-start – Event secure Web server started • log-https-wait – Event waiting for Web server to start • log-key-deleted – Event RSA key associated with SSH is deleted • log-key-restored – Event RSA key associated with SSH is added • log-trustpoint-deleted – Event trustpoint associated with HTTPS is deleted
mesh	Enables and configures the logging of mesh module related event messages • mesh-link-down – Event mesh link down message • mesh-link-up – Event mesh link up message • meshpoint-down – Event meshpoint down message • meshpoint-loop-prevent-off – Event meshpoint loop prevent off message • meshpoint-loop-prevent-on – Event meshpoint loop prevent on message • meshpoint-path-change – Event meshpoint-path-change message • meshpoint-root-change – Event meshpoint-root-change message • meshpoint-up – Event meshpoint up message
nsm	Enables and configures the logging of *Network Service Module* (NSM) related event messages • dhcpc-err – Event DHCP certification error message • dhcpdefrt – Event DHCP defrt message • dhcpip – Event DHCP IP message • dhcpipchg – Event DHCP IP change message • dhcpipnoadd – Event DHCP IP overlaps static IP address message • dhcplsexp – Event DHCP lease expiry message • dhcpnak – Event DHCP server returned DHCP NAK response • dhcpnodefrt – Event interface no default route message Contd..

<event-type>	<event-name>
	• if-failback – Event interface failback message • if-failover – EVENT interface failover message • ifdown – Event interface down message • ifipcfg – Event interface IP config message • ifup – Event interface up message • nsm-ntp – Event translate host name message • ntp-start – Event NTP server start message • ntp-stop – Event NTP server stop message
pm	Enables and configures the logging of process monitor module related event messages • procid – Event proc ID message • procmaxrstrt – Event proc max restart message • procnoresp – Event proc no response message • procrstrt – Event proc restart message • procstart – Event proc start message • procstop – Event proc stop message • procsysrstrt – Event proc system restart message • startupcomplete – Event startup complete message
radconf	Enables and configures the logging of RADIUS configuration daemon related event messages • could-not-stop-radius – Event could not stop RADIUS server message • radiusdstart – Event RADIUS server started message • radiusdstop – Event RADIUS server stopped message
radio	Enables and configures the logging of radio module related event messages • acs-scan-complete – Event ACS scan completed • acs-scan-started – Event ACS scan started • channel-country-mismatch – Event channel and country of operation mismatch message • radar-det-info – Detected radar info message • radar-detected – Event radar detected message • radar-scan-completed – Event radar scan completed message • radar-scan-started – Event radar scan started message • radio-antenna-error – Event invalid antenna type on this radio message • radio-antenna-setting – Event antenna type setting on this radio message • radio-state-change – Event radio state change message • resume-home-channel – Event resume home channel message
rasst	Enables and configures the logging of roaming assist module related event message

<event-type>	<event-name>
smrt	Enables and configures the logging of SMART RF module related event messages • calibration-done – Event calibration done message • calibration-started – Event calibration started message • channel-change – Event channel change message • config-cleared – Configuration cleared event message • cov-hole-recovery – Event coverage hole recovery message • cov-hole-recovery-done – Event coverage hole recovery done message • interference-recovery – Event interference recovery message • neighbor-recovery – Event neighbor recovery message • power-adjustment – Event power adjustment message • root-recovery – Event meshpoint root recovery message
smtpnot	Enables and configures the logging of SMTP module related event messages • cfg – Event cfg message • cfginc – Event cfg inc message • net – Event net message • proto – Event proto message • smtpauth – Event SMTP authentication message • smtperr – Event SMTP error message • smtpinfo – Event SMTP information message
system	Enables and configures the logging of system module related event messages • clock-reset – Event clock reset message • cold-start – Event cold start message • config-commit – Event configuration commit message • config-revision – Event config-revision done message • devup-rfd-fail – Event device-upgrade failed on rf-domain manager managed devices message • guest-user-exp – Event guest user purging message • http-err – Event Web server did not start message • login – Event successful login message • login-fail – Event login fail message. Occurs when user authentication fails. • login-fail-access – Event login fail access message. Occurs in case of access violation. • login-fail-bad-role – Event login fail bad role message. Occurs when user uses an invalid role to logon. • login-lockout – Event user account locked out message. Occurs when a user account is locked due to exceeding of maximum number failed login attempts threshold. Enable this event notification only if the *max-fail* and *lockout-time* parameters have been configured in the management-policy context. For more information, see *passwd-entry*. • login-unlocked – Event user account un-locked message. Occurs when a locked user account is re-activated. Enable this event notification only if the *max-fail* and *lockout-time* parameters have been configured in the management-policy context. For more information, see *passwd-entry*. Contd..

<event-type>	<event-name>
system	• logout – Event logout message • maat-light – Event action on *Research in Motion* (RIM) radio(s) from the Maat light module • panic – Event panic message • periodic-heart-beat – Event periodic heart beat message • procstop – Event proc stop message • server-unreachable – Event server-unreachable message • system-autoup-disable – Event system autoup disable message • system-autoup-enable – Event system autoup enable message • t5-config-error – Event t5-config-error message • ui-user-auth-fail – Event user authentication fail message • ui-user-auth-success – Event user authentication success message • warm-start – Event warm start message • warm-start-recover – Event recovery from warm start message
test	Enables and configures the logging of the test module related event messages • testalert – Event test alert message • testargs – Event test arguments message • testcrit – Event test critical message • testdebug – Event test debug message • testemerg – Event test emergency message • testerr – Event test error message • testinfo – Event test information message • testnotice – Event test notice message • testwarn – Event test warning message
vrrp	Enables and configures the logging of *Virtual Router Redundancy Protocol* (VRRP) related event messages • vrrp-monitor-change – Event VRRP monitor link state change message • vrrp-state-change – Event VRRP state transition message • vrrp-vip-subnet-mismatch – Event VRRP IP not overlapping with an interface addresses message
webf	Enables and configures the logging of the *Web Filtering* (webf) module related events • malform-url-request – Event malformed URL request message • no-parent-engine – Event 'no session to URL classification server' message • srvr-connect-fail – Event URL classification server unreachable message • url-blocked – Event URL blocked message • webf-lic-acquired – Event webf license acquired message • webf-lic-missing – Event webf license missing message • webf-lic-revoked – Event webf license revoked message

<event-type>	<event-name>
wips	Enables and configures the logging of the Wireless IPS module related event messages • air-termination-active – Event air termination active message • air-termination-ended – Event air termination ended message • air-termination-inactive – Event air termination inactive message • air-termination-initiated – Event air termination initiated message • rogue-ap-active – Event rogue AP active message • rogue-ap-inactive – Event rogue AP inactive message • unsanctioned-ap-active – Event unsanctioned AP active message • unsanctioned-ap-inactive – Event unsanctioned AP inactive message • unsanctioned-ap-status-change – Event unsanctioned AP changed state message • wips-client-blacklisted – Event WIPS client blacklisted message • wips-client-rem-blacklist – Event WIPS client rem blacklist message • wips-event – Event WIPS event triggered message
email	Sends e-mail notifications to a pre configured e-mail ID
forward-to-switch	Forwards the messages to an external server
snmp	Logs an SNMP event
syslog	Logs an event to syslog
default	Performs the default action for the event
off	Switches the event off, when the event happens, and no action is performed
on	Switches the event on, when the event happens, and the configured action is taken

Example

```
rfs4000-229D58(config-event-system-policy-event-testpolicy)#event aaa radius-
discon-msg email on forward-to-switch default snmp default syslog default
rfs4000-229D58(config-event-system-policy-event-testpolicy)#

rfs4000-229D58(config-event-system-policy-testpolicy)#show context
event-system-policy test
 event aaa radius-discon-msg email on
rfs4000-229D58(config-event-system-policy-testpolicy)#

nx9500-6C8809(config-event-system-policy-test)#event database database-exception
 syslog default snmp default forward-to-switch default email default

nx9500-6C8809(config-event-system-policy-test)#event database operation-failed
syslog default snmp default forward-to-switch default email default

nx9500-6C8809(config-event-system-policy-test)#show context include-factory |
grep operation-failed
 event database operation-failed syslog default snmp default forward-to-switch
default email default
nx9500-6C8809(config-event-system-policy-test)#
```

Related Commands

no	Resets or disables event monitoring

4.1.41.2.64 no

event-system-policy-mode commands

Negates an event monitoring configuration

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no event <EVENT-TYPE> <EVENT-NAME> [email|forward-to-switch|snmp|syslog]
[default|on|off]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes event monitoring and message forwarding activity based on the parameters passed **Note:** The system stops network monitoring for the occurrence of the specified event and no notification is sent if the event occurs.

Example

```
rfs4000-229D58(config-event-system-policy-TestPolicy)#event ap adopted syslog
default

rfs4000-229D58(config-event-system-policy-TestPolicy)#no event ap adopted syslog
```

Related Commands

event	Configures the action taken for each event

GLOBAL CONFIGURATION COMMANDS

The following table lists EX3500 time-range configuration mode commands. It also provides links to other EX3500 related configuration modes:

Table 4.24 *EX3500-Time-Range-List Config Command*

Command	Description	Reference
ex3500	Creates an EX3500 time range list and enters its configuration mode	*page 4-216*
ex3500-time-range-config-mode commands	Summarizes EX3500 time range list configuration mode commands	*page 4-217*
ex3500-management-policy	Creates an EX3500 management policy and enters its configuration mode	*page 4-222*
ex3500-qos-class-map-policy	Creates an EX3500 QoS class map policy and enters its configuration mode	*page 4-243*
ex3500-qos-policy-map	Creates an EX3500 QoS policy map and enters its configuration mode	*page 4-251*
ex3524	Adds a EX3524 switch to the network	*page 4-266*
ex3548	Adds a EX3548 switch to the network	*page 4-268*

4.1.42.1 ex3500

ex3500

Creates an EX3500 time range list and enters its configuration mode

An EX3500 time range list consists of a set of periodic and absolute time range rules. Periodic time ranges recur periodically at specified time periods, such as daily, weekly, weekends, weekdays, and on specific week days, for example on every successive Mondays. Absolute time ranges are not periodic and do not recur. They consist of a range of days during a particular time period (the starting and ending days and time are fixed).

The EX3500 series switch is a Gigabit Ethernet layer 2 switch with either 24 or 48 10/100/1000-BASE-T ports, and four *Small Form Factor Pluggable* (SFP) transceiver slots for fiber connectivity. The EX3500 series switch can adopt to a WiNG NOC controller and be managed by it. The EX3500 time range values configured here are used in EX3500 MAC ACL firewall rules that filter an EX3500's incoming and outgoing traffic. For more information on creating EX3500 MAC ACL rules, see *ex3500* and *access-group*.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ex3500 time-range <TIME-RANGE-NAME>
```

Parameters

- `ex3500 time-range <TIME-RANGE-NAME>`

ex3500 time-range <TIME-RANGE-NAME>	Configures EX3500 time range list and enters its configuration mode • <TIME-RANGE-NAME> – Enter a name for this EX3500 time range. If the time range does not exist, it is created.

Example

```
nx9500-6C8809(config)#ex3500 time-range EX3500_TimeRange_02
nx9500-6C8809(config-ex3500-time-range-EX3500_TimeRange_02)#?
EX3500 Time Range Configuration commands:
  absolute  Absolute time and date
  no        Negate a command or set its defaults
  periodic  Periodic time and date

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

nx9500-6C8809(config-ex3500-time-range-EX3500_TimeRange_02)#
```

Related Commands

no	Removes this EX3500 time range list

ex3500

The following table summarizes EX3500 time-range configuration mode commands:

Table 4.25 *EX3500-Time-Range-Mode Commands*

Command	Description	Reference
absolute	Configures an absolute time range rule for this EX3500 time range list	*page 4-218*
periodic	Configures a periodic time range rule for this EX3500 time range list	*page 4-219*
no	Removes this EX3500 time range list settings	*page 4-221*

4.1.42.2.65 absolute

ex3500-time-range-config-mode commands

Configures an absolute time range rule for this EX3500 time range list

Absolute time ranges are not periodic and do not recur. They consist of a range of days during a particular time period.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
absolute start <0-23> <0-59> <1-31> <MONTH> <2013-2037> {end <0-23> <0-59> <1-31> <MONTH> <2013-2037>}
```

Parameters

- `absolute start <0-23> <0-59> <1-31> <MONTH> <2013-2037> {end <0-23> <0-59> <1-31> <MONTH> <2013-2037>}`

absolute	Configures an absolute time range rule settings
start <0-23> <0-59> <1-31> <MONTH> <2013-2037>	Configures the start day and time settings • <0-23> – Specify the start time from 0 - 23 hours. • <0-59> – Specify the start time from 0 - 59 minutes. **Note:** For example, if the values provided are 12 hours and 30 minutes, the start time is 12:30 A.M on the specified day. • <1-31> – Specify the day of month from 1 - 31 when the time range starts. • <MONTH> – Specify the month. The options are: April, August, December, February, January, July, June, March, May, November, October, September. • <2013-2037> – Specify the year from 2013 - 2037.
end <0-23> <0-59> <1-31> <MONTH> <2013-2037>	Optional. Configures the end day and time settings • <0-23> – Specify the end time from 0 - 23 hours. • <0-59> – Specify the end time from 0 - 59 minutes. • <1-31> – Specify the day of month from 1 - 31 when the time range ends. • <MONTH> – Specify the month. The options are: April, August, December, February, January, July, June, March, May, November, October, September. • <2013-2037> – Specify the year from 2013 - 2037.

Example

```
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#absolute start 1 0 1
 june 2017 end 1 0 30 june 2018

nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
 absolute start 1 0 1 june 2017 end 1 0 30 june 2018
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#
```

Related Commands

no	Removes this absolute time range rule from the EX3500 time range list

4.1.42.2.66 periodic

ex3500-time-range-config-mode commands

Configures a periodic time range rule for this EX3500 time range list

Periodic time ranges are configured to recur based on periodicity such as daily, weekly, weekends, weekdays, and on specific week days, such as on every successive Sunday.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|
weekdays|weekend] <0-23> <0-59> to [<023> <0-59>|daily|friday|monday|saturday|
sunday|thursday|tuesday|wednesday|weekdays|weekend] <0-23> <0-59> rule-precedence
<1-7>
```

Parameters

```
• periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|
weekdays|weekend] <0-23> <0-59> to [<023> <0-59>|daily|friday|monday|saturday|
sunday|thursday|tuesday|wednesday|weekdays|weekend] <0-23> <0-59> rule-precedence
<1-7>
```

periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|weekdays|weekend]	Configures this periodic time range's start day. The options are: • daily • Friday • Monday • Saturday • Sunday • Thursday • Tuesday • Wednesday • weekdays • weekend
<0-23> <0-59>	After specifying the start day, specify the start time in hours (24 hours format) and minutes • <0-23> – Specify the start time from 0 - 23 hours. • <0-59> – Specify the start time from 0 - 59 minutes. For example, if the values provided are 12 hours and 30 minutes, the start time is 12:30 A.M on the specified day.
to [<023> <0-59>|daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|weekdays|weekend]	Configures this periodic time range's end day. This is the day when the time range ends. The options available changes depending on the *start day* configured. The options are: • <0-23> <0-59> – Select this option to end the time range on the same day as it starts. Specify the end hour from 0 - 23 hours and the minutes from 0 - 59 minutes. • daily – Select this option if the time range starts and ends every day at a specified time • friday – Select this option if the time range ends on Fridays Contd..

	• monday – Select this option if the time range ends on Mondays • saturday – Select this option if the time range ends on Saturdays • sunday – Select this option if the time range ends on Sundays • thursday – Select this option if the time range ends on Thursdays • tuesday – Select this option if the time range ends on Tuesdays • wednesday – Select this option if the time range ends on Wednesdays • weekdays – Select this option if the time range ends on Weekdays • weekend – Select this option if the time range ends on Weekends **Note:** If the time range does not end on the same day, select the end day, and then specify the end time, or else just specify the end time.
<0-23> <0-59>	After specifying the end day, specify the end time in hours (in 24 hours format) and minutes • <0-23> – Specify the end time from 0 - 23 hours. • <0-59> – Specify the end minute from 0 - 59 minutes. **Note:** In case of time ranges starting and ending on the same day, ensure that the end time (hours and minutes) is not lower than the specified start time.
rule-precedence <1-7>	Configures a precedence value for this periodic time range rule. Rules with lower precedence have higher priority and are applied first. • <1-7> – Specify a precedence value from 1 - 7.

Example

```
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#periodic daily 1 10
to daily 23 10 rule-precedence 1

nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
 periodic daily 1 10 to daily 23 10 rule-precedence 1
 absolute start 1 0 1 june 2017 end 1 0 30 june 2018
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#
```

Related Commands

no	Removes this periodic time range rule from the EX3500 time range list

4.1.42.2.67 no

ex3500-time-range-config-mode commands

Removes this EX3500 time range list settings

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
no [absolute|periodic]

no absolute

no periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|
weekdays|weekend] <0-23> <0-59> to [<0-23> <0-59>|daily|friday|monday|saturday|
sunday|thursday|tuesday|wednesday|weekdays|weekend]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes this EX3500 time range list settings based on the parameters passed

Example

```
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
 periodic daily 1 10 to daily 23 10 rule-precedence 1
 absolute start 1 0 1 june 2015 end 1 0 30 june 2016
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#

nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#no periodic daily 1
10 to daily 23 10 rule-precedence 1

 absolute start 1 0 1 june 2015 end 1 0 30 june 2016
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#
```

4.1.43 ex3500-management-policy

Global Configuration Commands

The following table lists EX3500 management policy configuration mode commands:

Table 4.26 *EX3500-Management-Policy Config Command*

Command	Description	Reference
ex3500-management-policy	Creates an EX3500 management policy and enters its configuration mode	*page 4-223*
ex3500-management-policy config commands	Summarizes EX3500 management policy configuration mode commands	*page 4-225*
ex3500	Creates an EX3500 time range list and enters its configuration mode	*page 4-215*
ex3500-qos-class-map-policy	Creates an EX3500 QoS class map policy and enters its configuration mode	*page 4-243*
ex3500-qos-policy-map	Creates an EX3500 QoS policy map and enters its configuration mode	*page 4-251*
ex3524	Adds a EX3524 switch to the network	*page 4-266*
ex3548	Adds a EX3548 switch to the network	*page 4-268*

4.1.43.1 ex3500-management-policy

ex3500-management-policy

Creates an EX3500 management policy and enters its configuration mode. Once configured and applied on a EX3500 switch, the management policy controls access to the switch from management stations using SNMP.

The EX3500 management policy is either applied:

- Individually on an adopted EX3500 series switch (in the device configuration mode), or
- To a EX3524 and/or EX3548 profile, which is then applied to an adopted EX3500 series switch.

EX3500 devices (EX3524 and EX3548) are layer 2 Gigabit Ethernet switches with either 24 or 48 10/100/1000-BASE-T ports, and four SFP transceiver slots for fiber connectivity. Each 10/100/1000 Mbps port supports both the IEEE 802.3af and IEEE 802.3at-2009 PoE standards. An EX3500 switch has an SNMP-based management agent that provides both in-band and out-of-band management access. The EX3500 switch utilizes an embedded HTTP Web agent and CLI, which in spite of being different from that of the WiNG operating system provides WiNG controllers PoE and port management resources.

Going forward NX9500 and NX7500 WiNG managed series service platforms and WiNG VMs can discover, adopt, and partially manage EX3500 series Ethernet switches without modifying the proprietary operating system running the EX3500 switches. The WiNG service platforms utilize standardized WiNG interfaces to push configuration files to the EX3500 switches, and maintain a translation layer, understood by the EX3500 switch, for statistics retrieval.

WiNG can partially manage an EX3500 without using DHCP option 193, provided the EX3500 is directly configured to specify the IPv4 addresses of potential WiNG adopters. To identify the potential WiNG adopter, in the EX3500's device configuration mode specify the adopter's IPv4 address using the *controller > host > <IP-ADDRESS>* command. WiNG service platforms leave the proprietary operating system running the EX3500 switches unmodified, and partially manage them utilizing standardized WiNG interfaces. WiNG service platforms use a translation layer to communicate with the EX3500.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ex3500-management-policy <POLICY-NAME>
```

Parameters

- `ex3500-management-policy <POLICY-NAME>`

<POLICY-NAME>	Specify the EX3500 management policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config)#ex3500-management-policy test
nx9500-6C8809(config-ex3500-management-policy-test)#?
EX3500_Management Mode commands:
  enable        Modifies enable password parameters
  http          Hyper Text Terminal Protocol (HTTP)
  memory        Memory utilization
  no            Negate a command or set its defaults
  process-cpu   Process-cpu utilization
  snmp-server   Enable SNMP server configuration
  ssh           Secure Shell server connections
  username      Login TACACS server port

  clrscr        Clears the display screen
  commit        Commit all changes made in this session
  do            Run commands from Exec mode
  end           End current mode and change to EXEC mode
  exit          End current mode and down to previous mode
  help          Description of the interactive help system
  revert        Revert changes
  service       Service Commands
  show          Show running system information
  write         Write running configuration to memory or terminal

nx9500-6C8809(config-ex3500-management-policy-test)#
```

Related Commands

no	Removes this EX3500 management policy

4.1.43.2 ex3500-management-policy config commands

ex3500-management-policy

The following table summarizes EX3500 management policy configuration mode commands:

Table 4.27 *EX3500-Management-Policy Config Mode Commands*

Command	Description	Reference
enable	Configures an executive password for this EX3500 management policy	*page 4-226*
http	Configures the HTTP server settings used to authenticate HTTP connection to a EX3500 switch	*page 4-228*
memory	Configures the EX3500's memory utilization rising (upper) and falling (lower) threshold values	*page 4-229*
process-cpu	Configures the EX3500's CPU (processor) utilization rising (upper) and falling (lower) threshold values	*page 4-230*
snmp-server	Configures *Simple Network Management Protocol* (SNMP) server settings. Once configured and applied on a EX3500 switch, the management policy controls access to the switch from management stations using SNMP.	*page 4-231*
ssh	Configures the SSH server settings used to authenticate Secure Shell (SSH) connection to a EX3500 switch	*page 4-238*
username	Configures a EX3500 switch user settings	*page 4-240*
no	Removes or reverts this EX3500 management policy settings	*page 4-241*

4.1.43.2.68 enable

ex3500-management-policy config commands

Configures an executive password for this EX3500 management policy

Each EX3500 management policy can have a unique executive password with its own privilege level assigned. Utilize these passwords as specific EX3500 management sessions require priority over others.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
enable password [0|7|level]

enable password [0|7] <PASSWORD>

enable password level <0-15> [0 <PASSWORD>|7 <PASSWORD>]
```

Parameters

- `enable password [0|7] <PASSWORD>`

enable password [0|7] <PASSWORD>	Creates a new executive password for this EX3500 management policy. The password could be in clear text or encrypted • 0 – Configures a clear text password using ASCII characters (should be 1 - 32 characters long) • 7 – Configures an encrypted password using HEX characters (should be 32 characters long) • <PASSWORD> – Specify the password.

- `enable password level <0-15> [0 <PASSWORD>|7 <PASSWORD>]`

enable password level <0-15>	Creates a new executive password for this EX3500 management policy and sets its privilege level • <0-15> – Specify the privilege level for this executive password from 0 - 15. Lower values have higher priority, to slot and prioritize executive passwords and EX3500 management sessions.
[0|7] <PASSWORD>	After setting the privilege level, configure the password, which could be in clear text or encrypted • 0 – Configures a clear text password using ASCII characters (should be 1 - 32 characters long) • 7 – Configures an encrypted password using HEX characters (should be 32 characters long) • <PASSWORD> – Specify the password.

Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#enable password level 3 7
12345678901020304050607080929291

nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
 enable password level 3 7 12345678901020304050607080929291
 snmp-server notify-filter 1 remote 127.0.0.1
nx9500-6C8809(config-ex3500-management-policy-test)#
```

Related Commands

no	Removes a executive password from this EX3500 management policy

4.1.43.2.69 http

ex3500-management-policy config commands

Configures the HTTP server settings used to authenticate HTTP connection to a EX3500 switch

Management access to an EX3500 switch can be enabled/disabled as required using separate interfaces and protocols (HTTP, SSH). Disabling un-used and insecure interfaces and unused management services can dramatically reduce an attack footprint and free resources within an EX3500 management policy.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
http [port <1-65535>|secure-port <1-65535>|secure-server|server]
```

Parameters

- `http [port <1-65535>|secure-port <1-65535>|secure-server|server]`

http	Configures following HTTP settings: port, secure-port, secure-server, and server
port <1-65535>	Configures the HTTP port number. This is the port used to connect to the HTTP server. • <1-65535> – Specify a value from 1 - 65535. The default port is 80.
secure-port <1-65535>	Enables secure HTTP connection over a designated secure port. Ensure that the HTTP secure server is enabled before specifying the secure-server port. • <1-65535> – Specify the secure HTTP server port from 1 - 65535. The default port is 443.
secure-server	Enables HTTP secure server. This option is disabled by default.
server	Enables HTTP server. This option is enabled by default. Consequently, HTTP management access is allowed by default.

Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#http secure-server

nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
 http secure-server
 enable password level 3 7 12345678901020304050607080929291
 snmp-server notify-filter 1 remote 127.0.0.1
nx9500-6C8809(config-ex3500-management-policy-test)#
```

Related Commands

no	Reverts to default HTTP server settings (HTTP server enabled, HTTP port 80)

4.1.43.2.70 memory

ex3500-management-policy config commands

Configures the EX3500's memory utilization rising (upper) and falling (lower) threshold values. Once configured, the system sends a notification when the memory utilization exceeds the specified rising limit or falls below the specified falling limit.

By customizing an EX3500's memory and CPU utilization's upper and lower thresholds, you can avoid over utilization of the EX3500's processor capacity when sharing network resources with an NX series service platform or a WiNG VM.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
memory [falling-threshold|rising-threshold] <1-100>
```

Parameters

- `memory [falling-threshold|rising-threshold] <1-100>`

memory	Configures the EX3500's memory utilization rising and falling threshold values. The system generates a notification when either of these limits is exceeded.
falling-threshold <1-100>	Configures the falling threshold for the EX3500 memory utilization • <1-100> – Specify the falling threshold as a percentage from 1 - 100. The default is 70%.
rising-threshold <1-100>	Configures the rising threshold for the EX3500's memory utilization • <1-100> – Specify the rising threshold as a percentage from 1 - 100. The default is 90%.

Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#memory falling-threshold 50

nx9500-6C8809(config-ex3500-management-policy-test)#memory rising-threshold 95

nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
 http secure-server
 enable password level 3 7 12345678901020304050607080929291
 snmp-server notify-filter 1 remote 127.0.0.1
 memory falling-threshold 50
 memory rising-threshold 95
nx9500-6C8809(config-ex3500-management-policy-test)#
```

Related Commands

no	Reverts the memory utilization's falling-threshold and/or rising threshold to 70% and 90% respectively

4.1.43.2.71 process-cpu

ex3500-management-policy config commands

Configures the EX3500's CPU (processor) utilization rising (upper) and falling (lower) threshold values. Once configured, the system sends a notification when the CPU utilization exceeds the specified rising limit or falls below the specified falling limit.

By customizing an EX3500's memory and CPU utilization's upper and lower thresholds, you can avoid over utilization of the EX3500's processor capacity when sharing network resources with an NX series service platform or a WiNG VM.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
process-cpu [falling-threshold|rising-threshold] <1-100>
```

Parameters

- `process-cpu [falling-threshold|rising-threshold] <1-100>`

process-cpu	Configures the EX3500's CPU utilization rising and falling threshold values. The system generates a notification when either of these limits is exceeded.
falling-threshold <1-100>	Configures the falling threshold for the EX3500's CPU utilization • <1-100> – Specify the falling threshold as a percentage from 1 - 100. The default is 70%.
rising-threshold <1-100>	Configures the rising threshold for the EX3500's CPU utilization • <1-100> – Specify the rising threshold as a percentage from 1 - 100. The default is 90%.

Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#process-cpu falling-threshold
60

nx9500-6C8809(config-ex3500-management-policy-test)#process-cpu rising-threshold
80

nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
 http secure-server
 enable password level 3 7 1234567890102030405060708092929291
 snmp-server notify-filter 1 remote 127.0.0.1
 memory falling-threshold 50
 memory rising-threshold 95
 process-cpu falling-threshold 60
 process-cpu rising-threshold 80
nx9500-6C8809(config-ex3500-management-policy-test)#
```

Related Commands

no	Reverts the CPU utilization's falling-threshold and/or rising threshold to 70% and 90% respectively

4.1.43.2.72 snmp-server

ex3500-management-policy config commands

Configures *Simple Network Management Protocol* (SNMP) server settings. Once configured and applied on a EX3500 switch, the management policy controls access to the switch from management stations using SNMP.

SNMP is an application layer protocol that facilitates the exchange of management information between the management stations and a managed EX3500 switch. SNMP-enabled devices listen on port 162 (by default) for SNMP packets from the management server. SNMP uses read-only and read-write community strings as an authentication mechanism to monitor and configure supported devices. The read-only community string is used to gather statistics and configuration parameters from a supported wireless device. The read-write community string is used by a management server to set device parameters. SNMP is generally used to monitor a system's performance and other parameters.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
snmp-server {community|contact|enable|engine-id|group|host|location|notify-
filter|user|view}

snmp-server {community <STRING> {ro|rw}}

snmp-server {contact <NAME>}

snmp-server {enable traps {authentication|link-up-down}}

snmp-server {engine-id [local <WORD>|remote <IP> <WORD>]}

snmp-server {group <GROUP-NAME> [v1|v2c|v3 [auth|noauth|priv]] {notify <WORD>|
read <WORD>|write <WORD>}}

snmp-server {host <IP> [<STRING>|inform]}

snmp-server {host <IP> <STRING> version [v1|v2c|v3 [auth|noauth|priv]] {udp-port
<1-65535>}}

snmp-server {host <IP> inform [retry <0-255>|timeout <0-2147483647>] <STRING>
version [v2c|v3 [auth|noauth|priv]] {udp-port <1-65535>}}

snmp-server {location <WORD>}

snmp-server {notify-filter <WORD> remote <IP>}

snmp-server {user <USER-NAME> <GROUP-NAME> [remote-host|v1|v2c|v3]}

snmp-server {user <USER-NAME> <GROUP-NAME> remote-host <IP> v3 [auth|encrypted
auth] [md5|sha] <WORD> {priv [3des|aes128|aes192|aes256|des56] <WORD>}}

snmp-server {user <USER-NAME> <GROUP-NAME> [v1|v2c|v3]}

snmp-server {view <VIEW-NAME> <OID-TREE-STRING> [excluded|included]}
```

Parameters

- `snmp-server {community <STRING> {ro|rw}}`

snmp-server community <STRING> {ro|rw}	Configures SNMP-server related settings • community – Optional. Configures an SNMP community access string used to authorize management access by clients using SNMP v1, v2c, or v3 • <STRING> – Specify the SNMP community access string (should not exceed 32 characters). After specifying the string, optionally specify the access type associated with it. • ro – Optional. Provides read-only access with this SNMP community string. Allows authorized clients to only retrieve *Management Information Base* (MIB) objects. This is the default setting. • rw – Optional. Provides read-write access with this SNMP community string. Allows authorized clients to retrieve as well as modify MIB objects. **Note:** You can configure a maximum of five (5) community strings per EX3500 management policy.

- `snmp-server {contact <NAME>}`

snmp-server contact <NAME>	Configures SNMP-server related settings • contact – Optional. Configures the system's contact information • <NAME> – Specify the contact person's name (should not exceed 255 characters).

- `snmp-server {enable traps {authentication|link-up-down}}`

snmp-server enable traps {authentication| link-up-down}	Configures SNMP-server related settings
	• enable traps – Optional. Enables the EX3500 switch to send following SNMP traps or notifications:
	  • authentication – Optional. Enables SNMP authentication trap. This option is disabled by default.
	  • link-up-down – Optional. Enables SNMP link up and link down traps. This option is disabled by default.
	Note: If the command is executed without either of the above mentioned trap options, the system enables both authentication and link-up-down traps.
	Note: If enabling SNMP traps, use the snmp-server > host command to specify the host(s) receiving the SNMP notifications.

- `snmp-server {engine-id [local <WORD>|remote <IP> <WORD>]}`

snmp-server engine-id [local <WORD>| remote <IP> <WORD>]	Configures SNMP-server related settings
	• engine-id – Optional. Configures an identification string for the SNMPv3 engine. The SNMP engine is an independent SNMP agent residing either on the logged switch or on a remote device. It prevents message replay, delay, and redirection. In SNMPv3, the engine ID in combination with user passwords generates the security keys that is used for SNMPv3 packet authentication and encryption.
	  • local – Configures the SNMP engine on the logged switch
	  • <WORD> – Specify the hexadecimal engine ID string identifying the SNMP engine (should be 9 - 64 characters in length).
	Contd..

	• remote <IP> <WORD> – Configures a remote device as the SNMP engine • <IP> – Specify the remote device's IP address. • <WORD> – Specify the hexadecimal engine ID string identifying the SNMP engine (should be 9 - 64 characters in length). Configure the remote engine ID when using SNMPv3 informs. The remote ID configured here is used to generate the security digest for authentication and encryption of packets exchanged between the switch and the and the remote host user. SNMP passwords are localized using the engine ID of the authoritative agent. For informs, the authoritative SNMP agent is the remote agent. You therefore need to configure the remote agent's SNMP engine ID before you can send proxy requests or informs to it.

• `snmp-server {group <GROUP-NAME> [v1|v2c|v3 [auth|noauth|priv]] {notify <WORD>| read <WORD>|write <WORD>}}`

snmp-server group <GROUP-NAME>	Configures SNMP-server related settings • group – Optional. Configures an SNMP user group, mapping SNMP users to SNMP views • <GROUP-NAME> – Specify the SNMP group name (should not exceed 32 characters).
[v1|v2c|v3 [auth|noauth|priv]]	Configures the SNMP version used for authentication by this user group • v1 – Configures the SNMP version as v1. • v2c – Configures SNMP version as v2c • v3 – Configures the SNMP version as v3. If using SNMP v3, specify the authentication and encryption levels. • auth – Uses SNMP v3 with authentication and *no* privacy • noauth – Uses SNMP v3 with *no* authentication and *no* privacy • priv – Uses SNMP v3 with authentication and privacy
notify <WORD>	Optional. Configures the notification view string • <WORD> – Specify the string (should not exceed 32 characters).
read <WORD>	Optional. Configures the read view string • <WORD> – Specify the string (should not exceed 32 characters).
write <WORD>	Optional. Configures the write view string • <WORD> – Specify the string (should not exceed 32 characters).

• `snmp-server {host <IP> <STRING> version [v1|v2c|v3 [auth|noauth|priv]] {udp-port <1-65535>}}`

snmp-server host <IP>	Configures SNMP-server related settings • host – Optional. Configures the host(s) receiving the SNMP notifications. At least one SNMP server host should be configured in order to configure the switch to send notifications • <IP> – Specify the SNMP host's IP address. **Note:** You can configure a maximum of five (5) SNMP trap recipients per EX3500 management policy. **Note:** Ensure that SNMP trap notification is enabled.

<STRING>	Configures the SNMP community string. You can configure the SNMP community string here, or else use the string configured using the *snmp-server > community <STRING> > {ro|rw}* command. It is recommended that you configure the SNMP community string prior to configuring the SNMP host. • <STRING> – Specify the community string. The string configured here is sent in the SNMP traps to the SNMPv1 or SNMPv2c hosts.

version [v1|v2c| v3 [auth|noauth| priv]]	Configures the SNMP version used
	• v1 – Configures the SNMP version as 1. This is the default setting.
	• v2c – Configures SNMP version as 2c
	• v3 – Configures the SNMP version as 3. If using SNMPv3, specify the authentication and encryption levels.
	  • auth – Uses SNMP v3 with authentication and *no* privacy
	  • noauth – Uses SNMP v3 with *no* authentication and *no* privacy
	  • priv – Uses SNMP v3 with authentication and privacy

udp-port <1-65535>	Optional. After specifying the SNMP version, optionally specify the host UDP port • <1-65535> – Specify the UDP port. The default is 162.

• *snmp-server {host <IP> inform [retry <0-255>\|timeout <0-2147483647>] <STRING> version [v2c\|v3 [auth\|noauth\|priv]] {udp-port <1-65535>}}*

snmp-server host <IP>	Configures SNMP-server related settings • host – Optional. Configures the host(s) receiving the SNMP notifications • <IP> – Specify the SNMP host's IP address. **Note:** You can configure a maximum of five (5) SNMP trap recipients per EX3500 management policy. **Note:** Ensure that SNMP trap notification is enabled.

inform [retry <0-255>| timeout <0-2147483647>]	Enables sending of SNMP notifications as inform messages, and configures inform message settings.
	• retry <0-255> – Configures the maximum number attempts made to re-send an inform message in case the specified SNMP host does not acknowledge receipt.
	  • <0-255> – Specify a value from 0 - 255. The default is 3.
	• timeout <0-2147483647> – Configures the interval, in seconds, to wait for an acknowledgment from the SNMP host before re-sending an inform message
	  • <0-2147483647> – Specify a value from 0 - 2147483647 seconds. The default is 1500 seconds.
	Inform messages are more reliable than trap messages since they include a request for acknowledgement of receipt. Using inform messages to communicate critical information would be good practice. However, since inform messages are retained in the memory until a response is received, they consume more memory and may also result in traffic congestion. Take into considerations these facts when configuring the notification format.

<STRING>	Configures the SNMP community string. You can configure the SNMP community string here, or else use the string configured using the *snmp-server > community <STRING> > {ro|rw}* command. It is recommended that you configure the SNMP community string prior to configuring the SNMP host. • <STRING> – Specify the community string. The string configured here is sent in the SNMP inform messages to the SNMPv2c or SNMPv3 hosts.

version [v2c| v3 [auth|noauth| priv]]	Configures the SNMP version used
	• v2c – Configures the SNMP version as v2c
	• v3 – Configures the SNMP version as v3. If using SNMP v3, specify the authentication and encryption levels.
	  • auth – Uses SNMP v3 with authentication and *no* privacy
	  • noauth – Uses SNMP v3 with *no* authentication and *no* privacy
	  • priv – Uses SNMP v3 with authentication and privacy
	Note: SNMP inform messages are not supported on SNMP v1.

udp-port <1-65535>	Optional. After specifying the SNMP version, optionally specify the host UDP port • <1-65535> – Specify the UDP port. The default is 162.

- `snmp-server {location <WORD>}`

snmp-server location <WORD>	Configures SNMP-server related settings • location – Optional. Configures the EX3500's location string • <WORD> – Specify the location (should not exceed 255 characters).

- `snmp-server {notify-filter <WORD> remote <IP>}`

snmp-server notify-filter <WORD>	Configures SNMP-server related settings • notify-filter – Optional. Modifies the SNMP server's notify filter • <WORD> – Specify the SNMP notify-filter name.
remote <IP>	Optional. Configures the remote host's IP address • <IP> – Specify the IP address in the A.B.C.D format.

- `snmp-server {user <USER-NAME> <GROUP-NAME> remote <IP> v3 {auth|encrypted auth} [md5|sha] <WORD> {priv [3des|aes128|aes192|aes256|des56] <WORD>}}`

snmp-server user <USER-NAME> <GROUP-NAME>	Configures SNMP-server related settings
	• user – Optional. Configures the name of the SNMP user (connecting to the SNMP agent) and adds the user to an existing SNMP group. It also specifies the SNMP version type used. In case of SNMP version 3, this command also configures the remote host's IP address and the authentication type used.
	  • <USER-NAME> – Specify the user's name (should not exceed 32 characters).
	  • <GROUP-NAME> – Specify the SNMP group name to which this user is assigned.

remote <IP> v3	Configures the remote host on which the SNMPv3 engine is running • <IP> – Specify the remote host's IP address. **Note:** This option is available only for SNMPv3 engine. After configuring the remote host, optionally configure the authentication type and the corresponding authentication password used.
{auth|encrypted auth} [md5|sha] <WORD> {priv [3des|aes128| aes192|aes256| des56] <WORD>}	Optional. Configures authentication and encryption settings • auth – Specifies the authentication type used and configures the authentication password • encrypted – Enables encryption. When enabled all communications between the user and the SNMP engine are encrypted. After enabling encryption, specify the authentication type and configure the authentication password. Contd..

	The following parameters are common to the 'auth' and 'encrypted' keywords: • md5 – Uses MD5 to authenticate the user • sha – Uses SHA to authenticate the user The following parameter is common to the 'md5' and 'sha' keywords: • <WORD> – Specify the authentication password. **Note:** If the 'encrypted' option is not being used, enter an 8 - 40 characters ASCII password. Whereas, in case of an encrypted password enter a HEX characters password of 32 characters. • priv – Optional. Uses SNMPv3 with privacy. Select one of the privacy options: des, aes128, aes192, aes256, des56 • <WORD> – Configures the privacy password. If the 'encrypted' option is not being used, enter an 8 - 40 characters long ASCII password. Whereas, the encrypted password should be 32 HEX characters.

- `snmp-server {user <USER-NAME> <GROUP-NAME> [v1|v2c|v3]}`

snmp-server user <USER-NAME> <GROUP-NAME> [v1|v2c|v3]	Configures SNMP-server related settings • user – Optional. Configures the name of the SNMP user (connecting to the SNMP agent) and adds the user to an existing SNMP group. It also specifies the SNMP version type used. In case of SNMPv3, this command also configures the authentication type used and the enables encryption. • <USER-NAME> – Specify the user's name (should not exceed 32 characters). • <GROUP-NAME> – Specify the SNMP group name to which this user is assigned. • [v1|v2c|v3] – After specifying the group name, specify the SNMP version used. The options are SNMP version v1, SNMP version 2c, and SNMP version 3. **Note:** If using SNMP version 3, optionally specify the authentication type and the corresponding authentication password used. Please see previous table for SNMPv3 authentication and encryption configuration details.

- `snmp-server {view <VIEW-NAME> <OID-TREE-STRING> [excluded|included]}`

snmp-server view <VIEW-NAME>	Configures SNMP-server related settings • view – Optional. Creates an SNMP view. SNMP views are used to control user access to the MIB. • <VIEW-NAME> – Provide a name for this SNMP view (should not exceed 32 characters).
<OID-TREE-STRING> [excluded|included]	Configures the *object identifier* (OID) of a branch within the MIB tree • excluded – Specifies an excluded view • included – Specifies an included view

Example

```

4.1.43.2.73 ssh

ex3500-management-policy config commands

Configures the SSH server settings used to authenticate *Secure Shell* (SSH) connection to a EX3500 switch

Management access to an EX3500 switch can be enabled/disabled as required using separate interfaces and protocols (HTTP, SSH). Disabling un-used and insecure interfaces and unused management services can dramatically reduce an attack footprint and free resources within an EX3500 management policy.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ssh [authentication-retries <1-5>|server|server-key size <512-1024>|timeout <1-120>]
```

Parameters

```
• ssh [authentication-retries <1-5>|server|server-key size <512-1024>|timeout <1-120>]
```

ssh	Enables SSH management access to an EX3500 switch. This option is disabled by default. Use this command to configure SSH access settings.
authentication-retries <1-5>	Configures the maximum number of retries made to connect to the SSH server resource • <1-5> – Specify a value from 1 - 5. The default setting is 3.
server	Enables SSH server connection
server-key size <512-1024>	Configures the SSH server key size • <512-1024> – Specify the SSH server key from 512 - 1,024. The default length is 768.
timeout <1-120>	Configures the SSH server resource inactivity timeout value in seconds. When the specified time is exceeded, the SSH server resource becomes unreachable and must be re-authenticated. • <1-120> – Specify a value from 1 120 seconds. The default is 120 seconds.

Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#ssh authentication-retries 4

nx9500-6C8809(config-ex3500-management-policy-test)#ssh timeout 90

nx9500-6C8809(config-ex3500-management-policy-test)#ssh server-key size 600

Related Commands

no	Disables SSH management access to an EX3500 switch

4.1.43.2.74 username

ex3500-management-policy config commands

Configures a EX3500 switch user settings

The EX3500 switch user details are stored in a local database on the NX9500, NX7500, or WiNG VM. You can configure multiple users, each having a unique name, access level, and password.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
username <USER-NAME> [access-level <0-15>|nopassword|password [0|7] <PASSWORD>]
```

Parameters

- `username <USER-NAME> [access-level <0-15>|nopassword|password [0|7] <PASSWORD>]`

username <USER-NAME>	Configures the TACACS server port username • <USER-NAME> – Specify the user name (should not exceed 32 characters)
access-level <0-15>	Configures the access level for this user. This value determines the access priority of each user requesting access and interoperability with EX3500 switch. • <0-15> – Specify the access level from 0 - 15. The default is 0.
nopassword	Allows user to login without a password
password [0|7] <PASSWORD>	Configures the password for this user • 0 – Configures a plain text password • 7 – Configures an encrypted password (should be 32 characters in length) • <PASSWORD> – Specify the password.

Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#username user1 access-level 5

4.1.44 ex3500-qos-class-map-policy

Global Configuration Commands

The following table lists EX3500 QoS class map policy configuration mode commands:

Table 4.28 *EX3500-QoS-Class-Map Config Command*

Command	Description	Reference
ex3500-qos-class-map-policy	Creates an EX3500 QoS class map policy and enters its configuration mode	*page 4-244*
ex3500-qos-class-map-policy config commands	Summarizes EX3500 QoS class map policy configuration mode commands	*page 4-245*
ex3500-qos-policy-map	Creates an EX3500 QoS policy map and enters its configuration mode	*page 4-251*
ex3500	Creates an EX3500 time range list and enters its configuration mode	*page 4-215*
ex3500-management-policy	Creates an EX3500 management policy and enters its configuration mode	*page 4-222*
ex3524	Adds a EX3524 switch to the network	*page 4-266*
ex3548	Adds a EX3548 switch to the network	*page 4-268*

4.1.44.1 ex3500-qos-class-map-policy

ex3500-qos-class-map-policy

Creates a EX3500 *Quality of Service* (QoS) class map policy and enters its configuration mode

A QoS class map policy contains a set of *Differentiated Services* (DiffServ) classification criteria that are used to classify incoming traffic into different category and provide differentiated service based on this classification. Each policy defines a set match criteria rules that use objects, such as access lists, IP precedence or DSCP values, and VLANs. When configured and applied, the policy classifies traffic based on layer 2, layer 3, or layer 4 information contained in each incoming packet.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ex3500-qos-class-map-policy <POLICY-NAME>
```

Parameters

- `ex3500-qos-class-map-policy <POLICY-NAME>`

<POLICY-NAME>	Specify the EX3500 QoS class map policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config)#ex3500-qos-class-map-policy dscp
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#?
EX3500_Qos_class_map Mode commands:
  description  Class-map description
  match        Defines the match criteria to classify traffic
  no           Negate a command or set its defaults
  rename       Redefines the name of class-map

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
```

4.1.44.2 ex3500-qos-class-map-policy config commands

ex3500-qos-class-map-policy

The following table summarizes EX3500 QoS class map policy configuration mode commands:

Table 4.29 *EX3500-Management-Policy Commands*

Command	Description	Reference
description	Configures a description for this EX3500 QoS class map policy	*page 4-246*
match	Configures match criteria rules used to classify traffic	*page 4-247*
rename	Renames an existing EX3500 QoS class map object	*page 4-249*
no	Removes this EX3500 QoS class map policy's description and match criteria	*page 4-250*

4.1.44.2.76 description

ex3500-qos-class-map-policy config commands

Configures this EX3500 QoS class map policy's description

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
description <LINE>
```

Parameters

- `description <LINE>`

description <LINE>	Configures this EX3500 QoS class map policy's description • <LINE> – Enter a description that allows to you differentiate it from other policies with similar configuration (should not exceed 64 characters)

Example

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#description "Matches
packets marked for DSCP service 3"

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy dscp
 description "Matches packets marked for DSCP service 3"
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
```

Related Commands

no	Removes this EX3500 QoS class map policy's description

4.1.44.2.77 match

ex3500-qos-class-map-policy config commands

Configures match criteria rules used to classify traffic

Access lists, IP precedence, DSCP values, or VLANs are commonly used to classify traffic. Access lists select traffic based on layer 2, layer 3, or layer 4 information contained in each packet.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
match [access-list [ex3500-ext-access-list|ex3500-std-access-list|mac-acl] <ACL-NAME>|cos <0-7>|ip [dscp <0-63>|precedence <0-7>]|ipv6 dscp <0-63>|vlan <1-4094>]
```

Parameters

```
• match [access-list [ex3500-ext-access-list|ex3500-std-access-list|mac-acl] <ACL-NAME>|cos <0-7>|ip [dscp <0-63>|precedence <0-7>]|ipv6 dscp <0-63>|vlan <1-4094>]
```

match	Configures the match criteria. The options are: access-list, cos, ip, ipv6, vlan **Note:** Incoming packets matching the specified criteria are included in this QoS class map.
access-list [ex3500-ext-access-list| ex3500-std-access-list| mac-acl] <ACL-NAME>	Uses access lists to provide the match criteria. You can use any one the following ACL types to classify traffic: • ex3500-ext-access-list – Uses an IPv4 EX3500 extended ACL • ex3500-std-access-list – Uses an IPv4 EX3500 standard ACL • mac-acl – Uses a MAC EX3500 ACL The following keyword is common to all of the above ACL types: • <ACL-NAME> – Specify the ACL name (should be existing and configured).
cos <0-7>	Configures the *class of service* (CoS) value used to apply user priority. CoS is a form of QoS applicable only to layer 2 Ethernet frames. It uses 3-bits (8 values) of the 802.1Q tag to differentiate and shape network traffic. • <0-7> – Specify the CoS value from 0 - 7. Following are the 8 traffic classes based on the CoS value: 000 (0) - Routine 001 (1) - Priority 010 (2) - Immediate 011 (3) - Flash 100 (4) - Flash Override 101 (5) - Critical 110 (6) - Internetwork Control 111 (7) - Network Control

ip [dscp <0-63>| precedence <0-7>]	Configures the IPv4 DSCP value to match and/or the IP precedence value to match. • <0-63> – Specify the DSCP value from 0 - 63. Use this option to specify the *type of service* (ToS) field values included in the IP header. The ToS field exists between the header length and the total length fields. The DSCP constitutes the first 6 bits of the ToS field. • precedence <0-7> – Configures the IP precedence to match. Following are the 8 traffic classes based on the IP precedence values: 000 (0) - Routine 001 (1) - Priority 010 (2) - Immediate 011 (3) - Flash 100 (4) - Flash Override 101 (5) - Critical 110 (6) - Internetwork Control 111 (7) - Network Control
ipv6 dscp <0-63>	Configures the IPv6 DSCP value to match • <0-63> – Specify the DSCP value from 0 - 63.
vlan <1-4094>	Configures the VLAN to match • <1-4094> – Specify the VLAN ID.

Usage Guidelines

When configuring match entries, take into consideration the following points:

- Deny rules included in an ACL (associated with a EX3500 QoS class map policy) are ignored whenever an incoming packet matches the ACL.
- A class map policy cannot include both IP ACL or IP precedence rule and a VLAN rule.
- A class map policy containing a MAC ACL or VLAN rule cannot include either an IP ACL or a IP precedence rule.
- A class map policy can include a maximum of 16 match entries.

Example

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#match ip dscp 3

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy dscp
 description "Matches packets marked for DSCP service 3"
 match ip dscp 3
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#

nx9500-6C8809(config-ex3500-qos-class-map-policy-test2)#match ip precedence 1
```

Related Commands

no	Removes match criteria rules configured for this EX3500 QoS class map policy

4.1.44.2.78 rename

ex3500-qos-class-map-policy config commands

Renames an existing EX3500 QoS class map policy

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
rename <EX3500-QOS-CLASS-MAP-POLICY-NAME> <NEW-EX3500-QOS-CLASS-MAP-POLICY-NAME>
```

Parameters

```
• rename <EX3500-QOS-CLASS-MAP-POLICY-NAME> <NEW-EX3500-QOS-CLASS-MAP-POLICY-
NAME>
```

rename <EX3500-QOS-CLASS-MAP-POLICY-NAME> <NEW-EX3500-QOS-CLASS-MAP-NAME>	Renames an existing EX3500 QoS class map • <EX3500-QOS-CLASS-MAP-POLICY-NAME> – Enter the EX3500 QoS class map's current name. • <NEW-EX3500-QOS-CLASS-MAP-POLICY-NAME> – Enter the new name.

Example

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#rename [TAB]
dscp   test   test2
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#rename test2 IP_Precedence

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#rename [TAB]
dscp   IP_Precedence   test
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
```

4.1.44.2.79 no

ex3500-qos-class-map-policy config commands

Removes this EX3500 QoS class map policy's description and match criteria

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
no [description|match]

no description

no match [access-list [ex3500-ext-access-list|ex3500-std-access-list|mac-acl]
<ACL-NAME>|cos <0-7>|ip [dscp <0-63>|precedence <0-7>]|ipv6 dscp <0-63>|vlan <1-
4094>]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes the EX3500 QoS class map policy's settings based on the parameters passed

Example

The following example shows the EX3500 QoS class map policy 'test' settings before the 'no' command are executed:

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy dscp
 description "Matches packets marked for DSCP service 3"
 match ip dscp 3
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#no description

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#no match ip dscp
```

The following example shows the EX3500 QoS class map policy 'test' settings after the 'no' command are executed:

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy test
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
```

4.1.45 ex3500-qos-policy-map

Global Configuration Commands

The following table lists EX3500 QoS policy map configuration mode commands:

Table 4.30 *EX3500-QoS-Policy-Map Config Command*

Command	Description	Reference
ex3500-qos-policy-map	Creates a EX3500 policy map and enters its configuration mode	*page 4-252*
ex3500-qos-policy-map config commands	Summarizes EX3500 QoS policy map configuration mode commands	*page 4-253*

4.1.45.1 ex3500-qos-policy-map

ex3500-qos-policy-map

Creates an EX3500 policy map and enters its configuration mode

An EX3500 policy map contains one or more EX3500 QoS class maps traffic classifications (existing and configured) and can be attached to multiple interfaces. Creates an EX3500 policy map, and then use the class parameter to configure policies for traffic that matches the criteria defined in the EX3500 QoS class map policy. For more information, see *match*.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ex3500-qos-policy-map <EX3500-QOS-POLICY-MAP-NAME>
```

Parameters

- `ex3500-qos-policy-map <EX3500-QOS-POLICY-MAP-NAME>`

<EX3500-QOS-POLICY-MAP-NAME>	Specify the EX3500 policy map's name

Example

```
nx9500-6C8809(config)#ex3500-qos-policy-map testPolicyMap
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap)#?

4.1.45.2.80 class

ex3500-qos-policy-map config commands

Creates a policy map class and enters its configuration mode. The policy map class is a traffic classification upon which a policy can act.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
class <EX3500-QoS-CLASS-MAP-POLICY-NAME>
```

Parameters

- `class <EX3500-QoS-CLASS-MAP-POLICY-NAME>`

<EX3500-QoS-CLASS-MAP-POLICY-NAME>	Specify the EX3500 QoS class map policy's name (should be existing and configured)

Example

```
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap)#class dscp
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#?
commands:
  no        Negate a command or set its defaults
  police    Defines a policer for classified traffic
  set       Classify IP traffic

4.1.45.2.82 police

ex3500-qos-policy-map-class-config commands

Configures an enforcer for classified traffic

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
police [flow|srtcm-color-aware|srtcm-color-blind|trtcm-color-aware|trtcm-color-blind]

police flow <0-1000000> <0-16000000> conform-action transmit violate-action [<0-63>|drop]

police [srtcm-color-aware|srtcm-color-blind] <0-1000000> <0-16000000> <0-16000000> conform-action transmit exceed-action [<0-63>|drop] violate-action [<0-63>|drop]

police [trtcm-color-aware|trtcm-color-blind] <0-1000000> <0-16000000> <0-1000000> <0-16000000> conform-action transmit exceed-action [<0-63>|drop] violate-action [<0-63>|drop]
```

Parameters

```
• police flow <0-1000000> <0-16000000> conform-action transmit violate-action [<0-63>|drop]
```

police	Configures an enforcer for classified traffic
flow <0-1000000> <0-16000000>	Configures an enforcer for classified traffic based on the metered flow rate • <0-1000000> – Configures the *committed information rate* (CIR) from 0 -1000000 kilobits per second. • <0-16000000> – Configures the *committed burst size* (BC) from 0 - 16000000 bytes. Policing is based on a token bucket, where bucket depth (i.e., the maximum burst before the bucket overflows) is specified by the committed-burst field, and the average rate tokens are added to the bucket is specified by the committed-rate option. Note that the token bucket functions similar to that described in RFC 2697 and RFC 2698. The behavior of the meter is specified in terms of one token bucket (C), the rate at which the tokens are incremented CIR and the maximum size of the token bucket BC. The token bucket C is initially full, that is, the token count Tc(0) = BC. Thereafter, the token count Tc is updated CIR times per second as follows: • If Tc is less than BC, Tc is incremented by one, else • Tc is not incremented. When a packet of size B bytes arrives at time t, the following happens: • If Tc(t)-B > OR = 0, the packet is green and Tc is decremented by B down to the minimum value of 0, else • The packet is red and Tc is not decremented.

conform-action transmit	Configures the action applied when packets fall within the specified CIR and BC limits • transmit – Transmits packets falling within the specified CIR and BC limits. This is subject to there being enough tokens to service the packet, in which case the packet is set green.
violate-action [<0-63>|drop]	Configures the action applied when packets violate the specified CIR and BC limits • <0-63> – Applies a new DSCP value. Select the DSCP value from 0 - 63. • drops – Drops packets violating the specified CIR and BC limits

```
• police [srtcm-color-aware|srtcm-color-blind] <0-1000000> <0-16000000> <0-
16000000> conform-action transmit exceed-action [<0-63>|drop] violate-action [<0-
63>|drop]
```

police	Configures an enforcer for classified traffic
[srtcm-color-aware| srtcm-color-blind] <0-1000000> <0-16000000> <0-16000000>	Configures an enforcer for classified traffic based on *single rate three color meter* (srTCM) mode. The srTCM as defined in RFC 2697 meters a traffic stream and processes its packets according to three traffic parameters – *Committed Information Rate* (CIR), *Committed Burst Size* (BC), and *Excess Burst Size* (BE). • srtcm-color-blind - Single rate three color meter in color-blind mode • srtcm-color-aware - Single rate three color meter in color-aware mode The meter operates in one of two modes. In the color-blind mode, the meter assumes that the packet stream is uncolored. In color-aware mode the meter assumes that some preceding entity has pre-colored the incoming packet stream so that each packet is either green, yellow, or red. The marker (re)colors an IP packet according to the results of the meter. The color is coded in the DS field [RFC 2474] of the packet. • <0-1000000> – Configures the CIR from 0 -1000000 kilobits per second. • <0-16000000> – Configures the BC from 0 - 1600000 bytes. • <0-16000000> – Configures the BE from 0 - 1600000 bytes. The behavior of the meter is specified in terms of its mode and two token buckets, C and E, which both share the common rate CIR. The maximum size of the token bucket C is BC and the maximum size of the token bucket E is BE. The token buckets C and E are initially full, that is, the token count Tc(0) = BC and the token count Te(0) = BE. Thereafter, the token counts Tc and Te are updated CIR times per second as follows: • If Tc is less than BC, Tc is incremented by one, else • If Te is less then BE, Te is incremented by one, else • neither Tc nor Te is incremented. When a packet of size B bytes arrives at time t, the following happens if srTCM is configured to operate in color-blind mode: • If Tc(t)-B > OR = 0, the packet is green and Tc is decremented by B down to the minimum value of 0, else • if Te(t)-B > OR = 0, the packets is yellow and Te is decremented by B down to the minimum value of 0, • else the packet is red and neither Tc nor Te is decremented. Contd..

	When a packet of size B bytes arrives at time t, the following happens if srTCM is configured to operate in color-aware mode: • If the packet has been pre-colored as green and Tc(t)-B ? 0, the packet is green and Tc is decremented by B down to the minimum value of 0, else • If the packet has been pre-colored as yellow or green and if • Te(t)-B > OR = 0, the packets is yellow and Te is decremented by B down to the minimum value of 0, else the packet is red and neither Tc nor Te is decremented. The metering policy guarantees a deterministic behavior where the volume of green packets is never smaller than what has been determined by the CIR and BC, that is, tokens of a given color are always spent on packets of that color. Refer to RFC 2697 for more information on other aspects of srTCM.
conform-action transmit	Configures the action applied when packet rates fall within the specified CIR and BC limits • transmit – Transmits packets falling within the specified CIR and BC limits
exceed-action [<0-63>|drop]	Configures the action applied when packet rates exceed the specified CIR and BC limits • <0-63> – Applies a new DSCP value. Select the DSCP value from 0 - 63. • drops – Drops packets exceeding the specified CIR and BC limits
violate-action [<0-63>|drop]	Configures the action applied when packet rates exceed the specified BE limit • <0-63> – Applies a new DSCP value. Select the DSCP value from 0 - 63. • drops – Drops packets exceeding the specified BE limit

```
• police [trtcm-color-aware|trtcm-color-blind] <0-1000000> <0-16000000> <0-
1000000> <0-16000000> conform-action transmit exceed-action [<0-63>|drop] violate-
action [<0-63>|drop]
```

police	Configures an enforcer for classified traffic
[trtcm-color-aware| trtcm-color-blind] <0-1000000> <0-16000000> <0-1000000> <0-16000000>	Configures an enforcer for classified traffic based on a *two rate three color meter* (trTCM) mode. The trTCM as defined in RFC 2698 meters a traffic stream and processes its packets based on two rates – *Committed Information Rate* (CIR) and *Peak Information Rate* (PIR), and their associated burst sizes - *Committed Burst Size* (BC) and *Peak Burst Size* (BP). • trtcm-color-blind - Two rate three color meter in color-blind mode • trtcm-color-aware - Two rate three color meter in color-aware mode • <0-1000000> – Configures the CIR from 0 - 1000000 kilobits per second • <0-16000000> – Configures the BC from 0 - 1600000 bytes. • <0-1000000> – Configures the PIR from 0 - 1000000 kilobits per second • <0-16000000> – Configures the BP from 0 - 1600000 bytes The meter operates in one of two modes. In the color-blind mode, the meter assumes that the packet stream is uncolored. In color-aware mode the meter assumes that some preceding entity has pre-colored the incoming packet stream so that each packet is either green, yellow, or red. The marker (re)colors an IP packet according to the results of the meter. The color is coded in the DS field [RFC 2474] of the packet. Contd..

	The behavior of the meter is specified in terms of its mode and two token buckets, P and C, which are based on the rates PIR and CIR, respectively. The maximum size of the token bucket P is BP and the maximum size of the token bucket C is BC. The token buckets P and C are initially (at time 0) full, that is, the token count Tp(0) = BP and the token count Tc(0) = BC. Thereafter, the token count Tp is incremented by one PIR times per second up to BP and the token count Tc is incremented by one CIR times per second up to BC. When a packet of size B bytes arrives at time t, the following happens if trTCM is configured to operate in color-blind mode: • If Tp(t)-B < 0, the packet is red, else • if Tc(t)-B < 0, the packet is yellow and Tp is decremented by B, else • The packet is green and both Tp and Tc are decremented by B. When a packet of size B bytes arrives at time t, the following happens if trTCM is configured to operate in color-aware mode: • If the packet has been pre-colored as red or if Tp(t)-B < 0, the packet is red, else • if the packet has been pre-colored as yellow or if Tc(t)-B < 0, the packet is yellow and Tp is decremented by B, else • the packet is green and both Tp and Tc are decremented by B. The trTCM can be used to mark a IP packet stream in a service, where different, decreasing levels of assurances (either absolute or relative) are given to packets which are green, yellow, or red. Refer to RFC 2698 for more information on other aspects of trTCM.
conform-action transmit	Configures the action applied when packet rates fall within the specified CIR and BP limits • transmit – Transmits packets falling within the specified CIR and BC limits
exceed-action [<0-63>|drop]	Configures the action applied when packet rates exceed the specified CIR limit, but are within the specified PIR limit • <0-63> – Applies a new DSCP value. Select the DSCP value from 0 - 63. • drops – Drops packets exceeding the specified CIR and BC limit
violate-action [<0-63>|drop]	Configures the action applied when packet rates exceed the specified PIR limit • <0-63> – Applies a new DSCP value. Select the DSCP value from 0 - 63. • drops – Drops packets exceeding the specified BE limit

Usage Guidelines

When configuring the traffic class enforcer parameters, take into consideration the following factors:

- You can configure up to 200 enforcers/policers (i.e., class maps) for ingress ports.
- The committed-rate cannot exceed the configured interface speed, and the committed-burst cannot exceed 16 Mbytes.

Example

The following example uses the police trtcm-color-blind command to limit the average bandwidth to 100,000 Kbps, the committed burst rate to 4000 bytes, the peak information rate to 1,000,000 Kbps, the peak burst size to 6000, to remark any packets exceeding the committed burst size, and to drop any packets exceeding the peak information rate.

```
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#police
 trtcm-color-blind 100000 4000 100000 6000 conform-action transmit exceed-action
 0 violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#show
context
 class dscp
  police trtcm-color-blind 100000 4000 100000 6000 conform-action transmit exceed-
action 0 violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#
```

Related Commands

no	Removes the traffic enforcer settings

4.1.45.2.83 set

ex3500-qos-policy-map-class-config commands

Sets *class of service* (CoS) value, *per-hop behavior* (PHB) value, and IP DSCP value in matching packets

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
set [cos <0-7>|ip dscp <0-63>|phb <0-7>]
```

Parameters

- `set [cos <0-7>|ip dscp <0-63>|phb <0-7>]`

set	Sets the match criteria used to identify and classify traffic into different classes. The match criteria options are: CoS, IP DSCP, and PHB values.
cos <0-7>	Configures the CoS value for a matching packet (as specified by the match command) in the packet's VLAN tag • <0-7> – Specify a value from 0 - 7. The CoS is modified to the value specified here.
ip dscp <0-63>	Modifies the IP DSCP value in a matching packet (as specified by the match command) • <0-63> – Specify a value from 0 - 63. The DSCP value is modified to the value specified here.
phb <0-7>	Configures a PHB value for a matching packets • <0-7> – Specify a value from 0 -7. **Note:** The PHB label is composed of five bits, three bits for per-hop behavior, and two bits for the color scheme used to control queue congestion. A packet is marked green, yellow, or red as per the following: • green if it does not exceed the CIR and BC limits • yellow if it exceeds the CIR and BC limits, but not the BE limit, and • red otherwise.

Example

The following example uses the *set > phb* command to classify the service that incoming packets will receive, and then uses the *police > trtcm-color-blind* command to limit the average bandwidth to 100,000 Kbps, the committed burst rate to 4000 bytes, the peak information rate to 1,000,000 Kbps, the peak burst size to 6000 bytes, to remark any packets exceeding the committed burst size, and to drop any packets exceeding the peak information rate.

```
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-test2)#set
phb 3

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-
test2)#police
 trtcm-color-blind 100000 4000 1000000 6000 conform-action transmit exceed-action
0 violate-action drop

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-test2)#show
context
 class test2
  set phb 3
  police trtcm-color-blind 100000 4000 100000 6000 conform-action transmit exceed-
action 0 violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-test2)#
```

The following example uses the *set > ip dscp* command to classify the service that incoming packets will receive, and then uses the *police > flow* command to limit the average bandwidth to 100,000 Kbps, the burst rate to 4000 bytes, and configure the response to drop any violating packets:

```
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#set ip
dscp 3

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#police
 flow 100000 4000 conform-action transmit violate-action drop

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#show
context
 class dscp
  set ip dscp 3
  police flow 100000 4000 conform-action transmit violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#
```

4.1.45.2.85 description

ex3500-qos-policy-map config commands

Configures this EX3500 QoS policy map's description

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
description <LINE>
```

Parameters

- `description <LINE>`

description <LINE>	Configures this EX3500 QoS policy map's description • <LINE> – Enter a description that allows to you differentiate it from other policies with similar configuration (should not exceed 64 characters)

Example

```
nx9500-6C8809(config-ex3500-qos-policy-map-test)#description "This is a test
EX3500 QoS Policy Map"

nx9500-6C8809(config-ex3500-qos-policy-map-test)#show context
ex3500-qos-policy-map test
 description "This is a test EX3500 QoS Policy Map"
 class test
nx9500-6C8809(config-ex3500-qos-policy-map-test)#
```

Related Commands

no	Removes this EX3500 QoS policy map's description

4.1.45.2.86 no

ex3500-qos-policy-map config commands

Removes this EX3500 QoS policy map's settings. Use this keyword to remove the description and to remove the QoS traffic classification created.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
no [class <EX3500-QoS-POLICY-MAP-NAME>|description]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes this EX3500 QoS policy map's settings based on the parameters passed

Example

The following example shows the EX3500 QoS policy map 'test' settings before the 'no' command are executed:

```
nx9500-6C8809(config-ex3500-qos-policy-map-test)#show context
ex3500-qos-policy-map test
 description "This is a test EX3500 QoS Policy Map"
 class test
nx9500-6C8809(config-ex3500-qos-policy-map-test)#

nx9500-6C8809(config-ex3500-qos-policy-map-test)#no description

nx9500-6C8809(config-ex3500-qos-policy-map-test)#no class test
```

The following example shows the EX3500 QoS policy map 'test' settings after the 'no' command are executed:

```
nx9500-6C8809(config-ex3500-qos-policy-map-test)#show context
ex3500-qos-policy-map test
nx9500-6C8809(config-ex3500-qos-policy-map-test)#
```

4.1.46 ex3524

Global Configuration Commands

Adds a EX3524 switch to the network

The EX3500 series switch is a Gigabit Ethernet layer 2 switch with either 24 or 48 10/100/1000-BASE-T ports, and four *Small Form Factor Pluggable* (SFP) transceiver slots for fiber connectivity.

To enable layer 3 adoption of the logged EX3524 switch to a NOC controller, navigate to the EX3524 switch's device configuration mode and execute the following command: *controller > host > <IP/HOSTANME>.*

EX3500 devices (EX3524 and EX3548) are layer 2 Gigabit Ethernet switches with either 24 or 48 10/100/1000-BASE-T ports, and four SFP transceiver slots for fiber connectivity. Each 10/100/1000 Mbps port supports both the IEEE 802.3af and IEEE 802.3at-2009 PoE standards. An EX3500 switch has an SNMP-based management agent that provides both in-band and out-of-band management access. The EX3500 switch utilizes an embedded HTTP Web agent and CLI, which in spite of being different from that of the WiNG operating system provides WiNG controllers PoE and port management resources.

Going forward NX9500 and NX7500 WiNG managed series service platforms and WiNG VMs can discover, adopt, and partially manage EX3500 series Ethernet switches without modifying the proprietary operating system running the EX3500 switches. The WiNG service platforms utilize standardized WiNG interfaces to push configuration files to the EX3500 switches, and maintain a translation layer, understood by the EX3500 switch, for statistics retrieval.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ex3524 <DEVICE-EX3524-MAC>
```

Parameters

- `ex3524 <DEVICE-EX3524-MAC>`

<DEVICE-EX3524-MAC>	Specifies the MAC address of a EX3524 switch

Example

```
nx9500-6C8809(config)#ex3524 A1-C4-33-6D-66-07

nx9500-6C8809(config-device-A1-C4-33-6D-66-07)#?
EX35xx Device Mode commands:
  hostname          Set system's network name

4.1.47 ex3548

Global Configuration Commands

Adds a EX3548 switch to the network

The EX3500 series switch is a Gigabit Ethernet layer 2 switch with either 24 or 48 10/100/1000-BASE-T ports, and four SFP transceiver slots for fiber connectivity.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
ex3548 <DEVICE-EX3548-MAC>
```

Parameters

- `ex3548 <DEVICE-EX3548-MAC>`

<DEVICE-EX3548-MAC>	Specifies the MAC address of a EX3548 switch

Example

```
nx9500-6C8809(config)#ex3548 22-65-78-09-12-35
nx9500-6C8809(config-device-22-65-78-09-12-35)#?
EX35xx Device Mode commands:
  hostname          Set system's network name
  interface         Select an interface to configure
  ip                Internet Protocol (IP)
  no                Negate a command or set its defaults
  power             EX3500 Power over Ethernet Command
  remove-override   Remove configuration item override from the device (so
                    profile value takes effect)
  upgrade           Configures upgrade option for ex3500 system
  use               Set setting to use

  clrscr            Clears the display screen

  do                Run commands from Exec mode
  end               End current mode and change to EXEC mode
  exit              End current mode and down to previous mode
  help              Description of the interactive help system
  revert            Revert changes
  service           Service Commands
  show              Show running system information
  write             Write running configuration to memory or terminal

nx9500-6C8809(config-device-22-65-78-09-12-35)#
```

Related Commands

no	Removes a EX3548 switch from the network

4.1.48 firewall-policy

Global Configuration Commands

Configures a firewall policy. This policy defines a set of rules for managing network traffic and prevents unauthorized access to the network behind the firewall.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
firewall-policy <FIREWALL-POLICY-NAME>
```

Parameters

- `firewall-policy <FIREWALL-POLICY-NAME>`

<FIREWALL-POLICY-NAME>	Specify the firewall policy name. If a firewall policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#firewall-policy test
rfs6000-81742D(config-fw-policy-test)#?
Firewall policy Mode commands:
  acl-logging                     Log on flow creating traffic
  alg                             Enable ALG
  clamp                           Clamp value
  dhcp-offer-convert              Enable conversion of broadcast dhcp offers to
                                  unicast
  dns-snoop                       DNS Snooping
  firewall                        Wireless firewall
  flow                            Firewall flow
  ip                              Internet Protocol (IP)
  ip-mac                          Action based on ip-mac table
  ipv6                            Internet Protocol version 6 (IPv6)
  ipv6-mac                        Action based on ipv6-mac table
  logging                         Firewall enhanced logging
  no                              Negate a command or set its defaults
  proxy-arp                       Enable generation of ARP responses on behalf
                                  of another device
  proxy-nd                        Enable generation of ND responses (for IPv6)
                                  on behalf of another device
  stateful-packet-inspection-l2   Enable stateful packet inspection in layer2
                                  firewall
  storm-control                   Storm-control
  virtual-defragmentation         Enable virtual defragmentation for IPv4
                                  packets (recommended for proper functioning
                                  of firewall)

  clrscr                          Clears the display screen
  commit                          Commit all changes made in this session
  do                              Run commands from Exec mode
  end                             End current mode and change to EXEC mode
  exit                            End current mode and down to previous mode
  help                            Description of the interactive help system
  revert                          Revert changes
  service                         Service Commands
  show                            Show running system information
  write                           Write running configuration to memory or
```

```
                                        terminal

rfs6000-81742D(config-fw-policy-test)#
```

Related Commands

no	Removes an existing firewall policy

NOTE: For more information on Firewall policy, see *Chapter 13, FIREWALL-POLICY*.

4.1.49 global-association-list

Global Configuration Commands

Configures a global list of client MAC addresses. Based on the deny or permit rules specified, clients are either allowed or denied access to the managed network.

The global association list serves the same purpose as an *Association Access Control List* (ACL). However, the Association ACL allows a limited number of entries, a few thousand only, and does not suffice the requirements of a large deployment. This gap is filled by a global association list, which is much larger (with tens of thousands of entries). Both lists co-exist in the system. When an access request comes in, the association ACL is looked up first and if the requesting MAC address is listed in one of the deny ACLs, the association is denied. But, if the requesting client is permitted access, or if in case none of the ACLs list the client's MAC address, the global association ACL is checked. Once authenticated, the client's credentials are cached on the access point, and subsequent requests are not referenced to the controller. An entry in an APs credential cache means a pass in the global association list.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
global-association-list <GLOBAL-ASSOC-LIST-NAME>
```

Parameters

- `global-association-list <GLOBAL-ASSOC-LIST-NAME>`

<GLOBAL-ASSOC-LIST-NAME>	Specify the global association list name. If a list with the same name does not exist, it is created. Map this global association list to a device (controller) or a controller profile. Once associated, the controller applies this association list to requests received from all adopted APs. For more information, see *use*. The global association list can also be mapped to a WLAN. The usage of global access lists is controlled on a per-WLAN basis. For more information, see *association-list*.

Example

```
rfs4000-229D58(config)#global-association-list my-clients
rfs4000-229D58(config-global-assoc-list-my-clients)#?
Global Association List Mode commands:
  default-action  Configure the default action when the client MAC does not
                  match any rule
  deny            Specify MAC addresses to be denied
  no              Negate a command or set its defaults
  permit          Specify MAC addresses to be permitted

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  do              Run commands from Exec mode
  end             End current mode and change to EXEC mode
  exit            End current mode and down to previous mode
  help            Description of the interactive help system
  revert          Revert changes
  service         Service Commands
```

```
  show              Show running system information
  write             Write running configuration to memory or terminal

rfs4000-229D58(config-global-assoc-list-my-clients)#
```

To enable global-association-list controlled client association, execute the following commands:

1 Create a global association list, and configure it as shown in the following examples:

```
rfs4000-229D58(config)#global-association-list vtt-list

rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 01-22-33-44-55-66
description sample
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 40-B8-9A-39-F1-27
description acer
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 42-B8-9A-39-F1-27
description ami
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 6C-40-08-B2-80-6C
description mac
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit E0-98-61-34-11-47
description my_mobile

rfs4000-880DA7(config-global-assoc-list-vtt-list)#show context
global-association-list vtt-list
 default-action deny
 permit 01-22-33-44-55-66 description sample
 permit 40-B8-9A-39-F1-27 description acer
 permit 42-B8-9A-39-F1-27 description ami
 permit 6C-40-08-B2-80-6C description mac
 permit E0-98-61-34-11-47 description my_mobile
rfs4000-880DA7(config-global-assoc-list-vtt-list)#
```

2 Attach this global association list to the profile or device context of the access point *or* controller, as shown in the following examples:

3 On the access point's profile context:

```
Note: Ensure that the global association list is associated with the profile
being applied on the access point.

rfs4000-880DA7(config-profile-testAP6522)#use global-association-list server
vtt-list

rfs4000-880DA7(config-profile-testAP6522)#show context include-factory |
include g
lobal-association-list
 service global-association-list blacklist-interval 60
 use global-association-list server vtt-list
rfs4000-880DA7(config-profile-testAP6522)#
```

4 On the access point's device context:

```
ap6522(config-device-B4-C7-99-EA-DF-2C)#use global-association-list server
vtt-list
ap6522 (config-device-B4-C7-99-EA-DF-2C)#show context include-factory | in
clude global-association-list
 use global-association-list server vtt-list
ap6522(config-device-B4-C7-99-EA-DF-2C)#
```

5 On the controller's device context:

```
rfs4000-880DA7(config-device-00-23-68-88-0D-A7)#use global-association-list
server vtt-list

rfs4000-880DA7(config-device-00-23-68-88-0D-A7)#show context include-factory
| in
clude global-association-list
 use global-association-list server vtt-list
ap6522(config-device-B4-C7-99-EA-DF-2C)#
```

6 Attach this global association list with the WLAN, as shown in the following example:

```
rfs4000-880DA7(config-wlan-GLAssList)#association-list global vtt-list

rfs4000-880DA7(config-wlan-GLAssList)#show context include-factory | include
association-list
 association-list global vtt-list
rfs4000-880DA7(config-wlan-GLAssList)#
```

4.1.50 guest-management

Global Configuration Commands

The following table summarizes the guest management policy configuration mode commands:

Table 4.33 *Guest-Management Policy Config Command*

Command	Description	Reference
guest-management	Creates a guest management policy and enters its configuration mode	*page 4-275*
guest-management-mode commands	Summarizes guest management policy configuration mode commands	*page 4-276*

4.1.50.1 guest-management

guest-management

Configures a guest management policy that redirects guest users to a registration portal upon association to a captive portal. Guest users are redirected to an internally (or) externally hosted registration page (registration.html) where previously, not-registered guest users can register. The internally hosted captive portal registration page can be customized based on business requirements.

Use the guest management policy commands to configure parameters, such as E-mail host and SMS gateway along with the credentials required for sending pass code to guest via e-mail and SMS. You can configure up to 32 different guest management policies. Each guest management policy allows you to configure the SMS gateway, SMS message body, E-mail SMTP server, E-mail subject contents, and E-mail message body. Although, at any point-in-time, multiple guest management policies may exist, only one guest management policy can be active per device.

Guest registration is supported only on the NX95XX and NX7500 series service platforms. However, the number of user identity entries supported on each varies. It is 2 million and 1 million user-identity entries for the NX95XX and NX75XX model service platforms respectively.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
guest-management <POLICY-NAME>
```

Parameters

- `guest-management <POLICY-NAME>`

<POLICY-NAME>	Specify the guest management policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config)#guest-management guest
nx9500-6C8809(config-guest-management-guest)#?
Guest Management Mode commands:
  email                    Email guest-notification configuration
  guest-database-backup    Configure guest-database-backup parameters
  guest-database-export    Configure guest-database-export parameters
  no                       Negate a command or set its defaults
  sms                      SMS guest-notification configuration
  sms-over-smtp            Sms-over-smtp configuration to email sms gateway
                           address

  clrscr                   Clears the display screen
  commit                   Commit all changes made in this session
  do                       Run commands from Exec mode
  end                      End current mode and change to EXEC mode
  exit                     End current mode and down to previous mode
  help                     Description of the interactive help system
  revert                   Revert changes
  service                  Service Commands
  show                     Show running system information
  write                    Write running configuration to memory or terminal

nx9500-6C8809(config-guest-management-guest)#
```

Related Commands

no	Removes an existing guest management policy

4.1.50.2 guest-management-mode commands

guest-management

The following table summarizes guest management policy configuration mode commands:

Table 4.34 *Guest-Management-Policy-Config-Mode Commands*

Command	Description	Reference
email	Configures guest user e-mail notification settings	*page 4-277*
guest-database-backup	Enables periodic backup of the captive portal's guest registration user database	*page 4-279*
guest-database-export	Schedules an export of the Guest Management User database to a specified external server	*page 4-280*
sms	Configures guest user SMS notification settings	*page 4-281*
sms-over-smtp	Configures an e-mail host server along with sender credentials and the recipient's gateway e-mail address to which the message is e-mailed. The gateway server converts the e-mail into SMS and forwards the message to the guest users's mobile device.	*page 4-283*
no	Removes this guest management policy settings	*page 4-285*

4.1.50.2.87 email

guest-management-mode commands

Configures guest user e-mail notification settings. When configured, guest users can register themselves with their e-mail credentials as a primary key for authentication. The captive portal system provides the pass code for their registration. Guest users need to use their registered e-mail, mobile, or member ID and the received pass code for subsequent logins to the captive portal.

This option is disabled by default.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
email [host|message|subject]

email host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS> security
[none|ssl|starttls] username <USER-NAME> password <PASSWORD>

email message <LINE>

email subject <LINE>
```

Parameters

```
• email host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS> security
[none|ssl|starttls] username <USER-NAME> password <PASSWORD>
```

email	Configures guest user e-mail notification settings
host [<IP/HOSTNAME>| <HOST-ALIAS-NAME>]	Configures the SMTP server's IP address or hostname used for guest management e-mail traffic, guest user credential validation, and pass code reception. Optionally you can use an existing host alias to identify the SMTP server host. • <IP/HOSTNAME> – Specify the SMTP server's IPv4 address or hostname. • <HOST-ALIAS-NAME> – Specify the host alias name (should be existing and configured). Consider providing the host as an alias. A host alias is a configuration item that maps the alias to a hostname. Once created, it can be used across different configuration modes. Where ever used the alias is replaced by the associated hostname.
sender <EMAIL-ADDRESS>	Configures the sender's name for the guest user receiving the passcode required for registering their guest E-mail credentials using SMTP. • <EMAIL-SENDER> – Specify the sender's name (should not exceed 100 characters).
security [none|ssl|starttls]	Configures the encryption protocol used by the SMTP server when communicating the pass code • none – No encryption used. Use if no additional user authentication is needed beyond the required username and password combination. • SSL – Uses SSL encryption. This is the default setting. • STARTTLS – Uses STARTTLS encryption
username <USER-NAME>	Configures a username unique to this SMS guest management configuration. After configuring the username, specify the associated password. Ensure that the password is correctly provided to receive the pass code required for registering guest user credentials with SMS. • <USER-NAME> – Specify the username (should not exceed 100 characters).

password <PASSWORD>	Configures the password associated with the specified SMTP user name • <PASSWORD> – Specify the password (should not exceed 63 characters).

- `email message <LINE>`

email	Configures guest user e-mail notification content
message <LINE>	Configures the content of the e-mail sent to the guest user notifying the pass code (should not exceed 1024 characters) • <LINE> – Specify the message content. When entering the message, use the following tags: GM-NAME – for the guest user's name GM_PASSCODE – for the pass code CR-NL – to enter a new line For example: Dear *GM_NAME*, *CR-NL* your internet access pass code is *GM_PASSCODE*. *CR-NL* Use this for internet access.

- `email subject <LINE>`

email	Configures guest user e-mail notification subject line
subject <LINE>	Configures the subject line of the e-mail sent to the guest user notifying the pass code (should not exceed 100 characters) • <LINE> – Specify the subject line content. When entering the subject line, use the following tag: GM-NAME – for the guest user's name For example: *GM_NAME*, your internet access code

Example

```
nx9500-6C8809(config-guest-management-test)#email host 192.168.13.10 sender
bob@extremenetworks.com security ssl username guest1 password guest1@123

nx9500-6C8809(config-guest-management-test)#show context
guest-management test
 email host 192.168.13.10 sender bob@extremenetworks.com security ssl username
guest1 password guest1@123
nx9500-6C8809(config-guest-management-test)#

nx9500-6C8809(config-guest-management-test2)#email message Dear GM_Guest2, CR-NL
Your internet access passcode is GM_Guest2. CR-NL Use this for internet access.

nx9500-6C8809(config-guest-management-test2)#email subject GM_Guest2 Your
internet access code

nx9500-6C8809(config-guest-management-test2)#show context
guest-management test2
 email subject GM_Guest2 Your internet access code
 email message Dear GM_Guest2,  CR-NL  Your internet access passcode is GM_Guest2.
CR-NL  Use this for internet access.
nx9500-6C8809(config-guest-management-test2)#
```

Related Commands

no	Removes the e-mail settings used to send notification mails to the guest user

4.1.50.2.88 guest-database-backup

guest-management-mode commands

Enables periodic backup of a captive portal's guest registration user database. This option is enabled by default.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
guest-database-backup enable {<TIME>}
```

Parameters

- `guest-database-backup enable {<TIME>}`

guest-database-backup enable <TIME>	Enables periodic backup of a captive portal's guest registration user database. This command also allows you to configure the time at which the system starts backing up the database. The default backup-start time is '00:00' (midnight every day). • <TIME> – Optional. Resets the periodic database backup-start time to a user-defined value in the HH;MM format. When specified, the system starts periodic backup of the database, every day, at the specified time.

Example

```
nx9500-6C8809(config-guest-management-test)#guest-database-backup enable 12:30

vnx9500-6C8809(config-guest-management-test)#show context
guest-management test
 guest-database-backup enable 12:30
nx9500-6C8809(config-guest-management-test)#
```

Related Commands

no	Disables periodic backup of a captive portal's guest registration user database

4.1.50.2.89 guest-database-export

guest-management-mode commands

Schedules an export of the Guest Management user database to a specified external server. This option is enabled by default.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
guest-database-export <TIME> frequency <1-168> url-directory <URL> {(format
[csv|json]|last-visit-within <1-168>)}
```

Parameters

```
• guest-database-export <TIME> frequency <1-168> url-directory <URL> {(format
[csv|json]|last-visit-within <1-168>)}
```

guest-database-export <TIME>	Schedules an export of the Guest Management User collection to an external server • <TIME> – Configures the start time of the export operation in the HH:MM format
frequency <1-168>	Configures the user collection export frequency in hours • <1-168> – Configures the frequency from 1 - 168 hours. If the frequency is set at 3 hours, the user database is exported once in every 3 hours. The default is 4 hours.
url-directory <URL>	Configures external server's URL and directory to where the collection is exported • <URL> – Specify the external server's URL
format [csv|json]	Optional. Configures the file format • csv – Exports collection to the specified location in CSV format. This is the default setting. • json – Exports collection to the specified location in JSON format
last-visit-within <1-168>	Configures a filters guest users who have last visited within a specified period of time • <1-168> – Specify a time period from 1 - 168 hours. If for example, the last-visit-within value is set at 2 hours, then only the last two hours guest user collections will be exported. The default is 4 hours.

Example

```
nx9500-6C8809(config-guest-management-gm1)#guest-database-export 10:30 frequency
 6 url-directory ftp://admin:xxxxxx@192.168.13.10/dbe_dir format json last-visit
-within 168

nx9500-6C8809(config-guest-management-test)#show context
guest-management test
 guest-database-export 12:30 frequency 20 url-directory ftp://
admin:xxxxxx@192.168.13.10/dbe_dir format json last-visit-within 168
nx9500-6C8809(config-guest-management-test)#
```

Related Commands

no	Reverts the guest database export parameters to default

4.1.50.2.90 sms

guest-management-mode commands

Configures guest user SMS notification settings

When configured, guest users can register themselves with their e-mail or mobile device ID as the primary key for authentication. The captive portal provides the pass code for registration. Guest users use their registered e-mail or mobile device ID and the received pass code for subsequent logins to the captive portal.

NOTE: When using SMS, ensure that the WLAN's mode of authentication is set to *none* and the mode of registration is set to *user*. In other words, captive portal authentication must always enforce guest registration.

SMS is similar to MAC address-based self registration, but in addition the captive portal sends an SMS message, containing an access code, to the user's mobile phone number provided at the time of registration. The captive portal verifies the code, returns the *Welcome* page and provides access. This allows the administrator to verify the phone number provided and can be traced back to a specific individual should the need arise.

The default gateway used with SMS is *Clickatell.* A pass code can be sent with SMS to the guest user directly using Clickatell, or the pass code can be sent via e-mail to the SMS Clickatell gateway server, and Clickatell sends the pass code SMS to the guest user.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
sms [host|message]

sms host clickatell username <USER-NAME> password <PASSWORD> api-id <ID> user-agent
<PYCLICKATELL> {source-number <WORD>}

sms message <LINE>
```

Parameters

```
• sms host clickatell username <USER-NAME> password <PASSWORD> api-id <ID> user-
agent <PYCLICKATELL> {source-number <WORD>}
```

sms	Configures guest user SMS notification settings
host clickatell	By default, *clickatell* is the host SMS gateway server resource. Upon receiving the pass code e-mail, the SMS gateway sends the actual notification pass code SMS to the guest user.
username <USER-NAME>	Configures a username unique to this SMS guest management configuration. After configuring the username, specify the associated password. Ensure that the password is correctly provided to receive the pass code required for registering guest user credentials with SMS. • <USER-NAME> – Specify the username (should not exceed 32 characters).
password <PASSWORD>	Configures the password associated with the specified username • <PASSWORD> – Specify the password (should not exceed 63 characters).
api-id <ID>	Set a 32 character maximum API ID • <API-ID> – Specify the API ID (should not exceed 32 characters).

user-agent <PYCLICKATELL>	Since the SMS service provider by default is Clickatell, set the user agent name to *pyclickatell*. The user-agent value ensures the Clickatell SMS gateway server and its related credentials, needed for sending the pass code to guest users, are configured.
source-number <WORD>	Optional. Configures the long-address or the from-number associated with this Clickatell user account • <WORD> – Specify the source number (should not exceed 32 characters).

- `sms message <LINE>`

SMS	Configures guest user SMS notification content
message <LINE>	Configures the content of the SMS sent to the guest user notifying the pass code (should not exceed 1024 characters) • <LINE> – Specify the message content. When entering the message, use the following tags: GM-NAME – for the guest user's name GM_PASSCODE – for the pass code For example: Dear *GM_NAME*, your internet access pass code is *GM_PASSCODE*.

