# Preface

This section discusses the conventions used in this guide, ways to provide feedback, additional help, and other Extreme Networks® publications.

## Text Conventions

The following tables list text conventions that are used throughout this guide.

**Table 1: Notice Icons**

| Icon  | Notice Type    | Alerts you to...   |
|---|----------------|--|
|  | General Notice | Helpful tips and notices for using the product.                        |
|  | Note           | Important features or instructions.                                    |
|  | Caution        | Risk of personal injury, system damage, or loss of data.               |
|  | Warning        | Risk of severe personal injury.  |
| <b><i>New!</i></b>  | New Content    | Displayed next to new content. This is searchable text within the PDF. |

**Table 2: Text Conventions**

| Convention                             | Description   |
|--|---|
| Screen displays                        | This typeface indicates command syntax, or represents information as it appears on the screen.  |
| The words <b>enter</b> and <b>type</b> | When you see the word “enter” in this guide, you must type something, and then press the Return or Enter key. Do not press the Return or Enter key when an instruction simply says “type.”                                |
| <b>[Key]</b> names                     | Key names are written with brackets, such as <b>[Return]</b> or <b>[Esc]</b> . If you must press two or more keys simultaneously, the key names are linked with a plus sign (+). Example: Press <b>[Ctrl]+[Alt]+[Del]</b> |
| <i>Words in italicized type</i>        | Italics emphasize a point or denote new terms at the place where they are defined in the text. Italics are also used when referring to publication titles.  |

## Platform-Dependent Conventions

Unless otherwise noted, all information applies to all platforms supported by ExtremeXOS software, which are the following:

- ExtremeSwitching® switches
- Summit® switches
- SummitStack™

When a feature or feature implementation applies to specific platforms, the specific platform is noted in the heading for the section describing that implementation in the ExtremeXOS command documentation (see the Extreme Documentation page at [www.extremenetworks.com/documentation/](http://www.extremenetworks.com/documentation/)). In many cases, although the command is available on all platforms, each platform uses specific keywords. These keywords specific to each platform are shown in the Syntax Description and discussed in the Usage Guidelines sections.

## Providing Feedback to Us

Quality is our first concern at Extreme Networks, and we have made every effort to ensure the accuracy and completeness of this document. We are always striving to improve our documentation and help you work better, so we want to hear from you! We welcome all feedback but especially want to know about:

- Content errors or confusing or conflicting information.
- Ideas for improvements to our documentation so you can find the information you need faster.
- Broken links or usability issues.

If you would like to provide feedback to the Extreme Networks Information Development team, you can do so in two ways:

- Use our short online feedback form at <https://www.extremenetworks.com/documentation-feedback/>.
- Email us at [documentation@extremenetworks.com](mailto:documentation@extremenetworks.com).

Please provide the publication title, part number, and as much detail as possible, including the topic heading and page number if applicable, as well as your suggestions for improvement.

## Getting Help

If you require assistance, contact Extreme Networks using one of the following methods:

|                       |  |
|-----------------------|--|
| <b>Extreme Portal</b> | Search the GTAC (Global Technical Assistance Center) knowledge base, manage support cases and service contracts, download software, and obtain product licensing, training, and certifications.  |
| <b>The Hub</b>        | A forum for Extreme Networks customers to connect with one another, answer questions, and share ideas and feedback. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.         |
| <b>Call GTAC</b>      | For immediate support: 1-800-998-2408 (toll-free in U.S. and Canada) or +1 408-579-2826. For the support phone number in your country, visit: <a href="http://www.extremenetworks.com/support/contact">www.extremenetworks.com/support/contact</a> |

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number and/or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any action(s) already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)

- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

## Subscribing to Service Notifications

You can subscribe to email notifications for product and software release announcements, Vulnerability Notices, and Service Notifications.

- 1 Go to [www.extremenetworks.com/support/service-notification-form](http://www.extremenetworks.com/support/service-notification-form).
- 2 Complete the form with your information (all fields are required).
- 3 Select the products for which you would like to receive notifications.

### Note

You can modify your product selections or unsubscribe at any time.

---

- 4 Click **Submit**.

## Documentation and Training

---

| Release Notes  | <a href="http://www.extremenetworks.com/support/release-notes">www.extremenetworks.com/support/release-notes</a>                              |
| Hardware/Software Compatibility Matrices                             | <a href="https://www.extremenetworks.com/support/compatibility-matrices/">https://www.extremenetworks.com/support/compatibility-matrices/</a> |
| White papers, data sheets, case studies, and other product resources | <a href="https://www.extremenetworks.com/resources/">https://www.extremenetworks.com/resources/</a>   |

## Training

Extreme Networks offers product training courses, both online and in person, as well as specialized certifications. For more information, visit [www.extremenetworks.com/education/](http://www.extremenetworks.com/education/).

# 1 About this Guide

## Notational Conventions

This manual describes the CLI (Command Line Interface) commands and configurations required to bring up and deploy Extreme Networks' access points, wireless controllers and service platforms within a WiNG 7.2.1 managed network.

The WiNG 7.2.1 software supports the following access points and service platforms:

- Access Points (802.11ax) — AP505i, AP510i, AP510e, AP560i, AP560h
- Access Points (802.11ac) — AP7522, AP7532, AP7562, AP7612, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Note

The 802.11ax model access points are a part of the ExtremeWireless OmniEdge line of products.

The WiNG 7.X.X software supports the following AP5xx model APs:

- AP560h - This is a dual-radio, cloud-ready, stadium optimized, Wi-Fi 6, 802.11ax outdoor access point with eight internal antennas, supporting two software selectable *30 degree and 70 degree directional* antennas. It is ideally suited for high-density user environments, such as stadiums, large public venues, convention centers and school auditoriums. The AP560h offers flexible deployment options and can be mounted under a seat, to a pole, and a wall, thereby ensuring exceptional mobile user experience.
- AP560i - This is a cloud-ready, stadium optimized, Wi-Fi 6, 802.11ax outdoor access point with two internal antenna. It is ideally suited for high-density user environments, such as stadiums, large public venues, convention centers and school auditoriums. The AP560i offers flexible deployment options and can be mounted under a seat, to a pole, and a wall, thereby ensuring exceptional mobile user experience.
- AP510e - This is a next generation, enterprise-class 802.11ax access point. The AP features a dual-band radio, a band locked radio, and comes with eight (8) Wi-Fi *external* antennas and one *Bluetooth Low Energy* (BLE) antenna.
- AP510i - This is a next generation, enterprise-class 802.11ax access point. The “i” in AP510i indicates that it comes with internal antennas. The AP features a dual-band radio, a band locked radio, and comes with eight (8) Wi-Fi internal antennas and one BLE antenna.
- AP505i - This is a next generation, enterprise-class 802.11ax access point. The “i” in AP505i indicates that it comes with internal antennas. The AP505i can be used in stadiums, public venues such as hospitals and hotels, retail industry, and educational institutions. The 802.11ax technology supports more users and *internet of things* (IoT) devices.

## Notational Conventions

The following notational conventions are used in this document:

- Italics are used to highlight specific items in the general text, and to identify chapters and sections in this and related documents.
- Bullets (•) indicate:
  - lists of alternatives
  - lists of required steps that are not necessarily sequential
  - action items
- Sequential lists (those describing step-by-step procedures) appear as numbered lists