Example

```
nx9500-6C8809(config-guest-management-test)#sms host clickatell username guest1
password guest1@123 api-id test user-agent pyclickatell

nx9500-6C8809(config-guest-management-test)#sms message Dear guest1, Your passcode
for internet access is GM-guest1

nx9500-6C8809(config-guest-management-test)#show context
guest-management test
 email host 192.168.13.10 sender bob@extremenetworks.com security ssl username
guest1 password guest1@123
 sms host clickatell username guest1 password guest1@123 api-id test user-agent
pyclickatell
 sms message Dear guest1, Your passcode for internet access is GM-guest1
nx9500-6C8809(config-guest-management-test)#
```

Related Commands

no	Removes the SMS settings used to send SMS to the guest user

4.1.50.2.91 sms-over-smtp

guest-management-mode commands

Configures an e-mail host server (for example: smtp.gmail.com) along with sender related credentials and the recipient gateway e-mail address to which the message is E-mailed. The gateway server converts the e-mail into SMS and sends the message to the guest users's mobile device.

When sending an e-mail, the e-mail client interacts with a SMTP server to handle the content transmission. The SMTP server on the host may have conversations with other SMTP servers to deliver the e-mail.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
sms-over-smtp [host|message|subject]

sms-over-smtp host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS>
security [none|ssl|starttls] username <USER-NAME> password <PASSWORD> recipient
<EMAIL-ADDRESS>

sms-over-smtp message <LINE>

sms-over-smtp subject <LINE>
```

Parameters

```
• sms-over-smtp host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS>
security [none|ssl|starttls] username <USER-NAME> password <PASSWORD> recipient
<EMAIL-ADDRESS>
```

sms-over-smtp	Configures guest user SMS over SMTP notification settings
host [<IP/HOSTNAME>| <HOST-ALIAS-NAME>]	Configures the SMS gateway server resource's IPv4 address or hostname used for guest management SMS over SMTP traffic, guest user credential validation and pass code reception. Optionally you can use an existing host alias to identify the SMS gateway server resource. • <IP/HOSTNAME> – Specify the SMTP gateway server resource's IP address or hostname. • <HOST-ALIAS-NAME> – Specify the host alias name (should existing and configured). Consider providing the host as an alias. A host alias is a configuration item that maps the alias to a hostname. Once created, it can be used across different configuration modes. Where ever used the alias is replaced by the associated hostname.
sender <EMAIL-ADDRESS>	Configures the sender's e-mail address. The sender here is the guest user receiving the pass code. Guest users require this pass code for registering their guest e-mail credentials using SMTP. • <EMAIL-ADDRESS> – Specify the e-mail address (should not exceed 64 characters).
security [none|ssl|starttls]	Configures the encryption protocol used by the SMTP server when communicating the pass code • none – No encryption used. Use if no additional user authentication is needed beyond the required username and password combination. • SSL – Uses SSL encryption. This is the default setting. • STARTTLS – Uses STARTTLS encryption

username <USER-NAME>	Configures a username unique to this SMTP guest management configuration. After configuring the username, specify the associated password. Ensure that the correct password is provided to receive the pass code required for registering guest user credentials with SMTP. • <USER-NAME> – Specify the username (should not exceed 64 characters).
password <PASSWORD>	Configures the password associated with the specified SMTP user name • <PASSWORD> – Specify the password (should not exceed 64 characters).
recipient <EMAIL-ADDRESS>	Configures the e-mail recipient's e-mail address • <EMAIL-ADDRESS> – Specify the recipient's e-mail address (should not exceed 64 characters in length.

- `sms-over-smtp message <LINE>`

`sms-over-smtp`	Configures guest user SMS over SMTP notification message content
message <LINE>	Configures the content of the SMS over SMTP sent to the guest user notifying the pass code (should not exceed 1024 characters) • <LINE> – Specify the message content. When entering the message, use the following tags: GM-NAME – for the guest user's name GM_PASSCODE – for the pass code CR-NL – to enter a new line For example: Dear *GM_NAME*, *CR-NL* your internet access pass code is *GM_PASSCODE*. *CR-NL* Use this access code for internet access.

- `sms-over-smtp subject <LINE>`

`sms-over-smtp`	Configures guest user e-mail notification subject line content
subject <LINE>	Configures the subject line of the SMS over SMTP sent to the guest user notifying the pass code (should not exceed 100 characters) • <LINE> – Specify the subject line content. When entering the subject line, use the following tag: GM-NAME – for the guest user's name For example: *GM_NAME*, your internet access code

Example

```
nx9500-6C8809(config-guest-management-test3)#sms-over-smtp host test sender
bob@extremenetworks.com security ssl username bob password bob@123 recipient
john@extremenetworks.com

4.1.51 host

Global Configuration Commands

Enters the configuration context of a remote device using its hostname

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
host <DEVICE-NAME>
```

Parameters

- `host <DEVICE-NAME>`

<DEVICE-NAME>	Specify the device's hostname. All discovered devices are displayed when 'Tab' is pressed to auto complete this command.

Example

```
rfs4000-229D58(config)#host rfs4000-229D58
rfs4000-229D58(config-device-00-23-68-22-9D-58)#
```

4.1.52 inline-password-encryption

Global Configuration Commands

Stores the encryption key in the startup configuration file

By default, the encryption key is not stored in the startup-config file. Use the inline-password-encryption command to move the encrypted key to the startup-config file. This command uses the master key to encrypt the password, then moves it to the startup-config file.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
inline-password-encryption
```

Parameters

None

Usage Guidelines

When the configuration file is imported to a different device, it first decrypts the encryption key using the default key and then decrypts the rest of the configuration using the administrator configured encryption key.

Example

The following command uses the specified password for encryption key and stores it outside of startup-config:

```
rfs6000-81742D(config)#password-encryption secret 2 12345678

rfs6000-81742D(config)#commit write memory
```

The following command moves the same password to the startup-config and encrypts it with the master key:

```
rfs6000-81742D(config)#inline-password-encryption
```

Related Commands

no	Disables storing of the encryption key in the startup configuration file
password-encryption	Enables password encryption

4.1.53 ip

Global Configuration Commands

Creates a IP *access control list* (ACL) and/or a SNMP IP ACL

Access lists define access permissions to the network using a set of rules. Each rule specifies an action taken when a packet matches the rule. If the action is deny, the packet is dropped. If the action is permit, the packet is allowed.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ip [access-list|snmp-access-list]

ip access-list <IP-ACL-NAME>
ip snmp-access-list <IP-SNMP-ACL-NAME>
```

Parameters

- `ip access-list <IP-ACL-NAME>`

access-list <IP-ACL-NAME>	Creates an IP ACL and enters its configuration mode • <IP-ACL-NAME> – Specify the ACL name. If the access list does not exist, it is created.

- `ip snmp-access-list <IP-SNMP-ACL-NAME>`

snmp-access-list <IP-SNMP-ACL-NAME>	Creates a SNMP IP ACL and enters its configuration mode. An SNMP IP ACL is an access control mechanism that uses a combination of IP ACL and SNMP community string. SNMP performs network management functions using a data structure called a *Management Information Base* (MIB). SNMP is widely implemented but not very secure, since it uses only text community strings for accessing controller or service platform configuration files. Use SNMP ACLs (firewalls) to help reduce SNMP's vulnerabilities, as SNMP traffic can be easily exploited to produce a *denial of service* (DoS). • <IP-SNMP-ACL-NAME> – Specify the SNMP IP ACL name. If the access list does not exist, it is created. After creating the SNMP ACL, define the deny/permit rules based on the network and/or host IP addresses. Once created and configured, link this SNMP IP ACL with a SNMP community string. To link the SNMP community string with the SNMP IP ACL, in the management-policy-config-mode, use the following command: *snmp-server > community <COMMUNITY-STRING> > [ro|rw] > ip-snmp-access-list <IP-SNMP-ACL-NAME>.*

Example

```
rfs6000-81742D(config)#ip access-list test
rfs6000-81742D(config-ip-acl-test)#?
ACL Configuration commands:
  deny      Specify packets to reject
  disable   Disable rule if not needed
  no        Negate a command or set its defaults
  permit    Specify packets to forward

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

rfs6000-81742D(config-ip-acl-test)#

rfs6000-81742D(config)#ip snmp-access-list SNMPAcl
rfs6000-81742D(config-ip-snmp-acl-SNMPAcl)#?
SNMP ACL Configuration commands:
  deny      Specify packets to reject
  no        Negate a command or set its defaults
  permit    Specify packets to forward

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

rfs6000-81742D(config-ip-snmp-acl-SNMPAcl)#
```

Related Commands

no	Removes an IP access control list

NOTE: For more information on access control lists, see *Chapter 11, ACCESS-LIST*.

4.1.54 ipv6

Global Configuration Commands

Creates a IPv6 ACL

An IPv6 ACL defines a set of rules that filter IPv6 packets flowing through a port or interface. Each rule specifies the action taken when a packet matches the rule. If the action is deny, the packet is dropped. If the action is permit, the packet is allowed.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ipv6 access-list <IPv6-ACL-NAME>
```

Parameters

- `ipv6 access-list <IPv6-ACL-NAME>`

access-list <IPv6-ACL-NAME>	Configures an IPv6 access list and enters its configuration mode • <IPv6-ACL-NAME> – Specify the IPv6 ACL name. If the access list does not exist, it is created.

Example

```
rfs4000-229D58(config)#ipv6 access-list IPv6ACLTest
rfs4000-229D58(config-ipv6-acl-IPv6ACLTest)#?
IPv6 Access Control Mode commands:
  deny      Specify packets to reject
  no        Negate a command or set its defaults
  permit    Specify packets to forward

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

rfs4000-229D58(config-ipv6-acl-IPv6ACLTest)#
```

Related Commands

no	Removes an IPv6 access control list

NOTE: For more information on access control lists, see *Chapter 11, ACCESS-LIST*.

4.1.55 ipv6-router-advertisement-policy

Global Configuration Commands

The following table lists the IPv6 *router advertisement* (RA) policy configuration commands:

Table 4.35 *IPv6-Router-Advertisement-Policy-Config Commands*

Command	Description	Reference
ipv6-router-advertisement-policy	Creates a new IPv6 RA policy and enters its configuration mode	*page 4-292*
ipv6-router-advertisement-policy-mode commands	Summarizes the IPv6 RA policy configuration mode commands	*page 4-294*

4.1.55.1 ipv6-router-advertisement-policy

ipv6-router-advertisement-policy

Creates an IPv6 RA policy and enters its configuration mode

An IPv6 router policy allows routers to advertise their presence in response to solicitation messages. After receiving a neighbor solicitation message, the destination node sends an advertisement message. which includes the link layer address of the source node. After receiving the advertisement, the destination device replies with a neighbor advertisement message on the local link. After the source receives the advertisement it can communicate with other devices.

Advertisement messages are also sent to indicate a change in link layer address for a node on the local link. With such a change, the multicast address becomes the destination address for advertisement messages.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ipv6-router-advertisement-policy <POLICY-NAME>
```

Parameters

- `ipv6-router-advertisement-policy <POLICY-NAME>`

ipv6-router-advertisement-policy <POLICY-NAME>	Specify an IPv6 RA policy name. If the policy does not exist, it is created.

Example

```
rfs4000-229D58(config)#ipv6-router-advertisement-policy test
rfs4000-229D58(config-ipv6-radv-policy-test)#?
IPv6 Router Advertisement Policy Mode commands:
  advertise                       Option to advertise in router advertisement
  assist-neighbor-discovery       Send the Source Link Layer address option
                                  in Router Advertisement to assist in
                                  neighbor discovery
  check-ra-consistency            Check if the parameters advertised by other
                                  routers on the link are in conflict with
                                  those configured on this router. Conflicts
                                  are logged.
  dns-server                      DNS Server
  domain-name                     Configure domain-name
  managed-config-flag             Set the managed-address-configuration flag
                                  in Router Advertisements. When set, it
                                  indicates that the addresses are available
                                  via DHCPv6
  nd-reachable-time               Time that a node assumes a neighbor is
                                  reachable after having received a
                                  reachability confirmation
  no                              Negate a command or set its defaults
  ns-interval                     Time between retransmitted Neighbor
                                  Solicitation messages
  other-config-flag               Set the other-configuration flag in Router
                                  Advertisements. When set, it indicates that
                                  other configuration information is
```

```
                                    available via DHCPv6.
  ra                                Router Advertisements
  router-lifetime                   Lifetime associated with the default router
  router-preference                 Preference of this router over other
                                    routers
  unicast-solicited-advertisement   Unicast the solicited Router Advertisements

  clrscr                            Clears the display screen
  commit                            Commit all changes made in this session
  do                                Run commands from Exec mode
  end                               End current mode and change to EXEC mode
  exit                              End current mode and down to previous mode
  help                              Description of the interactive help system
  revert                            Revert changes
  service                           Service Commands
  show                              Show running system information
  write                             Write running configuration to memory or
                                    terminal

rfs4000-229D58(config-ipv6-radv-policy-test)#
```

Related Commands

no	Removes the specified IPv6 RA policy

4.1.55.2 ipv6-router-advertisement-policy-mode commands

ipv6-router-advertisement-policy

The following table summarizes IPv6 router advertisement policy configuration commands:

Table 4.36 *IPv6-Router-Advertisement-Policy-Config-Mode Commands*

Command	Description	Reference
advertise	Enables advertisement of IPv6 *maximum transmission unit* (MTU) and hop-count value in RAs	*page 4-295*
assist-neighbor-discovery	Enables advertisement of the source link layer address in RAs	*page 4-296*
check-ra-consistency	Enables checking of consistency in RA values advertised by this router with those advertised by other routers, if any, on the same link	*page 4-297*
dns-server	Configures the DNS server's IPv6 address and lifetime advertised in RAs	*page 4-298*
domain-name	Configures the Domain name search label advertised in RAs	*page 4-299*
managed-config-flag	Sets the managed address configuration flag in RAs	*page 4-300*
nd-reachable-time	Enables advertisement of neighbor reachable time in RAs	*page 4-301*
no	Removes or reverts router advertisement policy settings	*page 4-302*
ns-interval	Configures the interval between two successive retransmitted *neighbor solicitation* (NS) messages	*page 4-303*
other-config-flag	Sets the other-configuration flag in RAs	*page 4-304*
ra	Configures RA related parameters, such as the interval between two unsolicited successive RAs	*page 4-305*
router-lifetime	Configures the default router's lifetime, in seconds, advertised in RAs	*page 4-306*
router-preference	Configures the router preference field value advertised in RAs	*page 4-307*
unicast-solicited-advertisement	Enables unicasting of solicited RAs	*page 4-308*

4.1.55.2.93 advertise

ipv6-router-advertisement-policy-mode commands

Enables advertisement of IPv6 MTU and hop-count value in RAs

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
advertise [hop-limit|mtu]
```

Parameters

- `advertise [hop-limit|mtu]`

advertise [hop-limit|mtu]	Enables advertisement of IPv6 MTU and hop-count value in RAs. Both these features are disabled by default.

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#advertise hop-limit

rfs6000-81742D(config-ipv6-radv-policy-test)#advertise mtu

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 advertise mtu
 advertise hop-limit
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Disables advertisement of IPv6 MTU and hop-count value in RAs

4.1.55.2.94 assist-neighbor-discovery

ipv6-router-advertisement-policy-mode commands

Enables advertisement of the source link layer address in RAs to facilitate neighbor discovery. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
assist-neighbor-discovery
```

Parameters

None

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#assist-neighbor-discovery
```

Related Commands

no	Disables the advertisement of the source link layer address in RAs

4.1.55.2.95 check-ra-consistency

ipv6-router-advertisement-policy-mode commands

Enables checking of consistency in RA values advertised by this router with those advertised by other routers, if any, on the same link. If the values advertised are inconsistent, a conflict is logged.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
check-ra-consistency
```

Parameters

None

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#check-ra-consistency

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 advertise mtu
 advertise hop-limit
 check-ra-consistency
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Disables comparison of interface-specific parameters advertised by other routers, within the link, with those advertised with this router

4.1.55.2.96 dns-server

ipv6-router-advertisement-policy-mode commands

Configures the DNS server's IPv6 address and lifetime. The configured values are advertised in RAs.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dns-server <IPv6> {lifetime [<4-3600>|expired|infinite]}
```

Parameters

- `dns-server <IPv6> {lifetime [<4-3600>|expired|infinite]}`

dns-server <IPv6>	Configures the DNS server's IPv6 address Enables the use of a DNS server to resolve host names to IPv6 addresses. When an IPv6 host is configured with the address of a DNS server, the host sends DNS name queries to the server for resolution. • <IPv6> – Specify the DNS server's address. This address is advertised in RAs. A maximum of four (4) entries can be made per policy.
lifetime [<4-3600>|expired|infinite]	Optional. Configures the DNS server's (identified by the <IPv6> parameter) lifetime • <4-3600> – Configures a lifetime in seconds. Specify a value form 4 - 3600 seconds. The default is 600 seconds. • expired – Advertises that this DNS server's lifetime has expired and should not be used • infinite – Advertises that this DNS server's lifetime is infinite

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#dns-server 2002::2 lifetime 3000

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 advertise mtu
 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Removes the DNS server settings advertised in RAs. Once removed these values are not advertised in RAs.

4.1.55.2.97 domain-name

ipv6-router-advertisement-policy-mode commands

Configures the Domain name search label advertised in RAs

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
domain-name <WORD> {lifetime [<4-3600>|expired|infinite]}
```

Parameters

- `domain-name <WORD> {lifetime [<4-3600>|expired|infinite]}`

domain-name <WORD>	Configures the Domain name search label advertised in RAs Enter a *fully qualified domain name* (FQDN), which is an unambiguous domain name available in a router advertisement resource. To distinguish an FQDN from a regular domain name, a trailing period is added. For example, somehost.example.com. • <WORD> – Specify the Domain name search label. A maximum of four (4) entries can be made per policy.
lifetime [<4-3600>| expired|infinite]	Optional. Configures the Domain name search label's lifetime • <4-3600> – Configures a lifetime in seconds. Specify a value form 4 - 3600 seconds. The default is 600 seconds. • expired – Advertises that this Domain name search label's lifetime has expired and should not be used • infinite – Advertises that this Domain name search label's lifetime is infinite

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#domain-name TechPubs lifetime
infinite

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 advertise mtu
 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Removes the Domain name settings advertised in RAs. Once removed these values are not advertised in RAs.

4.1.55.2.98 managed-config-flag

ipv6-router-advertisement-policy-mode commands

Sets the managed address configuration flag in RAs. When set, it indicates that IPv6 addresses are available through DHCPv6. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
managed-config-flag
```

Parameters

None

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#managed-config-flag

rfs6000-81742D(config-ipv6-radv-policy-test)#show context

 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Removes the managed address configuration flag advertised in RAs

4.1.55.2.99 nd-reachable-time

ipv6-router-advertisement-policy-mode commands

Enables advertisement of neighbor discovery reachable time in RAs. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
nd-reachable-time [<5000-3600000>|global]
```

Parameters

- `nd-reachable-time [<5000-3600000>|global]`

nd-reachable-time [<5000-3600000>| global]	Configures the interval, in milliseconds, that a node assumes a neighbor is reachable after receiving a reachability confirmation from the neighbor. Therefore, a neighbor is reachable, after being discovered, for a period specified here. This value is advertised in RAs. Use one of the following options: • <5000-3600000> – Configures an interface-specific value. Specify a value from 5000 - 3600000 milliseconds. The default is 5000 milliseconds. • global – Advertises the neighbor reachable time configured for the system. This is the value configured at the device configuration mode. For more information, see *use*.

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#nd-reachable-time 6000

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 managed-config-flag
 nd-reachable-time 6000
 advertise mtu
 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Disables advertisement of neighbor reachable time in RAs

4.1.55.2.100 no

ipv6-router-advertisement-policy-mode commands

Removes or reverts router advertisement policy settings. Use the no command to remove or revert the interface-specific parameters that are advertised by link router.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [advertise [hop-limit|mtu]|assist-neighbor-discovery|check-ra-consistency|
dns-server <IPv6>|domain-name <WORD>|managed-config-flag|nd-reachable-time|
ns-interval|other-config-flag|ra [interval|suppress]|router-lifetime|
unicast-solicited-advertisement]
```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Removes or reverts this IPv6 router advertisement policy's settings based on the parameters passed

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 managed-config-flag
 nd-reachable-time global
 advertise mtu
 advertise hop-limit

 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

4.1.55.2.101 ns-interval

ipv6-router-advertisement-policy-mode commands

Configures the *neighbor solicitation* (NS) retransmit timer value advertised in RAs. This is the interval between two successive NS messages. When specified, it enables the sending of the specified value in RAs. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ns-interval [<1000-3600000>|global]
```

Parameters

- `ns-interval [<1000-3600000>|global]`

ns-interval [<1000-3600000>| global]	Configures the NS interval advertised in RAs. Use one of the following options: • <1000-3600000> – Specify a value from 1000 - 3600000 milliseconds. The default is 1000 milliseconds. • global – Advertises the NS interval configured for the system. This is configured on the device in the device configuration mode. For more information, see *ipv6*.

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#ns-interval 3000

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 managed-config-flag
 nd-reachable-time global
 ns-interval 3000
 advertise mtu
 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Disables advertisement of NS interval in RAs

4.1.55.2.102 other-config-flag

ipv6-router-advertisement-policy-mode commands

Sets the other-configuration flag in RAs. When set, it indicates that other configuration details, such as DNS-related information, are available through DHCPv6. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
other-config-flag
```

Parameters

None

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#other-config-flag
```

Related Commands

no	Removes the other-config-flag advertised on RAs

4.1.55.2.103 ra

ipv6-router-advertisement-policy-mode commands

Configures RA related parameters, such as the interval between two unsolicited successive RAs. It also allows suppression of RAs.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ra [interval <3-1800>|suppress]
```

Parameters

- `ra [interval <3-1800>|suppress]`

interval <3-1800>	Configures the interval, in seconds, between two unsolicited successive RAs • <3-1800> – Specify a value from 3 - 1800 seconds. The default is 300 seconds. The router-lifetime should be at least three times the specified router interval.
suppress	Enables the suppression of RAs. When enabled, the transmission of RAs in IPv6 packets is suppressed. This option is disabled by default. The *no > ra > suppress* command enables the sending of RAs.

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#ra interval 200

rfs6000-81742D(config-ipv6-radv-policy-test)#ra suppress

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 ra suppress
 ra interval 200
 managed-config-flag
 nd-reachable-time global
 advertise mtu
 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Removes the RA interval, and enables the sending of RAs

4.1.55.2.104 router-lifetime

ipv6-router-advertisement-policy-mode commands

Configures the default router's lifetime, in seconds, advertised in RAs

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
router-lifetime <0-9000>
```

Parameters

- `router-lifetime <0-9000>`

router-lifetime <0-9000>	Configures the default router's lifetime • <0-9000> – Specify a value from 0 - 9000 seconds. The default value is 1500 seconds. A value of "0" indicates that this router is not the default router.

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#router-lifetime 2000

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 ra suppress
 ra interval 200
 managed-config-flag
 nd-reachable-time global
 router-lifetime 2000
 advertise mtu
 advertise hop-limit
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Removes the default router's lifetime

4.1.55.2.105 router-preference

ipv6-router-advertisement-policy-mode commands

Configures the router preference field value advertised in RAs. The options are high, medium, and low. This value is used to prioritize and select the default router when multiple routers are discovered.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
router-preference [high|medium|low]
```

Parameters

- `router-preference [high|medium|low]`

router-preference [high|medium|low]	Sets this router's preference over other routers, in the link, to be the default router. The options are high, low, and medium. The default value is medium. **Note:** The following points should be taken into consideration when configuring router preference: • For a router to be selected as a default router, the router's lifetime should not be equal to "0". • To enable default router selection, using router information contained in RAs, configure default router selection on that interface.

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#router-preference high

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 ra suppress
 ra interval 200
 managed-config-flag
 nd-reachable-time global
 router-lifetime 2000
 advertise mtu
 advertise hop-limit
 router-preference high
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

4.1.55.2.106 unicast-solicited-advertisement

ipv6-router-advertisement-policy-mode commands

Enables unicasting of solicited RAs. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
unicast-solicited-advertisement
```

Parameters

None

Example

```
rfs6000-81742D(config-ipv6-radv-policy-test)#unicast-solicited-advertisement

rfs6000-81742D(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
 ra suppress
 ra interval 200
 unicast-solicited-advertisement
 managed-config-flag
 nd-reachable-time global
 router-lifetime 2000
 advertise mtu
 advertise hop-limit
 router-preference high
 check-ra-consistency
 dns-server 2002::2 lifetime 3000
 domain-name TechPubs lifetime infinite
rfs6000-81742D(config-ipv6-radv-policy-test)#
```

Related Commands

no	Disables unicasting of solicited RAs

4.1.56 l2tpv3

Global Configuration Commands

Configures a *Layer 2 Tunnel Protocol Version 3* (L2TPv3) tunnel policy, used to create one or more L2TPv3 tunnels

The L2TPv3 policy defines the control and encapsulation protocols needed for tunneling layer 2 frames between two IP nodes. This policy enables creation of L2TPv3 tunnels for transporting Ethernet frames between bridge VLANs and physical GE ports. L2TPv3 tunnels can be created between any vendor devices supporting L2TPv3 protocol.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
l2tpv3 policy <L2TPV3-POLICY-NAME>
```

Parameters

- `l2tpv3 policy <L2TPV3-POLICY-NAME>`

l2tpv3 policy <L2TPV3-POLICY-NAME>	Configures an L2TPv3 tunnel policy • <L2TPV3-POLICY-NAME> – Specify a policy name. The policy is created if it does not exist. To modify an existing L2TPv3, specify its name.

Example

```
rfs6000-81742D(config)#l2tpv3 policy L2TPV3Policy1
rfs6000-81742D(config-l2tpv3-policy-L2TPV3Policy1)#?
L2tpv3 Policy Mode commands:
  cookie-size             Size of the cookie field present in each l2tpv3 data
                          message
  failover-delay          Time interval for re-establishing the tunnel after
                          the failover (RF-Domain
                          manager/VRRP-master/Cluster-master failover)
  force-l2-path-recovery  Enables force learning of servers, gateways etc.,
                          behind the l2tpv3 tunnel when the tunnel is
                          established
  hello-interval          Configure the time interval (in seconds) between
                          l2tpv3 Hello keep-alive messages exchanged in l2tpv3
                          control connection
  no                      Negate a command or set its defaults
  reconnect-attempts      Maximum number of attempts to reestablish the
                          tunnel.
  reconnect-interval      Time interval between the successive attempts to
                          reestablish the l2tpv3 tunnel
  retry-attempts          Configure the maximum number of retransmissions for
                          signaling message
  retry-interval          Time interval (in seconds) before the initiating a
                          retransmission of any l2tpv3 signaling message
  rx-window-size          Number of signaling messages that can be received
                          without sending the acknowledgement
  tx-window-size          Number of signaling messages that can be sent
                          without receiving the acknowledgement

  clrscr                  Clears the display screen
  commit                  Commit all changes made in this session
```

```
  end                          End current mode and change to EXEC mode
  exit                         End current mode and down to previous mode
  help                         Description of the interactive help system
  revert                       Revert changes
  service                      Service Commands
  show                         Show running system information
  write                        Write running configuration to memory or terminal

rfs6000-81742D(config-l2tpv3-policy-L2TPV3Policy1)#
```

Related Commands

no	Removes an existing L2TPv3 tunnel policy
mint-policy	Configures the global MiNT policy

NOTE: For more information on the L2TPv3 tunnel configuration mode and commands, see *Chapter 22, L2TPV3-POLICY*.

4.1.57 mac

Global Configuration Commands

Configures a MAC ACLs

Access lists define access permissions to the network using a set of rules. Each rule specifies an action taken when a packet matches the rule. If the action is deny, the packet is dropped. If the action is permit, the packet is allowed.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mac access-list <MAC-ACL-NAME>
```

Parameters

- `mac access-list <MAC-ACL-NAME>`

access-list <MAC-ACL-NAME>	Configures a MAC access control list • <MAC-ACL-NAME> – Specify the MAC ACL name. If the access control list does not exist, it is created.

Example

```
rfs6000-81742D(config)#mac access-list test
rfs6000-81742D(config-mac-acl-test)#?
MAC Extended ACL Configuration commands:
  deny     Specify packets to reject
  disable  Disable rule if not needed
  no       Negate a command or set its defaults
  permit   Specify packets to forward

  clrscr   Clears the display screen
  commit   Commit all changes made in this session
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  revert   Revert changes
  service  Service Commands
  show     Show running system information
  write    Write running configuration to memory or terminal

rfs6000-81742D(config-mac-acl-test)#
```

Related Commands

no	Removes a MAC access control list

NOTE: For more information on MAC access control lists, see *Chapter 11, ACCESS-LIST*.

4.1.58 management-policy

Global Configuration Commands

Configures a management policy. Management policies include services that run on a device, welcome messages, banners, etc.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
management-policy <MANAGEMENT-POLICY-NAME>
```

Parameters

- `management-policy <MANAGEMENT-POLICY-NAME>`

<MANAGEMENT-POLICY-NAME>	Specify the management policy name. If the policy does not exist, it is created.

Example

```
<DEVICE>(config)#management-policy test
<DEVICE>(config-management-policy-test)#?
Management Mode commands:
  aaa-login                 Set authentication for logins
  allowed-locations         Add allowed locations
  banner                    Define a login banner
  ftp                       Enable FTP server
  http                      Hyper Text Terminal Protocol (HTTP)
  https                     Secure HTTP
  idle-session-timeout      Configure idle timeout for a configuration session
                            (GUI or CLI)
  ipv6                      IPv6 Protocol
  no                        Negate a command or set its defaults
  passwd-retry              Lockout user if too many consecutive login failures
  privilege-mode-password   Set the password for entering CLI privilege mode
  rest-server               Enable rest server for device on-boarding
                            functionality
  restrict-access           Restrict management access to the device
  snmp-server               SNMP
  ssh                       Enable ssh
  t5                        T5 configuration
  telnet                    Enable telnet
  user                      Add a user account

  clrscr                    Clears the display screen
  commit                    Commit all changes made in this session
  do                        Run commands from Exec mode
  end                       End current mode and change to EXEC mode
  exit                      End current mode and down to previous mode
  help                      Description of the interactive help system
  revert                    Revert changes
  service                   Service Commands
  show                      Show running system information
  write                     Write running configuration to memory or terminal

<DEVICE>(config-management-policy-test)#
```

Related Commands

no	Removes an existing management policy

NOTE: For more information on Management policy configuration, see *Chapter 15, MANAGEMENT-POLICY*.

4.1.59 meshpoint

Global Configuration Commands

Creates a new meshpoint and enters its configuration mode. Use this command to select and configure existing meshpoints.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
meshpoint [<MESHPOINT-NAME>|containing <WORD>]
```

Parameters

- `meshpoint [<MESHPOINT-NAME>|containing <WORD>]`

<MESHPOINT-NAME>	Specify the meshpoint name. If the meshpoint does not exist, it is created.
containing <WORD>	Selects existing meshpoints containing the sub-string <WORD> in their names

Example

```
rfs6000-81742D(config)#meshpoint TestMeshpoint
rfs6000-81742D(config-meshpoint-TestMeshpoint)#?
Mesh Point Mode commands:
  allowed-vlans  Set the allowed VLANs
  beacon-format  The beacon format of this meshpoint
  control-vlan   VLAN for meshpoint control traffic
  data-rates     Specify the 802.11 rates to be supported on this meshpoint
  description    Configure a description of the usage of this meshpoint
  force          Force suboptimal paths
  meshid         Configure the Service Set Identifier for this meshpoint
  neighbor       Configure neighbor specific parameters
  no             Negate a command or set its defaults
  root           Set this meshpoint as root
  security-mode  The security mode of this meshpoint
  shutdown       Shutdown this meshpoint
  use            Set setting to use
  wpa2           Modify ccmp wpa2 related parameters

  clrscr         Clears the display screen
  commit         Commit all changes made in this session
  do             Run commands from Exec mode
  end            End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service        Service Commands
  show           Show running system information
  write          Write running configuration to memory or terminal

rfs6000-81742D(config-meshpoint-TestMeshpoint)#
```

Related Commands

no	Removes an existing meshpoint

NOTE: For more information on Meshpoint configuration, see *Chapter 26, MESHPOINT*.

4.1.60 meshpoint-qos-policy

Global Configuration Commands

Configures a set of parameters that defines the meshpoint *quality of service* (QoS) policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
meshpoint-qos-policy <MESHPOINT-QOS-POLICY-NAME>
```

Parameters

- `meshpoint-qos-policy <MESHPOINT-QOS-POLICY-NAME>`

<MESHPOINT-QOS-POLICY-NAME>	Specify the meshpoint QoS policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#meshpoint-qos-policy TestMeshpointQoS
rfs6000-81742D(config-meshpoint-qos-TestMeshpointQoS)#?
Mesh Point QoS Mode commands:
  accelerated-multicast  Configure accelerated multicast streams address and
                         forwarding QoS classification
  no                     Negate a command or set its defaults
  rate-limit             Configure traffic rate-limiting parameters on a
                         per-meshpoint/per-neighbor basis

  clrscr                 Clears the display screen
  commit                 Commit all changes made in this session
  do                     Run commands from Exec mode
  end                    End current mode and change to EXEC mode
  exit                   End current mode and down to previous mode
  help                   Description of the interactive help system
  revert                 Revert changes
  service                Service Commands
  show                   Show running system information
  write                  Write running configuration to memory or terminal

rfs6000-81742D(config-meshpoint-qos-TestMeshpointQoS)#
```

Related Commands

no	Removes an existing meshpoint QoS policy

NOTE: For more information on Meshpoint QoS policy configuration, see *Chapter 26, MESHPOINT*.

4.1.61 mint-policy

Global Configuration Commands

Configures the global MiNT policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mint-policy global-default
```

Parameters

- `mint-policy global-default`

global-default	Configures the global default MiNT policy

Example

```
rfs6000-81742D(config)#mint-policy global-default
rfs6000-81742D(config-mint-policy-global-default)#?
Mint Policy Mode commands:
  level    Mint routing level
  lsp      LSP
  mtu      Configure the global Mint MTU
  no       Negate a command or set its defaults
  router   Mint router
  udp      Configure mint UDP/IP encapsulation

  clrscr   Clears the display screen
  commit   Commit all changes made in this session
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  revert   Revert changes
  service  Service Commands
  show     Show running system information
  write    Write running configuration to memory or terminal

rfs6000-81742D(config-mint-policy-global-default)#
```

Related Commands

no	Removes an existing MiNT policy

NOTE: For more information on MiNT policy configuration, see *Chapter 14, MINT-POLICY*.

4.1.62 nac-list

Global Configuration Commands

A *Network Access Control* (NAC) policy configures a list of devices that can access a network based on their MAC addresses.

The following table lists NAC list configuration mode commands:

Table 4.37 *NAC-List Config Command*

Command	Description	Reference
nac-list	Creates a NAC list and enters its configuration mode	*page 4-319*
nac-list-mode commands	Summarizes NAC list configuration mode commands	*page 4-320*

4.1.62.1 nac-list

nac-list

Configures a NAC list that manages access to the network

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
nac-list <NAC-LIST-NAME>
```

Parameters

- `nac-list <NAC-LIST-NAME>`

<NAC-LIST-NAME>	Specify the NAC list name. If the NAC list does not exist, it is created.

Example

```
rfs6000-81742D(config)#nac-list test
rfs6000-81742D(config-nac-list-test)#?
NAC List Mode commands:
  exclude  Specify MAC addresses to be excluded from the NAC enforcement list
  include  Specify MAC addresses to be included in the NAC enforcement list
  no       Negate a command or set its defaults

  clrscr   Clears the display screen
  commit   Commit all changes made in this session
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  revert   Revert changes
  service  Service Commands
  show     Show running system information
  write    Write running configuration to memory or terminal

rfs6000-81742D(config-nac-list-test)#
```

Related Commands

no	Removes a NAC list

4.1.62.2 nac-list-mode commands

nac-list

The following table summarizes NAC list configuration mode commands:

Table 4.38 *NAC-List-Mode Commands*

Command	Description	Reference
exclude	Specifies the MAC addresses excluded from the NAC enforcement list	*page 4-321*
include	Specifies the MAC addresses included in the NAC enforcement list	*page 4-322*
no	Cancels an exclude or include NAC list rule	*page 4-323*

4.1.62.2.107 exclude

nac-list-mode commands

Specifies the MAC addresses excluded from the NAC enforcement list

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
exclude <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

Parameters

- `exclude <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]`

<START-MAC>	Specifies a range of MAC addresses or a single MAC address to exclude from the NAC enforcement list • <START-MAC> – Specify the first MAC address in the range. **Note:** Use this parameter to specify a single MAC address.
<END-MAC>	Specifies the last MAC address in the range (optional if a single MAC is added to the list) • <END-MAC> – Specify the last MAC address in the range.
precedence <1-1000>	Sets the rule precedence. Exclude entries are checked in the order of their rule precedence. • <1-1000> – Specify a value from 1 - 1000.

Example

```
rfs6000-81742D(config-nac-list-test)#exclude 00-40-96-B0-BA-2A precedence 1

rfs6000-81742D(config-nac-list-test)#show context
nac-list test
 exclude 00-40-96-B0-BA-2A 00-40-96-B0-BA-2A precedence 1
rfs6000-81742D(config-nac-list-test)#
```

4.1.62.2.108 include

nac-list-mode commands

Specifies the MAC addresses included in the NAC enforcement list

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
include <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

Parameters

- `include <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]`

<START-MAC>	Specifies a range of MAC addresses or a single MAC address to include in the NAC enforcement list • <START-MAC> – Specify the first MAC address in the range. **Note:** Use this parameter to specify a single MAC address.
<END-MAC>	Specifies the last MAC address in the range (optional if a single MAC is added to the list) • <END-MAC> – Specify the last MAC address in the range.
precedence <1-1000>	Sets the rule precedence. Include entries are checked in the order of their rule precedence. • <1-1000> – Specify a value from 1 - 1000.

Example

```
rfs6000-81742D(config-nac-list-test)#include 00-15-70-38-06-49 precedence 2

rfs6000-81742D(config-nac-list-test)#show context
nac-list test
 exclude 00-04-96-B0-BA-2A 00-04-96-B0-BA-2A precedence 1
 include 00-15-70-38-06-49 00-15-70-38-06-49 precedence 2
rfs6000-81742D(config-nac-list-test)#
```

4.1.62.2.109 no

nac-list-mode commands

Cancels an exclude or include NAC list rule

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [exclude|include]

no [exclude|include] <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes or reverts this NAC list's settings based on the parameters passed

Example

The following example shows the NAC list 'test' settings before the 'no' command is executed:

```
rfs6000-81742D(config-nac-list-test)#show context
nac-list test
 exclude 00-04-96-B0-BA-2A 00-04-96-B0-BA-2A precedence 1
 include 00-15-70-38-06-49 00-15-70-38-06-49 precedence 2
rfs6000-81742D(config-nac-list-test)#

rfs6000-81742D(config-nac-list-test)#no exclude 00-40-96-B0-BA-2A precedence 1
```

The following example shows the NAC list 'test' settings after the 'no' command is executed:

```
rfs6000-81742D(config-nac-list-test)#show context
nac-list test
 include 00-15-70-38-06-49 00-15-70-38-06-49 precedence 2
rfs6000-81742D(config-nac-list-test)#
```

Related Commands

exclude	Specifies MAC addresses excluded from the NAC enforcement list
include	Specifies MAC addresses included in the NAC enforcement list

4.1.63 no

Global Configuration Commands

Negates a command, or reverts configured settings to their default

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

  wips-policy                    Delete a wips policy
  wlan                           Delete a wlan object
  wlan-qos-policy                Delete a wireless lan QoS configuration
                                 policy

  service                        Service Commands

<DEVICE>(config)#
```

4.1.64 nsight-policy

Global Configuration Commands

The following table lists NSight policy configuration mode commands:

Table 4.39 *NSight-Policy Config Command*

Command	Description	Reference
nsight-policy	Creates an NSight policy and enters its configuration mode	*page 4-329*
nsight-policy commands	Summarizes NSight policy configuration mode commands	*page 4-331*

4.1.64.1 nsight-policy

nsight-policy

Creates an NSight policy and enters its configuration mode

The NSight policy is an advance management, analytics, reporting, and troubleshooting tool, which when created and applied at the RF Domain level allows the RF Domain manager to send statistics (polled from devices within the RF Domain) to the NOC. The NOC, when enabled as the NSight server, stores this data in a locally or externally hosted database. This large, complex data is collated and presented on an NSight Dashboard that can be launched from the NSight-enabled NOC. For large networks, enabling NSight removes the inadequacies of the existing data collection, presentation, and analytics framework. It simplifies network monitoring, troubleshooting, and reporting.

NOTE: NSight is a licensed feature, and can be enabled only on the application of an NSight license in the NSight server's self mode.

The NSight features include:

- Network statistic and event visualization - Simplified and unified network views based on defined user roles
- Custom dashboards - Live network health information in real-time to optimally assist network administrators
- Live troubleshooting tools - Packet capture, wireless debug logs, TCP/IP ping and traceroute
- Interactive floor maps with timeline views - Visualize and identify potential issues and problems areas
- Real-time trend analysis - Simplify network growth planning
- Exceptionally responsive interface - Any information the admin needs is three, or less, clicks away

The WiNG NSight implementation consists of the following components:

- An NSight server
- A database. This database consists of AP statistics gathered by RF Domain managers.
- An NSight UI portal
- An NSight client hosted on the RF Domain manager, which periodically gathers statistics from APs and forwards to the NSight server.
- Event history – Event details for all APs adopted by the NOC. These are events received by the Cfgd every 30 seconds and sent to the MART server. Each event consists of the RF Domain name, wireless client MAC if applicable, AP MAC, event mnemonic, event timestamp, and the event string itself.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9510, NX9600, VX9000

Syntax

```
nsight-policy <NSIGHT-POLICY-NAME>
```

Parameters

- `nsight-policy <NSIGHT-POLICY-NAME>`

<NSIGHT-POLICY-NAME>	Specify the NSight policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config)#nsight-policy test
nx9500-6C8809(config-nsight-policy-test)#?
Nsight Policy Mode commands:
  enable               Enable this Nsight policy
  event-history-size   Size of the event history collection
  history-ttl          Time to live for historical data
  no                   Negate a command or set its defaults
  nsight-server        Enable Nsight server functionality
  server               Configure Nsight server

  clrscr               Clears the display screen
  commit               Commit all changes made in this session
  end                  End current mode and change to EXEC mode
  exit                 End current mode and down to previous mode
  help                 Description of the interactive help system
  revert               Revert changes
  service              Service Commands
  show                 Show running system information
  write                Write running configuration to memory or terminal

nx9500-6C8809(config-nsight-policy-test)#
```

Related Commands

no	Removes an existing NSight policy

4.1.64.2 nsight-policy commands

nsight-policy

The following table summarizes NSight policy configuration mode commands:

Table 4.40 *NSight-Policy-Config Mode Commands*

Command	Description	Reference
enable	Enables this NSight policy	*page 4-332*
event-history-size	Converts and sizes the NSight event history collection to a capped collection	*page 4-333*
history-ttl	Configures the *time-to-live* (TTL), in days, for historical data related to clients and devices	*page 4-334*
nsight-server	Enables NSight server functionality and configures the SMTP report delivery settings	*page 4-335*
server	Configures the NSight server host. This configuration is used by the NSight client to identify the NSight server host.	*page 4-337*
no	Removes this NSight policy settings	*page 4-338*

4.1.64.2.110 enable

nsight-policy commands

Enables this NSight policy. The default setting is enabled.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
enable
```

Parameters

None

Example

```
nx9510-6C8A5C(config-nsight-policy-test2)#enable
```

Related Commands

no	Disables this NSight policy

4.1.64.2.111 event-history-size

nsight-policy commands

Converts and sizes the NSight event history collection to a capped collection. The conversion occurs when upgrading. Use this command to define the NSight event history collection's size and prevent its unbounded growth. Note, resizing the collection results in the collection contents being dropped.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
event-history-size [high|low|medium]
```

Parameters

- `event-history-size [high|low|medium]`

event-history-size [high|low|medium]	Defines the size of the NSight event history collection. The options are: • high – Sets the size at approximately 10 M events • low – Sets the size at approximately 500 K events. This is the default setting. • medium – Sets the size at approximately 5 M events

Example

```
nx9500-6C8809(config-nsight-policy-test)#event-history-size medium

nx9500-6C8809(config-nsight-policy-test)#show context
nsight-policy test
 event-history-size medium
nx9500-6C8809(config-nsight-policy-test)#
```

Related Commands

no	Reverts the NSight event history collection size to default (5 M)

4.1.64.2.112 history-ttl

nsight-policy commands

Configures the *time-to-live* (TTL), in days, for historical data related to clients, devices, and guest users. This is the duration for which clients, devices, or guest user related data is retained in the NSight database.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
history-ttl [clients|devices|guest-clients]

history-ttl [clients|devices] <1-3650>

history-ttl guest-clients <8-48>
```

Parameters

- `history-ttl [clients|devices] <1-3650>`

history-ttl [client|devices] <1-3650>	Configures the TTL for historical data related to clients and devices • clients – Configures the TTL for wireless clients related historical data • devices – Configures the TTL for devices (adopted access points or site controllers) related historical data The following is common to both the 'clients' and 'devices' keywords: • <1-3650> – Specify a value from 1 - 3650 days. The default for both (clients and devices) is 180 days.

- `history-ttl guest-clients <8-48>`

history-ttl guest-clients <8-48>	Configures the TTL for historical data related to clients and devices • guest-clients – Configures the TTL for guest-client related historical data • <8-48> – Specify a value from 8 - 48 hours. The default is 8 hours.

Example

```
nx9500-6C8809(config-nsight-policy-test)#history-ttl clients 250

nx9500-6C8809(config-nsight-policy-test)#show context
nsight-policy test
 history-ttl clients 250
nx9500-6C8809(config-nsight-policy-test)#
```

Related Commands

no	Reverts the NSight clients or devices TTL duration to default (180 days)

4.1.64.2.113 nsight-server

nsight-policy commands

Enables NSight server functionality and configures the SMTP report delivery settings.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
nsight-server {smtp-report-delivery|standalone}

nsight-server {smtp-report-delivery host <WORD> sender <EMAIL-ADD> [port <1-65535>|security [none|ssl|starttls]|username <USER-NAME> password [0|2|<WORD>]]}

nsight-server {standalone}
```

Parameters

- `nsight-server {smtp-report-delivery host <WORD> sender <EMAIL-ADD> [port <1-65535>|security [none|ssl|starttls]|username <USER-NAME> password [0|2|<WORD>]]}`

nsight-server	Enables NSight server functionality on the host using this NSight policy
smtp-report-delivery host <WORD>	Optional. Configures SMTP report delivery settings • host <WORD> – Configures the SMTP server host • <WORD> – Specify the SMTP server host's IP address or hostname.
sender <EMAIL-ADD>	Optional. Configures the SMTP sender's e-mail address • <EMAIL-ADD> – Specify the sender's e-mail address.
port <1-65535>	Optional. Configures the SMTP server port • <1-65535> – Specify the port from 1 - 65535.
security [none|ssl|starttls]	Optional. Configures the encryption protocol used by the SMTP server. The options are: • none – Uses no encryption • ssl – Uses SSL encryption • starttls – Uses STARTTLS encryption

username <USER-NAME> password [0|2|<WORD>]	Optional. Configures the SMTP username
	• <USER-NAME> Specify the user name
	  • password [0|2|<WORD>] – Configures the password associated with the above configured user
	  • 0 – Configures a clear text password
	  • 2 – Configures an encrypted password
	  • <WORD> – Enter the password.

- `nsight-server {standalone}`

nsight-server	Enables NSight server functionality on the host using this NSight policy
standalone	Optional. Configures NSight server as standalone. Use this option in the split NSight deployment scenario where the NSight server and database are hosted on separate hosts.

Example

```
nx9510-6C8A5C(config-nsight-policy-test2)#nsight-server

nx9510-6C8A5C(config-nsight-policy-test2)#show context
nsight-policy test2
 nsight-server
nx9510-6C8A5C(config-nsight-policy-test2)#
```

Related Commands

no	Disables NSight server functionality on this NSight policy

4.1.64.2.114 server

nsight-policy commands

Configures the NSight server host. This configuration is used by the NSight client to identify the NSight server host.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
server host [<IP>|<HOSTNAME>|<X:X::X:X>] {http|https}
```

Parameters

- `server host [<IP>|<HOSTNAME>|<X:X::X:X>] {http|https}`

server host [<IP>| <HOSTNAME>| <X:X::X:X>]	Configures the NSight server host's address. Use one of the following options to identify the NSight server host: • <IP> – Configures the NSight server's IPv4 address • <HOSTNAME> – Configures the NSight server's hostname • <X:X::X:X> – Configures the NSight server's IPv6 address
{http|https}	Optional. Configures the protocol used to communicate with the NSight server • http – Optional. Uses HTTP to communicate • https – Optional. Uses HTTPS to communicate (this is the default setting)

Example

```
nx9510-6C8A5C(config-nsight-policy-test2)#server host 172.22.0.153 http

nx9510-6C8A5C(config-nsight-policy-test2)#show context
nsight-policy test2
 server host 172.22.0.153 http
 nsight-server
nx9510-6C8A5C(config-nsight-policy-test2)#
```

Related Commands

no	Removes NSight server host settings from this NSight policy

4.1.64.2.115 no

nsight-policy commands

Removes NSight policy settings

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
no [enable|event-history-size|history-ttl [clients|devices|guest-clients]|
   nsight-server {smtp-report-delivery}|server host [<IP>|<HOSTNAME>|<X:X::X:X>]]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes NSight policy settings based on the parameters passed

Example

The following example shows the NSight policy 'test2' settings before the 'no' command is executed:

```
nx9510-6C8A5C(config-nsight-policy-test2)#show context
nsight-policy test2
 server host 172.22.0.153 http
 nsight-server
nx9510-6C8A5C(config-nsight-policy-test2)#

nx9510-6C8A5C(config-nsight-policy-test2)#no server host 172.22.0.153
```

The following example shows the NSight policy 'test2' settings after the 'no' command is executed:

```
nx9500-6C8809(config-nsight-policy-test2)#show context
nsight-policy test2
 nsight-server
nx9510-6C8A5C(config-nsight-policy-test2)#
```

4.1.65 passpoint-policy

Global Configuration Commands

Creates a new passpoint policy and enters its configuration mode

The passpoint policy implements the Hotspot 2.0 Wi-Fi Alliance standard, enabling interoperability between clients, infrastructure, and operators. It makes a portion of the IEEE 802.11u standard mandatory and adds Hotspot 2.0 extensions that allow clients to query a network before actually attempting to join it.

The passpoint policy allows a single or set of Hotspot 2.0 configurations to be global and referenced by the devices that use it. It is mapped to a WLAN. However, only primary WLANs on a BSSID will have their passpoint policy configuration used.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
passpoint-policy <POLICY-NAME>
```

Parameters

- `passpoint-policy <POLICY-NAME>`

passpoint-policy <POLICY-NAME>	Specify the passpoint policy name. If a passpoint policy does not exist, it is created.

Example

```
rfs4000-229D58(config)#passpoint-policy test
rfs4000-229D58(config-passpoint-policy-test)#?
Passpoint Policy Mode commands:
  3gpp                    Configure a 3gpp plmn (public land mobile network) id
  access-network-type     Set the access network type for the passpoint
  connection-capability   Configure the connection capability for the passpoint
  domain-name             Add a domain-name for the passpoint
  hessid                  Set a homogeneous ESSID value for the passpoint
  internet                Advertise the passopint having internet access
  ip-address-type         Configure the advertised ip-address-type
  nai-realm               Configure a NAI realm for the passpoint
  net-auth-type           Add a network authentication type to the passpoint
  no                      Negate a command or set its defaults
  operator                Add configuration related to the operator of the
                          passpoint
  osu                     Online signup
  roam-consortium         Add a roam consortium for the passpoint
  venue                   Set the venue parameters of the passpoint
  wan-metrics             Set the wan-metrics of the passpoint

  clrscr                  Clears the display screen
  commit                  Commit all changes made in this session
  do                      Run commands from Exec mode
  end                     End current mode and change to EXEC mode
  exit                    End current mode and down to previous mode
  help                    Description of the interactive help system
  revert                  Revert changes
  service                 Service Commands
  show                    Show running system information
```

```
  write                  Write running configuration to memory or terminal
rfs4000-229D58(config-passpoint-policy-test)#
```

Related Commands

no	Removes an existing passpoint policy

NOTE: For more information on passpoint policy, see *Chapter 27, PASSPOINT POLICY*.

4.1.66 password-encryption

Global Configuration Commands

Enables password encryption and configures the passphrase used to encrypt passwords. When enabled, passwords configured within the system are not displayed as clear text.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
password-encryption secret 2 <LINE>
```

Parameters

- `password-encryption secret 2 <LINE>`

secret 2 <LINE>	Encrypts passwords with a secret phrase • 2 – Specifies the encryption type as either SHA256 or AES256 • <LINE> – Specify the encryption passphrase.

Example

```
nx9500-6C8809(config)#password-encryption secret 2 test@123
```

To confirm if password encryption is enabled, execute the following command:

```
nx9500-6C8809(config)#show password-encryption status
Password encryption is enabled
nx9500-6C8809(config)#
```

The following example shows the privilege-mode-password as encrypted text. Note, the digit '1' preceding the password implies that displayed text is the encrypted password and not clear text.

```
nx9500-6C8809(config-management-policy-test)#show context include-factory |
include privilege-mode-password
 privilege-mode-password 1
bc28e4d82bb11fa75a3c56346441d48f50f19c47184e2575a59a6a5d18e63925
nx9500-6C8809(config-management-policy-test)#
```

Related Commands

no	Disables password encryption

4.1.67 profile

Global Configuration Commands

Configures profile related commands. If no parameters are given, all profiles are selected.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
profile {anyap|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|
ap81xx|ap82xx|ap8432|ap8533|containing|filter|rfs4000|rfs6000|nx5500|nx75xx|
nx9000|nx9600|vx9000}

profile
{anyap|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|
ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000}
<DEVICE-PROFILE-NAME>

profile {containing <DEVICE-PROFILE-NAME>} {filter type [ap6521|ap6522|ap6532|
ap6562|ap71xx|ap7502|ap7522|ap7532|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|
nx75xx|nx9000|vx9000]}

profile {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|

vx9000]}
```

Parameters

- `profile {anyap|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000} <DEVICE-PROFILE-NAME>`

profile <DEVICE-TYPE> <DEVICE-PROFILE-NAME>	Configures device profile commands. If no device profile is specified, the system configures all device profiles. • <DEVICE-TYPE> – Optional. Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. After specifying the device type, specify the profile name. • <DEVICE-PROFILE-NAME> – Specify the profile name. **Note:** Select 'anyap' to configure a profile applicable to any access point. **Note:** The NX9600 profile option is only available on an NX9600 device.

- `profile {containing <DEVICE-PROFILE-NAME>} {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000]}`

profile	Configures device profile commands
containing <DEVICE-PROFILE-NAME>	Optional. Configures profiles that contain a specified sub-string in the hostname • <DEVICE-PROFILE-NAME> – Specify a substring in the profile name to filter profiles.

filter type	Optional. An additional filter used to configure a specific type of device profile. If no device type is specified, the system configures all device profiles. • type – Filters profiles by the device type. Select a device type from the following options: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. **Note:** The NX9600 profile option is only available on an NX9600 device.

• `profile {filter type [ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000]}`

profile	Configures device profile commands
filter type	Optional. An additional filter used to configure a specific type of device profile. If no device type is specified, the system configures all device profiles. • type – Filters profiles by the device type. Select a device type from the following options: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. **Note:** The NX9600 profile option is only available on an NX9600 device.

Example

```
<DEVICE>(config)#profile <DEVICE-TYPE> <PROFILE-NAME>
<DEVICE>(config-profile-<PROFILE-NAME>)#?
Profile Mode commands:
  adopter-auto-provisioning-policy-lookup  Use centralized auto-provisioning
                                           policy when adopted by another
                                           controller
  adoption                                 Adoption configuration
  alias                                    Alias

<DEVICE>(config-profile-<PROFILE-NAME>)#
```

Related Commands

no	Removes a profile and its associated configurations

NOTE: For more information on profiles and how to configure profiles, see *Chapter 7, PROFILES*.

4.1.68 radio-qos-policy

Global Configuration Commands

Configures a radio *quality-of-service* (QoS) policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radio-qos-policy <RADIO-QOS-POLICY-NAME>
```

Parameters

- `radio-qos-policy <RADIO-QOS-POLICY-NAME>`

<RADIO-QOS-POLICY-NAME>	Specify the radio QoS policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#radio-qos-policy test
rfs6000-81742D(config-radio-qos-test)#?
Radio QoS Mode commands:
  accelerated-multicast  Configure multicast streams for acceleration
  admission-control      Configure admission-control on this radio for one or
                         more access categories
  no                     Negate a command or set its defaults
  smart-aggregation      Configure smart aggregation parameters
  wmm                    Configure 802.11e/Wireless MultiMedia parameters

  clrscr                 Clears the display screen
  commit                 Commit all changes made in this session
  do                     Run commands from Exec mode
  end                    End current mode and change to EXEC mode
  exit                   End current mode and down to previous mode
  help                   Description of the interactive help system
  revert                 Revert changes
  service                Service Commands
  show                   Show running system information
  write                  Write running configuration to memory or terminal

rfs6000-81742D(config-radio-qos-test)#
```

Related Commands

no	Removes an existing Radio QoS policy

NOTE: For more information on radio qos policy, see *Chapter 17, RADIO-QOS-POLICY*.

4.1.69 radius-group

Global Configuration Commands

Configures RADIUS user group parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radius-group <RADIUS-GROUP-NAME>
```

Parameters

- `radius-group <RADIUS-GROUP-NAME>`

<RADIUS-GROUP-NAME>	Specify a RADIUS user group name. The name should not exceed 64 characters. If the RADIUS user group does not exist, it is created.

Example

```
rfs6000-81742D(config)#radius-group testgroup
rfs6000-81742D(config-radius-group-testgroup)#?
Radius user group configuration commands:
  guest       Make this group a Guest group
  no          Negate a command or set its defaults
  policy      Radius group access policy configuration
  rate-limit  Set rate limit for group

  clrscr      Clears the display screen
  commit      Commit all changes made in this session
  do          Run commands from Exec mode
  end         End current mode and change to EXEC mode
  exit        End current mode and down to previous mode
  help        Description of the interactive help system
  revert      Revert changes
  service     Service Commands
  show        Show running system information
  write       Write running configuration to memory or terminal

rfs6000-81742D(config-radius-group-testgroup)#
```

Related Commands

no	Removes an existing RADIUS group

NOTE: For more information on RADIUS user group commands, see *Chapter 16, RADIUS-POLICY*.

4.1.70 radius-server-policy

Global Configuration Commands

Creates an onboard device RADIUS policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radius-server-policy <RADIUS-SERVER-POLICY-NAME>
```

Parameters

- `radius-server-policy <RADIUS-SERVER-POLICY-NAME>`

<RADIUS-SERVER-POLICY-NAME>	Specify the RADIUS server policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#radius-server-policy testpolicy
rfs6000-81742D(config-radius-server-policy-testpolicy)#?
Radius Configuration commands:
  authentication           Radius authentication
  bypass                   Bypass Certificate Revocation List( CRL ) check
  chase-referral           Enable chasing referrals from LDAP server
  crl-check                Enable Certificate Revocation List( CRL ) check
  ldap-agent               LDAP Agent configuration parameters
  ldap-group-verification  Enable LDAP Group Verification setting
  ldap-server              LDAP server parameters
  local                    RADIUS local realm
  nas                      RADIUS client
  no                       Negate a command or set its defaults
  proxy                    RADIUS proxy server
  session-resumption       Enable session resumption/fast reauthentication by
                           using cached attributes
  termination              Enable Eap termination for proxy requests
  use                      Set setting to use

  clrscr                   Clears the display screen
  commit                   Commit all changes made in this session
  do                       Run commands from Exec mode
  end                      End current mode and change to EXEC mode
  exit                     End current mode and down to previous mode
  help                     Description of the interactive help system
  revert                   Revert changes
  service                  Service Commands
  show                     Show running system information
  write                    Write running configuration to memory or terminal

rfs6000-81742D(config-radius-server-policy-testpolicy)#
```

Related Commands

no	Removes an existing RADIUS server policy

NOTE: For more information on RADIUS server policy commands, see *Chapter 16, RADIUS-POLICY*.

4.1.71 radius-user-pool-policy

Global Configuration Commands

Configures a RADIUS user pool

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radius-user-pool-policy <RADIUS-USER-POOL-POLICY-NAME>
```

Parameters

- `radius-user-pool-policy <RADIUS-USER-POOL-POLICY-NAME>`

<RADIUS-USER-POOL-POLICY-NAME>	Specify the RADIUS user pool policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#radius-user-pool-policy testpool
rfs6000-81742D(config-radius-user-pool-testpool)#?
Radius User Pool Mode commands:
  duration  Set a guest user's access duration
  no        Negate a command or set its defaults
  user      Radius user configuration

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

rfs6000-81742D(config-radius-user-pool-testpool)#
```

Related Commands

no	Removes an existing RADIUS user pool

NOTE: For more information on RADIUS user group commands, see *Chapter 16, RADIUS-POLICY*.

4.1.72 rename

Global Configuration Commands

Renames and existing TLO

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rename tlo <TLO-NAME>
```

Parameters

- `rename tlo <TLO-NAME> <NEW-TLO-NAME>`

rename tlo <TLO-NAME> <NEW-TLO-NAME>	Renames an existing TLO object • <TLO-NAME> – Specify the TLO's name. This is the TLO that is to be renamed. • <NEW-TLO-NAME> – Specify the new name for this TLO

Example

The following example shows the top level objects available for renaming:

Enter rename and press Tab to list top level objects available for renaming.

```
nx9500-6C8809(config)#rename
aaa_policy                          aaa_tacacs_policy
address_range_alias                 aif_policy
ap300                               app_group
app_policy                          application
assoc_acl                           auto_provisioning_policy
bgp_as_path_list                    bgp_community_list
bgp_extcommunity_list               bgp_ip_access_list
bgp_ip_prefix_list                  bonjour_gw_discovery_policy
bonjour_gw_forwarding_policy        bonjour_gw_query_forwarding_policy
bridging_policy                     captive_portal
centro_policy                       client_identity
client_identity_group               content_cache_policy
content_filter_policy               crypto_cmp_policy
database_client_policy              database_policy
device_categorization               dhcp_server_policy
dhcpv6_server_policy                dns_whitelist
dr_route_map                        encrypted_string_alias
event_system_policy                 ex3500_ext_ip_acl
ex3500_management_policy            ex3500_qos_class_map_policy
ex3500_qos_policy_map               ex3500_std_ip_acl
ex3500_time_range                   firewall_policy
global_assoc_list                   guest_management
hashed_string_alias                 host_alias
ip_acl                              ip_snmp_acl
ipv6_acl                            ipv6_radv_policy
l2tpv3_policy                       mac_acl
management_policy                   meshpoint
meshpoint_qos                       mint_policy
mint_security_policy                nac_list

--More--
nx9500-6C8809(config)#
```

The following examples first clones the existing IP access list BROADCAST-MULTICAST-CONTROL, and then renames the cloned IP access list:

```
nx9500-6C8809(config)#show context include-factory | include ip access-list
ip access-list BROADCAST-MULTICAST-CONTROL
nx9500-6C8809(config)#

nx9500-6C8809(config)#clone ip_acl BROADCAST-MULTICAST-CONTROL Test_IP_CLONED
nx9500-6C8809(config)#commit

nx9500-6C8809(config)#show context include-factory | include ip access-list
ip access-list BROADCAST-MULTICAST-CONTROL
ip access-list Test_IP_CLONED
nx9500-6C8809(config)#

rfs4000-229D58(config)#rename ip_acl TestIP_CLONED TestIP_RENAMED
rfs4000-229D58(config)#commit

nx9500-6C8809(config)#rename ip_acl Test_IP_CLONED Test_IP_RENAMED
nx9500-6C8809(config)#

nx9500-6C8809(config)#show context include-factory | include ip access-list
ip access-list BROADCAST-MULTICAST-CONTROL
ip access-list Test_IP_RENAMED
nx9500-6C8809(config)#
```

Related Commands

clone	Creates a replica of an existing TLO or device

4.1.73 replace

Global Configuration Commands

Selects an existing device by its MAC address or hostname and replaces it with a new device having a different MAC address. Internally, a new device is created with the new MAC address. The old device's configuration is copied to the new device, and then removed from the controller's configuration (i.e., the old device's configuration is no longer staged on the controller).

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
replace device [<MAC-ADDRESS>|<HOSTNAME>] <NEW-MAC-ADDRESS>
```

Parameters

- `replace device [<MAC-ADDRESS>|<HOSTNAME>] <NEW-MAC-ADDRESS>`

replace device	Replaces an existing device with a new device, such that the old device's configuration is copied on to the new device
[<MAC-ADDRESS>|<HOSTNAME>]	Identifies the device to replace by its MAC address or hostname • <MAC-ADDRESS> – Identifies the device to replace by its MAC address. Specify the device's existing MAC address. • <HOSTNAME> – Identifies the device to replace by its hostname. Specify the device's hostname.
<NEW-MAC-ADDRESS>	Specifies the new device's MAC address Both the new and old devices should of the same model type.

Example

```
rfs4000-882A17(config)#replace device ap7131-4BF364 ?
  AA-BB-CC-DD-EE-FF New device MAC address
rfs4000-882A17(config)#replace device ap7131-4BF364 00-15-0F-BB-98-30
```

The following example shows an existing AP7502 (MAC: DD-AA-BB-88-12-43) configuration staged on a VX9000 controller:

```
VX9000-NOC-DE9D(config-device-DD-AA-BB-88-12-43)#show context
ap7502 DD-AA-BB-88-12-43
 use profile default-ap7502
 use rf-domain default
 hostname ap7502-881243
 interface radio1
  wlan theMOZART bss 1 primary
 interface radio2
  wlan theMOZART bss 1 primary
 interface ge1
  switchport mode access
  switchport access vlan 1
 controller host 12.12.12.2
VX9000-NOC-DE9D(config-device-DD-AA-BB-88-12-43)#
```

The following example shows AP7502 (MAC: DD-AA-BB-88-12-43) replaced by another AP7502 having MAC address 11-22-33-44-55-66:

Note that the new AP7502 device has the same configuration as the old AP7502 device. The HOSTNAME remains the same. Consequently, objects that refer to this particular hostname need not be updated. For example, an hostname alias identifying this particular device, and TLOs using this alias, such as IP/MAC ACLs, remain unchanged.

```
VX9000-NOC-DE9D(config)#replace device DD-AA-BB-88-12-43 11-22-33-44-55-66
VX9000-NOC-DE9D(config)#ap7502 11-22-33-44-55-66
VX9000-NOC-DE9D(config-device-11-22-33-44-55-66)#show context
ap7502 11-22-33-44-55-66
 use profile default-ap7502
 use rf-domain default
 hostname ap7502-881243
 interface radio1
  wlan theMOZART bss 1 primary
 interface radio2
  wlan theMOZART bss 1 primary
 interface ge1
  switchport mode access
  switchport access vlan 1
 controller host 12.12.12.2
VX9000-NOC-DE9D(config-device-11-22-33-44-55-66)#
```

4.1.74 rf-domain

Global Configuration Commands

An RF Domain groups devices that can logically belong to one network.

The following table lists the RF Domain configuration mode commands:

Table 4.41 *RF-Domain Config Commands*

Command	Description	Reference
rf-domain	Creates a RF Domain policy and enters its configuration mode	*page 4-356*
rf-domain-mode commands	Invokes RF Domain configuration mode commands	*page 4-358*

4.1.74.1 rf-domain

rf-domain

Creates an RF Domain or enters the RF Domain configuration context for one or more RF Domains. If the RF Domain does not exist, it is created.

The configuration of controllers (wireless controllers, service platforms, and access points) comprises of RF Domains that define regulatory, location, and other relevant policies. At least one default RF Domain is assigned to each controller. RF Domains allow administrators to assign configuration data to multiple devices deployed in a common coverage area, such as in a floor, building, or site. Each RF Domain contains policies that set the Smart RF or WIPS configuration.

RF Domains also enable administrators to override WLAN SSID name and VLAN assignments. This enables the deployment of a global WLAN across multiple sites and unique SSID name or VLAN assignments to groups of access points servicing the global WLAN. This WLAN override eliminates the need to define and manage a large number of individual WLANs and profiles.

A controller's configuration contains:

- A default RF Domain - Each controller utilizes a default RF Domain. Access Points are assigned to this default RF Domain as they are discovered by the controller. A default RF Domain can be used for single-site and multi-site deployments.
- Single-site deployment – The default RF Domain can be used for single site deployments, where regional, regulatory, and RF policies are common between devices.
- Multi-site deployment – A default RF Domain can omit configuration parameters to prohibit regulatory configuration from automatically being inherited by devices as they are discovered. This is desirable in multi-site deployments with devices spanning multiple countries. Omitting specific configuration parameters eliminates the risk of an incorrect country code from being automatically assigned to a device.
- A user-defined RF Domain - Created by administrators. A user-defined RF Domain can be assigned to multiple devices manually or automatically.
- Manually assigned – Use the CLI or UI to manually assign a user-defined RF Domain to controllers and service platforms.
- Automatically assigned – Use a AP provisioning policy to automatically assign specific RF Domains to access points based on the access point's model, serial number, VLAN, DHCP option, and IP address or MAC address. Automatic RF Domain assignments are useful in large deployments, as they enable plug-n-play access point deployments by automatically applying RF Domains to remote access points. For more information on auto provisioning policy, see *AUTO-PROVISIONING-POLICY*.

Configure and deploy user-defined RF Domains for single or multiple sites where devices require unique regulatory and regional configurations, or unique Smart RF and WIPS policies. User-defined RF Domains can be used to:

- Assign unique Smart RF or WIPS policies to access points deployed on different floors or buildings within in a site.
- Assign unique regional or regulatory configurations to devices deployed in different states or countries.
- Assign unique WLAN SSIDs and/or VLAN IDs to sites assigned a common WLAN without having to define individual WLANs for each site.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rf-domain {<RF-DOMAIN-NAME>|containing <RF-DOMAIN-NAME>}
```

Parameters

- `rf-domain {<RF-DOMAIN-NAME>|containing <RF-DOMAIN-NAME>}`

rf-domain	Creates a new RF Domain or enters its configuration context
<RF-DOMAIN-NAME>	Optional. Specify the RF Domain name (should not exceed 32 characters and should represent the intended purpose). Once created, the name cannot be edited.
containing <RF-DOMAIN-NAME>	Optional. Identifies an existing RF Domain that contains a specified sub-string in the domain name • <RF-DOMAIN-NAME> – Specify a sub-string of the RF Domain name.

Example

```
rfs6000-81742D(config)#rf-domain rfs6000
rfs6000-81742D(config-rf-domain-rfs6000)#?
RF Domain Mode commands:
  alias               Alias
  channel-list        Configure channel list to be advertised to wireless
                      clients
  contact             Configure the contact
  control-vlan        VLAN for control traffic on this RF Domain
  controller-managed  RF Domain manager for this domain will be an adopting
                      controller
  country-code        Configure the country of operation
  geo-coordinates     Configure geo coordinates for this device
  layout              Configure layout
  location            Configure the location
  location-server     LSENSE server configuration
  mac-name            Configure MAC address to name mappings
  no                  Negate a command or set its defaults
  nsight-sensor       Enable sensor for Nsight
  override-smartrf    Configured RF Domain level overrides for smart-rf
  override-wlan       Configure RF Domain level overrides for wlan
  sensor-server       AirDefense sensor server configuration
  stats               Configure the stats related setting
  timezone            Configure the timezone
  tree-node           Configure tree node under which this rf-domain appears
  use                 Set setting to use

  clrscr              Clears the display screen
  commit              Commit all changes made in this session
  do                  Run commands from Exec mode
  end                 End current mode and change to EXEC mode
  exit                End current mode and down to previous mode
  help                Description of the interactive help system
  revert              Revert changes
  service             Service Commands
  show                Show running system information
  write               Write running configuration to memory or terminal
rfs6000-81742D(config-rf-domain-rfs6000)#
```

4.1.74.2 rf-domain-mode commands

rf-domain

This section describes the default commands under RF Domain.

The following table summarizes RF Domain configuration commands:

Table 4.42 *RF-Domain-Mode Commands*

Command	Description	Reference
alias	Creates various types of aliases, such as network, VLAN, network-group, network-service, encrypted-string, hashed -string, etc. at the RF Domain level	*page 4-359*
channel-list	Configures the channel list advertised by radios	*page 4-366*
contact	Configures network administrator's contact information (needed in case of any problems impacting the RF Domain)	*page 4-367*
control-vlan	Configures VLAN for traffic control on a RF Domain	*page 4-368*
controller-managed	Configures the adopting controller or service platform as this RF Domain's manager	*page 4-369*
country-code	Configures the country of operation	*page 4-370*
geo-coordinates	Configures the longitude and latitude of the RF Domain in order to fix its exact geographical location on a map	*page 4-371*
layout	Configures layout information	*page 4-372*
location	Configures the physical location of a RF Domain	*page 4-374*
location-server	Configures an LSENSE server on the selected RF Domain. This command is supported only on the NX95XX series service platforms.	*page 4-375*
mac-name	Maps MAC addresses to names	*page 4-376*
no	Negates a command or reverts configured settings to their default	*page 4-377*
override-smart-rf	Configures RF Domain level overrides for Smart RF	*page 4-379*
override-wlan	Configures RF Domain level overrides for a WLAN	*page 4-380*
sensor-server	Configures an AirDefense sensor server on this RF Domain	*page 4-383*
stats	Configures stats related settings on this RF Domain. These settings define how RF Domain statistics are updated.	*page 4-385*
timezone	Configures a RF Domain's geographic time zone	*page 4-386*
tree-node	Configures the hierarchical (tree-node) structure under which this RF Domain appears	*page 4-388*
use	Enables the use of a specified Smart RF and/or WIPS policy	*page 4-390*

4.1.74.2.116 alias

rf-domain-mode commands

Configures network, VLAN, host, string, network-service, etc. aliases at the RF Domain level

For information on aliases, see *alias*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
alias [address-range|encrypted-string|hashed-string|host|network|network-group|
network-service|number|string|vlan]

alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>

alias hashed-string <HASHED-STRING-ALIAS-NAME> 1 <LINE>

alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>

alias host <HOST-ALIAS-NAME> <HOST-IP>

alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>

alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range|host|network]
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to
<ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]

alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport|ssh|telnet|tftp|www)}

alias number <NUMBER-ALIAS-NAME> <0-4294967295>

alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|
tftp|www)}

alias string <STRING-ALIAS-NAME> <LINE>

alias vlan <VLAN-ALIAS-NAME> <1-4094>
```

Parameters

- `alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>`

address-range <ADDRESS-RANGE-ALIAS-NAME>	Creates a new address-range alias for this RF Domain. Or associates an existing address-range alias with this RF Domain. An address-range alias maps a name to a range of IP addresses. • <ADDRESS-RANGE-ALIAS-NAME> – Specify the address range alias name. Alias name should begin with '$'.

<STARTING-IP> to <ENDING-IP>	Associates a range of IP addresses with this address range alias • <STARTING-IP> – Specify the first IP address in the range. • to <ENDING-IP> – Specify the last IP address in the range. Aliases defined at any given level can be overridden at the next lower level. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>`

encrypted-string <ENCRYPTED-STRING-ALIAS-NAME>	Creates an alias for an encrypted string. Use this alias for string configuration values that are encrypted when "password-encryption" is enabled. For example, in the management-policy, use it to define the SNMP community string. For more information, see *snmp-server*. • <ENCRYPTED-STRING-ALIAS-NAME> – Specify the encrypted-string alias name. Alias name should begin with '$'.

[0|2] <LINE>	Configures the value associated with the alias name specified in the previous step
	• [0|2] <LINE> – Configures the alias value
	Note, if password-encryption is enabled, in the *show > running-config* output, this clear text is displayed as an encrypted string, as shown below:
	`nx9500-6C8809(config)#show running-config`
	`!.............................`
	`alias encrypted-string $enString 2`
	`fABMK2is7UToNiZE3MQXbgAAAAxB0ZIysdqsEJwr6AH/Da//`
	`!`
	`--More--`
	`nx9500-6C8809`
	In the above output, the '2' displayed before the encrypted-string alias value indicates that the displayed text is encrypted and not a clear text.
	However, if password-encryption is disabled the clear text is displayed as is:
	`nx9500-6C8809(config)#show running-config`
	`!.............................`
	`!`
	`alias encrypted-string $enString 0 test11223344`
	`!`
	`--More--`
	`nx9500-6C8809`
	For more information on enabling password-encryption, see *password-encryption*.

- `alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>`

hashed-string <HASHED-STRING-ALIAS-NAME>	Creates an alias for a hashed string. Use this alias for configuration values that are hashed string, such as passwords. For example, in the management-policy, use it to define the privilege mode password. For more information, see *privilege-mode-password*. • <HASHED-STRING-ALIAS-NAME> – Specify the hashed-string alias name. Alias name should begin with '$'.

<LINE>	Configures the hashed-string value associated with this alias.
	`nx9500-6C8809(config)#show running-config`
	`!`
	`alias encrypted-string $WRITE 2 sBqVCDAoxs3oByF5PCSuFAAAAAd7HT2+EiT/l/BXm9c4SBDv`
	`!`
	`alias hashed-string $PriMode 1 faffdde27cb49ad634ea20df4f7c8ef2685894d10ffcb1b2efba054112ecfc75`
	`--More--`
	`nx9500-6C8809`
	In the above *show > running-config* output, the '1' displayed before the hashed-string alias value indicates that the displayed text is hashed and not a clear text.

- `alias host <HOST-ALIAS-NAME> <HOST-IP>`

host <HOST-ALIAS-NAME>	Creates a host alias for this RF Domain. Or associates an existing host alias with this RF Domain. A host alias maps a name to a single network host. • <HOST-ALIAS-NAME> – Specify the host alias name. Alias name should begin with '$'.
<HOST-IP>	Associates the network host's IP address with this host alias • <HOST-IP> – Specify the network host's IP address. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>`

network <NETWORK-ALIAS-NAME>	Creates a network alias for this RF Domain. Or associates an existing network alias with this RF Domain. A network alias maps a name to a single network address. • <NETWORK-ALIAS-NAME> – Specify the network alias name. Alias name should begin with '$'.
<NETWORK-ADDRESS/MASK>	Associates a single network with this network alias • <NETWORK-ADDRESS/MASK> – Specify the network's address and mask. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to <ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}| network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]`

network-group <NETWORK-GROUP-ALIAS-NAME>	Creates a network-group alias for this RF Domain. Or associates an existing network-group alias with this RF Domain. • <NETWORK-GROUP-ALIAS-NAME> – Specify the network-group alias name. Alias name should begin with '$'. Contd..

	After specifying the name, specify the following: a range of IP addresses, host addresses, or a range of network addresses. **Note:** Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.
address-range <STARTING-IP> to <ENDING-IP> {<STARTING-IP> to <ENDING-IP>}	Associates a range of IP addresses with this network-group alias • <STARTING-IP> – Specify the first IP address in the range. • to <ENDING-IP> – Specify the last IP address in the range. • <STARTING-IP> to <ENDING-IP> – Optional. Specifies more than one range of IP addresses. A maximum of eight (8) IP address ranges can be configured.
host <HOST-IP> {<HOST-IP>}	Associates a single or multiple hosts with this network-group alias • <HOST-IP> – Specify the hosts' IP address. • <HOST-IP> – Optional. Specifies more than one host. A maximum of eight (8) hosts can be configured.
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}	Associates a single or multiple networks with this network-group alias • <NETWORK-ADDRESS/MASK> – Specify the network's address and mask. • <NETWORK-ADDRESS/MASK> – Optional. Specifies more than one network. A maximum of eight (8) networks can be configured.

```
• alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|
eigrp|gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|
https|ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|
telnet|tftp|www)}
```

alias network-service <NETWORK-SERVICE-ALIAS-NAME>	Creates a network-service alias for this RF Domain. Or associates an existing network-service alias with this RF Domain. A network-service alias maps a name to network services and the corresponding source and destination software ports. • <NETWORK-SERVICE-ALIAS-NAME> – Specify a network-service alias name. Alias name should begin with '$'. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.
proto [<0-254>|<WORD>|eigrp|gre|igmp|igp|ospf|vrrp]	Use one of the following options to associate an Internet protocol with this network-service alias: • <0-254> – Identifies the protocol by its number. Specify the protocol number from 0 - 254. This is the number by which the protocol is identified in the *Protocol* field of the IPv4 header and the *Next Header* field of IPv6 header. For example, the *User Datagram Protocol's* (UDP) designated number is 17. • <WORD> – Identifies the protocol by its name. Specify the protocol name. • eigrp – Selects *Enhanced Interior Gateway Routing Protocol* (EIGRP). The protocol number 88. • gre – Selects *Generic Routing Encapsulation* (GRE). The protocol number is 47. • igmp – Selects *Internet Group Management Protocol* (IGMP). The protocol number is 2. • igp – Selects *Interior Gateway Protocol* (IGP). The protocol number is 9. • ospf – Selects *Open Shortest Path First* (OSPF). The protocol number is 89. • vrrp – Selects *Virtual Router Redundancy Protocol* (VRRP). The protocol number is 112.

{(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|tftp|www)}	After specifying the protocol, you may configure a destination port for this service. These keywords are recursive and you can configure multiple protocols and associate multiple destination and source ports.
	• <1-65535> – Optional. Configures a destination port number from 1 - 65535
	• <WORD> – Optional. Identifies the destination port by the service name provided. For example, the *secure shell* (SSH) service uses TCP port 22.
	• bgp – Optional. Configures the default *Border Gateway Protocol* (BGP) services port (179)
	• dns – Optional. Configures the default *Domain Name System* (DNS) services port (53)
	• ftp – Optional. Configures the default *File Transfer Protocol* (FTP) control services port (21)
	• ftp-data – Optional. Configures the default FTP data services port (20)
	• gopher – Optional. Configures the default gopher services port (70)
	• https – Optional. Configures the default HTTPS services port (443)
	• ldap – Optional. Configures the default *Lightweight Directory Access Protocol* (LDAP) services port (389)
	• nntp – Optional. Configures the default Newsgroup (NNTP) services port (119)
	• ntp – Optional. Configures the default *Network Time Protocol* (NTP) services port (123)
	• POP3 – Optional. Configures the default *Post Office Protocol* (POP3) services port (110)
	• proto – Optional. Use this option to select another Internet protocol in addition to the one selected in the previous step.
	• sip – Optional. Configures the default *Session Initiation Protocol* (SIP) services port (5060)
	• smtp – Optional. Configures the default *Simple Mail Transfer Protocol* (SMTP) services port (25)
	• sourceport [<1-65535>|<WORD>] – Optional. After specifying the destination port, you may specify a single or range of source ports.
	  • <1-65535> – Specify the source port from 1 - 65535.
	  • <WORD> – Specify the source port range, for example 1-10.
	• ssh – Optional. Configures the default SSH services port (22)
	• telnet – Optional. Configures the default Telnet services port (23)
	• tftp – Optional. Configures the default *Trivial File Transfer Protocol* (TFTP) services port (69)
	• www – Optional. Configures the default HTTP services port (80)

• `alias number <NUMBER-ALIAS-NAME> <0-4294967295>`

alias number <NUMBER-ALIAS-NAME> <0-4294967295>	Creates a new number alias or applies an existing number, identified by the <NUMBER-ALIAS-NAME> keyword, • <NUMBER-ALIAS-NAME> – Specify the number alias name. • <0-4294967295> – Specify the number, from 0 - 4294967295, assigned to the number alias created. Contd..

	Number aliases map a name to a numeric value. For example, 'alias number $NUMBER 100'. • The number alias name is: $NUMBER • The value assigned is: 100 The value referenced by alias $NUMBER, wherever used, is 100.

- `alias string <STRING-ALIAS-NAME> <LINE>`

alias string <STRING-ALIAS-NAME>	Creates a string alias for this RF Domain. Or associates an existing string alias with this RF Domain. String aliases map a name to an arbitrary string value. For example, 'alias string $DOMAIN test.example_company.com'. In this example, the string alias name is: *$DOMAIN* and the string value it is mapped to is: *test.example_company.com*. In this example, the string alias refers to a domain name. • <STRING-ALIAS-NAME> – Specify the string alias name. • <LINE> – Specify the string value. Alias name should begin with '$'. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias vlan <VLAN-ALIAS-NAME> <1-4094>`

alias vlan <VLAN-ALIAS-NAME>	Creates a VLAN alias for this RF Domain. Or associates an existing VLAN alias with this RF Domain. A VLAN alias maps a name to a VLAN ID. • <VLAN-ALIAS-NAME> – Specify the VLAN alias name. Alias name should begin with '$'.
<1-4094>	Maps the VLAN alias to a VLAN ID • <1-4094> – Specify the VLAN ID from 1 - 4094. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

Example

```
rfs4000-229D58(config)#show context
!
! Configuration of RFS4000 version 5.9.0.0-008B

!
!
version 2.5
!
!
alias network-group $TestNetGrpAlias network 192.168.13.0/24 192.168.16.0/24
alias network-group $TestNetGrpAlias address-range 192.168.13.7 to 192.168.13.16
192.168.13.20 to 192.168.13.25
!
alias network $TestNetworkAlias 192.168.13.0/24
!
alias host $TestHostAlias 192.168.13.10
!
alias address-range $TestAddRanAlias 192.168.13.10 to 192.168.13.13
!
alias network-service $NetworkServAlias proto udp
!
alias network-service $kerberos proto tcp 749 750 80 proto udp 68 sourceport 67
!
```

```
alias vlan $TestVLANAlias 1
--More--
rfs4000-229D58(config)#
```

In the following examples, the global aliases '$kerberos' and '$TestVLANAlias' are associated with the RF Domain 'test' and overrides applied:

```
rfs4000-229D58(config-rf-domain-test)#alias network-service $kerberos proto tcp
749 750 80

rfs4000-229D58(config-rf-domain-test)#alias vlan $TestVLANAlias 10

rfs4000-229D58(config-rf-domain-test)#show context
rf-domain test
 no country-code
 alias network-service $kerberos proto tcp 749 750 80
  alias vlan $TestVLANAlias 10
rfs4000-229D58(config-rf-domain-test)#

nx9500-6C8809(config-rf-domain-test)#alias string $test example_company.com

nx9500-6C8809(config-rf-domain-test)#show context
rf-domain test
 no country-code
 alias string $test example_company.com
nx9500-6C8809(config-rf-domain-test)#
```

Example 1:

In the following examples, the network-group alias '$test' is configured to include hosts 192.168.1.10 and 192.168.1.11, networks 192.168.2.0/24 and 192.168.3.0/24 and address-range 192.168.4.10 to 192.168.4.20.

```
rfs4000-229D58(config)#alias network-group $test host 192.168.1.10 192.168.1.11
rfs4000-229D58(config)#alias network-group $test network 192.168.2.0/24
192.168.3.0/24
rfs4000-229D58(config)#alias network-group $test address-range 192.168.4.10 to
192.168.4.20
```

Associate this network-group alias '$test' to the RF Domain 'test' and override the 'host' element of the alias.

```
rfs4000-229D58(config-rf-domain-test)#alias network-group $test host
192.168.10.10
rfs4000-229D58(config-rf-domain-test)#show context
rf-domain test
 no country-code
 alias network-service $kerberos proto tcp 749 750 80
  alias network-group $test host 192.168.10.10
  alias network-group $test network 192.168.2.0/24 192.168.3.0/24
  alias network-group $test address-range 192.168.4.10 to 192.168.4.20
  alias vlan $TestVLANAlias 10
rfs4000-229D58(config-rf-domain-test)#
```

In the preceding example, the 'host' element of the network-group alias '$test' has been overridden. But the 'network' and 'address-range' elements have been retained as is.

Related Commands

no	Removes a network, network-group, network-service, VLAN, or string alias from this RF Domain

4.1.74.2.117 channel-list

rf-domain-mode commands

Configures the channel list advertised by radios. This command also enables a dynamic update of a channel list.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
channel-list [2.4GHz|5GHz|dynamic]

channel-list dynamic

channel-list [2.4GHz|5GHz] <CHANNEL-LIST>
```

Parameters

- `channel-list dynamic`

dynamic	Enables a dynamic update of a channel list

- `channel-list [2.4GHz|5GHz] <CHANNEL-LIST>`

2.4GHz <CHANNEL-LIST>	Configures the channel list advertised by radios operating in the 2.4 GHz mode • <CHANNEL-LIST> – Specify the list of channels separated by commas or hyphens.
5GHz <CHANNEL-LIST>	Configures the channel list advertised by radios operating in the 5.0 GHz mode • <CHANNEL-LIST> – Specify the list of channels separated by commas or hyphens.

Example

```
rfs6000-81742D(config-rf-domain-default)#channel-list 2.4GHz 1-10

rfs6000-81742D(config-rf-domain-default)#show context
rf-domain default
 no country-code
 channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
rfs6000-81742D(config-rf-domain-default)#
```

Related Commands

no	Removes the list of channels configured on the selected RF Domain for 2.4 GHz and 5.0 GHz bands. Also disables dynamic update of a channel list.

4.1.74.2.118 contact

rf-domain-mode commands

Configures the network administrator's contact details. The network administrator is responsible for addressing problems impacting the network.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
contact <WORD>
```

Parameters

- `contact <WORD>`

contact <WORD>	Specify contact details, such as name and number.

Example

```
rfs6000-81742D(config-rf-domain-default)#contact Bob+14082778691

rfs6000-81742D(config-rf-domain-default)#show context
rf-domain default
 contact Bob+14082778691
 no country-code
 channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
rfs6000-81742D(config-rf-domain-default)#
```

Related Commands

no	Removes a network administrator's contact details

4.1.74.2.119 control-vlan

rf-domain-mode commands

Configures the VLAN designated for traffic control in this RF Domain

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
control-vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

Parameters

- `control-vlan [<1-4094>|<VLAN-ALIAS-NAME>]`

[<1-4094>| <VLAN-ALIAS-NAME>]	Specify the VLAN ID from 1 - 4094. Alternately, use a vlan-alias to identify the control VLAN. If using a vlan-alias, ensure that the alias is existing and configured.

Example

```
rfs6000-81742D(config-rf-domain-default)#control-vlan 1

rfs6000-81742D(config-rf-domain-default)#show context
rf-domain default
 contact Bob+14082778691
 no country-code
 channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
 control-vlan 1
rfs6000-81742D(config-rf-domain-default)#
```

Related Commands

no	Disables the VLAN designated for controlling RF Domain traffic

4.1.74.2.120 controller-managed

rf-domain-mode commands

Configures the adopting controller (wireless controller, access point, or service platform) as this RF Domain's manager. In other words, the RF Domain is controller managed, and the managing controller is the device managing the RF Domain.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
controller-managed
```

Parameters

None

Example

```
rfs4000-229D58(config-rf-domain-test)#controller-managed
rfs4000-229D58(config-rf-domain-test)#commit

rfs4000-229D58(config-rf-domain-test)#show context
rf-domain test
 country-code in
 controller-managed
 network-alias techPubs host 192.168.13.8
 network-alias techPubs address-range 192.168.13.10 to 192.168.13.15
 service-alias testing index 10 proto 9 destination-port range 21 21
rfs4000-229D58(config-rf-domain-test)#
```

Related Commands

no	Removes the adopting controller or service platform as this RF Domain's manager

4.1.74.2.121 country-code

rf-domain-mode commands

Configures a RF Domain's country of operation. Since device channels transmit in specific channels unique to the country of operation, it is essential to configure the country code correctly or risk using illegal operation.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
country-code <WORD>
```

Parameters

- `country-code <WORD>`

country-code	Configures the RF Domain's country of operation
<WORD>	Specify the two (2) letter ISO-3166 country code.

Example

```
rfs6000-81742D(config-rf-domain-default)#country-code ?
  WORD  The 2 letter ISO-3166 country code
  ae    United Arab Emirates
  ag    Antigua and Barbuda
  ai    Anguilla
  al    Albania
  an    Dutch Antilles
  ar    Argentina
  at    Austria
  au    Australia
  ba    Bosnia-Herzegovina
  bb    Barbados
  bd    Bangladesh
  be    Belgium
  bf    Burkina Faso

Related Commands

no	Removes or resets this RF Domain's configured country of operation

4.1.74.2.122 geo-coordinates

rf-domain-mode commands

Configures the longitude and latitude of the RF Domain in order to fix its exact geographical location on a map. Use this command to define the geographical area where a common set of device configurations are deployed and managed by this RF Domain policy.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
geo-coordinates <-90.0000-90.0000> <-180.0000-180.0000>
```

Parameters

- `geo-coordinates <-90.0000-90.0000> <-180.0000-180.0000>`

geo-coordinates <-90.0000-90.0000> <-180.0000-180.0000>	Configures the geo-coordinates of this RF Domain • <-90.0000-90.0000> – Specify the latitude from -90.0000 - 90.0000. • -180.0000-180.0000 – Specify the longitude from -180.0000 - 180.0000.