## Understanding Command Syntax

|            |  |
|------------|--|
| <variable> | <p>Variables are described with a short description enclosed within a '&lt;' and a '&gt;' pair.</p> <p>For example, the command,</p> <pre>nx9500-6C8809&gt;show interface ge 1</pre> <p>is documented as:</p> <pre>show interface ge &lt;1-2&gt;</pre> <p>where:</p> <ul style="list-style-type: none"> <li>• show – is the command – displays information</li> <li>• interface – is the keyword – represents the interface type</li> <li>• &lt;1-2&gt; – is the variable – represents the ge interface index value</li> </ul> <p><b>Note:</b> Since this output is from an NX 9500 service platform, which supports only two (2) GE interfaces, the index value is shown as &lt;1-2&gt;. This value will vary depending on the platform type.</p> |
|            | <p>The pipe symbol. This is used to separate the variables/keywords in a list.</p> <p>For example, the command,</p> <pre>nx9500-6C8809&gt; show .....</pre> <p>is documented as:</p> <pre>show [adoption bluetooth bonjour boot .....]</pre> <p>where:</p> <ul style="list-style-type: none"> <li>• show – is the command – displays information</li> <li>• [adoption bluetooth bonjour boot .....] – indicates the different keywords that can be combined with the <i>show</i> command. However, only one of the above option can be used at a time.</li> </ul> <pre>show adoption ... show bluetooth ... show bonjour ...</pre>   |

|            |  |
|------------|--|
| <p>[ ]</p> | <p>Of the different keywords and variables listed inside a '[' &amp; ']' pair, only one can be used. Each choice in the list is separated with a ' ' (pipe) symbol. For example, the command,</p> <pre>nx9500-6C8809# clear ...</pre> <p>is documented as:</p> <pre>clear [arp-cache bonjour cdp counters crypto  event-history firewall gre ip ipv6 l2tpv3-stats lacp  license lldp logging mac-addressstable mint role rtls  spanning-tree traffic-shape vrrp]</pre> <p>where:</p> <ul style="list-style-type: none"> <li>clear – is the command</li> <li>[arp-cache bonjour cdp counters crypto  ..... vrrp] – indicates that these keywords are available for this command. However, only one can be used at a time.</li> </ul>                                |
| <p>{ }</p> | <p>Any command/keyword/variable or a combination of them inside a '{ &amp; }' pair is optional. All optional commands follow the same conventions as listed above. However, they are displayed italicized. For example, the command,</p> <pre>nx9500-6C8809&gt; show adoption ....</pre> <p>is documented as:</p> <pre>show adoption info {on &lt;DEVICE-NAME&gt;}</pre> <p>here:</p> <ul style="list-style-type: none"> <li>show adoption info – is the command. This command can also be used as:</li> </ul> <pre>show adoption info</pre> <p>The command can also be extended as:</p> <pre>show adoption info {on &lt;DEVICE-NAME&gt;}</pre> <p>here:</p> <ul style="list-style-type: none"> <li>{on &lt;DEVICE-NAME&gt;} – is the optional keyword.</li> </ul> |

|                   |  |
|-------------------|--|
| command / keyword | <p>The first word is always a command. Keywords are words that must be entered as is. Commands and keywords are mandatory.</p> <p>For example, the command,</p> <pre>nx9500-6C8809&gt;show wireless</pre> <p>is documented as:</p> <pre>show wireless</pre> <p>where:</p> <ul style="list-style-type: none"> <li>• show – is the command</li> <li>• wireless – is the keyword</li> </ul>   |
| ()                | <p>Any command/keyword/variable or a combination of them inside a '(' &amp; ')' pair are recursive. All recursive commands can be listed in any order and can be used once along with the rest of the commands.</p> <p>For example, the command,</p> <pre>crypto pki export request generate-rsa-key test autogen-subject-name ...</pre> <p>is documented as:</p> <pre>nx9500-6C8809#crypto pki export request generate-rsa-key test autogen-subject-name (&lt;URL&gt;,email &lt;EMAIL&gt;,fqdn &lt;FQDN&gt;,ip-address &lt;IP&gt;)</pre> <p>here:</p> <ul style="list-style-type: none"> <li>• crypto pki export request generate-rsa-key &lt;RSA-KEYPAIR-NAME&gt; auto-gen-subject-name – is the command</li> <li>• &lt;RSA-KEYPAIR-NAME&gt; – is the RSA keypair name (in this example, the keypair name is 'test')</li> <li>• (&lt;URL&gt;,email &lt;EMAIL&gt;,fqdn &lt;FQDN&gt;,ip-address &lt;IP&gt;) – is the set of recursive parameters (separated by commas) that can be used in any order.</li> </ul> |

# 2 Introduction

## WiNG 7.1.X Operating System Overview CLI Overview

This chapter provides a general overview of the WiNG 7 operating system and the *CLI (Command Line Interface)* structure. It also provides a list of commands required to deploy and manage access points within the WiNG managed network.

## WiNG 7.1.X Operating System Overview

The WiNG 7 operating system is a solution designed for 802.11n, 802.11ac and 802.11ax networking. It is a convergence of the legacy ExtremeWireless™ WiNG (5.9.X) and ExtremeWireless™ (10.X) wireless operating systems. It offers a high-level of flexibility and scalability covering both campus and distributed modes of deployment.

WiNG 7.1.X brings together the following key benefits of both deployment topologies under one fold:

- *ExtremeWireless* - The ExtremeWireless software provides a secure, highly scalable, cost-effective solution based on the IEEE 802.11 standard. The system is intended for enterprise networks operating on multiple floors in more than one building, and is ideal for public environments, such as airports and convention centers that require multiple access points. It is an ideal solution for high-density, campus and stadium deployments. It is well suited to meet the needs of enterprises in the education, healthcare, sports and entertainment verticals. The ExtremeWireless OS key strengths are:
  - Extensive Policy Framework
  - Contextual Device and Application Control
  - Application Visibility & Control with Analytics
  - BYOD - Single *SSID* with Programmable Data Path
  - Voice & Video Optimized with Seamless Roaming
- *ExtremeWireless WiNG* - The WiNG architecture is a solution designed for 802.11n and 802.11ac networking. It is designed for standalone or distributed hierarchical networks. The ExtremeWireless WiNG software distributes intelligence right to the network edge, empowering every controller and access point with the intelligence needed to be network-aware, able to identify and dynamically route traffic over the most efficient path available at that time. It is highly scalable and well suited to meet the needs of large, geographically distributed enterprises. It is an ideal wireless networking solution for the retail, manufacturing, transportation & logistics, and hospitality verticals. The ExtremeWireless OS key strengths are:
  - Simple Guest Access with Analytics
  - Contextual Application Control
  - Advanced Diagnostics and Remote Troubleshooting
  - Intrusion, Compliance and Wi-Fi Forensics
  - Scale-out 1000s of APs with Rapid Rollout

- Self-tuning RF (Smart-RF)
- Distributed Service Intelligence

Going forward, this unified, common, wireless, infrastructure WiNG 7.1 OS will power both ExtremeWireless and ExtremeWireless WiNG product families. The WiNG 7.2.1 OS supports the following platforms:

- Access Points (802.11ax) — AP505i, AP510i, AP510e, AP560i, AP560h
- Access Points (802.11ac) — AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Dual Mode Capability

The WiNG 7 AP5XX (AP505, AP510 and AP560) model access points have the capability of operating in the **Distributed** and **Centralized** modes. For a newly-manufactured, out-of-the-box AP5XX model access point the mode of operation is not specified.

### Note

For more information, see [Dual Mode Capability](#).

## AP560h Specifications

The enterprise class 802.11ax AP560h access point has the following features:

- Radios: 2 radios; 1 IoT radio (2.4 GHz).
- Console Port: RJ45.
- Two Ethernet Ports:
  - GE1 - 10/100/1000/2500/5000 Mbps auto-negotiation Ethernet port, RJ45, with *Power over Ethernet* (PoE) In
  - GE2 - 10/100/1000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In
- LEDs: 2 – All LEDs will be on during reset
- One Reset button
- Power: PoE 802.3af; 12VDC external power in connector.
- Antennas:
  - Eight WiFi internal antennas, supporting the following internal antenna modes:
    - 30 degree
    - 70 degree
  - One BLE internal antenna

## AP560i Specifications

The enterprise class 802.11ax AP560i access point has the following features:

- Radios: 2 radios; 1 IoT radio (2.4 GHz).
- Console Port: RJ45.
- Two Ethernet Ports:
  - GE1 - 10/100/1000/2500/5000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In
  - GE2 - 10/100/1000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In

- LEDs: 2 – All LEDs will be on during reset
- One Reset button
- Power: PoE 802.3af; 12VDC external power in connector.
- Antennas:
  - Eight WiFi internal antennas
  - One BLE internal antenna

## AP510e Specifications

The enterprise class 802.11ax AP510e access point has the following features:

- Radios: 2 radios; 1 IoT radio (2.4 GHz).
- Console Port: RJ45.
- Two Ethernet Ports:
  - GE1 - 10/100/1000/2500/5000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In
  - GE2 - 10/100/1000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In
- LEDs: 6 – All LEDs will be on during reset
- One Reset button
- Power: PoE 802.3af; 12VDC external power in connector.
- Antennas:
  - Eight WiFi **external** antennas
  - One BLE internal antenna

## AP510i Specifications

The enterprise class 802.11ax AP510i access point has the following features:

- Radios: 2 radios; 1 IoT radio (2.4 GHz).
- Console Port: RJ45.
- Two Ethernet Ports:
  - GE1 - 10/100/1000/2500/5000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In
  - GE2 - 10/100/1000 Mbps auto-negotiation Ethernet port, RJ45, with PoE In
- LEDs: 6 – All LEDs will be on during reset
- One Reset button
- Power: PoE 802.3af; 12VDC external power in connector.
- Antennas:
  - Eight WiFi internal antennas
  - One BLE internal antenna

## AP505i Specifications

The enterprise class 802.11ax AP505i access point has the following features:

- Radios: 2 radios (one band locked at 2.4 GHz and the other band at 5 GHz); 1 IoT radio (2.4 GHz)
- Console port: RJ45
- Two Ethernet ports:
  - GE1 - 10/100/1000/2500 Mbps auto-negotiation Ethernet port, RJ45, with PoE In

- GE2 - 10/100/1000 Mbps auto-negotiation Ethernet port, RJ45, with NO PoE
- LEDs: 6 LEDs; all LEDs will be on during reset
- One reset button
- Power: PoE 802.3af; 12VDC external power in connector
- Antennas:
  - Eight WiFi internal antennas
  - One BLE internal antenna

#### Note

For more information on the AP505i, AP510i/e and AP560i/h, refer to the respective installation guides, available at <https://extremenetworks.com/documentation>.

## CLI Overview

This section describes the commands available within a device's CLI structure. CLI is available for access points, wireless controller, and service platforms.

You can access the CLI by using:

- A terminal emulation program running on a computer connected to the serial port on the device (AP, wireless controller, and service platform).
- A Telnet session through SSH (*Secure Shell*) over a network.

### Configuration for connecting to a Controller using a terminal emulator

If connecting through the serial port, use the following settings to configure your terminal emulator:

|                        |   |
|------------------------|---|
| <i>Bits Per Second</i> | <b>19200</b> - For NX5500, NX7500, NX9500, NX9600, VX9000 model service platforms.<br><b>115200</b> - For AP505 and AP510 model access points |
| <i>Data Bits</i>       | <b>8</b>  |
| <i>Parity</i>          | <b>None</b>   |
| <i>Stop Bit</i>        | <b>1</b>  |
| <i>Flow Control</i>    | <b>None</b>   |

When a CLI session is established, complete the following (user input is in **bold**):

```
login as: <username>
administrator's login password: <password>
```

### User Credentials

Use the following credentials when logging into a device for the first time:

|                  |          |
|------------------|----------|
| <b>User Name</b> | admin    |
| <b>Password</b>  | admin123 |

When logging into the CLI for the first time, you are prompted to change the password. Reset the password and use it for subsequent logins.

## Examples in this reference guide

Examples used in this reference guide are generic to the each supported wireless controller, service platform, and AP model. Commands that are not common, are identified using the notation "Supported in the following platforms." For an example, see below:

### Supported in the following platforms:

- Wireless Controller – NX 5500

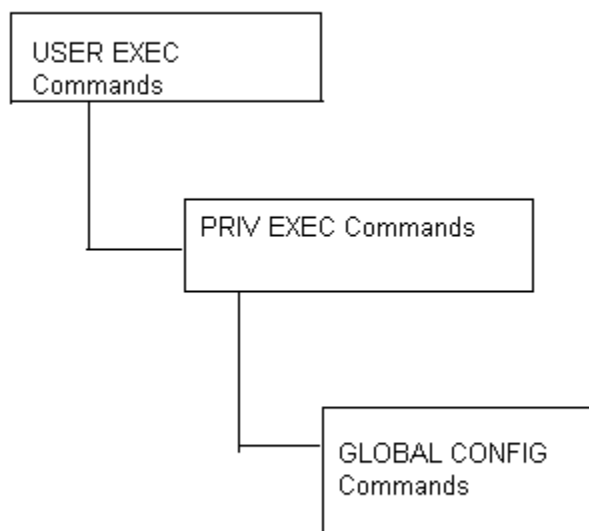

The above example indicates the command is only available for a NX 5500 model wireless controller.

The CLI is used for configuring, monitoring, and maintaining the network. The user interface allows you to execute commands on supported wireless controllers, service platforms, and APs, using either a serial console or a remote access method.

This chapter describes basic CLI features. Topics covered include an introduction to command modes, navigation and editing features, help features and command history.

The CLI is segregated into different command modes. Each mode has its own set of commands for configuration, maintenance, and monitoring. The commands available at any given time depend on the mode you are in, and to a lesser extent, the particular model used. Enter a question mark (?) at the system prompt to view a list of commands available for each command mode/instance.

Use specific commands to navigate from one command mode to another. The standard order is: USER EXEC mode, PRIV EXEC mode and GLOBAL CONFIG mode.

**Figure 1: Figure: Hierarchy of User Modes**

## Command Modes

A session generally begins in the USER EXEC mode (one of the two access levels of the EXEC mode). For security, only a limited subset of EXEC commands are available in the USER EXEC mode. This level is reserved for tasks that do not change the device's (wireless controller, service platform, or AP) configuration.

```
ap505-13403B>
```

The system prompt signifies the device name and the last three bytes of the device MAC address.

To access commands, enter the PRIV EXEC mode (the second access level for the EXEC mode). Once in the PRIV EXEC mode, enter any EXEC command. The PRIV EXEC mode is a superset of the USER EXEC mode.

```
ap505-13403B>en
ap505-13403B#
```

Most of the USER EXEC mode commands are one-time commands and are not saved across device reboots. Save the command by executing 'commit' command. For example, the show command displays the current configuration and the clear command clears the interface.

Access the GLOBAL CONFIG mode from the PRIV EXEC mode. In the GLOBAL CONFIG mode, enter commands that set general system characteristics. Configuration modes, allow you to change the running configuration. If you save the configuration later, these commands are stored across device reboots.

Access a variety of protocol specific (or feature-specific) modes from the global configuration mode. The CLI hierarchy requires you to access specific configuration modes only through the global configuration mode.

```
ap505-13403B#configure terminal
Enter configuration commands, one per line.  End with CNTL/Z.
ap505-13403B(config)#
```

You can also access sub-modes from the global configuration mode. Configuration sub-modes define specific features within the context of a configuration mode.

```
ap505-13403B(config)#aaa-policy test
ap505-13403B(config-aaa-policy-test)#
```

To enter the logged device's configuration, execute the following command:

```
ap505-13403B(config)#self
ap505-13403B(config-device-94-9B-2C-13-40-38)#
```

The following table summarizes the available controller commands:

**Table 3: Controller CLI Modes and Commands**

| User Exec Mode             | Priv Exec Mode             | Global Configuration Mode |
|----------------------------|----------------------------|---------------------------|
| captive-portal-page-upload | archive                    | aaa-policy                |
| change-passwd              | boot                       | aaa-tacacs-policy         |
| clear                      | captive-portal-page-upload | alias                     |
| clock                      | cd                         | AP505                     |

**Table 3: Controller CLI Modes and Commands (continued)**

| User Exec Mode         | Priv Exec Mode  | Global Configuration Mode                                      |
|------------------------|---|--|
| cluster                | change-passwd   | AP510  |
| commit                 | clear   | application  |
| connect                | clock   | application-group  |
| create-cluster         | cluster   | application-policy   |
| crypto                 | commit  | association-acl-policy   |
| crypto-cmp-cert-update | configure   | auto-provisioning-policy                                       |
| database               | connect   | bgp  |
| database-backup        | copy  | ble-data-export-policy   |
| database-restore       | cpe (supported on NX7500, NX9500, NX9600, and VX9000) | bonjour-gw-discovery-policy                                    |
| debug                  | create-cluster  | bonjour-gw-forwarding-policy                                   |
| device-upgrade         | crypto  | bonjour-gw-query-forwarding-policy                             |
| disable                | crypto-cmp-cert-update                                | captive-portal   |
| enable                 | database  | clear  |
| file-sync              | database-backup                                       | client-identity  |
| help                   | database-restore                                      | client-identity-group  |
| join-cluster           | debug   | clone  |
| l2tpv3                 | delete  | crypto-cmp-policy  |
| logging                | device-upgrade  | customize  |
| mint                   | diff  | database-client-policy (supported only on VX9000)              |
| no                     | dir   | database-policy (supported only on NX9500, NX9600, and VX9000) |
| on                     | disable   | device   |
| opendns                | edit  | device-categorization  |
| page                   |   | dhcp-server-policy   |
| ping                   | enable  | dhcpv6-server-policy   |
| ping6                  | erase   | dns-whitelist  |
| revert                 | ex3500 (supported only on NX9500, NX9600, and VX9000) | event-system-policy  |
| service                | factory-reset   | ex3500   |
| show                   | file-sync   | ex3500-management-policy                                       |
| ssh                    | halt  | ex3500-qos-class-map-policy                                    |
| telnet                 | help  | ex3500-qos-policy-map  |
| terminal               | join-cluster  | ex3524   |