Example

```
nx9500-6C8809(config-rf-domain-TechPubs)#geo-coordinates 12.971599 77.594563

nx9500-6C8809(config-rf-domain-TechPubs)#show context

Related Commands

no	Removes or resets this RF Domain's configured geo-coordinates

4.1.74.2.123 layout

rf-domain-mode commands

Configures the RF Domain layout in terms of area, floor, and location on a map. It allows users to place APs across the deployment map. A maximum of 256 layouts is permitted.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
layout [area|description|floor|map-location] {(area|description|floor|map-
location)}

layout [area <AREA-NAME>|description <LINE>|floor <FLOOR-NAME> {<1-4094>}|
map-location <URL> units [feet|meters]] {(area <AREA-NAME>|description <LINE>|
floor <FLOOR-NAME> {<1-4094>}|map-location <URL> units [feet|meters])}
```

Parameters

```
• layout [area <AREA-NAME>|description <LINE>|floor <FLOOR-NAME> {<1-4094>}|
map-location <URL> units [feet|meters]] {(area <AREA-NAME>|description <LINE>|
floor <FLOOR-NAME> {<1-4094>}|map-location <URL> units [feet|meters])}
```

layout	Configures the RF Domain's layout in terms of area, floor, and location on a map These are recursive parameters and you can configure one or all of these parameters.
area <AREA-NAME>	Configures the RF Domain's layout in terms of the area of location • <AREA-NAME> – Specify the area name. **Note:** After configuring the RF Domain's area of functioning, optionally specify the floor name (and number), description, and/or the location on map.
description <LINE>	Configures a description for this RF Domain • <LINE> – Specify a description that enables you to identify the RF Domain. For a multi-worded string, use double quotes.
floor <FLOOR-NAME> <1-4094>	Configures the RF Domain's layout in terms of the floor name and number • <FLOOR-NAME> – Specify the floor name. • <1-4094> – Optional. Specifies the floor number from 1 - 4094. The default floor number is 1. **Note:** After configuring the RF Domain's floor name (and number), optionally specify the area name, description, and/or the location on map.
map-location <URL> units [feet|meters]	Configures the location of the RF Domain on the map • <URL> – Specify the URL to configure the map location. • units [feet|meters] – Configures the map units. The options are: feet or meters • feet – Configures the map units in terms of feet • meters – Configures the map units in terms of meter After configuring the location of the RF Domain on the map, optionally specify the area name, floor name (and number), and/or description.

Example

```
rfs6000-81742D(config-rf-domain-default)#layout map-location www.firstfloor.com
units meters area HamiltonAve floor Floor1

4.1.74.2.124 location

rf-domain-mode commands

Configures the RF Domain's physical location's name. The location could be as specific as the building name or floor number. Or it could be generic and include an entire site. The location defines the physical area where a set of devices with common configurations are deployed and managed by a RF Domain policy.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
location <WORD>
```

Parameters

- `location <WORD>`

location <WORD>	Configures the RF Domain location by specifying the area or building name • <WORD> – Specify the location.

Example

```
rfs6000-81742D(config-rf-domain-default)#location SanJose

rfs6000-81742D(config-rf-domain-default)#show context

Related Commands

no	Removes the RF Domain location

4.1.74.2.125 location-server

rf-domain-mode commands

Configures the L-Sense server's IP address or hostname on the selected RF Domain. When configured, the AP7522, AP7532, AP7562, AP8432 and AP8533 model access points, within the RF Domain, extract and forward client-location related data to the specified L-Sense server.

L-Sense is a highly scalable indoor locationing platform that gathers location-related analytics, such as visitor trends, peak and off-peak times, dwell time, heat-maps, etc. to enable entrepreneurs deeper visibility at a venue. To enable the location tracking system, the L-Sense server should be up and running and the RF Domain Sensor configuration should point to the L-sense server.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510

Syntax

```
location-server 1 ip <LSENSE-SERVER-IP/HOSTNAME> {port [443|<1-65535>]}
```

Parameters

- `location-server 1 ip <LSENSE-SERVER-IP/HOSTNAME> {port [443|<1-65535>]}`

location-server 1 ip <LSENSE-SERVER-IP/HOSTNAME>	Configures the LSENSE server parameters • 1 – Sets the server ID as 1. As of now only one L-Sense server can be configured. • ip <LSENSE-SERVER-IP/HOSTNAME> – Specify the server's IPv4 address/host-name. This is the L-Sense server designated to receive RSSI scan data from a WiNG dedicated sensor.
port [443|<1-65535>]	Optional. Configures the port where the LSENSE server is reachable. The options are: • 443 – Configures port 443. This is the default setting. • <1-65535> – Alternately, specify a port as the LSENSE server port from 1 - 65535.

Example

```
nx9500-6C8809(config-rf-domain-test)#location-server 1 ip 192.168.13.20 port 200

nx9500-6C8809(config-rf-domain-test)#show context
rf-domain test
 no country-code
 location-server 1 ip 192.168.13.20 port 200
nx9500-6C8809(config-rf-domain-test)#
```

Related Commands

no	Removes the LSENSE server configurations

4.1.74.2.126 mac-name

rf-domain-mode commands

Configures a relevant name for each MAC address. Use this command to associate client names to specific connected client MAC addresses for improved client management.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mac-name <MAC> <NAME>
```

Parameters

- `mac-name <MAC> <NAME>`

mac-name <MAC> <NAME>	Assigns a user-friendly name to this RF Domain's member access point's connected client to assist in its easy recognition • <MAC> – Specify the MAC address • <NAME> – Specify the client name for the specified MAC address. The name specified here will be used in events and statistics.

Example

```
rfs6000-81742D(config-rf-domain-default)#mac-name 11-22-33-44-55-66 TestDevice

rfs6000-81742D(config-rf-domain-default)#show context

 layout area Ecospace floor Floor1 map-location www.firstfloor.com units meters
rfs6000-81742D(config-rf-domain-default)#
```

4.1.74.2.128 override-smart-rf

rf-domain-mode commands

Enables dynamic channel switching for Smart RF radios. This command allows you to configure an override list of channels that Smart RF can use for channel compensations on 2.4 GHz and 5.0 GHz radios.

When a radio fails or is faulty, a Smart RF policy provides automatic recovery by instructing neighboring access points to increase their transmit power to compensate for the coverage loss. Once correct access point placement has been established, Smart-RF can optionally be leveraged for automatic detector radio selection. Smart-RF uses detector radios to monitor RF events and can ensure availability of adequate detector coverage.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
override-smartrf channel-list [2.4GHz|5GHZ] <CHANNEL-LIST>
```

Parameters

- `override-smartrf channel-list [2.4GHz|5GHZ] <CHANNEL-LIST>`

override-smartrf	Enables dynamic channel switching for Smart RF radios
channel-list	Configures a list of channels for 2.4 GHz and 5.0 GHz Smart RF radios
2.4GHz <CHANNEL-LIST>	Selects the 2.4 GHz Smart RF radio channels • <CHANNEL-LIST> – Specify a list of channels separated by commas.
5GHz <CHANNEL-LIST>	Selects the 5.0 GHz Smart RF radio channels • <CHANNEL-LIST> – Specify a list of channels separated by commas.

Example

```
rfs6000-81742D(config-rf-domain-default)#override-smartrf channel-list 2.4GHz
1,2,3

rfs6000-81742D(config-rf-domain-default)#show context

```

Related Commands

no	Removes the override-smartrf list of channels configured for 2.4 GHz and 5.0 GHz radios

4.1.74.2.129 override-wlan

rf-domain-mode commands

Configures RF Domain level overrides for a WLAN

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
override-wlan <WLAN-NAME> [shutdown|ssid|template|vlan-pool|wep128|wpa-wpa2-psk]

override-wlan <WLAN-NAME> [shutdown|ssid <SSID>|template <TEMPLATE-NAME>|vlan-
pool <1-4094> {limit <0-8192>}]

override-wlan <WLAN-NAME> wpa-wpa2-psk [0 <WORD>|2 <WORD>]

override-wlan <WLAN-NAME> wep128 [key <1-4> hex [0 <WORD>|2 <WORD>]|transmit-key
<1-4>]
```

Parameters

```
• override-wlan <WLAN-NAME> [shutdown|ssid <SSID>|template <TEMPLATE-NAME>|vlan-
pool <1-4094> {limit <0-8192>}]
```

<WLAN-NAME>	Configures the WLAN name If applying RF Domain level overrides to an existing WLAN, specify its name. If creating a new WLAN, specify a name not exceeding 32 characters and representing the WLAN's coverage area. After creating the WLAN, configure its override parameters.
shutdown	Shuts down WLAN operation on all mapped radios
ssid <SSID>	Configures a override SSID associated with this WLAN • <SSID> – Specify the SSID (should not exceed 32 characters in length). Each WLAN provides associated wireless clients with a SSID. This has limitations, because it requires wireless clients to associate with different SSIDs to obtain QoS and security policies. However, a WiNG-managed RF Domain can have WLANs assigned and advertise a single SSID, and yet allow users to inherit different QoS or security policies.
template <TEMPLATE-NAME>	Configures a template name for this RF Domain • <TEMPLATE-NAME> – Specify the template name (should not exceed 32 characters in length).
vlan-pool <1-4094> {limit <0-8192>}	Configures the override VLANs available to this WLAN • <1-4094> – Specify the VLAN ID from 1 - 4094. • limit <0-8192> – Optional. Sets a limit to the number of users on this VLAN from 0 - 8192. The default is 0. Controllers and service platforms allow the mapping of a WLAN to more than one VLAN. Wireless clients associating with a WLAN are assigned VLANs, from the pool representative of the WLAN, in a way that ensures proper load balancing across VLANs. Clients are tracked per VLAN, and assigned to the least used/loaded VLAN. Client VLAN usage is tracked on a per-WLAN basis. The maximum allowed client limit is 8192 per VLAN.

- `override-wlan <WLAN-NAME> wpa-wpa2-psk [0 <WORD>|2 <WORD>]`

<WLAN-NAME>	Configures the WLAN name If applying RF Domain level overrides to an existing WLAN, specify its name. If creating a new WLAN, specify a name not exceeding 32 characters and representing the WLAN's coverage area. After creating the WLAN, configure its override parameters.
wpa-wpa2-psk <PASSPHRASE>	Overrides a WLAN's existing WPA-WPA2 pre-shared key or passphrase at the RF Domain level. WPA2 is a newer 802.11i standard that provides wireless security that is stronger than *Wi-Fi Protected Access* (WPA) and WEP. • <PASSPHRASE> – Specify a WPA-WPA2 key or passphrase. It is an alphanumeric string of 8 to 64 ASCII characters or 64 HEX characters as the primary string, which both the transmitting and receiving authenticators must share in this new override PSK. The alphanumeric string allows character spaces. The string is converted to a numeric value. This passphrase saves the you the necessity of entering the 256-bit key each time keys are generated.

- `override-wlan <WLAN-NAME> wep128 [key <1-4> hex [0 <WORD>|2 <WORD>]|transmit-key <1-4>]`

<WLAN-NAME>	Configures the WLAN name If applying RF Domain level overrides to an existing WLAN, specify its name. If creating a new WLAN, specify a name not exceeding 32 characters and representing the WLAN's coverage area. After creating the WLAN, configure its override parameters.
wep128	Overrides a WLAN's existing WEP128 keys at the RF Domain level (not the profile level). WEP128 uses a 104 bit key, which is concatenated with a 24-bit *initialization vector* (IV) to form the RC4 traffic key. WEP may be all a small-business user needs for the simple encryption of wireless data on the WLAN. However, networks that require more security are at risk from a WEP flaw. WEP is only recommended if there are client devices incapable of using higher forms of security. The existing 802.11 standard alone offers administrators no effective method to update keys.

key <1-4> hex [0 <WORD>| 2 <WORD>]	Configures the WEP128 key.
	A total of four keys can be configured.
	• <1-4> – Select the key index from 1- 4.
	  • hex – Configures a hexadecimal key
	  • 0 <WORD> – Configures a clear text key
	  • 2 <WORD> – Configures an encrypted key
	The following parameter is common to both clear-text and encrypted key options:
	• <WORD> – Specify the WEP128/Keyguard key (should not exceed 26 hexadecimal characters in length).

transmit-key <1-4>	Configures transmit WEP/Keyguard key settings • <1-4> – Transmit the key identified by the key index specified here. Specify the index from 1 - 4.

Example

```
rfs6000-81742D(config-rf-domain-default)#override-wlan test vlan-pool 2 limit 20

rfs6000-81742D(config-rf-domain-default)#show context

rfs6000-81742D(config-rf-domain-default)#
```

Related Commands

no	Resets the override WLAN settings its default

4.1.74.2.130 sensor-server

rf-domain-mode commands

Configures an AirDefense sensor server on this RF Domain. Sensor servers allow network administrators to monitor and download data from multiple sensors remote locations using Ethernet TCP/IP or serial communications. This enables administrators to respond quickly to interferences and coverage problems.

The *Wireless Intrusion Protection System* (WIPS) protects the controller managed network, wireless clients and access point radio traffic from attacks and unauthorized access. WIPS provides tools for standards compliance and around-the-clock wireless network security in a distributed environment. WIPS allows administrators to identify and accurately locate attacks, rogue devices and network vulnerabilities in real time and permits both a wired and wireless lockdown of wireless device connections upon acknowledgement of a threat.

In addition to dedicated AirDefense sensors, an access point radio can function as a sensor and upload information to a dedicated WIPS server (external to the controller). Unique WIPS server configurations can be used by RF Domains to ensure a WIPS server configuration is available to support the unique data protection needs of individual RF Domains.

WIPS is not supported on a WLAN basis, rather sensor functionality is supported on the access point radio(s) available to each controller managed WLAN. When an access point radio is functioning as a WIPS sensor, it is able to scan in sensor mode across all legal channels within the 2.4 and 5.0 GHz bands. Sensor support requires a AirDefense WIPS Server on the network. Sensor functionality is not provided by the access point alone. The access point works in conjunction with a dedicated WIPS server.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
sensor-server <1-3> ip <IP/HOSTNAME> {port [443|<1-65535>]}
```

Parameters

- `sensor-server <1-3> ip <IP/HOSTNAME> {port [443|<1-65535>]}`

sensor-server <1-3>	Configures an AirDefense sensor server parameters • <1-3> – Select the server ID from 1 - 3. The server with the lowest defined ID is reached first. The default is 1.
ip <IP/HOSTNAME>	Configures the (non DNS) IPv4 address of the sensor server • <IP/HOSTNAME> – Specify the sensor server's IPv4 address or hostname.
port [443|<1-65535>]	Optional. Configures the sensor server port. The options are: • 443 – Configures port 443, the default port used by the AirDefense server. This is the default setting. • <1-65535> – Allows you to select a WIPS/AirDefense sensor server port from 1 - 65535

Example

```
rfs6000-81742D(config-rf-domain-default)#sensor-server 2 ip 172.16.10.3 port 443

rfs6000-81742D(config-rf-domain-default)#show context

Related Commands

no	Disables an AirDefense sensor server parameters

4.1.74.2.131 stats

rf-domain-mode commands

Configures stats settings that define how RF Domain statistics are updated

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
stats update-interval

stats update-interval [<5-300>|auto]
```

Parameters

- `stats update-interval [<5-300>|auto]`

stats	Configures stats related settings on this RF Domain
update-interval [<5-300>|auto]	Configures the interval at which RF Domain statistics are updated. The options are: • <5-300> – Specify an update interval from 5 - 300 seconds. • auto – The RF Domain manager automatically adjusts the update interval based on the load. This is the default setting.

Example

```
rfs6000-81742D(config-rf-domain-default)#stats update-interval 200
rfs6000-81742D(config-rf-domain-default)#show context
rf-domain default
 contact Bob+14082778691
 stats update-interval 200
 country-code us
 sensor-server 2 ip 172.16.10.3
 override-smartrf channel-list 2.4GHz 1,2,3
 override-wlan test vlan-pool 2 limit 20
 layout area Ecospace floor Floor1 map-location www.firstfloor.com units meters
rfs6000-81742D(config-rf-domain-default)#
```

Related Commands

no	Resets stats related settings

4.1.74.2.132 timezone

rf-domain-mode commands

Configures the RF Domain's geographic time zone. By default all WiNG devices are shipped with the time zone and time format set to *Universal Time Coordinated* (UTC) and 24-hour clock respectively. If the time zone is not reset, all devices within the RF Domain will display time relative to the UTC - Greenwich Time. Resetting the time zone is recommended, especially for RF Domains deployed across different geographical locations. The time zone can either be set on a specific device or on an RF Domain. When configured as RF Domain setting, it applies to all devices within the domain. For more information on configuring the time zone on a device, see *timezone*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
timezone <TIMEZONE>
```

Parameters

- `timezone <TIMEZONE>`

time <TIMEZONE>	Specify the RF Domain's time zone. The configured time zone will apply to all devices within the selected RF Domain.

Example

```
rfs6000-81742D(config-rf-domain-default)#timezone America/Los_Angeles

rfs6000-81742D(config-rf-domain-default)#show context
rf-domain default
 contact Bob+14082778691
 timezone America/Los_Angeles
 stats update-interval 200
 country-code us
 sensor-server 2 ip 172.16.10.3
 override-smartrf channel-list 2.4GHz 1,2,3
 override-wlan test vlan-pool 2 limit 20
 layout area Ecospace floor Floor1 map-location www.firstfloor.com units meters
rfs6000-81742D(config-rf-domain-default)#

The built-in WiNG timezones are:

nx9500-6C8809(config-rf-domain-test)#timezone <TAB>
Africa/     Asia/       Atlantic/   Australia/  CET         CST6CDT
EET         EST5EDT     Etc/        Europe/     MST7MDT     Pacific/
PST8PDT     US/         America/
nx9500-6C8809(config-rf-domain-test)#
```

Each of these time zones are further differentiated into sub time zones. For example, as shown in the following example:

```
nx9500-6C8809(config-rf-domain-test)#timezone Africa/
Africa/Cairo         Africa/Casablanca    Africa/Harare
Africa/Johannesburg  Africa/Lagos         Africa/Nairobi
nx9500-6C8809(config-rf-domain-test)#
```

Related Commands

no	Removes a RF Domain's time zone

4.1.74.2.133 tree-node

rf-domain-mode commands

Configures the hierarchical (tree-node) structure under which this RF Domain is located

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
tree-node [campus|city|country|region] {(campus|city|country|region)}
```

Parameters

- `tree-node [campus|city|country|region] {(campus|city|country|region)}`

tree-node	Configures the hierarchical tree structure defining the RF Domain's location. The tree node hierarchy can be configured in any order, but will always appear as: *country > region > city > campus*. Further, a higher node, such as country, cannot be defined under a lower node, such as region. An RF Domain can be placed under any one of the tree nodes. But, an RF Domain at the country level may have all four nodes defined. Whereas, an RF Domain restricted to a campus, cannot have the country, city, and region nodes. At least one of these four nodes must be defined. This feature is disabled by default.
campus	Configures the campus name for this RF Domain
city	Configures the city for this RF Domain
country	Configures the country for this RF Domain
region	Configures the region for this RF Domain

Usage Guidelines

The following points need to be taken into consideration when creating the tree-node structure:

- Adding a *country* first is a good idea since *region*, *city*, and *campus* can all be added as sub-nodes in the tree structure. However, the selected country is an invalid tree node until a RF Domain is mapped.
- A city and campus can be added in the tree structure as sub-nodes under a region. An RF Domain can be mapped anywhere down the hierarchy for a region and not just directly under a country. For example, a region can have city, campus, and one RF Domain mapped.
- Only a campus can be added as a sub-node under a city. The city is an invalid tree node until a RF Domain is mapped somewhere within the directory tree.
- A campus is the last node in the hierarchy before a RF Domain, and it is not valid unless it has a RF Domain mapped.
- After creating the tree structure do a *commit* and *save* for the tree configuration to take effect and persist across reboots.

Example

```
rfs4000-229D58(config-rf-domain-test)#tree-node campus EcoSpace City Bangalore
country India region South
rfs4000-229D58(config-rf-domain-test)#

rfs4000-229D58(config-rf-domain-test)#show context
rf-domain test
 country-code in
 tree-node country India region South city Bangalore campus EcoSpace
rfs4000-229D58(config-rf-domain-test)#
```

Related Commands

no	Removes the RF Domain's tree-node configuration

4.1.74.2.134 use

rf-domain-mode commands

Associates the following with an RF Domain: database policy, NSight policy, sensor policy, Smart RF policy, WIPS policy, RTL server policy, and Web filtering license.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
use [database-policy|license|nsight-policy|rtl-server-policy|sensor-policy|
smart-rf-policy|wips-policy]

use [database-policy <DATABASE-POLICY-NAME>|license <WEB-FILTERING-LICENSE>|
nsight-policy <NSIGHT-POLICY-NAME>|rtl-server-policy <RTL-SERVER-POLICY-NAME>
sensor-policy <SENSOR-POLICY-NAME>|smart-rf-policy <SMART-RF-POLICY-NAME>|
wips-policy <WIPS-POLICY-NAME>]
```

Parameters

```
• use [database-policy <DATABASE-POLICY-NAME>|license <WEB-FILTERING-LICENSE>|
nsight-policy <NSIGHT-POLICY-NAME>|rtl-server-policy <RTL-SERVER-POLICY-NAME>|
sensor-policy <SENSOR-POLICY-NAME>|smart-rf-policy <SMART-RF-POLICY-NAME>|
wips-policy <WIPS-POLICY-NAME>]
```

use	Associates the following policies with the RF Domain: database policy, NSight policy, sensor policy, Smart RF policy, WIPS policy. It also applies a Web filtering license to the selected RF Domain.
database-policy <DATABASE-POLICY-NAME>	Associates a database policy with the selected RF Domain • <DATABASE-POLICY-NAME> – Specify the database policy name (should be existing and configured).
license <WEB-FILTERING-LICENSE>	Obtains the specified Web filtering license from the adopting controller • <WEB-FILTERING-LICENSE> – Specify the WEBF license name.
nsight-policy <NSIGHT-POLICY-NAME>	Associates an NSight policy to this RF Domain • Specify the NSight policy name (should be existing and configured). When applied, it enables the RF Domain manager to gather statistical data from access points within the domain and forward to the NOC running the NSight server. For information on configuring NSight policy, see *nsight-policy*.
rtl-server-policy <RTL-SERVER-POLICY-NAME>	Associates an *Real Time Locationing* (RTL) server policy with the selected RF Domain • <RTL-SERVER-POLICY-NAME> – Specify the RTL server policy name (should be existing and configured
sensor-policy <SENSOR-POLICY-NAME>	Associates a sensor policy with the selected RF Domain • <SENSOR-POLICY-NAME> – Specify the sensor policy name (should be existing and configured).

smart-rf-policy <SMART-RF-POLICY-NAME>	Associates a Smart RF policy. When associated, the Smart RF policy provides automatic recovery from coverage loss (due to failed or faulty radio) by instructing neighboring access points to increase their transmit power. Once correct access point placement has been established, Smart-RF can optionally be leveraged for automatic detector radio selection. Smart-RF uses detector radios to monitor RF events to ensure availability of adequate detector coverage. • <SMART-RF-POLICY-NAME> – Specify the Smart RF policy name (should be existing and configured). For more information on configuring smart RF policy, see *SMART-RF-POLICY*.
wips-policy <WIPS-POLICY-NAME>	Associates a WIPS policy. A WIPS policy provides protection against wireless threats and acts as a key layer of security complementing wireless VPNs, encryption and authentication. A WIPS policy uses a dedicated sensor for actively detecting and locating rogue AP devices. After detection, WIPS uses mitigation techniques to block the devices by manual termination, air lockdown, or port suppression. • <WIPS-POLICY-NAME> – Specify the WIPS policy name (should be existing and configured). For more information on configuring WIPS policy, see *WIPS-POLICY*.

Example

```
rfs6000-81742D(config-rf-domain-default)#use smart-rf-policy Smart-RF1
rfs6000-81742D(config-rf-domain-default)#use wips-policy WIPS1

rfs6000-81742D(config-rf-domain-default)#show context

4.1.75 rfs6000

Global Configuration Commands

Adds a RFS6000 wireless controller to the network

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rfs6000 <DEVICE-RFS6000-MAC>
```

Parameters

- `rfs6000 <DEVICE-RFS6000-MAC>`

<DEVICE-RFS6000-MAC>	Specify the RFS6000's MAC address.

Example

```
rfs6000-81742D(config)#rfs6000 11-20-30-40-50-61
rfs6000-81742D(config-device-11-20-30-40-50-61)#
```

Related Commands

no	Removes a RFS6000 wireless controller from the network

4.1.76 rfs4000

Global Configuration Commands

Adds an RFS4000 wireless controller to the network

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rfs4000 <DEVICE-RFS4000-MAC>
```

Parameters

- `rfs4000 <DEVICE-RFS4000-MAC>`

<DEVICE-RFS4000-MAC>	Specify the RFS4000's MAC address.

Example

```
rfs6000-81742D(config)#rfs4000 10-20-30-40-50-60
rfs6000-81742D(config-device-10-20-30-40-50-60)#
```

Related Commands

no	Removes an RFS4000 wireless controller from the network

4.1.77 nx5500

Global Configuration Commands

Adds an integrated NX5500 series service platform to the network. If a profile for this service platform is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
nx5500 <DEVICE-NX5500-MAC>
```

Parameters

- `nx5500 <DEVICE-NX5500-MAC>`

<DEVICE-NX5500-MAC>	Specifies the MAC address of a NX5500 series service platform.

Example

```
nx9500-6C8809(config)#nx5500 B4-C7-02-3C-FA-6E
nx9500-6C8809(config-device-B4-C7-02-3C-FA-6E)#
```

Related Commands

no	Removes a NX5500 series service platform from the network

4.1.78 nx75xx

Global Configuration Commands

Adds an integrated NX75XX series service platform to the network. If a profile for service platform is not available, a new profile is created.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

NOTE: In this guide, NX7500, NX7510, NX7520, and NX7530 are collectively represented as a NX75XX series service platform.

Syntax

```
nx75xx <DEVICE-NX75XX-MAC>
```

Parameters

- `nx75xx <DEVICE-NX75XX-MAC>`

<DEVICE-NX75XX-MAC>	Specifies the MAC address of a NX75XX series service platform.

Example

```
nx9500-6C8809(config)#nx75xx B4-C9-81-6C-FA-7C
nx9500-6C8809(config-device-B4-C9-81-6C-FA-7C)#show context

no	Removes a NX75XX series service platform from the network

4.1.79 nx9000

Global Configuration Commands

Adds a NX95XX series service platform to the network

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
nx9000 <DEVICE-NX95XX-MAC>
```

Parameters

- `nx9000 <DEVICE-NX95XX-MAC>`

<DEVICE-NX95XX-MAC>	Specifies the MAC address of a NX95XX series service platform.

Example

```
nx9500-6C8809(config)#nx9000 B4-C7-89-7C-81-08
nx9500-6C8809(config-device-B4-C7-89-7C-81-08)#
```

Related Commands

no	Removes a NX95XX series service platform from the network

4.1.80 roaming-assist-policy

Global Configuration Commands

Configures a roaming assist policy that enables access points to assist wireless clients in making roaming decisions, such as which access point to connect, etc.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
roaming-assist-policy <POLICY-NAME>
```

Parameters

- `roaming-assist-policy <POLICY-NAME>`

<POLICY-NAME>	Specify the roaming assist policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#roaming-assist-policy testPolicy
rfs6000-81742D(config-roaming-assist-policy-testPolicy)#?
Roaming Assist Mode commands:
  action                Configure action - action is either to log / deauth
  aggressiveness        Configure the roaming aggressiveness for a wireless
                        client
  detection-threshold   Configure the detection threshold - when exceeded,
                        client monitoring starts
  disassoc-time         Configure the disassociation time - time after which a
                        disassociation is sent
  handoff-count         Configure the handoff count - number of times client
                        can exceed handoff threshold
  handoff-threshold     Configure the handoff threshold - when exceeds an
                        action is taken.
  monitoring-interval   Configure the monitoring interval - interval at which
                        client monitoring occurs
  no                    Negate a command or set its defaults
  sampling-interval     Configure the sampling interval - interval at which
                        client rssi values are checked

  clrscr                Clears the display screen
  commit                Commit all changes made in this session
  end                   End current mode and change to EXEC mode
  exit                  End current mode and down to previous mode
  help                  Description of the interactive help system
  revert                Revert changes
  service               Service Commands
  show                  Show running system information
  write                 Write running configuration to memory or terminal

rfs6000-81742D(config-roaming-assist-policy-testPolicy)#
```

Related Commands

no	Removes an existing roaming assist policy

NOTE: For more information on roaming assist policy commands, see *Chapter 30, ROAMING ASSIST POLICY*.

4.1.81 role-policy

Global Configuration Commands

Configures a role-based firewall policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
role-policy <ROLE-POLICY-NAME>
```

Parameters

- `role-policy <ROLE-POLICY-NAME>`

<ROLE-POLICY-NAME>	Specify the role policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#role-policy role1
rfs6000-81742D(config-role-policy-role1)#?
Role Policy Mode commands:
  default-role      Configuration for Wireless Clients not matching any role
  ldap-deadperiod   Ldap dead period interval
  ldap-query        Set the ldap query mode
  ldap-server       Add a ldap server
  ldap-timeout      Ldap query timeout interval
  no                Negate a command or set its defaults
  user-role         Create a role

  clrscr            Clears the display screen
  commit            Commit all changes made in this session
  do                Run commands from Exec mode
  end               End current mode and change to EXEC mode
  exit              End current mode and down to previous mode
  help              Description of the interactive help system
  revert            Revert changes
  service           Service Commands
  show              Show running system information
  write             Write running configuration to memory or terminal

rfs6000-81742D(config-role-policy-role1)#
```

Related Commands

no	Removes an existing role policy

NOTE: For more information on role policy commands, see *Chapter 18, ROLE-POLICY*.

4.1.82 route-map

Global Configuration Commands

Creates a dynamic BGP route map and enters its configuration mode

BGP route maps are used by network administrators to define rules controlling redistribution of routes between routers and routing processes. These route maps are also used to control and modify routing information.

Supported in the following platforms:

- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9600, VX9000

Syntax

```
route-map <ROUTE-MAP-NAME>
```

Parameters

- `route-map <ROUTE-MAP-NAME>`

route-map <ROUTE-MAP-NAME>	Creates a new BGP route map and enters its configuration mode

Example

```
nx9500-6C8809(config)#route-map test

nx9500-6C8809(config-dr-route-map-test)#?
Route Map Mode commands:
  deny      Add a deny route map rule to deny set operations
  no        Negate a command or set its defaults
  permit    Add a permit route map rule to permit set operations

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

nx9500-6C8809(config-dr-route-map-test)#
```

Related Commands

no	Removes an existing dynamic BGP route map

NOTE: For more information on BGP route maps, see *Chapter 28, BORDER GATEWAY PROTOCOL*.

4.1.83 routing-policy

Global Configuration Commands

Configures a routing policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
routing-policy <ROUTING-POLICY-NAME>
```

Parameters

- `routing-policy <ROUTING-POLICY-NAME>`

<ROUTING-POLICY-NAME>	Specify the routing policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#routing-policy TestRoutingPolicy
rfs6000-81742D(config-routing-policy-TestRoutingPolicy)#?
Routing Policy Mode commands:
  apply-to-local-packets  Use Policy Based Routing for packets generated by
                          the device
  logging                 Enable logging for this Route Map
  no                      Negate a command or set its defaults
  route-map               Create a Route Map
  use                     Set setting to use

  clrscr                  Clears the display screen
  commit                  Commit all changes made in this session
  do                      Run commands from Exec mode
  end                     End current mode and change to EXEC mode
  exit                    End current mode and down to previous mode
  help                    Description of the interactive help system
  revert                  Revert changes
  service                 Service Commands
  show                    Show running system information
  write                   Write running configuration to memory or terminal

rfs6000-81742D(config-routing-policy-TestRoutingPolicy)#
```

Related Commands

no	Removes an existing routing policy

NOTE: For more information on routing policy commands, see *Chapter 24, ROUTING-POLICY*.

4.1.84 rtl-server-policy

Global Configuration Commands

The following table lists the *Real Time Locationing* (RTL) server policy configuration commands:

Table 4.43 *RTL-Server-Policy Config Command*

Command	Description	Reference
rtl-server-policy	Configures an RTL server policy and enters its configuration mode	*page 4-403*
rtl-server-policy-mode commands	Summarizes RTL server policy configuration mode commands	*page 4-405*

4.1.84.1 rtl-server-policy

rtl-server-policy

Creates an RTL server policy and enters its configuration mode. When configured and applied on an access point (AP7522, AP7532, AP8432, AP8533), this policy enables the sending of RSSI feeds from the access point to a
third-party Euclid server. The RTL server policy provides the exact location (URL) of the Euclid server. The RSSI feeds sent are as per the sensor-policy configured and applied on the access point. Therefore, ensure that a sensor-policy, with the *rssi-interval-duration* specified, is existing, configured, and applied on the access points.

To initiate RSSI feed posts to the Euclid locationing server, use the RTL server policy on the:

- AP's device/profile context, or
- AP's RF Domain context.

Supported in the following platforms:

- Access Points — AP7522, AP7532, AP8432, AP8533
- Wireless Controllers — RFS4000
- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
rtl-server-policy <RTL-POLICY-NAME>
```

Parameters

- `rtl-server-policy <RTL-POLICY-NAME>`

<RTL-SERVER-POLICY-NAME>	Specify the RTL server policy name. If a RTL server policy with the specified name does not exist, it is created.

Example

```
nx9500-6C8809(config)#rtl-server-policy test
nx9500-6C8809(config-rtl-server-policy-test)#?
RTL Server Policy Mode commands:
  no        Negate a command or set its defaults
  url       Configure the url to send the real time RSSI feed to

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

nx9500-6C8809(config-rtl-server-policy-test)#
```

Related Commands

no	Removes an existing RTL server policy

use (profile/device configuration mode command)	Documents the 'use' command in a device's profile or device configuration context. Use this option to associate this RTL server policy to an access point's profile or device.
use (RF Domain configuration mode command)	Documents the 'use' command in the RF Domain configuration context. Use this option to associate this RTL server policy to an RF Domain. When associated, the policy is applied to all access points within the RF Domain.

4.1.84.2 rtl-server-policy-mode commands

rtl-server-policy

The following table summarizes the RTL server policy configuration mode commands:

Table 4.44 *RTL-Server-Policy Mode Commands*

Command	Description	Reference
url	Configures the third-party Euclid RTL server's URL	*page 4-406*
no	Removes the Euclid RTL server's URL configuration	*page 4-407*

4.1.84.2.135 url

rtl-server-policy-mode commands

Configures the third-party Euclid RTL server's exact location. This is the URL at which the server can be reached.

Supported in the following platforms:

- Access Points — AP7522, AP7532, AP8432, AP8533
- Wireless Controllers — RFS4000
- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
url <URL>
```

Parameters

- `url <URL>`

url <URL>	Configures the Euclid server's URL • <URL> – Specify the URL.

Example

```
nx9500-6C8809(config-rtl-server-policy-test)#url https://testrtlsever.com

nx9500-6C8809(config-rtl-server-policy-test)#show context
rtl-server-policy test
 url https://testrtlsever.com
nx9500-6C8809(config-rtl-server-policy-test)#
```

Related Commands

no	Removes the Euclid server's configured URL

4.1.84.2.136 no

rtl-server-policy-mode commands

Removes the Euclid locationing server's URL configuration

Supported in the following platforms:

- Access Points — AP7522, AP7532, AP8432, AP8533
- Wireless Controllers — RFS4000
- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
no url
```

Parameters

- `no url`

no url	Removes the Euclid server's URL

Example

The following example displays the RTL server policy 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-rtl-server-policy-test)#show context
rtl-server-policy test
 url https://testrtlsever.com
nx9500-6C8809(config-rtl-server-policy-test)#

nx9500-6C8809(config-rtl-server-policy-test)#no url
```

The following example displays the RTL server policy 'test' settings after the 'no' command is executed:

```
nx9500-6C8809(config-rtl-server-policy-test)#show context
rtl-server-policy test
nx9500-6C8809(config-rtl-server-policy-test)#
```

4.1.85 schedule-policy

Global Configuration Commands

The following table summarizes the config schedule policy commands:

Table 4.45 *Schedule-Policy Config Commands*

Command	Description	Reference
schedule-policy	Creates a schedule policy and enters its configuration mode	*page 4-409*
schedule-policy-mode commands	Lists schedule policy configuration mode commands	*page 4-410*

4.1.85.1 schedule-policy

schedule-policy

Creates a schedule policy and enters its configuration mode. A schedule policy strategically enforces application filter policy rules during administrator assigned intervals.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
schedule-policy <SCHEDULE-POLICY-NAME>
```

Parameters

- `schedule-policy <SCHEDULE-POLICY-NAME>`

schedule-policy <SCHEDULE-POLICY-NAME>	Specify the Schedule policy name. If the policy does not exist, it is created. The name should not exceed 32 characters in length.

Example

```
nx9500-6C8809(config)#schedule-policy test
nx9500-6C8809(config-schedule-policy-test)#?
Schedule Policy Mode commands:
  description  Schedule policy description
  no           Negate a command or set its defaults
  time-rule    Configure a time rule

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-schedule-policy-test)#
```

Related Commands

no	Removes an existing schedule policy

4.1.85.2 schedule-policy-mode commands

schedule-policy

The following table summarizes schedule-policy configuration mode commands:

Table 4.46 *Schedule-Policy-Config-Mode Commands*

Command	Description	Reference
description	Configures a description for this schedule policy that differentiates it from other policies with similar time rule configurations	*page 4-411*
time-rule	Configures a time rule specifying the days and optionally the start and end times	*page 4-412*
no	Removes the selected schedule policy's settings	*page 4-414*

4.1.85.2.137 description

schedule-policy-mode commands

Configures a description for this schedule policy that differentiates it from other policies with similar time rule configurations

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <WORD>
```

Parameters

- `description <WORD>`

description <WORD>	Configures this schedule policy's description • <WORD> – Enter a description not exceeding 80 characters in length. The description should uniquely identify the policy from other policies with similar configuration.

Example

```
nx9500-6C8809(config-schedule-policy-test)#description "Denies social networking
 sites on weekdays."

nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
 description "Denies social networking sites on weekdays."
nx9500-6C8809(config-schedule-policy-test)#
```

Related Commands

no	Removes this schedule policy's description

4.1.85.2.138 time-rule

schedule-policy-mode commands

Configures a time rule specifying the days and optionally the start and end times. When applied to an application-policy rule, the schedule policy defines the enforcement time of the rule. For more information, see *application-policy*.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
time-rule days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|all|
weekends|weekdays] {start-time <HH:MM> [end-time <HH:MM>]}
```

Parameters

```
• time-rule days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|all|
weekends|weekdays] {start-time <HH:MM> [end-time <HH:MM>]}
```

time-rule	Configures a time rule in days and hours and minutes **Note:** A schedule policy can have more than one non-overlapping time-rules. The following time-rules, having overlapping time periods, are invalid: '*weekdays, start-time 9:30 am, end-time 11:30 pm*' and '*all, start-time 12:00 am, end-time 12:00 p*m'.
days [sunday|monday| tuesday|wednesday| thursday|friday| saturday|all| weekends| weekdays]	Specifies the days on which the time rule is applicable • sunday – Applicable on Sundays only • monday – Applicable on Mondays only • tuesday – Applicable on Tuesdays only • wednesday – Applicable on Wednesdays only • thursday – Applicable on Thursdays only • friday – Applicable on Fridays only • saturday – Applicable on Saturdays only • weekends – Applicable on weekends only • weekdays – Applicable on weekdays only • all – Applicable on all days
start-time <HH:MM> [end-time <HH:MM>]	After specifying the days of enforcement, specify the following: • start-time – Optional. Specifies the enforcement start time • <HH:MM> – Specify the start time in hours and minutes in the HH:MM format. If no start time is specified, the time rule is enforced, on the specified days, at all time. • end-time – Specifies the enforcement end time • <HH:MM> – Specify the time in hours and minutes in the HH:MM format.

Example

```
nx9500-6C8809(config-schedule-policy-test)#time-rule days weekdays start-time
10:00 end-time 23:30

nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
 description "Denies social networking sites on weekdays."
 time-rule days weekdays start-time 10:00 end-time 23:30
nx9500-6C8809(config-schedule-policy-test)#
```

Related Commands

no	Removes the time-rule from the schedule policy

4.1.85.2.139 no

schedule-policy-mode commands

Removes the selected schedule policy's settings

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [description|time-rule]

no description

no time-rule days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|
all|weekends|weekdays]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes the schedule policy's settings based on the parameters passed

Example

The following example displays the schedule policy 'test' settings before the 'no' commands have been executed:

```
nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
 description "Denies social networking sites on weekdays."
 time-rule days weekdays start-time 10:00 end-time 23:30
nx9500-6C8809(config-schedule-policy-test)#
```

The following example displays the schedule policy 'test' settings after the 'no' commands have been executed:

```
nx9500-6C8809(config-schedule-policy-test)#no description
nx9500-6C8809(config-schedule-policy-test)#no time-rule days weekdays

nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
nx9500-6C8809(config-schedule-policy-test)#
```

4.1.86 self

Global Configuration Commands

Displays the logged device's configuration context

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
self
```

Parameters

None

Example

```
rfs6000-81742D(config)#self
rfs6000-81742D(config-device-00-15-70-37-FA-BE)#
```

4.1.87 sensor-policy

Global Configuration Commands

The following table summarizes the config sensor policy commands:0

Table 4.47 *Sensor-Policy Config Commands*

Command	Description	Reference
sensor-policy	Creates a sensor policy and enters its configuration mode	*page 4-417*
sensor-policy-mode commands	Lists sensor policy configuration mode commands	*page 4-419*

4.1.87.1 sensor-policy

sensor-policy

In addition to WIPS support, sensor functionality has now been added for the Extreme Network's MPact locationing system. The MPact system for Wi-Fi locationing includes WiNG controllers, and access points functioning as sensors. Within the MPact architecture, sensors scan for RSSI data on an administrator defined interval and send to a dedicated MPact Server resource, as opposed to an ADSP server. The MPact Server collects the RSSI data from WiNG sensor devices, and calculates the location of Wi-Fi devices for MPact administrators.

Use this command to configure a policy defining the mode of scanning, the channels to scan (in case scan-mode is set to custom-scan), and the RSSI interval. For the sensor policy to take effect, use the policy either in the access point's RF Domain context or in the access point's device context.

NOTE: If a dedicated sensor is utilized with WIPS for rogue detection, any sensor policy used is discarded and not utilized by the sensor. To avoid this situation, use ADSP channel settings exclusively to configure the sensor and not the WiNG interface.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510

Syntax

```
sensor-policy <SENSOR-POLICY-NAME>
```

Parameters

- `sensor-policy <SENSOR-POLICY-NAME>`

sensor-policy <SENSOR-POLICY-NAME>	Specify the Sensor policy name. If a sensor policy with the specified name does not exist, it is created. The name should not exceed 32 characters in length. No character spaces are permitted within the name. Define a name unique to the policy's channel and scan mode configuration to help differentiate it from other policies.

Usage GuidelinesADSP WIPS/MPact

Access point radios, functioning as sensors, along with AirDefense WIPS servers protect networks from attacks and unauthorized access. These access point sensors scan legal channels and (based on a WIPS policy settings) identify events potential threats to the managed network. These events are reported to the AirDefense WIPS server, which determines the action taken.

In addition to WIPS support, sensor functionality has now been added for the MPact locationing system. The MPact system for Wi-Fi locationing includes WiNG controllers and access points functioning as sensors. Within the MPact architecture, sensors scan for RSSI data on an administrator-defined interval and send to a dedicated MPact server resource, as opposed to an ADSP server. The MPact server collects the RSSI data from WiNG sensor devices, and calculates the location of Wi-Fi devices. With the introduction of the MPact platform, the data collected by access point radios, functioning as sensors, is also used by the MPact server to provide real-time locationing services.

Example

```
nx9500-6C8809(config)#sensor-policy test
nx9500-6C8809(config-sensor-policy-test)#?
Sensor Policy Mode commands:
  custom-scan             Channel configuration in Custom Scan channels
  no                      Negate a command or set its defaults
  rssi-interval-duration  Configure the periodicity of sensding RSSI info from
                          sensor to server
  scan-mode               Configure the Scan mode

  clrscr                  Clears the display screen
  commit                  Commit all changes made in this session
  do                      Run commands from Exec mode
  end                     End current mode and change to EXEC mode
  exit                    End current mode and down to previous mode
  help                    Description of the interactive help system
  revert                  Revert changes
  service                 Service Commands
  show                    Show running system information
  write                   Write running configuration to memory or terminal

nx9500-6C8809(config-sensor-policy-test)#
```

Related Commands

no	Removes an existing sensor policy

4.1.87.2 sensor-policy-mode commands

sensor-policy

The following table summarizes sensor-policy configuration mode commands:

Table 4.48 *Sensor-Policy-Config-Mode Commands*

Command	Description	Reference
custom-scan	Configures the channel scanning settings when the scan-mode is set to custom-scan	*page 4-420*
rssi-interval-duration	Configures the interval at which dedicated sensors scan channels for RSSI assessments and send the collected data to a specified MPact server resource	*page 4-422*
scan-mode	Configures the mode of scanning used by dedicated sensors (access point radios)	*page 4-423*
no	Removes or reverts to default a sensor policy's settings	*page 4-424*

4.1.87.2.140 custom-scan

sensor-policy-mode commands

Configures the channel scanning settings when the *scan-mode* is set to *custom-scan*

> **NOTE:** If the mode of scanning is set to *Custom-Scan*, use this command to configure the channels to be scanned. To set the mode of scanning to custom-scan, use the *scan-mode > Custom-Scan* command. For more information, see *scan-mode*.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
custom-scan channel-frequency <CHANNEL-FREQUENCY> width [20MHz|40MHz-Bth|40MHz-Lower|40MHz-Upper|80MHz] scan-weight <SCAN-WEIGHT>
```

Parameters

```
• custom-scan channel-frequency <CHANNEL-FREQUENCY> width [20MHz|40MHz-Both|40MHz-Lower|40MHz-Upper|80MHz] scan-weight <SCAN-WEIGHT>
```

custom-scan	Configures the custom-scan channel frequency, channel width, and scan weight
channel-frequency <CHANNEL-FREQUENCY>	Configures the channel frequency. A list of unique channels in the 2.4, 4.9, 5 and 6 GHz band can be collectively or individually enabled for customized channel scans and RSSI reporting. • <CHANNEL-FREQUENCY> – Specify a single or multiple, 'comma-separated' channel frequencies.
width [20MHz| 40MHz-Both| 40MHz-Lower| 40MHz-Upper| 80MHz]	Configures the channel width. When custom channels are selected for RSSI scans, each selected channel can have its own width defined. Numerous channels have their width fixed at 20MHz, 802.11a radios support 20 and 40 MHz channel widths. • 20MHz – Sets the channel width as 20 Mhz • 40Mhz-Both – Sets the channel width as 40Mhz-Both • 40Mhz-Lowe – Sets the channel width as 40Mhz-Lower • 40Mhz-Upper – Sets the channel width as 40Mhz-Upper • 80Mhz – Sets the channel width as 80Mhz
scan-weight <SCAN-WEIGHT>	Configures the scan-weight (scanning duration) for each of the selected channels. Each selected channel can have its weight prioritized in respect to the amount of time a scan is permitted within the defined RSSI scan interval. • <SCAN-WEIGHT> – Specify the scan weightage given to each selected channel.

Example

```
nx9500-6C8809(config-sensor-policy-test)#custom-scan channel-frequency 2412 width 20MHz scan-weight 1000

nx9500-6C8809(config-sensor-policy-test)#custom-scan channel-frequency 2417 width 20MHz scan-weight 1000

nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
 scan-mode Custom-Scan
 custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
 custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#
```

Related Commands

no	Removes channels from the channels-to-scan list in case of scan-mode being set to Custom-Scan

4.1.87.2.141 rssi-interval-duration

sensor-policy-mode commands

Configures the interval, in seconds, at which dedicated sensors scan channels for RSSI assessments and send the RSSI data obtained to a specified server resource

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
rssi-interval-duration <1-60>
```

Parameters

- `rssi-interval-duration <1-60>`

rssi-interval-duration <1-60>	Configures the RSSI interval duration in seconds. This is the interval at which the sensor scans channels for RSSI data and forwards the data to a dedicated server resource. The server calculates real-time locations of Wi-Fi devices based on the this data. • <1-60> – Specify the RSSI interval duration from 1 - 60 seconds. The default is 1 second. **Note:** The channels scanned for RSSI assessment depends on the scan-mode selected. For more information, see *scan-mode* and *custom-scan*. Ensure that the server's IP address or hostname has been configured in the access point sensor's RF Domain context.

Example

```
nx9500-6C8809(config-sensor-policy-test)#rssi-interval-duration 30

nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
 rssi-interval-duration 30
 scan-mode Custom-Scan
 custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
 custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#
```

Related Commands

no	Resets the interval at which RSSI data is collected and sent by the sensor to the MPact server host to default (1 second)

4.1.87.2.142 scan-mode

sensor-policy-mode commands

Configures the mode of scanning used by dedicated sensors (access point radios)

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
scan-mode [Channel-Lock|Custom-Scan|Default-Scan]

scan-mode Channel-Lock lock-frequency <LOCK-FREQUENCY>

scan-mode [Custom-Scan|Default-Scan]
```

Parameters

- `scan-mode Channel-Lock lock-frequency <LOCK-FREQUENCY>`

scan-mode	Configures the mode of scanning used by the sensors to scan system-defined or user-defined channels for RSSI assessments. The options are: Channel-Lock, Custom-Scan, and Default-Scan.
Channel-Lock lock-frequency <LOCK-FREQUENCY>	Configures the mode of scanning as Channel-Lock • lock-frequency <LOCK-FREQUENCY> – Locks scanning for RSSI data to one specific channel identified by the <LOCK-FREQUENCY> parameter. • <LOCK-FREQUENCY> – Specify the channel frequency in MHz. When specified, the sensor scans only this specified channel.

- `scan-mode [Custom-Scan|Default-Scan]`

scan-mode	Configures the mode of scanning used by the sensor. The options are: channel-lock, custom-scan, and default-scan.
Custom-Scan	Configures the mode of scanning as Custom-Scan Select this option to restrict scanning to user-defined channels. If selecting this option, use the *custom-scan > channel-frequency* command to configure the channels scanned by the dedicated sensor. For more information, see *custom-scan*.
Default-Scan	Configures the mode of scanning as Default-Scan. This is the default setting. By default the system has a fixed, built-in list of channels that are scanned. These channels are hard coded in a spread pattern of 1, 6, 11, 36, 40, 44, and 48. When selected, the dedicated sensor scans only these default channels.

Example

```
nx9500-6C8809(config-sensor-policy-test)#scan-mode Custom-Scan

nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
 rssi-interval-duration 30
 scan-mode Custom-Scan
 custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
 custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#
```

Related Commands

no	Reverts the scan-mode to default (Default-Scan)

4.1.87.2.143 no

sensor-policy-mode commands

Removes or reverts to default a sensor policy's settings

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [custom-scan|rss1-interval-duration|scan-mode]

no custom-scan channel-frequency <CHANNEL-FREQUENCY-LIST>

no rssi-interval-duration

no scan-mode
```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Removes or reverts to default a sensor policy settings based on the parameters passed

Example

The following example shows the sensor-policy 'test' settings before the 'no' commands are executed:

```
nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
 rssi-interval-duration 30
 scan-mode Custom-Scan
 custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
 custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#
```

The scan-mode is reverted back to the default setting of 'Default-Scan', as show in the following output:

```
nx9500-6C8809(config-sensor-policy-test)#no scan-mode
nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
 rssi-interval-duration 30
 scan-mode Default-Scan
 custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
 custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#

nx9500-6C8809(config-sensor-policy-test)#no custom-scan channel-frequency 2412

nx9500-6C8809(config-sensor-policy-test)#no custom-scan channel-frequency 2417

nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
 rssi-interval-duration 30
 scan-mode Default-Scan
nx9500-6C8809(config-sensor-policy-test)#
```

4.1.88 smart-rf-policy

Global Configuration Commands

Configures a Smart RF policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
smart-rf-policy <SMART-RF-POLICY-NAME>
```

Parameters

- `smart-rf-policy <SMART-RF-POLICY-NAME>`

<SMART-RF-POLICY-NAME>	Specify the Smart RF policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#smart-rf-policy test
rfs6000-81742D(config-smart-rf-policy-test)#?
Smart RF Mode commands:
  area                      Specify channel list/ power for an area
  assignable-power          Specify the assignable power during power-assignment
  avoidance-time            Time to avoid a channel once dfs/adaptivity
                            avoidance is necessary
  channel-list              Select channel list for smart-rf
  channel-width             Select channel width for smart-rf
  coverage-hole-recovery    Recover from coverage hole
  enable                    Enable this smart-rf policy
  group-by                  Configure grouping parameters
  interference-recovery     Recover issues due to excessive noise and
                            interference
  neighbor-recovery         Recover issues due to faulty neighbor radios
  no                        Negate a command or set its defaults
  sensitivity               Configure smart-rf sensitivity (Modifies various
                            other smart-rf configuration items)
  smart-ocs-monitoring      Smart off channel scanning

  clrscr                    Clears the display screen
  commit                    Commit all changes made in this session
  end                       End current mode and change to EXEC mode
  exit                      End current mode and down to previous mode
  help                      Description of the interactive help system
  revert                    Revert changes
  service                   Service Commands
  show                      Show running system information
  write                     Write running configuration to memory or term

rfs6000-81742D(config-smart-rf-policy-test)#
```

Related Commands

no	Removes an existing Smart RF policy

NOTE: For more information on Smart RF policy commands, see *Chapter 19, SMART-RF-POLICY*.

4.1.89 t5

Global Configuration Commands

Invokes the configuration mode of a t5 wireless controller

A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
t5 <T5-DEVICE-MAC>
```

Parameters

- `t5 <T5-DEVICE-MAC>`

t5 <T5-DEVICE-MAC>	Specify the t5 device's MAC address. The system enters the identified device's configuration mode. A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS wireless controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The *Customer Premises Equipment* (CPEs) are the T5 controller managed radio devices using the IPX operating system. These CPEs use a *Digital Subscriber Line* (DSL) as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack. After logging on to the T5 device, use the 'cpe' keyword and configure the following mandatory settings: • vlan – Set a VLAN from 1 - 4,094 used as a virtual interface for connections between the T5 controller and its managed CPE devices. • start ip – Set a starting IP address used in a range of addresses available to T5 controller connecting CPE devices. • end ip – Set an end IP address used in a range of addresses available to T5 controller connecting CPE devices.

Example

```
rfs6000-81742D(config)#t5 B4:C7:99:ED:5C:2C
rfs6000-81742D(config-device-B4:C7:99:ED:5C:2C)#?
T5 Device Mode commands:
  adsp-sensor-server  Configure WIPS server
  bridge              Sets MAC address expiration time in the bridge address
                      table
  clock               Configure clock options
  cpe                 T5 CPE configuration
  hostname            Set system's network name
  interface           Select an interface to configure
  ip                  Internet Protocol (IP)
  no                  Negate a command or set its defaults
  ntp                 Configure NTP
  override-wlan       Configure RF Domain level overrides for wlan
  password            T5 password configuration
  qos                 QOS settings
  radius-server       Radius server settings
  t5                  T5 configuration
  t5-logging          Modify message logging facilities
  use                 Set setting to use

  clrscr              Clears the display screen
  commit              Commit all changes made in this session
  do                  Run commands from Exec mode
  end                 End current mode and change to EXEC mode
  exit                End current mode and down to previous mode
  help                Description of the interactive help system
  revert              Revert changes
  service             Service Commands
  show                Show running system information
  write               Write running configuration to memory or terminal

rfs6000-81742D(config-device-B4:C7:99:ED:5C:2C)#
```

Related Commands

no	Removes the t5 wireless controller identified by the device's MAC address

4.1.90 web-filter-policy

Global Configuration Commands

The following table lists commands that enable you to enter the Web Filter policy configuration mode:

Table 4.49 *Commands Creating a Web-Filter-Policy*

Command	Description	Reference
web-filter-policy	Creates a new Web Filter policy and enters its configuration mode	*page 4-542*
web-filter-policy-config-mode commands	Summarizes the Web Filter policy configuration mode commands	*page 4-432*

4.1.90.1 web-filter-policy

web-filter-policy

Creates a Web Filtering policy and enters its configuration mode. This policy defines rules managing the local classification database and the cached data. When configured and applied, this policy also enables caching of URL classification records in a local database in a controller-based, *hierarchically managed* (HM) deployment. Use this option to specify the following: classification server details, size of the local database, time for which records are cached in the database, the action taken in case the classification server is unavailable, etc.

The Web filter policy is applied at the profile or device level.

For more information on URL filtering, see *url-filter*.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
web-filter-policy <WEB-FILTER-POLICY-NAME>
```

Parameters

- `web-filter-policy <WEB-FILTER-POLICY-NAME>`

<WEB-FILTER-POLICY-NAME>	Specify the Web filter policy name. If the policy does not exist, it is created.

Example

```
nx9500-6C8809(config)#web-filter-policy test
nx9500-6C8809(config-web-filter-policy-test)#?
Content Filter Mode commands:
  cache-max-recs       Configure the maximum number of records in local cache
  cache-save-interval  Configure the time a record is saved in local cache
  logging              Select logging method
  no                   Negate a command or set its defaults
  server-host          Configure URL classification server if it is not the
                       adopted controller
  server-unreachable   Permission to access website when classification server
                       is unreachable (default is pass)
  uncategorized-url    Permission to website when server fails to classify the
                       URL request (default is pass)

  clrscr               Clears the display screen
  commit               Commit all changes made in this session
  do                   Run commands from Exec mode
  end                  End current mode and change to EXEC mode
  exit                 End current mode and down to previous mode
  help                 Description of the interactive help system
  revert               Revert changes
  service              Service Commands
  show                 Show running system information
  write                Write running configuration to memory or terminal

nx9500-6C8809(config-web-filter-policy-test)#
```

Related Commands

no	Removes an existing Web filter policy

4.1.90.2 web-filter-policy-config-mode commands

web-filter-policy

The following table summarizes Web Filter policy configuration mode commands:

Table 4.50 *Web-Filter-Policy-Config-Mode Commands*

Command	Description	Reference
cache-max-recs	Configures the maximum number of records (URLs and Web pages) cached in the local database	*page 4-433*
cache-save-interval	Configures the maximum time period for which a record (URL and Web page classification entry) is cached in the local database	*page 4-434*
logging	Configures the method used to log Web filtering events	*page 4-435*
no	Reverts the selected Web Filter policy settings to default	*page 4-436*
server-host	Configures the URL classification server in case it is not the adopted controller	*page 4-437*
server-unreachable	Configures the action taken in case the classification server is unreachable	*page 4-438*
uncategorized-url	Configures the action taken in case the classification server fails to classify a URL/Website	*page 4-439*

4.1.90.2.144 cache-max-recs

web-filter-policy-config-mode commands

Configures the maximum number of records (URL and Web page classification entries) cached in the local database

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
cache-max-recs <1-1000000>
```

Parameters

- `cache-max-recs <1-1000000>`

cache-max-recs <1-1000000>	Specify the maximum number of records cached in the local database from 1 - 1000000. When configuring this value take into consideration the type of device using the Web Filter policy. The value should approximately be as per the following information: • NX95XX – <1-1000000> (default is 100000) • NX75XX – <1-100000> (default is 10000) • RFS Switches – <1-10000> (default is 1000) • Access Points – <1-1500> (default is 500)

Example

```
nx9500-6C8809(config-web-filter-policy-test)#cache-max-recs 9000

nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-max-recs 9000
nx9500-6C8809(config-web-filter-policy-test)#
```

Related Commands

no	Reverts the maximum number of stored records to default. Please see the parameter table for default values for the different device types.

4.1.90.2.145 cache-save-interval

web-filter-policy-config-mode commands

Configures the maximum time period, in seconds, for which a record (URL and Web page classification entry) is cached in the local database. Once the specified time has expired the record is removed from the cache.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
cache-save-interval <1-86400>
```

Parameters

- `cache-save-interval <1-86400>`

cache-save-interval <1-86400>	Specify the maximum time period, in seconds, for which a record is cached in the local database from 1 - 86400 seconds. The default is 60 seconds.

Example

```
nx9500-6C8809(config-web-filter-policy-test)#cache-save-interval 1000

nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-max-recs 9000
 cache-save-interval 1000
nx9500-6C8809(config-web-filter-policy-test)#
```

Related Commands

no	Reverts the maximum time period for which a record (URL and Web page classification entry) is cached in the local database to default (60)

4.1.90.2.146 logging

web-filter-policy-config-mode commands

Configures the method used to log Web filtering events

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
logging [logfile|syslog]
```

Parameters

- `logging [logfile|syslog]`

logging [logfile|syslog]	Selects the method used to log Web filtering events. The options are: • logfile – Logs to a file. • syslog – Logs to the syslog server. This is the default setting.

Example

```
nx9500-6C8809(config-web-filter-policy-test)#logging logfile

nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 logging logfile
nx9500-6C8809(config-web-filter-policy-test)#
```

4.1.90.2.147 no

web-filter-policy-config-mode commands

Reverts the selected Web Filter policy settings to default, based on the parameters passed

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [cache-max-recs|cache-save-interval|server-host|server-unreachable|
uncategorized-url]
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Reverts the selected Web Filter policy settings to default, based on the parameters passed. Specify the parameters to revert back to default value.

Example

The following example shows the Web Filter policy 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-max-recs 9000
 cache-save-interval 1000
 uncategorized-url block
 server-unreachable block
 server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#

nx9500-6C8809(config-web-filter-policy-test)#no cache-max-recs
nx9500-6C8809(config-web-filter-policy-test)#no server-unreachable
nx9500-6C8809(config-web-filter-policy-test)#no uncategorized-url
```

The following example shows the Web Filter policy 'test' settings after the 'no' command has been executed:

```
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-save-interval 1000
 server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

4.1.90.2.148 server-host

web-filter-policy-config-mode commands

Configures the URL classification server in case it is not the adopted controller

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
server-host [host-name <SERVER-HOST-NAME>|ip-address <SERVER-IPv4>|mint-id
<SERVER-MiNT-ID>]
```

Parameters

```
• server-host [host-name <SERVER-HOST-NAME>|ip-address <SERVER-IPv4>|mint-id
<SERVER-MiNT-ID>]
```

server-host [host-name <SERVER-HOST-NAME>| ip-address <SERVER-IPv4>| mint-id <SERVER-MiNT-ID>]	Use one of the following options to identify the URL classification server: • host-name <SERVER-HOST-NAME> – Identifies the classification server by its hostname. • ip-address <SERVER-IPv4> – Identifies the classification server by its IP address. • mint-id <SERVER-MiNT-ID> – Identifies the classification server by its MiNT ID.

Example

```
nx9500-6C8809(config-web-filter-policy-test)#server-host ip-address 192.168.13.13

nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-max-recs 9000
 cache-save-interval 1000
 server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

Related Commands

no	Removes the URL classification server's configured details, such as hostname, ip-address, or MiNT ID.

4.1.90.2.149 server-unreachable

web-filter-policy-config-mode commands

Configures the action taken in case the classification server is unreachable. Based on the value configured the an end user's request for a URL/Website is either blocked or passed.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
server-unreachable [block|pass]
```

Parameters

- `server-unreachable [block|pass]`

server-unreachable [block|pass]	Configures the action taken in case the classification server is unreachable. The options are: • block – Denies access to the requested URL/Website • pass – Allows access to the requested URL/Website. This is the default value.

Example

```
nx9500-6C8809(config-web-filter-policy-test)#server-unreachable block

nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-max-recs 9000
 cache-save-interval 1000
 server-unreachable block
 server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

Related Commands

no	Reverts the action taken in case the classification server is unreachable to default (pass)

4.1.90.2.150 uncategorized-url

web-filter-policy-config-mode commands

Configures the action taken in case the classification server fails to classify a URL/Website. Based on the value configured the an end user's request for a non-classified URL/Website is either blocked or passed.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
uncategorized-url [block|pass]
```

Parameters

- `uncategorized-url [block|pass]`

uncategorized-url [block|pass]	Configures the action taken in case the classification server fails to classify a URL/ Website. The options are: • block – Denies access to the requested non-classified URL/Website • pass – Allows access to the requested non-classified URL/Website. This is the default value.

Example

```
nx9500-6C8809(config-web-filter-policy-test)#uncategorized-url block

nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
 cache-max-recs 9000
 cache-save-interval 1000
 uncategorized-url block
 server-unreachable block
 server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

Related Commands

no	Reverts the action taken in case the classification server fails to classify a URL/ Website to default (pass)

4.1.91 wips-policy

Global Configuration Commands

Configures a WIPS policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wips-policy <WIPS-POLICY-NAME>
```

Parameters

- `wips-policy <WIPS-POLICY-NAME>`

<WIPS-POLICY-NAME>	Specify the WIPS policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#wips-policy test
rfs6000-81742D(config-wips-policy-test)#?
Wips Policy Mode commands:
  ap-detection                Rogue AP detection
  enable                      Enable this wips policy
  event                       Configure an event
  history-throttle-duration   Configure the duration for which event duplicates
                              are not stored in history
  interference-event          Specify events which will contribute to smart-rf
                              wifi interference calculations
  no                          Negate a command or set its defaults
  signature                   Signature to configure
  use                         Set setting to use

  clrscr                      Clears the display screen
  commit                      Commit all changes made in this session
  do                          Run commands from Exec mode
  end                         End current mode and change to EXEC mode
  exit                        End current mode and down to previous mode
  help                        Description of the interactive help system
  revert                      Revert changes
  service                     Service Commands
  show                        Show running system information
  write                       Write running configuration to memory or terminal

rfs6000-81742D(config-wips-policy-test)#
```

Related Commands

no	Removes an existing WIPS policy

NOTE: For more information on WIPS policy commands, see *Chapter 20, WIPS-POLICY*.

4.1.92 wlan

Global Configuration Commands

Configures a *Wireless Local Area Network* (WLAN)

The following table lists WLAN configuration mode commands:

Table 4.51 *WLAN-Policy Config Commands*

Command	Description	Reference
wlan	Creates a new wireless LAN and enters its configuration mode	*page 4-442*
wlan-mode commands	Summarizes WLAN configuration mode commands	*page 4-446*

4.1.92.1 wlan

wlan

Configures a WLAN and enters its configuration mode. Use this command to modify an existing WLAN's settings.

A WLAN is a data-communications system that flexibly extends the functionality of a wired LAN. A WLAN links two or more computers or devices using spread-spectrum or *Orthogonal Frequency Division Multiplexing* (OFDM) modulation based technology. WLANs do not require lining up devices for line-of-sight transmission, and are thus, desirable for wireless networking. Roaming users can be handed off from one access point to another, like a cellular phone system. WLANs can therefore be configured around the needs of specific user groups, even when they are not in physical proximity.

WLANs can provide an abundance of services, including data communications (allowing mobile devices to access applications), e-mail, file, and print services or even specialty applications (such as guest access control and asset tracking).

Each WLAN configuration contains encryption, authentication and QoS policies and conditions for user connections. Connected access point radios transmit periodic beacons for each BSS. A beacon advertises the SSID, security requirements, supported data rates of the wireless network to enable clients to locate and connect to the WLAN.

WLANs are mapped to radios on each access point. A WLAN can be advertised from a single access point radio or can span multiple access points and radios. WLAN configurations can be defined to provide service to specific areas of a site. For example, a guest access WLAN may only be mapped to a 2.4 GHz radio in a lobby or conference room providing limited coverage, while a data WLAN is mapped to all 2.4 GHz and 5.0 GHz radios at the branch site to provide complete coverage.

The maximum number of WLANs supported by different devices is as follows:

- RFS4000 and RFS6000 wireless controllers – 32 WLANs
- NX95XX series service platforms – 1000 WLANs
- Access Points – 16 WLANs

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wlan {<WLAN-NAME>|containing <WLAN-NAME>}
```

Parameters

- `wlan {<WLAN-NAME>|containing <WLAN-NAME>}`

wlan <WLAN-NAME>	Configures a new WLAN • <WLAN-NAME> – Optional. Specify the WLAN name. The WLAN name could be a logical representation of its coverage area (for example, engineering, marketing, etc.).The name cannot exceed 32 characters.
containing <WLAN-NAME>	Optional. Configures an existing WLAN's settings • <WLAN-NAME> – Specify a sub-string in the WLAN name. Use this parameter to filter a WLAN. This option allows you to select and enter the configuration mode of one or more WLANs.

Example

```
rfs6000-81742D(config)#wlan 1
rfs6000-81742D(config-wlan-1)#?
Wireless LAN Mode commands:
  accounting                          Configure how accounting records are
                                      created for this wlan
  acl                                 Actions taken based on ACL
                                      configuration [packet drop being one
                                      of them]
  answer-broadcast-probes             Include this wlan when responding to
                                      probe requests that do not specify an
                                      SSID
  assoc-response                      Association response threshold
  association-list                    Configure the association list for
                                      the wlan
  authentication-type                 The authentication type of this WLAN
  bridging-mode                       Configure how packets to/from this
                                      wlan are bridged
  broadcast-dhcp                      Configure broadcast DHCP packet
                                      handling
  broadcast-ssid                      Advertise the SSID of the WLAN in
                                      beacons
  captive-portal-enforcement          Enable captive-portal enforcement on
                                      the wlan
  client-access                       Enable client-access (normal data
                                      operations) on this wlan
  client-client-communication         Allow switching of frames from one
                                      wireless client to another on this
                                      wlan
  client-load-balancing               Configure load balancing of clients
                                      on this wlan
  controller-assisted-mobility        Enable controller assisted mobility
                                      to determine wireless clients' VLAN
                                      assignment
  data-rates                          Specify the 802.11 rates to be
                                      supported on this wlan
  description                         Configure a description of the usage
                                      of this wlan
  downstream-group-addressed-forwarding  Enable downstream group addressed
                                      forwarding of packets
  dpi                                 Deep-Packet-Inspection (Application
                                      Assurance)
  dynamic-vlan-assignment             Dynamic VLAN assignment configuration
  eap-types                           Configure client access based on
                                      eap-type used for authentication
  encryption-type                     Configure the encryption to use on
                                      this wlan
  enforce-dhcp                        Drop packets from Wireless Clients
                                      with static IP address
  fast-bss-transition                 Configure support for 802.11r Fast
```

```
                                        BSS Transition
  http-analyze                          Enable HTTP URL analysis on the wlan
  ip                                    Internet Protocol (IP)
  ipv6                                  Internet Protocol version 6 (IPv6)
  kerberos                              Configure kerberos authentication
                                        parameters
  mac-authentication                    Configure mac-authentication related
                                        parameters
  no                                    Negate a command or set its defaults
  nsight                                Nsight Server
  opendns                               OpenDNS related config for this wlan
  protected-mgmt-frames                 Protected Management Frames (IEEE
                                        802.11w) related configuration (DEMO
                                        FEATURE)
  proxy-arp-mode                        Configure handling of ARP requests
                                        with proxy-arp is enabled
  proxy-nd-mode                         Configure handling of IPv6 ND
                                        requests with proxy-nd is enabled
  qos-map                               Support the 802.11u QoS map element
                                        and frame
  radio-resource-measurement            Configure support for 802.11k Radio
                                        Resource Measurement
  radius                                Configure RADIUS related parameters
  registration                          Enable dynamic registration of device
                                        (or) user
  relay-agent                           Configure dhcp relay agent info
  shutdown                              Shutdown this wlan
  ssid                                  Configure the Service Set Identifier
                                        for this WLAN
  t5-client-isolation                   Isolate traffic among clients
  t5-security                           Configure encryption and
                                        authentication
  time-based-access                     Configure client access based on time
  use                                   Set setting to use
  vlan                                  Configure the vlan where traffic from
                                        this wlan is mapped
  vlan-pool-member                      Add a member vlan to the pool of
                                        vlans for the wlan (Note:
                                        configuration of a vlan-pool
                                        overrides the 'vlan' configuration)
  wep128                                Configure WEP128 parameters
  wep64                                 Configure WEP64 parameters
  wing-extensions                       Enable support for WiNG-Specific
                                        extensions to 802.11
  wireless-client                       Configure wireless-client specific
                                        parameters
  wpa-wpa2                              Modify tkip-ccmp (wpa/wpa2) related
                                        parameters

  clrscr                                Clears the display screen
  commit                                Commit all changes made in this
                                        session
  do                                    Run commands from Exec mode
  end                                   End current mode and change to EXEC
                                        mode
  exit                                  End current mode and down to previous
                                        mode
  help                                  Description of the interactive help
                                        system
  revert                                Revert changes
  service                               Service Commands
  show                                  Show running system information
  write                                 Write running configuration to memory
                                        or terminal

rfs6000-81742D(config-wlan-1)#
```

The following example shows how to use the ‘containing’ keyword to enter the configuration mode of an existing WLAN:

```
rfs6000-81742D(config)#wlan containing wlan1
rfs6000-81742D(config-wlan-{'containing': 'wlan1'})#
```

4.1.92.2 wlan-mode commands

wlan

This section documents the WLAN configuration mode commands in detail.

Use the (config) instance to configure WLAN related parameters.

To navigate to this instance, use the following command:

```
<DEVICE>(config)#wlan <WLAN-NAME>
```

The following table summarizes WLAN configuration mode commands:

Table 4.52 *WLAN-Mode Commands*

Command	Description	Reference
accounting	Defines a WLAN accounting configuration	*page 4-449*
acl	Defines the actions based on an ACL rule configuration	*page 4-452*
answer-broadcast-probes	Allows a WLAN to respond to probes for broadcast ESS	*page 4-454*
assoc-response	Configures a minimum *receive signal strength indication* (RSSI) value, below which the WLAN does not send a response to a client's association request	*page 4-455*
association-list	Attaches an existing global association list to a WLAN	*page 4-456*
authentication-type	Sets a WLAN's authentication type	*page 4-457*
bridging-mode	Configures how packets to/from this WLAN are bridged	*page 4-459*
broadcast-dhcp	Configures broadcast DHCP packet handling	*page 4-460*
broadcast-ssid	Advertises a WLAN's SSID in beacons	*page 4-461*
captive-portal-enforcement	Configures a WLAN's captive portal enforcement	*page 4-462*
client-access	Enables WLAN client access (normal data operations)	*page 4-463*
client-client-communication	Allows the switching of frames from one wireless client to another on a WLAN	*page 4-464*
client-load-balancing	Enables load balancing of WLAN clients	*page 4-465*
controller-assisted-mobility	Enables controller assisted mobility to determine wireless clients' VLAN assignment	*page 4-467*
data-rates	Specifies the 802.11 rates supported on the WLAN	*page 4-468*
description	Sets a WLAN's description	*page 4-471*
downstream-group-addressed-forwarding	Enables forwarding of downstream packets addressed to a group	*page 4-472*
dpi	Enables extraction of metadata flows on the WLAN	*page 4-473*
dynamic-vlan-assignment	Configures dynamic VLAN assignment on this WLAN	*page 4-475*
eap-types	Configures client access based on eap-type used for authentication	*page 4-476*
encryption-type	Sets a WLAN's encryption type	*page 4-478*

Table 4.52 *WLAN-Mode Commands*

Command	Description	Reference
enforce-dhcp	Drops packets from clients with a static IP address	*page 4-479*
fast-bss-transition	Configures support for 802.11r fast BSS transition on a WLAN	*page 4-480*
http-analyze	Enables HTTP URL analysis on the WLAN	*page 4-481*
ip	Configures IPv4 settings on this WLAN	*page 4-483*
ipv6	Configures IPv6 settings on this WLAN	*page 4-484*
kerberos	Configures Kerberos authentication parameters	*page 4-485*
mac-authentication	Configures MAC authentication parameters	*page 4-487*
no	Negates a command or reverts settings to their default	*page 4-488*
nsight	Enables retention of guest client history in the NSight database	*page 4-492*
opendns	Configures the device ID, which is embedded in each DNS query packet going out from an access point, wireless controller, or service platform to the OpenDNS server	*page 4-493*
protected-mgmt-frames	Enables and configures the WLAN's frame protection mode and security association	*page 4-495*
proxy-arp-mode	Enables the proxy ARP mode for ARP requests	*page 4-497*
proxy-nd-mode	Configures the proxy ND mode for this WLAN member clients as either strict or dynamic	*page 4-498*
qos-map	Enables support for 802.11u QoS map element and frames	*page 4-499*
radio-resource-measurement	Enables support for 802.11k radio resource measurement	*page 4-500*
radius	Configures RADIUS parameters	*page 4-501*
registration	Configures settings enabling dynamic registration of devices. Use this command to specify the mode of registration and to configure corresponding parameters.	*page 4-503*
relay-agent	Enables support for DHCP relay agent information (option 82) feature on this WLAN	*page 4-506*
shutdown	Auto shuts down a WLAN	*page 4-508*
ssid	Configures a WLAN's SSID	*page 4-510*
t5-client-isolation	Disallows clients connecting to the WLAN to communicate with one another	*page 4-511*
t5-security	Configures T5 PowerBroadband security settings	*page 4-512*
time-based-access	Configures time-based client access	*page 4-514*
use	Defines WLAN mode configuration settings	*page 4-515*
vlan	Sets VLAN assignment for a WLAN	*page 4-519*
vlan-pool-member	Adds a member VLAN to the pool of VLANs for a WLAN	*page 4-520*
wep128	Configures WEP128 parameters	*page 4-522*
wep64	Configures WEP64 parameters	*page 4-524*

Table 4.52 *WLAN-Mode Commands*

Command	Description	Reference
wing-extensions	Enables support for WiNG specific extensions to 802.11	*page 4-526*
wireless-client	Configures the transmit power for wireless clients transmission	*page 4-529*
wpa-wpa2	Modifies TKIP and CCMP (WPA/WPA2) related parameters	*page 4-532*
service	Invokes service commands applicable in the WLAN configuration mode	*page 4-535*

4.1.92.2.151 accounting

wlan-mode commands

Defines the WLAN's accounting configuration

Accounting is the method of collecting user data, such as start and stop times, executed commands (for example, PPP), number of packets and number of bytes received and transmitted. This data is sent to the security server for billing, auditing, and reporting purposes. Accounting enables wireless network administrators to track the services and network resources accessed and consumed by users. When enabled, this feature allows the network access server to report and log user activity to a RADIUS security server in the form of accounting records. Each accounting record is comprised of AV pairs and is stored on the access control server. The data can be analyzed for network management, client billing, and/or auditing. Accounting methods must be defined through AAA policies.

Accounting can be enabled and applied to access point, wireless controller, or service platform managed WLANs. Once enabled, it uniquely logs accounting events specific to the managed WLAN. Accounting logs contain information about the use of remote access services by users. This information is of great assistance in partitioning local versus remote users and how to best accommodate each. Remote user information can be archived to a location outside of the access point for periodic network and user permission administration.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
accounting [radius|syslog|wait-client-ip]

accounting [radius|wait-client-ip]

accounting syslog [host|mac-address-format]

accounting syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none|through-controller|through-rf-domain-manager]}

accounting syslog mac-address-format [middle-hyphen|no-delim|pair-colon|pair-hyphen|quad-dot] case [lower|upper]
```

Parameters

- `accounting [radius|wait-client-ip]`

accounting radius	Enables support for WLAN RADIUS accounting messages. This option is disabled by default. When enabled, the WLAN uses an external RADIUS resource for accounting. Use the *use > aaa-policy > <AAA-POLICY-NAME>* command to associate an appropriate AAA policy with this WLAN. This AAA policy should be existing and should define the accounting, authentication, and authorization parameters.
accounting wait-client-ip	Enables waiting for client's IP before commencing the accounting procedure

```
• accounting syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none|through-
controller|through-rf-domain-manager]}
```

accounting syslog	Enables support for WLAN syslog accounting messages in standard syslog format (RFC 3164). This option is disabled by default.
host <IP/HOSTNAME>	Configures a syslog destination hostname or IP address for accounting records • <IP/HOSTNAME> – Specify the IP address or name of the destination host.
port <1-65535>	Optional. Configures the syslog server's UDP port (this port is used to connect to the server) • <1-65535> – Specify the port from 1 - 65535. Default port is 514.
proxy-mode [none| through-controller| through-rf-domain-manager]	Optional. Configures the request proxying mode • none – Requests are directly sent to the server from the device • through-controller – Proxies requests through the controller (access point, wireless controller, or service platform) configuring the device • through-rf-domain-manager – Proxies requests through the local RF Domain manager

```
• accounting syslog mac-address-format [middle-hyphen|no-delim|pair-colon|pair-
hyphen|quad-dot] case [lower|upper]
```

accounting syslog	Enables support for WLAN syslog accounting messages
mac-address-format	Configures the MAC address format used in syslog messages
middle-hyphen	Configures the MAC address format with middle hyphen (AABBCC-DDEEFF)
no-delim	Configures the MAC address format without delimitors (AABBCCDDEEFF)
pair-colon	Configures the MAC address format with pair-colon delimitors (AA:BB:CC:DD:EE:FF)
pair-hyphen	Configures the MAC address format with pair-hyphen deli mi tors (AA-BB-CC-DD-EE-FF). This is the default setting.
quad-dot	Configures the MAC address format with quad-dot delimitors (AABB.CCDD.EEFF)
case [lower|upper]	The following keywords are common to all: • case – Specifies MAC address case (upper or lower) • lower – Specifies MAC address is filled in lower case (for example, aa-bb-cc-dd-ee-ff) • upper – Specifies MAC address is filled in upper case (for example, AA-BB-CC-DD-EE-FF)

Example

```
rfs6000-81742D(config-wlan-test)#accounting syslog host 172.16.10.4 port 2 proxy-
mode none

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 accounting syslog host 172.16.10.4 port 2
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables sending of accounting message to the RADIUS server, disables syslog accounting, or disables waiting for client's IP before sending accounting messages

4.1.92.2.152 acl

wlan-mode commands

Defines the actions taken based on an ACL rule configuration

Use the *use > ip-access-list <IP-ACCESS-LIST-NAME>* command to associate an ACL with the WLAN. The ACL rule is determined by the associated ACL's configuration.

A firewall is a mechanism enforcing access control, and is considered a first line of defense in protecting proprietary information within the network. The means by which this is accomplished varies, but in principle, a firewall can be thought of as mechanisms allowing and denying data traffic in respect to administrator defined rules. For an overview of firewalls, see *FIREWALL-POLICY*.

WLANs use firewalls like *Access Control Lists* (ACLs) to filter/mark packets based on the WLAN from which they arrive, as opposed to filtering packets on layer 2 ports. An ACL contains an ordered list of *Access Control Entries* (ACEs). Each ACE specifies an action and a set of conditions (rules) a packet must satisfy to match the ACE. The order of conditions in the list is critical since filtering is stopped after the first match.

IP based firewall rules are specific to source and destination IP addresses and the unique rules and precedence orders assigned. Both IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC.

Additionally, administrators can filter layer 2 traffic on a physical layer 2 interface using MAC addresses. A MAC Firewall rule uses source and destination MAC addresses for matching operations, where the result is a typical allow, deny or mark designation to WLAN packet traffic.

Keep in mind IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC ACL to the interface.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
acl exceed-rate wireless-client-denied-traffic <0-1000000> {blacklist <0-86400>|
  disassociate}
```

Parameters

- `acl exceed-rate wireless-client-denied-traffic <0-1000000> {blacklist <0-86400>| disassociate}`

acl exceed-rate	Sets the action taken based on an ACL rule configuration (for example, drop a packet) • exceed-rate – Action is taken when the rate exceeds a specified value

wireless-client-denied-traffic <0-1000000>	Sets the action to deny traffic to the wireless client when the rate exceeds the specified value • <0-1000000> – Specify a allowed rate threshold of disallowed traffic in packets/sec. If enabled, this option allows an associated client, exceeding the thresholds configured for storm traffic, to be either de-authenticated or blacklisted depending on the action selected. This option is disabled by default.
blacklist <0-86400>	Optional. When enabled, sets the time interval, in seconds, to blacklist a wireless client. • <0-86400> – Configures the blacklist duration from 0 - 86400 seconds. Offending clients are re-authenticated once the blacklist duration, configured here, has exceeded.
disassociate	Optional. When enabled, disassociates a wireless client

Example

```
rfs6000-81742D(config-wlan-test)#acl exceed-rate wireless-client-denied-traffic
20 disassociate

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 accounting syslog host 172.16.10.4 port 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Removes the action (de-authenticate or blacklist) to be taken when an associated client exceeds the thresholds configured for storm traffic

4.1.92.2.153 answer-broadcast-probes

wlan-mode commands

Allows the WLAN to respond to probe requests that do not specify a SSID. These probes are for broadcast ESS. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
answer-broadcast-probes
```

Parameters

None

Example

```
rfs6000-81742D(config-wlan-1)#answer-broadcast-probes
rfs6000-81742D(config-wlan-1)#
```

Related Commands

no	Does not allow this WLAN to respond to probe requests that do not specify a SSID

4.1.92.2.154 assoc-response

wlan-mode commands

Configures the deny-threshold and rssi-threshold values. These threshold values are considered when responding to a client's association/authentication request.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
assoc-response [deny-threshold <1-12>|rssi-threshold <-100--40>]
```

Parameters

- `assoc-response [deny-threshold <1-12>|rssi-threshold <-100--40>]`

assoc-response	Configures the association response thresholds
deny-threshold <1-12>	Configures the number of times association/authentication request, from a client, is ignored if the RSSI is less than the configured RSSI threshold. This option is disabled by default. • <1-12> – Specify the deny-threshold from 1 - 12.
rssi-threshold <-100--40>	Configures an association response RSSI threshold value. If the RSSI is below the configured threshold value, the client's association/authentication request is ignored. This option is disabled by default. • rssi-threshold <-100--40> – Specify a value from -100 - -40 dBm.

Example

```
nx9500-6C8809(config-wlan-test)#assoc-response rssi-threshold -60
nx9500-6C8809(config-wlan-test)#assoc-response deny-threshold 4

nx9500-6C8809(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 assoc-response rssi-threshold -60
 assoc-response deny-threshold 4
 registration user group-name guest expiry-time 2000 agreement-refresh 14400
nx9500-6C8809(config-wlan-test)#
```

Related Commands

no	Removes the configured deny-threshold and rssi-threshold values

4.1.92.2.155 association-list

wlan-mode commands

Attaches an existing global association list with this WLAN. For more information on global association lists, see *global-association-list*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
association-list global <GLOBAL-ASSO-LIST-NAME>
```

Parameters

- `association-list global <GLOBAL-ASSO-LIST-NAME>`

association-list global <GLOBAL-ASSO-LIST-NAME>	Attaches an existing global association list with this WLAN • <GLOBAL-ASSO-LIST-NAME> – Specify the global association list name (should be existing and configured).

Example

```
rfs4000-229D58(config-wlan-test)#association-list global my-clients

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 association-list global my-clients
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Removes the global association list's association with this WLAN

4.1.92.2.156 authentication-type

wlan-mode commands

Sets the WLAN's authentication type

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
authentication-type [eap|eap-mac|eap-psk|kerberos|mac|none]
```

Parameters

- `authentication-type [eap|eap-mac|eap-psk|kerberos|mac|none]`

authentication-type	Configures a WLAN's authentication type The authentication types are: EAP, EAP-MAC, EAP-PSK, Kerberos, MAC, and none.
eap	Configures EAP authentication (802.1X) EAP is the de-facto standard authentication method used to provide secure authenticated access to controller managed WLANs. EAP provides mutual authentication, secured credential exchange, dynamic keying and strong encryption. 802.1X EAP can be deployed with WEP, WPA or WPA2 encryption schemes to further protect user information forwarded over controller managed WLANs. The EAP process begins when an unauthenticated supplicant (client device) tries to connect with an authenticator (in this case, the authentication server). An access point passes EAP packets from the client to an authentication server on the wired side of the access point. All other packet types are blocked until the authentication server (typically, a RADIUS server) verifies the client's identity. If using EAP authentication ensure that a AAA policy is mapped to the WLAN.
eap-mac	Configures EAP or MAC authentication depending on client. (This setting is valid only with the None encryption type. EAP-MAC is useful when in a hotspot environment, as some clients support EAP and an administrator may want to authenticate based on just the MAC address of the device.
eap-psk	Configures EAP authentication or pre-shared keys depending on client (This setting is only valid with *Temporal Key Integrity Protocol* (TKIP) or *Counter Mode with Cipher Block Chaining Message Authentication Code Protocol* (CCMP) encryption types). When using PSK with EAP, the controller sends a packet requesting a secure link using a pre-shared key. The controller and authenticating device must use the same authenticating algorithm and pass code during authentication. EAP-PSK is useful when transitioning from a PSK network to one that supports EAP. If using eap-psk authentication ensure that a AAA policy is mapped to the WLAN.

kerberos	Configures Kerberos authentication (encryption will change to WEP128 if it's not already WEP128 or Keyguard) Kerberos (designed and developed by MIT) provides strong authentication for client/server applications using secret-key cryptography. Using Kerberos, a client must prove its identity to a server (and vice versa) across an insecure network connection. Once a client and server use Kerberos to validate their identity, they encrypt all communications to assure privacy and data integrity. Kerberos can only be used on the access point with 802.11b clients. Kerberos uses *Network Time Protocol* (NTP) for synchronizing the clocks of its *Key Distribution Center* (KDC) server(s).
mac	Configures MAC authentication (RADIUS lookup of MAC address) MAC is a device level authentication method used to augment other security schemes when legacy devices are deployed using static WEP. MAC authentication can be used for device level authentication by permitting WLAN access based on device MAC address. MAC authentication is typically used to augment WLAN security options that do not use authentication (such as static WEP, WPA-PSK and WPA2-PSK) MAC authentication can also be used to assign VLAN memberships, Firewall policies and time and date restrictions. MAC authentication can only identify devices, not users. If using mac authentication ensure that an AAA policy is mapped to the WLAN.
none	No authentication is used or the client uses pre-shared keys. This is the default value.

Example

```
rfs6000-81742D(config-wlan-test)#authentication-type eap

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Resets the authentication mode used with this WLAN to default (none/pre-shared keys)

4.1.92.2.157 bridging-mode

wlan-mode commands

Configures how packets are bridged to and from a WLAN

Use this command to define which VLANs are bridged, and how local VLANs are bridged between the wired and wireless sides of the network.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bridging-mode [local|tunnel]
```

Parameters

- `bridging-mode [local|tunnel]`

bridging-mode	Configures how packets are bridged to and from a WLAN. The options are local and tunnel.
local	Bridges packets between WLAN and local ethernet ports. This is the default mode.
tunnel	Tunnels packets to other devices (typically a wireless controller or service platform)

Example

```
rfs6000-81742D(config-wlan-test)#bridging-mode local

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
rfs6000-81742D(config-wlan-test)#
```

4.1.92.2.158 broadcast-dhcp

wlan-mode commands

Configures broadcast DHCP packet handling parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
broadcast-dhcp validate-offer
```

Parameters

- `broadcast-dhcp validate-offer`

validate-offer	Enables validation of the broadcast DHCP packet destination (a wireless client associated to the radio) before forwarding over the air. This option is disabled by default.

Example

```
rfs6000-81742D(config-wlan-test)#broadcast-dhcp validate-offer

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables validation of the broadcast DHCP packet destination (a wireless client associated to the radio) before forwarding over the air

4.1.92.2.159 broadcast-ssid

wlan-mode commands

Advertises the WLAN SSID in beacons. If a hacker tries to isolate and hack a SSID from a client, the SSID will display since the ESSID is in the beacon. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
broadcast-ssid
```

Parameters

None

Example

```
rfs6000-81742D(config-wlan-1)#broadcast-ssid
rfs6000-81742D(config-wlan-1)#
```

Related Commands

no	Disables the broadcasting of the WLAN's SSID in beacons

4.1.92.2.160 captive-portal-enforcement

wlan-mode commands

Configures the captive portal enforcement on this WLAN. When enabled, provides successfully authenticated guests temporary and restricted access to the network. If enforcing captive-portal authentication, specify the captive-portal policy to use. For more information, see *use*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
captive-portal-enforcement {fall-back}
```

Parameters

- `captive-portal-enforcement {fall-back}`

captive-portal-enforcement	Enables captive portal enforcement on a WLAN. This option is disabled by default.
fall-back	Optional. Enforces captive portal validation if WLAN authentication fails (applicable to EAP or MAC authentication only)

Example

```
rfs6000-81742D(config-wlan-test)#captive-portal-enforcement fall-back

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 captive-portal-enforcement fall-back
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables captive portal enforcement

4.1.92.2.161 client-access

wlan-mode commands

Enables WLAN client access (for normal data operations)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
client-access
```

Parameters

None

Example

```
rfs6000-81742D(config-wlan-1)#client-access
rfs6000-81742D(config-wlan-1)#
```

Related Commands

no	Disables WLAN client access

4.1.92.2.162 client-client-communication

wlan-mode commands

Allows frame switching from one client to another on a WLAN

This option is enabled by default. It allows clients to exchange packets with other clients. It does not necessarily prevent clients on other WLANs from sending packets to this WLAN, but as long as this setting is also disabled on that WLAN, clients are not permitted to interoperate.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
client-client-communication
```

Parameters

None

Example

```
rfs6000-81742D(config-wlan-1)#client-client-communication
rfs6000-81742D(config-wlan-1)#
```

Related Commands

no	Disables frame switching from one client to another on a WLAN

4.1.92.2.163 client-load-balancing

wlan-mode commands

Enforces client load balancing on a WLAN's access point radios. AP6522, AP6532, AP6562, AP81XX, and AP82XX models can support 256 clients per access point. AP6511 and AP6521 models can support up to 128 clients per access point. When enforced, loads are balanced by ignoring association and probe requests. Probe and association requests are not responded to, forcing a client to associate with another access point radio.

This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
client-load-balancing {allow-single-band-clients|band-discovery-intvl|
capability-ageout-time|max-probe-req|probe-req-invl}

client-load-balancing {allow-single-band-clients [2.4ghz|5ghz]|band-discovery-
intvl <0-10000>|capability-ageout-time <0-10000>}

client-load-balancing {max-probe-req|probe-req-intvl} [2.4ghz|5ghz] <0-10000>
```

Parameters

- `client-load-balancing {allow-single-band-clients [2.4ghz|5ghz]|band-discovery-intvl <0-10000>|capability-ageout-time <0-10000>}`

client-load-balancing	Configures client load balancing on a WLAN
allow-single-band-clients [2.4ghz|5ghz]	Optional. Allows single band clients to associate even during load balancing • 2.4ghz – Enables load balancing across 2.4 GHz channels • 5ghz – Enables load balancing across 5.0 GHz channels This option is enabled by default for 2.4 and 5.0 GHz radios.
band-discovery-intvl <0-10000>	Optional. Configures the interval to discover a client's band capability before connection • <0-10000> – Specify a value from 0 - 10000 seconds. The default is 10 seconds.
capability-ageout-time <0-10000>	Optional. Configures a client's capability ageout interval. This is the time for which a client's capabilities are retained in the device's internal table. Once this time is exceeded the client's capabilities are aged out. • <0-10000> – Specify a value from 0 - 10000 seconds. The default is 3600 seconds.

- `client-load-balancing {max-probe-req|probe-req-intvl} [2.4ghz|5ghz] <0-10000>`

client-load-balancing	Configures WLAN client load balancing
max-probe-req [2.4ghz|5ghz] <0-10000>	Optional. Configures client probe request interval limits for device association • 2.4ghz – Configures maximum client probe requests on 2.4 GHz radios • 5ghz – Configures maximum client probe requests on 5.0 GHz radios • <0-10000> – Specify a client probe request threshold from 0 - 10000. The default for both 2.4 and 5.0 GHz radios is 60.

probe-req-intvl [2.4ghz|5ghz] <0-10000>	Optional. Configures client probe request interval limits for device association • 2.4ghz – Configures the client probe request interval on 2.4 GHz radios • 5ghz – Configures the client probe request interval on 5.0 GHz radios • <0-10000> – Specify a value from 0 - 10000. The default for both 2.4 and 5.0 GHz radios is 10 seconds.

Example

```
rfs6000-81742D(config-wlan-test)#client-load-balancing band-discovery-intvl 2

rfs6000-81742D(config-wlan-test)#client-load-balancing probe-req-intvl 5ghz 5

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 client-load-balancing probe-req-intvl 5ghz 5

 captive-portal-enforcement fall-back
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables client load balancing on a WLAN's access point radios

4.1.92.2.164 controller-assisted-mobility

wlan-mode commands

Enables controller or service platform assisted mobility to determine a wireless client's VLAN assignment. When enabled, a controller or service platform's mobility database is used to assist in roaming between RF Domains. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
controller-assisted-mobility
```

Parameters

None

Example

```
rfs4000-229D58(config-wlan-test)#controller-assisted-mobility

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 controller-assisted-mobility
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Disables controller or service platform assisted mobility to determine a wireless client's VLAN assignment

4.1.92.2.165 data-rates

wlan-mode commands

Specifies the 802.11 rates supported on a WLAN

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
data-rates [2.4GHz|5GHz]

data-rates 2.4GHz [b-only|bg|bgn|custom|default|g-only|gn]

data-rates 2.4GHz custom [1|11|12|18|2|24|36|48|5.5|54|6|9|basic-1|basic-11|
basic-12|basic-18|basic-2|basic-24|basic-36|basic-48|basic-5.5|basic-54|
basic-6|basic-9|basic-mcs-1s|mcs-1s|mcs-2s|mcs-3s]

data-rates 5GHz [a-only|an|custom|default]

data-rates 5GHz custom [12|18|24|36|48|54|6|9|basic-1|basic-11|basic-12|
basic-18|basic-2|basic-24|basic-36|basic-48|basic-5.5|basic-54|basic-6|basic-9|
basic-mcs-1s|mcs-1s|mcs2s|mcs3s]
```

Parameters

- `data-rates 2.4GHz [b-only|bg|bgn|default|g-only|gn]`

data-rates	Specifies the 802.11 rates supported when mapped to a 2.4 GHz radio
b-only	Uses rates that support only 11b clients
bg	Uses rates that support both 11b and 11g clients
bgn	Uses rates that support 11b, 11g and 11n clients
default	Uses the default rates configured for a 2.4 GHz radio
g-only	Uses rates that support operation in 11g only
gn	Uses rates that support 11g and 11n clients

- `data-rates 5GHz [a-only|an|default]`

data-rates	Specifies the 802.11 rates supported when mapped to a 5.0 GHz radio
a-only	Uses rates that support operation in 11a only
an	Uses rates that support 11a and 11n clients
default	Uses default rates configured for a 5.0 GHz

- `data-rates [2.4GHz|5GHz] custom [1|11|12|18|2|24|36|48|5.5|54|6|9|basic-1|basic-11|basic-12|basic-18|basic-2|basic-24|basic-36|basic-48|basic-5.5|basic-54|basic-6|basic-9|basic-mcs-1s|mcs-1s|mcs-2s|mcs-3s]`

data-rates [2.4GHz|5GHz]	Specifies the 802.11 rates supported when mapped to a 2.4 GHz or 5.0 GHz radio

custom	Configures a data rates list by specifying each rate individually. Use 'basic-' prefix before a rate to indicate it is used as a basic rate (For example, 'data-rates custom basic-1 basic-2 5.5 11'). The data-rates for 2.4 GHz and 5.0 GHz channels are the same with a few exceptions. The 2.4 GHz channel has a few extra data rates: 1, 11, 2, and 5.5.
1,11,2,5.5	The following data rates are specific to the 2.4 GHz channel: • 1 – 1-Mbps • 11 – 11-Mbps • 2 – 2-Mbps • 5.5 – 5.5-Mbps
[12,18,24,36,48,54,6,9, basic-1,basic-11, basic-12,basic-18, basic-2,basic-36, basic-48,basic-5.5, basic-54,basic-6, basic-9, basic-mcs-1s, mcs-1s,mcs2s, mcs-3s]	The following data rates are common to both the 2.4 GHz and 5.0 GHz channels: • 12 – 12 Mbps • 18 – 18-Mbps • 24 – 24 Mbps • 36 – 36-Mbps • 48 – 48-Mbps • 54 – 54-Mbps • 6 – 6-Mbps • 9 – 9-Mbps • basic-1 – basic 1-Mbps • basic-11 – basic 11-Mbps • basic-12 – basic 12-Mbps • basic-18 – basic 18-Mbps • basic-2 – basic 2-Mbps • basic-36 – basic 36-Mbps • basic-48 – basic 48-Mbps • basic-5.5 – basic 5.5-Mbps • basic-54 – basic 54-Mbps • basic-6 – basic 6-Mbps • basic-9 – basic 9-Mbps • basic-mcs-1s – Modulation and coding scheme data rates for 1 Spatial Stream • mcs-1s – Applicable to 1-spatial stream data rates • mcs-2s – Applicable to 2-spatial stream data rates • mcs-3s – Applicable to 3-spatial stream data rates

Example

```
rfs6000-81742D(config-wlan-test)#data-rates 2.4GHz gn

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 data-rates 2.4GHz gn
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 captive-portal-enforcement fall-back
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Resets the 802.11 data rates supported on a WLAN for the 2.4 GHz or 5.0 GHz radios

4.1.92.2.166 description

wlan-mode commands

Defines the WLAN description

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <LINE>
```

Parameters

```
• description <LINE>
```

<LINE>	Specify a WLAN description The WLAN's description should help differentiate it from others with similar configurations. The description should not exceed 64 characters.

Example

```
rfs6000-81742D(config-wlan-test)#description TestWLAN

rfs6000-81742D(config-wlan-test)#show context
wlan test
 description TestWLAN
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 data-rates 2.4GHz gn
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 captive-portal-enforcement fall-back
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Removes a WLAN's configured description

4.1.92.2.167 downstream-group-addressed-forwarding

wlan-mode commands

Enables forwarding of downstream *broadcast/multicast* (BC/MC) packets to a group on this WLAN. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
downstream-group-addressed-forwarding
```

Parameters

None

Example

```
rfs4000-229D58(config-wlan-test)#downstream-group-addressed-forwarding
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Disables forwarding of downstream BCMC packets to a group on this WLAN

4.1.92.2.168 dpi

wlan-mode commands

Enables DPI on this WLAN. When enabled, all traffic is subjected to DPI for detection of applications, application categories, custom applications, and metadata extraction.

DPI is an advanced packet analysis technique, which analyzes packet and packet content headers to determine the nature of network traffic. When enabled, DPI inspects packets of all flows to identify applications (such as, Netflix, Twitter, Facebook, etc.) and extract metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

Supported in the following platforms:

- Access Points — AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dpi metadata [http|ssl|tcp-rtt|voice-video]
```

Parameters

- `dpi metadata [http|ssl|tcp-rtt|voice-video]`

dpi metadata [http|ssl|tcp-rtt| voice-video]	Enables extraction of the following metadata flows: • http – Extracts HTTP flows. When enabled, administrators can track HTTP Websites accessed by both internal and guest clients and visualize HTTP data usage, hits, active time and total clients on the NSight application's dashboard. This setting is disabled by default. • ssl – Extracts SSL flows. When enabled, administrators can track SSL Websites accessed by both internal and guest clients and visualize SSL data usage, hits, active time and total clients on the NSight application's dashboard.This setting is disabled by default • tcp-rtt – Extracts *Round Trip Time* (RTT) information from *Transmission Control Protocol* (TCP) flows. However, this TCP-RTT metadata is viewable only on the NSight dashboard. Therefore, ensure the NSight server is up and NSight analytics data collection is enabled. • voice-video – Extracts voice and video flows. When enabled, voice and video calls can be tracked by extracting parameters, such as packets transferred and lost, jitter, and application name. Most Enterprise VoIP applications like facetime, skype for business and VoIP terminals can be monitored for call quality and visualized on the NSight dashboard in manner similar to HTTP and SSL. Call quality and metrics can only be determined from calls established unencrypted. This setting is disabled by default.

Example

```
rfs6000-81742D(config-wlan-test)#dpi metadata http
rfs6000-81742D(config-wlan-test)#dpi metadata ssl
rfs6000-81742D(config-wlan-test)#dpi metadata voice-video

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 dpi metadata voice-video
 dpi metadata http
 dpi metadata ssl
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables extraction of metadata flows on the WLAN

4.1.92.2.169 dynamic-vlan-assignment

wlan-mode commands

Enables dynamic VLAN assignment on this WLAN, and adds or removes VLANs for the selected WLAN. Configure this feature to allow an override to the WLAN configuration. If, as part of the authentication process, the RADIUS server returns a client's VLAN-ID in a RADIUS Access-Accept packet, and this feature is enabled, all client traffic is forward on that VLAN. If disabled, the RADIUS server returns VLAN-ID is ignored and the WLAN's VLAN configuration is used. For more information, see *vlan*. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
dynamic-vlan-assignment allowed-vlans <VLAN-ID>
```

Parameters

- `dynamic-vlan-assignment allowed-vlans <VLAN-ID>`

dynamic-vlan-assignment allowed-vlans	Enables dynamic VLAN assignment and configures a list of VLAN IDs or VLAN alias allowed access to the WLAN
<VLAN-ID>	Specify the list of VLAN IDs or the VLAN alias names. For example, 10-20, 25, 30-35, $guest. For information on VLAN aliases, see *alias*.

Example

```
rfs4000-229D58(config-wlan-test)#dynamic-vlan-assignment allowed-vlans 10-20

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 dynamic-vlan-assignment allowed-vlans 10-20
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Disables dynamic VLAN assignment on this WLAN

4.1.92.2.170 eap-types

wlan-mode commands

Configures client access based on the EAP type used

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
eap-types [allow|deny] [aka|all|fast|peap|sim|tls|ttls] {(aka|all|fast|peap|sim|
tls|ttls)}
```

Parameters

```
• eap-types [allow|deny] [aka|all|fast|peap|sim|tls|ttls] {(aka|all|fast|
peap|sim|tls|ttls)}
```

eap-types [allow|deny]	Configures a list of allowed or denied EAP types • allow – Configures a list of EAP types allowed for WLAN client authentication • deny – Configures a list of EAP types not allowed for WLAN client authentication
[aka|all|fast|peap|sim|tls|ttls]	The following EAP types are common to the 'allow' and 'deny' keywords: • aka – Configures EAP *Authentication and Key Agreement* (AKA) and EAP-AKA' (AKA Prime). EAP-AKA is one of the methods in the EAP authentication framework. It uses *Universal Mobile Telecommunications System* (UMTS) and *Universal Subscriber Identity Module* (USIM) for client authentication and key distribution. • all – Allows or denies usage of all EAP types on the WLAN. This is the default setting. • fast – Configures EAP *Flexible Authentication via Secure Tunneling* (FAST). EAP-FAST establishes a *Transport Layer Security* (TLS) tunnel, to verify client credentials, using *Protected Access Credentials* (PAC). • peap – Configures *Protected Extensible Authentication Protocol* (PEAP). PEAP or Protected EAP uses encrypted and authenticated TLS tunnel to encapsulate EAP. • sim – Configures EAP *Subscriber Identity Module* (SIM). EAP-SIM uses *Global System for Mobile Communications* (GSMC) SIM for client authentication and key distribution. • tls – Configures EAP *Transport Layer Security* (TLS). EAP-TLS is an EAP authentication method that uses PKI to communicate with a RADIUS server or any other authentication server. • ttls – Configures *Tunneled Transport Layer Security* (TTLS). EAP-TTLS is an extension of TLS. Unlike TLS, TTLS does not require every client to generate and install a CA-signed certificate. **Note:** These options are recursive, and more than one EAP type can be selected. The selected options are added to the allowed or denied EAP types list.

Example

```
rfs6000-81742D(config-wlan-test)#eap-types allow fast sim tls

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 eap-types allow fast sim tls
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Reverts to default setting - eap-types allow all

4.1.92.2.171 encryption-type

wlan-mode commands

Sets a WLAN's encryption type

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
encryption-type [ccmp|keyguard|none|tkip-ccmp|wep128|web128-keyguard|wep64]
```

Parameters

- `encryption-type [ccmp|keyguard|none|tkip-ccmp|wep128|web128-keyguard|wep64]`

encryption-type	Configures the WLAN's data encryption parameters
ccmp	Configures *Advanced Encryption Standard* (AES) *Counter Mode CBC-MAC Protocol* (AES-CCM/CCMP)
keyguard	Configures Keyguard-MCM *(Mobile Computing Mode)*
none	No encryption used. This is the default setting.
tkip-ccmp	Configures the TKIP and AES-CCM/CCMP encryption modes
wep128	Configures WEP with 128 bit keys
wep128-keyguard	Configures WEP128 as well as Keyguard-MCM encryption modes
wep64	Configures WEP with 64 bit keys. A WEP64 configuration is insecure when two WLANs are mapped to the same VLAN, and one uses no encryption while the other uses WEP.

Example

```
rfs6000-81742Dconfig-wlan-test)#encryption-type tkip-ccmp

rfs6000-81742D(config-wlan-test)#show context
wlan test
 description TestWLAN
 ssid test
 bridging-mode local
 encryption-type tkip-ccmp
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 data-rates 2.4GHz gn
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 captive-portal-enforcement fall-back
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Resets the WLAN's encryption type to default (none)

4.1.92.2.172 enforce-dhcp

wlan-mode commands

Enables dropping of packets from clients with a static IP address. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
enforce-dhcp
```

Parameters

None

Example

```
rfs6000-81742D(config-wlan-test)#enforce-dhcp

rfs6000-81742D(config-wlan-test)#show context
wlan test
 description TestWLAN
 ssid test
 bridging-mode local
 encryption-type tkip-ccmp
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 data-rates 2.4GHz gn
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 captive-portal-enforcement fall-back
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 enforce-dhcp
 broadcast-dhcp validate-offer
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables dropping of packets from clients with a static IP address

4.1.92.2.173 fast-bss-transition

wlan-mode commands

Enables support for 802.11r *Fast-BSS Transition* (FT) on the selected WLAN. This feature is disabled by default.

802.11r is an attempt to undo the burden that security and QoS added to the handoff process, and restore it back to an original four message exchange process. The central application for the 802.11r standard is VOIP using mobile phones within wireless Internet networks. 802.11r FT redefines the security key negotiation protocol, allowing parallel processing of negotiation and requests for wireless resources.

Enabling FT standards provides wireless clients fast, secure and seamless transfer from one base station to another, ensuring continuous connectivity.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
fast-bss-transition {over-ds}
```

Parameters

- `fast-bss-transition {over-ds}`

fast-bss-transition over-ds	Enables 802.11r FT support on this WLAN • over-ds – Optional. Enables 802.11r client roaming over the *Distribution System* (DS). When enabled, all client communication with the target AP is via the current AP. This communication, carried in FT action frames, is first sent by the client to the current AP, then forwarded to the target AP through the controller.

Example

```
rfs6000-81742D(config-wlan-test)#fast-bss-transition

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 vlan 1
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 fast-bss-transition
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables support for 802.11r *Fast-BSS Transition* (FT) on a WLAN

4.1.92.2.174 http-analyze

wlan-mode commands

Enables HTTP URL analysis on the WLAN

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
http-analyze [filter|syslog]
http-analyze filter [images|post|query-string]
http-analyze syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none|
   through-controller|through-rf-domain-manager]}
```

Parameters

- `http-analyze filter [images|post|query-string]`

filter	Filters URLs, based on the parameters set, before forwarding them
images	Filters out URLs referring to images (does not forward URL requesting images)
post	Filters out URLs requesting POST (does not forward POST requests). This option is disabled by default.
query-string	Removes query strings from URLs before forwarding them (forwards requests and no data). This option is disabled by default.

- `http-analyze syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none| through-controller|through-rf-domain-manager]}`

syslog host <IP/ HOSTNAME>	Forwards client and URL information to a syslog server • host <IP/HOSTNAME> – Specify the syslog server's IP address or hostname
port <1-65535>	Optional. Specifies the UDP port to connect to the syslog server from 1 - 65535
proxy-mode [none| through-controller| through-rf-domain-manager]	Optional. Specifies if the request is to be proxied through another device • none – Requests are sent directly to syslog server from device • through-controller – Proxies requests, to the syslog server, through the controller configuring the device • through-rf-domain-manager – Proxies requests, to the syslog server, through the local RF Domain manager

Example

```
rfs4000-229D58(config-wlan-test)#http-analyze syslog host 192.168.13.10 port 21
proxy-mode through-controller

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 http-analyze syslog host 192.168.13.10 port 21 proxy-mode through-controller
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Disables HTTP URL analysis on the WLAN

4.1.92.2.175 ip

wlan-mode commands

Configures *Internet Protocol* (IP) settings

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ip [arp|dhcp]

ip arp [header-mismatch-validation|trust]

ip dhcp trust
```

Parameters

- `ip arp [header-mismatch-validation|trust]`

ip arp	Configures the IP settings for ARP packets
header-mismatch-validation	Verifies mismatch of source MAC address in the ARP and Ethernet headers. This option is enabled by default.
trust	Sets ARP responses as trusted for a WLAN/range. This option is disabled by default.

- `ip dhcp trust`

ip dhcp	Configures the IP settings for DHCP packets
trust	Sets DHCP responses as trusted for a WLAN/range. This option is disabled by default.

Example

```
rfs6000-81742D(config-wlan-test)#ip dhcp trust

rfs6000-81742D(config-wlan-test)#show context
wlan test
 description TestWLAN
 ssid test
 bridging-mode local
 encryption-type tkip-ccmp
 authentication-type eap
 accounting syslog host 172.16.10.4 port 2
 data-rates 2.4GHz gn
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 captive-portal-enforcement fall-back
 ip dhcp trust
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 enforce-dhcp
 broadcast-dhcp validate-offer
 http-analyze controller
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Resets IP ARP or DHCP trust parameters to default. ARP trust is disabled, ARP mismatch verification is enabled, or DHCP trust is disabled.

4.1.92.2.176 ipv6

wlan-mode commands

Sets the DHCPv6 and ICMPv6 *neighbor discovery* (ND) components for this WLAN

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ipv6 [dhcpv6|nd]

ipv6 dhcpv6 trust

ipv6 nd [header-mismatch-validation|raguard|trust]
```

Parameters

- `ipv6 dhcpv6 trust`

ipv6 dhcpv6 trust	Enables DHCPv6 trust state for DHCPv6 responses on this WLAN. When enabled, all DHCPv6 responses received on this WLAN are trusted and forwarded. This option is disabled by default.

- `ipv6 nd [header-mismatch-validation|raguard|trust]`

ipv6 nd	Sets the IPv6 ND settings for this WLAN
header-mismatch-validation	Checks for mismatch of source MAC address in the ICMPv6 ND message and Ethernet header (link layer option). This option is enabled by default.
raguard	Allows redirection of *router advertisements* (RAs) and ICMPv6 packets originating on this WLAN. This option is disabled by default.
trust	Enables trust state for ND requests received on this WLAN. When enabled, all ND requests on an IPv6 firewall, on this WLAN, are trusted. This option is disabled by default.

Example

```
rfs6000-81742D(config-wlan-test)#ipv6 dhcpv6 trust

rfs6000-81742D(config-wlan-test)#ipv6 nd trust

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 vlan 1
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 ipv6 dhcpv6 trust
 ipv6 nd trust
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Resets IPv6 ND or DHCPv6 trust parameters to default. ND request trust is disabled, ND header mismatch verification is enabled, ND RA and ICMPv6 redirection is disabled, or DHCPv6 trust is disabled.

4.1.92.2.177 kerberos

wlan-mode commands

Configures Kerberos authentication parameters on a WLAN

Kerberos (designed and developed by MIT) provides strong authentication for client/server applications using secret-key cryptography. Using Kerberos, a client must prove its identity to a server (and vice versa) across an insecure network connection.

Once a client and server use Kerberos to validate their identity, they encrypt all communications to assure privacy and data integrity. Kerberos can only be used on the access point with 802.11b clients. Kerberos uses *Network Time Protocol* (NTP) for synchronizing the clocks of its *Key Distribution Center* (KDC) server(s).

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
kerberos [password|realm|server]

kerberos password [0 <LINE>|2 <LINE>|<LINE>]

kerberos realm <REALM>

kerberos server [primary|secondary|timeout]

kerberos server [primary|secondary] host <IP/HOSTNAME> {port <1-65535>}

kerberos server timeout <1-60>
```

Parameters

- `kerberos password [0 <LINE>|2 <LINE>|<LINE>]`

kerberos	Configures a WLAN's Kerberos authentication parameters The parameters are: password, realm, and server.
password	Configures a Kerberos KDC server password. The password should not exceed 127 characters. The password options are: • 0 <LINE> – Configures a clear text password • 2 <LINE> – Configures an encrypted password • <LINE> – Specify the password.

- `kerberos realm <REALM>`

kerberos	Configures a WLAN's Kerberos authentication parameters The parameters are: password, realm, and server.
realm <REALM>	Configures a Kerberos KDC server realm. The REALM should not exceed 127 characters.

- `kerberos server [primary|secondary] host <IP/HOSTNAME> {port <1-65535>}`

kerberos	Configures a WLAN's Kerberos authentication parameters The parameters are: password, realm, and server.
server [primary|secondary]	Configures the primary and secondary KDC server parameters • primary – Configures the primary KDC server parameters • secondary – Configures the secondary KDC server parameters
host <IP/HOSTNAME>	Sets the primary or secondary KDC server address • <IP/HOSTNAME> – Specify the IP address or name of the KDC server.
port <1-65535>	Optional. Configures the UDP port used to connect to the KDC server • <1-65535> – Specify the port from 1 - 65535. The default is 88.

- `kerberos server timeout <1-60>`

kerberos	Configures a WLAN's Kerberos authentication parameters The parameters are: password, realm, and server.
timeout <1-60>	Modifies the Kerberos KDC server's timeout parameters • <1-60> – Specifies the wait time for a response from the Kerberos KDC server before retrying. Specify a value from 1 - 60 seconds.

Example

```
rfs6000-81742D(config-wlan-test)#kerberos server timeout 12

rfs6000-81742D(config-wlan-test)#kerberos server primary host 172.16.10.2 port 88

rfs6000-81742D(config-wlan-test)#show context
wlan test
 description TestWLAN
 ssid test
 bridging-mode local
 encryption-type tkip-ccmp
 authentication-type eap
 kerberos server timeout 12
 kerberos server primary host 172.16.10.2
 accounting syslog host 172.16.10.4 port 2
 data-rates 2.4GHz gn
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 captive-portal-enforcement fall-back
 ip dhcp trust
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 enforce-dhcp
 broadcast-dhcp validate-offer
 http-analyze controller
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Removes Kerberos authentication related parameters on a WLAN

4.1.92.2.178 mac-authentication

wlan-mode commands

Enables MAC authentication. When enabled, the system uses cached credentials (RADIUS server lookups are skipped) to authenticate clients.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
mac-authentication [cached-credentials|enforce-always]
```

Parameters

- `mac-authentication [cached-credentials|enforce-always]`

mac-authentication	Enables MAC authentication on this WLAN and configures related parameters
cached-credentials	Uses cached credentials to skip RADIUS lookups. This option is disabled by default.
enforce-always	Enforces MAC authentication on this WLAN. When enabled, MAC authentication is enforced, each time a client logs in, even when the authentication type specified (using the authentication-type command) is not MAC authentication. This option is disabled by default.

Example

```
rfs4000-229D58(config-wlan-test)#mac-authentication cached-credentials
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Disables MAC authentication related parameters: Disables use of cached credentials to skip RADIUS lookups, or disables enforcement of MAC authentication on this WLAN.

4.1.92.2.179 no

wlan-mode commands

Negates WLAN mode commands and reverts values to their default

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```

```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Removes or reverts this WLAN's settings based on the parameters passed

Usage Guidelines

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

Example

```
rfs6000-81742D(config-wlan-test)#no ?
  accounting                          Configure how accounting records are
                                      created for this wlan
  acl                                 Actions taken based on ACL
                                      configuration [ packet drop being one
                                      of them]
  answer-broadcast-probes             Do not Include this wlan when
                                      responding to probe requests that do
                                      not specify an SSID
  assoc-response                      Association response threshold
  association-list                    Configure the association list for
                                      the wlan
  authentication-type                 Reset the authentication to use on
                                      this wlan to default (none/Pre-shared
                                      keys)
  broadcast-dhcp                      Configure broadcast DHCP packet
                                      handling
  broadcast-ssid                      Do not advertise the SSID of the WLAN
                                      in beacons
  captive-portal-enforcement          Configure how captive-portal is
                                      enforced on the wlan
  client-access                       Disallow client access on this wlan
                                      (no data operations)
  client-client-communication         Disallow switching of frames from one
                                      wireless client to another on this
                                      wlan
  client-load-balancing               Disable load-balancing of clients on
                                      this wlan
  controller-assisted-mobility        Disable configure assisted mobility
```

```
  data-rates                                Reset data rate configuration to
                                            default
  description                               Reset the description of the wlan
  downstream-group-addressed-forwarding     Disable downstream group addressed
                                            forwarding of packets
  dpi                                       Deep-Packet-Inspection (Application
                                            Assurance)
  dynamic-vlan-assignment                   Dynamic VLAN assignment configuration
  eap-types                                 Allow all EAP types on this wlan
  encryption-type                           Reset the encryption to use on this
                                            wlan to default (none)
  enforce-dhcp                              Drop packets from Wireless Clients
                                            with static IP address
  fast-bss-transition                       Disable support for 802.11r Fast BSS
                                            Transition
  http-analyze                              Enable HTTP URL analysis on the wlan
  ip                                        Internet Protocol (IP)
  ipv6                                      Internet Protocol version 6 (IPv6)
  kerberos                                  Configure kerberos authentication
                                            parameters
  mac-authentication                        Configure mac-authentication related
                                            parameters
  nsight                                    Nsight Server
  opendns                                   OpenDNS related config for this wlan
  protected-mgmt-frames                     Disable support for Protected
                                            Management Frames (IEEE 802.11w)
  proxy-arp-mode                            Configure handling of ARP requests
                                            with proxy-arp is enabled
  proxy-nd-mode                             Configure handling of IPv6 ND
                                            requests with proxy-nd is enabled
  qos-map                                   Disable the 802.11u QoS map element
                                            and frame
  radio-resource-measurement                Disable support for 802.11k Radio
                                            Resource Measurement
  radius                                    Configure RADIUS related parameters

4.1.92.2.180 nsight

wlan-mode commands

Enables retention of client-history

A typical NSight-server enabled, guest access environment may be visited by thousands of unique clients on a daily basis. Some of these guest clients are not regular visitors, accessing the network infrequently. However, by default, historical data of all guest clients, irrespective of their network access frequency, is retained by the NSight server for up to 180 days. This results in the database containing thousands if not millions of unique MAC addresses of infrequent guest clients. To address this potential problem it is recommended to disable client-history retention on a guest WLAN, and use the nsight-policy context to configure a separate timer (8 hours by default) specifying the guest client data lifespan in the database.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
nsight client-history
```

Parameters

- `nsight client-history`

nsight client-history	Enables retention of client-history in the database. This option is enabled by default.

Example

On a WLAN, the client-history option is enabled by default. When enabled, all client history (including guest-clients) is retained in the NSight server database for 180 days.

To disable this option, execute the *no > nsight > client-history* command. When disabled, guest client history is retained only for 8 hours, which is the default setting defined by the NSight policy applied on the access point (through which the guest client accesses the WLAN) or the access point's RF Domain. However, the default historical data retention duration for regular clients and devices (access point and controllers) remains unchanged (180 days) as per the NSight policy settings.

```
nx9500-6C8809(config-wlan-test3)#no nsight client-history
nx9500-6C8809(config-wlan-test3)#show context
wlan test3
 ssid test3
 bridging-mode local
 encryption-type none
 authentication-type none
 no nsight client-history
nx9500-6C8809(config-wlan-test3)#
```

Use the NSight policy context to define separate client-history retention time for regular clients, devices, and guest clients. For more information, see *nsight-policy*.

Related Commands

no	Disables client-history retention in the NSight database

4.1.92.2.181 opendns

wlan-mode commands

Configures the pre-fetched OpenDNS device_id. Once configured, all DNS queries originating from wireless clients associating with the WLAN are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. The device ID is a sixteen (16) character hex string representing a 64 bit unsigned integer and is fetched from the OpenDNS site.

This command is part of a series of configurations that are required to integrate WiNG access points, wireless controllers, and service platforms with OpenDNS. When all the parameters have been configured, DNS queries from wireless clients, associating with the WLAN, are redirected to OpenDNS (208.67.220.220 OR 208.67.222.222). These OpenDNS resolvers act as proxy DNS servers that provide additional functionalities, such as Web filtering, reporting, and performance enhancement. For more information on the entire configuration, see *opendns*.

This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
opendns device-id <DEVICE-ID>
```

Parameters

- `opendns device-id <DEVICE-ID>`

opendns device-id <DEVICE-ID>	Configures the device ID to embed in DNS queries sent to OpenDNS • <DEVICE-ID> – Specify the device ID.

Example

The following command fetches the device_id from the OpenDNS site.

```
ap7131-E6D512#opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073
device_id = 0014AADF8EDC6C59
ap7131-E6D512#
```

Use this device_id in the WLAN configuration context.

```
ap7131-E6D512(config)#wlan opendns
ap7131-E6D512(config-wlan-opendns)#opendns device-id 0014AADF8EDC6C59
ap7131-E6D512(config-wlan-opendns)#commit

ap7131-E6D512(config-wlan-opendns)#show context
wlan opendns
 ssid opendns
 vlan 1
 bridging-mode local
 encryption-type none
 authentication-type none
 opendns device-id 0014AADF8EDC6C59
ap7131-E6D512(config-wlan-opendns)#
```

Related Commands

no	Removes the device ID configured to be embedded in the DNS queries originating from the WiNG devices

4.1.92.2.182 protected-mgmt-frames

wlan-mode commands

Configures the WLAN's frame protection mode and *security association* (SA) query parameters

802.11w provides protection for both unicast management frames and broadcast/multicast management frames. The 'robust management frames' are *action*, *disassociation,* and *deauthentication* frames. The standard provides one security protocol CCMP for protection of unicast robust management frames. *Protected management frames* (PMF) protocol only applies to robust management frames after establishment of RSNA PTK. Robust management frame protection is achieved by using CCMP for unicast management frames, *broadcast/multicast integrity protocol* (BIP) for broadcast/multicast management frames and SA query protocol for protection against (re)association attacks.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
protected-mgmt-frames [mandatory|optional|sa-query [attempts <1-10>|timeout <100-1000>]]
```

Parameters

```
• protected-mgmt-frames [mandatory|optional|sa-query [attempts <1-10>|timeout <100-1000>]]
```

protected-mgmt-frames	Enables and configures WLAN's frame protection mode and SA query parameters. Use this command to specify whether management frames are continually or optionally protected. Frame protection mode is disabled by default.
mandatory	Enforces *protected management frames* (PMF) on this WLAN (management frames are continually optionally protected)
optional	Provides PMF only for those clients that support PMF (management frames are optionally protected)
sa-query [attempts <1-10>| timeout <100-1000>]	Configures the following SA parameters: • attempts <1-10> – Configures the number of SA query attempts from 1 - 10. The default is 5. • timeout <100-1000> – Configures the interval, in milliseconds, used to timeout association requests that exceed the defined interval. Specify a value from 100 - 1000 milliseconds. The default value is 201 milliseconds.

Example

```
rfs6000-81742D(config-wlan-test)#protected-mgmt-frames mandatory

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 protected-mgmt-frames mandatory
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables enforcement of protected management frames on this WLAN. And reverts protected management frames sa-query timeout and attempts to 201 milliseconds and 5 respectively.

4.1.92.2.183 proxy-arp-mode

wlan-mode commands

Enables proxy ARP mode for handling ARP requests

Proxy ARP is the technique used to answer ARP requests intended for another system. By faking its identity, the access point accepts responsibility for routing packets to the actual destination.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
proxy-arp-mode [dynamic|strict]
```

Parameters

- `proxy-arp-mode [dynamic|strict]`

proxy-arp-mode	Enables proxy ARP mode for handling ARP requests. The options available are dynamic and strict.
dynamic	Forwards ARP requests to the wireless side (for which a response could not be proxied). This is the default setting.
strict	Does not forward ARP requests to the wireless side

Example

```
rfs6000-81742D(config-wlan-test)#proxy-arp-mode strict

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 protected-mgmt-frames mandatory
 wing-extensions wmm-load-information
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 proxy-arp-mode strict
 broadcast-dhcp validate-offer
 http-analyze controller
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Reverts the proxy ARP mode to default (dynamic)

4.1.92.2.184 proxy-nd-mode

wlan-mode commands

Configures the proxy ND mode for this WLAN member clients as either strict or dynamic

ND proxy is used in IPv6 to provide reachability by allowing a client to act as proxy. Proxy certificate signing can be done either dynamically (requiring exchanges of identity and authorization information) or statically when the network topology is defined.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
proxy-nd-mode [dynamic|strict]
```

Parameters

- `proxy-nd-mode [dynamic|strict]`

proxy-nd-mode [dynamic|strict]	Configures the proxy ND mode for this WLAN member clients. The options are: dynamic and strict • dynamic – Forwards ND request to wireless for which a response could not be proxied. This is the default value. • strict – Does not forward ND requests to the wireless side

Example

```
rfs6000-81742D(config-wlan-test)#proxy-nd-mode strict

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 wpa-wpa2 server-only-authentication
 proxy-nd-mode strict
 opendns device-id 44-55-66
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Reverts the proxy ND mode to default (dynamic)

4.1.92.2.185 qos-map

wlan-mode commands

Enables support for 802.11u QoS map element and frames

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
qos-map
```

Parameters

None

Example

```
rfs6000-81742D(config-wlan-test)#qos-map

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 qos-map
 wpa-wpa2 server-only-authentication
 proxy-nd-mode strict
 opendns device-id 44-55-66
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables support for 802.11u QoS map element and frames

4.1.92.2.186 radio-resource-measurement

wlan-mode commands

Enables support for 802.11k radio resource measurement capabilities (IEEE 802.11k) on this WLAN

802.11k improves how traffic is distributed. In a WLAN, devices normally connect to the access point with the strongest signal. Depending on the number and location of clients, this arrangement can lead to excessive demand on one access point and under utilization of others, resulting in degradation of overall network performance. With 802.11k, if the access point with the strongest signal is loaded to its capacity, a client connects to an under-utilized access point. Even if the signal is weaker, the overall throughput is greater since it's an efficient use of the network's resources. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radio-resource-measurement {channel-report|neighbor-report {hybrid}}
```

Parameters

- `radio-resource-measurement {channel-report|neighbor-report {hybrid}}`

radio-resource-measurement	Enables support for 802.11k radio resource measurement capabilities
channel-report	Optional. Includes the channel-report element in beacons and probe responses
neighbor-report {hybrid}	Optional. Enables responding to neighbor-report requests • hybrid – Optional. Uses the hybrid model of smart-rf neighbors and roaming frequency to neighbors

Example

```
rfs4000-229D58(config-wlan-test)#radio-resource-measurement

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 vlan 1
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 radio-resource-measurement
 controller-assisted-mobility
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Disables support for 802.11k radio resource measurement capabilities (IEEE 802.11k) on this WLAN

4.1.92.2.187 radius

wlan-mode commands

Configures RADIUS related parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
radius [dynamic-authorization|nas-identifier|nas-port-id|vlan-assignment]

radius [dynamic-authorization|nas-identifier <NAS-ID>|nas-port-id <NAS-PORT-ID>|
  vlan-assignment]
```

Parameters

```
• radius [dynamic-authorization|nas-identifier <NAS-ID>|nas-port-id <NAS-PORT-
ID>|vlan-assignment]
```

dynamic-authorization	Enables support for disconnect and change of authorization messages (RFC5176) When enabled, this option extends the RADIUS protocol to support unsolicited messages from the RADIUS server. These messages allow administrators to issue *change of authorization* (CoA) messages, which affect session authorization, or *disconnect messages* (DM) that terminate a session immediately. This option is disabled by default.
nas-identifier <NAS-ID>	Configures the *network access server* (NAS) identifier attribute, a value that identifies the access point or controller where the RADIUS messages originate. The value specified here is included in the RADIUS NAS-Identifier field for WLAN authentication and accounting packets. • <NAS-ID> – Specify the NAS identifier attribute (should not exceed 256 characters in length).
nas-port-id <NAS-PORT-ID>	Configures the NAS port ID attribute, a value that identifies the port from where the RADIUS messages originate • <NAS-PORT-ID> – Specify the NAS port ID attribute (should not exceed 256 characters in length). The profile database on the RADIUS server consists of user profiles for each connected NAS port. Each profile is matched to a username representing a physical port. When authorizing users, it queries the user profile database using a username representative of the physical NAS port making the connection. Set the numeric port value from 0 - 4294967295.

vlan-assignment	Configures the VLAN assignment of a WLAN. RADIUS VLAN assignment is disabled by default. When enabled, this option assigns clients to the RADIUS server specified VLANs, overriding the WLAN configuration. This option is disabled by default. If, as part of the authentication process, the RADIUS server returns a client's VLAN-ID in a RADIUS access-accept packet, and this feature is enabled, all client traffic is forwarded on that VLAN. If disabled, the RADIUS server returned VLAN-ID is ignored and the VLAN specified using the *vlan*/*vlan-pool-member* options (in the WLAN config mode) is used. **Note:** If both the RADIUS VLAN assignment and the post authentication VLAN options are enabled, then RADIUS VLAN assignment takes priority over post authentication VLAN configuration.

Example

```
rfs6000-81742D(config-wlan-test)#radius vlan-assignment

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 protected-mgmt-frames mandatory
 radius vlan-assignment
 wing-extensions wmm-load-information
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 --More--
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables support for disconnect and change of authorization messages. Disables the use of VLAN information received in RADIUS server responses, instead uses the VLAN provided in the WLAN configuration. Removes the NAS identifier and NAS port identifiers configured.

4.1.92.2.188 registration

wlan-mode commands

Configures settings enabling dynamic registration and validation of devices by their MAC addresses. When configured, this option registers a device's MAC address, and allows direct access to a previously registered device.

This command also configures the external guest registration and validation server details. If using an external server to perform guest registration, authentication and accounting, use this command to configure the external server's IP address/hostname. When configured, access points and controllers forward guest registration requests to the specified registration server. In case of EGuest deployment, this external resource should point to the EGuest registration server.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
registration [device|device-OTP|external|user]

registration [device|device-OTP|user] group-name <RAD-GROUP-NAME> {agreement-refresh <0-144000>|expiry-time <1-43800>}

registration external [follow-aaa|host]

registration external follow-aaa {send-mode [http|https|udp]}

registration external host <IP/HOSTNAME> {proxy-mode|send-mode}

registration external host <IP/HOSTNAME> {proxy-mode [none|through-controller|through-rf-domain-manager|through-centralized-controller]|send-mode [https|https|udp]}
```

Parameters

- `registration external follow-aaa {send-mode [http|https|udp]}`

registration	Enables dynamic guest-user registration and validation. This option is disabled by default.
external	Specifies that the guest registration is handled by an external resource. Access points/controllers send registration requests to the external registration server.
follow-aaa	Uses an AAA policy to point to the guest registration, authentication, and accounting server. When used, guest registration is handled by the RADIUS server specified in the AAA policy used in the WLAN context. In case of EGuest deployment, the RADIUS authentication and accounting server configuration in the AAA policy should point to the EGuest server. The use of 'follow-aaa' option is recommended in EGuest replica-set deployments. For more information on enabling the EGuest server, see *eguest-server (VX9000 only)*. For more information on configuring an EGuest deployment, see *configuring ExtremeGuest captive-portal*.

send-mode [https|https|udp]	Optional. Specifies the protocol used to forward registration requests to the external AAA policy servers. The options are; • HTTPS – Sends registration requests as HTTPS packet • HTTP – Sends registration requests as HTTP packet • UDP – Sends registration requests as UDP packet, using the UPD port 12322. This is the default setting.

• `registration external host <IP/HOSTNAME> {proxy-mode [none|through-controller|through-rf-domain-manager|through-centralized-controller]|send-mode [https|https|udp]}`

registration	Configures dynamic guest registration and validation parameters. This option is disabled by default.
external	Specifies that the guest registration is handled by an external resource. Access points/controllers send registration requests to the external registration server.
host <IP/HOSTNAME>	Specifies the external registration server's IP address or hostname. When configured, access points/ controllers forward guest registration requests to the external registration server specified here.
proxy-mode {none| through-controller| through-rf-domain-manager|through-centralized-controller}	Optional. Specifies the proxy mode. If a proxy is needed for connection, specify the proxy mode as through-controller, through-rf-domain. If no proxy is needed, select none. • none – Optional. Requests are sent directly to the controller from the requesting device • through-controller – Optional. Requests are proxied through the controller configuring the device • through-rf-domain-manager – Optional. Requests are proxied through the local RF Domain manager • through-centralized-controller – Optional. Request are proxied through one of the controllers in a cluster.that is operating as the designated forwarder. Select this option if capture and redirection is on a cluster of wireless controller/service platforms managing dependent/independent access points when redundancy is required. After specifying the proxy-mode, optionally specify the protocol used to send the requests to the external registration server host.
send-mode [https|https|udp]	Optional. Specifies the communication protocol used. The options are; • HTTPS – Sends registration requests as HTTPS packets • HTTP – Sends registration requests as HTTP packets • UDP – Sends registration requests as UDP packet, using the UPD port 12322. This is the default setting.

• `registration [device|device-OTP|user] group-name <RAD-GROUP-NAME> {agreement-refresh <0-144000>|expiry-time <1-43800>}`

registration	Configures dynamic guest registration and validation parameters. This option is disabled by default.

[device|device-OTP|user]	Configures the mode used to register guest users of this WLAN. Options include device, external, user, and device-OTP • device-OTP – Registers a device by its MAC address. During registration, the user, using the registered device, has to provide the e-mail address, mobile number, or member id, and the *one-time-passcode (*OTP) sent to the registered e-mail id or mobile number to complete registration. On subsequent logins, the user has to enter the OTP. If the MAC address of the device attempting login and the OTP combination matches, the user is allowed access. If using this option, set the WLAN authentication type as *MAC authentication.* • device – Registers a device by its MAC address. On subsequent logins, already registered MAC addresses are allowed access. If using this option, set the WLAN authentication type as *MAC authentication.* • user – Registers guest users using one of the following options: e-mail address, mobile-number, or member-id. If using any one of the above modes of registration, specify the RADIUS group to which the registered device or user is to be assigned post authentication.
group-name <RAD-GROUP-NAME>	Configures the RADIUS group name to which registered users are associated. When left blank, users are not associated with a RADIUS group. • <RAD-GROUP-NAME> – Specify the RADIUS group name (should not exceed 64 characters).
expiry-time <1-43800>	Optional. Configures the amount of time, in hours, before registered addresses expire and must be re-entered • <1-43800> – Specify a value from 1 - 43800 hrs. The default is 1500 hrs.
agreement-refresh <0-144000>	Optional. Sets the time, in minutes, after which an inactive user has to refresh the WLAN's terms of agreement. For example, if the agreement refresh period is set to 1440 minutes, a user, who has been inactive for more than 1440 minutes (1 day) is served the agreement page, and is allowed access only after refreshing the terms of agreement. • <0-100> – Specify a value from 0 - 144000. The default is 0 minutes.

Example

```
nx9500-6C8809(config-wlan-test)#registration user group-name guest agreement-ref
resh 14400 expiry-time 2000

nx9500-6C8809(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 registration user group-name guest expiry-time 2000 agreement-refresh 14400
nx9500-6C8809(config-wlan-test)#
```

Related Commands

no	Disables dynamic user registration and removes associated configurations. ALso disables forwarding of user information to an external device.

4.1.92.2.189 relay-agent

wlan-mode commands

Enables support for DHCP/DHCPv6 relay agent information (option 82 and DHCPv6-LDRA) feature on this WLAN. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
relay-agent [dhcp-option82|dhcpv6-ldra]
```

Parameters

- `relay-agent [dhcp-option82|dhcpv6-ldra]`

relay-agent	Enables support for the following DHCP and DHCPv6 options: option 82 and *Lightweight DHCPv6 Relay Agent* (LDRA) respectively. When enabled, this feature allows the DHCP/DHCPv6 relay agent to insert the relay agent information option (option 82, LDRA) in client requests forwarded to the DHCP/DHCPv6 server. This information provides the following: • circuit ID suboption – Provides the SNMP port interface index • remote ID – Provides the controller's MAC address
dhcp-option82	Enables DHCP option 82. DHCP option 82 provides client physical attachment information. This option is disabled by default.
dhcpv6-ldra	Enables the DHCPv6 relay agent. The LDRA feature allows DHCPv6 messages to be transmitted on existing networks that do not currently support IPv6 or DHCPv6. This option is disabled by default.

Example

```
rfs4000-229D58(config-wlan-test)#relay-agent dhcp-option82

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 vlan 1
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 radio-resource-measurement
 relay-agent dhcp-option82
 controller-assisted-mobility
rfs4000-229D58(config-wlan-test)#

rfs6000-81701D(config-wlan-test)#relay-agent dhcpv6-ldra

rfs6000-81701D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 relay-agent dhcpv6-ldra
rfs6000-81701D(config-wlan-test)#
```

Related Commands

no	Disables support for DHCP/DHCPv6 relay agent information (option 82 and DHCPv6-LDRA) feature on this WLAN

4.1.92.2.190 shutdown

wlan-mode commands

Auto shuts down a WLAN

The auto shutdown mechanism helps regulate the availability of a WLAN based on an administrator defined access period. Use this feature to shut down a WLAN on specific days and hours and restrict periods when the WLAN traffic is either not desired or cannot be properly administrated. The normal practice is to shut down WLANs when there are no users on the network, such as after hours, weekends or holidays. This allows administrators more time to manage mission critical tasks since the WLAN's availability is automated.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
shutdown {on-critical-resource <CR-NAME>|on-meshpoint-loss|on-primary-port-link-loss|on-unadoption}
```

Parameters

- `shutdown {on-critical-resource <CR-NAME>|on-meshpoint-loss|on-primary-port-link-loss|on-unadoption}`

shutdown	Auto shuts down the WLAN when specified events occur. Disabled by default.
on-critical-resource <CR-NAME>	Optional. Auto shuts down the WLAN when critical resource failure occurs. Disabled by default. • <CR-NAME> – Specifies the name of the critical resource being monitored for this WLAN.
on-meshpoint-loss	Optional. Auto shuts down the WLAN when the root meshpoint link fails (is unreachable). Disabled by default.
on-primary-port-link-loss	Optional. Auto shuts down the WLAN when a device losses its primary Ethernet port (ge1/up1) link. Disabled by default.
on-unadoption	Optional. Auto shuts down the WLAN when an adopted device becomes unadopted. Disabled by default.

Usage Guidelines

If the shutdown on-meshpoint-loss feature is enabled, the WLAN status changes only if the meshpoint and the WLAN are mapped to the same VLAN. If the meshpoint is mapped to VLAN 1 and the WLAN is mapped to VLAN 2, then the WLAN status does not change on loss of the meshpoint.

Example

```
rfs6000-81742D(config-wlan-test)#shutdown on-unadoption

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 protected-mgmt-frames mandatory
 radius vlan-assignment
 wing-extensions wmm-load-information
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 proxy-arp-mode strict
 broadcast-dhcp validate-offer
 shutdown on-unadoption
 http-analyze controller
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Disables auto shut down WLAN. Use the optional keywords provided to disable auto shut down of the WLAN upon critical resource failure, when meshpoint links fail, when the primary Ethernet port (e1/up1) loses link, or when the WLAN gets unadopted.

4.1.92.2.191 ssid

wlan-mode commands

Configures a WLAN's SSID

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ssid <SSID>
```

Parameters

```
• ssid <SSID>
```

<SSID>	Specify the WLAN's SSID. The WLAN SSID is case sensitive and alphanumeric. Its length should not exceed 32 characters.

Example

```
rfs6000-81742D(config-wlan-test)#ssid testWLAN1

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid testWLAN1
 bridging-mode local
 encryption-type none
 authentication-type none
 protected-mgmt-frames mandatory
 radius vlan-assignment
 wing-extensions wmm-load-information
 client-load-balancing probe-req-intvl 5ghz 5
 client-load-balancing band-discovery-intvl 2
 acl exceed-rate wireless-client-denied-traffic 20 disassociate
 proxy-arp-mode strict
 broadcast-dhcp validate-offer
 shutdown on-unadoption
 http-analyze controller
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Removes the WLAN's SSID

4.1.92.2.192 t5-client-isolation

wlan-mode commands

Disallows clients connecting to the WLAN to communicate with one another. This setting applies exclusively to CPE devices managed by aT5 controller and is disabled by default.

A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS wireless controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the IPX operating system. These CPEs use a DSL as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.

NOTE: This setting is applicable only when this WLAN supports T5 controllers and their connected CPEs.

Supported in the following platforms:

- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
t5-client-isolation
```

Parameters

None

Example

```
nx9500-6C8809(config-wlan-test)#t5-client-isolation

nx9500-6C8809(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 t5-client-isolation
nx9500-6C8809(config-wlan-test)#
```

Related Commands

no	Allows clients connecting to the WLAN to communicate with one another

4.1.92.2.193 t5-security

wlan-mode commands

Configures T5 PowerBroadband security settings

A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the IPX operating system. These CPEs use DSL as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.

NOTE: This setting is applicable only when this WLAN supports T5 controllers and their connected CPEs.

Supported in the following platforms:

- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
t5-security [static-wep|wpa-enterprise|wpa-personal]

t5-security static-wep encryption-type [wep128|wep64] [hex <STRING>|passphrase
<STRING>]

t5-security [wpa-enterprise|wpa-personal] encryption-type [ccmp|tkip|tkip-ccmp]
version [mixed|wpa|wpa2]
```

Parameters

```
• t5-security static-wep encryption-type [wep128|wep64] [hex <STRING>|passphrase
<STRING>]
```

t5-security static-wep	Configures the T5 WLAN security type as static-wep
encryption-type [wep128|wep64]	Applies one of the following encryption algorithms to the T5 support WLAN configuration: WEP64 or WEP128
hex <STRING>	Configures the hex password (used to derive the security key) • <STRING> – Specify the hex password (should not exceed the 10 - 26 characters).
passphrase <STRING>	Configures the passphrase shared by both transmitting and receiving authenticators • <STRING> – Specify the passphrase. It could either be an alphanumeric string of 8 to 63 ASCII characters or 64 HEX characters. The alphanumeric string allows character spaces. This string is converted to a numeric value. Configuring a passphrase saves you the need to create a 256-bit key each time keys are generated.

```
• t5-security [wpa-enterprise|wpa-personal] encryption-type [ccmp|tkip|tkip-ccmp]
version [mixed|wpa|wpa2]
```

t5-security [wpa-enterprise| wpa-personal]	Configures the T5 WLAN security type as: wpa-enterprise OR wpa-personal

encryption-type [ccmp|tkip|tkip-ccmp]	The following parameters are common to the *wpa-enterprise* and *wpa-personal* keywords: Applies one of the following encryption algorithms to the T5 support WLAN configuration: CCMP, TKIP, or TKIP-CCMP
version [mixed|wpa|wpa2]	The following parameters are common to the *wpa-enterprise* and *wpa-personal* keywords: • version – Applies one of the following encryption schemes to the T5 support WLAN configuration: WPA, WPA2, or mixed

Example

```
nx9500-6C8809(config-wlan-test)#t5-security wpa-enterprise encryption-type ccmp
version wpa

nx9500-6C8809(config-wlan-test)#show context
wlan test
 ssid test
 bridging-mode local
 encryption-type none
 authentication-type none
 t5-security wpa-enterprise encryption-type ccmp version wpa
 t5-client-isolation
nx9500-6C8809(config-wlan-test)#
```

Related Commands

no	Removes the configured T5 PowerBroadband security settings

4.1.92.2.194 time-based-access

wlan-mode commands

Configures time-based client access to the network resources

Administrators can use this feature to assign fixed days and time of WLAN access for wireless clients

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
time-based-access days [sunday|monday|tuesday|wednesday|thursday|friday|
saturday|all|weekends|weekdays] {start <START-TIME>} [end <END-TIME>]
```

Parameters

```
• time-based-access days [sunday|monday|tuesday|wednesday|thursday|friday|
saturday|all|weekends|weekdays] {start <START-TIME>} [end <END-TIME>]
```

day <option>	Specifies the day or days on which the client can access the WLAN • sunday – Allows access on Sundays only • monday – Allows access on Mondays only • tuesday – Allows access on Tuesdays only • wednesday – Allows access on Wednesdays only • thursday – Allows access on Thursdays only • friday – Allows access on Fridays only • saturday – Allows access on Saturdays only • weekends – Allows access on weekends only • weekdays – Allows access on weekdays only • all – Allows access on all days
start <START-TIME>	Optional. Specifies the access start time in hours and minutes (HH:MM)
end <END-TIME>	Specifies the access end time in hours and minutes (HH:MM)

Example

```
rfs6000-81742D(config-wlan-test)#time-based-access days weekdays start 10:00 end
 16:30

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid testWLAN1
 bridging-mode local
 encryption-type none
 authentication-type none
 protected-mgmt-frames mandatory
 radius vlan-assignment
 time-based-access days weekdays start 10:00 end 16:30
 --More--
rfs6000-81742D(config-wlan-test)#
```

Related Commands

no	Removes the configured time-based-access settings

4.1.92.2.195 use

wlan-mode commands

This command associates an existing captive portal with a WLAN.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
use [aaa-policy|application-policy|association-acl-policy|bonjour-gw-discovery-
policy|captive-portal|ip-access-list|ipv6-access-list|mac-access-list|passpoint-
policy|roaming-assist-policy|url-filter|wlan-qos-policy]

use [aaa-policy <AAA-POLICY-NAME>|application-policy <POLICY-NAME>|association-
acl-policy <ASSOCIATION-POLICY-NAME>|bonjour-gw-discovery-policy <POLICY-
NAME>|captive-portal <CAPTIVE-PORTAL-NAME>|passpoint-policy <PASSPOINT-POLICY-
NAME>|roaming-assist-policy <POLICY-NAME>|url-filter <URL-FILTER-NAME>|wlan-qos-
policy <WLAN-QOS-POLICY-NAME>]

use ip-access-list [in|out] <IP-ACCESS-LIST-NAME>
use ipv6-access-list [in|out] <IPv6-ACCESS-LIST-NAME>
use mac-access-list [in|out] <MAC-ACCESS-LIST-NAME>
```

Parameters

```
• use [aaa-policy <AAA-POLICY-NAME>|application-policy <POLICY-NAME>|
association-acl-policy <ASSOCIATION-POLICY-NAME>|bonjour-gw-discovery-policy
<POLICY-NAME>|captive-portal <CAPTIVE-PORTAL-NAME>|passpoint-policy <PASSPOINT-
POLICY-NAME>|roaming-assist-policy <POLICY-NAME>|url-filter <URL-FILTER-NAME>|
wlan-qos-policy <WLAN-QoS-POLICY-NAME>]
```

aaa-policy <AAA-POLICY-NAME>	Uses an existing AAA policy with a WLAN • <AAA-POLICY-NAME> – Specify the AAA policy name.
application-policy <POLICY-NAME>	Uses an existing application policy with a WLAN. An application policy defines actions to perform on a packet when it matches a specified set of pre-defined applications or application categories. For more information, see *application-policy*. • <POLICY-NAME> – Specify the policy name.
association-acl <ASSOCIATION-POLICY-NAME>	Uses an existing association ACL policy with a WLAN • <ASSOCIATION-POLICY-NAME> – Specify the association ACL policy name.
bonjour-gw-discovery-policy <POLICY-NAME>	Uses an existing Bonjour GW Discovery policy with a WLAN. When associated, the Bonjour GW Discovery policy defines a list of services clients can discover across subnets. Contd..

	Bonjour enables discovery of services on a LAN. Bonjour allows the setting up a network (without any configuration) in which services such as printers, scanners and file-sharing servers can be found using Bonjour. Bonjour only works within a single broadcast domain. However, with a special DNS configuration, it can be extended to find services across broadcast domains. • <POLICY-NAME> – Specify the Bonjour GW Discovery policy name (should be existing and configured). For more information on Bonjour GW Discovery policy, see *bonjour-gw-discovery-policy*.
captive-portal <CAPTIVE-PORTAL-NAME>	Specifies the captive-portal policy to use if enforcing captive-portal authentication on this WLAN • <CAPTIVE-PORTAL-NAME> – Specify the captive-portal policy name. Should be existing and configured.
passpoint-policy <PASSPOINT-POLICY-NAME>	Associates a passpoint policy (Hotspot2 configuration) with this WLAN • <PASSPOINT-POLICY-NAME> – Specify the Hotspot 2.0 policy name. For more information on passpoint policy, see *passpoint-policy*. Map a passpoint policy to a WLAN. Since the configuration gets applied to the radio by BSS, only the Hotspot 2.0 configuration of primary WLANs on a BSSID is used. Incoming Hotspot 2.0 GAQ/ANQP requests from clients are identified by their destination MAC addresses and are handled by the passpoint policy from the primary WLAN on that BSS. Define one passpoint policy for every WLAN configured.
roaming-assist-policy <POLICY-NAME>	Associates an existing roaming assist policy with this WLAN • <POLICY-NAME> – Specify the Roaming Assist policy name. For more information on roaming assist policy, see *roaming-assist-policy*.
url-filter <URL-FILTER-NAME>	Associates an existing URL list with this WLAN • <URL-FILTER-NAME> – Specify the URL filter name. For more information on configuring a URL list, see *url-list*.
wlan-qos-policy <WLAN-QOS-POLICY-NAME>	Uses an existing WLAN QoS policy with a WLAN • <wlan-qos-policy-name> – Specify the WLAN QoS policy name.

- `use ip-access-list [in|out] <IP-ACCESS-LIST-NAME>`

ip-access-list [in|out] <IP-ACCESS-LIST-NAME>	Specifies the IP access list for incoming and outgoing packets • in – Applies the IP ACL to incoming packets • out – Applies IP ACL to outgoing packets • <IP-ACCESS-LIST-NAME> – Specify the IP access list name.

- `use ipv6-access-list [in|out] <IPv6-ACCESS-LIST-NAME>`

ipv6-access-list [in|out] <IPv6-ACCESS-LIST-NAME>	Specifies the IPv6 access list for incoming and outgoing packets • in – Applies the IPv6 ACL to incoming packets • out – Applies IPv6 ACL to outgoing packets • <IPv6-ACCESS-LIST-NAME> – Specify the IPv6 access list name.

- `use mac-access-list [in|out] <MAC-ACCESS-LIST-NAME>`

mac-access-list [in|out] <MAC-ACCESS-LIST-NAME>	Specifies the MAC access list for incoming and outgoing packets. • in – Applies the MAC ACL to incoming packets • out – Applies MAC ACL to outgoing packets • <MAC-ACCESS-LIST-NAME> – Specify the MAC access list name.

Usage Guidelines

IP and MAC ACLs act as firewalls within a WLAN. WLANs use ACLs as firewalls to filter or mark packets based on the WLAN from which they arrive, as opposed to filtering packets on layer 2 ports. An ACL contains an ordered list of *Access Control Entries* (ACEs). Each ACE specifies a set of conditions (rules) and the action taken in case of a match. The action can be permit, deny, or mark. Therefore, when a packet matches an ACE's conditions, it is either forwarded, dropped, or marked depending on the action specified in the ACE. The order of conditions in the list is critical since filtering is stopped after the first match.

IP ACLs contain deny and permit rules specifying source and destination IP addresses. Each rule has a precedence order assigned. Both IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC.

Additionally, you can filter layer 2 traffic on a physical layer 2 interface using MAC addresses. A MAC firewall rule uses source and destination MAC addresses for matching operations, where the result is a typical allow, deny, or mark designation to WLAN packet traffic.

Keep in mind IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC ACL to the interface.

Example

```
rfs6000-81742D(config-wlan-test)#use aaa-policy test

rfs6000-81742D(config-wlan-test)#use association-acl-policy test
rfs6000-81742D(config-wlan-test)#show context
wlan test

4.1.92.2.196 vlan

wlan-mode commands

Sets the VLAN where traffic from a WLAN is mapped

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

Parameters

- `vlan [<1-4094>|<VLAN-ALIAS-NAME>]`

<1-4094>	Sets a WLAN's VLAN ID. This command starts a new VLAN assignment for a WLAN index. All prior VLAN settings are erased. Use this command to assign just one VLAN to the WLAN. Utilizing a single VLAN per WLAN is a more typical deployment scenario than using a VLAN pool.
<VLAN-ALIAS-NAME>	Assigns a VLAN alias to the WLAN. The VLAN alias should to existing and configured. A VLAN alias maps a name to a VLAN ID. When applied to ports (for example GE ports) using the trunk mode, a VLAN alias denies or permits traffic, on the port, to and from the VLANs specified in the alias. For more information on aliases, see *alias*.

Example

```
rfs6000-81742D(config-wlan-test)#vlan 4

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid testWLAN1

4.1.92.2.197 vlan-pool-member

wlan-mode commands

Adds a member VLAN to a WLAN's VLAN pool. Use this option to define the VLANs available to this WLAN. Additionally, define the number of wireless clients supported by each VLAN.

NOTE: Configuration of a VLAN pool overrides the 'vlan' configuration.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
vlan-pool-member <WORD> {limit <0-8192>}
```

Parameters

- `vlan-pool-member <WORD> {limit <0-8192>}`

vlan-pool-member	Adds a member VLAN to a WLAN's VLAN pool **Note:** Since users belonging to separate VLANs can share the same WLAN, it is not necessary to create a new WLAN for every VLAN in the network.
<WORD>	Define the VLANs available to this WLAN. It is either a single index, or a list of VLAN IDs (for example, 1,3,7), or a range (for example, 1-10)
limit <0-8192>	Optional. Is ignored if the number of clients are limited and well within the limits of the DHCP pool on the VLAN • <0-8192> – Specifies the number of users allowed

Example

```
rfs6000-81742D(config-wlan-test)#vlan-pool-member 1-10 limit 1

rfs6000-81742D(config-wlan-test)#show context
wlan test
 ssid testWLAN1

4.1.92.2.198 wep128

wlan-mode commands

Configures WEP128 parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wep128 [key|keys-from-passkey|transmit-key]

wep128 key <1-4> [ascii|hex] [0 <WORD>|2 <WORD>|<WORD>]

wep128 keys-from-passkey <WORD>

wep128 transmit-key <1-4>
```

Parameters

- `wep128 key <1-4> [ascii|hex] [0 <WORD>|2 <WORD>|<WORD>]`

wep128	Configures WEP128 parameters. The parameters are: key, key-from-passkey, and transmit-key.
key <1-4>	Configures pre-shared hex keys • <1-4> – Configures a maximum of four key indexes. Select the key index from 1 - 4.
ascii [0 <WORD>| 2 <WORD>|| <WORD>]	Sets keys as ASCII characters (5 characters for WEP64, 13 for WEP128) • 0 <WORD> – Configures a clear text key • 2 <WORD> – Configures an encrypted key • <WORD> – Configures keys as 13 ASCII characters converted to hex, or 26 hexadecimal characters
hex [0 <WORD>| 2 <WORD>| <WORD>]	Sets keys as hexadecimal characters (10 characters for WEP64, 26 for WEP128) • 0 <WORD> – Configures a clear text key • 2 <WORD> – Configures an encrypted key • <WORD> – Configures keys as 13 ASCII characters converted to hex, or 26 hexadecimal characters

- `wep128 keys-from-passkey <WORD>`

keys-from-passkey <WORD>	Specifies a passphrase from which keys are derived • <WORD> – Specify a passphrase from 4 - 32 characters.

- `wep128 transmit-key <1-4>`

transmit-key <1-4>	Configures the key index used for transmission from an AP to a wireless client or service platform • <1-4> – Specify a key index from 1 - 4.

Example

```
rfs6000-81742D(config-wlan-test)#wep128 keys-from-passkey example@123

Related Commands

no	Resets the WEP128 PSK and transmission keys to factory-default values.

4.1.92.2.199 wep64

wlan-mode commands

Configures WEP64 parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wep64 [key|keys-from-passkey|transmit-key]

wep64 key <1-4> [ascii|hex] [0 <WORD>|2 <WORD>|<WORD>]

wep64 keys-from-passkey <WORD>

wep64 transmit-key <1-4>
```

Parameters

- `wep64 key <1-4> [ascii|hex] [0 <WORD>|2 <WORD>|<WORD>]`

wep64	Configures WEP64 parameters The parameters are: key, key-from-passkey, and transmit-key.
key <1-4>	Configures pre-shared hex keys • <1-4> – Configures a maximum of four key indexes. Select a key index from 1 - 4.
ascii [0 <WORD>| 2 <WORD>| <WORD>]	Sets keys as ASCII characters (5 characters for WEP64, 13 for WEP128) • 0 <WORD> – Configures a clear text key • 2 <WORD> – Configures an encrypted key • <WORD> – Configures key (10 hex or 5 ASCII characters for WEP64, 26 hex or 13 ASCII characters for WEP128).
hex [0 <WORD>| 2 <WORD>| <WORD>]	Sets keys as hexadecimal characters (10 characters for WEP64, 26 for WEP128) • 0 <WORD> – Configures a clear text key • 2 <WORD> – Configures an encrypted key • <WORD> – Configures the key (10 hex or 5 ASCII characters for WEP64, 26 hex or 13 ASCII characters for WEP128)

- `wep64 keys-from-passkey <WORD>`

keys-from-passkey <WORD>	Specifies a passphrase from which keys are derived • <WORD> – Specify a passphrase from 4 - 32 characters.

- `wep64 transmit-key <1-4>`

transmit-key <1-4>	Configures the key index used for transmission from an AP to a wireless client or service platform • <1-4> – Specify a key index from 1 - 4.

Example

```
rfs6000-81742D(config-wlan-test)#wep64 key 1 ascii test1

rfs6000-81742D(config-wlan-test)#wep64 transmit-key 1

4.1.92.2.200 wing-extensions

wlan-mode commands

Enables support for WiNG-specific client extensions to the IEEE 802.11x WLAN standards that potentially increase client roaming reliability and handshake speed

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wing-extensions [ap-attributes-information {include-hostname}|
coverage-hole-detection {11k-clients|offset <5-20>|threshold <-80--60}|
ft-over-ds-aggregate|move-command|scan-assist {channel-info-interval <6-9>}|
smart-scan|wing-load-information|wmm-load-information]
```

Parameters

```
• wing-extensions [ap-attributes-information {include-hostname}|
coverage-hole-detection {11k-clients|offset <5-20>|offset <5-20>|threshold <-80--
60}|ft-over-ds-aggregate|move-command|scan-assist {channel-info-interval <6-9>}|
smart-scan|wing-load-information|wmm-load-information]
```

wing-extensions	Enables support for inclusion of WiNG-specific client extensions in radio transmissions
ap-attributes-information {include-hostname}	Enables support for AP attributes *information element* (IE) • include-hostname – Optional. When enabled, includes AP's hostname, as a sub-element, in the AP attributes IE. The AP attributes IE is vendor-specific and, when enabled, is added to beacons and probe responses. Inclusion of AP attributes IE allows Extreme Networks terminals to: - Recognize Extreme APs - Determine if the AP supports PAN BU features, irrespective of whether these features are enabled or not. **Note:** AP attributes IE is not added to beacons and probe responses by default.
overage-hole-detection {11k-clients| offset <5-20>| threshold <-80--60>}	Enables *coverage hole detection* (CHD) and configures CHD parameters. When enabled, allows clients (MUs) to inform an access point when it experiences a coverage hole. A coverage hole is an area of poor wireless coverage not supported by a WiNG managed access point radio. Enable *radio resource measurement* prior to enabling CHD. For enabling radio resource measurement, see *radio-resource-measurement*. CHD is disabled by default. After enabling CHD, optionally configure the following parameters: 11k-clients – Optional. Provides coverage hole detection to 802.11k-only-capable clients. This is a reduced set of coverage hole detection capabilities (standard 11k messages and behaviors). This option is disabled by default. Contd..

	• offset <5-20> – Optional. Configures the offset added to the threshold to obtain the access point's signal strength (as seen by the client) considered adequate.
	  • <5-20> – Specify the offset value from 5 - 20. The default is 5.
	• threshold – Optional. Configures the access point's signal strength threshold. When *Radio Resource Measurement* and *CVG Hole* are enabled, specify a threshold for the AP's signal strength (as seen by the client) below which a coverage hole incident is reported by the client.
	  • <-80--60> – Specify the threshold from -80 - -60 dBm. The default is -70 dBm.

ft-over-ds-aggregate	Enables *fast-transition* (FT) aggregation of action frames. When enabled, increases roaming speed by eliminating separate key exchange handshake frames with potential roam candidates. Enable fast transition to complete an initial FT over *distribution system* (DS) handshake with multiple roam candidates (up to 6) at once, eliminating the need to send separate FT over DS handshakes to each roam candidate. This option is disabled by default.
move-command	Enables use of *Hyper Fast Secure Roaming* (HFSR) for clients on this WLAN. This feature applies only to certain client devices. This option is disabled by default.
scan-assist {channel-info-interval <6-9>}	Enables support for scanning assist. When enabled, allows faster roams on *Dynamic Frequency Selection* (DFS) channels by eliminating passive scans. Clients get channel information directly from possible roam candidates. This option is disabled by default. • channel-info-interval <6-9> – Optional. Configures the interval at which channel information is periodically retrieved from potential roam candidates without requesting scan assist. • <6-9> – Specify the interval from 6 - 9 seconds. When enabled, the default value is 8 seconds.
smart-scan	Enables a smart scan to refine a clients channel scans to just a few channels as opposed to all available channels. This option is disabled by default.
wing-load-information	Enables support for the WiNG load information element (Element ID 173) with legacy Symbol Technology clients, thus making them optimally interoperable with the latest Extreme Networks access points. This option is enabled by default.
wmm-load-information	Enables support for WiNG *Wi-Fi MultiMedia* (WMM) Load Information Element in radio transmissions with legacy clients. This option is disabled by default.

Example

```
rfs6000-81742D(config-wlan-test)#wing-extensions wmm-load-information

rfs6000-81742D(config-wlan-test)#show context
wlan test
 description TestWLAN

4.1.92.2.201 wireless-client

wlan-mode commands

Configures the transmit power indicated to clients

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wireless-client [count-per-radio|cred-cache-ageout|hold-time|inactivity-timeout|
max-firewall-sessions|reauthentication|roam-notification|t5-inactivity-timeout|
tx-power|vlan-cache-ageout]

wireless-client [count-per-radio <0-256>|cred-cache-ageout <60-86400>|hold-time
<1-86400>|inactivity-timeout <60-86400>|max-firewall-sessions <10-10000>|
reauthentication <30-86400>|t5-inactivity-timeout <60-86400>|tx-power <0-20>|
vlan-cache-ageout <60-86400>]

wireless-client roam-notification [after-association|after-data-ready|auto]
```

Parameters

```
• wireless-client [count-per-radio <0-256>|cred-cache-ageout <60-86400>|hold-time
<1-86400>|inactivity-timeout <60-86400>|max-firewall-sessions <10-10000>|
reauthentication <30-86400>|t5-inactivity-timeout <60-86400>|tx-power <0-20>|
vlan-cache-out <60-86400>]
```

wireless-client	Configures the transmit power indicated to wireless clients for transmission
count-per-radio <0-256>	Configures the maximum number of clients allowed on this WLAN per radio • <0-256> – Specify a value from 0 - 256.
cred-cache-ageout <60-86400>	Configures the timeout period for which client credentials are cached across associations • <60-86400> – Specify a value from 60 - 86400 seconds.
hold-time <1-86400>	Configures the time period for which wireless client state information is cached post roaming • <1-86400> – Specify a value from 1 - 86400 seconds.
inactivity-timeout <60-86400>	Configures an inactivity timeout period in seconds. If a frame is not received from a wireless client for this period of time, the client is disassociated. • <60-86400> – Specify a value from 60 - 86400 seconds.
max-firewall-sessions <10-10000>	Configures the maximum firewall sessions allowed per client on a WLAN • <10-10000> – Specify the maximum number of firewall sessions allowed from 10 - 10000.
reauthentication <30-86400>	Configures periodic reauthentication of associated clients • <30-86400> – Specify the client reauthentication interval from 30 - 86400 seconds.
t5-inactivity-timeout <60-86400>	Configures and inactivity timeout, in seconds, for T5 devices. When configured, the T5 device is disassociated if the time lapsed after the last frame received from it exceeds the value specified here. • <60-86400> – Specify a value from 60 - 86400 seconds. The default is 60 seconds.

tx-power <0-20>	Configures the transmit power indicated to clients • <0-20> – Specify a value from 0 - 20 dBm.
vlan-cache-ageout <60-86400>	Configures the timeout period for which client VLAN information is cached across associations. • <60-86400> – Specify a value from 60 - 86400 seconds.

- `wireless-client roam-notification [after-association|after-data-ready|auto]`

wireless-client	Configures the transmit power indicated to wireless clients for transmission
roam-notification	Configures when a roam notification is transmitted
after-association	Transmits a roam notification after a client has associated
after-data-ready	Transmits a roam notification after a client is data-ready (after completion of authentication, handshakes, etc.)
auto	Transmits a roam notification upon client association (if the client is known to have authenticated to the network)

Related Commands

no	Removes or reverts to default configured wireless client related parameters

4.1.92.2.202 wpa-wpa2

wlan-mode commands

Modifies TKIP-CCMP (WPA/WPA2) related parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wpa-wpa2 [exclude-wpa2-tkip|handshake|key-rotation|opp-pmk-caching|pmk-caching|
preauthentication|server-only-authentication|psk|tkip-countermeasures|
use-sha256-akm]

wpa-wpa2 [exclude-wpa2-tkip|opp-pmk-caching|pmk-caching|preauthentication|
server-only-authentication|use-sha256-akm]

wpa-wpa2 handshake [attempts|init-wait|priority|timeout]
wpa-wpa2 handshake [attempts <1-5>|init-wait <5-1000000>|priority [high|normal]|
timeout <10-5000> {10-5000}]

wpa-wpa2 key-rotation [broadcast|unicast] <30-86400>

wpa-wpa2 psk [0 <LINE>|2 <LINE>|<LINE>]

wpa-wpa2 tkip-countermeasures holdtime <0-65535>
```

Parameters

- `wpa-wpa2 [exclude-wpa2-tkip|opp-pmk-caching|pmk-caching|preauthentication|server-only-authentication|use-sha256-akm]`

wpa-wpa2	Modifies TKIP-CCMP (WPA/WPA2) related parameters
exclude-wpa2-tkip	Excludes the *Wi-Fi Protected Access II* (WPA2) version of TKIP. It supports the WPA version of TKIP only. This option is disabled by default.
opp-pmk-caching	Uses opportunistic key caching (same *Pairwise Master Key* (PMK) across APs for fast roaming with EAP.802.1x. This option is enabled by default.
pmk-caching	Uses cached pair-wise master keys (fast roaming with eap/802.1x). This option is enabled by default.
preauthentication	Uses pre-authentication mode (WPA2 fast roaming)
server-only-authentication	Uses online sign up server-only-authenticated encryption network. This option is disabled by default.
use-sha256-akm	Uses sha256 authentication key management suite. This option is disabled by default.

- `wpa-wpa2 handshake [attempts <1-5>|init-wait <5-1000000>|priority [high|normal]|timeout <10-5000> {10-5000}]`

wpa-wpa2	Modifies TKIP-CCMP (WPA/WPA2) related parameters
handshake	Configures WPA/WPA2 handshake parameters
attempts <1-5>	Configures the total number of times a message is transmitted towards a non-responsive client • <1-5> – Specify a value from 1 - 5. The default is 2.

init-wait <5-1000000>	Configures a minimum wait-time period, in microseconds, before the first handshake message is transmitted from the AP. This option is disabled by default. • <5-1000000> – Specify a value from 5 - 1000000 microseconds.
priority [high|normal]	Configures the relative priority of handshake messages compared to other data traffic • high – Treats handshake messages as high priority packets on a radio. This is the default setting. • normal – Treats handshake messages as normal priority packets on a radio
timeout <10-5000> <10-5000>	Configures the timeout period, in milliseconds, for a handshake message to retire. Once this period is exceed, the handshake message is retired. • <10-5000> – Specify a value from 10 - 5000 milliseconds. The default is 500 milliseconds. • <10-5000> – Optional. Configures a different timeout between the second and third attempts

- `wpa-wpa2 key-rotation [broadcast|unicast] <30-86400>`

wpa-wpa2	Modifies TKIP-CCMP (WPA/WPA2) related parameters
key-rotation	Configures parameters related to periodic rotation of encryption keys. The periodic key rotation parameters are broadcast, multicast, and unicast traffic.
broadcast <30-86400>	Configures the periodic rotation of keys used for broadcast and multicast traffic. This parameter specifies the interval, in seconds, at which keys are rotated. This option is disabled by default. • <30-86400> – Specify a value from 30 - 86400 seconds.
unicast <30-86400>	Configures a periodic interval for the rotation of keys, used for unicast traffic. This option is disabled by default. • <30-86400> – Specify a value from 30 - 86400 seconds.

- `wpa-wpa2 psk [0 <LINE>|2 <LINE>|<LINE>]`

wpa-wpa2	Modifies TKIP-CCMP (WPA/WPA2) related parameters
psk	Configures a pre-shared key. The key options are: 0, 2, and LINE
0 <LINE>	Configures a clear text key
2 <LINE>	Configures an encrypted key
<LINE>	Enter the pre-shared key either as a passphrase not exceeding 8 - 63 characters, or as a 64 character (256bit) hexadecimal value

- `wpa-wpa2 tkip-countermeasures holdtime <0-65535>`

wpa-wpa2	Modifies TKIP-CCMP (WPA/WPA2) parameters
tkip-countermeasures	Configures a hold time period for implementation of TKIP counter measures
holdtime <0-65535>	Configures the amount of time a WLAN is disabled when TKIP counter measures are invoked • <0-65535> – Specify a value from 0 - 65535 seconds. The default is 60 seconds.

Example

```
rfs6000-81742D(config-wlan-test)#wpa-wpa2 tkip-countermeasures hold-time 2

rfs6000-81742D(config-wlan-test)#show context

4.1.92.2.203 service

wlan-mode commands

Invokes service commands applicable in the WLAN configuration mode

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
service [allow-ht-only|allow-open-passpoint|client-load-balancing|cred-cache|
eap-mac-mode|eap-mac-multicopy|eap-mac-multikeys|eap-throttle|
enforce-pmkid-validation|key-index|monitor|radio-crypto|reauthentication|
session-timeout|tx-deauth-on-roam-detection|unresponsive-client|wpa-wpa2|show]

service [allow-ht-only|allow-open-passpoint|cred-cache [clear-on-4way-timeout|
clear-on-disconnect]|eap-mac-multicopy|eap-mac-multikeys|enforce-pmkid-
validation|radio-crypto|reauthentication seamless|session-timeout mac|
tx-deauth-on-roam-detection|show cli]

service eap-mac-mode [mac-always|normal]

service eap-throttle <0-254>

service key-index eap-wep-unicast <1-4>

service monitor [aaa-server|adoption|captive-portal|dhcp|dns]

service monitor [aaa-server|adoption vlan <1-4094>|captive-portal external-server]
service monitor [dhcp|dns] crm <RESOURCE-NAME> vlan <1-4094>

service unresponsive-client [attempts <1-1000>|ps-detect {threshold <1-1000>}|
timeout <1-60>]

service wpa-wpa2 exclude-ccmp
```

Parameters

```
• service [allow-ht-only|allow-open-passpoint|cred-cache [clear-on-4way-timeout|
clear-on-disconnect]|eap-mac-multicopy|eap-mac-multikeys|enforce-pmkid-
validation|radio-crypto|reauthentication seamless|session-timeout mac|tx-deauth-
on-roam-detection|show cli]
```

allow-ht-only	Only allows clients capable of High Throughput (802.11n) data rates to associate. This option is disabled by default.
allow-open-passpoint	Enables non-WPA2 security for passpoint WLANs. This option is disabled by default. For more information on passpoint policy and configuration, see *PASSPOINT POLICY*.
cred-cache [clear-on-4way-timeout| clear-on-disconnect]	Clears credential cache based on the parameter passed • clear-on-4way-timeout – Clears cached client credentials after the 4way handshake with a client has timed out. This option is enabled by default. • clear-on-disconnect – Clears cached client credentials after the client has disconnected from the network. This option is disabled by default.
eap-mac-multicopy	Enables sending of multiple copies of broadcast and unicast messages. This option is disabled by default.

eap-mac-multikeys	Enables configuration of different key indices for MAC authentication. This option is disabled by default.
enforce-pmkid-validation	Validates the *Predictive real-time pairwise master key identifier* (PMKID) contained in a client's association request against the one present in the wpa-wpa2 handshake. This option is enabled by default. This functionality is based on the *Proactive Key Caching* (PKC) extension of the 802.11i EEEE standard. Whenever a wireless client successfully authenticates with a AP it receives a *pairwise master key* (PMK). PKC allows clients to cache this PMK and reuse it for future re-authentications with the same AP. The PMK is unique for every client and is identified by the PMKID. The PMKID is a combination of the hash of the PMK, a string, the station and the MAC addresses of the AP.
radio-crypto	Uses radio hardware for encryption and decryption. This is applicable only for devices using *Counter Cipher Mode with Block Chaining Message Authentication Code Protocol* (CCMP) encryption mode. This option is enabled by default.
reauthentication seamless	Enables seamless EAP client reauthentication without disconnecting client after the session has timed out. This option is enabled by default.
session-timeout mac	Enables reauthentication of MAC authenticated clients without disconnecting client after the session has timed out. This option is enabled by default.
tx-deauth-on-roam-detection	Transmits a deauthentication on the air while disassociating a client because its roam is detected on the wired side. This option is disabled by default.
show cli	Displays the CLI tree of the current mode. When used in the WLAN mode, this command displays the WLAN CLI structure.

- `service eap-mac-mode [mac-always|normal]`

eap-mac-mode	Configures the EAP and/or MAC authentication mode used with this WLAN. This option is enabled by default.
mac-always	Enables both EAP and MAC authentication. MAC authentication is performed first, followed by EAP authentication. Clients are granted access based on the EAP authentication result. If a client does not have EAP, the MAC authentication result is used to grant access.
normal	Grants client access if the client clears either EAP or MAC authentication. This is the default setting.

- `service eap-throttle <0-254>`

eap-throttle <0-254>	Enables EAP request throttling. Use this command to specify the maximum number of parallel EAP sessions allowed on this WLAN. Once this specified value is exceeded, all incoming EAP session requests are throttled. This option is enabled by default. • <0-254> – Specify a value from 0 - 254. This default value is 0.

- `service key-index eap-wep-unicast <1-4>`

key-index eap-wep-unicast <1-4>	Configures an index with each key during EAP authentication with WEP. This option is enabled by default. • <1-4> – Select a index from 1 - 4. The default value is 1.

- `service wpa-wpa2 exclude-ccmp`

wpa-wpa2 exclude-ccmp	Configures exclusion of CCMP requests when the authentication mode is set to tkip-ccmp. When enabled, it provides compatibility for client devices not compliant with tkip-ccmp. This option is disabled by default.

- `service monitor [aaa-server|adoption vlan <1-4094>|captive-portal external-server]`

monitor	Enables critical resource monitoring. In a WLAN, service monitoring enables regular monitoring of external AAA servers, captive portal servers, access point adoption, DHCP and DNS servers. When enabled, it allows administrators to notify users of a service's availability and make resource substitutions in case of unavailability of a service.
aaa-server	Enables external AAA server failure monitoring. When enabled monitors an external RADIUS server resource's AAA activity and ensures its adoption and availability. This feature is disabled by default.
adoption vlan <1-4094>	Enables adoption failure monitoring on an adopted AP. Also configures a adoption failover VLAN. This feature is disabled by default. • VLAN <1-4094> – Specify the VLAN on which clients are placed when the connectivity between the AAP and the controller is lost. Configure a DHCP pool and gateway for the failover VLAN. Ensure the DHCP server is running on the AP. Also ensure that the DHCP pool is configured to have less lease time. When this feature is enabled on a WLAN, it allows adopted APs to monitor their connectivity with the controller. If and when this connectivity is lost, all new clients are placed in the configured adoption failover VLAN. They are served an IP by the DHCP server running on the AP. In this situation if a client tries to access a Web URL, the AP redirects the client to a page stating that the service is down. When the AAP's link to the switch is restored, clients are placed back in the WLAN's configured VLAN, and are served an IP from the corresponding configured DHCP server (external or on the AP/controller).
captive-portal external-server	Enables external captive portal server failure monitoring. When enabled, monitors externally hosted captive portal activity, and user access to the controller or service platform managed network. This feature is disabled by default. When enabled, this feature enables APs to display, to an externally located captive portal's user, the no-service page when the captive portal's server is not reachable.

- `service monitor [dhcp|dns] crm <RESOURCE-NAME> vlan <1-4094>]`

monitor	Enables DHCP and/or DNS server monitoring on this WLAN.
dhcp	Enables monitoring of a specified DHCP server. When the connection to the DHCP server is lost, captive portal users automatically migrate to a pre-defined VLAN. The feature is disabled by default. **Note:** Use the *crm* keyword to specify the DHCP server to monitor.
dns	Enables monitoring of a specified DNS server. When the connection to the DNS server is lost, captive portal users automatically migrate to a pre-defined VLAN. The feature is disabled by default. **Note:** Use the *crm* keyword to specify the DNS server to monitor.
crm <RESOURCE-NAME>	This keyword is common to the 'dhcp' and 'dns' parameters. • crm – Identifies the DHCP and/or DNS server to monitor • <RESOURCE-NAME> – Specify the name of the DHCP or DNS server. **Note:** Once enabled, the CRM server monitors the DHCP/DNS server and updates their status as 'up' or 'down' depending on the availability of the resource. When either of these resources is down the wireless client is mapped to the failover VLAN and served with the 'no-service' page through the access point.

vlan <1-4094>	This keyword is common to the 'dhcp' and 'dns' parameters. After specifying the DHCP/DNS sever resource, specify the failover VLAN. • VLAN <1-4094> – Configures the failover VLAN from 1 - 4094. **Note:** When the DHCP server resource becomes unavailable, the device falls back to the VLAN defined here. This VLAN has a DHCP server configured that provides a pool of IP addresses with a lease time less than the main DHCP server. **Note:** When this DNS server resource becomes unavailable, the device falls back to the VLAN defined here. This VLAN has a DNS server configured that provides DNS address resolution until the main DNS server becomes available.

```
• service unresponsive-client [attempts <1-1000>|ps-detect {threshold <1-1000>}|
timeout <1-60>]
```

eap-mac-mode	Configures handling of unresponsive clients
attempts <1-1000>	Configures the maximum number of successive packets that failed transmission • <1-1000> – Specify a value from 1 - 1000. The default is 7.
ps-detect {threshold <1-1000>}	Enables the detection of power-save mode clients, whose PS stats has not been updated on the AP. This option is enabled by default. • threshold – Optional. Configures the threshold at which power-save client detection is triggered • <1-1000> – Configures the number of successive unacknowledged packets received before power-save detection is triggered. Specify a value from 1 - 1000. The default is 3.
timeout <1-60>	Configures the interval, in seconds, for successive packets not acknowledged by the client • <1-60> – Specify a value from 1 - 60 seconds. The default is 3 seconds.