**Table 3: Controller CLI Modes and Commands (continued)**

| User Exec Mode   | Priv Exec Mode  | Global Configuration Mode  |
|--|---|--|
| time-it  | l2tpv3  | ex3548   |
| traceroute   | logging   | firewall-policy  |
| traceroute6  | mint  | global-association-list  |
| virtual-machine (supported only on NX9500, NX9600, and VX9000) | mkdir   | guest-management   |
| watch  | more  | help   |
| write  | no  | host   |
| clrscr   | on  | igmp-snoop-policy (This command has been deprecated. IGMP snooping is now configurable under the profile/device configuration mode. For more information, see <a href="#">ip</a> on page 1170. |
| exit   | opendns   | inline-password-encryption   |
|  | page  | iot-device-type-imagotag-policy  |
|  | ping  | ip   |
|  | ping6   | ipv6   |
|  | pwd   | ipv6-router-advertisement-policy   |
|  | raid (supported only on NX9500, NX9600, and NX7500)       | l2tpv3   |
|  | re-elect  | location-policy  |
|  | reload  | mac  |
|  | remote-debug  | management-policy  |
|  | rename  | meshpoint  |
|  | revert  | meshpoint-qos-policy   |
|  | rmdir   | mint-policy  |
|  | self  | nac-list   |
|  | service   | no   |
|  | set-personality   | nsight-policy  |
|  | show  | NX5500 (supported only on NX9500, NX9600, and VX900 and )  |
|  | ssh   | NX7500 (supported only on NX9500, NX9600, and VX9000)  |
|  | t5 (supported only on RFS400, NX9500, NX9600, and VX9000) | NX9000 (supported only on NX9500, NX9600, and VX9000)  |
|  | telnet  | NX9600 (supported only on NX9600, and VX9000)  |
|  | terminal  | passpoint-policy   |

**Table 3: Controller CLI Modes and Commands (continued)**

| User Exec Mode | Priv Exec Mode  | Global Configuration Mode                                 |
|----------------|---|---|
|                | time-it   | password-encryption                                       |
|                | tracert   | profile   |
|                | tracert6  | radio-qos-policy  |
|                | upgrade   | radius-group  |
|                | upgrade-abort   | radius-server-policy                                      |
|                | virtual-machine (supported only on NX9500, NX9600 and VX9000) | radius-user-pool-policy                                   |
|                | watch   | rename  |
|                |   | replace   |
|                | write   | rf-domain   |
|                | clrscr  | rfs4000   |
|                | exit  | roaming-assist-policy                                     |
|                |   | role-policy   |
|                |   | route-map   |
|                |   | routing-policy  |
|                |   | rtl-server-policy   |
|                |   | schedule-policy   |
|                |   | self  |
|                |   | sensor-policy   |
|                |   | smart-rf-policy   |
|                |   | t5 (supported only on NX7500, NX9500, NX9600 and VX9000)  |
|                |   | url-filter (supported only on NX9500, NX9600, and VX9000) |
|                |   | url-list (supported only on NX9500, NX9600 and VX9000)    |
|                |   | vx9000 (supported only on NX9500, NX9600, and VX9000)     |
|                |   | web-filter-policy   |
|                |   | wips-policy   |
|                |   | wlan  |
|                |   | wlan-qos-policy   |
|                |   |   |
|                |   | write   |
|                |   | clrscr  |
|                |   | commit  |
|                |   | do  |

**Table 3: Controller CLI Modes and Commands (continued)**

| User Exec Mode | Priv Exec Mode | Global Configuration Mode |
|----------------|----------------|---------------------------|
|                |                | end                       |
|                |                | exit                      |
|                |                | revert                    |
|                |                | service                   |
|                |                | show                      |

## Getting Context Sensitive Help

Enter a question mark (?) at the system prompt to display a list of commands available for each mode. Obtain a list of arguments and keywords for any command using the CLI context-sensitive help.

Use the following commands to obtain help specific to a command mode, command name, keyword or argument:

| Command                                  | Description  |
|--|--|
| (prompt)# help                           | Displays a brief description of the help system                                  |
| (prompt)# abbreviated-command-entry?     | Lists commands in the current mode that begin with a particular character string |
| (prompt)# abbreviated-command-entry<TAB> | Completes a partial command name   |
| (prompt)# ?                              | Lists all commands available in the command mode                                 |
| (prompt)# command ?                      | Lists the available syntax options (arguments and keywords) for the command      |
| (prompt)# command keyword ?              | Lists the next available syntax option for the command                           |

### Note

The system prompt varies depending on the configuration mode.

### Note

Enter Ctrl + V to use ? as a regular character and not as a character used for displaying context sensitive help. This is required when the user has to enter a URL that ends with a ?

### Note

The escape character used through out the CLI is "\". To enter a "\" use "\\" instead.

When using context-sensitive help, the space (or lack of a space) before the question mark (?) is significant. To obtain a list of commands that begin with a particular sequence, enter the characters

followed by a question mark (?). Do not include a space. This form of help is called word help, because it completes a word.

```

nx9500-6C8809#service?
  service  Service Commands

nx9500-6C8809#
ap505-13403B#se?
  self          Config context of the device currently logged into
  service       Service Commands
  set-personality Change personality on next reload

ap505-13403B#

```

Enter a question mark (?) (in place of a keyword or argument) to list keywords or arguments. Include a space before the "?". This form of help is called command syntax help. It shows the keywords or arguments available based on the command/keyword and argument already entered.

```

```

```
nx9500-6C8809#
```

It is possible to abbreviate commands and keywords to allow a unique abbreviation. For example, "configure terminal" can be abbreviated as **confi t**. Since the abbreviated command is unique, the wireless controller accepts the abbreviation and executes the command.

Enter the help command (available in any command mode) to provide the following description:

```
ap505-13403B>help
```

When using the CLI, help is provided at the command line when typing '?'.  
 If no help is available, the help content will be empty. Backup until entering a '?' shows the help content.

If no help is available, the help content will be empty. Backup until entering a '?' shows the help content.

There are two styles of help provided:

1. Full help. Available when entering a command argument (e.g. 'show ?'). This will describe each possible argument.
2. Partial help. Available when an abbreviated argument is entered. This will display which arguments match the input (e.g. 'show ve?').

```
ap505-13403B>
```

## Using the No Command

Almost every command has a no form. Use no to disable a feature or function or return it to its default. Use the command without the no keyword to re-enable a disabled feature.

## Using CLI Editing Features and Shortcuts

A variety of shortcuts and edit features are available. The following sections describe these features:

- [Moving the Cursor on the Command Line](#) on page 24
- [Completing a Partial Command Name](#) on page 25
- [Command Output pagination](#) on page 26
- [Creating Profiles](#) on page 26
- [Changing Default Profile](#) on page 27
- [Enabling Remote Administration](#) on page 27

### *Moving the Cursor on the Command Line*

The following table shows the key combinations or sequences to move the command line cursor. **Ctrl** defines the control key, which must be pressed simultaneously with its associated letter key. **Esc** means the escape key (which must be pressed first), followed by its associated letter key. Keys are not case sensitive. Specific letters are used to provide an easy way of remembering their functions. The bold characters indicate the relation between a letter and its function.

**Table: Keystrokes Details**

| Keystrokes                 | Function Summary  | Function Details   |
|----------------------------|-------------------|--|
| Left Arrow<br>or<br>Ctrl-B | Back character    | Moves the cursor one character to the left<br>When entering a command that extends beyond a single line, press the Left Arrow or Ctrl-B keys repeatedly to move back to the system prompt. |
| Right Arrow or Ctrl-F      | Forward character | Moves the cursor one character to the right  |
| Esc- B                     | Back word         | Moves the cursor back one word   |
| Esc- F                     | Forward word      | Moves the cursor forward one word  |
| Ctrl-A                     | Beginning of line | Moves the cursor to the beginning of the command line  |
| Ctrl-E                     | End of line       | Moves the cursor to the end of the command line  |
| Ctrl-D                     |                   | Deletes the current character  |
| Ctrl-U                     |                   | Deletes text up to cursor  |
| Ctrl-K                     |                   | Deletes from the cursor to end of the line   |
| Ctrl-P                     |                   | Obtains the prior command from memory  |
| Ctrl-N                     |                   | Obtains the next command from memory   |
| Esc-C                      |                   | Converts the letter at the cursor to uppercase   |
| Esc-L                      |                   | Converts the letter at the cursor to lowercase   |
| Esc-D                      |                   | Deletes the remainder of a word  |
| Ctrl-W                     |                   | Deletes the word up to the cursor  |
| Ctrl-Z                     |                   | Returns to the root prompt   |
| Ctrl-T                     |                   | Transposes the character to the left of the cursor with the character located at the cursor  |
| Ctrl-L                     |                   | Clears the screen  |

### Completing a Partial Command Name

If you cannot remember a command name (or if you want to reduce the amount of typing you have to perform), enter the first few letters of a command, then press the Tab key. The command line parser completes the command if the string entered is unique to the command mode. If your keyboard does not have a **Tab** key, press **Ctrl-L**.