Example

```
rfs4000-229D58(config-wlan-test)#service allow-ht-only

rfs4000-229D58(config-wlan-test)#service monitor aaa-server

rfs4000-229D58(config-wlan-test)#show context
wlan test
 ssid test
 vlan 1
 bridging-mode tunnel
 encryption-type none
 authentication-type none
 service monitor aaa-server
 service allow-ht-only
 controller-assisted-mobility
rfs4000-229D58(config-wlan-test)#
```

Related Commands

no	Removes or reverts to default WLAN settings configured using the 'service' command

4.1.93 wlan-qos-policy

Global Configuration Commands

Configures a WLAN QoS policy

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
wlan-qos-policy <WLAN-QOS-POLICY-NAME>
```

Parameters

- `wlan-qos-policy <WLAN-QOS-POLICY-NAME>`

<WLAN-QOS-POLICY-NAME>	Specify the WLAN QoS policy name. If the policy does not exist, it is created.

Example

```
rfs6000-81742D(config)#wlan-qos-policy test
rfs6000-81742D(config-wlan-qos-test)#?
WLAN QoS Mode commands:
  accelerated-multicast  Configure accelerated multicast streams address assnd
                         forwarding QoS classification
  classification         Select how traffic on this WLAN must be classified
                         (relative prioritization on the radio)
  multicast-mask         Egress multicast mask (frames that match bypass the
                         PSPqueue. This permits intercom mode operation
                         without delay even in the presence of PSP clients)
  no                     Negate a command or set its defaults
  qos                    Quality of service
  rate-limit             Configure traffic rate-limiting parameters on a
                         per-wlan/per-client basis
  svp-prioritization     Enable spectralink voice protocol support on this
                         wlan
  voice-prioritization   Prioritize voice client over other client (for
                         non-WMM clients)
  wmm                    Configure 802.11e/Wireless MultiMedia parameters

  clrscr                 Clears the display screen
  commit                 Commit all changes made in this session
  do                     Run commands from Exec mode
  end                    End current mode and change to EXEC mode
  exit                   End current mode and down to previous mode
  help                   Description of the interactive help system
  revert                 Revert changes
  service                Service Commands
  show                   Show running system information
  write                  Write running configuration to memory or terminal

rfs6000-81742D(config-wlan-qos-test)#
```

Related Commands

no	Removes an existing WLAN QoS Policy

NOTE: For more information on WLAN QoS policy commands, see *Chapter 21, WLAN-QOS-POLICY*.

4.1.94 url-filter

Global Configuration Commands

The following table lists the commands that allow you to enter the URL filter configuration mode:

Table 4.53 *Commands Creating a URL Filter*

Command	Description	Reference
url-filter	Creates a new URL filter and enters its configuration mode	*page 4-542*
url-filter-config-mode commands	Summarizes the URL filter configuration mode commands	*page 4-545*

4.1.94.1 url-filter

url-filter

Creates a new URL filter (Web filter) and enters its configuration mode. URL filtering is a licensed feature. When applied to a WiNG device the license allows you to enable URL filtering on the device, create and apply a URL filter defining the banned and/or allowed URLs. When enabled, the URL filter is applied to all user-initiated URL requests to determine if the requested URL is banned or allowed. Only if allowed is the user's request (in the form of a HTTP request packet) forwarded to the Web server.

URL filters can be applied at any of the following points: the user's application (browser/email reader), the network's gateway, at the *Internet service provider's* (ISP) end, and also on a Web portal. For wireless clients, the WLAN infrastructure is the best place to implement these filters.

A URL filter is a set of whitelist and/or blacklist rules. The whitelist allows access only to those Websites and URLs specified in it. All other Websites and URLs, apart from those specified in the whitelist, are banned. On the other hand, the blacklist bans all Websites and URLs specified in it. All other Websites and URLs, apart from those specified in the blacklist, are allowed.

To simplify URL filter configuration, Websites have been classified into pre-defined category-types and categories. The system provides 12 category-types and 64 categories. To further simplify configuration, these 12 category-types have been grouped into *five* (5) pre-defined levels. (See Usage Guidelines section for the list of category-types, categories, and levels). The actual classification of URLs (on the basis of the pre-defined factors mentioned above) is done by the classification server. A local database also helps by caching URL records for a user-defined time period. The classification server host is specified in the Web filter policy. The Web filter policy also defines the URL database parameters. For more information, see *web-filter-policy*.

The WiNG software also allows you to create URL lists. Each URL list contains a list of user-defined URLs. Use the URL list in a URL filter (whitelist or blacklist rule) to identify the URLs to ban or allow. For example, a URL list named SocialNetworking is created listing the following three sites: Facebook, Twitter, and LinkedIn. When applied to a URL filter's blacklist these three sites are banned. Where as, when applied to a whitelist only these three sites are allowed. For more information on configuring a URL list, see *url-list*.

NOTE: URL filtering is a licensed feature. Procure and install the license in the device configuration mode. For more information, see *license*.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
url-filter <URL-FILTER-NAME>
```

Parameters

- `url-filter <URL-FILTER-NAME>`

<URL-FILTER-NAME>	Creates a new URL filter and enters its configuration mode. Specify the URL filter name. If the filter does not exist, it is created.

Usage Guidelines

	Category Type	Category
1	Adult Content	Alcohol & Tobacco, Dating & Personals, Gambling, Nudity, Pornography/Sexually Explicit, Sex Education, Weapons
2	Business	Web-based Email
3	Communication	Chat, Instant Messaging
4	Entertainment	Streaming Media & Downloads
5	File Sharing and Backup	Download Sites
6	Gaming	Games
7	News Sports and General	Arts, Business, Computer & Technology, Education, Entertainment, Fashion & Beauty, Finance, Forum & Newsgroups, General, Government, Greeting Card, Health & Medicine, Information Security, Job Search, Leisure & Recreation, Network Errors, News, Non-Profits & NGO, Personal Sites, Politics, Private IP Addresses, Real Estates, Religion, Restaurants & Dinning, Search Engine & Portals, Shopping, Sports, Transportation, Translators, Travel
8	Peer-to-Peer (P2P)	Peer to Peer
9	Questionable/ Unethical	Child Abuse Images, Cults, Hacking, Hate & Intolerance, Illegal Drug, Illegal Sharing, Illegal Software, School Cheating, Tasteless, Violence
10	Security Risk	Advertisement & Pop-ups, Anonymizers, Botnets, Compromised, Criminal Activity, Malware, Parked Domains, Phishing & Fraud, Spam Sites
11	Social and Photo Sharing	Social Networking
12	Software Update	N/A

	Level	Description
1	Basic	Blocks sites/URL categorized as Security Risk
2	Low	Blocks sites/URL categorized as Adult Content + Basic
3	Medium	Blocks sites/URL categorized as File Sharing and Backup, P2P, Questionable / Unethical + Low
4	Medium High	Blocks sites/URL categorized as Gaming + Medium
5	High	Blocks sites/URL categorized as Communication, Entertainment, Social and Photo Sharing + Medium High

Example

```
nx9500-6C8809(config-url-filter-test)#?
URL Filter Mode commands:
  blacklist    Block access to URL
  blockpage    Configure blocking page parameters
  description  Url filter description
  no           Negate a command or set its defaults
  whitelist    Allow access to URL

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-url-filter-test)#
```

4.1.94.2 url-filter-config-mode commands

url-filter

The following table summarizes URL filter configuration mode commands:

Table 4.54 *URL-Filter-Config-Mode Commands*

Command	Description	Reference
blacklist	Creates a blacklist rule defining a list of banned Websites and URLs	*page 4-546*
blockpage	Configures the parameters that retrieve the page or content displayed by the client's browser when a requested URL is blocked and cannot be viewed	*page 4-549*
description	Configures an appropriate description for this URL filter	*page 4-551*
no	Removes this URL filter's configured parameters	*page 4-552*
whitelist	Creates a whitelist rule defining a list of Websites and URLs allowed access by clients.	*page 4-553*

4.1.94.2.204 blacklist

url-filter-config-mode commands

Creates a blacklist rule. A blacklist is a list of Websites and URLs denied access by clients. Clients requesting blacklisted URLs are presented with a page displaying the 'Web page blocked' message. Parameters relating to this page are configured using the 'blockpage' option.

URL filtering is based on the classification of Websites into pre-defined category-types. Some of the category-types are further divided into multiple categories. Currently available are 12 built-in category types, and 64 categories. These built-in category-types and categories cannot be modified.

Use the available options to identify the URL category-types and categories to include in the blacklist.

In addition to identifying URLs by the categories and category-types they are classified into, the system also provides *five* (5) levels of Web filtering (basic, high, low, medium, and medium-high). Each level identifies a specific set of URL categories to blacklist. For more information on category-types, categories, and URL filtering levels, see *url-filter*.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
blacklist [category-type|level|url-list]

blacklist category-type [adult-content|all|business|communication|entertainment|
file-sharing-backup|gaming|news-sports-general|p2p|questionable|security-risk|
social-photo-sharing|software-updates] precedence <1-500> {description <LINE>}

blacklist level [basic|high|low|medium|medium-high] precedence <1-500>
{description <LINE>}

blacklist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}
```

Parameters

```
• blacklist category-type [adult-content|all|business|communication|
entertainment|file-sharing-backup|gaming|news-sports-general|p2p|questionable|
security-risk|social-photo-sharing|software-updates] precedence <1-500>
{description <LINE>}
```

blacklist category-type <SELECT-CATEGORY-TYPE>	Selects the category-type to blacklist. A category is a pre-defined URL list available in the WiNG software. Categories are based on an external database, and cannot be modified or removed. Custom categories can created with the URL List and added to the database. Websites have been classified into the following 12 category types: adult-content, business, communication, entertainment, file-sharing-backup, gaming, news-sports-general, p2p, questionable, security-risk, social-photo-sharing, and software-updates Contd..

	Select 'all' to blacklist all category-types. Some of the category-types are further classified into categories. For example, the '*adult-content*' category-type is differentiated into the following categories: • alcohol-tobacco, dating-personals, gambling, nudity, pornography-sexually-explicit, sex-education, and weapons. The system blocks all categories (URLs falling within their limits) within the selected category-type.
precedence <1-500>	Configures the precedence value for this blacklist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.
description <LINE>	Optional. Configures a description (not exceeding 80 characters) for this blacklist rule. Enter a description that allows you to identify the purpose of the rule.

- `blacklist level [basic|high|low|medium|medium-high] precedence <1-500> {description <LINE>}`

blacklist level [basic|high|low|medium|medium-high]	Configures the Web filtering level as basic, high, low, medium, or medium-high. Each of these filter-levels are pre-configured to use a set of category types and this mapping cannot be modified.
precedence <1-500>	Configures the precedence value for this blacklist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.
description <LINE>	Optional. Configures a description (not exceeding 80 characters) for this blacklist rule. Enter a description that allows you to identify the purpose of the rule.

- `blacklist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}`

blacklist url-list <URL-LIST-NAME>	Associates a URL list with this URL filter. When associated with a blacklist rule, all URLs listed in the specified URL list are blacklisted. URL lists are customized categories included in the custom filter-level setting. URL lists enable an administrator to blacklist or whitelist URLs in addition to the built-in categories. For more information on configuring a URL list, see *url-list*. • <URL-LIST-NAME> – Enter URL list name (should be existing and configured)
precedence <1-500>	Configures the precedence value for this blacklist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.
description <LINE>	Optional. Configures a description (not exceeding 80 characters) for this blacklist rule. Enter a description that allows you to identify the purpose of the rule.

Example

```
rfs6000-81742D(config-url-filter-test)#blacklist level medium-high precedence 10

rfs6000-81742D(config-url-filter-test)#blacklist category-type adult-content
category alcohol-tobacco precedence 1

rfs6000-81742D(config-url-filter-test)#blacklist category-type security-risk
category botnets precedence 3
```

```
rfs6000-81742D(config-url-filter-test)#show context
url-filter test
 blacklist level medium-high precedence 10
 blacklist category-type security-risk category botnets precedence 3
 blacklist category-type adult-content category alcohol-tobacco precedence 1
rfs6000-81742D(config-url-filter-test)#
```

Related Commands

no	Removes a blacklist rule from this URL filter. Specify the category-type, category, and precedence to identify the blacklist rule. The identified rule is removed form the URL filter.

4.1.94.2.205 blockpage

url-filter-config-mode commands

Configures the parameters that retrieve the page or content displayed by the client's browser when a requested URL is blocked and cannot be viewed

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
blockpage [external|internal|path]

blockpage path [external|internal]
blockpage external url <URL>
blockpage internal [content|footer|header|main-logo|org-name|org-signature|
small-logo|title] <LINE/IMAGE-URL>
```

Parameters

- `blockpage path [external|internal]`

blockpage path [external|internal]	Specifies if the location of the page displayed, to the client when a requested URL is blocked, is external or internal • external – Indicates the page displayed is hosted on an external Web server resource. If selecting this option, use the *blockpage > external > url <URL>* command to provide the path to the external Web server hosting the page. **Note:** internal – Indicates the page displayed is hosted internally. This is the default setting. If selecting this option, use the *blockpage > internal > <SELECT-PAGE-TYPE> > <LINE/IMAGE-URL>* command to define the page configuration.

- `blockpage external url <URL>`

blockpage external url <URL>	Configures the URL of the external Web server hosting the page (displayed to the client when a requested URL is blocked). • url <URL> – Specify the URL of the Web server and the blocking page name Valid URLs should begin with http:// or https:// The URL can contain query strings. Use '&' or '?' character to separate field-value pair. Enter 'ctrl-v' followed by '?' to configure query strings

- `blockpage internal [content|footer|header|main-logo|org-name|org-signature| small-logo|title] <LINE/IMAGE-URL>`

blockpage internal [content|footer|header|main-logo|org-name|org-signature|small-logo|title] <LINE/IMAGE-URL>	Configures the internally hosted blocking page parameters, such as the content displayed, page footer and header, organization (the organization enforcing the Web page blocking) details (name, signature, and logo), and page title • content – Configures the text (message) displayed on the blocking page • footer – Configures the text displayed as the blocking page footer Contd...

	• header – Configures the text displayed as the blocking page header • org-name – Configures the organization's name displayed on the blocking page • org-signature – Configures the organization's signature displayed on the blocking page • title – Configures the title of the blocking page. • main-logo – Configures the location of the main logo (organization's large logo) • small-logo – Configures the location of the small logo (organization's small logo) The following keyword is common to all of the above parameters: • <LINE/IMAGE-URL> – Specify the location of the logo (main and small) image file. The image is retrieved and displayed from the location configured here. If you are using this option to provide content, such as organization name, footer, header, etc. enter a text string not exceeding 255 characters in length.

Example

```
rfs6000-81742D(config-url-filter-test)#blockpage internal content "The requested
Web page is blocked and cannot be displayed for viewing"

rfs6000-81742D(config-url-filter-test)#show context
url-filter test
 blacklist level medium-high precedence 10
 blacklist category-type security-risk category botnets precedence 3
 blacklist category-type adult-content category alcohol-tobacco precedence 1
 blockpage internal content "The requested Web page is blocked and cannot be
displayed for viewing"
rfs6000-81742D(config-url-filter-test)#
```

Related Commands

no	Removes the blocking page configurations

4.1.94.2.206 description

url-filter-config-mode commands

Configures a description for this URL filter. Provide a description that enables you to identify the purpose of this URL filter.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <LINE>
```

Parameters

- `description <LINE>`

description <LINE>	Enter an appropriate description for this URL filter. The description should identify the URL filter's purpose and should not exceed 80 characters in length.

Example

```
rfs6000-81742D(config-url-filter-test)#description Blacklists sites inappropriate
for children and are security risks.

rfs6000-81742D(config-url-filter-test)#show context
url-filter test
 description "Blacklists sites inappropriate for children and are security risks."
 blacklist level medium-high precedence 10
 blacklist category-type security-risk category botnets precedence 3
 blacklist category-type adult-content category alcohol-tobacco precedence 1
 blockpage internal content "The requested Web page is blocked and cannot be
displayed for viewing"
rfs6000-81742D(config-url-filter-test)#
```

Related Commands

no	Removes this URL filter's description

4.1.94.2.207 no

url-filter-config-mode commands

Use the no command to remove this URL filter's configured parameters

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [blacklist|blockpage|description|whitelist]

no blacklist [category-type|level|url-list]
no blacklist [category-type <SELECT-CATEGORY-TYPE>|level <SELECT-LEVEL>|
url-list <URL-LIST-NAME>] precedence <1-500>

no blockpage [external|internal [content|footer|header|main-logo|org-name|
org-signature|small-logo|title]|path]

no description

no whitelist [category-type|url-list]
no whitelist [category-type <SELECT-CATEGORY-TYPE>|url-list <URL-LIST-NAME>]
precedence <1-500>
```

Parameters

- no <PARAMETERS>

no <PARAMETERS>	Removes this URL filter's configured parameters based on the values passed here

Example

The following example displays the URL filter 'test' settings before the 'no' is executed:

```
rfs6000-81742D(config-url-filter-test)#show context
url-filter test
 description "Blacklists sites inappropriate for children and are security risks."
 blacklist level medium-high precedence 10
 whitelist category-type communication category chat precedence 7
 blacklist category-type security-risk category botnets precedence 3
 blacklist category-type adult-content category alcohol-tobacco precedence 1
 blockpage internal content "The requested Web page is blocked and cannot be
displayed for viewing"
rfs6000-81742D(config-url-filter-test)#

rfs6000-81742D(config-url-filter-test)#no description

rfs6000-81742D(config-url-filter-test)#no blacklist category-type adult-content
category alcohol-tobacco precedence 1

rfs6000-81742D(config-url-filter-test)#no whitelist category-type communication
category chat precedence 7
```

The following example displays the URL filter 'test' settings after the 'no' is executed:

```
rfs6000-81742D(config-url-filter-test)#show context
url-filter test
 blacklist level medium-high precedence 10
 blacklist category-type security-risk category botnets precedence 3
 blockpage internal content "The requested Web page is blocked and cannot be
displayed for viewing"
rfs6000-81742D(config-url-filter-test)#
```

4.1.94.2.208 whitelist

url-filter-config-mode commands

Creates a whitelist rule. A whitelist is a list of Websites and URLs allowed access by clients.

URL filtering is based on the classification of Websites into pre-defined category-types. Some of the category-types are further divided into multiple categories. Currently available are 12 built-in category types, and 64 categories. These built-in category-types and categories cannot be modified.

Use the available options to identify the category-types and categories to include in the whitelist.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
whitelist [category-type|url-list]

whitelist category-type [adult-content|all|business|communication|entertainment|
file-sharing-backup|gaming|news-sports-general|p2p|questionable|security-risk|
social-photo-sharing|software-updates] precedence <1-500> {description <LINE>}

whitelist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}
```

Parameters

```
• whitelist category-type [adult-content|all|business|communication|
entertainment|file-sharing-backup|gaming|news-sports-general|p2p|questionable|
security-risk|social-photo-sharing|software-updates] precedence <1-500>
{description <LINE>}
```

whitelist category-type <SELECT-CATEGORY-TYPE>	Selects the category-type to add to this whitelist. A category is a pre-defined URL list available in the WiNG software. Categories are based on an external database, and cannot be modified or removed. Custom categories can created with the URL List and added to the database. Websites have been classified into the following 12 category types: adult-content, business, communication, entertainment, file-sharing-backup, gaming, news-sports-general, p2p, questionable, security-risk, social-photo-sharing, and software-updates. Select 'all' to whitelist all category-types. Some of the category-types are further classified into categories. For example, the '*adult-content*' category-type is differentiated into the following categories: • alcohol-tobacco, dating-personals, gambling, nudity, pornography-sexually-explicit, sex-education, and weapons. The system allows all categories (URLs falling within their limits) within the selected category-type.
precedence <1-500>	Configures the precedence value for this whitelist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.
description <LINE>	Optional. Configures a description (not exceeding 80 characters) for this whitelist rule. Enter a description that allows you to identify the purpose of the rule.

- `whitelist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}`

whitelist url-list <URL-LIST-NAME>	Associates a URL list with this URL filter. When associated with a whitelist rule, all URLs listed in the specified URL list are allowed access. URL lists are customized categories included in the custom filter-level setting. URL lists enable an administrator to blacklist or whitelist URLs in addition to the built-in categories. For more information on configuring a URL list, see *url-list*. • <URL-LIST-NAME> – Enter URL list name (should be existing and configured)
precedence <1-500>	Configures the precedence value for this whitelist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.
description <LINE>	Optional. Configures a description (not exceeding 80 characters) for this whitelist rule. Enter a description that allows you to identify the purpose of the rule.

Example

```
rfs6000-81742D(config-url-filter-test)#whitelist category-type communication
category chat precedence 7

rfs6000-81742D(config-url-filter-test)#show context
url-filter test
 description "Blacklists sites inappropriate for children and are security risks."
 blacklist level medium-high precedence 10
 whitelist category-type communication category chat precedence 7
 blacklist category-type security-risk category botnets precedence 3
 blacklist category-type adult-content category alcohol-tobacco precedence 1
 blockpage internal content "The requested Web page is blocked and cannot be
displayed for viewing"
rfs6000-81742D(config-url-filter-test)#
```

Related Commands

no	Removes a whitelist rule from this URL filter. Specify the category-type, category, and precedence to identify the blacklist rule. The identified rule is removed form the URL filter.

4.1.95 url-list

Global Configuration Commands

The following table lists the commands that allow you to enter the URL list configuration mode:

Table 4.55 *Commands Creating a URL List*

Command	Description	Reference
url-list	Creates a new URL list and enters its configuration mode	*page 4-556*
url-list-config-mode commands	Summarizes the URL list configuration mode commands	*page 4-557*

4.1.95.1 url-list

url-list

Creates a URL list and enters its configuration mode. URL lists are a means of categorizing URLs on the basis of various criteria, such as frequently used, not-permitted, etc. It is used in URL filters to identify whitelisted/blacklisted URLs. Web requests are blocked or approved based on URL filter whitelist/blacklist rules. A whitelist bans all sites except the categories and URL lists defined in the whitelist. The blacklist allows all sites except the categories and URL lists defined in the blacklist

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
url-list <URL-LIST-NAME>
```

Parameters

- `url-list <URL-LIST-NAME>`

<URL-LIST-NAME>	Specify the URL list name. The URL list is created if another list with the same name does not exist.

Example

```
nx9500-6C8809(config)#url-list URLlist1
nx9500-6C8809(config-url-list-URLlist1)#?
URL List Mode commands:
  description  Description of the category
  no           Negate a command or set its defaults
  url          Add a URL entry

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-url-list-URLlist1)#

nx9500-6C8809(config-url-list-URLlist1)#url http://www.example_company.com depth
10

nx9500-6C8809(config-url-list-test)#show context
url-list test
 url http://www.example_company.com depth 10
nx9500-6C8809(config-url-list-URLlist1)#
```

4.1.95.2 url-list-config-mode commands

url-list

The following table summarizes URL list configuration mode commands:

Table 4.56 *URL-Filter-Config-Mode Commands*

Command	Description	Reference
description	Creates a blacklist rule defining a list of banned Web sites and URLs	*page 4-558*
url	Adds URL entries to this URL list	*page 4-559*
no	Removes this URL list's settings	*page 4-560*

4.1.95.2.209 description

url-list-config-mode commands

Configures a description for this URL list. The description should be unique and enable you to identify the type of URLs listed in the URL list.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <LINE>
```

Parameters

- `description <LINE>`

description <LINE>	Provide a unique description for this URL list (should not exceed 500 characters in length)

Example

```
nx9500-6C8809(config-url-list-test)#description "This URL list contains social
media URLs"

nx9500-6C8809(config-url-list-test)#show context
url-list test
 description "This URL list contains social media URLs"
nx9500-6C8809(config-url-list-test)#
```

Related Commands

no	Removes this URL list's description

4.1.95.2.210 url

url-list-config-mode commands

Adds URL entries to this URL list

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
url <WORD> {depth <1-10>}
```

Parameters

- `url <WORD> {depth <1-10>}`

url <WORD> {depth <1-10>}	Adds a URL entry • <WORD> – Specify the URL to add. • depth – Optional. Sets number of levels to be cached. Since Web sites have different parameters to uniquely identify specific content, the same content may be stored on multiple origin servers. Smart caching uses subsets of these parameters to recognize that the content is the same and serves it from cache. • <1-10> – Specify the depth from 1 - 10.

Example

```
nx9500-6C8809(config-url-list-test)#url http://www.facebook.com

nx9500-6C8809(config-url-list-test)#show context
url-list test
 description "This URL list contains social communication URLS"
 url https://www.facebook.com depth 5
nx9500-6C8809(config-url-list-test)#
```

Related Commands

no	Removes a URL entry from this URL list

4.1.95.2.211 no

url-list-config-mode commands

Removes this URL list's settings

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no [description|url]

no description

no url <WORD>
```

Parameters

- `no <PARAMETERS>`

no <PARAMETERS>	Removes this URL's settings based on the parameters passed

Example

The following example displays the URL list 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-url-list-test)#show context
url-list test
 description "This URL list contains social communication URLS"
 url https://www.facebook.com depth 5
nx9500-6C8809(config-url-list-test)#

nx9500-6C8809(config-url-list-test)#no url www.facebook.com
```

The following example displays the URL list 'test' settings after the 'no' command is executed:

```
nx9500-6C8809(config-url-list-test)#show context
url-list test
 description "This URL list contains social communication URLS"
nx9500-6C8809(config-url-list-test)#
```

4.1.96 vx9000

Global Configuration Commands

Configures a *Virtual WLAN Controller* (V-WLC) in a *virtual machine* (VM) environment. V-WLC can be deployed on a shared, third-party server hardware, thereby reducing overhead costs of procuring and maintaining dedicated appliances. The external, third-party hardware needs to have installed hypervisors, such as VmWare, Xen, VirtualBox, KVM, Amazon EC2 or Hyper-V, enabling it to communicate with V-WLC software.

The V-WLC controls and manages access points and other controllers (at NOC or as a site-controller) in the network. The traffic between the access points and the V-WLC is over the layer-3 MINT protocol.

V-WLC is a licensed feature, and the WiNG software provides the following two new licenses:

- VX – When installed, this license activates VM controller instance, and enables the V-WLC to trigger adoption process allowing access points to adopt to the V-WLC. The adoption capacity of the V-WLC is determined by the number of licenses installed on it.
- VX-DEMO – This is a 60 day trial license. This license also activates VM controller instance, and enables the V-WLC to adopt access points. But, the access point adoption capacity is limited to 16. Having installed this license on a device, the only other license that you can install on it is the VX license. All existing installed licenses will continue to work as before. Since this license has a limited validity period, ensure that the system clock on the license generating tool and the device are in sync. preferably through NTP.

To install the VX or VX-DEMO license on an existing V-WLC instance, use the license command. For more information, see the examples provided in this section.

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600

Syntax

```
vx9000 <MAC>
```

Parameters

- `vx9000 <MAC>`

vx <MAC>	Configures a V-WLC and enters its configuration mode The V-WLC configuration is the same as that of a normal controller.

Example

```
nx9500-6C8809(config)#vx9000 11-22-33-44-55-66
nx9500-6C8809(config-device-11-22-33-44-55-66)#?
Device Mode commands:

Related Commands

no	Removes a VX9000 wireless controller

5 COMMON COMMANDS

This chapter describes the CLI commands used in the USER EXEC, PRIV EXEC, and GLOBAL CONFIG modes.

The PRIV EXEC command set contains commands available within the USER EXEC mode. Some commands can be entered in either mode. Commands entered in either the USER EXEC or PRIV EXEC mode are referred to as EXEC mode commands. If a user or privilege is not specified, the referenced command can be entered in either mode.

5.1 Common Commands

COMMON COMMANDS

The following table summarizes commands common to the User Exec, Priv Exec, and Global Config modes:

Table 5.1 *Commands Common to Controller CLI Modes*

Command	Description	Reference
clrscr	Clears the display screen	*page 5-3*
commit	Commits (saves) changes made in the current session	*page 5-4*
exit	Ends and exits the current mode and moves to the PRIV EXEC mode	*page 5-5*
help	Displays the interactive help system	*page 5-6*
no	Negates a command or reverts values to their default settings	*page 5-9*
revert	Reverts changes to their last saved configuration	*page 5-12*
service	Invokes service commands to troubleshoot or debug `(config-if)` instance configurations	*page 5-13*
show	Displays running system information	*page 5-58*
write	Writes the system's running configuration to memory or to the terminal	*page 5-60*

NOTE: The input parameter <HOSTNAME> cannot include an underscore character. In other words, a device's hostname cannot contain an underscore.

5.1.1 clrscr

Common Commands

Clears the screen and refreshes the prompt, irrespective of the mode

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
clrscr
```

Parameters

None

Example

The terminal window or screen before the clrscr command is executed:

```
rfs4000-229D58#device-upgrade ?
  DEVICE-NAME     Name/MAC address of device
  all             Upgrade all devices
  ap650           Upgrade AP650 Device
  ap6511          Upgrade AP6511 Device
  ap6521          Upgrade AP6521 Device
  ap6522          Upgrade AP6522 Device
  ap6532          Upgrade AP6532 Device
  ap6562          Upgrade AP6562 Device
  ap71xx          Upgrade AP7161 Device
  ap7502          Upgrade AP7502 Device
  ap7522          Upgrade AP7522 Device
  ap7532          Upgrade AP7532 Device
  ap7562          Upgrade AP7562 Device
  ap81xx          Upgrade AP81XX Device
  ap82xx          Upgrade AP82XX Device
  ap8432          Upgrade AP8432 Device
  ap8533          Upgrade AP8533 Device
  cancel-upgrade  Cancel upgrading the device
  load-image      Load the device images to controller for device-upgrades
  rf-domain       Upgrade all devices belonging to an RF Domain
  rfs4000         Upgrade RFS4000 Device

rfs4000-229D58#
```

The terminal window or screen after the clrscr command is executed:

```
rfs4000-229D58#
```

5.1.2 commit

Common Commands

Commits changes made in the active session. Use the commit command to save and invoke settings entered during the current transaction.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
commit {write}{memory}
```

Parameters

- `commit {write}{memory}`

write	Optional. Commits changes made in the current session
memory	Optional. Writes to memory. This option ensures current changes persist across reboots.

Example

```
nx9500-6C8809#commit write memory
[OK]
nx9500-6C8809#
```

5.1.3 exit

Common Commands

The exit command works differently in the User Exec, Priv Exec, and Global Config modes. In the Global Config mode, it ends the current mode and moves to the previous mode, which is Priv Exec mode. The prompt changes from `(config)#` to `#`. When used in the Priv Exec and User Exec modes, the exit command ends the current session, and connection to the terminal device is terminated. If the current session has changes that have not been committed, the system prompts you to either do a commit or a revert before terminating the session.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
exit
```

Parameters

None

Example

```
nx9500-6C8809(config)#exit
nx9500-6C8809#
```

5.1.4 help

Common Commands

Describes the interactive help system

Use this command to access the advanced help feature. Use “?” anytime at the command prompt to access the help topic.

Two kinds of help are provided:

- Full help is available when ready to enter a command argument
- Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (for example 'show ve?').

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
help {search}

help {search <WORD>} {detailed|only-show|skip-no|skip-show}
```

Parameters

- `help {search <WORD>} {detailed|only-show|skip-no|skip-show}`

search <WORD>	Optional. Searches for CLI commands related to a specified target term • <WORD> – Specify a target term (for example, a feature or a configuration parameter). After specifying the term, select one of the following options: detailed, only-show, skip-no, or skip-show. The system displays information based on the option selected.
detailed	Optional. Searches and displays help strings in addition to mode and commands
only-show	Optional. Displays only “show” commands. Does not display configuration commands
skip-no	Optional. Displays only configuration commands. Does not display “no” commands
skip-show	Optional. Displays only configuration commands. Does not display “show” commands

Example

```
nx9500-6C8809>help search crypto detailed

5.1.5 no

Common Commands

Negates a command or sets its default. Though the no command is common to the User Exec, Priv Exec, and Global Config modes, it negates a different set of commands in each mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
no <PARAMETERS>
```

Parameters

- no <PARAMATERS>

no <PARAMETERS>	The no command is common across all configuration modes and sub modes. It resets or reverts settings based on the mode in which executed. For example, when executed in the AAA policy configuration mode, it allows you to reset or revert a specific AAA policy settings. Similarly, when executed in the global configuration mode, it only resets or reverts settings configured in the global configuration mode.

Usage Guidelines

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

Example

Global Config mode: No command options

```
rfs6000-81742D(config)##no ?
  aaa-policy                    Delete a aaa policy
  aaa-tacacs-policy             Delete a aaa tacacs policy

5.1.6 revert

Common Commands

Reverts changes made, in the current session, to their last saved configuration

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
revert
```

Parameters

None

Example

```
nx9500-6C8809>revert
nx9500-6C8809>
```

5.1.7 service

Common Commands

Service commands are used to view and manage configurations. The service commands and their corresponding parameters vary from mode to mode. The User Exec mode and Priv Exec mode commands provide same functionalities with a few minor changes. The Global Config service command sets the size of history files. It also enables viewing the current mode's CLI tree.

This section consists of the following sub-sections:

- Syntax *(User Exec Mode)*
- Syntax *(Privilege Exec Mode)*
- Syntax *(Privilege Exec Mode: NX9500 and NX9510)*

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000
    - Syntax *(Global Config Mode)*

Syntax (User Exec Mode)

```
service [block-adopter-config-update|clear|cli-tables-skin|cluster|database|

Parameters (User Exec Mode)

service

- `service [block-adopter-config-update|request-full-config-from-adopter]`

block-adopter-config-update	Blocks the configuration updates sent from the NOC server
request-full-config-from-adopter	Configures a request for full configuration updates from the adopter device In an *hierarchically managed* (HM) network devices are deployed in two levels. The first level consists of the *Network Operations Center* (NOC) controllers. The second level consists of the site controllers that can be grouped to form clusters. The NOC controllers adopt and manage the site controllers. Access points within the network are adopted and managed by the site controllers. The adopted devices (access points and site controllers) are referred to as the adoptee. The devices adopting the adoptee are the 'adopters'.

- `service clear adoption history {on <DEVICE-NAME>}`

clear adoption history	Clears adoption history on this device and its adopted access points
on <DEVICE-NAME>	Optional. Clears adoption history on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service clear device-upgrade history {on <DOMAIN-NAME>}`

clear device-upgrade history	Clears device upgrade history
on <DOMAIN-NAME>	Optional. Clears all firmware upgrade history in a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `service clear diag pkts`

clear diag pkts	Clears the looped packets queue logged by the dataplane. The dataplane logs up to 16 looped packets at a time in a separate queue, which has to be manually cleared to make space for new packet logging. For more information on viewing logged looped packet information execute the *service > show > diag > pkts* command.

- `service clear dpi [all|app|app-category] stats {on <DEVICE-OR-DOMAIN-NAME>}`

clear dpi	Clears *Deep Packet Inspection* (DPI) statistics When enabled, DPI allows application and/or application category recognition. The DPI statistics are maintained by the system for every hit registered by the DPI engine.
[all|app|app-category] stats	Use the following filter options to clear all or specific DPI statistics: • all – Clears all DPI related (application and app-category) statistics • app – Clears only application related statistics • app-category – Clears only app-category related statistics
on <DEVICE-OR-DOMAIN-NAME>	Optional. Clears DPI statistics based on the parameters passed on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the access point, controller, service platform, or RF Domain.

- `service clear file-sync history {on <DOMAIN-NAME>}`

clear file-sync history	Clears client-bridge certificate synchronization statistics When an AP6522/AP6562 access point is configured as a client bridge, the EAP-TLS X.509 (PKCS#12) certificate is synchronized between the staging-controller and adoptee AP6522/AP6562 client-bridge access points. This command allows you to clear client-bridge certificate synchronization statistics.
on <DOMAIN-NAME>	Optional. Clears file synchronization history on all devices within a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `service clear captive-portal-page-upload history {on <DOMAIN-NAME>}`

clear captive-portal-page-upload history	Clears captive portal page upload history

on <DOMAIN-NAME>	Optional. Clears captive portal page upload history on a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `service clear [command-history|reboot-history|upgrade-history|virtual-machine-history] {on <DEVICE-NAME>}`

clear [command-history|reboot-history|upgrade-history]	Clears command history, reboot history, or device upgrade history
clear virtual-machine-history	Clears virtual-machine history on the logged device or a specified device This command is applicable only on the NX9500 and NX9510 series service platforms.
on <DEVICE-NAME>	Optional. Clears history on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. When executing the clear virtual-machine-history command, provide the name of the service platform running the VMs.

- `service clear noc statistics`

clear noc statistics	Clears *Network Operations Center* (NOC) applicable statistics counters

- `service clear unsanctioned aps {on <DEVICE-OR-DOMAIN-NAME>}`

clear unsanctioned aps	Clears the unsanctioned APs list
on <DEVICE-OR-DOMAIN-NAME>	Optional. Clears the unsanctioned APs list on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service clear wireless [ap|client] {<MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

clear wireless [ap|client] statistics	Clears wireless statistics counters based on the parameters passed • ap statistics – Clears applicable AP statistics counters • client statistics – Clears applicable wireless client statistics counters • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.
<MAC> {on <DEVICE-OR-DOMAIN-NAME>}	The following keywords are common to the 'ap' and 'client' parameters: • <MAC> – Optional. Clears statistics counters for a specified AP or client. Specify the AP/client MAC address. • on <DEVICE-OR-DOMAIN-NAME> – Optional. Clears AP/client statistics counters on a specified device or RF Domain. Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service clear wireless controller-mobility-database`

clear wireless controller-mobility-database	Clears the controller assisted mobility database

- `service clear web-filter cache {on <DEVICE-NAME>}`

clear web-filter cache	Clears the cache used for Web filtering

on <DEVICE-NAME>	Optional. Clears the Web filtering cache on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `service clear wireless radio statistics {<MAC/HOSTNAME>} {<1-3>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

clear wireless radio statistics	Clears applicable wireless radio statistics counters
<MAC/HOSTNAME> <1-3>	Optional. Specify the MAC address or hostname of the radio, or append the interface number to form the radio ID in the AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX format. • <1-3> – Optional. Specify the radio interface index, if not specified as part of the radio ID.
on <DEVICE-OR-DOMAIN-NAME>	Optional. This is a recursive parameter, which clears wireless radio statistics on a specified device or RF Domain. Specify the name of the device. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

• `service clear wireless wlan statistics {<WLAN-NAME>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

clear wireless wlan statistics	Clears WLAN statistics counters
<WLAN-NAME>	Optional. Clears statistics counters on a specified WLAN. Specify the WLAN name.
on <DEVICE-OR-DOMAIN-NAME>	Optional. This is a recursive parameter, which clears WLAN statistics on a specified device or RF Domain. Specify the name of the device. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

• `service clear xpath requests {<1-100000>}`

clear xpath	Clears XPATH related information
requests	Clears pending XPATH get requests
<1-100000>	Optional. Specifies the session number (cookie from show sessions) • <1-100000> – Specify the session number from 1 - 100000. **Note:** Omits clearing the current session's pending XPATH get requests.

• `service cli-tables-skin [ansi|hashes|minimal|none|percent|stars|thick|thin|utf-8] {grid}`

cli-tables-skin [ansi|hashes|minimal| none|percent|stars| thick|thin|uf-8]	Selects a formatting layout or skin for CLI tabular outputs • ansi – Uses ANSI characters for borders • hashes – Uses hashes (#) for borders • minimal – Uses one horizontal line between title and data rows Contd..

	• none – Displays space separated items with no decoration • percent – Uses the percent sign (%) for borders • stars – Uses asterisks (*) for borders • thick – Uses thick lines for borders • thin – Uses thin lines for borders • utf-8 – Uses UTF-8 characters for borders
grid	Optional. Uses a complete grid instead of just title lines

- `service cluster force [active|configured-state|standby]`

cluster	Enables cluster protocol management
force	Forces action commands on a cluster (active, configured-state, and standby)
active	Changes the cluster run status to active
configured-state	Restores a cluster to the configured state
standby	Changes the cluster run status to standby

- `service database authentication create-user username <USER-NAME> password <PASSWORD>`

database	Performs database related actions This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
authentication create-user username <USER-NAME> password <PASSWORD>	Creates users having access rights to the database. Execute this command on the database host. However, before creating users, on the database, generate the database keyfile. For more information on generating the keyfile, see *database*. • username <USER-NAME> – Configures databse username • password <PASSWORD> – Configures a password for the username specified above In the database-policy ensure that authentication is enabled and username and password is configured. The database-client-policy also should have the same username and password configured. For more information on database-policy and database-client-policy, see *database-policy* and *database-client-policy*.

- `database authentication delete-user username <USER-NAME>`

database	Performs database related actions This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
database authentication delete-user username <USER-NAME>	Deletes the username requires to access rights the captive-portal/NSight database • username <USER-NAME> – Deletes the username identified by the <USER-NAME> keyword Once deleted, the database cannot be accessed using the specified combination of username and password.

- `service database start-shell`

database	Performs database related actions This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
start-shell	Starts the MongoDB shell

- `service delete-offline-aps all`

delete-offline-aps all	Deletes all off-line access points

- `service delete-offline-aps offline-for days <0-999> {time <TIME>}`

delete-offline-aps	Deletes off-line access points for a specified interval
day <0-999>	Deletes off-line access points for a specified number of days • <0-999> – Specify the number of off-line days from 0 - 999.
time <TIME>	Optional. Deletes off-line access points for a specified time • <TIME> – Specify the time in HH:MM:SS format.

- `service force-send-config {on <DEVICE-OR-DOMAIN-NAME>}`

force-send-config	Resends configuration to device(s)
on <DEVICE-OR-DOMAIN-NAME>	Optional. Resends configuration to a specified device or all devices in a specified RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service force-update-vm-stats {on <DEVICE-NAME>}`

force-update-vm-stats	Forcefully pushes VM statistics on to the NOC
on <DEVICE-NAME>	Optional. Executes the command on a specified device • <DEVICE-NAME> – Specify the name of the device.

- `service guest-registration backup [delete|restore]`

service guest-registration backup [delete|restore]	Deletes or restores all guest registration backup snapshots based on the parameter passed • delete – Deletes all guest registration backup snapshots • restores – Restores all guest registration backup snapshots **Note:** To view the status of the restore process, use the *service > show > guest-registration > restore-status* command.

- `service guest-registration delete [all|email <EMAIL-ADD>|group <RAD-GROUP-NAME>|mac <MAC>|mobile <MOBILE-NUMBER>|name <CLIENT-FULL-NAME>|non-social|offline-for days <1-999>|wlan <WLAN-NAME>|otp-incomplete-for days <1-999>|social [facebook|google]`

service guest-registration delete	Deletes a specified user or all user records from the guest-registration database To delete a specific user, use one of the following options as an identification parameter: email, group, mac, mobile number, name, offline-for, wlan, otp-incomplete-for, or social.

[all|
email <EMAIL-ADD>|
group <RAD-GROUP-NAME>|
mac <MAC>|
mobile <MOBILE-NUMBER>|
name <CLIENT-FULL-NAME>]|non-social|
offline-for days <1-999>|
wlan <WLAN-NAME>|
otp-incomplete-for days <1-999>|
social [facebook|google]
	Following are the user filtering options: The user identified by one of the following parameters is deleted from the guest-registration database.
	• email <EMAIL-ADD> – Identifies user by the e-mail address
	  • <EMAIL-ADD> – Provide the user's e-mail address.
	• mac <MAC> – Identifies user by the MAC address
	  • <MAC> – Provide the user's MAC address.
	• group <RAD-GROUP-NAME> – Identifies users by their RADIUS group association
	  • <RAD-GROUP-NAME> – Specify the RADIUS group name.
	• mobile <MOBILE-NUMBER> – Identifies user by the registered mobile number
	  • <MOBILE-NUMBER> – Provide the user's mobile number.
	• name <CLIENT-FULL-NAME> – Identifies user by the registered full name
	  • <CLIENT-FULL-NAME> – Provide the user's full name.
	• non-social – Identifies users that have not registered through social authentication
	• offline-for days <1-999> – Filters users who have not accessed the network for a specified number of days
	  • days <1-999> – Specify the number of days from 1 - 999.
	• wlan <WLAN-NAME> – Identifies users accessing a specified WLAN
	  • <WLAN-NAME> – Specify the WLAN name.
	• otp-incomplete-for days <1-999> – Identifies records of users that have not used their *one-time-password* (OTP) to complete registration within a specified number of days
	  • days <1-999> – Specify the number of days from 1 - 999.
	• social [facebook|google] – Identifies users using either Facebook or Google credentials to access the network
	  • facebook – Identifies users using Facebook authentication
	  • google – Identifies users using Google authentication

• `service guest-registration export format [csv|json] <DEST-URL> {(rfdomain <DOMAIN-NAME>|time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all]|wlan <WLAN-NAME>)}`

service guest-registration export	Exports guest registration user data files in the *Comma-Separated Values* (CSV) or *JavaScript Object Notation* (JSON) format Use the 'rfdomain', 'wlan', and 'time' options to filter users for a specified RF Domain, WLAN, and/or time period. These are recursive parameters and you can apply all or any of these three filters.
format [csv|json]	Specifies the file format. The options are: • csv – Exports user data files in the CSV format • json – Exports user data files in the JSON format

<DEST-URL>	Configures the destination URL. The files are exported to the specified location. Both IPv4 and IPv6 address formats are supported. IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file
rfdomain <DOMAIN-NAME>	Optional. Filters user data based on RF Domain name. Only the filtered data are exported. • <DOMAIN-NAME> – Specify the RF Domain name.
wlan <WLAN-NAME>	Optional. Filters user data based on WLAN name. Only the filtered data are exported. • <WLAN-NAME> – Specify the WLAN name.
time [1-Day|1-Month| 1-Week|2-Hours| 30-Mins|5-Hours|all]	Optional. Filters user data for a specified time period. Only the filtered data are exported. • 1-Day – Filters and exports previous day's data • 1-Month – Filters and exports previous month's data • 1-Week – Filters and exports previous week's data • 2-Hours – Filters and exports last 2 hours data • 30-Mins – Filters and exports last 30 minutes data • 5-Hours – Filters and exports last 5 hours data • all – Exports the entire database

- `service guest-registration import format json <SOURCE-URL>`

service guest-registration import	Imports user data from a specified location
format json	Specifies the file format • json – Imports user data files in the JSON format
<SOURCE-URL>	Configures the Source URL. The files are imported from the specified location. Both IPv4 and IPv6 address formats are supported. IPv4 URLs: tftp://<hostname|IP>[:port]/path/file ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file sftp://<user>:<passwd>@<hostname|IP>[:port]>/path/file IPv6 URLs: tftp://<hostname|[IPv6]>[:port]/path/file ftp://<user>:<passwd>@<hostname|[IPv6]>[:port]/path/file sftp://<user>:<passwd>@<hostname|[IPv6]>[:port]>/path/file

- `service load-balancing clear-client-capability [<MAC>|all] {on <DEVICE-NAME>}`

load-balancing	Enables wireless load balancing by clearing client capability records
clear-client-capability [<MAC>|all]	Clears a specified client or all client's capability records • <MAC> – Clears capability records of a specified client. Specify the client's MAC address in the AA-BB-CC-DD-EE-FF format. • all – Clears the capability records of all clients
on <DEVICE-NAME>	Optional. Clears client capability records on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service load-ssh-authorized-keys <PUBLIC-KEY> {on <DEVICE-NAME>}`

load-ssh-authorized-keys	Loads SSH public (client) key on a device
<PUBLIC-KEY>	Enter the public key. The public key should be in the OpenSSH rsa/dsa format.
on <DEVICE-NAME>	Optional. Loads the specified public key on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service locator {<1-60>} {(on <DEVICE-NAME>)}`

locator	Enables LEDs
<1-60>	Sets LED flashing time from 1 - 60 seconds.
on <DEVICE-NAME>	The following keyword is recursive and common to the <1-60> parameter: • on <DEVICE-NAME> – Optional. Enables LEDs on a specified device • <DEVICE-NAME> – Specify name of the AP, wireless controller, or service platform.

- `service nsight clear-offline [all|offline-for days <0-999> {time <TIME>}]`

nsight clear-offline [all|offline-for days <0-999> {time <TIME>}]	Clears NSight data received from offline controllers, based on the parameters passed. Select one of the following options: • all – Clears NSight data received from all offline controllers • offline-for days <0-999> time <TIME> – Clears NSight data received from controllers that have been offline for a specified time period • days <0-999> – Specifies the number of days controllers have been offline • <0-999> – Specify the number of days from 0 - 999 days. Select "0" to identify controllers offline less than 24 hours. • time <TIME> – Optional. Specifies the total time for which controllers have been offline • <TIME> – Specify the time in HH:MM:SS format. **Note:** This command is applicable only to the NX95XX, NX9600, and VX9000 platforms.

- `service radio <1-3> adaptivity`

radio <1-3>	Configures radio's parameters • <1-3> – Specify the radio index from 1 - 3.
adaptivity	Simulates the presence of interference on the current channel

- `service radio <1-3> channel-switch <36-196> [160|20|40|80|80-80]`

radio <1-3>	Configures radio's parameters • <1-3> – Specify the radio index from 1 - 3.
channel-switch <36-196> [160|20|40|80|80-80]	Enables channel switching • <36-196> – Specifies the channel to switch to from 36 - 196. • 160|20|40|80|80-80] – Specifies the bandwidth for the above specified channel. Select the appropriate option.

- `service radio <1-3> dfs simulate-radar [extension|primary]`

radio <1-3>	Configures radio's parameters • <1-3> – Specify the radio index from 1 - 3.
dfs	Enables *Dynamic Frequency Selection* (DFS)
simulate-radar [extension|primary]	Simulates the presence of a radar on a channel. Select the channel type from the following options: • extension – Simulates a radar on the radio's current extension channel • primary – Simulates a radar on the radio's current primary channel

- `service radius test [<IP>|<HOSTNAME>] <WORD> <USERNAME> <PASSWORD> {wlan <WLAN-NAME> ssid <SSID>} {(on <DEVICE-NAME>)}`

radius test	Tests RADIUS server's account. This command sends an access-request packet to the RADIUS server. Use this command to confirm time and data/bandwidth parameters for valid wireless clients. • test – Tests the RADIUS server's account with user provided parameters
[<IP>|<HOSTNAME>]	Sets the RADIUS server's IP address or hostname • <IP> – Specifies the RADIUS server's IP address • <HOSTNAME> – Specifies the RADIUS server's hostname
<WORD>	Specify the RADIUS server's shared secret.
<USERNAME>	Specify username for authentication.
<PASSWORD>	Specify the password.
wlan <WLAN-NAME> ssid <SSID>	Optional. Tests the RADIUS server on the local WLAN. Specify the local WLAN name. • ssid <SSID> – Specify the local RADIUS server's SSID.
on <DEVICE-NAME>	Optional. This is a recursive parameter also applicable to the WLAN parameter. Performs tests on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service radius test [<IP>|<HOSTNAME>] port <1024-65535> <WORD> <USERNAME> <PASSWORD> {wlan <WLAN-NAME> ssid <SSID>} {(on <DEVICE-NAME>)}`

radius test	Tests a RADIUS server's account. This command sends an access-request packet to the RADIUS server. Use this command to confirm time and data/bandwidth parameters for valid wireless clients. • test – Tests the RADIUS server's account with user provided parameters

[<IP>|<HOSTNAME>]	Sets the IP address or hostname of the RADIUS server • <IP> – Specify the RADIUS server's IP address. • <HOSTNAME> – Specify the RADIUS server's hostname.
port <1024-65535>	Specify the RADIUS server port from 1024 - 65535. The default port is 1812.
<WORD>	Specify the RADIUS server's shared secret.
<USERNAME>	Specify username for authentication.
<PASSWORD>	Specify the password.
wlan <WLAN-NAME> ssid <SSID>	Optional. Tests the RADIUS server on the local WLAN. Specify the local WLAN name. • ssid <SSID> – Specify the RADIUS server's SSID.
on <DEVICE-NAME>	Optional. This is a recursive parameter also applicable to the WLAN parameter. Performs tests on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service set validation-mode [full|partial] {on <DEVICE-NAME>}`

set	Sets the validation mode for running configuration validation
validation-mode [full|partial]	Sets the validation mode • full – Performs a full configuration validation • partial – Performs a partial configuration validation
on <DEVICE-NAME>	Optional. Performs full or partial configuration validation on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show block-adopter-config-update`

show	Displays running system statistics based on the parameters passed
block-adopter-config-update	Displays NOC configuration blocking status

- `service show captive-portal log-internal`

show	Displays running system statistics based on the parameters passed
captive-portal	Displays captive portal information
log-internal	Displays recent captive portal debug logs (information and above severity level)

- `service show captive-portal [servers|user-cache] {on <DEVICE-NAME>}`

show	Displays running system statistics based on the parameters passed
captive-portal	Displays captive portal information
servers	Displays server information for active captive portals
user-cache	Displays cached user details for a captive portal
on <DEVICE-NAME>	Optional. Displays server information or cached user details on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show [cli|client-identity-defaults|configuration-revision|mac-user-import-status|mac-vendor <OUI/MAC>|noc diag|snmp session|xpath-history]`

show	Displays running system statistics based on the parameters passed
cli	Displays CLI tree of the current mode
client-identity-defaults	Displays default client-identities and their configuration
configuration-revision	Displays current configuration revision number
mac-user-import-status	Displays status of file import initiated by a MAC-user
mac-vendor <OUI/MAC>	Displays vendor name for a specified MAC address or *Organizationally Unique Identifier* (OUI) part of the MAC address • <OUI/MAC> – Specify the MAC address or its OUI. The first six digits of the MAC address is the OUI. Use the AABBCC or AA-BB-CC format to provide the OUI.
noc diag	Displays NOC diagnostic details
snmp session	Displays SNMP session details
xpath-history	Displays XPath history

- `service show [command-history|crash-info|info|mem|process|reboot-history|startup-log|ssh-authorized-keys|sysinfo|top|upgrade-history|watchdog]` *`{on <DEVICE-NAME>}`*

show	Displays running system statistics based on the parameters passed
command-history	Displays command history (lists all commands executed)
crash-info	Displays information about core, panic, and AP dump files
info	Displays snapshot of available support information
mem	Displays a system's current memory usage (displays the total memory and available memory)
process	Displays active system process information (displays all processes currently running on the system)
reboot-history	Displays the device's reboot history
startup-log	Displays the device's startup log
ssh-authorized-keys	Displays all devices (device hostnames) that have ssh authorized keys loaded
sysinfo	Displays system's memory usage information
top	Displays system resource information
upgrade-history	Displays the device's upgrade history (displays details, such as date, time, and status of the upgrade, old version, new version, etc.)
watchdog	Displays the device's watchdog status
on <DEVICE-NAME>	The following keywords are common to all of the above: • on <DEVICE-NAME> – Optional. Displays information for a specified device. If no device is specified, the system displays information for logged device(s) • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show ip-access-list wlan <WLAN-NAME> status {detail} {on <DEVICE-OR-DOMAIN-NAME>}`

show ip-access-list	Displays status of IP *Access Control List* (ACL) to WLAN mappings on a specified device or all devices within a specified RF Domain. This command also displays if IP ACLs are properly applied in the dataplane.
wlan <WLAN-NAME>	Specifies the WLAN, for which the IP ACL to WLAN mapping status is required • <WLAN-NAME> – Specify the WLAN name.
status detail	Displays only failed IP ACL to WLAN mappings • details – Optional. Displays all (failed as well as successful) IP ACL to WLAN mapping status
on <DEVICE-OR-DOMAIN-NAME>	Optional. Specifies the device name or the RF Domain name. • <DEVICE-OR-DOMAIN-NAME> – Specify the device name or the RF Domain. When specified, the system displays IP ACL to WLAN mapping status on the specified device or all devices within the specified RF Domain.

- `service show dhcp-lease {<INTERFACE-NAME>|on|pppoe1|vlan <1-4094>|wwan1} {(on <DEVICE-NAME>)}`

show	Displays running system statistics based on the parameters passed
dhcp-lease	Displays DHCP lease information received from the server
<INTERFACE-NAME>	Optional. Displays DHCP lease information for a specified router interface • <INTERFACE-NAME> – Specify the router interface name.
on	Optional. Displays DHCP lease information for a specified device
pppoe1	Optional. Displays DHCP lease information for a PPP over Ethernet interface
vlan <1-4094>	Optional. Displays DHCP lease information for a VLAN interface • <1-4094> – Specify a VLAN index from 1 - 4094.
wwan1	Optional. Displays DHCP lease information for a Wireless WAN interface
on <DEVICE-NAME>	The following keywords are common to all of the above: • on <DEVICE-NAME> – Optional. Displays DHCP lease information for a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show diag [fds|pkts]`

show diag	Displays diagnostic statistics, such as LED status, fan speed, sensor temperature, open file descriptors, looped packets etc.
fds	Displays the number of *file descriptors* (fds) opened by key processes, such as the CFGD. When executed, the command displays only the file name and FD.

pkts	Displays details of looped packets captured by the dataplane and pushed to a separate queue. These queued packets are written to a log file (named *loop_pkt_info.log*) available at the /var2/log/ directory. Use the *service > start-shell* command and enter the path 'cat /var2/log/' to view if the *loop_pkt_info.log* file exists. However, looped packet logging has to be enabled in the profile/device context. For more information, see *diag*. The dataplane can log up to 16 looped packets at a time. Once the queue is full, no new loop packet is logged until the existing queue is cleared. To clear the logged looped packet queue execute the *service > clear > diag > pkts* command. Following are the loop codes and the corresponding loop reasons: (5) - "pkt looping in dataplane" (51) - "loop in packet path" (367) - "wispe encapsulation loop" (432) - "mcx loop prevention" (532) - "Port loop detected" (536) - "packet loop detected by wireless bridge" (41) - "IPv4 TTL exceeded" (493) - "IPv6 TTL exceeded" (540) - "mint TTL exceeded"

- `service show diag [led-status|psu|stats] {(on <DEVICE-NAME>)}`

show	Displays running system statistics based on the parameters passed
diag	Displays diagnostic statistics, such as LED status, fan speed, and sensor temperature
led-status	Displays LED state variables and the current state
psu	Displays power supply information
stats	Displays fan speed and sensor temperature statistics
on <DEVICE-NAME>	Optional. Displays diagnostic statistics for a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show guest-registration [export-status|import-status|restore-status]`

show	Displays running system statistics based on the parameters passed
guest-registration	Displays status of the guest-registration database snapshot related processes (export, import, and restore) **Note:** To export, import, or restore a guest-registration database, use the *service > guest-registration > [backup|export|import]* command.]
export-status	Displays the status of the latest export process initiated
import-status	Displays the status of the latest import process initiated
export-status	Displays the status of the latest restore process initiated

- `service show fast-switching {on <DEVICE-NAME>}`

show	Displays running system statistics based on the parameters passed
fast-switching	Displays fast switching state (enabled or disabled)

on <DEVICE-NAME>	Optional. Displays fast switching state for a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show [fib|fib6] {table-id <0-255>}`

show	Displays running system statistics based on the parameters passed
fib	Displays entries in the *Forwarding Information Base* (FIB)
fib6	Displays FIB IPv6 static routing entries The WiNG software allows the IPv6 FIB to maintain only IPv6 static and interface routes. FIB is a collection of routing entries. A route entry consists of IPv6 network (which can also be a host) address, the prefix length for the network (for IPv6 routes this is between 0 - 128), and the next hop's (gateway) IPv6 address. Since a destination can be reached through multiple next hops, you can configure multiple routes to the same destination with multiple next hops.
table-id <0-255>	Optional. Displays FIB information maintained by the system based on the table ID • <0-255> – Specify the table ID from 0 - 255.

- `service show mint [adopted-devices {on <DEVICE-NAME>}|ports]`

show	Displays running system statistics based on the parameters passed
mint	Displays MiNT protocol details
adopted-devices on <DEVICE-NAME>	Displays adopted devices status in dpd2 • on <DEVICE-NAME> – Optional. Displays MiNT protocol details for a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
ports	Displays MiNT ports used by various services and features

- `service show pm {history} {(on <DEVICE-NAME>)}`

show	Displays running system statistics based on the parameters passed
pm	Displays the *Process Monitor* (PM) controlled process details
history	Optional. Displays process change history (the time at which the change was implemented, and the events that triggered the change)
on <DEVICE-NAME>	Optional. Displays process change history for a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show rf-domain-manager [diag|info] {<MAC/HOSTNAME>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

show	Displays running system statistics based on the parameters passed
rf-domain-manager	Displays RF Domain manager information
diag	Displays RF Domain manager related diagnostics statistics

info	The following keyword is common to the 'diag' and 'info' parameters: Displays RF Domain manager related information
<MAC/HOSTNAME>	Optional. Specify the MAC address or hostname of the RF Domain manager.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'diag' and 'info' parameters: Optional. Displays diagnostics statistics on a specified device or domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service show sites`

show	Displays running system statistics based on the parameters passed
sites	Displays NOC sites related information

- `service show virtual-machine-history` *`{on <DEVICE-NAME>}`*

show virtual-machine-history	Displays virtual machine history based on the parameters passed This command is applicable only to the NX9500, and NX9510 series service platforms. It is also available on the Privilege Executable Mode of these devices.
on <DEVICE-NAME>	Optional. Displays virtual machine history on a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the service platform.

- `service show wireless [aaa-stats|adaptivity-status|credential-cache|dns-cache|radar-status|vlan-usage]` *`{on <DEVICE-NAME>}`*

show	Displays running system statistics based on the parameters passed
wireless	Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN assignment, etc.)
aaa-stats	Displays AAA policy statistics
adaptivity-status	Displays the current list of channels (with interference levels exceeding the configured threshold resulting in adaptivity kicking in) and time when adaptivity kicked in on a device
credential-cache	Displays clients cached credentials statistics (VLAN, keys, etc.)
dns-cache	Displays cache of resolved names of servers related to wireless networking
radar-status	Displays radar discovery status. This option displays following information: • If a radar has been discovered by the AP • The time of discovery
vlan-usage	Displays VLAN statistics across WLANs
on <DEVICE-NAME>	The following keywords are common to all of the above: • on <DEVICE-NAME> – Optional. Displays running system statistics on a specified device. If no device is specified, the system displays information for the logged device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service show wireless [config-internal|log-internal|neighbors]`

show	Displays running system statistics based on the parameters passed

wireless	Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.)
config-internal	Displays internal configuration parameters
log-internal	Displays recent internal wireless debug logs (info and above severity)
neighbors	Displays neighboring device statistics for roaming and flow migration

- `service show wireless [client|meshpoint neighbor] proc [info|stats] {<MAC>} {(on <DEVICE-OR-DOMAIN-NAME)}`

show	Displays running system statistics based on the parameters passed
wireless	Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.)
client	Displays WLAN client statistics
meshpoint neighbor	Displays meshpoint related proc entries
proc	The following keyword is common to client and meshpoint neighbor parameters: • proc – Displays dataplane proc entries based on the parameter selected **Note:** These proc entries provide statistics on each wireless client on the WLAN. **Note:** For the meshpoint parameter, it displays proc entries about neighbors.
info	This parameter is common to client and meshpoint neighbor parameters. Displays information for a specified device (wireless client or neighbor) or RF Domain
stats	This parameter is common to client and meshpoint neighbor parameters. Displays information for a specified device (wireless client or neighbor) or RF Domain
<MAC>	Displays information for a specified device (wireless client or neighbor) or RF Domain
on <DEVICE-OR-DOMAIN-NAME>	This parameter is common to client and meshpoint neighbor parameters. Displays information for a specified device (wireless client or neighbor) or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service show wireless radio-internal [radio1|radio2] <LINE>`

show	Displays running system statistics based on the parameters passed
wireless	Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.)
radio-internal [radio1|radio2]	Displays radio internal debug logs. Select the radio from the following options: • radio1 – Selects radio 1 • radio2 – Selects radio 2.
<LINE>	Specify the radio internal debug command to enable.

- `service show wireless reference [channels|frame|handshake|mcs-rates|reason-codes|status-codes]`

show	Displays running system statistics based on the parameters passed
wireless	Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.)
reference	Displays look up reference information related to standards, protocols, etc.
channels	Displays 802.11 channels information

frame	Displays 802.11 frame structure
handshake	Displays a flow diagram of 802.11 handshakes
mcs-rates	Displays MCS rate information
reason-codes	Displays 802.11 reason codes (for deauthentication, disassociation, etc.)
status-codes	Displays 802.11 status codes (for association response)

- `service show wireless stats-client diag {<MAC/HOSTNAME>} {(on <DEVICE-OR-DOMAIN-NAME)}`

show	Displays running system statistics based on the parameters passed
wireless	Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.)
stats-client	Displays managed AP statistics
<MAC/HOSTNAME>	Optional. Specify the MAC address or hostname of the AP.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays statistics on a specified AP, or all APs on a specified domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service smart-rf clear-config {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>}`

smart-rf	Enables Smart RF management
clear-config	Clears WLAN Smart RF configuration on a specified device or on all devices
<MAC>	Optional. Clears WLAN Smart RF configuration on a device identified by its MAC address. Specify the device's MAC address in the AA-BB-CC-DD-EE-FF format.
<DEVICE-NAME>	Optional. Clears WLAN Smart RF configuration on a device identified by its hostname. Specify the device's hostname.
on <DOMAIN-NAME>	Optional. Clears WLAN Smart RF configuration on all devices in a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `service smart-rf [clear-history|clear-interfering-aps|save-config] {on <DOMAIN-NAME>}`

smart-rf	Enables Smart RF management
clear-history	Clears WLAN Smart RF history on all devices
clear-interfering-aps	Clears Smart-RF interfering APs
save-config	Saves the Smart RF configuration on all devices, and also saves the history on the RF Domain Manager
on <DOMAIN-NAME>	Optional. Clears WLAN Smart RF configuration on all devices in a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `service snmp sysoid wing5`

snmp sysoid wing5	Configures a new *sysObjectID* (sysoid), in the MIB, for devices running WiNG 5.X devices When configured, the SNMP manager returns sysoid for WiNG 5.X OS. Hardwares running the WiNG 4.X and WiNG 5.X images have different sysoids. For example, the sysoid for a RFS4000 using the WiNG 4.X image differs from another RFS4000 running the WiNG 5.X image. This command is applicable only to RFS4000 and RFS6000 platforms, since they have the same sysoid supported in WiNG 4.X and WiNG 5.X. The WiNG 4.X sysoids are: • RFS4000 – 1.3.6.1.4.1.388.18 • RFS6000 – 1.3.6.1.4.1.388.16 The WiNG 5.X sysoids are: • RFS4000 – 1.3.6.1.4.1.388.50.1.1.35 • RFS6000 – 1.3.6.1.4.1.388.50.1.1.36

- `service ssm dump-core-snapshot`

ssm dump-core-snapshot	Triggers a debug core dump of the SSM module

- `service syslog test {level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|notifications|warnings]} {(on <DEVICE-NAME>)}`

syslog test	Sends a test message to the syslog server to confirm server availability

level	Optional. Sets the logging level. In case syslog server is unreachable, an event is logged based on the logging level defined. This is an optional parameter, and the system configures default settings, if no logging severity level is specified.
	• <0-7> – Optional. Specify the logging severity level from 0-7. The various levels and their implications are as follows:
	  • alerts – Optional. Immediate action needed (severity=1)
	  • critical – Optional. Critical conditions (severity=2)
	  • debugging – Optional. Debugging messages (severity=7)
	  • emergencies – Optional. System is unusable (severity=0)
	  • errors – Optional. Error conditions (severity=3)
	  • informational – Optional. Informational messages (severity=6)
	  • notifications – Optional. Normal but significant conditions (severity=5)
	  • warnings – Optional. Warning conditions (severity=4). This is the default setting.

on <DEVICE-NAME>	Optional. Executes the command on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service ssm trace pattern <WORD> {on <DEVICE-NAME>}`

ssm trace	Displays the SSM module trace based on parameters passed
pattern <WORD>	Configures the pattern to match • <WORD> – Specify the pattern to match.

on <DEVICE-NAME>	Optional. Displays the SSM module trace on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service wireless client beacon-request <MAC> mode [active|passive|table] ssid [<SSID>|any] channel-report [<CHANNEL-LIST>|none] {on <DEVICE-NAME>}`

wireless client beacon-requests	Sends beacon measurement requests to a wireless client
<MAC>	Specify the wireless client's MAC address.
mode [active|passive|table]	Specifies the beacon measurement mode. The following modes are available: • Active – Requests beacon measurements in the active mode • Passive – Requests beacon measurements in the passive mode • Table – Requests beacon measurements in the table mode
ssid [<SSID>|any]	Specifies if the measurements have to be made for a specified SSID or for any SSID • <SSID> – Requests beacon measurement for a specified SSID • any – Requests beacon measurement for any SSID
channel-report [<CHANNEL-LIST>| none]	Configures channel report in the request. The request can include a list of channels or can apply to all channels. • <CHANNEL-LIST> – Request includes a list of channels. The client has to send beacon measurements only for those channels included in the request • none – Request applies to all channels
on <DEVICE-NAME>	Optional. Sends requests on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service wireless client quiet-element [start|stop]`

wireless client quiet-element	Enables the quite-element information in beacons sent to wireless clients
start	Enables the quite-element information in beacons sent to wireless clients. This is the interval for which all wireless clients are to remain quiet.
stop	Disables the quite-element information in beacons sent to wireless clients. Once disabled, this information is no longer included in beacons.

- `service wireless client trigger-bss-transition mac <MAC> {timeout <0-65535} {url <URL>} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless client trigger-bss-transition	Sends a 80211v-Wireless Network Management BSS transition request to a client
mac <MAC>	Specifies the wireless client's MAC address
timeout <0-65535>	Specifies the time remaining, for this client. before BSS transition is initiated. In other words on completion of the specified time period, BSS transition is triggered. • <0-65535> – Specify a time from 0 -65535 seconds.
url <URL>	Optional. Specifies session termination URL
on <DEVICE-OR-DOMAIN-NAME>	Optional. Sends request on a specified device • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `service wireless client trigger-wnm mac <MAC> type [deauth-imminent| subscription-remediation] {uri <WORD>}`

wireless client trigger-wnm	Sends a WNM notification (action frame) to a wireless client
mac <MAC>	Specifies the wireless client's MAC address
type [deauth-imminent| subscription-remediation]	Configures the WNM notification type • deauth-imminent – Sends a de-authentication imminent frame • subscription-remediation – Sends a subscription remediation needed frame
uri <WORD>	Optional. Specifies the *unique resource identifier* (URI)

- `service wireless dump-core-snapshot`

wireless client dump-core-snapshot	Triggers a debug core dump of the wireless module

- `service wireless meshpoint zl <MESHPOINT-NAME> [on <DEVICE-NAME>] {<ARGS>| timeout <1-65535>}`

service wireless meshpoint zl	Triggers a zonal level debug of a specified meshpoint's modules
<MESHPOINT-NAME>	Specify the meshpoint name
on <DEVICE-NAME>	Triggers zonal level debug of a specified meshpoint's modules on a specified device • <DEVICE-NAME> – Specify the name of the device (AP, wireless controller, or service platform)
<ARGS>	Optional. Specifies the zonal arguments. These zonal arguments represent the meshpoint modules identified by the zonal and subzonal arguments passed here. Also specify the debug level from 0 -7. Please see the *Examples* section, at the end of this topic, for more information.
timeout <1-65535>	Optional. Specifies a timeout value from 1 - 65535 seconds. When specified, meshpoint logs are debugged for the time specified here.

- `service wireless qos delete-tspec <MAC> tid <0-7>`

wireless qos delete-tspec	Sends a delete TSPEC request to a wireless client
<MAC>	Specify the MAC address of the wireless client.
tid <0-7>	Deletes the *Traffic Identifier* (TID) • <0-7> – Select the TID from 0 - 7.

- `service wireless trace pattern <WORD> {on <DEVICE-NAME>}`

wireless trace	Displays the wireless module trace based on parameters passed
pattern <WORD>	Configures the pattern to match • <WORD> – Specify the pattern to match.
on <DEVICE-NAME>	Optional. Displays the wireless module trace on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service wireless unsanctioned ap air-terminate <MAC> {on <DOMAIN-NAME>}`

wireless unsanctioned ap air-terminate	Enables unsanctioned access points termination
<MAC>	Configures the unsanctioned access points' BSSID (MAC address)
on <DOMAIN-NAME>	Optional. Specifies the RD Domain of the access point • <DOMAIN-NAME> – Specify the name of the RF Domain.

- `service wireless wips clear-client-blacklist [all|mac <MAC>]`

wireless wips	Enables management of WIPS parameters
clear-client-blacklist [all|mac <MAC>]	Removes a specified client or all clients from the blacklist • all – Removes all clients from the blacklist • mac <MAC> – Removes a specified client form the blacklist • <MAC> – Specify the wireless client's MAC address.

- `service wireless wips clear-event-history {on <DEVICE-OR-DOMAIN-NAME}`

wireless wips	Enables WIPS management
clear-event-history	Clears event history
on <DEVICE-OR-DOMAIN-NAME>	Optional. Clears event history on a device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Syntax (Privilege Exec Mode)

NOTE: The "service" command of the Priv Exec Mode is the same as the service command in the User Exec Mode. There a few modifications that have been documented in this section. For the syntax and parameters of the other commands refer to the *(User Exec Mode)* syntax and *(User Exec Mode)* parameters sections of this chapter.

service

```
service [block-adopter-config-updates|clear|cli-tables-skin|cluster|copy|
database|delete|delete-offline-aps|force-send-config|force-update-vm-stats|

```

Parameters (Privilege Exec Mode)

service

- `service copy tech-support [<FILE>|<URL>]`

copy tech-support	Copies extensive system information used for troubleshooting
<FILE>	Specify the location to copy file using the following format: • usbX:/path/file
<URL>	Specify the location URL to copy file. Both IPv4 andIPv6 address formats are supported. tftp://<hostname|IPv4/IPv6>[:port]/path/file ftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]/path/file sftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]>/path/file

- `service copy stats-report [global|rf-domain <DOMAIN-NAME>] (<FILE>|<URL>)`

copy stats-report	Copies extensive statistical data useful for troubleshooting
[global|rf-domain <DOMAIN-NAME>]	Identifies the RF Domain to copy statistical data • global – Copies extensive statistical data of all configured RF Domains • rf-domain <DOMAIN-NAME> – Copies extensive statistical data of a specified RF Domain. Specify the domain name.
<FILE>	Specify the location to copy file using the following format: • usbX:/path/file
<URL>	Specify the location URL to copy file. Both IPv4 andIPv6 address formats are supported. tftp://<hostname|IPv4/IPv6>[:port]/path/file ftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]/path/file sftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]>/path/file

- `service clear crash-info {on <DEVICE-NAME>}`

clear crash-info	Clears all crash files
on <DEVICE-NAME>	Optional. Clears crash files on a specified device. These crash files are core, panic, and AP dump. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service database authentication create-user username <USER-NAME> password <PASSWORD>`

database	Performs captive-portal/NSight database related actions This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
database authentication create-user username <USER-NAME> password <PASSWORD>	Creates the username and password required to access the database. Execute this command on the database host. However, before creating users, on the database, generate the database keyfile. For more information on generating the keyfile, see *database*. • username <USER-NAME> – Configures a database username • password <PASSWORD> – Configures a password for the username created above In the database-policy enable authentication and configure this username and password. The database-client-policy also should have the same user credentials configured. For more information on database-policy and database-client-policy, see *database-policy* and *database-client-policy*.

- `database authentication delete-user username <USER-NAME>`

database	Performs database (MongoDB) related actions This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
database authentication delete-user username <USER-NAME>	Deletes existing users having access rights to the MongoDB • username <USER-NAME> – Identifies the user to delete by the username • <USER-NAME> – Specify the user name. Once deleted, the MongoDB cannot be accessed using the specified combination of username and password.

- `service database compact [all|captive-portal|nsight]`

database	Performs database (MongoDB) related actions **Note:** This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
compact [all| captive-portal|nsight]	Compacts collections within the MongoDB database. Each database (captive-portal and NSight) contains one or more collection, where each collection is a set of records. Use this command to make a single compact set of all collections within a database. • all – Compacts collections within all MongoDB databases (captive-portal and NSight) being maintained • captive-portal – Compacts all collections within the captive portal database only • nsight – Compacts all collections within the NSight database only

- `service database drop [captive-portal|nsight] collection <COLLECTION-NAME>`

database	Performs database (MongoDB) related actions **Note:** This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
drop [captive-portal|nsight] collection <COLLECTION-NAME>	Drops the specified collection from the selected database. Select the database type and specify the collection. • captive-portal – Drops a captive portal database collection • nsight – Drops an NSight database collection The following keyword is common to both the 'captive-portal' and 'NSight' databases: • collection <COLLECTION-NAME> – Drops the collection identified by the <COLLECTION-NAME> parameter. • <COLLECTION-NAME> – Specify the collection name.

- `service database [maintenance-mode|primary-stepdown|remove-all-files|start-shell]`

database	Performs database (MongoDB) related actions **Note:** This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
maintenance-mode	Places the database server in the maintenance mode
primary-stepdown	Requests the primary replica-set to step down. For more information on replica-sets and its creation, *database-policy*.
remove-all-files	Removes all database-server related files (captive-portal and MongoDB). Use in a scenario where complete removal of all database related files is necessary, such as when downgrading to 5.8.1 or 5.8.0 version. Extreme caution is recommended when using this command.
start-shell	Starts the MongoDB shell

- `service database replica-set add member [<IP>|<FQDN>] [arbiter|priority <0-255>]`

database	Performs database (MongoDB) related actions **Note:** This command is supported only on the NX95XX, NX9600, and VX9000 platforms.

replica-set	Adds members in the MongoDB replica set. A replica set in MongoDB is a group of devices running the mongod instances that maintain the same data set. Replica sets provide redundancy and high availability, and are the basis for all production deployments. The replica set can contain a maximum of fifty (50) members, with each member (with the exception of the arbiter) hosts an instance of the MongoDB database. For more information on creating replica sets, see *database-policy*.
add member [<IP>|<FQDN>]	Adds members to the MongoDB replica set • <IP> – Identifies the member by its IP address. Specify the member's IP address. • <FQDN> – Identifies the member by its *Fully Qualified Domain Name* (FQDN). Specify the member's FQDN address. **Note:** Ensure that the identified members have the mongod instance running prior to being added to the replica set.
[arbiter| priority <0-255>]	After identifying the new member, optionally specify if the member is the arbiter or not. If not the arbiter, specify the member's priority value. • arbiter – Identifies the new member as the arbiter. The arbiter does not maintain a data set and is added to the replica set to facilitate the election of the fall-back primary member. It provides that one extra vote required in the election of the primary member. • priority <0-255> – Identifies the new member as not being the arbiter and configures its priority value. • <0-255> – Specify the priority value from 0 - 255. Not applicable for the arbiter. The priority value determines the member's position within the replica set as primary or secondary. It also helps in electing the fall-back primary member in the eventuality of the current primary member being unreachable. All identified members should have the mongod instances running prior to being added to the replica set.

- `service database replica-set delete member [<IP>|<FQDN>]`

database	Performs database related actions **Note:** This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
replica-set	Allows deletion of members in a MongoDB replica set. For each database a single three-member replica-set can be created and maintained. For more information on creating replica sets, see *database-policy*.
delete member [<IP>|<FQDN>]	Deletes members from an existing MongoDB replica set • <IP> – Identifies the member by its IP address. Specify the member's IP address. • <FQDN> – Identifies the member by its FQDN. Specify the member's FQDN address.

- `service database server [restart|start|stop]`

database	Performs database (MongoDB) related actions **Note:** This command is supported only on the NX95XX, NX9600, and VX9000 platforms.
server [restart|start|stop]	Performs the following actions on the database server: • restart – Restarts the server • start – Starts the server • stop – Stops the server

- `service delete sessions <SESSION-COOKIES>`

delete sessions <SESSION-COOKIES>	Deletes session cookies • <SESSION-COOKIES> – Provide a list of cookies to delete.

- `service mint [clear [lsp-dp|mlcp]|debug-log [flash-and-syslog|flash-only]| expire [lsp|spf]|flood [csnp|lsp]]`

mint	Enables MiNT protocol management (clears LSP database, enables debug logging, enables running silence, etc.)
clear [lsp-dp|mlcp]	Clears LSP database and *MiNT Link Control Protocol* (MLCP) links • lsp-dp – Clears MiNT *Label Switched Path* (LSP) database • mlcp – Clears MLCP links
debug-log [flash-and-syslog| flash-only]	Enables debug message logging • flash-and-syslog – Logs debug messages to the flash and syslog files • flash-only – Logs debug messages to the flash file only
expire [lsp|spf]	Forces expiration of LSP and recalculation of *Shortest Path First* (SPF) • lsp – Forces expiration of LSP • spf – Forces recalculation of SPF
flood [csnp|lsp]	Floods control packets • csnp – Floods our *Complete Sequence Number Packets* (CSNP) • lsp – Floods our LSP

- `service pm stop {on <DEVICE-NAME>}`

pm	Stops the *Process Monitor* (PM)
stop	Stop the PM from monitoring all daemons
on <DEVICE-NAME>	Optional. Stops the PM on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `service pktcap on [bridge|deny|drop|ext-vlan|rim|router|vpn|wireless] {(acl-name <ACL>,count <1-1000000>,direction [any|inbound|outbound],filter,hex, rate <1-100>,snap <1-2048>,tcpdump,verbose,write [file|url|tzsp <IP/TZSP-HOSTNAME>])}`

pktcap on	Captures data packets crossing at a specified location • on – Defines the packet capture location
bridge	Captures packets transiting through the Ethernet bridge
deny	Captures packets denied by an *Access Control List* (ACL)
drop	Captures packets at the drop locations
ext-vlan	Captures packets forwarded to or from an extended VLAN
rim	Captures packets at the *Radio Interface Module* (RIM)
router	Captures packets transiting through an IP router
vpn	Captures packets forwarded to or from a VPN link
wireless	Captures packets forwarded to or from a wireless device
acl-name <ACL>	Optional. Specify the ACL that matches the acl-name for the 'deny' location

count <1-1000000>	Optional. Limits the captured packet count. Specify a value from 1 -1000000.
direction [any|inbound|outbound]	Optional. Changes the packet direction with respect to a device. The direction can be set as any, inbound, or outbound.
filter [<LINE>|arp|capwap|cdp|dot11|dropreason|dst|ether|failed|host|icmp|icmp6|igmp|ip|ipv6|l2|l3|l4|lldp|mint|net|not|port|priority|radio|rssi|src|stp|tcp|tcp6|udp|udp6|vlan|wlan]	Optional. Filters packets based on the option selected (must be used as a last option) The filter options are: • <LINE> – Defines user defined packet capture filter • arp – Matches ARP packets • capwap – Matches CAPWAP packets • cdp – Matches CDP packets • dot11 – Matches 802.11 packets • dropreason – Matches packet drop reason • dst – Matches IP destination • ether – Matches Ethernet packets • failed – Matches failed 802.11 transmitted frames • host – Matches host destination • icmp – Matches ICMP packets • icmp6 – Matches ICMPv6 frames • ip – Matches IPV4 packets • ipv6 – Matches IPV6 packets • l2 – Matches L2 header • l3 – Matches L3 header • l4 – Matches L4 header • mint – Matches MiNT packets • lldp – Matches LLDP packets • net – Matches IP in subnet • not – Filters out any packet that matches the filter criteria (For example, if not TCP is used, all tcp packets are filtered out) • port – Matches TCP or UDP port • priority – Matches packet priority • radio – Matches radio • rssi – Matches *Received Signal Strength Indication* (RSSI) of received radio signals • src – Matches IP source • stp – Matches STP packets • tcp – Matches TCP packets • tcp6 – Matches TCP over IPv6 packets • udp – Matches UDP packets • udp6 – Matches UDP over IPv6 packets • vlan – Matches VLAN • wlan – Matches WLAN
hex	Optional. Provides binary output of the captured packets
rate <1-100>	Optional. Specifies the packet capture rate • <1-100> – Specify a value from 1 - 100 seconds.

snap <1-2048>	Optional. Captures the data length • <1-2048> – Specify a value from 1 - 2048 characters.
tcpdump	Optional. Decodes tcpdump. The tcpdump analyzes network behavior, performance, and infrastructure. It also analyzes applications that generate or receive traffic.
verbose	Optional. Displays full packet body
write	Captures packets to a specified file. Specify the location to capture file: FILE – flash:/path/file usbX:/path/file vram:startup-config URL – Specify the location URL to capture file. Both IPv4 and IPv6 address formats are supported. tftp://<hostname|IPv4/IPv6>[:port]/path/file ftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]/path/file sftp://<user>@<hostname|IPv4/IPv6>[:port]>/path/file tzsp – *Tazman Sniffer Protocol* (TZSP) host. Specify the TZSP host's IP address or hostname.

• `service pktcap on radio [<1-1024>|all] {(acl-name <ACL>,count <1-1000000>, direction [any|inbound|outbound],filter <LINE>,hex,promiscuous,rate <1-100>,snap <1-2048>,tcpdump,verbose,write [file|url|tzsp <IP/TZSP-HOSTNAME>])}`

pktcap on radio	Captures data packets on a radio (802.11)
<1-1024>	Captures data packets on a specified radio • <1-1024> – specify the radio index from 1 - 1024.
all	Captures data packets on all radios
acl-name <ACL>	Optional. Specify the ACL that matches the ACL name for the 'deny' location
count <1-1000000>	Optional. Sets a specified number of packets to capture • <1-1000000> – Specify a value from 1 - 1000000.
direction [any|inbound| outbound]	Optional. Changes the packet direction with respect to a device. The direction can be set as any, inbound, or outbound.
filter <LINE>	Optional. Filters packets based on the option selected (must be used as a last option) • <LINE> – Define a packet capture filter or select any one of the available options.
hex	Optional. Provides binary output of the captured packets
rate <1-100>	Optional. Specifies the packet capture rate • <1-100> – Specify a value from 1 - 100 seconds.
snap <1-2048>	Optional. Captures the data length • <1-2048> – Specify a value from 1 - 2048 characters.
tcpdump	Optional. Decodes the TCP dump
verbose	Optional. Provides verbose output

write	Captures packets to a specified file. Specify the location to capture file: FILE – flash:/path/file usbX:/path/file nvram:startup-config URL – Specify the location URL to capture file. Both IPv4 and IPv6 address formats are supported. tftp://<hostname|IPv4/IPv6>[:port]/path/file ftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]/path/file sftp://<user>@<hostname|IPv4/IPv6>[:port]>/path/file tzsp – The TZSP host. Specify the TZSP host's IP address or hostname.

- `service pktcap on interface [<INTERFACE>|ge <1-4>|me|port-channel <1-2>|vlan <1-4094>] {(acl-name <ACL>,count <1-1000000>,direction [any|inbound|outbound], filter <LINE>,hex,rate <1-100>,snap <1-2048>,tcpdump,verbose,write [file|url|tzsp <IP/TZSP-HOSTNAME>])}`

pktcap on	Captures data packets at a specified interface • on – Specify the capture location.
interface [<INTERFACE>| ge <1-4>|me1| port-channel <1-2>| vlan <1-4094>]	Captures packets at a specified interface. The options are: • <INTERFACE> – Specify the interface name. • ge <1-4> – Selects a GigabitEthernet interface index from 1 - 4 • me1 – Selects the FastEthernet interface • port-channel <1-2> – Selects a port-channel interface index from 1- 2 • vlan <1-4094> – Selects a VLAN ID from 1 - 4094
acl-name <ACL>	Optional. Specify the ACL that matches the ACL name for the 'deny' location
count <1-1000000>	Optional. Sets a specified number of packets to capture • <1-1000000> – Specify a value from 1 - 1000000.
direction [any|inbound| outbound]	Optional. Changes the packet direction with respect to a device. The direction can be set as any, inbound, or outbound.
filter <LINE>	Optional. Filters packets based on the option selected (must be used as a last option) • <LINE> – Define a packet capture filter or select any one of the available options.
hex	Optional. Provides binary output of the captured packets
rate <1-100>	Optional. Specifies the packet capture rate • <1-100> – Specify a value from 1 - 100 seconds.
snap <1-2048>	Optional. Captures the data length • <1-2048> – Specify a value from 1 - 2048 characters.
tcpdump	Optional. Decodes the TCP dump
verbose	Optional. Provides verbose output

write	Captures packets to a specified file. Specify the location to capture file: FILE – flash:/path/file usbX:/path/file nvram:startup-config URL – Specify the location URL to capture file. Both IPv4 and IPv6 address formats are supported. tftp://<hostname|IPv4/IPv6>[:port]/path/file ftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]/path/file sftp://<user>@<hostname|IPv4/IPv6>[:port]>/path/file tzsp – The TZSP host. Specify the TZSP host's IP address or hostname.

- `service show last-passwd`

show	Displays running system statistics based on the parameters passed
last-passwd	Displays the last password used to enter shell

- `service signal [abort <PROCESS-NAME>|kill <PROCESS-NAME>]`

signal	Sends a signal to a process • tech-support – Copies extensive system information useful for troubleshooting
abort	Sends an abort signal to a process, and forces it to dump to core • <PROCESS-NAME> – Specify the process name.
kill	Sends a kill signal to a process, and forces it to terminate without a core • <PROCESS-NAME> – Specify the process name.

- `service start-shell`

start-shell	Provides shell access

- `service trace <PROCESS-NAME> {summary}`

trace	Traces a process for system calls and signals
<PROCESS-NAME>	Specifies the process name
summary	Optional. Generates summary report of the specified process

Syntax (Privilege Exec Mode: NX9500 and NX9510)

service

The following service commands are specific to the NX9500 and NX9510 series service platforms:

`service copy analytics-support [<FILE>|<URL>]`

Parameters (Privilege Exec Mode: NX9500 and NX9510)

- `service copy analytics-support [<FILE>|<URL>]`

copy analytics-support	Enables copying of analytics information to a specified. Use one of the following options to specify the file: This information is useful to troubleshoot issues by the Technical Support team.
<FILE>	Specify the file name and location using one of the following formats: usb1:/path/file usb2:/path/file

<URL>	Specify the location URL to copy file. Both IPv4 and IPv6 formats are supported. tftp://<hostname|IPv4/IPv6>[:port]/path/file ftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]/path/file sftp://<user>:<passwd>@<hostname|IPv4/IPv6>[:port]>/path/file

Usage Guidelines

The NX9500 and NX9510 model service platforms (NOC) provide granular and robust analytic reporting for a RFS4000 or RFS6000 device managed network. The data analyzed is collected at intervals specified by the administrator.

To enable data analytics, procure and apply a separate hot spare analytics license at the NOC. The license restricts the number of access point streams processed at the NOC or forwarded to partner systems for further processing. The analytics feature can be turned on at select APs by enabling them in configuration. This way the customer can enable analytics on a select set of APs and not the entire system as long as the number of APs on which it is enabled is less than or equal to the total number of AP analytics licenses available at the NOC controller.

In an NOC managed network, the analytics engine parses and processes Smart RF events as they are received. The analytics engine parses the new channel and power information from the Smart RF event, as opposed to retrieving the event from the devices themselves.

Syntax (Global Config Mode)

service

```
service [set|show cli]

service set [command-history <10-300>|upgrade-history <10-100>|reboot-history <10-
100>|virtual-machine-history <10-200>] {on <DEVICE-NAME>}

service show cli
```

Parameters (Global Config Mode)

```
• service set [command-history <10-300>|upgrade-history <10-100>|reboot-history
<10-100>|virtual-machine-history <10-200>] {on <DEVICE-NAME>}
```

set	Sets the size of history files
command-history <10-300>	Sets the size of the command history file • <10-300> – Specify a value from 10 - 300. The default is 200.
upgrade-history <10-100>	Sets the size of the upgrade history file • <10-100> – Specify a value from 10 - 100. The default is 50.
reboot-history <10-100>	Sets the size of the reboot history file • <10-100> – Specify a value from 10 - 100. The default is 50.
virtual-machine-history <10-200>	Sets the size of the virtual-machine history file • <10-200> – Specify a value from 10 - 200. The default is 100. This command is applicable only to the NX9500 and NX9510 series service platforms. Use the *no > service > set > virtual-machine-history > {on <DEVICE-NAME>}* command to revert the history file size to 100.
on <DEVICE-NAME>	Optional. Sets the size of history files on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- service show cli

show cli	Displays running system configuration details • cli – Displays the CLI tree of the current mode

Example

```
rfs6000-81742D>service show cli

Examples for the *service > wireless > meshpoint* command.

The following example displays meshpoint modules:

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
        | SUBZONE
        | 0    1    2    3    4    5    6    7
--------+-----------------------------------------
  ZONE  |
        | GEN  TX   RX   BEA  TXF
 2-LLC  | 0    0    0    0    0
        | GEN  TX   RX   NBR  LQM  LSA
 3-ND   | 0    0    0    0    0    0
        | GEN
 4-ORL  | 0
        | GEN  TX   RX   HEL  PRO
 5-LQ   | 0    0    0    0    0
        | GEN
```

```
 6-PS   | 0
        | GEN   ROOT NBR   REC
 7-RS   | 0     0    0     0
        | GEN
 8-IA   | 0
        | GEN   SET  GET
11-MGT  | 0     0    0
        | GEN   RX   TX    R0    LMST LSUP LKEY KEY
13-LSA  | 0     0    0     0     0    0    0    0
        | GEN   SCAN TRIG
14-ACS  | 0     0    0
        | GEN
15-EAP  | 0
        | GEN
16-L2P  | 0

ROOT1-ap81xx-71174C#
```

In the preceding example,

- The meshpoint name is mesh_root
- The device on which the command is executed is ROOT1-ap81xx-71174C
- The vertical ZONE column represents meshpoint modules. For example, 3-ND presents the Neighbor Discovery module.
- The SUBZONE 0 to 7 represents the available processes for each of the zonal modules.
- Debugging is disabled for all modules for the mesh-root meshpoint. A value of 0 (Zero) represents debugging disabled.

To enable meshpoint module debugging, specify the module number and the process number separated by a period (.). And then specify the debugging level from 0 - 7.

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
3.2 7
```

In the preceding command,

- The meshpoint module number provided is 3 (ND)
- The process number provided is 2 (RX - Received signals from neighbors)
- The debugging level provided is 7 (highest level - warning)

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
        | SUBZONE
        | 0    1    2    3    4    5    6    7
--------+-----------------------------------------
  ZONE  |
        | GEN   TX   RX   BEA  TXF
 2-LLC  | 0     0    0    0    0
        | GEN   TX   RX   NBR  LQM  LSA
 3-ND   | 0     0    7(D) 0    0    0
        | GEN
 4-ORL  | 0
        | GEN   TX   RX   HEL  PRO
 5-LQ   | 0     0    0    0    0
        | GEN
 6-PS   | 0
        | GEN   ROOT NBR  REC
 7-RS   | 0     0    0    0
        | GEN
 8-IA   | 0
        | GEN   SET  GET
11-MGT  | 0     0    0
        | GEN   RX   TX   R0   LMST LSUP LKEY KEY
13-LSA  | 0     0    0    0    0    0    0    0
        | GEN   SCAN TRIG
14-ACS  | 0     0    0
        | GEN
```

```
15-EAP | 0
       | GEN
16-L2P | 0

ROOT1-ap81xx-71174C#
```

In the preceding example, level 7 debugging has been enabled only for the ND module's received signals. Note that debugging for all other modules and processes are still disabled.

To disable debugging for all modules, specify 0 (zero) in the command. For example:

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
0
```

To enable debugging for all modules, specify the debugging level number. For example:

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
5

ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
       | SUBZONE
       | 0    1    2    3    4    5    6    7
-------+---------------------------------------
  ZONE |
       | GEN  TX   RX   BEA  TXF
 2-LLC | 5(N) 5(N) 5(N) 5(N) 5(N)
       | GEN  TX   RX   NBR  LQM  LSA
 3-ND  | 5(N) 5(N) 5(N) 5(N) 5(N) 5(N)
       | GEN
 4-ORL | 5(N)
       | GEN  TX   RX   HEL  PRO

The following example displays IP ACLs to WLAN mapping summary on the 'TechPubs' RF Domain:

```
nx9500-6C8809#service show ip-access-list wlan TechPubs status
Reporting Device: ap7131-99BB7C - success
Reporting Device: ap7532-80C2AC - success
Reporting Device: ap7562-84A224 - success
Reporting Device: nx9500-6C8809 - success
Reporting Device: ap8132-74B45C - success
Total reporting devices: 5
nx9500-6C8809#
```

Consider an RF Domain (name guest-domain) with 3 APs adopted to a controller. The CLI output for the *service > show > ip-access-list* command in this set up varies for different scenarios, as shown in the following examples:

Scenario 1: Executing the command on a device (access point).

```
AP01#service show ip-access-list wlan status
Reporting Device: AP01 - fail
WLAN: XPO-Guest-PSK
  use ip-access-list in guest_access_inbound : fail
Total reporting devices: 1
AP01#
AP01#service show ip-access-list wlan status detail
================================================================================
==
Reporting Device: AP01
--------------------------------------------------------------------------------
--
WLAN: XPO-Guest-PSK
  use ip-access-list in guest_access_inbound : fail
  use ip-access-list out BC-MC-CONTROL : success
--------------------------------------------------------------------------------
--
WLAN: PartnerNet
  use ip-access-list in default : success
  use ip-access-list out default : success
--------------------------------------------------------------------------------
--
Total reporting devices: 1
AP01#
```

Scenario 2: IP ACL to WLAN mapping is successful for all APs in a specified RF Domain.

```
SW01#service show ip-access-list wlan status on guest-domain
Reporting Device: AP01 - success
Reporting Device: AP02 - success
Reporting Device: AP03 - success
Total reporting devices: 3
SW01#
```

Scenario 3: IP ACL has failed in dataplane due to unknown reasons.

```
SW01#service show ip-access-list wlan status on guest-domain
Reporting Device: AP01 - fail
WLAN: XPO-Guest-PSK
  use ip-access-list in guest_access_inbound : fail
Reporting Device: AP02 - success
Reporting Device: AP03 - success
Total reporting devices: 3
```

```
SW01#service show ip-access-list wlan status detail on guest-domain
================================================================================
==
Reporting Device: AP01
--------------------------------------------------------------------------------
--
WLAN: XPO-Guest-PSK
  use ip-access-list in guest_access_inbound : fail
  use ip-access-list out BC-MC-CONTROL : success
--------------------------------------------------------------------------------
--
WLAN: PartnerNet
  use ip-access-list in guest_access_inbound : success
  use ip-access-list out BC-MC-CONTROL : success
--------------------------------------------------------------------------------
--

================================================================================
==
Reporting Device: AP02
--------------------------------------------------------------------------------
--
WLAN: PartnerNet
  use ip-access-list in guest_access_inbound : success
  use ip-access-list out BC-MC-CONTROL : success
--------------------------------------------------------------------------------
--

================================================================================
==
Reporting Device: AP03
--------------------------------------------------------------------------------
--
WLAN: PartnerNet
  use ip-access-list in guest_access_inbound : success
  use ip-access-list out BC-MC-CONTROL : success
--------------------------------------------------------------------------------
--
Total reporting devices: 3
SW01#
```

Scenario 4: AP in RF Domain is unreachable or does not support this functionality.

```
SW01#service show ip-access-list wlan status on guest-domain
Reporting Device: AP01 - unreachable
Reporting Device: AP02 - success
Reporting Device: AP03 - success
Total reporting devices: 3
SW01#

SW01#service show ip-access-list wlan status detail on guest-domain

================================================================================
==
Reporting Device: AP01
Timed out waiting for remote device: xpath=wing-stats/device/00-23-68-0B-86-38/
firewall/ip_acl_intf_status/wlan[mac='*']

================================================================================

--
Total reporting devices: 3
```

5.1.8 show

Common Commands

Displays specified system component settings. There are a number of ways to invoke the show command:

- When invoked without any arguments, it displays information about the current context. If the current context contains instances, the show command (usually) displays a list of these instances.
- When invoked with the display parameter, it displays information about that component.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show <PARAMETERS>
```

Parameters

- `show <PARAMATERS>`

show <PARAMETERS>	The show command displays configuration details based on the configuration mode, in which the command is executed, and the parameters passed. For example, when executed in the AAA policy configuration mode, it displays the logged AAA policy's current settings. The example below shows the configuration details that can be viewed in the Priv Executable mode.

Example

```
nx9500-6C8809#show ?
  adoption                    Adoption related information
  bluetooth                   Bluetooth Configuration/Statistics commands
  bonjour                     Bonjour Gateway related commands
  boot                        Display boot configuration.
  captive-portal              Captive portal commands
  captive-portal-page-upload  Captive portal internal and advanced page upload
  cdp                         Cisco Discovery Protocol
  classify-url                Query the category of an URL
  clock                       Display system clock
  cluster                     Cluster Protocol
  cmp-factory-certs           Display the CMP certificate status
  commands                    Show command lists
  context                     Information about current context
  critical-resources          Critical Resources
  crypto                      Encryption related commands
  database                    Database
  debug                       Debugging functions
  debugging                   Debugging functions
  device-upgrade              Device Upgrade
  dot1x                       802.1X
  dpi                         Deep Packet Inspection
  eguest                      Registration EGuest process
  environmental-sensor        Display Environmental Sensor Module status
  event-history               Display event history
  event-system-policy         Display event system policy
  ex3500                      EX3500 device details
  extdev                      External device (T5, Ex3500..)
  file                        Display filesystem information
  file-sync                   File sync between controller and adoptees
  firewall                    Wireless Firewall
```

```
  global                        Global-level information
  gre                           Show l2gre tunnel info
  guest-notification-config     Show guest-notification information
  guest-registration            Guest registration commands
  interface                     Interface Configuration/Statistics commands
  ip                            Internet Protocol (IP)
  ip-access-list                IP ACL
  ipv6                          Internet Protocol version 6 (IPv6)
  ipv6-access-list              IPV6 ACL
  l2tpv3                        L2TPv3 information
  lacp                          LACP commands
  ldap-agent                    LDAP Agent Configuration
  licenses                      Show installed licenses and usage
  lldp                          Link Layer Discovery Protocol
  logging                       Show logging information
  mac-access-list               MAC ACL
  mac-address-table             Display MAC address table
  mac-auth                      MAC authentication
  mac-auth-clients              MAC authenticated clients
  mint                          MiNT protocol
  mirroring                     Show mirroring sessions
  nsight                        Nsight Server Module
  ntp                           Network time protocol
  password-encryption           Pasword encryption
  pppoe-client                  PPP Over Ethernet client
  privilege                     Show current privilege level
  radius                        RADIUS statistics commands
  raid                          Show RAID status
  reload                        Scheduled reload information
  remote-debug                  Show details of remote debug sessions
  rf-domain-manager             Show RF Domain Manager selection details
  role                          Role based firewall
  route-maps                    Display Route Map Statistics
  rtls                          RTLS Statistics
  running-config                Current operating configuration
  session-changes               Configuration changes made in this session
  session-config                This session configuration
  sessions                      Display sessions
  site-config-diff              Difference between site configuration on the NOC
                                and actual site configuration
  slot                          Expansion slots stats
  smart-rf                      Smart-RF Management Commands
  spanning-tree                 Display spanning tree information
  startup-config                Startup configuration
  t5                            Display T5 inventory information
  terminal                      Display terminal configuration parameters
  timezone                      The timezone
  traffic-shape                 Display traffic shaping
  upgrade-status                Display last image upgrade status
  version                       Display software & hardware version
  virtual-machine               Virtual Machine
  vrrp                          VRRP protocol
  web-filter                    Web filter
  what                          Perform global search
  wireless                      Wireless commands
  wwan                          Display wireless WAN Status

nx9500-6C8809#
```

NOTE: For more information on the show command, see *Chapter 6, SHOW COMMANDS*.

5.1.9 write

Common Commands

Writes the system running configuration to memory or terminal

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
write [memory|terminal]
```

Parameters

- `write [memory|terminal]`

memory	Writes to the *non-volatile* (NV) memory
terminal	Writes to the terminal

Example

```
nx9500-6C8809>write memory
[OK]
nx9500-6C8809>
```

6 SHOW COMMANDS

Show commands display configuration settings or statistical information. Use this command to view the current running configuration as well as the start-up configuration. The show command also displays the current context's configuration.

This chapter describes the 'show' CLI commands used in the USER EXEC, PRIV EXEC, and GLOBAL CONFIG modes. Commands entered in either USER EXEC mode or PRIV EXEC mode are referred to as EXEC mode commands. If a user or privilege is not specified, the referenced command can be entered in either mode.

This chapter also describes the 'show' commands in the 'GLOBAL CONFIG' mode. The commands can be entered in all three modes, except commands like file, IP access list statistics, MAC access list statistics, and upgrade statistics, which cannot be entered in the USER EXEC mode.

NOTE: The input parameter <HOSTNAME>, wherever used in syntaxes across this chapter, cannot include an underscore (_) character. In other words, the name of a device cannot contain an underscore.

6.1 show commands

SHOW COMMANDS

The following table summarizes show commands:

Table 6.1 *Show Commands*

Command	Description	Reference
show	Displays settings for the specified system component	*page 6-5*
adoption	Displays information related to adoption	*page 6-10*
bluetooth	Displays Bluetooth radio statistics for RF Domain member access points	*page 6-15*
boot	Displays a device boot configuration	*page 6-17*
bonjour	Displays the configured Bonjour services available on local and remote sites	*page 6-18*
captive-portal	Displays WLAN hotspot functions	*page 6-19*
captive-portal-page-upload	Displays captive portal page related information	*page 6-21*
cdp	Displays a *Cisco Discovery Protocol* (CDP) neighbor table	*page 6-23*
classify-url	Queries a specified global data center or a pre-configured classification server for the category of a specified URL.	*page 6-25*
clock	Displays the software system clock	*page 6-26*
cluster	Displays cluster commands	*page 6-27*
cmp-factory-certs	Displays factory installed CMP certificates	*page 6-29*
commands	Displays command list	*page 6-30*
context	Displays information about the current context	*page 6-31*
critical-resources	Displays critical resource information	*page 6-32*
crypto	Displays encryption mode information	*page 6-33*
database	Displays database-related statistics and status	*page 6-36*
device-upgrade	Displays device firmware upgradation information for devices adopted by a wireless controller or access point	*page 6-38*
dot1x	Displays dot1x information on interfaces	*page 6-40*
dpi	Displays statistics for all configured and canned applications	*page 6-42*
eguest	Displays EGuest server status and EGuest registration statistics	*page 6-45*
environmental-sensor	Displays environmental sensor's historical data (applicable only to AP8132)	*page 6-46*
event-history	Displays event history	*page 6-49*
event-system-policy	Displays event system policy configuration information	*page 6-50*
ex3500	Displays EX3500-related statistical data	*page 6-51*
extdev	Displays external device (T5 or EX3500) configuration error history	*page 6-54*

Table 6.1 *Show Commands*

Command	Description	Reference
file-sync	Displays file synchronization settings and status on a controller. The *file-sync* command syncs trustpoint/wireless-bridge certificate between the staging-controller and its adopted access points	*page 6-55*
firewall	Displays wireless firewall information	*page 6-57*
global	Displays global information for network devices based on the parameters passed	*page 6-61*
gre	Displays GRE tunnel related information	*page 6-63*
guest-registration	Displays guest registration statistics based on the option and time entered	*page 6-64*
interface	Displays interface status	*page 6-72*
ip	Displays IP related information	*page 6-76*
ip-access-list	Displays IP access list statistics	*page 6-83*
ipv6	Displays IPv6 related information	*page 6-85*
ipv6-access-list	Displays IPv6 access list statistics	*page 6-89*
l2tpv3	Displays *Layer 2 Tunnel Protocol Version 3* (L2TPV3) information	*page 6-90*
lacp	Displays *Link Aggregation Control Protocol* (LACP) related information	*page 6-93*
ldap-agent	Displays an LDAP agent's join status (join status to a LDAP server domain)	*page 6-96*
licenses	Displays installed licenses and usage information	*page 6-97*
lldp	Displays *Link Layer Discovery Protocol* (LLDP) information	*page 6-100*
logging	Displays logging information	*page 6-101*
mac-access-list	Displays MAC access list statistics	*page 6-102*
mac-address-table	Displays MAC address table entries	*page 6-103*
mac-auth	Displays details of wired ports that have MAC address-based authentication enabled	*page 6-104*
mac-auth-clients	Displays MAC-authenticated clients based on the parameters passed	*page 6-106*
mint	Displays MiNT protocol configuration commands	*page 6-108*
nsight	Displays NSight module related statistics and also displays the database server status (reachable or not)	*page 6-112*
ntp	Displays *Network Time Protocol* (NTP) information	*page 6-113*
password-encryption	Displays password encryption status	*page 6-115*
pppoe-client	Displays *Point to Point Protocol over Ethernet* (PPPoE) client information	*page 6-116*
privilege	Displays current privilege level information	*page 6-117*
radius	Displays the amount of access time consumed and the access time remaining for all guest users configured on a RADIUS server	*page 6-118*
reload	Displays scheduled reload information	*page 6-120*
rf-domain-manager	Displays RF Domain manager selection details	*page 6-121*

Table 6.1 *Show Commands*

Command	Description	Reference
role	Displays role-based firewall information	*page 6-122*
route-maps	Display route map statistics	*page 6-123*
rtls	Displays *Real Time Location Service* (RTLS) statistics of access points	*page 6-124*
running-config	Displays configuration file contents	*page 6-126*
session-changes	Displays configuration changes made in this session	*page 6-133*
session-config	Displays a list of currently active open sessions on the device	*page 6-134*
sessions	Displays CLI sessions	*page 6-135*
site-config-diff	Displays the difference between site configuration available on NOC and the actual site configuration	*page 6-136*
smart-rf	Displays Smart RF management commands	*page 6-137*
spanning-tree	Displays spanning tree information	*page 6-141*
startup-config	Displays complete startup configuration script on the console	*page 6-143*
t5	Displays adopted T5 controller details. This command is applicable only on the RFS4000, RFS6000, NX9500, NX9510, and VX9000.	*page 6-144*
terminal	Displays terminal configuration parameters	*page 6-152*
timezone	Displays timezone information for the system and managed devices	*page 6-153*
traffic-shape	Displays traffic-shaping related configuration details and statistics	*page 6-154*
upgrade-status	Displays image upgrade status	*page 6-156*
version	Displays a device's software and hardware version	*page 6-157*
vrrp	Displays *Virtual Router Redundancy Protocol* (VRRP) protocol details	*page 6-158*
web-filter	Displays pre-configured, in-built Web filter options available. These options are: category (URL category), category-types, filter-level, etc. This command also displays Web filter statistics and status.	*page 6-160*
what	Displays details of a specified search phrase	*page 6-162*
wireless	Displays wireless configuration parameters	*page 6-163*
wwan	Displays the wireless WAN status	*page 6-187*
virtual-machine	Displays the *virtual-machine* (VM) configuration, logs, and statistics	*page 6-188*
raid	Displays *Redundant Array of Independent Disks* (RAID) related information, such as array status, consistency check status, and RAID log.	*page 6-191*

6.1.1 show

show commands

The show command displays following information:

- A device's current configuration
- A device's start-up configuration
- A device's current context configuration, such as profiles and policies

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show <PARAMETERS>
```

Parameters

- `show <PARAMATERS>`

show <PARAMETERS>	The show command displays configuration details based on the configuration mode, in which the command is executed, and the parameters passed. For example, when executed in the AAA policy configuration mode, it displays the logged AAA policy's current settings. The examples below show the configuration parameters that can be viewed in the User Executable, Priv Executable, and Global Configurable modes.

Example

The following examples list the *show* commands in the User Exec, Priv Exec, and Global Config modes:

GLOBAL CONFIG Mode

```
<DEVICE>(config)#show ?
  adoption                    Adoption related information
  bluetooth                   Bluetooth Configuration/Statistics commands
  bonjour                     Bonjour Gateway related commands
  boot                        Display boot configuration.
  captive-portal              Captive portal commands
  captive-portal-page-upload  Captive portal internal and advanced page upload
  cdp                         Cisco Discovery Protocol
  classify-url                Query the category of an URL
  clock                       Display system clock
  cluster                     Cluster Protocol
  cmp-factory-certs           Display the CMP certificate status
  commands                    Show command lists
  context                     Information about current context
  critical-resources          Critical Resources
  crypto                      Encryption related commands
  database                    Database
  debug                       Debugging functions
  debugging                   Debugging functions
  device-upgrade              Device Upgrade
  dot1x                       802.1X
  dpi                         Deep Packet Inspection
  eguest                      ExtremeGuest
  environmental-sensor        Display Environmental Sensor Module status
  event-history               Display event history
```

```
  event-system-policy          Display event system policy
  ex3500                       EX3500 device details
  extdev                       External device (T5, Ex3500..)
  file                         Display filesystem information
  file-sync                    File sync between controller and adoptees
  firewall                     Wireless Firewall
  global                       Global-level information
  gre                          Show l2gre tunnel info
  guest-notification-config    Show guest-notification information
  guest-registration           Guest registration commands
  interface                    Interface Configuration/Statistics commands
  ip                           Internet Protocol (IP)
  ip-access-list               IP ACL
  ipv6                         Internet Protocol version 6 (IPv6)
  ipv6-access-list             IPV6 ACL
  l2tpv3                       L2TPv3 information
  lacp                         LACP commands
  ldap-agent                   LDAP Agent Configuration
  licenses                     Show installed licenses and usage
  lldp                         Link Layer Discovery Protocol
  logging                      Show logging information
  mac-access-list              MAC ACL
  mac-address-table            Display MAC address table
  mac-auth                     MAC authentication
  mac-auth-clients             MAC authenticated clients
  mint                         MiNT protocol
  mirroring                    Show mirroring sessions
  nsight                       Nsight Server Module
  ntp                          Network time protocol
  password-encryption          Pasword encryption
  pppoe-client                 PPP Over Ethernet client
  privilege                    Show current privilege level
  radius                       RADIUS statistics commands
  raid                         Show RAID status
  reload                       Scheduled reload information
  remote-debug                 Show details of remote debug sessions
  rf-domain-manager            Show RF Domain Manager selection details
  role                         Role based firewall
  route-maps                   Display Route Map Statistics
  rtls                         RTLS Statistics
  running-config               Current operating configuration
  session-changes              Configuration changes made in this session
  session-config               This session configuration
  sessions                     Display sessions
  site-config-diff             Difference between site configuration on the NOC
                               and actual site configuration
  slot                         Expansion slots stats
  smart-rf                     Smart-RF Management Commands
  spanning-tree                Display spanning tree information
  startup-config               Startup configuration
  t5                           Display T5 inventory information
  terminal                     Display terminal configuration parameters
  timezone                     The timezone
  traffic-shape                Display traffic shaping
  upgrade-status               Display last image upgrade status
  version                      Display software & hardware version
  virtual-machine              Virtual Machine
  vrrp                         VRRP protocol
  web-filter                   Web filter
  what                         Perform global search
  wireless                     Wireless commands
  wwan                         Display wireless WAN Status

6.1.2 adoption

show commands

Displays adoption related information, and is common to the User Exec, Priv Exec, and Global Config modes.

In an *hierarchically managed* (HM) network devices are deployed in two levels. The first level consists of the *Network Operations Center* (NOC) controllers. The second level consists of the site controllers. that can be grouped to form clusters. The NOC controllers adopt and manage the site controllers. Access points within the network are adopted and managed by the site controllers.

Use this command to confirm if a device is an adoptee or an adopter. This command also allows you to determine the devices adopted by an adopter device.

NOTE: A NOC controller's capacity is equal to or higher than a site controller's capacity. The following devices can be deployed at NOC and sites:

- NOC controller – RFS6000, NX65XX, NX9500, NX9510, or NX9600.
- Site controller – RFS6000 or RFS4000.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show adoption [config-errors|controllers|history|info|log|offline|pending|status|
timeline]

show adoption offline

show adoption config-errors <DEVICE-NAME>

show adoption log [adoptee|adopter {<MAC>}] {on <DEVICE-NAME>}

show adoption [controllers {include-ipv6}|history|info|pending|status {summary}|
timeline] {on <DEVICE-NAME>}
```

Parameters

- `show adoption offline`

adoption	Displays adoption related information. It also displays configuration errors.
offline	Displays non-adopted status of the logged device and its adopted access points

- `show adoption config-errors <DEVICE-NAME>`

adoption	Displays adoption related information. It also displays configuration errors.
config-errors <DEVICE-NAME>	Displays configuration errors for a specified adopted device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show adoption log [adoptee|adopter {<MAC>}] {on <DEVICE-NAME>}`

adoption	Displays adoption related information. It also displays configuration errors.

log [adoptee| adopter {MAC}] {on <DEVICE-NAME>}	Displays adoption logs, for the specified device. If no device name is specified, the system displays logs for the logged device. • adoptee – Displays adoption logs for adoptee devices (APs, wireless controllers, and service platforms). To view logs for a specified adoptee, specify the device's name. If no device name is specified, the system displays logs for the logged device. If the logged device is not an adoptee, the system states that the device is a controller. For example, `2013-01-19 22:00:13:MLCP_TAG_CLUSTER_MASTER not present and this device is a controller. Ignoring` • on <DEVICE-NAME> – Optional. Displays adoptee status and details for the device identified by the <DEVICE-NAME> keyword • <DEVICE-NAME> – Specify the device's name. • adopter – Displays adoption logs for adopter devices (APs, wireless controllers, and service platforms). To view logs for a specified adopter, specify the device's name. If no device name is specified, the system displays logs for the logged device. • <MAC> – Optional. Filters adopters by the adoptee device's MAC address. Specify the adoptee device's MAC address. The system displays logs for the device that has adopted the device identified by the <MAC> keyword. • on <DEVICE-NAME> – Optional. Displays adopter status and details for the device identified by the <DEVICE-NAME> keyword. • <DEVICE-NAME> – Specify the adopter device's name. A wireless controller or service platform cannot be configured as an adoptee and an adopter simultaneously. In other words, an adopted wireless controller or service platform cannot be configured to adopt another device and vice versa.

• `show adoption [history|controllers {include-ipv6}|info|pending|status {summary}|timeline] {on <DEVICE-NAME>}`

adoption	Displays adoption related information. It also displays configuration errors.
controllers {include-ipv6}	Displays information about adopted controllers. This is applicable in a Hierarchically managed network, where site controllers are adopted by the NOC controllers. • include-ipv6 – Optional. Displays the controller's IPv6 address, if assigned, in the output
history	Displays adoption history of the logged device and its adopted access points
info	Displays adopted device information
pending	Displays information for devices pending adoption
status {summary}	Displays adoption status for the logged device. When executed without using the 'on <DEVICE-NAME>' parameter, this command displays detailed information of all devices adopted by the device on which the command is executed. • summary – Optional. Displays a summary of all devices adopted by the logged device.
timeline	Displays the logged device's adoption timeline. It also shows the adoption time for logged device's adopted APs. To view the adoption timeline of a specific device, use the *on <device-name>* option to specify the device.
on <DEVICE-NAME>	The following keywords are common to all of the above parameters: • on <DEVICE-NAME> – Optional. Displays a device's adoption information, based on the parameter passed. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Usage Guidelines

In a device's Global Config mode, use the *customize > show-adoption-status* command to customize the *show > adoption > status* command output. The following columns can be added to the output:

```
nx9500-6C8809(config)#customize show-adoption-status ?
  adopted-by     Device name to which the AP is adopted
  ap-name        Host-name of the adopted AP
  cdp-lldp-info  Cdp/lldp info of the Adopted AP
  config-status  Configuration status of the adopted AP
  last-adoption  Last known adoption time
  msgs           Messages status
  uptime         Uptime of the adopted AP
  version        Current version of the adopted AP

nx9500-6C8809(config)#
```

For more information on the customise command, see *customize*.

Example

The following example displays details of the:

- device to which the logged device (`rfs6000-81742D`) is adopted, and
- devices adopted (`ap7532-A2A4B0, ap7532-80C2AC, ap7562-84A224, etc.`) by the logged device.

```
rfs6000-81742D(config)#show adoption status

6.1.3 bluetooth

show commands

Displays Bluetooth radio statistics for RF Domain member access points

AP8432 and AP8533 model access points utilize a built-in Bluetooth chip for specific Bluetooth functional behaviors in a WiNG managed network. AP8432 and AP8533 models support both Bluetooth classic and *Bluetooth low energy* (BLE) technology. These platforms use their Bluetooth classic enabled radio to sense other Bluetooth enabled devices and report device data (MAC address, RSSI and device calls) to an ADSP server for intrusion detection. If the device presence varies in an unexpected manner, ADSP can raise an alarm.

NOTE: AP8132 model access points support an external USB Bluetooth radio providing ADSP Bluetooth classic sensing functionality only, not the BLE beaconing functionality available for AP8432 and AP8533 model access points described in this section.

AP8432 and AP8533 model access points support Bluetooth beaconing to emit either iBeacon or Eddystone-URL beacons. The access point's Bluetooth radio sends non-connectable, undirected *low-energy* (LE) advertisement packets periodically. These advertisement packets are short and sent on Bluetooth advertising channels that conform to already-established iBeacon and Eddystone-URL standards.

Supported in the following platforms:

- Access Points — AP8432, AP8533

Syntax

```
show bluetooth radio {detail|on}

show bluetooth radio {detail {<DEVICE-NAME> <1-1>|filter bluetooth-radio-mac <BT-RADIO-MAC>}} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

Parameters

```
• show bluetooth radio {detail {<DEVICE-NAME> <1-1>|filter bluetooth-radio-mac <BT-RADIO-MAC>}} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

bluetooth radio	Displays Bluetooth radio utilization statistics based on the parameters passed
detail <DEVICE-NAME> <1-1>	Optional. Displays detailed Bluetooth radio utilization statistics. Optionally, to view detailed information for a specific access point's Bluetooth radio, specify the access point's and the radio's MAC addresses. • <DEVICE-NAME> <1-1> – Optional. Specify the access point's hostname or MAC address. • <1-1> – Specify the bluetooth radio interface index number from 1 - 1. As of now only one Bluetooth radio interface is supported. The Interface index number is appended to the AP's hostname or MAC address in the following format: ap8533-06FBE1:B1 OR 74-67-F7-06-FB-E1:B1 The following information is displayed: • access point's hostname as its network identifier • access point's alias. If an alias has been defined for the access point its listed here. The alias value is expressed in the form of <hostname>:B<Bluetooth_radio_number>. If the access point has a administrator assigned hostname, it is used in place of the access point's default hostname. Contd..

contd..	• access point's factory encoded MAC address • access point and bluetooth radio's administrator assigned area of deployment (the AP's geographical location) • bluetooth radio's state (on/off) • bluetooth radio's reason for inactivity (in case the radio is off) • bluetooth radio's factory encoded MAC address serving as this device's hardware identifier on the network • bluetooth radio's functional mode: bt-sensor or le-beacon • bluetooth radio's beacon period • bluetooth radio's beacon type • descriptive text on any error that's preventing the Bluetooth radio from operating
filter bluetooth-radio-mac <BT-RADIO-MAC>	Optional. Specifies additional filters to get table values. Filters data based on the Bluetooth radio's MAC address. • <BT-RADIO-MAC> – Specify the Bluetooth radio's MAC address. The system only displays statistics related to the specified Bluetooth radio.
on <DEVICE-OR-DOMAIN-NAME>	The following keywords are recursive and common to all of the above. • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays Bluetooth radio statistics on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the device or RF Domain. If the device name is explicitly given, the results display data for the specified AP only. If the RF Domain is explicitly given, the results display data for all APs within the specified RF Domain. If no device/RF Domain is specified, the results include data for all Bluetooth radios within the controller's RF Domain. If the controller is in the "on rf-domain all" mode, the results include data for all Bluetooth radios for all APs in each domain known to the controller.

Example

```
nx9500-6C8809(config)#show bluetooth radio on ap8533-06F808
-------------------------------------------------------------------------------
 BLUETOOTH RADIO      RADIO MAC           MODES                      STATE

6.1.4 boot

show commands

Displays a device's boot configuration. Use this command to view the primary and secondary image details, such as Build Date, Install Date, and Version. This command also displays the current boot and next boot information.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show boot {on <DEVICE-NAME>}
```

Parameters

- `show boot {on <DEVICE-NAME>}`

boot	Displays primary and secondary image boot configuration details (build date, install date, version, and the image used to boot the current session)
on <DEVICE-NAME>	Optional. Displays a specified device's boot configuration • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. **Note:** Use the *on <DEVICE-NAME>* option to view a remote device's boot configuration.

Example

```
nx9500-6C8809#show boot
------------------------------------------------------------------------------
     IMAGE            BUILD DATE              INSTALL DATE          VERSION

6.1.5 bonjour

show commands

Displays the configured Bonjour services available on local and remote sites

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show bonjour services {on <DEVICE-NAME>}
```

Parameters

- `show bonjour services {on <DEVICE-NAME>}`

bonjour services	Displays the configured Bonjour services available on local and remote sites
on <DEVICE-NAME>	Optional. Displays Bonjour services available on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D#show bonjour services on ap7131-11E6C4
-------------------------------------------------------------------------------
-------------------------------------------------------------------------------
-----------------------------------------

6.1.6 captive-portal

show commands

Displays WLAN captive portal information. Use this command to view a configured captive portal's client information.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show captive-portal sessions {include-ipv6|on <DEVICE-OR-DOMAIN-NAME>|
statistics} {(filter [captive-portal [<CAPTIVE-PORTAL>|not <CAPTIVE-PORTAL>]|
ip [<IPv4>|not <IPv4>]|ipv6 [<IPv6>|not <IPv6>]|state [pending|success|not
[pending|success]|vlan [<VLAN-ID>|not <VLAN-ID>]|wlan [<WLAN-NAME>|not <WLAN-
NAME>]])}
```

Parameters

```
• show captive-portal sessions {include-ipv6|on <DEVICE-OR-DOMAIN-NAME>|
statistics} {(filter [captive-portal [<CAPTIVE-PORTAL>|not <CAPTIVE-PORTAL>]|ip
[<IPv4>|not <IPv4>]|ipv6 [<IPv6>|not <IPv6>]|state [pending|success|not
[pending|success]|vlan [<VLAN-ID>|not <VLAN-ID>]|wlan [<WLAN-NAME>|not <WLAN-
NAME>]])}
```

captive-portal sessions	Displays active captive portal client session details
include-ipv6	Optional. Includes IPv6 address (if known) of captive portal clients By default the system only displays IPv4 addresses. The include-ipv6 parameter includes IPv6 address (if known) of each client.
statistics	Optional. Displays statistical information regarding client sessions
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays active captive portal session details on a specified device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.
filter	This parameter is recursive and can be used with any of the above parameters to define additional filters. Optional. Defines additional filters. Use one of the following options: captive-portal, ip, ipv6, state, vlan, or wlan.
captive-portal [<CAPTIVE-PORTAL>| not <CAPTIVE-PORTAL>]	Optional. Displays captive portal client and client session information, based on the captive portal name passed • <CAPTIVE-PORTAL> – Specify the captive portal name. Displays client details for the specified captive portal. • not <CAPTIVE-PORTAL> – Inverts the match selection. Displays client details for all captive portals other than the specified captive portal.

ip [<IPv4>|not <IPv4>]	Optional. Displays captive portal client/client sessions information, based on the IPv4 address passed • <IPv4> – Specify the client's IPv4 address. Displays information of the client identified by the <IPv4> parameter • not <IPv4> – Inverts the match selection. Displays client details for all clients other than the one identified by the <IPv4> parameter.
ipv6 [<IPv6>|not <IPv6>]	This filter option is available only for the 'include-ipv6' keyword. Optional. Displays captive portal client/client sessions information, based on the IPv6 address passed • <IPv6> – Specify the client's IPv6 address. Displays information of the client identified by the <IPv6> parameter • not <IPv6> – Inverts the match selection. Displays client details for all clients other than the one identified by the <IPv6> parameter.
state [pending|success| not [pending|success]]	Optional. Filters clients/client sessions based on the client's authentication state • pending – Displays information of clients redirected for authentication • success – Displays information of successfully authenticated clients • not [pending|success] – Inverts match selection • pending – Displays information of successfully authenticated clients (opposite of pending authentication) • success – Displays information of clients redirected for authentication (opposite of successful authentication)
vlan [<VLAN-ID>| not <VLAN-ID>]	Optional. Displays captive portal client/client sessions information based on the VLAN ID passed • <VLAN-ID> – Specify the VLAN ID. Displays client details for the specified VLAN. • not <VLAN-ID> – Inverts match selection. Displays client details for all VLANs other than the one identified by the <VLAN-ID> parameter.
wlan [<WLAN-NAME>| not <WLAN-NAME>]	Optional. Displays captive portal client/client sessions information based on the WLAN name passed • <WLAN-NAME> – Specify the WLAN name. Displays client details for the specified WLAN. • not <WLAN-NAME> – Inverts match selection. Displays client details for all WLANs other than the one identified by the <WLAN-NAME> parameter.

Example

```
rfs4000-229D58#show captive-portal sessions

```

6.1.7 captive-portal-page-upload

show commands

Displays captive portal page information, such as upload history, upload status, and page file download status

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show captive-portal-page-upload [history|list-files|load-image-status|status]

show captive-portal-page-upload load-image-status

show captive-portal-page-upload history {on <RF-DOMAIN-NAME>}

show captive-portal-page-upload status {on [<RF-DOMAIN-NAME>|<RF-DOMAIN-MANAGER>]}

show captive-portal-page-upload list-files <CAPTIVE-PORTAL-NAME>
```

Parameters

- `show captive-portal-page-upload load-image-status`

load-image-status	Displays captive portal advanced page file download status on the logged device

- `show captive-portal-page-upload history {on <RF-DOMAIN-NAME>}`

history {on <RF-DOMAIN-NAME>}	Displays captive portal page upload history • on <RF-DOMAIN-NAME> – Optional. Displays captive portal page upload history within a specified RF Domain. Specify the RF Domain name.

- `show captive-portal-page-upload status {on [<RF-DOMAIN-NAME>|<RF-DOMAIN-MANAGER>]}`

status {on <RF-DOMAIN-NAME>| on <RF-DOMAIN-MANAGER>}	Displays captive portal page upload status • on <RF-DOMAIN-NAME> – Optional. Displays captive portal page upload status within a specified RF Domain. Specify the RF Domain name. • on <RF-DOMAIN-MANAGER> – Optional. Displays captive portal page upload status for a specified RF Domain Manager. Specify the RF Domain Manager name.

- `show captive-portal-page-upload list-files <CAPTIVE-PORTAL-NAME>`

list-files <CAPTIVE-PORTAL-NAME>	Displays a list of all captive portal Web page files, of a specified captive portal, uploaded (internal and advanced page files) • <CAPTIVE-PORTAL-NAME> – Specify the captive portal name.

Example

```
nx7500-7F2C13#captive-portal-page-upload CP-BW all
-------------------------------------------------------------------------------
         CONTROLLER             STATUS                   MESSAGE

-------------------------------------------------------------------------------
nx7500-7F2C13#
```

6.1.8 cdp

show commands

Displays the *Cisco Discovery Protocol* (CDP) neighbor table

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show cdp [neighbors|report] {detail {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

Parameters

- `show cdp [neighbors|report] {detail {on <DEVICE-NAME>}|on <DEVICE-NAME>}`

cdp [neighbors|report]	Displays CDP neighbors table or aggregated CDP neighbors table
detail {on <DEVICE-NAME>}	Optional. Displays detailed CDP neighbors table or aggregated CDP neighbors table • on <DEVICE-NAME> – Optional. Displays table details on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
on <DEVICE-NAME>	Optional. Displays table details on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

The following example shows detailed CDP neighbors table:

```
nx9500-6C8809#show cdp neighbors detail
-------------------------
Device ID: ap8132-74B45C
Entry address(es):
  IP Address: 192.168.13.26

-------------------------------------------------------------------------------
rfs6000-81742D#
```

6.1.9 classify-url

show commands

Displays a specified URL's category. Use this command to query the category of a specific URL. The query is sent to a configured classification server. This option is available only if a valid URL filter license is available.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show classify-url [<URL-TO-QUERY>|datacenter <URL-TO-QUERY>]
```

Parameters

- `show classify-url [<URL-TO-QUERY>|datacenter <URL-TO-QUERY>]`

classify-url	Queries the category of a specified URL
`<URL-TO-QUERY>`	Specify the URL to query. The query is sent to the configured classification server.
datacenter <URL-TO-QUERY>	The query is sent to a global classification datacenter • <URL-TO-QUERY> – Specify the URL to query.

Example

```

6.1.10 clock

show commands

Displays a selected system's clock

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show clock {on <DEVICE-NAME>}
```

Parameters

- `show clock {on <DEVICE-NAME>}`

clock	Displays a system's clock
on <DEVICE-NAME>	Optional. Displays system clock on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
rfs6000-81742D#show clock
2017-04-06 15:50:42 IST
rfs6000-81742D#
```

6.1.11 cluster

show commands

Displays cluster information (cluster configuration parameters, members, status, etc.)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show cluster [configuration|history|members|status]

show cluster [configuration|history {on <DEVICE-NAME>}|members {detail}|status]
```

Parameters

- `show cluster [configuration|members {detail}|status]`

cluster	Displays cluster information
configuration	Displays cluster configuration details
history on <DEVICE-NAME>	Displays cluster history status • <DEVICE-NAME> – Optional. Specify the controller or access point name. If the device name is not specified, the system displays all cluster history.
members {detail}	Displays cluster members configured on the logged device • detail – Optional. Displays detailed information of known cluster members
status	Displays cluster status

Example

```
rfs6000-380649(config)#show cluster configuration
Cluster Configuration Information
 Name                          : SiteConRFS6k
 Configured Mode               : Active
 Master Priority               : 128
 Force configured state        : Disabled
 Force configured state delay : 5 minutes
 Handle STP                    : Disabled
 Radius Counter DB Sync Time   : 5 minutes
rfs6000-380649(config)#

rfs6000-380649(config)#show cluster members detail

 Number of connected member(s): 1
rfs6000-380649(config)#
```

6.1.12 cmp-factory-certs

show commands

Displays factory installed CMP certificates

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show cmp-factory-certs {all}
```

Parameters

- `show cmp-factory-certs {all}`

cmp-factory-certs {all}	Displays factory installed CMP certificates on the logged device. Optionally use the 'all' keyword to view certificate details.

Example

```
nx9500-6C8809>show cmp-factory-certs
No CMP factory certificate exist
nx9500-6C8809>
```

6.1.13 commands

show commands

Displays commands available for the current mode

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show commands
```

Parameters

None

Example

```
rfs4000-880DA7(config)#show commands
  help
  help search WORD (|detailed|only-show|skip-show|skip-no)
  show commands
  show adoption log adoptee(|on DEVICE-NAME)
  show adoption log adopter (|mac AA-BB-CC-DD-EE-FF)(|on DEVICE-NAME)
  show adoption info (|on DEVICE-NAME)
  show adoption status (|on DEVICE-NAME)
  show adoption status summary (|on DEVICE-NAME)
  show adoption config-errors DEVICE-NAME
  show adoption offline
  show adoption pending (|on DEVICE-NAME)
  show adoption history (|on DEVICE-NAME)
  show adoption timeline (|on DEVICE-NAME)
  show adoption controllers (|on DEVICE-NAME)
  show adoption controllers include-ipv6(|on DEVICE-NAME)
  show debugging (|on DEVICE-OR-DOMAIN-NAME)
  show debugging cfgd(|on DEVICE-NAME)
  show debugging fib(|on DEVICE-NAME)
  show debugging adoption (|on DEVICE-OR-DOMAIN-NAME)
  show debugging wireless (|on DEVICE-OR-DOMAIN-NAME)
  show debugging snmp (|on DEVICE-NAME)
  show debugging ssm (|on DEVICE-NAME)
  show debugging voice (|on DEVICE-OR-DOMAIN-NAME)
--More--
rfs4000-880DA7(config)#
```

6.1.14 context

show commands

Displays the current context details

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show context {include-factory|session-config {include-factory}}
```

Parameters

- `show context {include-factory|session-config {include-factory}}`

include-factory	Optional. Includes factory defaults
session-config {include-factory}	Optional. Displays running system information in the current context • include-factory – Optional. Includes factory defaults

Example

```
rfs4000-880DA7(config)#show context
!
! Configuration of RFS4000 version 5.9.0.0-029R
!
!
version 2.5
!
!

!
firewall-policy default
 no ip dos tcp-sequence-past-window
!
!
mint-policy global-default
!
radio-qos-policy default
!
auto-provisioning-policy 4K
!
--More--
rfs4000-880DA7(config)#
```

6.1.15 critical-resources

show commands

Displays critical resource information. Critical resources are resources vital to the network.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show critical-resources {on <DEVICE-NAME>}
```

Parameters

- `show critical-resources {on <DEVICE-NAME>}`

critical-resources	Displays critical resources information
on <DEVICE-NAME>	Optional. Displays critical resource information on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs4000-229D58(config)#show critical-resources
-------------------------------------------------------------------------
CRITICAL RESOURCE IP        VLAN          PING-MODE            STATE
-------------------------------------------------------------------------
172.168.1.103                1             arp-icmp             up
-------------------------------------------------------------------------
rfs4000-229D58(config)#
```

6.1.16 crypto

show commands

Displays encryption mode information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show crypto [cmp|ike|ipsec|key|pki]
show crypto cmp request status
show crypto ike sa {detail|on|peer|version}
show crypto ike sa {detail|peer <IP>} {on <DEVICE-NAME>}
show crypto ike sa {version [1|2]} {peer <IP>} {(on <DEVICE-NAME>)}
show crypto ipsec sa {detail|on|peer}
show crypto ipsec sa {detail} {on <DEVICE-NAME>}
show crypto ipsec sa {peer <IP>} {detail} {(on <DEVICE-NAME>)}
show crypto key rsa {on|public-key-detail}
show crypto key rsa {public-key-detail} {(on <DEVICE-NAME>)}
show crypto pki trustpoints {<TRUSTPOINT-NAME>|all|on}
show crypto pki trustpoints {<TRUSTPOINT-NAME>|all} {(on <DEVICE-NAME>)}
```

Parameters

- `show crypto cmp request status`

crypto cmp request status	Displays current status of in-progress *certificate management protocol* (CMP) requests For more information, see *CRYPTO-CMP-POLICY*.

- `show crypto ike sa {detail|peer <IP>} {on <DEVICE-NAME>}`

crypto ike sa	Displays *Internet Key Exchange* (IKE) *security association* (SA) statistics
detail	Displays detailed IKE SA statistics
peer <IP>	Optional. Displays IKE SA statistics for a specified peer • <IP> – Specify the peer's IP address in the A.B.C.D format
on <DEVICE-NAME>	Optional. Displays IKE SA statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show crypto ike sa {version [1|2]} {peer <IP>} {(on <DEVICE-NAME>)}`

crypto ike sa	Displays IKE SA details
version [1|2]	Optional. Displays IKE SA version statistics • 1 – Displays IKEv1 statistics • 2 – Displays IKEv2 statistics
peer <IP>	Optional. Displays IKE SA version statistics for a specified peer • <IP> – Specify the peer's IP address in the A.B.C.D format
on <DEVICE-NAME>	The following keyword is recursive and common to the 'peer ip' parameter: • on <DEVICE-NAME> – Optional. Displays IKE SA statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show crypto ipsec sa {detail} {on <DEVICE-NAME>}`

crypto ipsec sa	Displays *Internet Protocol Security* (IPSec) SA statistics. The IPSec encryption authenticates and encrypts each IP packet in a communication session
detail	Optional. Displays detailed IPSec SA statistics
on <DEVICE-NAME>	Optional. Displays IPSec SAs on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show crypto sa {peer <IP>} {detail} {(on <DEVICE-NAME>)}`

crypto ipsec sa	Displays IPSec SA statistics. The IPSec encryption authenticates and encrypts each IP packet in a communication session
peer <IP> detail	Optional. Displays IPSec SA statistics for a specified peer • <IP> – Specify the peer's IP address in the A.B.C.D format. • detail – Displays detailed IPSec SA statistics for the specified peer
on <DEVICE-NAME>	The following keyword is recursive: • on <DEVICE-NAME> – Optional. Displays IPSec SAs on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show crypto key rsa {public-key-detail} {(on <DEVICE-NAME>)}`

crypto key rsa	Displays RSA public keys
public-key-detail	Optional. Displays public key in the *Privacy-Enhanced Mail* (PEM) format
on <DEVICE-NAME>	The following keyword is recursive: • on <DEVICE-NAME> – Optional. Displays public key on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show crypto pki trustpoints {<TRUSTPOINT-NAME>|all} {(on <DEVICE-NAME>)}`

crypto pki	Displays PKI related information
trustpoints	Displays WLAN trustpoints This command displays all trustpoints including CMP-generated trustpoints.
<TRUSTPOINT-NAME>	Optional. Displays a specified trustpoint details. Specify the trustpoint name.

all	Optional. Displays details of all trustpoints
on <DEVICE-NAME>	The following keyword is recursive and common to the 'trustpoint-name' and 'all' parameters: • on <DEVICE-NAME> – Optional. Displays trustpoints configured on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809(config)#show crypto key rsa public-key-detail

6.1.17 database

show commands

Displays database-related statistics and status

Supported in the following platforms:

- Service Platforms — NX9500, NX9510

Syntax

```
show database [backup-status|keyfile|restore-status|statistics|status|users] {on <DEVICE-NAME>}
```

Parameters

- `show database [backup-status|keyfile|restore-status|statistics|status|users] {on <DEVICE-NAME>}`

database	Displays all configured database-related statistics and status
backup-status	Displays the last database backup status
keyfile	Displays the keyfiles generated on the database host to enable authenticated database access
back-restore	Displays the last database restore status
statistics	Displays database-related statistics, such as name of the database (NSight or captive portal), data size, storage size, free disk space available, etc.
status	Displays database status, such as online time.
users	Displays MongoDB users created. These are the users that can access the MongoDB.
on <DEVICE-NAME>	Optional. Displays database-related information on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
vx9000-D031F2(config)#show database backup-status detail

6.1.18 device-upgrade

show commands

Displays device firmware upgradation information for devices adopted by a wireless controller or access point

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show device-upgrade [history|load-image-status|status|versions]

show device-upgrade [history {on <DOMAIN-NAME>}|load-image-status|versions {on
<DEVICE-OR-DOMAIN-NAME>}

show device-upgrade status {on [<DOMAIN-NAME>|rf-domain-manager]|summary {on
<DOMAIN-NAME>}}
```

Parameters

• `show device-upgrade [history {on <DOMAIN-NAME>}|load-image-status|versions {on <DEVICE-OR-DOMAIN-NAME>}]`

device-upgrade	Displays device upgrade information based on the parameters passed
history {on <DOMAIN-NAME>}	Displays device upgrade history • on <DOMAIN-NAME> – Optional. Displays upgrade history for all devices within a specified RF Domain. Specify the RF Domain name.

load-image-status	Displays firmware image loading status. The output displays the <DEVICE> image loading status in percentage.
	For example:
	`#show device-upgrade load-image-status`
	`Download of ap81xx firmware file is 47 percent complete`

versions {on <DEVICE-OR-DOMAIN-NAME>}	Displays firmware image versions • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays firmware image versions loaded on specified device or RF Domain. Specify the name of the AP, wireless controller, service platform, or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the AP, wireless controller, service platform, or RF Domain name.

• `show device-upgrade status {on [<DOMAIN-NAME>|rf-domain-manager]|summary {on <DOMAIN-NAME>}}]`

device-upgrade	Displays device upgrade information based on the parameters passed
status	Displays in progress device upgrade status
on [<DOMAIN-NAME>| rf-domain-manager]	Optional. Displays in progress upgrade status of all devices within a specified RF Domain, or all devices upgraded by the RF Domain manager. Use this option to view upgrade status of multiple devices. • <DOMAIN-NAME> – Specify the RF Domain name. • rf-domain-manager – Select to view devices upgraded by the RF Domain manager.

summary {on <DOMAIN-NAME>}	Displays a summary of in-progress upgrade processes • on <DOMAIN-NAME> – Optional. Displays in-progress upgrade processes within a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

Example

```
nx9500-6C8809#device-upgrade load-image rfs6000 ftp://anonymous:anonymous@192.16
8.13.10/LatestBuilds/W59/RFS6000-LEAN.img

6.1.19 dot1x

show commands

Displays dot1x information on interfaces

Dot1x (or 802.1x) is an IEEE standard for network authentication. Devices supporting dot1x allow the automatic provision and connection to the wireless network without launching a Web browser at login. When within range of a dot1x network, a dot1X-enabled device automatically connects and authenticates without needing to manually login.

However, dot1x-enabled devices can be configured either as:

- supplicants only – Devices seeking network access
- authenticators only – Devices authenticating the supplicants, or
- supplicants as well authenticators

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

NOTE: Dot.1x supplicant configuration is supported on the following platforms:

- Access Points – AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers – RFS4000
- Service Platforms – NX5500, NX7500

NOTE: Dot.1x authenticator configuration is supported on the following platforms:

- Access Points – AP622, ES6510, AP6511, AP6521, AP6522, AP6562, AP7161, AP7502, AP81XX
- Wireless Controllers – RFS4000, RFS6000
- Service Platforms – NX5500, NX7500

Syntax

```
show dot1x {all|interface|on}

show dot1x {all {on <DEVICE-NAME>}|on <DEVICE-NAME>}

show dot1x {interface [<INTERFACE-NAME>|ge <1-4>|port-channel <1-2>} {on <DEVICE-NAME>}
```

Parameters

- `show dot1x {all {on <DEVICE-NAME>}|on <DEVICE-NAME>}`

dot1x all {on <DEVICE-NAME>}	Optional. Displays dot1x information for all interfaces • on <DEVICE-NAME> – Optional. Displays dot1x information for all interfaces on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

dot1x {on <DEVICE-NAME>}	Optional. Displays dot1x information for interfaces on a specified device • <DEVICE-NAME> – Specify the name of AP, wireless controller, or service platform.

• `show dot1x {interface [<INTERFACE-NAME>|ge <1-4>|port-channel <1-2>]} {on <DEVICE-NAME>}`

dot1x interface	Optional. Displays dot1x information for a specified interface or interface type
<INTERFACE-NAME>	Displays dot1x information for the layer 2 (Ethernet port) interface specified by the <INTERFACE-NAME> parameter
ge <1-4>	Displays dot1x for a specified GigabitEthernet interface • <1-4> – Select the interface index from 1 - 4.
port-channel <1-2>	Displays dot1x for a specified port channel interface • <1-2> – Select the interface index from 1 - 2.
on <DEVICE-NAME>	The following keywords are common to all of the above parameters: • on <DEVICE-NAME> – Optional. Displays dot1x interface information on a specified device • <DEVICE-NAME> – Specify the name of AP, wireless controller, or service platform.

Example

```
rfs6000-81742D#show dot1x all
802.1X information

rfs6000-81742D#
```

6.1.20 dpi

show commands

Displays *Deep Packet Inspection* (DPI) statistics for all configured and canned applications. DPI is an advanced packet analysis technique, which analyzes packet and packet content headers to determine the nature of network traffic. When DPI is enabled, packets of all flows are subjected to DPI to get accurate results. DPI identifies applications (such as, Netflix, Twitter, Facebook, etc.) and also extracts metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

NOTE: The *show > dpi* command returns results only if executed on a device that supports DPI and has DPI logging enabled. DPI logging can be enabled either on the device or on the profile applied to the device. For more information, see *dpi*.

Supported in the following platforms:

- Access Points — AP7522, AP7532, AP81XX, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show dpi [app|app-category|application|application-policy|per-category]

show dpi app wireless-clients stats <MAC> {on <DEVICE-OR-DOMAIN-NAME>}

show dpi [app|app-category] stats [<APPLICATION/APP-CATEGORY-NAME>|all] {on
<DEVICE-OR-DOMAIN-NAME>}

show dpi application-policy stats <APPLICATION-POLICY-NAME> {on <DEVICE-OR-DOMAIN-
NAME>}

show dpi application brief

show dpi per-category stats <APP-CATEGORIES> [bytes-in|bytes-out|total-bytes] {on
<DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `show dpi app wireless-clients stats <MAC> {<DEVICE-OR-DOMAIN-NAME>}`

dpi app wireless-clients <MAC>	Displays application-related statistics for all or a specified wireless clients • <MAC> – Displays statistics for a specified wireless client. Specify the client's MAC address.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays statistical data on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the access point, wireless controller, service platform, or RF Domain.

- `show dpi [app|app-category] stats [<APPLICATION/APP-CATEGORY-NAME>|all] {on <DEVICE-OR-DOMAIN-NAME>}`

dpi [app| app-category] stats	Displays statistics for a application or application category • app – Displays statistics for a specified application or all applications • app-category – Displays statistics for a specified application category or all categories. **Note:** The applications are the RF Domain member allowed applications whose data (bytes) are passing through the WiNG managed network. And, the application categories are existing WiNG or user defined application groups (video, streaming, mobile, audio, etc.) that assist administrators to permit or deny forwarding of application data.
[<APPLICATION/APP-CATEGORY-NAME>|all]	This parameter is common to the 'app' and 'app-category' keywords. • <APPLICATION/APP-CATEGORY-NAME> – Displays statistics for a specified application or application category, depending on the option selected in the previous step. Specify the application name or application category name. • all – Displays statistics for all applications or application categories, depending on the option selected in the previous step
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays statistical data on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the access point, wireless controller, service platform, or RF Domain.

- `show dpi application-policy stats <APPLICATION-POLICY-NAME> {on <DEVICE-OR-DOMAIN-NAME>}`

dpi application-policy stats	Displays statistics for an existing application policy
<APPLICATION-POLICY-NAME>	Displays statistics for a specified application-policy. Specify the application-policy name.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays application-policy related statistical data on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the access point, wireless controller, service platform, or RF Domain.

- `show dpi application brief`

dpi application brief	Displays a brief summary of applications their status and configuration

- `show dpi per-category stats <APP-CATEGORIES> [bytes-in|bytes-out|total-bytes] {on <DEVICE-OR-DOMAIN-NAME>}`

dpi per-category stats	Displays statistics for the top ten applications based on the application category and the Sort ID specified. The Sort ID options are: bytes-in, bytes-out or total-bytes.
<APP-CATEGORIES>	Specify the application category name. The system displays statistics for the top ten applications in this category.

[bytes-in|bytes-out|total-bytes]	Filters and displays statistical data for the top ten utilized applications in respect to the following: • bytes-in – Displays total data bytes uploaded through the controller managed network. If this application data is not aligned with application utilization expectations, consider allowing or denying additional applications and categories or adjusting their precedence (priority). • bytes-out – Displays total data bytes downloaded through the controller managed network. If this application data is not aligned with application utilization expectations, consider allowing or denying additional applications and categories or adjusting their precedence (priority). • total-bytes – Displays total data bytes (uploaded and downloaded) through the controller managed network. These are only the administrator allowed applications approved for proliferation within the managed network.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays statistical data on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the access point, wireless controller, service platform, or RF Domain.

Example

```
nx9500-6C8809>show dpi application brief
    1-clickshare-com
        This application recognizes DirectDownloadLink 1-clickshare
        traffic
        Application Category   : filetransfer
        Predefined Application : Yes
    1-upload-com
        This application recognizes DirectDownloadLink 1-upload-com
        traffic
        Application Category   : filetransfer
        Predefined Application : Yes
    1-upload-to
        This application recognizes DirectDownloadLink 1-upload-to
        traffic
        Application Category   : filetransfer
        Predefined Application : Yes
    10upload-com
        This application recognizes DirectDownloadLink 10upload-com
        traffic
        Application Category   : filetransfer

6.1.21 eguest

show commands

Displays EGuest server status and EGuest registration statistics

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
eguest [registration statistics|status]
```

Parameters

- `eguest [registration statistics|status]`

registration statistics	Displays the EGuest registration statistics
status	Displays the current status of EGuest servers

Example

```
vx-eguest-primary#show eguest status
-----------------------------------
pid                 process
-----------------------------------
2521                 gmd

vx-eguest-primary#
```

6.1.22 environmental-sensor

show commands

Displays environmental sensor's recorded data. The environmental sensor has to be enabled and configured in order to collect data related to humidity, light, motion, and temperature.

NOTE: The environmental senor is supported only on an AP8132. When executed on any controller (other than an AP8132), the *show > environmental-sensor > <parameters>* command displays environmental-sensor details for adopted AP8132s (if any).

Supported in the following platforms:

- Access Points — AP8132

Syntax

```
show environmental-sensor [history|humidity|light|motion|summary|temperature|
version]

show environmental-sensor history {<1-HOUR>|<20-MINUTE>|<24-HOUR>}

show environmental-sensor [humidity|light|motion|summary|temperature|version]
```

Parameters

- `show environmental-sensor history {<1-HOUR>|<20-MINUTE>|<24-HOUR>}`

environmental-sensor history	Displays environmental sensor history once in every hour, 20 minutes, or 24 hours History includes the humidity, light, motion, and temperature data recorded by the sensor at specified time interval.
1-hour	Optional. Displays environmental sensor history once in every 1 (one) hour
20-minute	Optional. Displays environmental sensor history once in every 20 minutes
24-hour	Optional. Displays environmental sensor history once in every 24 hours

- `show environmental-sensor [humidity|light|motion|summary|temperature|version]`

environmental-sensor	Displays environmental sensor's recorded data, based on the parameters passed. The system displays the specified recorded data. The environmental sensor records data at the following intervals: 20 minutes, 1 hour, and 24 hours.
humidity	Displays the minimum, average, and maximum humidity recorded
light	Displays the minimum, average, and maximum light recorded
motion	Displays the minimum, average, and maximum motion recorded
temperature	Displays the minimum, average, and maximum temperature recorded
version	Displays the hardware and firmware versions
summary	Displays a summary of the data recorded at following intervals:

Example

```
ap8132-711728#show environmental-sensor summary

6.1.23 event-history

show commands

Displays event history report

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show event-history {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `show event-history {on <DEVICE-OR-DOMAIN-NAME>}`

event-history	Displays event history report
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays event history report on a device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
nx9500-6C8809#show event-history

6.1.24 event-system-policy

show commands

Displays detailed event system policy configuration

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show event-system-policy [config|detail] <EVENT-SYSTEM-POLICY-NAME>
```

Parameters

- `show event-system-policy [config|detail] <EVENT-SYSTEM-POLICY-NAME>`

event-system-policy	Displays event system policy configuration
config	Displays configuration for a specified policy
detail	Displays detailed configuration for a specified policy
<EVENT-SYSTEM-POLICY-NAME>	Specify the event system policy name.

Example

```
rfs6000-81742D(config)#show event-system-policy config testpolicy
--------------------------------------------------------------------------------
MODULE          EVENT            SYSLOG    SNMP   FORWARD        EMAIL
--------------------------------------------------------------------------------
aaa       radius-discon-msg      on        on      on         default
--------------------------------------------------------------------------------
rfs6000-81742D(config)#
```

6.1.25 ex3500

show commands

Displays EX3500-related statistical data

Supported in the following platforms:

- Service Platforms — NX7500, NX9500

Syntax

```
show ex3500 [dir|interfaces|system|upgrade|version|whichboot]

show ex3500 dir {boot-rom|config|on|opcode} {<FILE-NAME>} {on <EX3500-DEVICE-NAME>}

show ex3500 interfaces counters [ether-like stats|ethernet <1-1> <1-52>|ext-if-table stats|if-table stats|portUtil stats|rmon stats] {on <EX3500-DEVICE-NAME>}

show ex3500 [system|upgrade|version|whichboot] {on <EX3500-DEVICE-NAME>}
```

Parameters

```
• show ex3500 dir {boot-rom|config|on|opcode} {<FILE-NAME>} {on <EX3500-DEVICE-NAME>}
```

ex3500 dir	Displays EX3500 directory information based on the option selected. The options are: boot-rom, config, opcode **Note:** If none of the specified options is selected, all EX3500 system-related information is displayed.
boot-rom	Optional. Displays only the Boot-ROM information
config	Optional. Displays only the configuration file
opcode	Optional. Displays only the run-time operation code
<FILE-NAME>	Displays the contents of a specified file identified by the <FILE-NAME> keyword. This is the name of configuration file or code image.
on <EX3500-DEVICE-NAME>	Optional. Executes the command on a specified EX3500 device • <DEVICE-NAME> – Specify the device's name.

```
• show ex3500 interfaces counters [ether-like stats|ethernet <1-1> <1-52>|ext-if-table stats|if-table stats|portUtil stats|rmon stats] {on <EX3500-DEVICE-NAME>}
```

ex3500 interfaces counters	Displays EX3500 interface counter information based on the option selected. The options are: ether-like, ethernet, ext-if-table, if-table, portUtil, rmon
ether-like stats	Displays *Managed Information Base* (MIB) object statistics for Ethernet-like interfaces
ethernet <1-1> <1-52>	Displays the Ethernet port statistics based on the unit identifier and port number selected • <1-1> – Specify the EX3500 unit's identifier from 1 - 1. • <1-52> – Specify the port number from 1 - 52. This range varies for the EX3524 (1-28) and EX3548 (1-52) devices. **Note:** This option displays the following for the selected Ethernet interface: extended interface table stats, interface table stats, port utilization information, and remote monitoring stats.
ext-if-table stats	Displays only the extended interface table statistics

if-table stats	Displays only the interface table statistics
portUtil stats	Displays only the port utilization information
rmon stats	Displays only *remote monitoring* (RMon) statistics
on <EX3500-DEVICE-NAME>	Optional. Executes the command on a specified EX3500 device • <DEVICE-NAME> – Specify the device's name.

- `show ex3500 [system|upgrade|version|whichboot] {on <EX3500-DEVICE-NAME>}`

ex3500	Displays the following information for a specified EX3500 device or all EX3500 devices in the managed network
system	Displays EX3500 system information, such as device description, OID string, up time, name, location, contact, MAC address, etc. Some of these information (example, system name) are configurable items, and if not configured are left blank.
upgrade	Displays the opcode upgrade configuration settings
version	Displays hardware and software version information for a EX3500 system
whichboot	Displays boot information
on <EX3500-DEVICE-NAME>	Optional. Executes the command on a specified EX3500 device • <DEVICE-NAME> – Specify the device's name.

Example

```
nx9500-6C8809#show ex3500 interfaces counters ethernet 1 17
Ethernet 1/ 17

6.1.26 extdev

show commands

Displays external device (T5 or EX3500) configuration error history

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX9500, NX9510

Syntax

```
show extdev error history {on <T5/EX3500-DEVICE-NAME>}
```

Parameters

- `show extdev error history {on <T5/EX3500-DEVICE-NAME>}`

extdev error history	Displays external device error history. This command is applicable only to the external devices T5, and EX3500 series switches. Use this command to view configuration error history for all or a specified external device adopted and managed by a WiNG NX9500 series service platform.
on <T5/EX3500-DEVICE-NAME>	Optional. Displays configuration error history on a specified T5 or EX3500 device • <T5/EX3500-DEVICE-NAME> – Specify the name of the device.

Example

```
nx9500-6C8809#show extdev error history on t5-ED5EAC
%% No History for this device
nx9500-6C8809#
```

6.1.27 file-sync

show commands

Displays file synchronization settings and status on a controller

The *file-sync* command syncs *wireless-bridge certificate* and *trustpoint* between the staging-controller and its adopted access points. The *show > file-sync* command displays information related to this process.

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510

Syntax

```
show file-sync [configuration|history|load-file-status|status] {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

```
• show file-sync [configuration|history|load-file-status|status] {on <DEVICE-OR-DOMAIN-NAME>}
```

file-sync	Displays the following file-synchronization (trustpoint and wireless-bridge certificate) related information: configuration, history, load-file-status, and status
configuration	Displays the following file-synchronization configuration details: • automatic file-syncing enabled or disabled. The default setting is disabled. The X.509 certificate needs synchronization only if the access point's radio2 is configured to use EAP-TLS authentication. In which case PKCS#12 certificate needs to be pushed on AP adoption. To enable automatic file syncing, in the controller's device/profile configuration mode, execute the *file-sync > auto* command. For more information, see *file-sync*. • Number of access points to which the certificate can be simultaneously uploaded. The default is 10. To modify the number of simultaneous uploads, in the controller's device/profile configuration mode, execute the *file-sync > count <1-20>* command. For more information, see *file-sync*. • Scheduled certificate upload, if any, details, such time and date of upload. To schedule certificate upload, use the *file-sync > wireless-certificate* command. For more information, see *file-sync*.
history	Displays file synchronization history. Use this option to view statistical data relating to wireless-bridge certificate synchronization between staging controller and its access points. When executed, a list of all certificate transfers made to the APs is displayed, with the latest transfer listed at the top.
load-file-status	Displays the status of the file upload to the controller. Use this command to view the status of a in-progress certificate upload, For more information on initiating a PKCS#12 certificate upload, see *file-sync*.

status	Displays status of the file synchronization between the controller and its adopted access point.
on <DEVICE-OR-DOMAIN- NAME>	Optional. Displays file synchronization settings and status on a specified device or RF Domain • <DEVICE-OR-DOMAIN- NAME> – Specify the name of the controller, service platform, or RF Domain.

Example

```
nx9500-6C8809#show file-sync configuration
File Sync Configuration Information
  Auto                            : Disabled
  Simultaneous Upload Count       : 128

6.1.28 firewall

show commands

Displays wireless firewall information, such as *Dynamic Host Configuration Protocol* (DHCP) snoop table entries, denial of service statistics, active session summaries, etc.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show firewall [dhcp|flows|neighbors]

show firewall dhcp snoop-table {on <DEVICE-NAME>}

show firewall flows {filter|management|on|stats|wireless-client}

show firewall flows {filter} {(dir|dst port <1-65535>|ether|flow-type|icmp|
icmpv6|igmp|ip|ipv6|max-idle|min-bytes|min-idle|min-pkts|not|port|src|tcp|udp)}

show firewall flows {management {on <DEVICE-NAME>}|stats {on <DEVICE-NAME>}|
wireless-client <MAC>|on <DEVICE-NAME>}

show firewall neighbors snoop-table {on <DEVICE-NAME>}
```

Parameters

- `show firewall dhcp snoop-table {on <DEVICE-NAME>}`

firewall dhcp snoop-table	Displays DHCP snoop table entries • snoop-table – Displays DHCP snoop table entries DHCP snooping acts as a firewall between non-trusted hosts and the DHCP server. Snoop table entries contain MAC address, IP address, lease time, binding type, and interface information of non-trusted interfaces.
on <DEVICE-NAME>	The following keyword is common to the 'DHCP snoop table' and 'DoS stats' parameters: • on <DEVICE-NAME> – Optional. Displays snoop table entries, or DoS stats on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show firewall flows {filter} {(dir|dst|ether|flow-type|icmp|icmpv6|igmp|ip|ipv6|max-idle|min-bytes|min-idle|min-pkts|not|port|src|tcp|udp)}`

firewall flows	Notifies a session has been established
filter	Optional. Defines additional firewall flow filter parameters
dir [wired-wired| wired-wireless| wireless-wired| wireless-wireless]	Optional. Matches the packet flow direction • wired-wired – Wired to wired flows • wired-wireless – Wired to wireless flows • wireless-wired – Wireless to wired flows • wireless-wireless – Wireless to wireless flows

dst port <1-65535>	Optional. Matches the destination port with the specified port • port <1-65535> – Specifies the destination port number from 1 - 65535
ether [dst <MAC>| host <MAC>| src <MAC>| vlan <1-4094>]	Optional. Displays Ethernet filter options • dst <MAC> – Matches only the destination MAC address • host <MAC> – Matches flows containing the specified MAC address • src <MAC> – Matches only the source MAC address • vlan <1-4094> – Matches the VLAN number of the traffic with the specified value. Specify a value from 1- 4094.
flow-type [bridged|natted| routed|wired| wireless]	Optional. Matches the traffic flow type • bridged – Bridged flows • natted – Natted flows • routed – Routed flows • wired – Flows belonging to wired hosts • wireless – Flows containing a mobile unit
icmp {code|type}	Optional. Matches flows with the specified *Internet Control Message Protocol* (ICMP) version 4 code and type • code – Optional. Matches flows with the specified ICMPv4 code • type – Optional. Matches flows with the specified ICMPv4 type
icmpv6 {code|type}	Optional. Matches flows with the specified ICMP version 6 code and type • code – Optional. Matches flows with the specified ICMPv6 code • type – Optional. Matches flows with the specified ICMPv6 type
igmp	Optional.Matches *Internet Group Management Protocol* (IGMP) flows
ip [dst <IP>| host <IP>| proto <0-254>| src <IP>]	Optional. Filters firewall flows based on the IPv4 parameters passed • dst <IP> – Matches destination IP address • host <IP> – Matches flows containing IPv4 address • proto <0-254> – Matches the IPv4 protocol number with the specified number • src <IPv4> – Matches source IP address
ipv6 [dst <IPv6>| host <IPv6>| proto <0-254>| src <IPv6>]	Optional. Filters firewall flows based on the IPv6 parameters passed • dst <IPv6> – Matches destination IPv6 address • host <IPv6> – Matches flows containing IPv6 address • proto <0-254> – Matches the IPv6 protocol number with the specified number • src <IPv6> – Matches source IPv6 address
max-idle <1-4294967295>	Optional. Filters firewall flows idle for at least the specified duration. Specify a max-idle value from 1 - 4294967295 bytes.
min-bytes <1-4294967295>	Optional. Filters firewall flows with at least the specified number of bytes. Specify a min-bytes value from 1 - 4294967295 bytes.
min-idle <1-4294967295>	Optional. Filters firewall flows idle for at least the specified duration. Specify a min-idle value from 1 - 4294967295 bytes.
min-pkts <1-4294967295>	Optional. Filters firewall flows with at least the given number of packets. Specify a min-bytes value from 1 - 4294967295 bytes.
not	Optional. Negates the filter expression selected

port <1-65535>	Optional. Matches either the source or destination port. Specify a port from 1 - 65535.
src <1-65535>	Optional. Matches only the source port with the specified port. Specify a port from 1 - 65535.
tcp	Optional. Matches TCP flows
udp	Optional. Matches UDP flows

- `show firewall flows {management {on <DEVICE-NAME>}|stats {on <DEVICE-NAME>}| wireless-client <MAC>|on <DEVICE-NAME>}`

firewall flows	Notifies a session has been established
management {on <DEVICE-NAME>}	Optional. Displays management traffic firewall flows • on <DEVICE-NAME> – Optional. Displays firewall flows on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
stats {on <DEVICE-NAME>}	Optional. Displays active session summary • on <DEVICE-NAME> – Optional. Displays active session summary on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
wireless-client <MAC>	Optional. Displays wireless clients firewall flows • <MAC> – Specify the MAC address of the wireless client.
on <DEVICE-NAME>	Optional. Displays all firewall flows on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show firewall neighbors snoop-table {on <DEVICE-NAME>}`

firewall neighbors snoop-table	Displays IPv6 neighbors snoop table entries
on <DEVICE-NAME>	Optional. Displays IPv6 neighbors snoop table entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D(config)#show fi
file-sync  firewall   file
rfs6000-81742D(config)#show firewall dhcp snoop-table
Snoop Binding <192.168.13.24, 00-15-70-81-74-2D, Vlan 1>

6.1.29 global

show commands

Displays global information for network devices based on the parameters passed

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show global [device-list|domain]

show global device-list {filter {offline|online|rf-domain}}
show global device-list {filter {offline|online}}
show global device-list {filter rf-domain [<DOMAIN-NAME>|not <DOMAIN-NAME>]}

show global domain managers
```

Parameters

- `show global device-list {filter {offline|online}}`

global device-list	Displays global information for all network devices. Use the following keywords to specify additional filters: offline, online, and rf-domain.
filter {offline|online}	Optional. Specifies additional filters • offline – Optional. Displays global information for offline devices only • online – Optional. Displays global information for online devices only

- `show global device-list {filter rf-domain [<DOMAIN-NAME>|not <DOMAIN-NAME>]}`

global device-list	Displays global information for all network devices. Use the following keywords to specify additional filters: offline, online, and rf-domain.
filter rf-domain [<DOMAIN-NAME>| not <DOMAIN-NAME>]	Optional. Specifies additional filters • rf-domain – Optional. Displays global information for all devices in a specified RF Domain • <DOMAIN-NAME> – Optional. Displays information of all devices within the domain identified by the <DOMAIN-NAME> keyword • not <DOMAIN-NAME> – Optional. Displays information of all devices in domains not matching the <DOMAIN-NAME> keyword

- `show global domain managers`

global domain managers	Displays global information for all RF Domains and managers in the network

Example

```
rfs6000-81742D(config)#show global device-list filter rf-domain TechPubs

6.1.30 gre

show commands

Displays layer 2 *Generic Routing Encapsulation* (GRE) tunnel traffic flow information

GRE is one of the available tunneling mechanisms which uses IP as the transport protocol and can be used for carrying many different passenger protocols. The tunnels behave as virtual point-to-point links that have two endpoints identified by the tunnel source and tunnel destination addresses at each endpoint.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show gre info {detail} {(on <DEVICE-NAME>)}
```

Parameters

- `show gre info {detail} {(on <DEVICE-NAME>)}`

gre info	Displays GRE tunnel information
detail	Optional. Displays GRE tunnel information in detail, such as tunnel state, tunnel's remote-end peer device's IP address, session ID of an operational tunnel, total number of packets received and transmitted through the tunnel, and the number of dropped packets during tunneled exchanges between access point and a peer at the remote end of the tunnel.
on <DEVICE-NAME>	Optional. Executes the command on a specified device • <DEVICE-NAME> – Specify the name of the access point, controller, or service platform.

Example

```
rfs6000-81742D#show gre info
Gre Tunnel info:
 Tunnel info not found
rfs6000-81742D#
```

6.1.31 guest-registration

show commands

Displays information on the performance of clients using guest access permissions to obtain network resources within the WiNG network. The reporting timeline can be adjusted as needed, as can the RF Domain(s) and WLAN(s) used to filter and report guest client statistics.

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510

Syntax

```
show guest-registration [age-range|backup-snapshots|browsers|client|devices|
gender|loyalty-app-status|notification-status|os|social|user-trends|visitors]
{on <DEVICE-NAME>}

show guest-registration backup-snapshots

show guest-registration [age-range|browsers|devices|gender|os|user-trends|
visitors] time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all] {(rfdomain
<DOMAIN-NAME>|wlan <WLAN-NAME>)}

show guest-registration client [email|mac|member|mobile|name|time]

show guest-registration client [email <EMAIL-ADDRESS>|mac <MAC>|member <MEMBER-
ID>|mobile <MOBILE-NUMBER>|name <NAME>]

show guest-registration client time [1-Hour|10-Mins|15-Mins|2-Mins|30-Mins|
30-Secs|5-Mins] {(rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>)}

show guest-registration loyalty-app-status time [1-Day|1-Month|1-Week|2-Hours|
30-Mins|5-Hours|all] {rfdomain <RF-DOMAIN-NAME>|wlan <WLAN-NAME>}

show guest-registration notification-status

show guest-registration social time [1-Day|1-Month|1-Week|2-Hours|30-Mins|
5-Hours|all] {(facebook|rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>|google)}
```

Parameters

- `show guest-registration backup-snapshots`

guest-registration	Displays guest registration statistics based on the parameters passed
backup-snapshots	Displays a list of periodically backed up snapshots of the database. By default, the system maintains a snapshot of the database on a daily basis. **Note:** Use the *service > guest-registration > backup [delete|restore]* command to delete these snapshots and to restore deleted snapshots. For more information, see *service*.

- `show guest-registration [age-range|browsers|devices|gender|os|user-trends|visitors] time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all] {(rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>)}`

guest-registration	Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN.
age-range	Displays the age ranges of logged guest users for a selected time period
browsers	Displays the browsers used by guest users logged in within a selected time period
devices	Displays the device types used by guest users logged in within a selected time period

gender	Displays the gender of guest users logged in within a selected time period
os	Displays the *operating system* (OS) of devices logged in within a selected time period
user-trends	Displays guest user login trends for a selected time period. It displays statistical data, such as number of new users, number of return users, and total of number users.
visitors	Displays type of visitors logged in within a selected time period
time [1-Day|1-Month| 1-Week|2-Hours| 30-Mins|5-Hours|all]	Displays guest registration statistics, for a specified time period. The stats displayed depends on the option selected in the previous step. Specify the time period using one of the following options: • 1-Day – Displays previous day's statistics • 1-Month – Displays previous month's statistics • 1-Week – Displays previous week's statistics • 2-Hours – Displays last 2 hours statistics • 30-Mins – Displays last 30 minutes statistics • 5-Hours – Displays last 5 hours statistics • all – Displays statistics from the day the database was created

[rfdomain
<DOMAIN-NAME|
wlan <WLAN-NAME>]
	Use the following options as additional filters:
	• rfdomain <DOMAIN-NAME> – Optional. Displays guest registration statistics for a specified RF Domain.
	  • <DOMAIN-NAME> – Specify the RF Domain name.
	• wlan <WLAN-NAME> – Optional. Displays guest registration statistics for a specified WLAN.
	  • <WLAN-NAME> – Specify the WLAN name.

• `show guest-registration client [email <EMAIL-ADDRESS>|mac <MAC>|member <MEMBER-ID>|mobile <MOBILE-NUMBER>|name <NAME>]`

guest-registration	Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN.
client	Displays statistical data for a specific client. Use the e-mail, mac, member, mobile, name to provide a match criteria.
email <EMAIL-ADDRESS>	Displays statistical data for the client with e-mail address matching the <EMAIL-ADDRESS> parameter • <EMAIL-ADDRESS> – Specify the client's e-mail address.
mac <MAC>	Displays statistical data for the client with MAC address matching the <MAC> parameter • <MAC> – Specify the client's MAC address
member <MEMBER-ID>	Displays statistical data for the client with member ID matching the <MEMBER-ID> parameter • <MEMBER-ID> – Specify the client's member ID.

mobile <MOBILE-NUMBER>	Displays statistical data for the client with mobile number matching the <MOBILE-NUMBER> parameter • <MOBILE-NUMBER> – Specify the client's mobile number.
name <NAME>	Displays statistical data for the client with name matching the <NAME> parameter • <MOBILE-NUMBER> – Specify the client's name.

• `show guest-registration client time [1-Hour|10-Mins|15-Mins|2-Mins|30-Mins|30-Secs|5-Mins] {(rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>)}`

guest-registration	Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN.
client	Displays statistical data for all clients logged in within a specified time period
time [1-Day|1-Month| 1-Week|2-Hours| 30-Mins|5-Hours|all]	Use one of the following options to specify the time period: • 1-Day – Displays previous day's statistics • 1-Month – Displays previous month's statistics • 1-Week – Displays previous week's statistics • 2-Hours – Displays last 2 hours statistics • 30-Mins – Displays last 30 minutes statistics • 5-Hours – Displays last 5 hours statistics • all – Displays entire statistics, from the day the database was created

[rfdomain <DOMAIN-NAME| wlan <WLAN-NAME>]	Use the following options as additional filters:
	• rfdomain <DOMAIN-NAME> – Optional. Displays guest registration statistics for a specified RF Domain.
	  • <DOMIAIN-NAME> – Specify the RF Domain name.
	• wlan <WLAN-NAME> – Optional. Displays guest registration statistics for a specified WLAN.
	  • <WLAN-NAME> – Specify the WLAN name.

• `show guest-registration loyalty-app-status time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all] {rfdomain <RF-DOMAIN-NAME>|wlan <WLAN-NAME>}`

guest-registration	Displays guest registration statistics based on the parameters and time entered
loyalty-app-status	Displays captive portal clients' Loyalty Application analytics, such as the number of guest clients with loyalty application detection enabled, associating with the captive portal's access point during a specified time period Loyalty application detection occurs on the access point to which the guest client is associated, allowing a retail administrator to assess whether a captive portal client is using specific retail (loyalty) applications in their captive portal. For more information on enabling loyalty application detection on a captive portal, see *report-loyalty-application*.
time [1-Day|1-Month| 1-Week|2-Hours| 30-Mins|5-Hours|all]	Specifies the time period, using one of the following options: • 1-Day – Displays previous day's captive portal clients' Loyalty Application analytics • 1-Month – Displays previous month's captive portal clients' Loyalty Application analytics Contd..

	• 1-Week – Displays previous week's captive portal clients' Loyalty Application analytics • 2-Hours – Displays last 2 hours captive portal clients' Loyalty Application analytics • 30-Mins – Displays last 30 minutes captive portal clients' Loyalty Application analytics • 5-Hours – Displays last 5 hours captive portal clients' Loyalty Application analytics • all – Displays the entire Loyalty Application analytics, from the day the database was created

{rfdomain <RF-DOMAIN-NAME>| wlan <WLAN-NAME>}	Optional. Specifies the 'rfdomain' and/or 'wlan' to view guest registration statistics for a specified RF Domain and/or WLAN
	• rfdomain <RF-DOMAIN-NAME> – Displays Loyalty App analytics for a specified RF Domain
	  • <RF-DOMAIN-NAME> – Specify the RF Domain name.
	• wlan <WLAN-NAME> – Displays Loyalty App analytics for a specified WLAN
	  • <WLAN-NAME> – Specify the WLAN name.

- `show guest-registration notification-status`

guest-registration	Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN.
notification-status	Displays guest registration notification status

- `show guest-registration social time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all] {(facebook|rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>|google)}`

guest-registration social	Displays the social sites used by guests to register. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view social site used by guests of a specified RF Domain and/or WLAN.
time [1-Day|1-Month| 1-Week|2-Hours| 30-Mins|5-Hours|all]	Displays social site statistics for a specified time period. Use one of the following time options: • 1-Day – Displays previous day's statistics • 1-Month – Displays previous month's statistics • 1-Week – Displays previous week's statistics • 2-Hours – Displays last 2 hours statistics • 30-Mins – Displays last 30 minutes statistics • 5-Hours – Displays last 5 hours statistics • all – Displays the entire database
facebook	Displays guest users using Facebook to log in
rfdomain <DOMAIN-NAME>	Displays guest users for a specific RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.
wlan <WLAN-NAME>	Displays guest users for a specific WLAN • <WLAN-NAME> – Specify the WLAN name.
google	Displays guest users using Google to log in

6.1.32 interface

show commands

Displays configured system interfaces and their status

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show interface {<INTERFACE-NAME>|brief|counters|ge|me1|port-channel|pppoe1|
switchport|vlan|wwan1}

show interface {<INTERFACE-NAME>|brief|counters|ge <1-4>|me1|port-channel <1-2>|
pppoe1|switchport|vlan <1-4094>|wwan1} {on <DEVICE-NAME>}
```

Parameters

```
• show interface {<INTERFACE-NAME>|brief|counters|ge <1-4>|me1|port-channel <1-
2>|pppoe1|switchport|vlan <1-4094>|wwan1} {on <DEVICE-NAME>}
```

interface	Optional. Displays system interface status based on the parameters passed
<INTERFACE-NAME>	Optional. Displays status of the interface specified by the <INTERFACE-NAME> parameter. Specify the interface name.
brief	Optional. Displays a brief summary of the interface status and configuration
counters	Optional. Displays interface Tx or Rx counters
ge <1-4>	Optional. Displays Gigabit Ethernet interface status and configuration • <1-4> – Select the Gigabit Ethernet interface index from 1 - 4.
me1	Optional. Displays Fast Ethernet interface status and configuration
port-channel <1-2>	Optional. Displays port channel interface status and configuration • <1-2> – Specify the port channel index from 1 - 2.
pppoe1	Optional. Displays PPP over Ethernet interface status and configuration
switchport	Optional. Displays layer 2 interface status
vlan <1-4094>	Optional. Displays VLAN interface status and configuration • <1-4094> – Specify the *Switch Virtual Interface* (SVI) VLAN ID from 1 - 4094.
wwan1	Optional. Displays Wireless WAN interface status, configuration, and counters
on <DEVICE-NAME>	The following keywords are common to all of the above interfaces: • on <DEVICE-NAME> – Optional. Displays interface related information on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

Following interfaces are available on a RFS6000 controller:

```
rfs6000-81742D(config)#show interface ?

  WORD          Interface name
  brief         Brief summary of interface status and configuration
  counters      Interface tx/rx counters
  ge            GigabitEthernet interface
  me1           FastEthernet interface
  on            On AP/Controller
  port-channel  Port-Channel interface
  pppoe1        PPP Over Ethernet interface
  switchport    Status of Layer2 interfaces
  up1           WAN Ethernet interface
  vlan          Switch VLAN interface
  wwan1         Wireless WAN interface
  |             Output modifiers
  >             Output redirection
  >>            Output redirection appending
  <cr>

show ip ospf {border-router|neighbor|route|on|state} {on <DEVICE-NAME>}
show ip ospf {interface} {vlan|on}
show ip ospf {interface} {vlan <1-4094>} {(on <DEVICE-NAME>)}
```

NOTE: The show ip ospf command is also available under the 'profile' and 'device' modes.

Parameters

- `show ip arp {<VLAN-NAME>} {(on <DEVICE-NAME>)}`

ip arp	Displays *Address Resolution Protocol* (ARP) mappings
<VLAN-NAME>	Optional. Displays ARP mapping on a specified VLAN. Specify the VLAN name.

on <DEVICE-NAME>	The following keyword is recursive and common to the 'vlan-name' parameter: • on <DEVICE-NAME> – Optional. Displays ARP configuration details on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

• `show ip bgp {<IP>|<IP/M>|community|community-list|filter-list|neighbors|on|paths|prefix-list|regexp|route-map|state|summary}`

ip bgp	Displays BGP routing table statistics based on the match criteria specified here. Routes matching the specified criteria are filtered. Use available options to filter the information displayed. This command is applicable to the RFS4000, RFS6000, NX9XXX model devices.
<IP>	Optional. Filters routes matching the specified IP address
<IP/M>	Optional. Filters routes matching the specified network
community	Optional. Filters routes based on the community attribute specified. The options are: • AA:NN – Filters routes based on the community number (AA: is the *autonomous system number (*ASN), NN: is the community number within the specified ASN) • local-as – Filters routes carrying the local-as attribute (these routes are not sent outside the local AS) • no-advertise – Filters routes carrying the no-advertise attribute (these routes are not advertised to any peers) • no-export – Filters routes carrying no-export attribute (these routes are not exported to next AS)
community-list	Optional. Displays routes that are members of communities included in the specified BGP community-list • <1-500> – Specify the community-list number. • <WORD> – Specify the community-list name.
filter-list	Optional. Filters routes having AS-path matching the specified AS-path access list. Specify the AS-path ACL name.
neighbors	Optional. Displays BGP neighbor details. Specify the IP address, to view a specific neighbor details. Use one of the following options to filter information: • advertised-routes – Displays route information for routes advertised to the selected neighbor device • received-routes – Displays route information for routes received from the selected neighbor device • routes – Displays the route information for routes learned from the selected neighbor device If no neighbor IP address is specified, the system displays all neighbor-related routes on the logged device.
on <DEVICE-NAME>	Optional. Displays BGP routing table statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
paths	Optional. Displays BGP path details
prefix-list <PREFIX-LIST-NAME>	Optional. Displays routes confirming to the specified prefix-list • <PREFIX-LIST-NAME> – Specify the prefix list name.

regexp <LINE>	Optional. Displays routes matching the specified AS path regular expression • <LINE> – Specify the regular expression.
route-map <ROUTE-MAP-NAME>	Optional. Displays routes matching the specified route map • <ROUTE-MAP-NAME> – Specify the route map name.

- `show ip ddns bindings` *`{on <DEVICE-NAME>}`*

ip ddns	Displays *Dynamic Domain Name Server* (DDNS) configuration details
bindings {on <DEVICE-NAME>}	Displays DDNS address bindings • on <DEVICE-NAME> – Optional. Displays address bindings on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip dhcp [networks|status]` *`{on <DEVICE-NAME>}`*

ip dhcp	Displays DHCP server related details, such as network and status
networks	Displays DHCP server network details
status	Displays DHCP server status
on <DEVICE-NAME>	The following keyword is common to all of the above parameters: • on <DEVICE-NAME> – Optional. Displays server status and network details on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip dhcp binding` *`{manual} {(on <DEVICE-NAME>)}`*

ip dhcp	Displays the DHCP server configuration details
bindings	Displays DHCP address bindings
manual	Optional. Displays static DHCP address bindings
on <DEVICE-NAME>	The following keyword is recursive and common to the 'manual' parameter: • on <DEVICE-NAME> – Optional. Displays DHCP address bindings on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip extcommunity-list [<1-500>|<NAME>]`

ip extcommunity-list [<1-500>|<NAME>]	Displays the specified extended community list details • <1-500> – Specify the extended community number from 1 - 500. • <NAME> – Specify the extended community name. This command is applicable to the RFS4000, RFS6000, NX95XX model devices.