The CLI recognizes a command once you have entered enough characters to make the command unique. If you enter "conf" within the privileged EXEC mode, the CLI associates the entry with the configure command, since only the configure command begins with **conf**.

In the following example, the CLI recognizes a unique string in the privileged EXEC mode when the Tab key is pressed:

```

nx9500-6C8809#conf[TAB]
nx9500-6C8809#configure
nx9500-6C8809#configure[ENTER]
Enter configuration commands, one per line. End with CNTL/Z.
nx9500-6C8809(config)#

```

When using the command completion feature, the CLI displays the full command name. The command is not executed until the **Return** or **Enter** key is pressed. Modify the command if the full command was not what you intended in the abbreviation. If entering a set of characters (indicating more than one command), the system lists all commands beginning with that set of characters.

Enter a question mark (?) to obtain a list of commands beginning with that set of characters. Do not leave a space between the last letter and the question mark (?).

In the following example, all commands, available in the current context, starting with the characters 'co' are listed:

```
nx9500-6C8809#co?
commit      Commit all changes made in this session
configure   Enter configuration mode
connect     Open a console connection to a remote device
copy        Copy from one file to another

nx9500-6C8809#
```

#### Note

The characters entered before the question mark are reprinted to the screen to complete the command entry.

### Command Output pagination

Output often extends beyond the visible screen length. For cases where output continues beyond the screen, the output is paused and a

```
--More--
```

prompt displays at the bottom of the screen. To resume the output, press the Enter key to scroll down one line or press the **Space bar** to display the next full screen of output.

### Creating Profiles

Profiles are sort of a 'template' representation of configuration. The system has:

- a default profile for each of the following service platforms:
  - NX5500, NX7500, NX9500, NX9600, and VX9000
- a default profile for each of the following access points:
  - AP505 and AP510

You can modify a default profile. In the following example, an IP address is assigned to the management port on the default AP505 profile.

```
nx9500-6C8809(config)#profile ap505 default-ap505
nx9500-6C8809(config-profile-default-ap505)#interface me1
nx9500-6C8809(config-profile-default-ap505-if-me1)#ip address 172.16.10.2/24
nx9500-6C8809(config-profile-default-ap505-if-me1)#commit
nx9500-6C8809(config-profile-default-ap505)#exit
nx9500-6C8809(config)#
```

The following command displays a default ap505 profile configuration:

```
nx9500-6C8809(config-profile-default-ap505)#
nx9500-6C8809(config-profile-default-ap505)#show context
profile ap505 default-ap505
```

```

### Changing Default Profile

This section describes how to change the default profile by creating vlan 150 and mapping to ge1 physical interface.

Log on to the controller in config mode and follow the procedure below:

```

nx9500-6C8809(config-profile-default-ap505)#interface vlan 150
nx9500-6C8809(config-profile-default-ap505-if-vlan150)#ip address 192.168.150.20/24
nx9500-6C8809(config-profile-default-ap505-if-vlan150)#exit
nx9500-6C8809(config-profile-default-ap505)#interface ge 1
nx9500-6C8809(config-profile-default-ap505-if-ge1)#switchport access vlan 150
nx9500-6C8809(config-profile-default-ap505-if-ge1)#commit write memory
[OK]
nx9500-6C8809(config-profile-default-ap505-if-ge1)#show interface vlan 150
Interface vlan150 is UP
  Hardware-type: vlan, Mode: Layer 3, Address: 00-15-70-81-70-1D
  Index: 6, Metric: 1, MTU: 1500
  IP-Address: 192.168.150.20/24
    input packets 0, bytes 0, dropped 0, multicast packets 0
    input errors 0, length 0, overrun 0, CRC 0, frame 0, fifo 0, missed 0
    output packets 2, bytes 140, dropped 0
    output errors 0, aborted 0, carrier 0, fifo 0, heartbeat 0, window 0
    collisions 0
  IPv6 mode is disabled

nx9500-6C8809(config-profile-default-ap505-if-ge1)#

```

### Enabling Remote Administration

A terminal server may function in remote administration mode if either the terminal services role is not installed on the machine or the client used to invoke the session has enabled the admin controller.

- A terminal emulation program running on a computer connected to the serial port on the controller. The serial port is located on the front of the controller.

- A Telnet session through a SSH (*Secure Shell*) over a network. The Telnet session may or may not use SSH depending on how the controller is configured. Using SSH for remote administration tasks is recommended.

### Configuring Telnet for Management Access

To enable Telnet for management access, use the serial console to login to the device and perform the following:

- 1 The session, by default, opens in the USER EXEC mode (one of the two access levels of the EXEC mode). Access the PRIV EXEC mode from the USER EXEC mode.

```
ap505-13403B>en
ap505-13403B#
```

- 2 Access the GLOBAL CONFIG mode from the PRIV EXEC mode.

```
ap505-13403B#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ap505-13403B(config)#
```

- 3 Go to 'default-management-policy' mode.

```
ap505-13403B(config)#management-policy ?
    MANAGEMENT  Name of the management policy to be configured (will be created
                  if it does not exist)

ap505-13403B(config)#management-policy default
ap505-13403B(config-management-policy-default)#
```

- 4 Enter Telnet and the port number at the command prompt. Note, the port number is optional. If you do not specify the port, the system, by default, assigns port 23 for Telnet. Commit your changes. Telnet is enabled.

```
ap505-13403B(config-management-policy-default)#telnet
ap505-13403B(config-management-policy-default)#commit write
ap505-13403B(config-management-policy-default)#end
ap505-13403B#exit
```

- 5 Connect to the controller through Telnet using its configured IP address. If logging in for the first time, use the following credentials:

|   |                 |
|---|-----------------|
| User Name   | <b>admin</b>    |
| Password  | <b>admin123</b> |
| <b>Note:</b> When logging in for the first time, you will be prompted to change the password. Re-set the password and use it for subsequent logins. |                 |

- 6 To change password, on subsequent logins, access the default management-policy configuration mode and enter the username, new password, role, and access details.

```
ap505-13403B(config-management-policy-default)#user testuser password test@123
role helpdesk access all

## Configuring SSH for Management Access

By default, SSH is enabled from the factory settings on the controller. The controller requires an IP address and login credentials.

To enable SSH access on a device, login through the serial console and perform the following:

- 1 The session, by default, opens in the USER EXEC mode (one of the two access levels of the EXEC mode). Access the PRIV EXEC mode from the USER EXEC mode.

```

ap505-13403B>en
ap505-13403B#

```

- 2 Access the GLOBAL CONFIG mode from the PRIV EXEC mode.

```

ap505-13403B#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ap505-13403B(config)#

```

- 3 Go to 'default-management-policy' mode.

```

ap505-13403B(config)#management-policy ?
MANAGEMENT  Name of the management policy to be configured (will be created
              if it does not exist)

ap505-13403B(config)#management-policy default
ap505-13403B(config-management-policy-default)#

```

- 4 Enter SSH at the command prompt.

```

ap505-13403B(config-management-policy-default)#ssh
ap505-13403B(config-management-policy-default)#commit write
ap505-13403B(config-management-policy-default)#end
ap505-13403B#exit

```

- 5 Connect to the access point through SSH using its configured IP address. If logging in for the first time, use the following credentials:

|           |  |
|-----------|--|
| User Name | <b>admin</b>   |
| Password  | <b>admin123</b><br><br><b>Note:</b> When logging in for the first time, you will be prompted to change the password. Re-set the password and use it for subsequent logins. |

- 6 On subsequent logins, to change the password, access the default management-policy configuration mode and enter the username, new password, role, and access details.

```

ap505-13403B(config-management-policy-default)#user testuser password test@123
role helpdesk access all

# 3 User Exec Mode Commands

## user-exec-commands

Logging in to the wireless controller or access point places you within the USER EXEC command mode. Typically, a login requires a user name and password. You have three login attempts before the connection attempt is refused. USER EXEC commands (available at the user level) are a subset of the commands available at the privileged level. In general, USER EXEC commands allow you to connect to remote devices, perform basic tests, and list system information.

To list available USER EXEC commands, use ? at the command prompt. The USER EXEC prompt consists of the device host name followed by an angle bracket (>).

```
<DEVICE>>?
Command commands:
  captive-portal-page-upload  Captive portal internal and advanced page upload
  change-passwd              Change password
  clear                      Clear
  clock                      Configure software system clock
  cluster                    Cluster commands
  commit                     Commit all changes made in this session
  connect                    Open a console connection to a remote device
  create-cluster              Create a cluster
  crypto                     Encryption related commands
  crypto-cmp-cert-update     Update the cmp certs
  database                   Database
  database-backup             Backup database
  database-restore            Restore database
  debug                      Debugging functions
  device-upgrade              Device firmware upgrade
  disable                    Turn off privileged mode command
  enable                     Turn on privileged mode command
  file-sync                  File sync between controller and adoptees
  help                       Description of the interactive help system
  join-cluster                Join the cluster
  l2tpv3                     L2tpv3 protocol
  logging                    Modify message logging facilities
  mint                       MiNT protocol
  no                         Negate a command or set its defaults
  on                          On RF-Domain
 .opendns                    OpenDNS configuration
  page                       Toggle paging
  ping                       Send ICMP echo messages
  ping6                      Send ICMPv6 echo messages
  revert                     Revert changes
  service                    Service Commands
  show                       Show running system information
  ssh                        Open an ssh connection
  telnet                     Open a telnet connection
  terminal                   Set terminal line parameters
  time-it                    Check how long a particular command took between
                             request and completion of response
  traceroute                 Trace route to destination
  traceroute6                Trace route to destination(IPv6)
  virtual-machine             Virtual Machine
  watch                      Repeat the specific CLI command at a periodic
```

|           |   |
|-----------|---|
| write     | interval<br>Write running configuration to memory or terminal |
| clrscr    | Clears the display screen                                     |
| exit      | Exit from the CLI   |
| <DEVICE>> |   |

## user-exec-commands

The following table summarizes the User Exec Configuration Mode commands:

**Table 4: User Exec Mode Commands**

| Command   | Description  |
|---|--|
| <a href="#">captive-portal-page-upload</a> on page 33 | Uploads captive portal advanced pages  |
| <a href="#">change-password</a> on page 36            | Changes the password of a logged user  |
| <a href="#">clear</a> on page 37                      | Resets the last saved command  |
| <a href="#">clock</a> on page 51                      | Configures the system clock  |
| <a href="#">cluster</a> on page 52                    | Accesses the cluster context   |
| <a href="#">commit</a> on page 53                     | Commits changes made in the active session.  |
| <a href="#">connect</a> on page 53                    | Establishes a console connection to a remote device  |
| <a href="#">create-cluster</a> on page 64             | Creates a new cluster on a specified device  |
| <a href="#">crypto</a> on page 54                     | Enables encryption   |
| <a href="#">crypto-cmp-cert-update</a> on page 65     | Triggers a CMP certificate update on a specified device or devices   |
| <a href="#">database</a> on page 66                   | Enables automatic repairing (vacuuming) and dropping of databases (Captive-portal and NSight)  |
| <a href="#">database-backup</a> on page 69            | Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server   |
| <a href="#">database-restore</a> on page 70           | Restores a previously exported database [captive-portal and/or NSight]. Previously exported databases (backed up to a specified FTP or SFTP server) are restored to the original database. |
| <a href="#">device-upgrade</a> on page 71             | Configures device firmware upgrade settings  |
| <a href="#">enable</a> on page 77                     | Turns on (enables) the privileged mode command set   |
| <a href="#">join-cluster</a> on page 83               | Adds a device (access point, wireless controller, or service platform) to an existing cluster of devices   |
| <a href="#">file-sync</a> on page 78                  | Configures parameters enabling syncing of PKCS#12 and wireless-bridge certificate between the staging-controller and adopted access points   |
| <a href="#">help</a> on page 80                       | Describes the interactive help system.   |
| <a href="#">l2tpv3</a> on page 84                     | Establishes or brings down L2TPv3 ( <i>Layer 2 Tunneling Protocol Version 3</i> ) tunnels  |
| <a href="#">logging</a> on page 86                    | Modifies message logging facilities  |

**Table 4: User Exec Mode Commands (continued)**

| Command                                     | Description   |
|---|---|
| <a href="#">mint</a> on page 87             | Configures MiNT protocol  |
| <a href="#">no</a> on page 89               | Negates a command or sets its default   |
| <a href="#">on</a> on page 90               | Executes the following commands in the RF Domain context: clrscr, do, end, exit, help, service, and show  |
| <a href="#">opendns</a> on page 90          | Connects to the OpenDNS site using OpenDNS registered credentials (username, password) OR OpenDNS API token to fetch the OpenDNS device_id. This command is a part of the process integrating access points, controllers, and service platforms with OpenDNS. |
| <a href="#">page</a> on page 94             | Toggles a device's (Access Point, wireless controller, or service platform) paging function   |
| <a href="#">ping</a> on page 95             | Sends ICMP echo messages to a user-specified location   |
| <a href="#">ping6</a> on page 96            | Sends ICMPv6 echo messages to a user-specified location   |
| <a href="#">ssh</a> on page 97              | Opens an SSH connection between two network devices   |
| <a href="#">telnet</a> on page 98           | Opens a Telnet session  |
| <a href="#">terminal</a> on page 99         | Sets the length and width of the terminal window  |
| <a href="#">time-it</a> on page 100         | Verifies the time taken by a particular command between request and response  |
| <a href="#">tracert</a> on page 100         | Traces the route to its defined IPv4 destination  |
| <a href="#">tracert6</a> on page 101        | the route to its defined IPv6 destination   |
| <a href="#">watch</a> on page 109           | Repeats a specific CLI command at a periodic interval   |
| <a href="#">virtual-machine</a> on page 102 | Installs, configures, and monitors the status of VMs ( <i>virtual machines</i> ). This command is specific to the NX 9500 and NX 9510 series service platforms.   |
| <a href="#">exit</a> on page 110            | Ends the current CLI session and closes the session window  |

**Note**

For more information on common commands (clrscr, commit, help, revert, service, show, write, and exit), see [Common Commands](#) on page 614.

**Note**

The input parameter <HOSTNAME>, if used in syntaxes across this chapter, cannot include an underscore ( \_ ) character.

## captive-portal-page-upload

Uploads *captive portal* pages to adopted access points. Use this command to provide access points with specific captive portal configurations, so that they can successfully provision login, welcome, and condition pages to clients attempting to access the wireless network using the captive portal.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
captive-portal-page-upload [<CAPTIVE-PORTAL-NAME>|cancel-upload|delete-file|load-file]
captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all|rf-domain]
captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all] {upload-time <TIME>}
captive-portal-page-upload <CAPTIVE-PORTAL-NAME> rf-domain [<DOMAIN-NAME>|all]
{from-controller} {(upload-time <TIME>)}
captive-portal-page-upload cancel-upload [<MAC/HOSTNAME>|all|
on rf-domain [<DOMAIN-NAME>|all]]
captive-portal-page-upload delete-file <CAPTIVE-PORTAL-NAME> <FILE-NAME>
captive-portal-page-upload load-file <CAPTIVE-PORTAL-NAME> <URL>
```