- `show ip [default-gateways|dhcp-vendor-options|domain-name|name-server|routing]` *`{on <DEVICE-NAME>}`*

ip default-gateways	Displays all learnt default gateways
ip dhcp-vendor-options	Displays DHCP 43 parameters received from the DHCP server. This output includes the interface from which the option was learned.
ip domain-name	Displays the DNS default domain

ip name-server	Displays the DNS name server details
ip routing	Displays routing status
on <DEVICE-NAME>	The following keywords are common to all of the above parameters: • on <DEVICE-NAME> – Optional. Displays IP related information, based on the parameters passed, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip igmp snooping [mrouter|querier] vlan <1-4095> {on <DEVICE-NAME>}`

ip igmp snooping	Displays the IGMP snooping configuration
mrouter	Displays the IGMP snooping multicast router (mrouter) configuration
querier	Displays the IGMP snooping multicast querier configuration
vlan <1-4095> {on <DEVICE-NAME>}	Displays the IGMP snooping multicast router configuration for a VLAN • <1-4095> – Specify the VLAN ID from 1 - 4095. • on <DEVICE-NAME> – Optional. Displays the IGMP snooping mrouter configuration on a specified device • <DEVICE-NAME> – Specify the name of the AP or wireless controller.

- `show ip igmp snooping vlan <1-4095> {<IP>} {(on <DEVICE-NAME>)}`

ip igmp snooping	Displays the IGMP snooping configuration
vlan <1-4095>	Displays the VLAN IGMP snooping configuration • <1-4095> – Specify the VLAN ID from 1 - 4095.
<IP>	Optional. Specifies the multicast group IP address
on <DEVICE-NAME>	The following keyword is recursive and common to the 'ip' parameter: • on <DEVICE-NAME> – Optional. Displays configuration details on a specified device • <DEVICE-NAME> – Specify the name of the AP or wireless controller.

- `show ip interface {<INTERFACE-NAME>|brief} {(on <DEVICE-NAME>)}`

ip interface	Displays an administrative and operational status of all layer 3 interfaces or a specified layer 3 interface
<INTERFACE-NAME>	Optional. Displays a specified interface status. Specify the interface name.
brief	Optional. Displays a brief summary of all interface status and configuration
on <DEVICE-NAME>	The following keyword is recursive and common to the 'interface-name' and 'brief' parameters: • on <DEVICE-NAME> – Optional. Displays interface status and summary, based on the parameters passed, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip nat translations verbose {on <DEVICE-NAME>}`

ip nat translations	Displays *Network Address Translation* (NAT) translations
verbose	Displays detailed NAT translations • on <DEVICE-NAME> – Optional.Displays NAT translations on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip route {<INTERFACE-NAME>|ge <1-4>|me1|port-channel <1-2>|vlan <1-4094>|pppoe1|wwan1} {(on <DEVICE-NAME>)}`

ip route	Displays route table details. The route tables use flags to distinguish between routes. The different flags are: • C – Connected • G – Gateway • O – OSPF route • S – Static route **Note:** Flags 'S' and 'O' identify static learned routes and dynamic learned routes respectively.
<INTERFACE-NAME>	Optional. Displays route table details for a specified interface. Specify the interface name
ge <1-4>	Optional. Displays GigabitEthernet interface route table details • <1-4> – Specify the GigabitEthernet interface index from 1 - 4.
me1	Optional. Displays FastEthernet interface route table details
port-channel <1-2>	Optional. Displays port channel interface route table details. Specify the port channel index from 1 - 2.
vlan <1-4094>	Optional. Displays VLAN interface route table details. Select the VLAN interface ID from 1 - 4094.
pppoe1	Optional. Displays *Point-to-point Protocol over Ethernet* (PPPoE) interface route table details
wwan1	Optional. Displays Wireless WAN route table details
on <DEVICE-NAME>	The following keywords are recursive and common to all of the above parameters: • on <DEVICE-NAME> – Displays route table details, based on the parameters passed, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ip ospf {border-router|interface|neighbor|route|on|state} {on <DEVICE-NAME>}`

ip ospf	Displays overall OSPF information
border-router	Optional. Displays details of all the border routers connected
interface {on| vlan <1-4094>} {on <DEVICE-NAME>}	Optional. Displays details of all the interfaces with OSPF enabled • on <DEVICE-NAME> – Optional. Displays specified device details • vlan <1-4094> – Displays VLAN interface details • <DEVICE-NAME> – Specify the name of the AP or wireless controller.
neighbor	Optional. Displays an OSPF neighbors list
route	Optional. Displays OFPS routes information
on <DEVICE-NAME>	Optional. Displays overall OSPF information on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
state	Optional. Displays an OSPF process state

on <DEVICE-NAME>	The following keywords are recursive and common to all of the above parameters: • on <DEVICE-NAME> – Optional. Displays overall OSPF information, based on the parameters passed, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D(config)#show ip arp
-------------------------------------------------------------------------------
          IP                   MAC             INTERFACE          TYPE
-------------------------------------------------------------------------------

6.1.34 ip-access-list

show commands

Displays IP access list statistics

NOTE: This command is not available in the USER EXEC Mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show ip-access-list stats {<IP-ACCESS-LIST-NAME>|detail|on}
show ip-access-list stats {<IP-ACCESS-LIST-NAME>|detail <IP-ACCESS-LIST-NAME>}
{(on <DEVICE-NAME>)}
```

Parameters

```
• show ip-access-list stats {<IP-ACCESS-LIST-NAME>|detail <IP-ACCESS-LIST-NAME>}
{(on <DEVICE-NAME>)}
```

ip-access-list stats	Displays IP access list statistics
<IP-ACCESS-LIST-NAME>	Optional. Displays statistics for a specified IP access list. Specify the IP access list name.
detail <IP-ACCESS-LIST-NAME>	Optional. Displays detailed statistics for a specified IP access list. Specify the IP access list name.
on <DEVICE-NAME>	The following keyword is recursive and common to the 'IP-ACCESS-LIST-NAME' and 'detail' parameters: • on <DEVICE-NAME> – Optional. Displays all or a specified IP access list statistics on a specified device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D(config)#show ip-access-list stats
IP Access-list: # Restrict Management ACL #
  permit tcp any any eq ftp rule-precedence 1        Hitcount: 0
  permit tcp any any eq www rule-precedence 2        Hitcount: 4
  permit tcp any any eq ssh rule-precedence 3        Hitcount: 448
  permit tcp any any eq https rule-precedence 4        Hitcount: 0
  permit udp any any eq snmp rule-precedence 5       Hitcount: 0
  permit tcp any any eq telnet rule-precedence 6       Hitcount: 4
rfs6000-81742D(config)#
```

The following example displays the ‘auto-tunnel-acl’ IP ACL configuration:

```
rfs4000-229D58(config)#ip access-list auto-tunnel-acl
rfs4000-229D58(config-ip-acl-auto-tunnel-acl)#show context
ip access-list auto-tunnel-acl
permit ip host 200.200.200.99 30.30.30.1/24 rule-precedence 2
permit ip host 200.200.200.99 any rule-precedence 3
rfs4000-229D58(config-ip-acl-auto-tunnel-acl)#
```

The following example displays the statistics for the ‘auto-tunnel-acl’ ACL:

```
rfs4000-229D58#show ip-access-list stats
IP Access-list: auto-tunnel-acl
  permit ip host 200.200.200.99 30.30.30.1/24 rule-precedence 2        Hitcount: 0
  permit ip host 200.200.200.99 any rule-precedence 3         Hitcount: 0

rfs4000-229D58#

nx9500-6C8809#show ip-access-list stats scaleacl | i 125
  permit ip host 125.1.1.1 any rule-precedence 125      Hitcount: 893      Hardware
Hitcount: 3120
  permit ip host 125.2.1.1 any rule-precedence 346       Hitcount: 0       Hardware
Hitcount: 0
nx9500-6C8809#
```

6.1.35 ipv6

show commands

Displays IPv6 related information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show ipv6 [default-gateways|delegated-prefix|dhcp|hop-limit|interface|mld|name-server|neighbors|route]

show ipv6 [default-gateways|delegated-prefix|hop-limit|name-server] {on <DEVICE-NAME>}

show ipv6 dhcp [client received-options|relay status|status] {on <DEVICE-NAME>}

show ipv6 interface {<IF-NAME>|brief} {(on <DEVICE-NAME>)}

show ipv6 mld snooping [mrouter vlan <1-4095>|querier vlan <1-4095>|vlan <1-4095>]
{on <DEVICE-NAME>}

show ipv6 neighbors <VLAN-NAME> {(on <DEVICE-NAME>)}

show ipv6 route {<IF-NAME>|ge <1-X>|me1|port-channel <1-2>|ppppoe1|serial <1-4>|
t1e1 <1-4> <1-1>|up|vlan <1-4095>|wwan1|xge} {(on <DEVICE-NAME>)}
```

Parameters

- `show ipv6 [default-gateways|delegated-prefix|hop-limit|name-server] {on <DEVICE-NAME>}`

ipv6	Displays IPv6 related information
default-gateways	Displays all learnt default gateways
delegated-prefix	Displays prefix delegation information
hop-limit	Displays the configured IPv6 hop count value
name-server	Displays DNS name servers
on <DEVICE-NAME>	This parameter is common to all of the above keywords. • on <DEVICE-NAME> – Optional. Displays the specified information on a device (access point, wireless controller, or service platform) • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ipv6 dhcp [client received-options|relay status|status] {on <DEVICE-NAME>}`

ipv6	Displays IPv6 related information
dhcp	Displays DHCPv6 related information
client received-options	Displays DHCP options received from clients
relay status	Displays the DHCPv6 relay agent's running status
status	Displays the DHCPv6 stateless server daemon's status. In case the DHCPv6 server is up and running, it also displays interface names.

on <DEVICE-NAME>	This parameter is common to all of the above keywords. • on <DEVICE-NAME> – Optional. Displays the specified information on a device (access point, wireless controller, or service platform) <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ipv6 interface {<IF-NAME>|brief} {(on <DEVICE-NAME>)}`

ipv6	Displays IPv6 related information
interface {<IF-NAME>|brief}	Displays IPv6 status and configuration on a specified interface related information • <IF-NAME> – Optional. Specify the interface name. • brief – Optional. Displays a brief summary of IPv6 status and configuration on the specified interface
on <DEVICE-NAME>	This parameter is common to all of the above keywords. • on <DEVICE-NAME> – Optional. Displays the specified information on a device (access point, wireless controller, or service platform) <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ipv6 mld snooping [mrouter vlan <1-4095>|querier vlan <1-4095>|vlan <1-4095>] {on <DEVICE-NAME>}`

ipv6	Displays IPv6 related information
mld snooping	Displays *Multicast Listener Discovery Protocol* (MLD) snooping related information
mrouter vlan <1-4095>	Displays IPv6 multicast router information on the specified VLAN
querier vlan <1-4095>	Displays IPv6 multicast querier information on the specified VLAN
vlan <1-4095>	Displays MLD snooping related information on the specified VLAN
on <DEVICE-NAME>	This parameter is common to all of the above keywords. • on <DEVICE-NAME> – Optional. Displays the specified information on a device (access point, wireless controller, or service platform) <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ipv6 neighbors <VLAN-NAME> {(on <DEVICE-NAME>)}`

ipv6	Displays IPv6 related information
neighbors <VLAN-NAME>	Displays IPv6 neighbors on the specified VLAN
on <DEVICE-NAME>	Optional. Displays IPv6 neighbors on a specified device (access point, wireless controller, or service platform) <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show ipv6 route {<IF-NAME>|ge <1-X>|me1|port-channel <1-2>|ppppoe1|serial <1-4>|t1e1 <1-4> <1-1>|up|vlan <1-4095>|wwan1|xge} {(on <DEVICE-NAME>)}`

ipv6	Displays IPv6 related information

route	Displays IPv6 route table
<IF-NAME>	Optional. Displays IPv6 route table for the interface identified by the <IF-NAME> keyword
ge <1-X>	Optional. Displays IPv6 route table for the selected GigabitEthernet interface
me1	Optional. Displays IPv6 route table for the FastEthernet interface
port-channel <1-2>	Optional. Displays IPv6 route table for the selected port-channel interface
pppoe1	Optional. Displays IPv6 route table for the PPP over Ethernet interface
vlan <1-4095>	Optional. Displays IPv6 route table for the selected VLAN interface
up	Optional. Displays IPv6 route table for the WAN Ethernet interface
wwan1	Optional. Displays IPv6 route table for the wireless WAN interface
xge <1-4>	Optional. Displays IPv6 route table for the selected TenGigabitEthernet interface Applicable only for the NX9500 and NX9510 service platforms.
on <DEVICE-NAME>	This parameter is common to all of the above keywords. • on <DEVICE-NAME> – Optional. Displays the specified information on a device (access point, wireless controller, or service platform) <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D(config)#show ipv6 dhcp client received-options
DHCPv6 Client received options:

6.1.36 ipv6-access-list

show commands

Displays IPv6 access list statistics

NOTE: This command is not available in the USER EXEC Mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show ipv6-access-list stats <IPv6-ACCESS-LIST-NAME> {(on <DEVICE-NAME>)}
```

Parameters

- `show ipv6-access-list stats <IPv6-ACCESS-LIST-NAME> {(on <DEVICE-NAME>)}`

ipv6-access-list stats	Displays IPv6 access list statistics
<IPv6-ACCESS-LIST-NAME>	Optional. Displays statistics for a specified IPv6 access list. Specify the IPv6 access list name. If IPv6 ACL name is not provided, the system displays statistics for all ACLs configured and applied.
on <DEVICE-NAME>	Optional. Displays all or a specified IPv6 access list statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D#show ipv6-access-list stats
IPV6 Access-list: test
  deny ipv6 any any rule-precedence 20        Hitcount: 4

rfs6000-81742D#
```

6.1.37 l2tpv3

show commands

Displays a *Layer 2 Tunnel Protocol Version 3 (L2TPV3)* session information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

NOTE: This command is not available in the USER EXEC mode.

Syntax

```
l2tpv3 {on|tunnel|tunnel-summary}

l2tpv3 {on <DEVICE-NAME>}

l2tpv3 {tunnel <L2TPV3-TUNNEL-NAME>} {session <L2TPV3-SESSION-NAME>} {(on <DEVICE-NAME>)}

l2tpv3 {tunnel-summary} {down|on|up}
l2tpv3 {tunnel-summary} {on <DEVICE-NAME>}
l2tpv3 {tunnel-summary} {down|up} {on <DEVICE-NAME>}
```

Parameters

- `l2tpv3 {on <DEVICE-NAME>}`

l2tpv3 {on <DEVICE-NAME>}	Displays a L2TPv3 tunnel and session details or summary • on <DEVICE-NAME> – Optional. Displays L2TPv3 information on a specified access point or wireless controller • <DEVICE-NAME> – Specify the name of AP, wireless controller, or service platform.

- `l2tpv3 {tunnel <L2TPV3-TUNNEL-NAME>} {session <L2TPV3-SESSION-NAME>} {(on <DEVICE-NAME>)}`

l2tpv3	Displays a L2TPv3 tunnel and session details or summary
tunnel <L2TPV3-TUNNEL-NAME>	Optional. Displays a specified L2TPv3 tunnel information • <L2TPV3-TUNNEL-NAME> – Specify the L2TPv3 tunnel name.
session <L2TPV3-SESSION-NAME>	Optional. Displays a specified L2TPv3 tunnel session information • <L2TPV3-SESSION-NAME> – Specify the session name.
on <DEVICE-NAME>	The following keyword is recursive and common to the 'session <L2TPV3-SESSION-NAME>' parameter. • on <DEVICE-NAME> – Optional. Displays a L2TPv3 tunnel and session details, based on the parameters passed, on a specified device. • <DEVICE-NAME> – Specify the name of AP, wireless controller, or service platform.

- `l2tpv3 {tunnel-summary} {on <DEVICE-NAME>}`

l2tpv3	Displays L2TPv3 tunnel and session details or summary For an L2TPv3 tunnel over Auto IPSec, the tunnel status is displayed as: Established (secured by ipsec)
tunnel-summary {on <DEVICE-NAME>}	Optional. Displays L2TPv3 tunnel summary • on <DEVICE-NAME> – Optional. Displays a L2TPv3 tunnel summary on a specified device • <DEVICE-NAME> – Specify the name of AP, wireless controller, or service platform.

- `l2tpv3 {tunnel-summary} {down|up} {on <DEVICE-NAME>}`

l2tpv3	Displays a L2TPv3 tunnel and session details or summary
tunnel-summary	Optional. Displays a L2TPv3 tunnel summary, based on the parameters passed
down	Optional. Displays un-established tunnels summary
up	Optional. Displays established tunnels summary
on <DEVICE-NAME>	The following keyword is common to the 'down' and 'up' parameters: • on <DEVICE-NAME> – Optional. Displays summary, for un-established or established tunnels, on a specified device • <DEVICE-NAME> – Specify the name of AP, wireless controller, or service platform.

Example

```

6.1.38 lacp

show commands

Displays *Link Aggregation Control Protocol* (LACP) related information

NOTE: For more information on enabling dynamic LACP, see *lacp*, *lacp-channel-group*, and *lacp*.

Supported in the following platforms:

- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show lacp [<1-4>|counters|details|sys-id]

show lacp <1-4> ([counters|details])

show lacp sys-id
```

Parameters

- `show lacp <1-4> ([counters|details])`

show lacp <1-4>	Shows the LACP related information for a specified port-channel or all port-channels using LACP • <1-4> – Select the port-channel index number from 1 - 4. Note, LACP is supported only on the NX5500, NX7500, and NX9500 model service platforms. However, the NX9500 series service platforms support only two (2) port-channels. Where as the other model service platforms support four (4) port-channels. If the port-channel index number is not specified, the system displays LACP counters and details for all port-channels configured on the device.
counters	Shows LACP counters for LACP-enabled port-channels. When passed without the <1-4> keyword, the system displays LACP counters for all configured port-channels. However, if the port-channel index number is specified, the system displays LACP counters only for the specified port-channel.
details	Shows details for LACP-enabled port-channels. When passed without the <1-4> keyword, the system displays LACP details for all configured port-channels. However, if the port-channel index number is specified, the system displays LACP details only for the specified port-channel.

- `show lacp sys-id`

show lacp sys-id	Shows the LACP related information for all LACP-enabled port-channels • sys-id – Shows the LACP system identifier and priority. This is the identifier assigned to the LACP peers (devices).

Example

```
NOC-controller#show interface port-channel 1
Interface port-channel1 is UP
  Hardware-type: aggregate, Mode: Layer 2, Address: 84-24-8D-7F-35-C8
  Index: 2018, Metric: 1, MTU: 1500
  Speed: Admin Auto, Operational 20G, Maximum 20G
  Duplex: Admin Auto, Operational Full
  Active-medium: n/a
  Channel-members: xge1 xge2
  Switchport settings: trunk, access-vlan: n/a
    Input packets 5121052, bytes 807510883, dropped 0
    Received 5121052 unicasts, 0 broadcasts, 516544 multicasts
    Input errors 0, runts 0, giants 0
    CRC 0, frame 0, fragment 0, jabber 0
    Output packets 4804420, bytes 1053174746, dropped 0
    Sent 4804420 unicasts, 0 broadcasts, 0 multicasts
    Output errors 0, collisions 0, late collisions 0
    Excessive collisions 0

NOC-controller#

NOC-controller#show interface port-channel 4

6.1.39 ldap-agent

show commands

Displays an LDAP agent's join status (join status to a LDAP server domain)

Use this command When LDAP is specified the external resource (as opposed to local RADIUS resources) to validate PEAP-MS-CHAP v2 authentication requests, user credentials, and password information needs to be made available locally to successfully connect to the external LDAP server. Up to two LDAP Agents (primary and secondary external resources) can be defined as external resources for PEAP-MS-CHAP v2 authentication requests.

NOTE: This command is not available in the USER EXEC Mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show ldap-agent join-status {on <DEVICE-NAME>}
```

Parameters

- `show ldap-agent join-status {on <DEVICE-NAME>}`

ldap-agent	Displays LDAP agent related configuration
join-status	Displays if the LDAP agent has successfully joined a LDAP server's domain
on <DEVICE-NAME>	Optional. Displays if the LDAP agent has successfully joined a specified LDAP server's domain. • <DEVICE-NAME> – Specify the name of the device running the LDAP server (access point, wireless controller, or service platform).

Example

```
rfs6000-81701D#show ldap-agent join-status
Primary LDAP Server's agent join-status : Joined domain TEST.

Secondary LDAP Server's agent join-status : Not Configured
rfs6000-81701D#
```

6.1.40 licenses

show commands

Displays installed licenses and usage information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show licenses {borrowed|lent}
```

Parameters

- `show licenses {borrowed|lent}`

licenses {borrowed|lent}	Displays installed licenses and usage information • borrowed – Optional. Displays information on licenses borrowed • lent – Optional. Displays information on licenses lent

Usage Guidelines

The WiNG HM network defines a three-tier structure, consisting of multiple wireless sites managed by a single *Network Operations Center* (NOC) controller, The NOC and the site controllers constitute the first and second tiers of the hierarchy respectively. The site controllers in turn adopt and manage access points that form the third tier of the hierarchy. The site controllers may or may not be grouped to form clusters.

At the time of adoption, access points and adaptive access points are provided license by the adopting controller. These license packs can be installed on both the NOC and site controllers. When a AP/AAP is adopted by a controller, the controller pushes a license on to the device. At this point the various possible scenarios are:

- AP/AAP license packs installed on the NOC controller only.

  The NOC controller provides the site controllers with the AP licenses, ensuring that per platform limits are not exceeded.

- AP/AAP license packs installed on the NOC and site controllers.

  The site controller uses its installed licenses and, in case of a shortage, the site controller borrows additional licenses from the NOC. If the NOC controller is unable to allocate sufficient licenses, the site controller unadopts some of the AP/AAPs.

- AP/AAP license packs installed on one controller within a cluster.

The site controller shares its installed and borrowed licenses with other cluster controllers.

Example

```
rfs4000-229D58#show licenses
Serial Number : 9184521800027

Device Licenses:
  AP-LICENSE
    String     : DEFAULT-6AP-LICENSE
    Value      : 6
    Borrowed   : 0
    Total      : 6
    Used       : 0
  AAP-LICENSE
    String     :
    Value      : 0
    Borrowed   : 0
    Total      : 0
    Used       : 0
  ADVANCED-SECURITY
    String     : DEFAULT-ADV-SEC-LICENSE
rfs4000-229D58#
```

The following example shows the show > licenses command output on a NOC controller:

```
nx9500-6C8809#show licenses
Serial Number : B4C7996C8809

Device Licenses:
  AP-LICENSE
    String     :
    Value      : 0
    Lent       : 0
    Total      : 0
    Used       : 0
  AAP-LICENSE
    String     :
66069c24b3bb1259b34ff016c723a9e299dd408f0ff891e7c5f7e279a382648397d6b3e975e356a1
    Value      : 10250
    Lent       : 0
    Total      : 10250
    Used       : 7
  HOTSPOT-ANALYTICS
    String     :
66069c24b3bb1259eb36826cab3cc83999dd408f0ff891e74b62b2d3594f0b3dde7967f30e49e497

Total Licenses Including Licenses in Adopted Controllers:
  AP-LICENSE
    Value      : 14
    Used       : 1
  AAP-LICENSE
    Value      : 10250
    Used       : 7
nx9500-6C8809#
```

In the following example, the 'VALIDITY(HRS)' column specifies the validity period, in days and hours, of a lent license. On a NOC controller, a 'VALIDITY(HRS)' value of 'current' implies that the site controller is currently adopted. Whereas, a numerical 'VALIDITY(HRS)' value indicates the days and hours the lent license is valid for a site controller that is not reachable.

```
nx9500-6C8809#show licenses lent
-------------------------------------------------------------------------------

6.1.41 lldp

show commands

Displays *Link Layer Discovery Protocol* (LLDP) information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show lldp [neighbors|report]
show lldp neighbors {on <DEVICE-NAME>}
show lldp report {detail|on}
show lldp report {detail} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

Parameters

- `show lldp neighbors {on <DEVICE-NAME>}`

lldp	Displays an LLDP neighbors table or aggregated LLDP neighbors table
neighbors	Displays an LLDP neighbors table
on <DEVICE-NAME>	Optional. Displays an LLDP neighbors table on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show lldp report {detail} {(on <DEVICE-OR-DOMAIN-NAME>)}`

lldp	Displays an LLDP neighbors table or aggregated LLDP neighbors table
report detail	Displays an aggregated LLDP neighbors table • detail – Optional. Displays detailed aggregated LLDP neighbors table **Note:** If the 'on' keyword is used without the 'detail' keyword, the system displays LLDP neighbors table summary on the specified device or RF Domain.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'report detail' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Displays an aggregated LLDP neighbors table on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
nx9500-6C8809#show lldp neighbors
-------------------------
Chassis ID: 00-18-71-D0-0B-00
System Name: TechPubs-ProCurve-Switch
Platform: ProCurve J8697A Switch 5406zl, revision K.12.1X, ROM K.11.03 (/sw/code/
build/btm(sw_esp1))
Capabilities: Bridge  Router
Enabled Capabilities: Bridge
Local Interface: ge1, Port ID(Port Description) (outgoing port): 5(A5)
TTL: 113 sec
Management Addresses: 192.168.13.40
nx9500-6C8809#
```

6.1.42 logging

show commands

Displays the network's activity log

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show logging {on <DEVICE-NAME>}
```

Parameters

- `show logging {on <DEVICE-NAME>}`

logging {on <DEVICE-NAME>}	Displays logging information on a specified device • on <DEVICE-NAME> – Optional. Executes the command on a specified device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show logging

Logging module: enabled
    Aggregation time: disabled
    Console logging: level debugging
    Monitor logging: disabled
    Buffered logging: level warnings
    Syslog logging: level warnings
        Facility: local7

Log Buffer (1666269 bytes):

May 14 05:30:23 2015: nx9500-6C8809 : %DIAG-4-PWRSPLY_FAIL: Power supply failure,

6.1.43 mac-access-list

show commands

Displays MAC access list statistics

NOTE: This command is not present in USER EXEC mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show mac-access-list stats {<MAC-ACCESS-LIST-NAME>|on}
show mac-access-list stats {<MAC-ACCESS-LIST-NAME>} {(on <DEVICE-NAME>)}
```

Parameters

- `show mac-access-list stats {<MAC-ACCESS-LIST-NAME>} {(on <DEVICE-NAME>)}`

mac-access-list stats	Displays MAC access list statistics
<MAC-ACCESS-LIST>	Optional. Displays statistics for a specified MAC access list. Specify the MAC access list name. **Note:** The system displays all configured ACL statistics if no ACL name is specified.
on <DEVICE-NAME>	Optional. Displays all or a specified MAC access list statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show mac-access-list stats scalemacacl | i 311
  permit D0-67-E5-3F-C0-00 FF-FF-FF-FF-F0-00  host 00-1E-EC-F2-0A-76 rule-
precedence 311        Hitcount: 0        Hardware Hitcount: 0
nx9500-6C8809#
```

6.1.44 mac-address-table

show commands

Displays MAC address table entries

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show mac-address-table {on <DEVICE-NAME>}
```

Parameters

- `show mac-address-table {on <DEVICE-NAME>}`

mac-address-table	Displays MAC address table entries
on <DEVICE-NAME>	Optional. Displays MAC address table entries on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D(config)#show mac-address-table
------------------------------------------------------------
 BRIDGE VLAN PORT             MAC               STATE

rfs6000-81742D(config)#
```

6.1.45 mac-auth

show commands

Displays details of wired ports that have MAC address authentication enabled

Use this command to view MAC authentication configuration and authentication state. The command displays the current authentication state of the wired host, the authorization state of the Ge1 port, and the wired hosts' MAC address. The port status displays as *Authorized* if the wired host has successfully authenticated and *Not Authorized* if the wired host has not authenticated or has failed MAC authentication.

For more information on enabling MAC address authentication on a wired port, see *mac-auth*.

Supported in the following platforms:

- Access Points — AP6511
- Wireless Controllers — RFS4000, RFS6000

Syntax

```
show mac-auth {all|interface|on}

show mac-auth {all|interface [<INTERFACE-NAME>|ge <1-5>|port-channel <1-3>|t1e1
<1-4>|up <1-2>|xge <1-4>]} {(on <DEVICE-NAME>)}
```

Parameters

```
• show mac-auth {all|interface [<INTERFACE-NAME>|ge <1-5>|port-channel <1-3>|t1e1
<1-4>|up <1-2>|xge <1-4>]} {(on <DEVICE-NAME>)}
```

mac-auth	Displays MAC authentication related information for all interfaces or all interfaces
all	Optional. Displays MAC authentication related information for all interfaces
interface [<INTERFACE-NAME>|ge <1-5>| port-channel <1-3>| t1e1 <1-4>|up <1-2>| xge <1-4>]	Optional. Displays MAC authentication related information for a specified interface. Specify the interface using one of the following options: • <INTERFACE-NAME> – Selects the interface identified by the <INTERFACE-NAME> keyword • ge <1-5> – Selects the GigabitEthernet interface identified by the index number • port-channel <1-3> – Selects the port channel interface identified by the index number • t1e1 <1-4> – Selects the layer 2 interface (Ethernet port) • up <1-2> – Selects the WAN Ethernet interface identified by the index number • xge <1-4> – Selects the TenGigabitEthernet interface identified by the index number
on <DEVICE-NAME>	The following keywords are common to the 'all' and 'interface' parameters: • on <DEVICE-NAME> – Optional. Displays MAC authentication related information on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. **Note:** When the 'on' keyword is used exclusively, without the 'all' and 'interface' options, the system displays MAC authentication related information for interfaces configured on the specified device.

Example

```
rfs4000-229D58(config)#show mac-auth all
AAA-Policy is none

Mac Auth info for interface GE1
---------------------------------
 Mac Auth Enabled
 Mac Auth Not Authorized

Mac Auth info for interface GE2
---------------------------------
 Mac Auth Disabled
 Mac Auth Not Authorized

Mac Auth info for interface GE3
---------------------------------
 Mac Auth Disabled
 Mac Auth Not Authorized

Mac Auth info for interface GE4
---------------------------------
 Mac Auth Disabled
 Mac Auth Authorized

Mac Auth info for interface GE5
---------------------------------
 Mac Auth Disabled
 Mac Auth Not Authorized

Mac Auth info for interface UP1
---------------------------------
 Mac Auth Disabled
 Mac Auth Not Authorized
rfs4000-229D58(config)#
```

6.1.46 mac-auth-clients

show commands

Displays MAC authenticated clients

Supported in the following platforms:

- Access Points — AP6511
- Wireless Controllers — RFS4000, RFS6000

Syntax

```
show mac-auth-clients [all|interface]

show mac-auth-clients all {on <DEVICE-NAME>}
show mac-auth-clients interface {<INF-NAME>|ge <1-X>|port-channel <1-2>|xge <1-4>}
```

Parameters

- `show mac-auth-clients all {on <DEVICE-NAME>}`

mac-auth-clients	Displays MAC authenticated clients based on the parameters passed. The options are: all and interface.
all	Displays MAC authenticated clients for all interfaces
on <DEVICE-NAME>	Optional. Displays MAC authenticated clients for all interfaces on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show mac-auth-clients interface {<INF-NAME>|ge <1-X>|port-channel <1-2>|xge <1-4>}`

mac-auth-clients	Displays MAC authenticated clients based on the parameters passed. The options are: all and interface.
interface [<INF-NAME>| ge <1-X>| port-channel <1-2>| xge <1-4>]	Displays MAC authenticated clients for the specified interface. Select the interface type from the following options: • <INF-NAME> – Optional. Displays MAC authenticated clients for the interface identified by the <INF-NAME> keyword. Specify the layer 2 (ethernet port) interface name. • ge <1-X> – Optional. Displays MAC authenticated clients for the selected GigabitEthernet interface. Specify the GE interface index from 1 - X. This will vary for different device types. • port-channel <1-2> – Optional. Displays MAC authenticated clients for the selected port channel interface. Specify the port channel interface index from 1 - 2. • xge <1-4> – Optional. Displays MAC authenticated clients for the selected TenGigabitEthernet interface. Specify the interface index from 1 - 4.
on <DEVICE-NAME>	Optional. Displays MAC authenticated clients for the specified interface on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#show mac-auth-clients interface ge
1
------------------------------------------------
 MAC               STATE            INTERFACE
------------------------------------------------
------------------------------------------------
Total number of MACs displayed: 0
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#
```

6.1.47 mint

show commands

Displays MiNT protocol related statistics

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show mint [config|dis|id|info|known-adopters|links|lsp|lsp-db|mlcp|neighbors|
route|stats|tunnel-controller|tunneled-vlans]

show mint [config|id|info|known-adopters|route|stats|tunneled-vlans] {on <DEVICE-
NAME>}

show mint [dis|links|neighbors|tunnel-controller] {details} {(on <DEVICE-NAME>)}

show mint lsp

show mint lsp-db {details <MINT-ADDRESS>} {(on <DEVICE-NAME>)}

show mint mlcp {history} {(on <DEVICE-NAME>)}
```

Parameters

- `show mint [config|id|info|known-adopters|route|stats|tunneled-vlans] {on <DEVICE-NAME>}`

mint	Displays MiNT protocol information based on the parameters passed
config	Displays MiNT configuration
id	Displays local MiNT ID
info	Displays MiNT status
known-adopters	Displays known, possible, or reachable adopters
route	Displays MiNT route table details
stats	Displays MiNT related statistics
tunneled-vlans	Displays MiNT tunneled VLAN details
on <DEVICE-NAME>	The following keywords are common to all of the above parameters: • on <DEVICE-NAME> – Optional. Displays MiNT protocol details on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show mint [dis|links|neighbors|tunnel-controller] {details} {(on <DEVICE-NAME>)}`

mint	Displays MiNT protocol information based on the parameters passed
dis	Displays MiNT network *Designated Intermediate Systems* (DISes) and *Ethernet Virtualization Interconnects* (EVISes)
links	Displays MiNT networking link details
neighbors	Displays adjacent MiNT peer details

tunnel-controller	Displays details of MiNT VLAN network tunnel wireless controllers for extended VLAN load balancing
details {(on <DEVICE-NAME>)}	The following keywords are common to the 'dis', 'links', 'neighbors', and 'tunnel-controller' parameters: • details – Optional. Displays detailed MiNT information • on <DEVICE-NAME> – Optional. This is a recursive parameter, which displays MiNT information on a specified device. • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show mint lsp`

mint	Displays MiNT protocol information based on the parameters passed
lsp	Displays this router's MiNT *Label Switched Paths* (LSPs)

- `show mint lsp-db {details <MINT-ADDRESS>} {(on <DEVICE-NAME>)}`

mint	Displays MiNT protocol information based on the parameters passed
lsp-db	Displays MiNT LSP database entries
details <MINT-ADDRESS>	Optional. Displays detailed MiNT LSP database entries • <MINT-ADDRESS> – Specify the MiNT address in the AA.BB.CC.DD format.
on <DEVICE-NAME>	The following keyword is recursive and common to the 'details' parameter: • on <DEVICE-NAME> – Optional. Displays MiNT LSP database entries on a specified device • <DEVICE-NAME> – Specify the name of the AP or wireless controller

- `show mint mlcp {history} {(on <DEVICE-NAME>)}`

mint	Displays MiNT protocol information based on the parameters passed This command displays the 'hello-interval' and 'hold-time' default values for both IP and VLAN links.
mlcp	Displays IPv4 and IPv6 *MiNT Link Creation Protocol* (MLCP) status
history	Optional. Displays MLCP client history • on <DEVICE-NAME> – Optional. Displays MLCP client history on a specified device
on <DEVICE-NAME>	The following keyword is recursive and common to the 'history' parameter: • on <DEVICE-NAME> – Optional. Displays MLCP client history on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```

6.1.48 nsight

show commands

Displays NSight related information and also displays the database server status (reachable or not)

Supported in the following platforms:

- Service Platforms — NX9500, NX9510, NX9600, VX9000

Syntax

```
show nsight status
```

Parameters

- `show nsight status`

nsight	Displays the NSight module related status, such as: • NSight is enabled or not on the device • NSight report and aggregation daemon is running or not • NSight alarm daemon is running or not • NSight server daemon is running or not • Database server is reachable or not

Example

```
nx9500-6C8809(config)#show nsight status
Nsight is enabled
 Nsight report and aggregation daemon is running
 Nsight alarm daemon is running

6.1.49 ntp

show commands

Displays *Network Time Protocol* (NTP) information. NTP enables clock synchronization within a network.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show ntp [associations|status]
show ntp [associations {detail|on}|status {on <DEVICE-NAME>}]
```

Parameters

- `show ntp [associations {detail|on}|status {on <DEVICE-NAME>}]`

ntp associations {detail|on}	Displays existing NTP associations. The interaction between the controller or service platform and a SNTP server constitutes an association. SNTP associations are of two kinds:
	- peer associations - where a controller or service platform synchronizes to another system or allows another system to synchronize to it, or
	- server associations - where only the controller or service platform synchronizes to the SNTP resource, not the other way around.
	• detail – Optional. Displays detailed NTP associations
	  • on <DEVICE-NAME> – Optional. Displays NTP associations on a specified device
	  • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.
	Note: If the 'on' keyword is used without the 'detail' keyword, the system displays a summary of existing NTP associations on the specified device or RF Domain.

ntp status {on <DEVICE-NAME>}	Displays the performance (status) information relative to the NTP association status. Use this command to view the access point, controller, or service platform's current NTP resource. • on <DEVICE-NAME> – Optional. Displays NTP association status on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show ntp associations
-------------------------------------------------------------------------------
---------------------------------
 STATUS NTP SERVER IP ADDR REF CLOCK IP ADDR STRATUM   WHEN     POLL     REACH

6.1.50 password-encryption

show commands

Displays password encryption status (enabled/disabled)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show password-encryption status
```

Parameters

- `show password-encryption status`

password-encryption status	Displays password encryption status (enabled/disabled)

Example

```
rfs6000-81742D(config)#show password-encryption status
Password encryption is enabled
rfs6000-81742D(config)#
```

6.1.51 pppoe-client

show commands

Displays *Point-to-Point Protocol over Ethernet* (PPPoE) client information

Use this command to view PPPoE statistics derived from access to high-speed data and broadband networks. PPPoE uses standard encryption, authentication, and compression methods as specified by the PPPoE protocol. PPPoE enables point-to-points connection to an ISP over existing Ethernet interface.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show pppoe-client [configuration|status] {on <DEVICE-NAME>}
```

Parameters

- `show pppoe-client [configuration|status] {on <DEVICE-NAME>}`

pppoe-client	Displays PPPoE client information (configuration and status)
configuration	Displays detailed PPPoE client configuration
status	Displays detailed PPPoE client status
on <DEVICE-NAME>	The following keywords are common to 'configuration' and 'status' parameters: • on <DEVICE-NAME> – Optional. Displays detailed PPPoE client status or configuration on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show pppoe-client configuration
 PPPoE Client Configuration:
+-----------------------------------------
|  Mode          : Disabled
|  Service Name  :
|  Auth Type     : pap
|  Username      :
|  Password      : fJx5O+5duPjaOaPuXmtLDQAAAAAmvgEXcQ1+eUK4ByHK4aRi
|  Idle Time     : 600
|  Keepalive     : Disabled
|  Local n/w     : vlan1
|  Static IP     : __wing_internal_not_set__
|  MTU           : 1492
+-----------------------------------------

nx9500-6C8809#
```

6.1.52 privilege

show commands

Displays a device's existing privilege level

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show privilege
```

Parameters

None

Example

```
rfs6000-81742D(config)#show privilege
Current user privilege: superuser
rfs6000-81742D(config)#
```

6.1.53 radius

show commands

Displays the amount of access time consumed and the amount of access time remaining for all guest users configured on a RADIUS server

Every captive portal guest user can access the captive portal for a specified duration. This results in following three scenarios:

- Scenario 1: Access duration not specified (in this case the default of 1440 minutes is applied)
- Scenario 2: Access duration is specified and is greater than 0
- Scenario 3: Access duration is specified and equals to 0 (in this case the guest user has unlimited access)

In all the three scenarios the access time consumed is the duration for which the guest user has logged.

But the access time remaining varies. It is calculated as follows:

- Scenarios 1 & 2 - It is the lesser of the following two values: difference between the configured access duration and the time consumed AND the time until user account expiration.
- Scenario 3 - It is the time until user account expiration

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show radius [guest-users|server]

show radius guest-users {brief|<GUEST-USER-NAME>}

show radius server
```

Parameters

- `show radius guest-users {brief|<GUEST-USER-NAME>}`

radius guest-users {brief|<GUEST-USER-NAME>}	Displays RADIUS server's guest user's access details: total time for which the user has logged in, and the amount of access time remaining. • brief – Displays the total number of guest users provided RADIUS access <GUEST-USER-NAME> – Optional. Provide the name of the guest user (whose access details are to be viewed). If no name is provided, the system displays details of all guest users who have successfully logged in at least once. Contd..

	Use this command in the captive-portal context to view time and data statistics for guest user(s) having bandwidth-based or time-based vouchers configured. In such a scenario, the system displays the following information: data configured, data remaining, configured and current bandwidths (for both downlink and uplink), time configured, and time remaining. If bandwidth-based voucher is not applicable to a guest user, the data configured and data remaining values are displayed as 'unlimited'. The bandwidth columns are blank. If time-based voucher is not applicable to a guest user, the only value displayed is the time remaining (which is the time till the expiration of the guest user's account). **Note:** For more information on configuring bandwidth-based and time-based vouchers, see *user*.

- `show radius server`

show radius server	Displays RADIUS server related statistical data

Example

```
rfs4000-229D58#show radius guest-users
         TIME (min:sec)
       USED    REMAINING   GUEST USER
       0:00         9:00   time9
       0:00         5:00   time5
       0:00        15:00   time15
       0:00    305416:35   notime
       2:31         7:29   time10
rfs4000-229D58#
```

The following example shows a RADIUS user pool with guest users having bandwidth-based, time-based, bandwidth and time based, and no bandwidth or time based vouchers:

```
rfs4000-229D58(config-captive-portal-wdws)#show context
radius-user-pool-policy wdws
 user time_and_data password 0 both group wdws guest expiry-time 12:00 expiry-
date 12/31/2015 access-duration  8000 data-limit  500 committed-downlink  3000
committed-uplink  2000 reduced-downlink  1000 reduce4
 user neither password 0 nine group wdws guest expiry-time 12:00 expiry-date
12/31/2015
 user data_only password 0 data group wdws guest expiry-time 12:00 expiry-date
12/31/2015 data-limit  125 committed-downlink  1000 committed-uplink  800
reduced-downlink  500 reduced-uplink  400
rfs4000-229D58(config-captive-portal-wdws)#
```

The following example shows the captive portal access details for the above mentioned RADIUS user pool users:

```
rfs4000-229D58(config-captive-portal-wdws)#show radius guest-users
                    TIME (DD:HH:MM:SS)           DATA (kilobytes)
BANDWIDTH (kbps)

Current time: 17:15:07
rfs4000-229D58(config-captive-portal-wdws)#
```

6.1.54 reload

show commands

Displays scheduled reload information for a specific device

NOTE: This command is not present in the USER EXEC mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show reload {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `show reload {on <DEVICE-OR-DOMAIN-NAME>}`

reload {on <DEVICE-OR-DOMAIN-NAME>}	Displays scheduled reload information for a specified device • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays configuration on a specified device • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
rfs6000-81742D(config)#show reload
No reload is scheduled.
rfs6000-81742D(config)#
```

6.1.55 rf-domain-manager

show commands

Displays RF Domain manager selection details

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show rf-domain-manager {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `show rf-domain-manager {on <DEVICE-OR-DOMAIN-NAME>}`

rf-domain-manager	Displays RF Domain manager selection details
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays RF Domain manager selection details on a specified device or domain • <DEVICE-OR-DOMAIN-NAME> – specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
nx9500-6C8809#show rf-domain-manager
 RF Domain TechPubs
 RF Domain Manager:
    ID: 19.6C.88.09
 Controller Managed
 Device under query:
    Priority: 220
    Has IP MiNT links
    Has wired MiNT links
nx9500-6C8809#
```

6.1.56 role

show commands

Displays role based firewall information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show role [ldap-stats|wireless-clients]
show role [ldap-stats|wireless-clients] {on <DEVICE-NAME>}
```

Parameters

- `show role [ldap-stats|wireless-clients] {on <DEVICE-NAME>}`

role ldap-stats	Displays LDAP server status and statistics
role wireless-clients	Displays clients associated with roles
on <DEVICE-NAME>	The following parameters are common to the 'ldap-stats' and 'wireless-clients' keywords: • on <DEVICE-NAME> – Optional. Displays clients associated with roles on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, and service platform.

Example

```
nx9500-6C8809(config)#show role wireless-clients
No ROLE statistics found.
nx9500-6C8809(config)#
```

6.1.57 route-maps

show commands

Displays route map statistics for defined device routes

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show route-maps {on <DEVICE-NAME>}
```

Parameters

- `show route-maps {on <DEVICE-NAME>}`

route-maps	Displays configured route map statistics for all defined routes For more information on route maps, see *route-map*.
on <DEVICE-NAME>	Optional. Displays route map statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809(config)#show route-maps
nx9500-6C8809(config)#
```

6.1.58 rtls

show commands

Displays *Real Time Location Service* (RTLS) statistics for access points contributing locationing information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show rtls [aeroscout|ekahau|omnitrail] {<MAC/HOSTNAME>} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

Parameters

```
• show rtls [aeroscout|ekahau|omnitrail] {<MAC/HOSTNAME>} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

rtls	Displays access point RTLS statistics
aeroscout	Displays access point Aeroscout statistics
ekahau	Displays access point Ekahau statistics
omnitrail	Displays access point Omnitrail statistics
<MAC/HOSTNAME>	Optional. Displays Aeroscout or Ekahau statistics for a specified access point. Specify the MAC address or hostname of the access point.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to 'Aeroscout' and 'Ekahau' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays Aeroscout or Ekahau statistics on a specified device or domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
rfs4000-229D58(config)#show rtls aeroscout

 Aeroscout Engine IP: 0.0.0.0 Port: 0
 Send Count           : 0
 Recv Count           : 0
 Tag Reports          : 0
 Nacks                : 0
 Acks                 : 0

ap8533-84A224#
```

6.1.59 running-config

show commands

Displays configuration files (where all configured MAC and IP access lists are applied to an interface)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show running-config {aaa-policy|application|application-group|
application-policy|association-acl-policy|auto-provisioning-policy|
captive-portal-policy|device|database-client-policy|database-policy|device|

nx9000|nx9600] <PROFILE-NAME>} {include-factory}

show running-config {rf-domain <DOMAIN-NAME>} {include-factory}
```

```
show running-config {wlan <WLAN-NAME>} {include-factory}

show running-config url-filter <URL-FILTER-NAME>

show running-config url-list <URL-LIST-NAME> {include-factory}
```

Parameters

- `show running-config {flag-unwritten-changes}`

running-config flag-unwritten-changes	Flags unsaved changes in the *show > running-config* command output. Optionally use the *flag-unwritten-changes* keyword to view changes that have been committed but not saved in the startup configuration. When used, all unsaved changes are marked with a "===" marker, as shown in the following *show > running-config > flag-unwritten-changes* output:
	`nx9500-6C8809(config)#show running-config flag-unwritten-changes`
	`!`

- `show running-config {aaa-policy|application-policy|association-acl-policy|auto-provisioning-policy|captive-portal-policy|database-client-policy|database-policy|dhcp-server-policy|dhcpv6-server-policy|ex3500-management-policy|ex3500-qos-class-map-policy|ex3500-qos-policy-map|guest-management-policy|firewall-policy|management-policy|nsight-policy|radio-qos-policy|roaming-assist-policy|rtl-server-policy|schedule-policy|smart-rf-policy|web-filter-policy|wlan-qos-policy} <POLICY-NAME> {include-factory}`

running-config	Displays current running configuration Optionally, execute the command along with one of the associated keywords to view the running configuration for that top-level object. For example, to view a policy and its configuration, specify the policy type and provide the policy name. **Note:** If the command is executed without a keyword, the system displays the entire running configuration.
<POLICY-TYPE> <POLICY-NAME>	Optional. Select the policy type, for example, aaa-policy, auto-provisioning-policy, captive-portal-policy, etc. and then specify the policy name. The system displays the selected policy's configuration. • <POLICY-NAME> – Specify the name of the policy (should be existing and configured).

include-factory	The following keyword is common to all policies: • include-factory – Optional. Includes factory defaults

• `show running-config {application <APPLICATION-NAME>|apllication-group <APPLICATION-GROUP-NAME>}`

running-config	Displays current running configuration Optionally, execute the command along with one of the associated keywords to view the running configuration for that top-level object. For example, to view a policy and its configuration, specify the policy type and provide the policy name. If the command is executed without a keyword, the system displays the entire running configuration.
application <APPLICATION-NAME>	Displays an application's configuration. The application can be system-provided or user-defined. • <APPLICATION-NAME> – Specify the application name (should be existing).
application-group <APPLICATION-GROUP-NAME>	Displays an application-group's configuration • <APPLICATION-GROUP-NAME> – Specify the application-group name (should be existing and configured).

• `show running-config {device [<MAC>|self]} {include-factory}`

running-config	Displays current running configuration Optionally, execute the command along with one of the associated keywords to view the running configuration for that top-level object. For example, to view a policy and its configuration, specify the policy type and provide the policy name. If the command is executed without a keyword, the system displays the entire running configuration.
device [<MAC>|self]	Optional. Displays device configuration • <MAC> – Displays a specified device configuration. Specify the MAC address of the device. • self – Displays the logged device's configuration
include-factory	The following keyword is common to the '<MAC>' and 'self' parameters: • Optional. Displays factory defaults

• `show running-config {hide-encrypted-values {exclude-devices|include-factory}}`

running-config	Displays current running configuration Optionally, execute the command along with one of the associated keywords to view the running configuration for that top-level object. For example, to view a policy and its configuration, specify the policy type and provide the policy name. If the command is executed without a keyword, the system displays the entire running configuration.
hide-encrypted-values {exclude-devices|include-factory}	Optional. Replaces all encrypted passwords with the standard characters ****** in the *show > running-config* output • exclude-devices – Optional. Excludes devices from the running configuration displayed • include-factory – Optional. Includes factory default values in the running configuration displayed

- `show running-config {device-overrides {brief}}`

running-config	Displays current running configuration
device-overrides brief	Optional. Displays overrides applied at the device's configuration • brief – Optional. Displays a brief summary of device overrides

- `show running-config {exclude-devices}`

running-config	Displays current running configuration
exclude-devices	Optional. Excludes device configuration details from the running configuration displayed

- `show running-config {include-factory}`

running-config	Displays current running configuration
include-factory	Optional. Includes factory defaults

- `show running-config {interface} {<INTERFACE-NAME>|ge <1-4>|include-factory|me1|port-channel <1-2>|pppoe1|vlan <1-4094>|wwan1} {include-factory}`

running-config	Displays current running configuration
interface	Optional. Displays interface configuration
<INTERFACE-NAME>	Optional. Displays a specified interface configuration. Specify the interface name.
ge <1-4>	Optional. Displays GigabitEthernet interface configuration • <1-4> – Specify the GigabitEthernet interface index from 1 - 4.
me1	Optional. Displays FastEthernet interface configuration
port-channel <1-2>	Optional. Displays port channel interface configuration • <1-2> – Specify the port channel interface index from 1 - 2.
pppoe1	Optional. Displays PPP over Ethernet interface configuration
vlan <1-4094>	Displays VLAN interface configuration • <1-4094> – Specify the VLAN interface number from 1 - 4094.
wwan1	Optional. Displays Wireless WAN interface configuration
include-factory	The following keyword is common to all interfaces: • Optional. Includes factory defaults

- `show running-config {ip-access-list <IP-ACCESS-LIST-NAME>|ipv6-access-list <IPv6-ACCESS-LIST-NAME>|mac-access-list <MAC-ACCESS-LIST-NAME} {include-factory}`

running-config	Displays current running configuration Optionally, you can execute the command along with one of the associated keywords to view the running configuration for that top-level object. To view a access-list and its configuration, specify the ACL type and provide the ACL name. **Note:** If the command is executed without a keyword, the system displays the entire running configuration.
<ACL-TYPE> <IP/IPv6/MAC-ACL-NAME>	Optional. Select the ACL type, for example, ip-access-list, ipv6-access-list, or mac-access-list, and then specify the ACL name. The system displays the selected ACL's configuration. • <IP/IPv6/MAC-ACL-NAME> – Specify the name of the ACL (should be existing and configured).

include-factory	The following keyword is common to the 'ip-access-list' and 'mac-access-list' parameters: • Optional. Includes factory defaults

- `show running-config {meshpoint <MESHPOINT-NAME>} {include-factory}`

running-config	Displays current running configuration
meshpoint <MESHPOINT-NAME>	Optional. Displays meshpoint configuration • <MESHPOINT-NAME> – Specify the meshpoint name
include-factory	Optional. Includes factory defaults along with running configuration details

- `show running-config {profile [anyap|ap6521|ap6522|ap6532|ap6562|ap71xx|ap7502|ap7522|ap7532|ap7562|ap81xx|ap82xx|ap8432|ap8533|rfs4000|rfs6000|nx5500|nx75xx|nx9000|nx9600] <PROFILE-NAME>} {include-factory}`

running-config	Displays current running configuration
profile <DEVICE-TYPE> <PROFILE-NAME>	Optional. Displays current configuration for a specified profile. Select the device type, and then specify the profile name. • <DEVICE-TYPE> – Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533, RFS4000, RFS6000, NX5500, NX75XX, NX95XX, NX9600, and VX9000. • <PROFILE-NAME> – Specify the profile name for the selected <DEVICE-TYPE>. **Note:** Select the 'anyap' option to view the running configuration of any type of device.
include-factory	Optional. This parameter is common to all profiles. When selected, it includes factory defaults in the output.

- `show running-config {rf-domain <DOMAIN-NAME>} {include-factory}`

running-config	Displays current running configuration
rf-domain <DOMAIN-NAME>	Optional. Displays current configuration for a RF Domain • <DOMAIN-NAME> – Displays current configuration for a specified RF Domain. Specify the RF Domain name.
include-factory	Optional. Includes factory defaults

- `show running-config {wlan <WLAN-NAME>} {include-factory}`

running-config	Displays current running configuration
wlan <WLAN-NAME>	Optional. Displays current configuration for a WLAN • <WLAN-NAME> – Displays current configuration for a specified WLAN. Specify the WLAN name.
include-factory	Optional. Includes factory defaults

- `show running-config url-filter <URL-FILTER-NAME>`

running-config	Displays current running configuration
url-filter <URL-FILTER-NAME>	Optional. Displays current configuration for the URL filter identified by the <URL-FILTER-NAME> keyword • <URL-FILTER-NAME> – Specify the URL filter's name.

- `show running-config url-list <URL-LIST-NAME> {include-factory}`

running-config	Displays current running configuration
url-list <URL-LIST-NAME>	Optional. Displays current configuration for the URL list identified by the <URL-LIST-NAME> keyword • <URL-FILTER-NAME> – Specify the URL list's name.
include-factory	Optional. Includes factory defaults

6.1.60 session-changes

show commands

Displays configuration changes made in the current session

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show session-changes
```

Parameters

None

Example

```
rfs6000-81742D(config)#show session-changes

No changes in this session

rfs6000-81742D(config)#
```

6.1.61 session-config

show commands

Lists active open sessions on a device

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show session-config {exclude-devices|include-factory}
```

Parameters

- `show session-config {exclude-devices|include-factory}`

session-config {exclude-devices| include-factory}	Displays current session configuration • exclude-devices – Optional. Excludes device configuration details from the output • include-factory – Optional. Includes factory defaults

Example

```
nx9500-6C8809(config)#show session-config

6.1.62 sessions

show commands

Displays CLI sessions initiated on a device

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show sessions all {on <DEVICE-NAME>}
```

Parameters

- `show sessions all {on <DEVICE-NAME>}`

sessions	Displays CLI sessions initiated on a device
all	Displays all sessions including internal
on <DEVICE-NAME>	Optional. This is a recurring keyword and is common to the 'all' parameter. Displays CLI sessions on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show sessions
INDEX   COOKIE  NAME          START TIME            FROM              ROLE
1       2       snmp          2017-06-02 14:31:23    127.0.0.1         superuser
2       3       snmp2         2017-06-02 14:31:23    127.0.0.1         superuser
3       18      admin         2017-06-06 10:38:36    192.168.13.17     superuser

nx9500-6C8809#
```

6.1.63 site-config-diff

show commands

Displays the difference in site configuration available on the NOC and a site.

The WiNG HM network defines a three-tier structure, consisting of multiple wireless sites managed by a single *Network Operations Center* (NOC) controller, The NOC controller constitutes the first and the site controllers constitute the second tier of the hierarchy. The site controllers may or may not be grouped to form clusters. The site controllers in turn adopt and manage access points that form the third tier of the hierarchy.

NOC controllers possess default site configuration details. Overrides applied at the site level result in a mismatch of configuration at the site and the default site configuration available on the NOC controller. Use this command to view this difference.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

NOTE: This command returns an output only when executed on a NOC controller.

Syntax

```
show site-config-diff <SITE-NAME>
```

Parameters

```
• show site-config-diff <SITE-NAME>
```

site-config-diff <SITE-NAME>	Displays the configuration difference for the specified site • <SITE-NAME> – Specify the site name.

Example

```
nx9500-6C874D#show site-config-diff 5C-0E-8B-18-06-F4
---- Config diff for switch 5C-0E-8B-18-06-F4 ----
rfs6000 5C-0E-8B-18-06-F4
interface pppoe1
  no shutdown
nx9500-6C874D#
```

6.1.64 smart-rf

show commands

Displays *Self-Monitoring At Run Time* (Smart RF) statistical history to assess adjustments made to device configurations to compensate for detected coverage holes or device failures

When invoked by an administrator, Smart RF instructs access point radios to change to a specific channel and begin beaconing using the maximum available transmit power. Within a well-planned deployment, any RF Domain member access point radio should be reachable by at least one other radio. Smart RF records signals received from its neighbors as well as signals from external, un-managed radios. AP-to-AP distance is recorded in terms of signal attenuation. The information from external radios is used during channel assignment to minimize interference.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show smart-rf [ap|channel-distribution|history|history-timeline|interfering-ap|
interfering-neighbors|radio]

show smart-rf ap {<MAC>|<DEVICE-NAME>|activity|energy|neighbors|on <DOMAIN-NAME>}

show smart-rf ap {<MAC>|<DEVICE-NAME>} {on <DOMAIN-NAME>}

show smart-rf ap (activity|energy|neighbors} [<MAC>|<DEVICE-NAME>] {(on <DOMAIN-
NAME>)}

show smart-rf [channel-distribution|history|history-timeline] {on <DOMAIN-NAME>}

show smart-rf radio {<MAC>|activity|all-11an|all-11bgn|channel|energy|neighbors|
on <DOMAIN-NAME>}

show smart-rf radio {<MAC>|all-11an|all-11bgn|energy <MAC>} {on <DOMAIN-NAME>}

show smart-rf radio {activity|neigbors} {<MAC>|all-11an|all-11bgn} {on <DOMAIN-
NAME>}

show smart-rf interfering-ap {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>}

show smart-rf interfering-neighbors {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>|
threshold <50-100>}
```

Parameters

- `show smart-rf ap {<MAC>|<DEVICE-NAME>} {on <DOMAIN-NAME>}`

smart-rf	Displays Smart RF related information
ap	Displays access point related Smart RF information
<MAC>	Optional. Uses MAC addresses to identify access points. Displays all access points, if no MAC address is specified.
<DEVICE-NAME>	Optional. Uses an administrator defined name to identify an access point
on <DOMAIN-NAME>	Optional. Displays access point details on a specified RF Domain • <DOMAIN-NAME> – Specify the domain name.

- `show smart-rf ap (activity|energy|neighbors} [<MAC>|<DEVICE-NAME>] {(on <DOMAIN-NAME>)}`

smart-rf	Displays Smart RF related information
ap	Displays AP related Smart RF information
activity	Optional. Displays Smart RF activity related information Use this option to view the following: • Time-period – Lists the frequency Smart RF activity is trended for the RF Domain. Trending periods include the current hour, last 24 hours, or the last seven days. Comparing Smart RF adjustments versus the last seven days enables an administrator to assess whether periods of interference and poor performance were relegated to just specific periods. • Power changes – Displays the number of Smart RF initiated power level changes needed for RF Domain member devices during each of the three trending periods. Determine whether power compensations were relegated to known device outages or if compensations were consistent over the course of a day or week. • Channel changes – Lists the number of Smart RF initiated channel changes needed for RF Domain member devices during each of the three trending periods. Determine if channel adjustments were relegated to known device count increases or decreases over the course of a day or week. • Coverage changes – Displays the number of Smart RF initiated coverage changes needed for RF Domain member devices during each of the three trending periods. Determine if coverage changes were relegated to known device failures or known periods of interference over the course of a day or week.
energy	Optional. Displays AP energy for a specified AP or all APs Use this option to view an RF Domain member access point's operating channels, noise level and neighbor count. This information helps assess whether Smart RF neighbor recovery is needed in respect to poorly performing access points.
neighbors	Optional. Displays AP neighbors Use this option to view attributes of neighbor radio resources available for Smart RF radio compensations for other RF Domain member device radios.
{<MAC>| <DEVICE-NAME>}	The following keywords are common to all of the above parameters: • <MAC> – Displays all of the above mentioned information for a specified AP, identified by its MAC address. Specify the AP's MAC address. • <DEVICE-NAME> – Displays all of the above mentioned information for a specified AP, identified by its hostname. Specify the AP's hostname.
on <DOMAIN-NAME>	Optional.Displays access point details on a specified RF Domain • <DOMAIN-NAME> – Specify the domain name.

- `show smart-rf [channel-distribution|history|history-timeline] {on <DOMAIN-NAME>}`

smart-rf	Displays Smart RF related information
channel-distribution	Displays Smart RF channel distribution information. This provides an overview of how RF Domain member devices are utilizing different channels to optimally support connect devices and avoid congestion and interference with neighboring devices. Assess whether the channel spectrum is being effectively utilized and whether channel changes are warranted to improve RF Domain member device performance.

history	Displays Smart RF calibration history Use this option to view description and types of Smart RF events impacting RF Domain member devices.
history-timeline	Displays extended Smart RF calibration history on an hourly or daily timeline Use this option to view the time stamp when Smart RF status was updated on behalf of a Smart RF adjustment within the selected RF Domain.
on <DOMAIN-NAME>	The following keyword is common to all of the above parameters: • on <DOMAIN-NAME> – Optional. Displays Smart RF configuration, based on the parameters passed, on a specified RF Domain • on <DOMAIN-NAME> – Specify the RF Domain name.

- `show smart-rf radio {<MAC>|all-11an|all-11bgn|energy <MAC>} {on <DOMAIN-NAME>}`

smart-rf	Displays Smart RF related information
radio	Displays radio related commands
<MAC>	Optional. Displays details of a specified radio. Specify the radio's MAC address in the AA-BB-CC-DD-EE-FF format.
all-11an	Optional. Displays all 11a radios currently in the configuration
all-11bgn	Optional. Displays all 11bg radios currently in the configuration
energy {<MAC>}	Optional. Displays radio energy • <MAC> – Optional. Specify the radio's MAC address in the AA-BB-CC-DD-EE-FF format. Use this option to view an RF Domain member access point radio's operating channel, noise level and neighbor count. This information helps assess whether Smart RF neighbor recovery is needed in respect to poorly performing radios.
on <DOMAIN-NAME>	The following keyword is common to all of the above parameters: • on <DOMAIN-NAME> – Optional. Displays radio details on a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `show smart-rf radio {activity|neighbors} {<MAC>|all-11an|all-11bgn} {on <DOMAIN-NAME>}`

smart-rf	Displays Smart RF related information
radio	Displays Smart RF radio related commands
activity	Optional. Displays changes related to radio power, number of radio channels, or coverage holes. Use additional filters to view specific details.
<MAC>	Optional. Displays radio activity for a specified radio • <MAC> – Specify the radio's MAC address.
all-11an	Optional. Displays radio activity of all 11a radios in the configuration
all-11bgn	Optional. Displays radio activity of all 11bg radios in the configuration
on <DOMAIN-NAME>	Optional. Displays radio activity of all radios within a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `show smart-rf interfering-ap {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>}`

smart-rf	Displays Smart RF related information
interfering-ap	Displays interfering access points (requiring potential isolation) information

<MAC>	Optional. Displays information of a specified interfering access point • <MAC> – Specify the access point's MAC address. **Note:** Considers all APs if this parameter is omitted
<DEVICE-NAME>	Optional. Displays interfering access point information on a specified device • <DEVICE-NAME> – Specify the device name. **Note:** Considers all APs if this parameter is omitted
on <DOMAIN-NAME>	Optional. Displays all interfering access point information within a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `show smart-rf interfering-neighbors {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>|threshold <50-100>}`

smart-rf	Displays Smart RF related information
interfering-ap	Displays interfering neighboring access point information
<MAC>	Optional. Displays interfering neighboring access point information • <MAC> – Specify the access point's MAC address. **Note:** Considers all APs if this parameter is omitted
<DEVICE-NAME>	Optional. Displays all interfering neighboring access point information on a specified device • <DEVICE-NAME> – Specify the device name. **Note:** Considers all APs if this parameter is omitted
threshold <50-100>	Optional. Specifies the maximum attenuation threshold of interfering neighbors. • <50-100> – Specify a value from 50 -100 dB. Attenuation is a measure of the reduction of signal strength during transmission. Attenuation is the opposite of amplification, and is normal when a signal is sent from one point to another. If the signal attenuates too much, it becomes unintelligible. Attenuation is measured in decibels.
on <DOMAIN-NAME>	Optional. Displays radio activity of all radios within a specified RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

Example

```
rfs6000-81742D(config)#show smart-rf calibration-status
No calibration currently in progress

6.1.65 spanning-tree

show commands

Displays spanning tree utilization information

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show spanning-tree mst {configuration|detail|instance|on <DEVICE-NAME>}

show spanning-tree mst {configuration} {(on <DEVICE-NAME>)}

show spanning-tree mst {detail} {interface|on}

show spanning-tree mst {detail} interface {<INTERFACE-NAME>|ge <1-4>|me1|port-channel <1-2>|pppoe1|vlan <1-4094>|wwan1} {(on <DEVICE-NAME>)}

show spanning-tree mst {instance <1-15>} {interface <INTERFACE-NAME>} {(on <DEVICE-NAME>)}
```

Parameters

- `show spanning-tree mst {configuration} {(on <DEVICE-NAME>)}`

spanning-tree	Displays spanning tree utilization information
mst	Displays *Multiple Spanning Tree* (MST) related information
configuration {on <DEVICE-NAME>}	Optional. Displays MST configuration • on <DEVICE-NAME> – Optional. Displays MST configuration on a specified device • <DEVICE-NAME> – Specify the name of the AP or wireless controller. **Note:** If the 'on' keyword is used without any of the other options, the system displays a summary of spanning tree utilization information on the specified device.

- `show spanning-tree mst {detail} interface {<INTERFACE-NAME>|ge <1-4>|me1|port-channel <1-2>|pppoe1|vlan <1-4094>|wwan1} {(on <DEVICE-NAME>)}`

spanning-tree	Displays spanning tree information
mst	Displays MST configuration
detail	Optional. Displays detailed MST configuration, based on the parameters passed

interface [<INTERFACE>| ge <1-4>|me1| port-channel <1-2>| pppoe1| vlan <1-4094> wwan1]	Displays detailed MST configuration for a specified interface
	• <INTERFACE> – Displays detailed MST configuration for a specified interface. Specify the interface name.
	• ge <1-4> – Displays GigabitEthernet interface MST configuration
	  • <1-4> – Select the GigabitEthernet interface index from 1 - 4.
	• me1 – Displays FastEthernet interface MST configuration
	• port-channel – Displays port channel interface MST configuration
	  • <1-2> – Select the port channel interface index from 1 - 2.
	Contd..

	• pppoe1 – Displays PPP over Ethernet interface MST configuration • vlan – Displays VLAN interface MST configuration • <1-4094> – Select the SVI VLAN ID from 1 - 4094. • wwan1 – Displays Wireless WAN interface MST configuration
on <DEVICE-NAME>	The following keyword is common to all interfaces: • on <DEVICE-NAME> – Optional. Displays detailed MST configuration on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show spanning-tree mst {instance <1-15>} {interface <INTERFACE-NAME>} {(on <DEVICE-NAME>)}`

spanning-tree	Displays spanning tree information
mst	Displays MST configuration. Use additional filters to view specific details.
instance <1-15>	Optional. Displays information for a particular MST instance • <1-15> – Specify the instance ID from 1 - 15.
interface <INTERFACE-NAME>	Optional. Displays MST configuration for a specific interface instance. The options are: • <INTERFACE-NAME> – Displays MST configuration for a specified interface. Specify the interface name.
on <DEVICE-NAME>	Optional. Displays MST configuration on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D#show spanning-tree mst configuration
%%

6.1.66 startup-config

show commands

Displays complete startup configuration script

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show startup-config {include-factory}
```

Parameters

- `show startup-config {include-factory}`

startup-config include-factory	Displays startup configuration script • include-factory – Optional. Includes factory defaults

Example

```
nx9500-6C8809#show startup-config
!
! Configuration of NX9500 version 5.9.0.0-029R

6.1.67 t5

show commands

Displays adopted T5 controller statistics

Supported in the following platforms:

- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX7500, NX7510, NX7510, NX7520, NX9500, NX9510, NX9600, VX9000

NOTE: This command is applicable only on WiNG controllers with adopted and managed T5 controllers.

Syntax

```
show t5 [boot|clock|cpe|interface|mac|system|temperature|uptime|version|
wireless] {on <T5-DEVICE-NAME>}

show t5 [boot|clock|system|temperature|uptime|version] {on <T5-DEVICE-NAME>}

show t5 cpe [address|boot|ether port status|led|reset|system|uptime|version] {on
<T5-DEVICE-NAME>}

show t5 interface [dsl|fe|ge|radio]

show t5 interface [dsl|fe|ge] [counter|description|errors|status|utilization] {on
<T5-DEVICE-NAME>}

show t5 interface dsl custom [avg|dses|dsses|peak|uses|usses] {on <T5-DEVICE-
NAME>}

show t5 interface radio [stats|status|wlam-map] {on <T5-DEVICE-NAME>}

show t5 mac table [filter name [dsl<1-24>|ge <1-2>|vlan <1-4094>|wlan <1-24>] {on
<T5-DEVICE-NAME>}]

show t5 wireless [client|wlan]

show t5 wireless client {filter name [association-status|authentication-
status|bss|mac-address|retry-percentage|rssi-value]} {on <T5-DEVICE-NAME>}

show t5 wireless wlan counters [qos|rate|size] {on <T5-DEVICE-NAME>}
```

Parameters

- `show t5 [boot|clock|system|temperature|uptime|version] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
boot	Displays the T5 device's boot details. Use this option to view the primary and secondary image files available to use for booting up.
clock	Displays the T5 controller's system time, as reported from the controller itself or its remote NTP time resource
system	Displays T5 controller's system information, which includes the T5 controller's hostname, MAC address, RF Domain, system clock, uptime
temperature	Displays T5 controller's current temperature
uptime	Displays the T5 controller's uptime (the time it has been actively deployed and operational)

version	Displays the T5 controller's primary and secondary firmware images
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

- `show t5 cpe [address|boot|ether port status|led|reset|system|uptime|version] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
cpe	Displays the T5 controller managed *Customer Premises Equipment* (CPE) statistics based on the parameters passed. Use this command to verify each CPE address credentials and whether currently disconnected or ready for radio coverage area support.
address	Displays each linked CPE's current IP address used as its network identifier
boot	Displays the primary and secondary firmware versions available to each CPE, along with status of the most recent upgrade operation details
ether port status	Displays Ethernet port status
led	Displays whether the CPEs currently have their LEDs enabled or disabled. In places like hospitals, its not uncommon for access points to be operational, but their LEDs off as to not disturb patients.
reset	Displays the number times a CPE has been reset
system	Displays device hardware and SKU information for each CPE. Use this information to assess whether a controller is managing the correct CPE devices out of the total number of CPEs available.
uptime	Displays the time each CPE device has been actively deployed and operational
version	Displays the application and boot versions utilized by the CPE devices
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

- `show t5 interface [dsl|fe|ge] [counter|description|errors|status|utilization] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
interface	Displays T5 interface-related statistics based on the interface selected

[dsl|fe|ge|radio] [counter|description| errors|status| utilization]	Select the interface type. The options are: dsl, fe, ge.
	• dsl – Displays *Digital Subscriber Line* (DSL) interface related information
	• fe – Displays *Fast Ethernet* (FE) interface related information
	• ge – Displays *Gigabit Ethernet* (GE) interface related information
	The system displays the following information for the DSL, GE, and FE ports:
	• counter – Displays the following:
	  • Number of octets (bytes) received and transmitted on this port
	  • Number of data packets received and transmitted on this port
	  • Number of flow control (layer 2) packets received and transmitted on this port
	Contd..

contd..	• description – Displays the following: • The selected port's name • The numeric index assignable to each port • The 64 character maximum, unique, administrator-assigned description to each port • errors – Displays the following DSL interface related errors: • The name of the DSL utilized by each T5 controller connected CPE device. • The number of FECs detected in the downstream direction. *Forward Error Correction* (FEC) or channel coding is used for controlling errors over unreliable or noisy communication channels. • The number of CPE DSL coding violations (badly coded packets) detected in the downstream direction. • The number of FECs detected in the upstream direction. • The number of CPE DSL coding violations (badly coded packets) detected in the upstream direction. • status – Displays the following: • The selected port's name • Whether the port is currently up or down as a T5 controller transmit and receive resource • The port's current speed in MB • Whether pause packet utilization is currently off or on for the selected port • Whether each listed port is enabled or disabled by the administrator • utilization – Displays the following: • The selected port's name • The port's receive and transmit data rates (in Kbps) • The packet per second port receive and transmit rates (p/s) • Each port's receive and transmit direction utilization as a percentage of the total transmit bandwidth available.
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

• `show t5 interface dsl custom [avg|dses|dsses|peak|uses|usses] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
interface	Displays T5 interface-related statistics based on the interface selected
dsl	Selects A T5 controller's DSL interface. A T5 controller uses the operating system to manage its connected radio devices, as opposed to the WiNG operating used by RFS controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the operating system. These CPEs use a DSL as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.

custom [avg|dses|dsses|peak|uses|usses]	Displays following custom CPE DSL data: • avg – Each DSL's average response time in microseconds • dses – The number of seconds downstream DSL transmissions were negatively impacted by code violations. • dsses – The number of seconds downstream DSL transmissions were severely negatively impacted by code violations. • peak – Each DSL's maximum (best to date since the screen was refreshed) response time in microseconds. • uses – The number of seconds upstream DSL transmissions were negatively impacted by code violations. • usses – The number of seconds upstream DLS transmissions were severely negatively impacted by code violations.
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

- `show t5 interface radio [stats|status|wlam-map] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
interface	Displays T5 interface-related statistics based on the interface selected
radio [stats|status|wlan-map]	Displays following radio interface related information: • stats – Displays T5 radio interface statistics. A T5 controller uses the operating system to manage its connected radio devices, as opposed to the WiNG operating used by RFS controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the operating system. Use this option to view the following: • name – The administrator assigned name of each listed CPE radio as its unique identifier • Rx (Kbps) – The listed CPE radio's receive data rate (in Kbps). Use this information to assess RF activity versus other T5 managed CPE radios in the same radio coverage area. • Rx Octets – The number of octets (bytes) received with no errors by the listed T5 controller managed CPE radio. • Rx Packets – The number of data packets received for the listed T5 managed CPE radio since this screen was last refreshed. • Tx (Kbps) – The listed CPE radio's transmit data rate (in Kbps). Use this information to assess RF activity versus other T5 managed CPE radios in the same radio coverage area. • Tx Octets – Displays the number of octets (bytes) transmitted with no errors by the listed T5 controller managed CPE radio. • Tx Packets – The number of data packets transmitted from the listed T5 managed CPE radio since this screen was last refreshed. Contd..

contd..	• status – Displays T5 radio interface status information • name – The administrator assigned name of each listed CPE radio as its unique identifier. • Operational status – The radio interface's operational status (enabled/disabled). • mac – The T5 radio interface's MAC address. • transmit power – The T5 radio interface's transmit power. • Channel – The T5 radio interface's channel of operation. • wlan-map – Displays WLAN map membership data for T5 controller managed CPE radio devices. Use this option to view the following: • name – The administrator assigned name of each listed CPE radio as its unique identifier. • status – Whether a CPE radio is currently enabled or disabled as a radio resource for the WLAN(s) the CPE radio has been mapped to. • wlan-radio-mapping – The managed WLAN(s) each listed radio has been mapped to.
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

- `show t5 mac table [filter name [dsl<1-24>|ge <1-2>|vlan <1-4094>|wlan <1-24>] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
mac table [dsl<1-24>|ge <1-2>| vlan <1-4094>| wlan <1-24>]	Displays T5 MAC address table. The T5 MAC table displays a dynamic list of MAC addresses learned by the T5 controller over its ethernet interfaces. Use this information to identify devices and the interfaces on which they can be found. Use the following additional filters to filter on the basis of the VLAN or DSL interface: • dsl <1-24> – Filters information on the basis of the selected DSL port • ge <1-2> – Filters information on the basis of the selected GE port • vlan <1-4094 – Filters information on the basis of the selected VLAN port • wlan <1-24> – Filters on the basis of the selected CPE
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

- `show t5 wireless client {filter name [association-status|authentication-status|bss|mac-address|retry-percentage|rssi-value]} {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
wireless client	Displays the T5 wireless client and WLAN related statistics • client – Displays read-only device information for wireless clients associated with the selected T5 controller and its connected CPE device radios. Use this information to assess if configuration changes are required to improve client performance. Use the additional filters available to view specific client-related information. The options are: • association-status Contd..

	• authentication-status • bss • retry-percentage • rssi-value
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

- `show t5 wireless wlan counters [qos|rate|size] {on <T5-DEVICE-NAME>}`

t5	Displays adopted T5 controller statistics
wireless wlan [qos|rate|size]	Displays the T5 wireless WLAN related statistics • wlan – Displays following T5 controller traffic counter statistics: • qos – T5 controller WLAN QoS utilization. Displays the number of background (low priority) and best-effort packets received and transmitted on each listed T5 controller managed WLANs • rates – Displays T5 controller's WLAN utilization data rate statistics • Lists the number of data packets received and transmitted in the WLAN that have been relegated to a 1 Mbps data rate • Lists the number of data packets received and transmitted in the WLAN by T5 controller connected devices at 54Mbps • size – Displays the number of data packets received and transmitted, in each listed WLAN, greater than 1024 bytes
on <T5-DEVICE-NAME>	Optional. Executes the command on a specified T5 device • <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

Example

The following examples are for show commands executed on the 't5-ED7C6C' controller adopted by the 'nx9500-6C8809' wireless controller:

```
nx9500-6C8809(config)#show t5 boot on t5-ED7C6C

6.1.68 terminal

show commands

Displays terminal configuration parameters

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show terminal
```

Parameters

None

Example

```
rfs6000-81742D(config)#show terminal
Terminal Type: xterm
Length: 24     Width: 200
rfs6000-81742D(config)#
```

6.1.69 timezone

show commands

Displays a device's timezone

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show timezone
```

Parameters

None

Example

```
rfs6000-81742D(config)#show timezone
Timezone is America/Los_Angeles
rfs6000-81742D(config)#
```

6.1.70 traffic-shape

show commands

Displays traffic-shaping related configuration details and statistics

Traffic shaping regulates network data transfers to ensure a specific performance level. Traffic shaping delays the flow of packets defined as less important than prioritized traffic streams. Traffic shaping enables traffic control out an interface to match its flow to the speed of a remote target's interface and ensure traffic conforms applied policies. Traffic can be shaped to meet downstream requirements and eliminate network congestion when data rates are in conflict.

Apply traffic shaping to specific applications to apply application categories. When application and ACL rules are conflicting, ACL rules take precedence for the traffic shaping class. Using traffic shaping, an application takes precedence over an application category.

Supported in the following platforms:

- Access Points — AP622, AP6522, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530

Syntax

```
show traffic-shape [priority-map|statistics {class <1-4>}|status] {on <DEVICE-NAME>}
```

Parameters

```
• show traffic-shape [priority-map|statistics {class <1-4>}|status] {on <DEVICE-NAME>}
```

traffic-shape	Displays traffic-shaping related configuration details and statistics
priority-map	Displays the traffic shaper queue priority. There are 8 queues (0 - 7), and traffic is queued in each based on incoming packets 802.1p markings.
statistics class <1-4>	Displays traffic-shaping related statistics for all traffic shaper classes or for a selected class • class <1-4> – Optional. Specify the traffic class from 1 - 4. The system displays traffic shaping statistics for the selected class. If not selected, the system statistics for all classes.
status	Displays the controller or service platform's traffic shaping status (whether running or not)
on <DEVICE-NAME>	Optional. Displays traffic-shaping related configuration details and statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
ap7532-DEB9B0#show traffic-shape priority-map
----------------------------------------
  DOT1P-PRIORITY    TX-SHAPER-PRIORITY
----------------------------------------
 0                 2

6.1.71 upgrade-status

show commands

Displays the last image upgrade status

NOTE: This command is not available in the USER EXEC Mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show upgrade-status {detail|on}
show upgrade-status {detail} {(on <DEVICE-NAME>)}
```

Parameters

- `show upgrade-status {detail} {(on <DEVICE-NAME>)}`

upgrade-status	Displays last image upgrade status and log
detail	Optional. Displays last image upgrade status in detail
on <DEVICE-NAME>	The following keyword is recursive and common to the 'detail' parameter: • on <DEVICE-NAME> – Optional. Displays last image upgrade status on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform. **Note:** If the 'on' keyword is used without the 'detail' keyword, the system displays a summary of upgrade status and log on the specified device.

Example

```
nx9500-6C8809#show upgrade-status
Last Image Upgrade Status :In_Progress(17 percent completed)
Last Image Upgrade Time   : 2017-02-11 12:26:29

6.1.72 version

show commands

Displays a device's software and hardware version

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show version {on <DEVICE-NAME>}
```

Parameters

- `show version {on <DEVICE-NAME>}`

version {on <DEVICE-NAME>}	Displays software and hardware versions on all devices or a specified device • on <DEVICE-NAME> – Optional. Displays software and hardware versions on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C8809#show version
NX9500 version 5.9.0.0-029R
Copyright (c) 2004-2017 Extreme Networks, Inc. All rights reserved.

nx9500-6C8809#
```

6.1.73 vrrp

show commands

Displays the following *Virtual Router Redundancy Protocol* (VRRP) related statistics: configuration error, router redundancy information in brief and detail. VRRP configuration errors include mismatch of authentication credentials, invalid packet checksums, invalid packet types, invalid virtual route IDs, TTL errors, packet length errors and invalid (non matching) VRRP versions.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show vrrp [brief|details|error-stats|stats]
show vrrp [brief|details|stats] {<1-255>} {(on <DEVICE-NAME>)}
show vrrp error-stats {on <DEVICE-NAME>}
```

Parameters

- `show vrrp [brief|details|stats] {<1-255>} {(on <DEVICE-NAME>)}`

vrrp	Displays VRRP related statistics in brief or in detail depending on the option selected
brief	Displays virtual router information in brief
details	Displays virtual router information in detail
stats	Displays virtual router statistics
<1-255>	The following keyword is common to all of the above parameters: • <1-255> – Optional. Displays information for a specified Virtual Router. Specify the router's ID from 1 - 255.
on <DEVICE-NAME>	The following keyword is recursive and common to the '<1-255>' parameter: • on <DEVICE-NAME> – Optional. Displays specified router information on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show vrrp error-stats {on <DEVICE-NAME>}`

vrrp	Displays VRRP related statistics in brief or in detail depending on the option selected
error-stats {on <DEVICE-NAME>}	Displays global error statistics • on <DEVICE-NAME> – Optional. Displays global error statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
rfs6000-81742D(config)#show vrrp error-stats
Last protocol error reason: none
IP TTL errors: 0
Version mismatch: 0
Packet Length error: 0
Checksum error: 0
Invalid virtual router id: 0
Authentication mismatch: 0
Invalid packet type: 0
rfs6000-81742D(config)#

rfs6000-81742D(config)#show vrrp details
VRRP Group 1:
  version 2
  interface none
  configured priority 1
  advertisement interval 1 sec
  preempt enable, preempt-delay 0
  virtual mac address 00-00-5E-00-01-01
  sync group disable
rfs6000-81742D(config)#
```

6.1.74 web-filter

show commands

Displays Web filtering related information

Use this command to view information on Web requests for content and whether the requests were blocked or approved based on URL filter settings defined for the selected controller or service platform. A URL filter is comprised of several filter rules. A whitelist bans all sites except the categories and URL lists defined in the whitelist. The blacklist allows all sites except the categories and URL lists defined in the blacklist.

Supported in the following platforms:

- Access Points — AP6522, AP6532, AP7131, AP7502, AP7522, AP7532, AP7562, AP8132
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX6524, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show web-filter [category|category-type|config|filter-level [basic|high|low|
medium|medium-high]|statistics {on <DEVICE-NAME>}|status]
```

Parameters

```
• show web-filter [category|category-type|config|filter-level [basic|high|low|
medium|medium-high]|statistics {on <DEVICE-NAME>}|status]
```

web-filter	Displays an existing and configured Web filter details
category	Displays Web filter categories. A category is a pre-defined URL list available in the WiNG software.
category-type	Displays the Web filter category types. This is a pre-configured list of categories and sub-categories in to which commonly accessed URLs have been classified.
config	Displays all existing Web filters and their configuration details
filter-level [basic|high|low|medium|medium-high]	Displays category types for the selected filter-level. Each filter level is pre-configured to use a set of category types. You cannot change the categories in the category types used for these pre-configured filter-level setting. Nor can you add, modify, or remove the category types mapped to a filter-level setting.The options are: • basic – Displays all category types configured for the basic filter-level • high – Displays all category types configured for the high filter-level • low – Displays all category types configured for the low filter-level • medium – Displays all category types configured for the medium filter-level • medium-high – Displays all category types configured for the medium-high filter-level
statistics {on <DEVICE-NAME>}	Displays Web filter statistics on a specified device • on <DEVICE-NAME> – Optional. Specifies the device name • <DEVICE-NAME> – Specify the name of the AP, controller, or service platform. **Note:** Web filtering is a licensed feature, and only when enforced can the system display Web filtering statistics.

status {on <DEVICE-NAME>}	Displays Web filter status on a specified device • on <DEVICE-NAME> – Optional. Specifies the device name • <DEVICE-NAME> – Specify the name of the AP, controller, or service platform. **Note:** Web filtering is a licensed feature, and only when enforced can the system display Web filtering status.