### Parameters

```
captive-portal-page-upload <CAPTIVE-PORTAL-NAME> [<MAC/HOSTNAME>|all]
{upload-time <TIME>}
```

|   |  |
|---|--|
| captive-portal-page-upload<br><CAPTIVE-PORTAL-NAME> | Uploads advanced pages of the captive portal identified by the <CAPTIVE-PORTAL-NAME> parameter <ul style="list-style-type: none"> <li>• &lt;CAPTIVE-PORTAL-NAME&gt; – Specify captive portal's name (should be existing and configured).</li> </ul>  |
| <MAC/HOSTNAME>                                      | Uploads to a specified AP <ul style="list-style-type: none"> <li>• &lt;MAC/HOSTNAME&gt; – Specify the AP's MAC address or hostname.</li> </ul>   |
| all   | Uploads to all APs   |
| upload-time <TIME>                                  | Schedules an AP upload time <ul style="list-style-type: none"> <li>• &lt;TIME&gt; – Specify upload time in the MM/DD/YYYY-HH:MM or HH:MM format.</li> </ul> <p>The scheduled upload time is your local system's time. It is not the access point, controller, service platform, or virtual controller time and it is not synched with the device.</p> <p>To view a list of uploaded captive portal files, execute the <code>show → captive-portal-page-upload → list-files &lt;CAPTIVE-PORTAL-NAME&gt;</code> command.</p> |

```
captive-portal-page-upload <CAPTIVE-PORTAL-NAME> rf-domain [<DOMAIN-NAME>|all]
{from-controller} {(upload-time <TIME>)}
```

|   |  |
|---|--|
| captive-portal-page-upload<br><CAPTIVE-PORTAL-NAME> | Uploads web pages of the captive portal identified by the <CAPTIVE-PORTAL-NAME> parameter <ul style="list-style-type: none"> <li>&lt;CAPTIVE-PORTAL-NAME&gt; – Specify the captive portal's name (should be existing and configured).</li> </ul>   |
| rf-domain [<DOMAIN-NAME> all]                       | Uploads to all APs within a specified RF Domain or all RF Domains <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Uploads to APs within a specified RF Domain. Specify the RF Domain name.</li> <li>all – Uploads to APs across all RF Domains</li> </ul>   |
| from-controller                                     | Optional. Uploads captive-portal web pages to APs via the controller to which the APs are adopted  |
| upload-time <TIME>                                  | Optional. Schedules an AP upload time <ul style="list-style-type: none"> <li>&lt;TIME&gt; – Specify upload time in the MM/DD/YYYY-HH:MM or HH:MM format.</li> </ul> <p>The scheduled upload time is your local system's time. It is not the access point, controller, service platform, or virtual controller time and it is not synched with the device.</p> <p>To view a list of uploaded captive portal files, execute the <code>show → captive-portal-page-upload → list-files &lt;CAPTIVE-PORTAL-NAME&gt;</code> command.</p> |

```
captive-portal-page-upload cancel-upload [<MAC/HOSTNAME>|all|
on rf-domain [<DOMAIN-NAME>|all]]
```

|   |  |
|---|--|
| captive-portal-page-upload cancel-upload                            | Cancels a scheduled AP upload  |
| cancel-upload [<MAC/HOSTNAME> all on rf-domain [<DOMAIN-NAME> all]] | Select one of the following options: <ul style="list-style-type: none"> <li>&lt;MAC/HOSTNAME&gt; – Cancels scheduled upload to a specified AP. Specify the AP's MAC address or hostname.</li> <li>all – Cancels all scheduled AP uploads</li> <li>on rf-domain – Cancels all scheduled uploads within a specified RF Domain or all RF Domains <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Cancels scheduled uploads within a specified RF Domain. Specify the RF Domain name.</li> <li>all – Cancels scheduled uploads across all RF Domains</li> </ul> </li> </ul> |

```
captive-portal-page-upload delete-file <CAPTIVE-PORTAL-NAME> <FILE-NAME>
```

|  |   |
|--|---|
| captive-portal-page-upload delete-file | Deletes a specified captive portal's uploaded captive-portal web pages  |
| <CAPTIVE-PORTAL-NAME> <FILE-NAME>      | Identifies the captive-portal and Web pages to delete <ul style="list-style-type: none"> <li>&lt;CAPTIVE-PORTAL-NAME&gt; – Specify the captive portal name.</li> <li>&lt;FILE-NAME&gt; – Specify the file name. The specified internal captive portal page is deleted.</li> </ul> |

```
captive-portal-page-upload load-file <CAPTIVE-PORTAL-NAME> <URL>
```

captive-portal-page-upload load-file Loads captive-portal web pages

<CAPTIVE-PORTAL-NAME> <URL> Specify the captive portal's name and location. The captive portal should be existing and configured.

IPv4 URLs:

- tftp://<hostname|IP>[:port]/path/file
- ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
- sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
- http://<hostname|IP>[:port]/path/file
- cf:/path/file
- usb<n>:/path/file

IPv6 URLs:

- tftp://<hostname|IPv6>[:port]/path/file
- ftp://<user>:<passwd>@<hostname|IPv6>[:port]/path/file
- sftp://<user>:<passwd>@<hostname|IPv6>[:port]/path/file
- http://<hostname|IPv6>[:port]/path/file

**Note:**

The captive portal pages are downloaded to the controller from the location specified here. After downloading use the `captive-portal-page-upload` → `<CAPTIVE-PORTAL-NAME>` → `<DEVICE-OR-DOMAIN-NAME>` command to upload these pages to APs.

### Examples

```
ap510-133B3B#captive-portal-page-upload load-file captive_portal_test tftp://89.89.89.17/
pages_new_only.tar
ap510-133B3B#show captive-portal-page-upload load-file-status
Download of captive_portal_test advanced page file is complete
ap510-133B3B#
ap510-133B3B#show captive-portal-page-upload status
Number of APs currently being uploaded : 1
Number of APs waiting in queue to be uploaded : 0
-----
      AP           STATE      UPLOAD TIME  PROGRESS  RETRIES  LAST  UPLOAD  ERROR  UPLOADED BY
-----
ap510-133B3B   downloading   immediate    100       0        -           None
-----
ap510-133B3B#
```

## change-password

Changes the password of the logged user.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
change-passwd {<OLD-PASSWORD>} <NEW-PASSWORD>
```

### Parameters

```
change passwd {<OLD-PASSWORD>} <NEW-PASSWORD>
```

|   |  |
|---|--|
| <OLD-PASSWORD>  | Optional. Specify the existing password. |
| <NEW-PASSWORD>  | Specify the new password.                |
| <p><b>Note:</b><br/>The password can also be changed interactively. To do so, press <b>[Enter]</b> after the command.</p> |  |

### Usage Guidelines

A password must be from 1 - 64 characters.

### Examples

```
nx9500-6C8809#change-passwd
Enter old password:
Enter new password:
Password for user 'admin' changed successfully
Please write this password change to memory(write memory) to be persistent.
nx9500-6C8809#write memory
OK
nx9500-6C8809#
```

## clear

Clears parameters, cache entries, table entries, and other similar entries. The clear command is available for specific commands only. The information cleared, using this command, depends on the mode in which the clear command is executed.

#### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

clear [arp-cache|bonjour|cdp|counters|crypto|event-history|firewall|gre|ip|ipv6|

clear traffic-shape statistics class <1-4> {(on <DEVICE-NAME>)}
clear vrrp [error-stats|stats] {on <DEVICE-NAME>}

```

### Parameters

```
clear arp-cache {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| arp-cache        | Clears <u>ARP (Address Resolution Protocol)</u> cache entries on a AP, wireless controller, or service platform. This protocol matches the layer 3 IP addresses to the layer 2 MAC addresses.          |
| on <DEVICE-NAME> | Optional. Clears ARP cache entries on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear bonjour cache {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| bonjour cache    | Clears all <u>Bonjour</u> cached statistics. Once cleared the system has to re-discover available Bonjour services.  |
| on <DEVICE-NAME> | Optional. Clears all Bonjour cached statistics on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear [cdp|lldp] neighbors {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| cdp              | Clears <u>CDP (Cisco Discovery Protocol)</u> table entries  |
| lldp             | Clears <u>LLDP (Link Layer Discovery Protocol)</u> table entries  |
| neighbors        | Clears CDP or LLDP neighbor table entries based on the option selected in the preceding step  |
| on <DEVICE-NAME> | Optional. Clears CDP or LLDP neighbor table entries on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear counters all {(on <DEVICE-OR-DOMAIN-NAME>) }
```

|                            |  |
|----------------------------|--|
| counters                   | Clears all counters on the logged device or on all devices within a specified RF Domain. These counters are: AP, bridge, interface, radio, router, thread and wireless clients.  |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Specify the device name or the RF Domain name. <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Clears all counters on a specified device or RF Domain.</li> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> <p><b>Note:</b><br/>If you do not specify a device name or an RF Domain name, the system clears all counters on the logged device.</p> |

```
clear counters [bridge|router|thread]
```