Example

```
nx9500-6C8809(config)#show web-filter category
    advertisement-popups
        Sites that provide advertising graphics or other ad content
        files such as banners and pop-ups.
    alcohol-tobacco
        Sites that promote or sell alcohol- or tobacco-related
        products or services.
    anonymizers
        Sites and proxies that act as an intermediary for surfing to
        other websites in an anonymous fashion, whether to
        circumvent web filtering or for other reasons.
    arts
        Sites with artistic content or relating to artistic
        institutions such as theaters, museums, galleries, dance
        companies, photography, and digital graphic resources.
    botnets
        Sites that use bots (zombies) including command-and-control
        sites.
--More--
nx9500-6C8809(config)#

nx9500-6C8809(config)#show web-filter config
URL filters configured for this device are:
    WebFilter_ShoppingSites
        Blacklisted categories:
            shopping,
        Whitelisted categories:
            <AllowedShopping>,
nx9500-6C8809(config)#
```

6.1.75 what

show commands

Displays details of a specified search phrase (performs global search)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show what [contain|is] <WORD> {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `show what [contain|is] <WORD> {on <DEVICE-OR-DOMAIN-NAME>}`

contain <WORD>	Searches on all the items that contain a specified word • <WORD> – Specify a word to search (for example, MAC address, hostname, etc.).
is <WORD>	Searches on an exact match • <WORD> – Specify a word to search (for example, MAC address, hostname, etc.).
on <DEVICE-OR-DOMAIN-NAME>	Optional. Performs global search on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Example

```
rfs4000-229D58#show what contain default

Parameters

- `show wireless ap {configured}`

wireless	Displays wireless configuration parameters
ap	Displays managed access point information
configured	Optional. Displays configured AP information, such as name, MAC address, profile, RF Domain, and adoption status

- `show wireless ap {detail} {<MAC/HOST-NAME>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
ap	Displays managed access point information
detail <MAC/HOST-NAME>	Optional. Displays detailed information for all APs or a specified AP • <MAC/HOST-NAME> – Optional. Displays information for a specified AP. Specify the AP's MAC address.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'detail <MAC/HOST-NAME>' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays information on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless ap {load-balancing} {client-capability|events|neighbors} {(on <DEVICE-NAME)}`

wireless	Displays wireless configuration parameters
ap	Displays managed access point information
load-balancing {client-capability| events|neighbors}	Optional. Displays load balancing status. Use additional filters to view specific details. • client-capability – Optional. Displays client band capability • events – Optional. Displays client events • neighbors – Optional. Displays neighboring clients
on <DEVICE-NAME>	The following keyword is recursive and common to the 'client-capability', 'events', and 'neighbors' parameters: • on <DEVICE-NAME> – Optional. Displays load balancing information, based on the parameters passed, on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

- `show wireless bridge {candidate-ap} {<MAC/HOSTNAME> {<1-3>}} {(filter radio-mac <RADIO-MAC>)} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration statistics
bridge candidate-ap	Optional. Displays information about the candidate infrastructure access points as well as the infrastructure access point that the client-bridge radio has selected **Note:** When enabled, the client-bridge radio scans its defined channels to locate the best candidate access point servicing the infrastructure WLAN.
<MAC/HOSTNAME> <1-3>	Optional. Specify the client-bridge access point's hostname or MAC address. Optionally append the radio interface's number to form client-bridge in the form of AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX. • <1-3> – Optional. Radio interface index if not specified as part of mesh ID.
filter radio-mac <RADIO-MAC>	This is a recursive parameter and common to all of the above options. • filter radio-mac – Optional. Provides additional filters to specifically identify the radio by its MAC address • <RADIO-MAC> – Specify the radio's MAC address.
on <DEVICE-OR-DOMAIN-NAME>	This is a recursive parameter and common to all of the above options. • on <DEVICE-OR-DOMAIN-NAME> – Optional. Executes the command on a specified device or devices within a specified RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the AP, controller, service platform, or RF Domain name.

- `show wireless bridge {certificate} status {on <DEVICE-NAME>}`

wireless	Displays wireless configuration statistics
bridge certificate status	Optional. Displays all client bridges in configuration and the status of their PKCS#12 certificates
on <DEVICE-NAME>	Optional. Executes the command on a specified device • <DEVICE-NAME> – Specify the AP, controller, service platform name.

- `show wireless bridge {config}`

wireless	Displays wireless configuration statistics
bridge config	Optional. Displays all client bridges in configuration The output displays the configured client-bridges' hostname, MAC address, profile, RF Domain, SSID, band, encryption, authentication, and EAP username.

- `show wireless bridge {hosts} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration statistics
bridge hosts	Optional. Displays the client bridge host information The output displays the configured client-bridges' host's MAC Address, bridge MAC address, IPv4 address, bridging status, and activity **Note:** The HOST MAC column displays real MAC addresses of wired hosts, while the BRIDGE MAC column displays the translated MAC addresses. The BRIDGE MAC column is based on the radio 2 base MAC address and increments by 1 for each wired host connected to the client bridges Ge1 port.

on <DEVICE-OR-DOMAIN-NAME>	Optional. Executes the command on a specified device or devices within a specified RF Domain • <DEVICE-OR-DOMAIN-NAME> – Optional. Specify the AP, controller, service platform, or Domain name.

- `show wireless bridge {statistics} {rf|traffic} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration statistics
bridge statistics	Optional. Displays the client-bridge related statistics
rf	Optional. Displays the client-bridge related RF statistics The output displays the signal, noise, SNR, TX/RX rates, retries, and errors.
traffic	Optional. Displays the client-bridge related traffic statistics The output displays TX/RX bytes, TX/RX packets, TX/RX bits/second, and dropped packets.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Executes the command on a specified device or devices within a specified RF Domain • on <DEVICE-OR-DOMAIN-NAME> – Optional. Specify the AP, controller, service platform, or Domain name.

- `show wireless client {association-history <MAC>} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed
association-history <MAC>	Optional. Displays association history for a specified client • <MAC> – Specify the MAC address of the client.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays association history on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client {detail <MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed
detail <MAC>	Optional. Displays detailed wireless client(s) information • <MAC> – Optional. Displays detailed information for a specified wireless client. Specify the MAC address of the client.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'detail <MAC>' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays detailed information on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client {filter ip [<IP>|not <IP>]} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed

filter IP [<IP>|not <IP>]	Optional. Uses IP addresses to filter wireless clients • <IP> – Selects clients with IP address matching the <IP> parameter • not <IP> – Inverts the match selection
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'IP' and 'not IP' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays selected wireless client information on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client {filter} {state [data-ready|not [data-ready|roaming]|roaming]} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed
filter state [data-ready| not [data-ready| roaming]| roaming]	Optional. Filters clients based on their state • data-ready – Selects wireless clients in the data-ready state • not [data-ready|roaming] – Inverts match selection. Selects wireless clients neither ready nor roaming • Roaming – Selects roaming clients
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'ready', 'not', and 'roaming' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays selected client details on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client {filter} {wlan [<WLAN-NAME>|not <WLAN-NAME>]} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed
filter wlan [<WLAN-NAME>| not <WLAN-NAME>]	Optional. Filters clients on a specified WLAN • <WLAN-NAME> – Specify the WLAN name. • not <WLAN-NAME> – Inverts the match selection
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'WLAN and 'not' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Filters clients on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client {statistics} {detail <MAC>|rf|window-data <MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed

statistics {detail <MAC>|rf| window-data <MAC>}	Optional. Displays detailed client statistics. Use additional filters to view specific details. • detail <MAC> – Optional. Displays detailed client statistics • <MAC> – Optional. Displays detailed statistics for a specified client. Specify the client's MAC address. • rf – Optional. Displays detailed client statistics on a specified device or RF Domain • window-data <MAC> – Optional. Displays historical data, for a specified client • <MAC> – Optional. Specify the client's MAC address
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'detail <MAC>', 'RF', and 'window-data <MAC>' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays client statistics, based on the parameters passed, on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client` *`{tspec} {<MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`*

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed
tspec <MAC>	Optional. Displays detailed *traffic specification* (TSPEC) information for all clients or a specified client • <MAC> – Optional. Displays detailed TSPEC information for a specified client. Specify the MAC address of the client.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'tspec <MAC>' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays detailed TSPEC information for wireless clients on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client` *`{include-ipv6} {detail <MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`*

wireless	Displays wireless configuration parameters
client	Displays client information based on the parameters passed
include-ipv6	Includes IPv6 address (if known) of wireless clients
detail <MAC>	Optional. Displays detailed wireless client(s) information • <MAC> – Optional. Displays detailed information for a specified wireless client. Specify the MAC address of the client.
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'detail <MAC>' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays detailed information on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless client` *`{include-ipv6} {filter {ip|ipv6|state|wlan}}`*

wireless	Displays wireless configuration parameters
client	Displays wireless client information based on the parameters passed

include-ipv6 {filter}	Optional. Includes IPv6 address (if known) of wireless clients • filter – Optional. Defines additional filters. Use one of the following options to filter clients: ip, ipv6, state, and wlan By default the system only displays the IPv4 address of clients. The include-ipv6 parameter includes the known IPv6 address of each client.
ip [<IPv4>|not <IPv4>]	Optional. Displays wireless client information based on the IPv4 address passed • <IPv4> – Displays information of the client identified by the <IPv4> parameter • not <IPv4> – Inverts the match selection
ipv6 [<IPv6>| not <Pv6>]	Optional. Displays wireless client information based on the IPv6 address passed • <IPv6> – Displays information of the client identified by the <IPv6> parameter • not <IPv6> – Inverts the match selection
filter state [data-ready| not [data-ready| roaming]|roaming]	Optional. Filters wireless client information based on their state • data-ready – Displays information of wireless clients in the data-ready state • not [data-ready|roaming] – Inverts match selection. Displays information of wireless clients neither ready nor roaming • Roaming – Displays information of roaming clients
wlan [<WLAN-NAME>| not <WLAN-NAME>]	Optional. Displays wireless client information based on the WLAN name passed • <WLAN-NAME> – Specify the WLAN name. • not <WLAN-NAME> – Inverts match selection

- `show wireless coverage-hole-incidents` *`{detail} {filter [ap <MAC/HOSTNAME>|client-mac <MAC>]|summary} {(on <DOMAIN-NAME>)}`*

wireless	Displays wireless configuration parameters. Use this option to view coverage-hole related incidents encountered by wireless clients and reported to associated access points.
coverage-hole-incidents	Displays coverage-hole related statistics

detail filters
[ap <MAC/HOSTNAME>|
client-mac <MAC>]
	Optional. Displays detailed coverage-hole related statistics
	• filters – Optional. Displays detailed coverage-hole related statistics on a per access point or wireless-client basis
	  • ap <MAC/HOSTNAME> – Displays detailed coverage-hole related statistics for a specified access point
	  • <MAC/HOSTNAME> – Specify the access point's device name or MAC address.
	  • client-mac <MAC> – Displays detailed coverage-hole related statistics encountered by a specified wireless client
	  • <MAC> – Specify the wireless client's MAC address
	Note: If the command is executed without any parameters being included, the system displays all coverage-hole related statistics.

summary	Optional. Displays a summary of coverage-hole related statistics
on <DOMAIN-NAME>	This parameter is recursive and is common to the 'detail' and 'summary' keywords: • on <DOMAIN-NAME> – Optional. Displays detailed or summary coverage-hole related statistics on a specified RF Domain • <DOMAIN-NAME> – Specify the domain name.

- `show wireless meshpoint {config} {filter [device <DEVICE-NAME>|rf-domain <DOMAIN-NAME>]}`

wireless	Displays wireless configuration parameters. Use this option to view detailed statistics on each Mesh-capable client available within controller's adopted access point's radio coverage area. A mesh network is where one where each node is able to communicate with other nodes and maintain more then one path to the other mesh nodes within the mesh network. A mesh network provides robust, reliable and redundant connectivity to all the members of the mesh network. When one member of the mesh network becomes unavailable, the other mesh nodes are still able to communicate with one another either directly or indirectly through intermediate nodes.
meshpoint	Displays meshpoint related information
config	Optional. Displays all meshpoint configuration

filters [device <DEVICE-NAME>|rf-domain <DOMAIN-NAME>]	Optional. Provides additional filter options, such as device name and RF Domain name.
	• device <DEVICE-NAME> – Displays meshpoints applied to a specified device
	  • <DEVICE-NAME> – Specify the device name.
	• rf-domain – <DOMAIN-NAME> – Displays meshpoints applied to a specified RF Domain
	  • <DOMAIN-NAME> – Specify the domain name.

- `show wireless meshpoint {detail} {<MESHPOINT-NAME>}`

wireless	Displays wireless configuration parameters
meshpoint	Displays meshpoint related information. Use this option to view detailed statistics on each Mesh-capable client available within controller's adopted access point's radio coverage area. A mesh network is where one where each node is able to communicate with other nodes and maintain more then one path to the other mesh nodes within the mesh network. A mesh network provides robust, reliable and redundant connectivity to all the members of the mesh network. When one member of the mesh network becomes unavailable, the other mesh nodes are still able to communicate with one another either directly or indirectly through intermediate nodes.
detail <MESHPOINT-NAME>	Optional. Displays detailed information for all meshpoints or a specified meshpoint • <MESHPOINT-NAME> – Optional. Displays detailed information for a specified meshpoint. Specify the meshpoint name.

- `show wireless meshpoint {multicast|path|proxy|root|security|statistics} [<MESHPOINT-NAME>|detail] {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters

meshpoint	Displays meshpoint related information. Use this option to view detailed statistics on each Mesh-capable client available within controller's adopted access point's radio coverage area. A mesh network is where one where each node is able to communicate with other nodes and maintain more then one path to the other mesh nodes within the mesh network. A mesh network provides robust, reliable and redundant connectivity to all the members of the mesh network. When one member of the mesh network becomes unavailable, the other mesh nodes are still able to communicate with one another either directly or indirectly through intermediate nodes.
multicast	Optional. Displays meshpoint multicast information
path	Optional. Displays meshpoint path information
proxy	Optional. Displays meshpoint proxy information
root	Optional. Displays meshpoint root information
security	Optional. Displays meshpoint security information
statistics	Optional. Displays meshpoint statistics
[<MESHPOINT-NAME>| detail]	The following keywords are common to all of the above parameters: • <MESHPOINT-NAME> – Displays meshpoint related information for a specified meshpoint. Specify the meshpoint name. • detail – Displays detailed multicast information for all meshpoints
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to all of the above parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays detailed multicast information on a specified device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless meshpoint` *`{neighbor}`* `[<MESHPOINT-NAME>|detail|statistics` *`{rf}`*`]` *`{on <DEVICE-OR-DOMAIN-NAME>}`*

wireless	Displays wireless configuration parameters
meshpoint	Displays meshpoint related information. Use this option to view detailed statistics on each Mesh-capable client available within controller's adopted access point's radio coverage area. A mesh network is where one where each node is able to communicate with other nodes and maintain more then one path to the other mesh nodes within the mesh network. A mesh network provides robust, reliable and redundant connectivity to all the members of the mesh network. When one member of the mesh network becomes unavailable, the other mesh nodes are still able to communicate with one another either directly or indirectly through intermediate nodes.
neighbor	Optional. Displays meshpoint neighbor information, based on the parameters passed
[<MESHPOINT-NAME>|detail| statistics {rf}]	Select one of the following parameter to view neighbor related information • <MESHPOINT-NAME> – Displays detailed multicast information for a specified meshpoint. Specify the meshpoint name. • detail – Displays detailed multicast information for all meshpoints • statistics – Displays neighbors related statistics • rf – Optional. Displays RF related statistics for neighbors

on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to all of the above parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays meshpoint neighbor information, based on the parameters passed, on a specified device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless meshpoint {tree} {on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
meshpoint	Displays meshpoint related information **Note:** The *show > wireless > meshpoint > tree* command can be executed only from a wireless controller.
tree	Optional. Displays meshpoint network tree
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays meshpoint network tree on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Optional. Specify the name of AP, wireless controller, service platform, or RF Domain

- `show wireless meshpoint {usage-mappings|on <DEVICE-OR-DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
meshpoint	Displays meshpoint related information
usage-mappings	Optional. Lists all devices and profiles using the meshpoint
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays meshpoint applied to a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Optional. Specify the name of AP, wireless controller,service platform, or RF Domain

- `show wireless mobility-database {on <DEVICE-NAME>}`

wireless	Displays wireless configuration parameters
mobility-database	Displays controller-assisted mobility database
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'filter <RADIO-MAC>' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays detailed radio operation status for all or a specified radio on a specified device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless mint [client|detail] {portal-candidates {<DEVICE-NAME>|filter <RADIO-MAC>}|statistics} (on <DEVICE-OR-DOMAIN-NAME>)`

wireless mint [client|detail]	Displays radio MiNT-mesh related statistics • client – Displays MiNT-mesh client related information. Use the 'client' option to view detailed statistics on each Mesh capable client available within the selected access point's radio coverage area. • detail – Displays detailed MiNT-mesh related information
portal-candidates	Displays detailed information about portal candidates for a MiNT-mesh. Mesh points connected to an external network and forwarding traffic in and out are Mesh portals. Mesh points must find paths to a portal to access the Internet. When multiple portals exist, the mesh point must select one. Use the additional filter option to view specific portal candidate details.

statistics	This option is common to the 'client' and 'detail' keyword. Displays MiNT-mesh client statistical data
on <DEVICE-OR-DOMAIN-NAME>	This option is common to the 'client' and 'detail' keyword. Displays MiNT-mesh client related information on a specific device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the access point, controller, or RF Domain name.

- `how wireless mint portal statistics` *`{on <DEVICE-OR-DOMAIN-NAME>}`*

wireless mint	Displays radio MiNT-mesh related statistics
links	Displays MiNT-mesh links related information. MiNT Links are automatically created between controllers and access points during adoption using MLCP (*MiNT Link Creation Protocol*). They can also be manually created between a controller and access point (or) between access points. MiNT links are manually created between controllers while configuring a cluster. Level 2 (or) remote MiNT links are controller aware links, and requires IP network for communication. This level 2 MiNT links at access points are intended for remote adaptive AP deployment and management from NOC. With Level2 MiNT links, access points are only aware of the controllers and not about other access points. Level 2 MiNT links also provide partitioning, between access points deployed at various remote sites.
on <DEVICE-OR-DOMAIN-NAME>	Displays MiNT-mesh links on a specific device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the access point, controller, or RF Domain name.

- `show wireless mint portal statistics` *`{on <DEVICE-OR-DOMAIN-NAME>}`*

wireless mint	Displays radio MiNT-mesh related statistics
portal	Displays legacy client on MiNT-mesh portal
on <DEVICE-OR-DOMAIN-NAME>	Displays legacy client on MiNT-mesh portal on a specific device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the access point, controller, or RF Domain name.

- `show wireless radio` *`{detail} {<DEVICE-NAME> {<1-3>|filter|on}}`*

wireless	Displays wireless configuration parameters
radio	Displays radio operation status and other related information. Use this option to view radio association data, including radio ID, connected APs, radio type, quality index and *Signal to Noise Ratio* (SNR). This data is reported to the managing controller or service platform from connected access point radios and should be refreshed periodically. A radio's RF Mode displays as: • 2.4GHz-wlan – If it is configured to provide 2.4 GHz WLAN service • 5GHz-wlan – If it is configured to provide 5.0 GHz WLAN service • bridge – If it is configured to provide client-bridge operation
detail	Optional. Displays detailed radio operation status
<DEVICE-NAME>	Optional. Displays detailed information for a specified radio. Specify the MAC address or hostname, or append the interface number to form the radio ID in the AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX format.

<1-3>	Optional. Specify the radio interface index from 1 - 3 (if not specified as part of the radio ID)
filter <RADIO-MAC>	Optional. Provides additional filters • <RADIO-MAC> – Optional. Filters based on the radio MAC address
on <DEVICE-OR-DOMAIN-NAME>	Optional. After specifying the radio MAC address, further refine the search by specifying a device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless radio {detail} {filter <RADIO-MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
radio	Displays radio operation status and other related information. Use this option to view radio association data, including radio ID, connected APs, radio type, quality index and *Signal to Noise Ratio* (SNR). This data is reported to the managing controller or service platform from connected access point radios and should be refreshed periodically. A radio's RF Mode displays as: • 2.4GHz-wlan – If it is configured to provide 2.4 GHz WLAN service • 5GHz-wlan – If it is configured to provide 5.0 GHz WLAN service • bridge – If it is configured to provide client-bridge operation
detail	Optional. Displays detailed radio operation status
filter <RADIO-MAC>	Optional. Provides additional filter options • <RADIO-MAC> – Uses MAC address to filter radios
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'filter <RADIO-MAC>' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays detailed radio operation status for all or a specified radio on a specified device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless radio {statistics} {on <DEVICE-OR-DOMAIN-NAME>|rf {on <DEVICE-OR-DOMAIN-NAME>}}`

wireless	Displays wireless configuration parameters
radio	Displays radio operation status and other related information. Use this option to view radio association data, including radio ID, connected APs, radio type, quality index and SNR. This data is reported to the managing controller or service platform from connected access point radios and should be refreshed periodically. A radio's RF Mode displays as: • 2.4GHz-wlan – If it is configured to provide 2.4 GHz WLAN service • 5GHz-wlan – If it is configured to provide 5.0 GHz WLAN service • bridge – If it is configured to provide client-bridge operation
statistics	Optional. Displays radio traffic and RF statistics

on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays traffic and RF related statistics on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.
rf {on <DEVICE-OR-DOMAIN-NAME>}	Optional. Displays RF statistics on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless radio {statistics} {detail|window-data} {<DEVICE-NAME>} {<1-3>| filter <RADIO-MAC>} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
radio	Displays radio operation status and other related information. Use this option to view radio association data, including radio ID, connected APs, radio type, quality index and SNR. This data is reported to the managing controller or service platform from connected access point radios and should be refreshed periodically. A radio's RF Mode displays as: • 2.4GHz-wlan – If it is configured to provide 2.4 GHz WLAN service • 5GHz-wlan – If it is configured to provide 5.0 GHz WLAN service • bridge – If it is configured to provide client-bridge operation
statistics {detail|window-data}	Optional. Displays radio traffic and RF statistics. Use additional filters to view specific details. The options are: are: • detail – Displays detailed traffic and RF statistics of all radios • window-data – Displays historical data over a time window
<DEVICE-NAME>	The following keywords are common to the 'detail' and 'window-data' parameters: • <DEVICE-NAME> – Optional. Specify the MAC address or hostname, or append the interface number to form the radio ID in the AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX format.
<1-3>	Optional. Specify the radio interface index from 1- 3, if not specified as part of the radio ID using the preceding parameter.
filter <RADIO-MAC>	Optional. Provides additional filters • <RADIO-MAC> – Optional. Filters based on the radio MAC address
on <DEVICE-OR-DOMAIN-NAME>	Optional. After specifying the radio MAC address, further refine the search by specifying a device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless radio {tspec} {<DEVICE-NAME>|filter|on <DEVICE-OR-DOMAIN-NAME>| option}`

wireless	Displays wireless configuration parameters

radio	Displays radio operation status and other related information. Use this option to view radio association data, including radio ID, connected APs, radio type, quality index and *Signal to Noise Ratio* (SNR). This data is reported to the managing controller or service platform from connected access point radios and should be refreshed periodically. A radio's RF Mode displays as: • 2.4GHz-wlan – If it is configured to provide 2.4 GHz WLAN service • 5GHz-wlan – If it is configured to provide 5.0 GHz WLAN service • bridge – If it is configured to provide client-bridge operation
tspec	Optional.Displays TSPEC information on a radio
<DEVICE-NAME>	Optional. Specify the MAC address or hostname, or append the interface number to form the radio ID in the AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX format.
filter	Optional. Provides additional filters • <RADIO-MAC> – Optional. Filters based on the radio MAC address
on <DEVICE-OR-DOMAIN-NAME>	Optional. After specifying the radio MAC address, further refine the search by specifying a device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless regulatory [channel-info <WORD>|county-code <WORD>]`

wireless	Displays wireless configuration parameters
regulatory	Displays wireless regulatory information
channel-info <WORD>	Displays channel information • <WORD> – Specify the channel number.
country-code <WORD>	Displays country code to country name information • <WORD> – Specify the two letter ISO-3166 country code.

- `show wireless regulatory device-type [ap6521|ap6522|ap6532|ap6562|ap7131|ap7161|ap7181|ap7502|ap7522|ap7532|ap7562|ap8132|ap8163|ap82xx|ap8432|ap8533|rfs4000] <WORD>`

wireless	Displays wireless configuration parameters
regulatory	Displays wireless regulatory information
device-type [ap6521|ap6522|ap6532|ap6562|ap7161| ap7181|ap7502|ap7522|ap7532|ap7562|ap8132|ap8163|ap82xx|ap8432| ap8533|rfs4000] <WORD>	Displays wireless regulatory information based on the device type selected. Select the device type. The options are: AP6521, AP6522, AP6532, AP6562, AP7131, AP7161, AP7181, AP7502, AP7522, AP7532, AP7562, AP8132, AP8163, AP82XX, AP8432, AP8533, RFS4000. After specifying the device type, specify the country code. • <WORD> – Specify the two letter ISO-3166 country code.

- `show wireless rf-domain statistics {detail} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
rf-domain statistics	Displays RF Domain statistics
details	Optional. Displays detailed RF Domain statistics

on <DEVICE-OR-DOMAIN-NAME>	The following keyword is recursive and common to the 'detail' parameter: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays RF Domain statistics on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless sensor-server` *`{on <DEVICE-OR-DOMAIN-NAME>}`*

wireless	Displays wireless configuration parameters
sensor- server {on <DEVICE-OR-DOMAIN-NAME>}	Displays AirDefense sensor server configuration details • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays AirDefense sensor server configuration on a specified device or RF Domain

- `show wireless unsanctioned aps` *`{detailed|statistics} {(on <DEVICE-OR-DOMAIN-NAME>)}`*

wireless	Displays wireless configuration parameters
unsanctioned aps	Displays unauthorized APs. Use additional filters to view specific details.
detailed	Optional. Displays detailed unauthorized APs information
statistics	Optional. Displays channel statistics
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'detailed' and 'statistics' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Specify the name of the AP, wireless controller, service platform, or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wireless wips [client-blacklist|event-history]` *`{on <DEVICE-OR-DOMAIN-NAME>}`*

wireless	Displays wireless configuration parameters
wips [client-blacklist|event-history]	Displays the WIPS details • client-blacklist – Displays blacklisted clients • event-history – Displays event history
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'client-blacklist' and 'event-history' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays the WIPS details on a specified device or RF Domain. • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

- `show wlan` *`{detail <WLAN>|on <DEVICE-OR-DOMAIN-NAME>|policy-mappings|usage-mappings}`*

wireless	Displays wireless configuration parameters
wlan	Displays WLAN related information based on the parameters passed
detail <WLAN>	Optional. Displays WLAN configuration • <WLAN> – Specify the WLAN name.
on <DEVICE-OR-DOMAIN-NAME>	Optional. Displays WLAN configuration on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

policy-mappings	Optional. Displays WLAN policy mappings
usage-mappings	Optional. Lists all devices and profiles using the WLAN

- `show wlan {config filter {device <DEVICE-NAME>|rf-domain <DOMAIN-NAME>}`

wireless	Displays wireless configuration parameters
wlan	Displays WLAN related information based on the parameters passed
config filter	Optional. Filters WLAN information based on the device name or RF Domain
device <DEVICE-NAME>	Optional. Filters WLAN information based on the device name • <DEVICE-NAME> – Specify the device name.
rf-domain <DOMAIN-NAME>	Optional. Filters WLAN information based on the RF Domain • <DOMAIN-NAME> – Specify the RF Domain name.

- `show wlan {statistics {<WLAN>|detail} {(on <DEVICE-OR-DOMAIN-NAME>)}`

wireless	Displays wireless configuration parameters
wlan	Displays WLAN related information based on the parameters passed
statistics {<WLAN>|detail}	Optional. Displays WLAN statistics. Use additional filters to view specific details • <WLAN> – Optional. Displays WLAN statistics. Specify the WLAN name. • detail – Optional. Displays detailed WLAN statistics
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'WLAN' and 'detail' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays WLAN statistics on a specified device or RF Domain • <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain.

Usage Guidelines

The customize command enables you to customize the *show > wireless* command output.

```
rfs6000-81742D(config)#customize ?
  cdp-lldp-info-column-width                Customize cdp-lldp-info
                                            column width
  hostname-column-width                     Customize hostname column width
  show-adoption-offline                     Customize the output of (show
                                            adoption offline) command
  show-adoption-status                      Customize the output of (show
                                            adoption status) command
  show-wireless-bridge                      Customize the output of (show
                                            wireless bridge) command
  show-wireless-bridge-hosts                Customize the output of (show
                                            wireless bridge hosts)
                                            command
  show-wireless-bridge-stats                Customize the output of (show
                                            wireless bridge stats)
                                            command
  show-wireless-bridge-stats-rf             Customize the output of (show
                                            wireless bridge stats rf)
                                            command
  show-wireless-bridge-stats-traffic        Customize the output of (show
                                            wireless bridge stats)
                                            command
  show-wireless-client                      Customize the output of (show
                                            wireless client) command
  show-wireless-client-stats                Customize the output of (show
                                            wireless client stats) command
  show-wireless-client-stats-rf             Customize the output of (show
```

```
                                                    wireless client stats rf)
  show-wireless-legacy-mesh-client-stats            Customize the output of (show
                                                    wireless mint client stats)
                                                    command
  show-wireless-meshpoint                           Customize the output of (show
                                                    wireless meshpoint) command
  show-wireless-meshpoint-accelerated-multicast     Customize the output of (show
                                                    wireless meshpoint
                                                    accelerated-multicast)
                                                    command
  show-wireless-meshpoint-neighbor-stats            Customize the output of (show
                                                    wireless meshpoint neighbor
                                                    stats) command
  show-wireless-meshpoint-neighbor-stats-rf         Customize the output of (show
                                                   wireless meshpoint neighbor stats
                                                    rf) command
  show-wireless-mint-client                         Customize the output of (show
                                                    wireless mint client)
  show-wireless-mint-client-stats                   Customize the output of (show
                                                    wireless mint client stats)
                                                    command
  show-wireless-mint-client-stats-rf                Customize the output of (show
                                                    wireless mint client stats
                                                    rf) command
  show-wireless-mint-portal                         Customize the output of (show
                                                    wireless mint portal)
  show-wireless-mint-portal-stats                   Customize the output of (show
                                                    wireless mint portal stats)
                                                    command
  show-wireless-mint-portal-stats-rf                Customize the output of (show
                                                    wireless mint portal stats
                                                    rf) command
  show-wireless-radio                               Customize the output of (show
                                                    wireless radio) command
  show-wireless-radio-stats                         Customize the output of (show
                                                    wireless radio stats) command
  show-wireless-radio-stats-rf                      Customize the output of (show
                                                    wireless radio stats rf) command
rfs6000-81742D(config)#
```

The default setting for the *show > wireless > client* command is as follows:

```
rfs6000-81742D(config)#show wireless client
-------------------------------------------------------------------------------
-------
MAC         IPv4    VENDOR          RADIO-ID          WLAN             VLAN
STATE
-------------------------------------------------------------------------------
-------
-------------------------------------------------------------------------------
-------
Total number of wireless clients displayed: 0
rfs6000-81742D(config)#
```

The above output can be customized, using the customize > show-wireless-client command, as follows:

```
rfs6000-81742D(config)#customize show-wireless-client mac ip vendor vlan radio-id
state wlan location radio-alias radio-type
rfs6000-81742D(config)#commit

rfs6000-81742D(config)#show wireless client
-------------------------------------------------------------------------------
-------------------------------------------------------------------------------
--
MAC            IP   VENDOR          VLAN  RADIO-ID          STATE WLAN
AP-LOCATION     RADIO                RADIO-TYPE
-------------------------------------------------------------------------------
-------------------------------------------------------------------------------
--
```

```
-------------------------------------------------------------------------------
-------------------------------------------------------------------------------
--
Total number of wireless clients displayed: 0
rfs6000-81742D(config)#
```

Example

```
nx9500-6C8809(config)#show wireless wlan config
-------------------------------------------------------------------------------
  NAME   ENABLE   SSID   ENCRYPTION   AUTHENTICATION   VLAN     BRIDGING MODE
-------------------------------------------------------------------------------
  test   Y        test   wep64        none             1      local
-------------------------------------------------------------------------------
nx9500-6C8809(config)#

nx9500-6C8809(config)#show wireless wips client-blacklist
No wireless clients blacklisted
nx9500-6C8809(config)#

rfs6000-81742D#show wireless regulatory channel-info 36
Center frequency for channel 36 is 5180MHz

6.1.77 wwan

show commands

Displays wireless WAN status

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP82XX, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
show wwan [configuration|status] {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

- `show wwan [configuration|status] {on <DEVICE-OR-DOMAIN-NAME>}`

wwan	Displays wireless WAN configuration and status details
configuration	Displays wireless WAN configuration information
status	Displays wireless WAN status information
on <DEVICE-OR-DOMAIN-NAME>	The following keyword is common to the 'configuration' and 'status' parameters: • on <DEVICE-OR-DOMAIN-NAME> – Optional. Displays configuration or status details on a specified device or RF Domain <DEVICE-OR-DOMAIN-NAME> – Specify the AP, wireless controller, service platform, or RF Domain name.

Example

```
rfs4000-229D58(config-device-00-23-68-22-9D-58)#show wwan configuration
>>> WWAN Configuration:
+-----------------------------------------
|  Access Port Name : isp.cingular
|  User Name        : testuser
|  Cryptomap        : map1
+-----------------------------------------
rfs4000-229D58(config-device-00-23-68-22-9D-58)#

rfs4000-229D58(config-device-00-23-68-22-9D-58)#show wwan status
>>> WWAN Status:
+-----------------------------------------
|  State : ACTIVE
|  DNS1  : 209.183.54.151
|  DNS2  : 209.183.54.151
+-----------------------------------------
rfs4000-229D58(config-device-00-23-68-22-9D-58)#
```

6.1.78 virtual-machine

show commands

Displays the *virtual-machine* (VM) configuration, logs, and statistics

Supported in the following platforms:

- Service Platforms — NX7500, NX7510, NX7520, NX7530, NX9500, NX9510

Syntax

```
show virtual-machine [configuration|debugging|export|statistics]

show virtual-machine [configuration|statistics] {<VM-NAME>|team-urc|team-rls|
team-vowlan} {(on <DEVICE-NAME>)}

show virtual-machine debugging {level|on}
show virtual-machine debugging {level [debug|error|info|warning]} {on <DEVICE-
NAME>}

show virtual-machine export <VM-NAME> {on <DEVICE-NAME>}

show virtual-machine [configuration|statistics] {<VM-NAME>|adsp|team-cmt}
```

Parameters

```
• show virtual-machine [configuration|statistics] {<VM-NAME>|team-urc|team-rls|
team-vowlan} {(on <DEVICE-NAME>)}
```

virtual-machine	Displays the following VM-related information: configuration or statistics
configuration	Displays detailed VM configuration
statistics	Displays VM statistics
[<VM-NAME>| team-urc|team-rls| team-vowlan]	The following keywords are common to the 'configuration' and 'statistics' parameters: • <VM-NAME> – Optional. Displays VM configuration or statistics for the virtual machine identified by the <VM-NAME> keyword. Specify the VM name. • team-urc – Optional. Displays TEAM-URC (IP-PBX) VM configuration/statistics • team-rls – Optional. Displays TEAM-RLS (Radio Link Server) VM configuration/ statistics • team-vowlan – Optional. Displays TEAM-VoWLAN (Voice over WLAN) VM configuration/statistics
on <DEVICE-NAME>	Optional. Specifies the name of the device on which the command is executed • <DEVICE-NAME> – Specify the name of the service platform.

```
• show virtual-machine [configuration|statistics] {<VM-NAME>|adsp|team-cmt}
{(on <DEVICE-NAME>)}
```

virtual-machine	Displays the following VM-related information: configuration or statistics
configuration	Displays detailed VM configuration
statistics	Displays VM statistics

[<VM-NAME>|adsp|team-cmt]	The following keywords are common to the 'configuration' and 'statistics' parameters: • <VM-NAME> – Optional. Displays VM configuration or statistics for the virtual machine identified by the <VM-NAME> keyword. Specify the VM name. • adsp – Optional. Displays *Air-Defense Services Platform* (ADSP) VM configuration/statistics • team-cmt – Optional. Displays TEAM-CMT VM configuration/statistics These keywords are specific to the NX9500 and NX9510 service platforms.
on <DEVICE-NAME>	Optional. Specifies the name of the device on which the command is executed • <DEVICE-NAME> – Specify the name of the service platform.

- `show virtual-machine debugging {level[debug|error|info|warning]} {on <DEVICE-NAME>}`

virtual-machine	Displays the following VM-related information: configuration or statistics
debugging	Displays VM logs
level [debug|error|info|warning]	Optional. Displays VM logs based on the level selected. The available options are: • debug – Displays VM logs of level debug and above • error – Displays VM logs of level error • info – Displays VM logs of level Info and above • warning – Displays logs of level warning and above The NX9500 and NX9510 series service platforms will display ADSP and TEAM-CMT VM debugging logs.
on <DEVICE-NAME>	Optional. Specifies the name of the device on which the command is executed • <DEVICE-NAME> – Specify the name of the service platform.

- `show virtual-machine export <VM-NAME> {on <DEVICE-NAME>}`

virtual-machine	Displays the following VM-related information: configuration or statistics
export	Displays VM configuration export related information
<VM-NAME>	Displays VM configuration export related information for the virtual machine identified by the <VM-NAME> keyword. Specify the VM name. The NX9500 and NX9510 series service platforms will display ADSP and TEAM-CMT VM configuration export information
on <DEVICE-NAME>	Optional. Specifies the name of the device on which the command is executed • <DEVICE-NAME> – Specify the name of the service platform.

Example

```
nx9500-6C874D#show virtual-machine statistics
-------------------------------------------------------------------------------
       NAME          STATE   VCPUS MEM (MB)    BRIDGE-IF             IP

nx9500-6C874D>
```

6.1.79 raid

show commands

Displays *Redundant Array of Independent Disks* (RAID) related information, such as array status, consistency check status, and RAID log.

Use this command to assess the RAID array's drive utilization and whether the drives are currently online. Since there is only one RAID array controller reporting status to the service platform, it is important to know if other drive s house hot spare drives as additional resources should one of the dedicated drives fail. This command also displays whether a physical within the RAID array has a drive installed, and whether the drive is currently online.

Supported in the following platforms:

- Service Platforms — NX9500

Syntax

```
show raid {on <DEVICE-NAME>}
```

Parameters

- `show raid {on <DEVICE-NAME>}`

raid	Displays the RAID array status and statistics
on <DEVICE-NAME>	Optional. Displays RAID status and statistics on a specified device • <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

Example

```
nx9500-6C874D(config)#show raid
Logical drive info:
 Size 930 GB, State optimal
 Alarm enabled
 Last check: Sat Aug 10 02:56:54 2013
 Last check result: ending
Physical drive info:

Drive  0: online
Drive  1: online
Drive  2: not-installed
Drive  3: not-installed
Drive  4: not-installed
nx9500-6C874D(config)#
```

7 PROFILES

Profiles enable administrators to assign a common set of configuration parameters, policies, and WLANs to service platforms, controllers, and access points across a large, multi segment, site. The configuration parameters within a profile are based on the hardware model the profile was created to support.

The service platforms, wireless controllers, and access points support both default and user-defined profiles. Each default and user-defined profile contains policies and configurations that are applied to devices assigned to the profile. Changes made to these configurations are automatically inherited by the devices. The central benefit of a profile is its ability to update devices collectively without having to modify individual device configurations.

Default profiles are system maintained and are automatically applied to service platforms and wireless controllers. The default AP profile is automatically applied to a AP (discovered by a wireless controller or service platform), unless an AP auto-provisioning policy is defined specifically to assign APs to a user-defined profile. After adoption, changes made to a profile's parameters are reflected across all devices using the profile. Default profiles are ideal for single site deployments where service platforms, wireless controllers, and access points share a common configuration.

User-defined profiles, on the other hand, are manually created for each supported service platform, wireless controller, and access point model. User-defined profiles are recommended for larger deployments using centralized controllers and service platforms when groups of devices on different floors, buildings or sites share a common configuration. These user-defined profiles can be manually, or automatically assigned to through an auto provisioning policy. An auto provisioning policy provides the means to assign profiles to access points based on model, serial number, VLAN ID, DHCP options, IP address (subnet) and MAC address. For more information, see *AUTO-PROVISIONING-POLICY*.

Each default and user-defined profile contains policies and configuration parameters.

A user defined profile can be created for each of the following device type:

- AP6521 – Adds an AP6521 access point profile
- AP6522 – Adds an AP6522 access point profile
- AP6532 – Adds an AP6532 access point profile
- AP6562 – Adds an AP6562 access point profile
- AP7161 – Adds an AP7161 access point profile
- AP7502 – Adds an AP7502 access point profile
- AP7522 – Adds an AP7522 access point profile
- AP7532 – Adds an AP7532 access point profile
- AP7562 – Adds an AP7562 access point profile
- AP81XX – Adds an AP81XX access point profile supporting the AP8122, AP8132, and AP8163 models
- AP8232 – Adds an AP8232 access point profile
- AP8432 – Adds an AP8432 access point profile
- AP8533 – Adds an AP8533 access point profile
- EX3524 – Adds an EX3524 wireless controller profile
- EX3548 – Adds an EX3548 wireless controller profile
- RFS4000 – Adds an RFS4000 wireless controller profile
- RFS6000 – Adds an RFS6000 wireless controller profile

- RFS7000 – Adds an RFS7000 wireless controller profile
- NX5500 – Adds an NX5500 wireless controller profile
- NX7500 – Adds an NX75XX series service platform profile supporting the NX7510, NX7520, and NX7530 models
- NX9000 – Adds an NX95XX series service platform profile supporting the NX9500 and NX9510 models
- NX9600 – Adds an NX96XX series service platform profile supporting the NX9600 and NX9610 models. Supported only on an NX96XX model device.
- VX9000 – Adds a VX9000 wireless controller profile
- T5 – Adds a T5 controller profile

NOTE: A T5 profile can be created only on the following platforms: RFS4000, RFS6000, NX9500, NX9510, and NX9600.

Although profiles assign a common set of configuration parameters across devices, individual devices can still be assigned unique configuration parameters that follow the flat configuration model. As individual device updates are made, these devices no longer share the profile based configuration they originally supported. Therefore, changes made to a profile are not automatically inherited by devices who have had their configuration customized. These devices require careful administration, as they cannot be tracked as profile members. Their customized configurations overwrite their profile configurations until the profile is re-applied.

NOTE: The commands present under 'Profiles' are also available under the 'Device mode'. The additional commands specific to the 'Device mode' are listed separately.

This chapter is organized into the following topics:

- *Profile Config Commands*
- *Device Config Commands*
- *T5 Profile Config Commands*
- *EX3524 & EX3548 Profile/Device Config Commands*

To view the list of device profiles supported, use the following command:

```
<DEVICE>(config)#profile ?
  anyap       Any access point profile
  ap650       AP650 access point profile
  ap6511      AP6511 access point profile

NOTE: The input parameter <HOSTNAME>, wherever used in syntaxes across this chapter, cannot include an underscore (_) character. In other words, the name of a device cannot contain an underscore.

7.1 Profile Config Commands

PROFILES

The following table summarizes profile configuration mode commands:

Command	Description	Reference
adopter-auto-provisioning-policy-lookup	Enables the use of a centralized auto provisioning policy on this profile	*page 7-11*
adoption	Configures a minimum and maximum delay time in the initiation of the device adoption process	*page 7-13*
alias	Creates various types of aliases, such as network, VLAN, network-group, network-service, encrypted-string, hashed -string, etc. at the profile level	*page 7-15*
application-policy	Associates a RADIUS server provided application policy with this profile. When associated, the application policy allows wireless clients (MUs) to always find the RADIUS-supplied application policy in the dataplane.	*page 7-23*
area	Sets the system's area of location (the area name)	*page 7-25*
arp	Configures static address resolution protocol	*page 7-26*
auto-learn	Enables controllers or service platforms to maintain a local configuration record of devices requesting adoption and provisioning. The command also enables learning of a device's host name via DHCP options.	*page 7-28*
autogen-uniqueid	Auto-generates a unique local ID for devices using this profile. When executed in the device configuration mode, this command generates a unique ID for the logged device.	*page 7-29*
autoinstall	Configures the automatic install feature	*page 7-31*
bridge	Configures bridge specific parameters	*page 7-32*
captive-portal	Configures captive portal advanced Web page upload on a device profile	*page 7-61*
cdp	Enables *Cisco Discovery Protocol* (CDP) on a device	*page 7-62*
cluster	Configures a cluster name	*page 7-63*
configuration-persistence	Enables persistence of configuration across reloads	*page 7-66*
controller	Configures a wireless controller or service platform	*page 7-67*
critical-resource	Monitors resources that are critical to the health of the service platform, wireless controller, or access point managed network. These critical resources are identified by their configured IP addresses.	*page 7-72*
crypto	Configures data encryption related protocols and settings	*page 7-81*
database	Backs up captive-portal and/or NSight database to a specified location and file and configures a low-disk-space threshold value	*page 7-145*
device-onboard	Configures the logo image file name and title displayed on the EGuest device-onboarding portal. This is the portal a vendor-admin user uses to onboard devices.	*page 7-146*
device-upgrade	Configures device firmware upgrade settings on this profile	*page 7-147*
diag	Enables looped packet logging	*page 7-149*

Command	Description	Reference
dot1x	Configures 802.1x standard authentication controls	*page 7-150*
dpi	Enables *Deep Packet Inspection* (DPI) on this profile	*page 7-152*
dscp-mapping	Configures an IP DSCP to 802.1p priority mapping for untagged frames	*page 7-155*
eguest-server (VX9000 only)	Enables the EGuest daemon when executed without the 'host' option	*page 7-156*
eguest-server (NOC Only)	Points to the EGuest server, when executed along with the 'host' option	*page 7-157*
email-notification	Configures e-mail notification settings	*page 7-158*
enforce-version	Enables checking of a device's firmware version before attempting adoption or clustering	*page 7-160*
environmental-sensor	Configures the environmental sensor settings on this profile (applicable to AP8132 model access point only)	*page 7-161*
events	Enables system event logging and message generation. This command also configures event message forwarding settings.	*page 7-164*
export	Enables export of startup.log file after every boot	*page 7-165*
file-sync	Configures parameters enabling synching of trustpoint and/or wireless-bridge certificate between the staging-controller and adopted access point	*page 7-167*
floor	Sets the floor name where the system is located	*page 7-168*
gre	Enables *Generic Routing Encapsulation* (GRE) tunneling on this profile	*page 7-169*
http-analyze	Configures HTTP analysis settings	*page 7-182*
http-analyze (NX95XX)	Configures HTTP analysis settings on a NX series service platform	*page 7-183*
interface	Configures an interface (VLAN, radio, GE, etc.)	*page 7-186*
ip	Configures IPv4 components	*page 7-359*
ipv6	Configures IPv6 components	*page 7-369*
l2tpv3	Defines the *Layer 2 Tunnel Protocol* (L2TP) protocol for tunneling layer 2 payloads using *Virtual Private Networks* (VPNs)	*page 7-373*
l3e-lite-table	Configures L3e Lite Table with this profile	*page 7-375*
led	Turns device LEDs on or off	*page 7-376*
led-timeout	Configures LED-timeout timer. This command is specific to the NX95XX series service platforms.	*page 7-377*
legacy-auto-downgrade	Auto downgrades a legacy device firmware	*page 7-379*
legacy-auto-update	Auto upgrades a legacy device firmware	*page 7-380*
lldp	Configures *Link Layer Discovery Protocol* (LLDP)	*page 7-381*
load-balancing	Configures load balancing parameters	*page 7-383*
logging	Modifies message logging settings	*page 7-388*
mac-address-table	Configures the MAC address table	*page 7-390*

Command	Description	Reference
mac-auth	Enables 802.1x user authentication protocol on this profile	*page 7-392*
management-server	Configures a management server with this profile	*page 7-395*
memory-profile	Configures the memory profile used on the device	*page 7-396*
meshpoint-device	Configures a meshpoint device parameters	*page 7-397*
meshpoint-monitor-interval	Configures meshpoint monitoring interval	*page 7-399*
min-misconfiguration-recovery-time	Configures the minimum device connectivity verification time	*page 7-400*
mint	Configures MiNT protocol settings	*page 7-401*
misconfiguration-recovery-time	Verifies device connectivity after a configuration is received	*page 7-408*
neighbor-inactivity-timeout	Configures neighbor inactivity timeout	*page 7-409*
neighbor-info-interval	Configures neighbor information exchange interval	*page 7-410*
no	Removes or reverts settings to their default. The no command, when used in the profile configuration mode, removes the selected profile's settings or reverts them to their default.	*page 7-411*
noc	Configures NOC settings	*page 7-413*
nsight	Configures NSight database related parameters	*page 7-414*
ntp	Configures NTP server settings	*page 7-419*
otls	Configures support for detection and forwarding of OmniTrail beacon tags	*page 7-422*
offline-duration	Sets the duration, in minutes, for which a device remains un-adopted before it generates offline event	*page 7-425*
power-config	Configures the power mode	*page 7-426*
preferred-controller-group	Specifies the wireless controller or service platform group preferred for adoption	*page 7-428*
preferred-tunnel-controller	Configures the tunnel wireless controller or service platform preferred by the system to tunnel extended VLAN traffic	*page 7-429*
radius	Configures device-level RADIUS authentication parameters	*page 7-430*
raid	Enables alarm on the array. This command is supported only on the NX9500 and NX9510 series service platform profile/device config modes.	*page 7-504*
rf-domain-manager	Enables devices using this profile to be elected as RF Domain manager. Also sets the priority value for devices using this profile in the RF Domain manager election process.	*page 7-431*
router	Configures dynamic router protocol settings	*page 7-432*
spanning-tree	Configures spanning tree related settings	*page 7-434*

Command	Description	Reference
traffic-class-mapping	Maps the IPv6 traffic class value of incoming IPv6 untagged packets to 802.1p priority	*page 7-437*
traffic-shape	Enables traffic shaping and configures traffic shaping parameters	*page 7-439*
trustpoint (profile-config-mode)	Configures the trustpoint assigned for validating a CMP auth Operator	*page 7-445*
tunnel-controller	Configures the name of tunneled WLAN (extended VLAN) wireless controller or service platform	*page 7-447*
use	Uses pre configured policies with this profile	*page 7-448*
vrrp	Configures *Virtual Router Redundancy Protocol* (VRRP) group settings	*page 7-454*
vrrp-state-check	Publishes interface via OSPF or BGP based on VRRP status	*page 7-458*
virtual-controller	Enables an access point as a *virtual-controller* (VC) or *dynamic virtual controller* (DVC). Note, DVC is supported only on the AP7522, AP7532, and AP7562 model access points.	*page 7-459*
wep-shared-key-auth	Enables support for 802.11 WEP shared key authentication	*page 7-461*
service	Service commands are used to view and manage configurations. The service commands and their corresponding parameters vary from mode to mode.	*page 7-462*
zone	Configures the zone for devices using this profile. The zone can also be configured on the device's self context.	*page 7-467*

NOTE: For more information on common commands (clrscr, commit, help, revert, service, show, write, and exit), see *COMMON COMMANDS*.

7.1.1 adopter-auto-provisioning-policy-lookup

Profile Config Commands

Enables the use of a centralized auto provisioning policy on this profile. When enabled, the auto-provisioning policy applied on the NOC gets precedence over the one applied at the site controller level. Optionally, use the '*evaluate-always*' option to set flag to run centralized auto-provisioning policy every time a device (access point/controller) is adopted. The device's previous adoption status is not taken into consideration.

This command is also applicable in the device configuration context.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
adopter-auto-provisioning-policy-lookup {evaluate-always}
```

Parameters

- `adopter-auto-provisioning-policy-lookup {evaluate-always}`

adopter-auto-provisioning-policy-lookup {evaluate-always}	Enables the use of a centralized auto provisioning policy on this profile or device • evaluate-always – Optional. Sets flag to run centralized auto-provisioning policy every time a device (access point/controller) is adopted.

Example

```
rfs6000-81742D(config-profile-default-rfs6000)#adopter-auto-provisioning-policy-
lookup evaluate-always

rfs6000-81742D(config-profile-default-rfs6000)#show context

rfs6000-81742D(config-profile-default-rfs6000)#
```

Related Commands

no	Disables the application of centralized auto provisioning policy on this profile or device

7.1.2 adoption

Profile Config Commands

Configures a minimum and maximum delay time in the initiation of the device adoption process. When configured, devices do not attempt adoption immediately on coming up. The process is initiated after the lapse of a specified period of time (configured using this command as the *start-delay minimum* time).

Once configured and applied, this setting is applicable on all devices using this profile. This option is also available in the device-configuration mode.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
adoption start-delay min <0-30> max <0-30>
```

Parameters

- `adoption start-delay min <0-30> max <0-30>`

adoption start-delay min <0-30> max <0-30>	Delays start of device adoption process • min <0-30> – Configures the minimum time to lapse before a device attempts adoption. Specify a value from 0 - 30 seconds. A device, on coming up, attempts adoption only after the lapse of the time specified here. The default is 5 seconds. • max <0-30> – Configures the maximum time to lapse before a device attempts adoption. Specify a value from 0 - 30 seconds. The default is 20 seconds.

Example

```
rfs6000-81742D(config-profile-default-rfs6000)#adoption start-delay min 10 max 30

rfs6000-81742D(config-profile-default-rfs6000)#show context

 router ospf
 router bgp
 adoption start-delay min 10 max 30
rfs6000-81742D(config-profile-default-rfs6000)#
```

Related Commands

no	Removes the configured minimum start-delay value. When removed, devices attempt adoption immediately on coming up.

7.1.3 alias

Profile Config Commands

Configures network, VLAN, and service aliases. The aliases defined on this profile applies to all devices using this profile. Aliases can be also defined at the device level.

NOTE: You can apply overrides to aliases at the device level. Overrides applied at the device level take precedence. For more information on aliases, see *alias*.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
alias [address-range|encrypted-string|hashed-string|host|network|network-group|
network-service|number|string|vlan]

alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>

alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>

alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>

alias host <HOST-ALIAS-NAME> <HOST-IP>

alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>

alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range|host|network]
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to
<ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|network
<NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]

alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport|ssh|telnet|tftp|www)}

alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|tftp|
www)}

alias number <NUMBER-ALIAS-NAME> <0-4294967295>

alias string <STRING-ALIAS-NAME> <LINE>

alias vlan <VLAN-ALIAS-NAME> <1-4094>
```

Parameters

- `alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>`

address-range <ADDRESS-RANGE-ALIAS-NAME>	Creates a new address-range alias for this profile. Or associates an existing address-range alias with this profile. An address-range alias maps a name to a range of IP addresses. Use this option to create unique address-range aliases for different deployment scenarios. Contd..

	For example, if an ACL defines a pool of network addresses as 192.168.10.10 through 192.168.10.100 for an entire network, and a remote location's network range is 172.16.13.20 through 172.16.13.110, the remote location's ACL can be overridden using an alias. At the remote location, the ACL works with the 172.16.13.20-110 address range. A new ACL need not be created specifically for the remote deployment location. • <ADDRESS-RANGE-ALIAS-NAME> – Specify the address range alias name. **Note:** Alias name should begin with '$'.
<STARTING-IP> to <ENDING-IP>	Associates a range of IP addresses with this address range alias • <STARTING-IP> – Specify the first IP address in the range. • to <ENDING-IP> – Specify the last IP address in the range. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>`

encrypted-string <ENCRYPTED-STRING-ALIAS-NAME>	Creates an alias for an encrypted string. Use this alias for string configuration values that are encrypted when "password-encryption" is enabled. For example, in the management-policy, use it to define the SNMP community string. For more information, see *snmp-server*. • <ENCRYPTED-STRING-ALIAS-NAME> – Specify the encrypted-string alias name. Alias name should begin with '$'.

[0|2] <LINE>	Configures the value associated with the alias name specified in the previous step
	• [0|2] <LINE> – Configures the alias value
	Note, if password-encryption is enabled, in the *show > running-config* output, this clear text is displayed as an encrypted string, as shown below:
	`nx9500-6C8809(config)#show running-config`
	`!.............................`
	`alias encrypted-string $enString 2`
	`fABMK2is7UToNiZE3MQXbgAAAAxB0ZIysdqsEJwr6AH/Da//`
	`!`
	`--More--`
	`nx9500-6C8809`
	`In the above output, the '2' displayed before the encrypted-string alias value indicates that the displayed text is encrypted and not a clear text.`
	`However, if password-encryption is disabled the clear text is displayed as is:`
	`nx9500-6C8809(config)#show running-config`
	`!.............................`
	`!`
	`alias encrypted-string $enString 0 test11223344`
	`!`
	`--More--`
	`nx9500-6C8809`
	For more information on enabling password-encryption, see *password-encryption*.

- `alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>`

hashed-string <HASHED-STRING-ALIAS-NAME>	Creates an alias for a hashed string. Use this alias for configuration values that are hashed string, such as passwords. For example, in the management-policy, use it to define the privilege mode password. For more information, see *privilege-mode-password*. • <HASHED-STRING-ALIAS-NAME> – Specify the hashed-string alias name. Alias name should begin with '$'.

<LINE>	Configures the hashed-string value associated with this alias.
	`nx9500-6C8809(config)#show running-config`
	`!`
	`alias encrypted-string $WRITE 2`
	`sBqVCDAoxs3oByF5PCSuFAAAAAd7HT2+EiT/l/BXm9c4SBDv`
	`!`
	`alias hashed-string $PriMode 1`
	`faffdde27cb49ad634ea20df4f7c8ef2685894d10ffcb1b2efba054112ec`
	`fc75`
	`--More--`
	`nx9500-6C8809`
	In the above *show > running-config* output, the '1' displayed before the hashed-string alias value indicates that the displayed text is hashed and not a clear text.

- `alias host <HOST-ALIAS-NAME> <HOST-IP>`

host <HOST-ALIAS-NAME>	Creates a new host alias for this profile. Or associates an existing host alias with this profile. A host alias configuration is for a particular host device's IP address. Use this option to create unique host aliases for different deployment scenarios. For example, if a central network DNS server is set a static IP address, and a remote location's local DNS server is defined, this host can be overridden at the remote location. At the remote location, the network is functional with a local DNS server, but uses the name set at the central network. A new host need not be created at the remote location. This simplifies creating and managing hosts and allows an administrator to better manage specific local requirements. • <HOST-ALIAS-NAME> – Specify the host alias name. Alias name should begin with '$'.
<HOST-IP>	Associates the network host's IP address with this host alias • <HOST-IP> – Specify the network host's IP address. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>`

network <NETWORK-ALIAS-NAME>	Creates a new network alias for this profile. Or associates an existing network alias with this profile. A network alias configuration is utilized for an IP address on a particular network. Use this option to create unique Network aliases for different deployment scenarios. For example, if a central network ACL defines a network as 192.168.10.0/24, and a remote location's network range is 172.16.10.0/24, the ACL can be overridden at the remote location to suit their local (but remote) requirement. Contd..
	At the remote location, the ACL functions with the 172.16.10.0/24 network. A new ACL need not be created specifically for the remote deployment. This simplifies ACL definition and allows an administrator to better manage specific local requirements. • <NETWORK-ALIAS-NAME> – Specify the network alias name. **Note:** Alias name should begin with '$'.

<NETWORK-ADDRESS/MASK>	Associates a single network with this network alias • <NETWORK-ADDRESS/MASK> – Specify the network's address and mask. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

```
• alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to
<ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]
```

network <NETWORK-GROUP-ALIAS-NAME>	Creates a new network-group alias for this profile. Or associates an existing network-group alias with this profile. • <NETWORK-GROUP-ALIAS-NAME> – Specify the network-group alias name. Alias name should begin with '$'. The network-group aliases are used in ACLs, to define the network-specific components. ACLs using aliases can be used across sites by re-defining the network-group alias elements at the device or profile level. After specifying the name, specify the following: a range of IP addresses, host addresses, or a range of network addresses. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.
address-range <STARTING-IP> to <ENDING-IP> {<STARTING-IP> to <ENDING-IP>}	Associates a range of IP addresses with this network-group alias • <STARTING-IP> – Specify the first IP address in the range. • to <ENDING-IP> – Specify the last IP address in the range. • <STARTING-IP> to <ENDING-IP> – Optional. Specifies more than one range of IP addresses. A maximum of eight (8) IP address ranges can be configured.
host <HOST-IP> {<HOST-IP>}	Associates a single or multiple hosts with this network-group alias • <HOST-IP> – Specify the hosts' IP address. • <HOST-IP> – Optional. Specifies more than one host. A maximum of eight (8) hosts can be configured.
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}	Associates a single or multiple networks with this network-group alias • <NETWORK-ADDRESS/MASK> – Specify the network's address and mask. • <NETWORK-ADDRESS/MASK> – Optional. Specifies more than one network. A maximum of eight (8) networks can be configured.

```
• alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|
eigrp|gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|
https|ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|
telnet|tftp|www)}
```

alias network-service <NETWORK-SERVICE-ALIAS-NAME>	Creates a new network-service alias for this profile. Or associates an existing network-service alias with this profile. A network service alias is a set of configurations that consist of protocol and port mappings. Both source and destination ports are configurable. For each protocol, up to 2 source port ranges and up to 2 destination port ranges can be configured. A maximum of 4 protocol entries can be configured per network service alias. • <NETWORK-SERVICE-ALIAS-NAME> – Specify a network-service alias name. Alias name should begin with '$'. The network-service aliases are used in ACLs, to define the service-specific components. ACLs using aliases can be used across sites by re-defining the network-service alias elements at the device or profile level. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.
proto [<0-254>|<WORD>|eigrp|gre|igmp|igp|ospf|vrrp]	Use one of the following options to associate an Internet protocol with this network-service alias: • <0-254> – Identifies the protocol by its number. Specify the protocol number from 0 - 254. This is the number by which the protocol is identified in the *Protocol* field of the IPv4 header and the *Next Header* field of IPv6 header. For example, the *User Datagram Protocol's* (UDP) designated number is 17. • <WORD> – Identifies the protocol by its name. Specify the protocol name. • eigrp – Selects *Enhanced Interior Gateway Routing Protocol* (EIGRP). The protocol number 88. • gre – Selects *Generic Routing Encapsulation* (GRE). The protocol number is 47. • igmp – Selects *Internet Group Management Protocol* (IGMP). The protocol number is 2. • igp – Selects *Interior Gateway Protocol* (IGP). The protocol number is 9. • ospf – Selects *Open Shortest Path First* (OSPF). The protocol number is 89. • vrrp – Selects *Virtual Router Redundancy Protocol* (VRRP). The protocol number is 112.
{(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|tftp|www)}	After specifying the protocol, you may configure a destination port for this service. These keywords are recursive and you can configure multiple protocols and associate multiple destination and source ports. • <1-65535> – Optional. Configures a destination port number from 1 - 65535 • <WORD> – Optional. Identifies the destination port by the service name provided. For example, the *secure shell* (SSH) service uses TCP port 22. • bgp – Optional. Configures the default *Border Gateway Protocol* (BGP) services port (179) • dns – Optional. Configures the default *Domain Name System* (DNS) services port (53) Contd...

	• ftp – Optional. Configures the default *File Transfer Protocol* (FTP) control services port (21)
	• ldap – Optional. Configures the default *Lightweight Directory Access Protocol* (LDAP) services port (389)
	• ftp-data – Optional. Configures the default FTP data services port (20)
	• gopher – Optional. Configures the default gopher services port (70)
	• https – Optional. Configures the default HTTPS services port (443)
	• nntp – Optional. Configures the default Newsgroup (NNTP) services port (119)
	• ntp – Optional. Configures the default *Network Time Protocol* (NTP) services port (123)
	• proto – Optional. Use this option to select another Internet protocol in addition to the one selected in the previous step.
	• pop3 – Optional. Configures the default *Post Office Protocol* (POP3) services port (110)
	• smtp – Optional. Configures the default *Simple Mail Transfer Protocol* (SMTP) services port (25)
	• sip – Optional. Configures the default *Session Initiation Protocol* (SIP) services port (5060)
	• sourceport [<1-65535>|<WORD>] – Optional. After specifying the destination port, you may specify a single or range of source ports.
	  • <1-65535> – Specify the source port from 1 - 65535.
	  • <WORD> – Specify the source port range, for example 1-10.
	• ssh – Optional. Configures the default SSH services port (22)
	• telnet – Optional. Configures the default Telnet services port (23)
	• tftp – Optional. Configures the default *Trivial File Transfer Protocol* (TFTP) services port (69)
	• www – Optional. Configures the default HTTP services port (80)

• `alias number <NUMBER-ALIAS-NAME> <0-4294967295>`

alias number <NUMBER-ALIAS-NAME> <0-4294967295>	Creates a number alias identified by the <NUMBER-ALIAS-NAME> keyword. Number aliases map a name to a numeric value. For example, 'alias number $NUMBER 100' • The number alias name is: $NUMBER • The value assigned is: 100 The value referenced by alias $NUMBER, wherever used, is 100. • <NUMBER-ALIAS-NAME> – Specify the number alias name. • <0-4294967295> – Specify the number, from 0 - 4294967295, assigned to the number alias created. Alias name should begin with '$'.

- `alias string <STRING-ALIAS-NAME> <LINE>`

alias string <STRING-ALIAS-NAME>	Creates a new string alias for this profile. Or associates an existing string alias with this profile. String aliases map a name to an arbitrary string value. Use this option to create unique string aliases for different deployment scenarios. For example, if the main domain at a remote location is called loc1.domain.com and at another deployment location it is called loc2.domain.com, the alias can be overridden at the remote location to suit the local (but remote) requirement. At one remote location, the alias functions with the loc1.domain.com domain and at the other with the loc2.domain.com domain. • <VLAN-ALIAS-NAME> – Specify the string alias name. • <LINE> – Specify the string value. Alias name should begin with '$'. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

- `alias vlan <VLAN-ALIAS-NAME> <1-4094>`

alias vlan <VLAN-ALIAS-NAME>	Creates a new VLAN alias for this profile. Or associates an existing VLAN alias with this profile. A VLAN alias maps a name to a VLAN ID. A VLAN alias is a configuration for optimal VLAN re-use and management for local and remote deployments. Use this option to create unique VLANs aliases for different deployment scenarios. For example, if a VLAN ID is set as 10 for the central network, and the VLAN is set as 26 at a remote location, the VLAN can be overridden at the remote location using an alias. At the remote location, the network is functional with an ID of 26, but utilizes the name defined at the central local network. A new VLAN need not be created specifically at the remote location. • <VLAN-ALIAS-NAME> – Specify the VLAN alias name. Alias name should begin with '$'.
<1-4094>	Maps the VLAN alias to a VLAN ID • <1-4094> – Specify the VLAN ID from 1 - 4094. Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

Example

The following example shows the global aliases configured. Note the network-service alias '$kerberos' settings.

```
nx9500-6C8809(config)#show running-config | include alias
alias network-group $NetGrpAlias address-range 192.168.13.7 to 192.168.13.16
192.168.13.20 to 192.168.13.25
alias network-group $NetGrpAlias network 192.168.13.0/24 192.168.16.0/24
alias network $NetworkAlias 192.168.13.0/24
alias host $HostAlias 192.168.13.10
alias address-range $AddRanAlias 192.168.13.10 to 192.168.13.13
alias network-service $kerberos proto tcp 23 22 proto udp 25
alias vlan $VlanAlias 1
alias string $AREA Ecospace
alias string $IN-Blr-EcoSpace-Floor-4 IBEF4
alias encrypted-string $READ 2 CdO6glQ9w29hybKxfbd6JwAAAAa7lKMBMk9EiDQfFRf9kegO
alias hashed-string $PriMode 1

nx9500-6C8809(config)#
```

The following examples show the overrides applied to the network-service alias '$kerberos' at the profile level:

```
nx9500-6C8809(config-profile-testRFS4k)#alias network-service $kerberos proto tcp
88 proto udp 389
nx9500-6C8809(config-profile-testRFS4k)#
```

The following example shows the overrides applied to the network-service alias '$kerberos' at the profile level:

```
nx9500-6C8809(config-profile-testRFS4k)#show running-config | include alias
alias network-group $NetGrpAlias address-range 192.168.13.7 to 192.168.13.16
192.168.13.20 to 192.168.13.25
alias network-group $NetGrpAlias network 192.168.13.0/24 192.168.16.0/24
alias network $NetworkAlias 192.168.13.0/24
alias host $HostAlias 192.168.13.10
alias address-range $AddRanAlias 192.168.13.10 to 192.168.13.13
alias network-service $kerberos proto tcp 23 22 proto udp 25

alias network-service $kerberos proto tcp 88 proto udp 389
nx9500-6C8809(config-profile-testRFS4k)#
```

Related Commands

no	Removes the use of centralized auto provisioning policy on this profile or device

7.1.4 application-policy

Profile Config Commands

Associates a RADIUS server provided application policy with this profile. This command is also applicable to the device configuration mode. When associated, the application policy allows wireless clients (MUs) to always find the RADIUS-supplied application policy in the dataplane.

An application policy defines the actions executed on recognized HTTP (Facebook), enterprise (Webex) and peer-to-peer (gaming) applications or application-categories. The following are the actions that can be applied in an application policy:

- Allow - Allows packets for a specific application and its defined category type (for e.g., social networking)
- Deny - Denies (restricts) packets to a specific application and its defined category type
- Mark - Marks recognized packets with DSCP/8021p value
- Rate-limit - Rate limits packets from specific application type

For more information on configuring an application policy, see *application-policy*.

Supported in the following platforms:

- Access Points — AP81XX, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
application-policy radius <APP-POLICY-NAME>
```

Parameters

- `application-policy radius <APP-POLICY-NAME>`

application-policy radius <APP-POLICY-NAME>	Associates a RADIUS server provided application policy with this profile • <APP-POLICY-NAME> – Specify the application policy name (should be existing and configured).

Example

```
nx9500-6C8809(config)#show context include-factory | include application-policy
application-policy Bing
  no use application-policy
  no use application-policy
  no use application-policy
 no use application-policy
 no use application-policy
 no use application-policy
 no use application-policy
 no use application-policy
  no use application-policy
nx9500-6C8809(config)#

nx9500-6C8809(config-profile-testNX9500)#application-policy radius Bing

nx9500-6C8809(config-profile-testNX9500)#show context include-factory | include
application-policy
 application-policy radius Bing
nx9500-6C8809(config-profile-testNX9500)#
```

```
nx9500-6C8809(config-application-Bing)#Show context
application Bing
 app-category streaming
 use url-list Bing
nx9500-6C8809(config-application-Bing)#
```

Related Commands

no	Removes the RADIUS-server provided application policy associated with this profile

7.1.5 area

Profile Config Commands

Sets the system's area of location (the physical area of deployment)

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
area <WORD>
```

Parameters

- `area <WORD>`

area <WORD>	Sets the system's area of location • <WORD> – Specify the area name (should not exceed 64 characters).

Example

```
rfs6000-37FABE(config-profile-default-rfs6000)#area Ecospace

rfs6000-37FABE(config-profile-default-rfs6000)#show context
profile rfs6000 default-rfs6000

 interface ge1
--More--
rfs6000-37FABE(config-profile-default-rfs6000)#
```

Related Commands

no	Resets the configured area name

7.1.6 arp

Profile Config Commands

Adds a static *Address Resolution Protocol* (ARP) IP address in the ARP cache

The ARP protocol maps an IP address to a hardware MAC address recognized on the network. ARP provides protocol rules for making this correlation and providing address conversion in both directions.

When an incoming packet destined for a host arrives, ARP finds a physical host or MAC address that matches the IP address. ARP looks in its ARP cache and, if it finds the address, provides it so the packet can be converted to the right packet length, formatted, and sent to its destination. If no entry is found for the IP address, ARP broadcasts a request packet in a special format on the LAN to locate a device that recognizes the IP address. A device that recognizes the IP address as its own returns a reply indicating it. ARP updates the ARP cache for future reference and then sends the packet to the MAC address that replied.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
arp [<IP>|timeout]

arp <IP> <MAC> arpa [<L3-INTERFACE-NAME>|pppoe1|vlan <1-4094>|wwan1|serial <1-4>
<1-1> <1-1>] {dhcp-server|router}

arp timeout <15-86400>
```

Parameters

```
• arp <IP> <MAC> arpa [<L3-INTERFACE-NAME>|pppoe1|vlan <1-4094>|wwan1|serial <1-
4> <1-1> <1-1>] {dhcp-server|router}
```

arp <IP>	Adds a static ARP IPv4 address in the ARP cache • <IP> – Specify the static IP address.
<MAC>	Specify the MAC address associated with the IP and the *Switch Virtual Interface* (SVI).
arpa	Sets ARP encapsulation type to ARPA
<L3-INTERFACE-NAME>	Configures static ARP entry for a specified router interface • <L3-INTERFACE-NAME> – Specify the router interface name.
pppoe1	Configures static ARP entry for PPP over Ethernet interface
vlan <1-4094>	Configures static ARP entry for a VLAN interface • <1-4094> – Specify a SVI VLAN ID from 1 - 4094.
wwan1	Configures static ARP entry for Wireless WAN interface
{dhcp-server|router}	The following keywords are common to all off the above interface types: • dhcp-server – Optional. Sets ARP entries for a DHCP server • router – Optional. Sets ARP entries for a router

- `arp timeout <15-86400>`

arp timeout <15-86400>	Sets ARP entry timeout • <TIME> – Sets the ARP entry timeout in seconds. Specify a value from 15 - 86400 seconds. The default is 3600 seconds.

Example

```
rfs6000-37FABE(config-profile-default-rfs6000)#arp timeout 2000

rfs6000-37FABE(config-profile-default-rfs6000)#show context
profile rfs6000 default-rfs6000
 bridge vlan 1
  bridging-mode isolated-tunnel
  ip igmp snooping
  ip igmp snooping querier
 arp timeout 2000
 crypto ikev1 policy ikev1-default
  isakmp-proposal default encryption aes-256 group 2 hash sha
 crypto ikev2 policy ikev2-default
  isakmp-proposal default encryption aes-256 group 2 hash sha

--More--
rfs6000-37FABE(config-profile-default-rfs7000)#
```

Related Commands

no	Removes an entry from the ARP cache

7.1.7 auto-learn

Profile Config Commands

Enables controllers or service platforms to maintain a local configuration record of devices requesting adoption and provisioning. The command also enables learning of a device's host name via DHCP options.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
auto-learn [host-name-via-dhcp <WORD>|staging-config]
```

Parameters

- `auto-learn [host-name-via-dhcp <WORD>|staging-config]`

auto-learn [host-name-via-dhcp <WORD>| staging-config]	Enables auto-learning of: • host-name-via-dhcp – A device's host name via DHCP option. • <WORD> – Provide the optional template with substitution token. For example, 'outdoor-$DHCP[1:3]-ap', where the *$DHCP token* references DHCP Option value received by the adopting device. The $DHCP token should be present. This option is disabled by default. • staging-config – The network configuration of devices requesting adoption. This option is enabled by default. For dependent access points that are pre-staged prior to deployment, it is recommended that the auto-learn-staging-config parameter remains enabled so that hostnames, VLAN and IP addressing configuration can be maintained upon initial adoption. However, if dependent access points are to be centrally managed and configured, it is recommended that the auto-learn-staging-config parameter be disabled.

Example

```
nx9500-6C8809(config-profile-test)#auto-learn staging-config

nx9500-6C8809(config-profile-test)#show context include-factory | include auto-
learn
 auto-learn staging-config
 no auto-learn host-name-via-dhcp
nx9500-6C8809(config-profile-test)#
```

Related Commands

no	Disables automatic recognition of devices' hostname and devices pending adoption

7.1.8 autogen-uniqueid

Profile Config Commands

Auto-generates a unique ID for devices using this profile. When executed in the device configuration mode, this command generates a unique ID for the logged device. A device's unique ID is a combination of a user-defined string (prefix, suffix, or both) and a substitution token. The WiNG implementation provides two built-in substitution tokens: $SN and $MiNT-ID that represent the device's serial number and MiNT-ID respectively. The value referenced by these substitution tokens are internally retrieved and combined with the user-defined string to auto generate a unique identity for the device.

The general format of this command is: <PREFIX><SUBSTITUTION-TOKEN><SUFFIX>. You can provide both (prefix and suffix) or just a prefix or suffix.

For example, given the following set of inputs:

- user-defined prefix – TestAP6522
- substitution token – $SN

The unique ID is generated using TestAP6522$SN, where $SN is replaced with the device's serial number.

When executed on an AP6522 (having serial number B4C7996C8809), the autogen-uniqueid TestAP6522$SN command generates the unique ID: TestAP6522*B4C7996C8809*. When configured on an AP6522 profile, all AP6522s using the profile auto-generate a unique ID in which the device's serial number is preceded by the string 'TestAP6522'.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
autogen-uniqueid <WORD>
```

Parameters

- `autogen-uniqueid <WORD>`

autogen-uniqueid <WORD>	Auto-generates a device's unique ID (not exceeding 64 characters in length) The ID generated is a combination of the text provided and the value referenced through the substitution token $SN or $MiNT-ID. Where ever the autogen-uniqueid is used the device's serial number *OR* MiNT-ID is referenced depending on the substitution token used. • <WORD> – Specify a auto generate unique ID format using one of the following substitution tokens: Available tokens: $SN - references SERIAL NUMBER of the device $MINT-ID - references MINT-ID of the device For example, Test-$SN-TechPubs. In this example 'Test' and 'TechPubs' represent the user-defined prefix and suffix respectively. And $SN is the substitution token.

Example

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#autogen-uniqueid Test-$MiNT-ID-
TechPubs

nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#show context

Related Commands

no	When executed in the device configuration mode, removes the device's autogen-uniqueid. When executed in the profile configuration mode, removes the autogen-uniqueid on all devices using the profile.

7.1.9 autoinstall

Profile Config Commands

Automatically installs firmware image and startup configuration parameters on to the selected device.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
autoinstall [configuration|firmware|start-interval <WORD>]
```

Parameters

- `autoinstall [configuration|firmware|start-interval <WORD>]`

configuration	Autoinstalls startup configuration. Setup parameters are automatically configured on devices using this profile. This option is disabled by default.
firmware	Autoinstalls firmware image. Firmware images are automatically installed on devices using this profile. This option is disabled by default.
start-interval <WORD>	Configures the interval between system boot and start of autoinstall process (this is the time, from system boot, after which autoinstall should start) • <WORD> – Specify the interval in minutes. The default is 10 minutes. **Note:** Zero (0) implies firmware or startup configuration installation can start any time.

Example

```
rfs6000-37FABE(config-profile-default-rfs6000)#autoinstall configuration

rfs6000-37FABE(config-profile-default-rfs6000)#autoinstall firmware

7.1.10 bridge

Profile Config Commands

The following table summarizes Ethernet bridge configuration commands:

Command	Description	Reference
bridge	Enables Ethernet bridge configuration context	*page 7-33*
bridge-vlan-mode commands	Summarizes bridge VLAN configuration mode commands	*page 7-36*

7.1.10.1 bridge

bridge

Configures VLAN Ethernet bridging parameters. Use this command to configure a Bridge NAT or Bridge VLAN settings

Configuring bridge *Network Address Translation* (NAT) parameters, allows management of Internet traffic originating at a remote site. In addition to traditional NAT functionality, bridge NAT provides a means of configuring NAT for bridged traffic through an access point. NAT rules are applied to bridged traffic through the access point, and matching packets are NATed to the WAN link instead of being bridged on their way to the router. Using bridge NAT, a tunneled VLAN (extended VLAN) is created between the NOC and a remote location. When a remote client needs to access the Internet, Internet traffic is routed to the NOC, and from there routed to the Internet. This increases the access time for the end user on the client. To resolve latency issues, bridge NAT identifies and segregates traffic heading towards the NOC and outwards towards the Internet. Traffic towards the NOC is allowed over the secure tunnel. Traffic towards the Internet is switched to a local WLAN link with access to the Internet.

A *Virtual LAN* (VLAN) is a separately administrated virtual network within the same physical managed network. VLANs are broadcast domains defined within wireless controllers or service platforms to allow control of broadcast, multicast, unicast, and unknown unicast within a layer 2 device. For example, say several computers are used in conference room X and some in conference Y. The systems in conference room X can communicate with one another, but not with the systems in conference room Y. The VLAN enables the systems in conference rooms X and Y to communicate with one another even though they are on separate physical subnets. The systems in conference rooms X and Y are managed by the same single wireless controller or service platform, but ignore the systems that are not using the same VLAN ID. Administrators often need to route traffic between different VLANs. Bridging VLANs are only for non-routable traffic, like tagged VLAN frames destined to some other device, which will untag it. When a data frame is received on a port, the VLAN bridge determines the associated VLAN based on the port of reception. Using forwarding database information, the bridge VLAN forwards the data frame on the appropriate port(s). VLANs are useful to set separate networks to isolate some computers from others, without actually having to have separate cabling and Ethernet switches. Controllers can do this on their own, without need for the computer or other gear to know itself what VLAN it is on (this is called port-based VLAN, since it is assigned by port of the switch). Another common use is to put specialized devices like VoIP Phones on a separate network for easier configuration, administration, security, or quality of service.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Switch Note: For more information on the interface types and the devices supporting them, see *interface*.

Syntax

```
bridge [nat|vlan]

bridge nat source list <IP-ACCESS-LIST-NAME> precedence <1-500> interface
[<LAYER3-INTERFACE-NAME>|pppoe1|vlan <1-4094>|wwan1] [(address|interface|
overload|pool <NAT-POOL-NAME>)]

bridge vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

Parameters

- `bridge nat source list <IP-ACCESS-LIST-NAME> precedence <1-500> interface [<LAYER3-INTERFACE-NAME>|pppoe1|vlan <1-4094>|wwan1] [(address|interface|overload|pool <NAT-POOL-NAME>)]`

nat	Configures bridge NAT parameters
source	Configures NAT source addresses
list <IP-ACCESS-LIST-NAME> precedence <1-500>	Associates an *access control list* (ACL) with this bridge NAT policy. The ACL specifies the IP address permit/deny rules applicable to this bridge NAT policy. • <IP-ACCESS-LIST-NAME> – Specify access list name. • precedence <1-500> – Specifies a precedence value for this bridge NAT policy.
interface [<LAYER3-INTERFACE-NAME>| pppoe1|vlan <1-4094>| wwan1]	Selects one of the following as the primary interface (between the source and destination points): • <LAYER3-INTERFACE-NAME> – A router interface. Specify interface name. • pppoe1 – A PPP over Ethernet interface. • vlan <1-4094> – A VLAN interface. Specify the VLAN interface index from 1 - 4094. • wwan1 – A Wireless WAN interface.
[(address|interface| overload|pool <NAT-POOL-NAME>)]	The following keywords are recursive and common to all interface types: • address – Configures the interface IP address used for NAT • interface – Configures the failover interface (default setting) • overload – Enables use of one global address for multiple local addresses (terminates command) • pool <NAT-POOLNAME> – Configures the NAT pool used with this bridge NAT policy. Specify the NAT pool name. For more information on configuring a NAT pool, see *nat-pool-config-instance*.

- `bridge vlan [<1-4094>|<VLAN-ALIAS-NAME>]`

vlan <1-4094>	Configures the numerical identifier for the Bridge VLAN when it was initially created. • <1-4094> – Specify a VLAN index from 1 - 4094.
vlan <VLAN-ALIAS-NAME>	Configures the VLAN alias (should be existing and configured) identifying the bridge VLAN • <VLAN-ALIAS-NAME> – Specify a VLAN alias name.

Usage Guidelines

Creating customized filter schemes for bridged networks limits the amount of unnecessary traffic processed and distributed by the bridging equipment.

If a bridge does not hear *Bridge Protocol Data Units* (BPDUs) from the root bridge within the specified interval, defined in the max-age (seconds) parameter, assume the network has changed and recomputed the spanning-tree topology.

Example

```
rfs6000-37FABE(config-profile-default-rfs6000)#bridge vlan 1
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#?

```

7.1.10.2 bridge-vlan-mode commands

- *bridge*

The following table summarizes bridge VLAN configuration mode commands:

Command	Description	Reference
bridging-mode	Configures how packets on this VLAN are bridged	*page 7-37*
captive-portal	Enables IP packet snooping on wired captive portals, and also configures the subnet to snoop	*page 7-39*
captive-portal-enforcement	Enables auto-enforcement of captive portal rules on this extended VLAN interface	*page 7-40*
description	Configures VLAN bridge description	*page 7-41*
edge-vlan	Enables edge VLAN mode	*page 7-42*
firewall	Enables firewall on this bridge VLAN interface	*page 7-43*
http-analyze	Enables the analysis of URLs and data traffic on this Bridge VLAN	*page 7-44*
ip	Configures IP components	*page 7-45*
ipv6	Configures IPv6 components	*page 7-48*
l2-tunnel-broadcast-optimization	Enables broadcast optimization	*page 7-51*
l2-tunnel-forward-additional-packet-types	Enables forwarding of *Wireless Network Management Protocol* (WNMP) packets across L2 tunnels. These WNMP packets are normally not forwarded if L2 tunnel broadcast optimization is enabled.	*page 7-52*
no	Negates a command or reverts settings to their default	*page 7-53*
stateful-packet-inspection-l2	Enables stateful packet inspection in the layer 2 fire wall	*page 7-55*
tunnel	Enables tunneling of unicast messages to unknown MAC destinations, on the selected VLAN bridge	*page 7-56*
tunnel-over-level2	Enables extended VLAN traffic over level 2 MiNT links	*page 7-58*
use	Associates a captive-portal, access control list (IP, IPv6, or MAC), and a URL filter with this bridge VLAN	*page 7-59*

7.1.10.2.1 bridging-mode

bridge-vlan-mode commands

Configures how packets are bridged on the selected VLAN

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
bridging-mode [auto|isolated-tunnel|local|tunnel]
```

Parameters

- `bridging-mode [auto|isolated-tunnel|local|tunnel]`

bridging-mode	Configures the VLAN bridging mode
auto	Automatically selects the bridging mode to match the WLAN, VLAN and bridging mode configurations. When selected, the controller or access point determines the best bridging mode for the VLAN. (default setting)
isolated-tunnel	Bridges packets between local Ethernet ports and local radios, and passes tunneled packets through without de-tunneling Select this option for a dedicated tunnel for bridging VLAN traffic.
local	Bridges packets normally between local Ethernet ports and local radios (if any) Local mode is typically configured in remote branch offices where traffic on remote private LAN segments need to be bridged locally. Local mode implies that traffic, wired and wireless, is to be bridged locally.
tunnel	Bridges packets between local Ethernet ports, local radios, and tunnels to other APs, wireless controllers, or service platforms Select this option to use a shared tunnel for bridging VLAN traffic. In tunnel mode, the traffic at the AP is always forwarded through the best path. The APs decide the best path to reach the destination and forward packets accordingly. Setting the VLAN to tunnel mode ensures packets are bridged between local Ethernet ports, any local radios, and tunnels to other APs, wireless controllers, and service platforms.

Usage Guidelines

ACLs can only be used with tunnel or isolated-tunnel modes. They do not work with the local and automatic modes.

Example

```
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#bridging-mode
isolated-tunnel

rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#show context
 bridge vlan 1
 bridging-mode isolated-tunnel
 ip igmp snooping
 ip igmp snooping querier
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#
```

Related Commands

no	Resets bridging mode to auto

7.1.10.2.2 captive-portal

bridge-vlan-mode commands

Enables IP (IPv4 and IPv6) packet snooping on wired captive portals, and also configures the subnet to snoop. When enabled, IP packets received from wired captive portal clients, on the specified subnet, are snooped to learn IP to MAC mapping.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
captive-portal [ipv4-snooping|ipv6-snooping] subnet <IPv4/M|IPv6/M> {excluded-address <IPv4|IPv6>}
```

Parameters

```
• captive-portal [ipv4-snooping|ipv6-snooping] subnet <IPv4/M|IPv6/M> {excluded-address <IPv4|IPv6>}
```

captive-portal [ipv4-snooping| ipv6-snooping]	Enables snooping of IPv4 or IPv6 packets (based on the option selected) for wired captive portal clients
subnet <IPv4/M| IPv6/M>	Enables IPv4 or IPv6 packet snooping on a specified subnet • <IPv4/M|IPv6/M> – Specify the subnet address in the A.B.C.D/M or X:X::X:X/M format to identify an IPv4 or IPv6 subnet respectively. When specified, this is the IPv4/IPv6 subnet on which IP packets are to be snooped.
excluded-address <IPv4|IPv6>	Optional. Configures the IPv4 or IPv6 address excluded from snooping within the specified IPv4|IPv6 subnet. • <IPv4|IPv6> – Specify the IPv4 or IPv6 address. Use this parameter to configure the gateway's address.

Example

```
nx9500-6C8809(config-profile NX9500Test-bridge-vlan-4)#captive-portal ip-snooping
subnet 192.168.13.0/24 excluded-address 192.168.13.7

nx9500-6C8809(config-profile NX9500Test-bridge-vlan-4)#show context
 bridge vlan 4
  captive-portal ip-snooping subnet 192.168.13.0/24 excluded-address 192.168.13.7
  ip igmp snooping
  ip igmp snooping querier
  ipv6 mld snooping
  ipv6 mld snooping querier
nx9500-6C8809(config-profile NX9500Test-bridge-vlan-4)#
```

Related Commands

no	Disables IP packet snooping on wired captive portals

7.1.10.2.3 captive-portal-enforcement

bridge-vlan-mode commands

Enables auto-enforcement of captive portal rules on this extended VLAN interface. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
captive-portal-enforcement
```

Parameters

- `captive-portal-enforcement`

captive-portal-enforcement	Enables auto-enforcement of captive portal access permission rules to data transmitted over this extended VLAN interface. When enforced, wired network users can pass traffic through the captive portal without being redirected to an authentication page. Authentication instead takes place when the RADIUS server is queried against the wired user's MAC address. If the MAC address is in the RADIUS server's user database, the user is allowed access. A captive portal is an access policy for providing temporary and restrictive access using a standard Web browser. Captive portals capture and re-direct a wired/ wireless user's Web browser session to a captive portal login page where the user must enter valid credentials to access the network.

Example

```
nx9500-6C8809(config-profile testAP7602-bridge-vlan-20)#show context
 bridge vlan 20
  captive-portal-enforcement
  ip igmp snooping
  ip igmp snooping querier
  ipv6 mld snooping
  ipv6 mld snooping querier
nx9500-6C8809(config-profile testAP7602-bridge-vlan-20)#
```

Related Commands

no	Disables auto-enforcement of captive portal rules on this extended VLAN interface

7.1.10.2.4 description

bridge-vlan-mode commands

Configures this extended VLAN's description

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
description <WORD>
```

Parameters

- `description <WORD>`

description <WORD>	Configures a description for this VLAN bridge • <WORD> – Enter a description. The description should be unique to the VLAN's specific configuration to help differentiate it from other VLANs with similar configurations.

Example

```
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#description "This is
a description for the bridged VLAN"

rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#show context
 bridge vlan 1
 description "This is a description for the bridged VLAN"
 bridging-mode isolated-tunnel
 ip igmp snooping
 ip igmp snooping querier
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#
```

Related Commands

no	Removes VLAN's description

7.1.10.2.5 edge-vlan

bridge-vlan-mode commands

Enables the edge VLAN mode. In the edge VLAN mode, a protected port does not forward traffic to another protected port on the same wireless controller or service platform. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
edge-vlan
```

Parameters

None

Example

```
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#edge-vlan
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#
```

Related Commands

no	Disables the edge VLAN mode

7.1.10.2.6 firewall

bridge-vlan-mode commands

Enables IPv4 firewall on this bridge VLAN interface. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
firewall
```

Parameters

None

Example

```
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#firewall
rfs6000-37FABE(config-profile-default-rfs6000-bridge-vlan-1)#
```

Related Commands

no	Disables firewall on this bridge VLAN interface

7.1.10.2.7 http-analyze

bridge-vlan-mode commands

Enables the analysis of URLs and data traffic on this Bridge VLAN. When enabled, URLs and data are forwarded to the controller running the HTTP analytics engine.

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
http-analyze {filter [images|post|query-string]}
```

Parameters

- `http-analyze {filter [images|post|query-string]}`

http-analyze filter [images|post|query-string]	Enables URL and HTTP data analysis. Optionally use the filter keyword to filter out specific URLs
	• filter – Optional. Filters out specific URLs
	  • images – Filters out URLs referring to images
	  • post – Filters out URLs referring to POSTs
	  • query-string – Filters out query strings received from URLs

Example

```
rfs4000-229D58(config-device 00-23-68-22-9D-58-bridge-vlan-4)#http-analyze filter
images

rfs4000-229D58(config-device 00-23-68-22-9D-58-bridge-vlan-4)#show context
 bridge vlan 4
  http-analyze filter images
rfs4000-229D58(config-device 00-23-68-22-9D-58-bridge-vlan-4)#
```

Related Commands

no	Disables forwarding of URLs and data to the controller running the HTTP analytics engine

7.1.10.2.8 ip

bridge-vlan-mode commands

Configures VLAN bridge IP components

Supported in the following platforms:

- Access Points — AP6521, AP6522, AP6532, AP6562, AP7161, AP7502, AP7522, AP7532, AP7562, AP81XX, AP8232, AP8432, AP8533
- Wireless Controllers — RFS4000, RFS6000
- Service Platforms — NX5500, NX7500, NX7510, NX7520, NX7530, NX9500, NX9510, NX9600, VX9000

Syntax

```
ip [arp|dhcp|igmp]

ip [arp|dhcp] trust

ip igmp snooping {fast-leave|forward-unknown-multicast|last-member-query-count|
mrouter|querier}

ip igmp snooping {fast-leave|forward-unknown-multicast|last-member-query-count
<1-7>}

ip igmp snooping {mrouter [interface|learn]}
ip igmp snooping {mrouter [interface <INTERFACE-LIST>|learn pim-dvmrp]}

ip igmp snooping {querier} {address|max-response-time|timer|version}
ip igmp snooping {querier} {address <IP>|max-response-time <1-25>|timer expiry
<60-300>|version <1-3>}
```

Parameters

- `ip [arp|dhcp] trust`

ip	Configures the VLAN bridge IP parameters
arp trust	Configures the ARP trust parameter. Trusted ARP packets are used to update the DHCP snoop table to prevent IP spoof and arp-cache poisoning attacks. This option is disabled by default. • trust – Trusts ARP responses on the VLAN bridge
dhcp trust	Configures the DHCP trust parameter. Uses DHCP packets, from a DHCP server, as trusted and permissible within the access point, wireless controller, or service platform managed network. DHCP packets are used to update the DHCP snoop table to prevent IP spoof attacks. This feature is enabled by default. • trust – Trusts DHCP responses on the VLAN bridge

- `ip igmp snooping {fast-leave|forward-unknown-multicast|last-member-query-count <1-7>}`

ip	Configures the VLAN bridge IP parameters
igmp snooping	Configures *Internet Group Management Protocol* (IGMP) snooping parameters. IGMP snooping is enabled by default. IGMP establishes and maintains multicast group memberships for interested members. Multicasting allows a networked device to listen to IGMP network traffic and forward IGMP multicast packets to radios on which the interested hosts are connected. The device also maintains a map of the links that require multicast streams, there by reducing unnecessary flooding of the network with multicast traffic.

fast-leave	Optional. Enables fast leave processing. When enabled, layer 2 LAN interfaces are removed from the IGMP snooping forwarding table entry without initially sending IGMP group-specific queries to the interface. When receiving a group specific IGMPv2 leave message, IGMP snooping removes the interface from the Layer 2 forwarding table entry for that multicast group, unless a multicast router was learned on the port. Fast-leave processing enhances bandwidth management for all hosts on the network. This option is disabled by default. This feature is supported only on the AP7502, AP8232, AP8533 model access points.
forward-unknown-multicast	Optional. Enables forwarding of multicast packets from unregistered multicast groups. If disabled, the unknown multicast forward feature is also disabled for individual VLANs. This option is enabled by default.
last-member-query-count <1-7>	Optional. Configures the last member query count used in determining the number of group-specific queries sent before removing the snoop entry • <1-7> – Specify the count from 1 - 7. The default value is 2.

- `ip igmp snooping {mrouter [interface <INTERFACE-LIST>|learn pim-dvmrp]}`

ip	Configures the VLAN bridge IP parameters
igmp snooping	Configures the IGMP snooping parameters
mrouter	Optional. Configures the multicast router parameters
interface <INTERFACE-LIST>	Configures the multicast router interfaces. This option is disabled by default. • <INTERFACE-LIST> – Specify a comma-separated list of interface names.
learn pim-dvmrp	Configures the multicast router learning protocols. This option is disabled by default. • pim-dvmrp – Enables *Protocol-Independent Multicast* (PIM) and *Distance-Vector Multicast Routing Protocol* (DVMRP) snooping of packets

- `ip igmp snooping {querier} {address <IP>|max-response-time <1-25>|timer expiry <60-300>|version <1-3>}`

ip	Configures the VLAN bridge IP parameters
igmp snooping	Configures the IGMP snooping parameters
querier	Optional. Configures the IGMP querier parameters. This option is disabled by default. Enables IGMP querier. IGMP snoop querier keeps host memberships alive. It is primarily used in a network where there is a multicast streaming server and hosts subscribed to the server and no IGMP querier present. The access point, wireless controller, or service platform performs the IGMP querier role. An IGMP querier sends out periodic IGMP query packets. Interested hosts reply with an IGMP report packet. IGMP snooping is only conducted on wireless radios. IGMP multicast packets are flooded on wired ports. IGMP multicast packet are not flooded on the wired port. IGMP membership is also learnt on it and only if present, then it is forwarded on that port.
address <IP>	Optional. Configures the IGMP querier source IP address. This address is used as the default VLAN querier IP address. • <IP> – Specify the IGMP querier source IP address.