|                        |   |
|------------------------|---|
| counters               | Clears counters based on the parameters passed. The options are: AP, bridge, interface, radio, router, thread and wireless clients.   |
| [bridge router thread] | Select one of the following options: <ul style="list-style-type: none"> <li>bridge – Clears bridge counters. When executed, this command resets the bridge forwarding cache.</li> <li>router – Clears router counters. When executed, this command resets the router counters.</li> <li>thread – Clears thread counters. When executed, this command resets the pre-thread counters.</li> </ul> |

```
clear counters [ap {<MAC>}|radio {<MAC/DEVICE-NAME>} {<1-X>}|wireless-client {<MAC>}}
{ (on <DEVICE-OR-DOMAIN-NAME>) }
```

|                               |   |
|-------------------------------|---|
| counters                      | Clears counters based on the parameters passed. The options are: AP, bridge, interface, radio, router, thread and wireless clients.   |
| ap <MAC>                      | Clears counters for all APs or a specified AP <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Optional. Specify the AP's MAC address.</li> </ul> <p><b>Note:</b><br/>If no MAC address is specified, all AP counters are cleared.</p>  |
| radio <MAC/DEVICE-NAME> <1-X> | Clears radio interface counters on a specified device or on all devices <ul style="list-style-type: none"> <li>&lt;MAC/DEVICE-NAME&gt; – Optional. Specify the device's hostname or MAC address. Optionally, append the radio interface number (to the radio ID) using one of the following formats: AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX (where RX is the interface number).</li> <li>&lt;1-X&gt; – Optional. Identifies the radio interface by its index. Specify the radio interface index, if not specified as part of the radio ID. Note, the number of radio interfaces available varies with the access point type.</li> </ul> <p><b>Note:</b><br/>If no device name or MAC address is specified, all radio interface counters are cleared.</p> |

|                            |  |
|----------------------------|--|
| wireless-client <MAC>      | <p>Clears counters for all wireless clients or a specified wireless client</p> <ul style="list-style-type: none"> <li>• &lt;MAC&gt; – Optional. Specify the wireless client's MAC address.</li> </ul> <p><b>Note:</b><br/>If no MAC address is specified, all wireless client counters are cleared.</p>  |
| on <DEVICE-OR-DOMAIN-NAME> | <p>The following option is common to all of the above keywords:</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Clears AP, radio, or wireless client counters on a specified device or RF Domain.</li> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
clear counters interface <INF-TYPE> <INF-NUMBER> { (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|                                   |   |
|-----------------------------------|---|
| counters                          | Clears counters based on the parameters passed. The options are: AP, bridge, interface, radio, router, thread and wireless clients.   |
| interface <INF-TYPE> <INF-NUMBER> | <p>Clears interface counters</p> <ul style="list-style-type: none"> <li>• &lt;INF-TYPE&gt; - Specify the interface type as Ethernet, VLAN, port-channel, usb, all, etc.</li> <li>• &lt;INF-NUMBER&gt; - After specifying the interface type, specify the interface number.</li> </ul> |
| on <DEVICE-OR-DOMAIN-NAME>        | <p>Optional. Clears the specified interface counters on a specified device or RF Domain.</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul>                     |

```
clear crypto ike sa [<IP>|all] {on <DEVICE-NAME>}
```

|                   |   |
|-------------------|---|
| crypto            | Clears encryption module's cached statistics  |
| ike sa [<IP> all] | <p>Clears <i>Internet Key Exchange</i> (IKE) <i>security associations</i> (SAs)</p> <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Clears IKE SA entries for the peer identified by the &lt;IP&gt; keyword</li> <li>• all – Clears IKE SA entries for all peers</li> </ul> |
| on <DEVICE-NAME>  | <p>Optional. Clears IKE SA entries, for a specified peer or all peers, on a specified device</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>                                  |

```
clear crypto ipsec sa {on <DEVICE-NAME>}
```

|  |  |
|--|--|
| crypto   | Clears encryption module's cached statistics   |
| ipsec sa {on <DEVICE-NAME>}  | Clears <u>IPsec/IPsec-ESP/IPsec-AH</u> database SAs <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. ```
clear ip bgp process {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| ip bgp process   | Clears all BGP processes running<br>This command is applicable only to the NX9500, NX9600, and VX9000 platforms.   |
| on <DEVICE-NAME> | Optional. Clears all BGP processes on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP or service platform.</li> </ul> |

```
clear ip dhcp bindings [<IP>|all] {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| ip               | Clears a DHCP ( <i>Dynamic Host Configuration Protocol</i> ) server's IP address binding entries   |
| dhcp bindings    | Clears DHCP connections and server bindings  |
| <IP>             | Clears specific address binding entries. Specify the IP address to clear binding entries.  |
| all              | Clears all address binding entries   |
| on <DEVICE-NAME> | Optional. Clears a specified address binding or all address bindings on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear ip ospf process {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| ip ospf process  | Clears already enabled OSPF ( <i>Open Shortest Path First</i> ) process and restarts the process  |
| on <DEVICE-NAME> | Optional. Clears OSPF process on a specified device<br>OSPF is a link-state IGP ( <i>interior gateway protocol</i> ). OSPF routes IP packets within a single routing domain (autonomous system), like an enterprise LAN. OSPF gathers link state information from neighboring routers and constructs a network topology. The topology determines the routing table presented to the Internet Layer, which makes routing decisions based solely on the destination IP address found in IP packets. <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear ipv6 neighbor-cache {on <DEVICE-NAME>}
```

|                           |  |
|---------------------------|--|
| clear ipv6 neighbor-cache | Clears IPv6 neighbor cache entries   |
| on <DEVICE-NAME>          | Optional. Clears IPv6 neighbor cache entries on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear lacp [<1-4> counters|counters]
```

|                                       |   |
|---------------------------------------|---|
| clear lacp [<1-4> counters  counters] | <p>Clears <i>LACP (Link Aggregation Control Protocol)</i> counters/statistics for a specified channel group or all channel groups configured</p> <ul style="list-style-type: none"> <li>• &lt;1-4&gt; counters – Clears LACP stats for a specified channel group. Specify the port-channel index number from 1 - 4. Note, LACP is supported only on the NX5500, NX7500, NX9500, and NX9600 model service platforms. However, the NX9500 series service platforms support only two (2) channel groups, and the other model service platforms support four (4) channel groups.</li> <li>• counters – Clears LACP stats for all configured channel groups on the device</li> </ul> |
|---------------------------------------|---|

```
clear license [borrowed|lent to <BORROWER-CONTROLLER-NAME>] {on <DEVICE-NAME>}
```

|                                     |  |
|-------------------------------------|--|
| license                             | Releases borrowed licenses or revokes lent licenses  |
| borrowed                            | <p>Releases all licenses borrowed by the logged controller or by a specified controller</p> <p><b>Note:</b><br/>If you do not specify a controller name, the command is executed on the controller you have logged on to.</p>  |
| lent to <BORROWING-CONTROLLER-NAME> | <p>Revokes licenses lent to a specified controller</p> <ul style="list-style-type: none"> <li>• to &lt;BORROWING-CONTROLLER-NAME&gt; - Specifies the borrowing controller's name. When specified, the system revokes all licenses (AP, AAP) lent to the specified controller.</li> </ul>   |
| on <DEVICE-NAME>                    | <p>Optional. This option is common to both of the above parameters.</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; - Specify the name of the controller on which the command is to be executed.</li> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the wireless controller or service platform.</li> </ul> <p><b>Note:</b><br/>If you do not specify the controller name, the system executes the command on the logged controller.</p> |

```
clear l2tpv3-stats tunnel <TUNNEL-NAME> {session <SESSION-NAME>} {on <DEVICE-NAME>}
```

|                      |   |
|----------------------|---|
| l2tpv3-stats         | Clears L2TPv3 tunnel statistics for a specified L2TPv3 tunnel |
| tunnel <TUNNEL-NAME> | Specifies the tunnel name                                     |

|                        |   |
|------------------------|---|
| session <SESSION-NAME> | Optional. Clears a specific session statistics in the specified L2TPv3 tunnel. <ul style="list-style-type: none"> <li>&lt;SESSION-NAME&gt; - Specify the session name.</li> </ul> <p><b>Note:</b><br/>If you do not specify the session name, the system clears statistics for all sessions.</p>  |
| on <DEVICE-NAME>       | This option is common to all of the above parameters. <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. Executes the command on a specified device. <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul> <p><b>Note:</b><br/>If you do not specify the device name, the system clears L2TPv3 tunnel and session statistics on the logged device.</p> |

```
clear mac-address-table {address <MAC>|vlan <1-4094>} {on <DEVICE-NAME>}
```

|                   |  |
|-------------------|--|
| mac-address-table | Clears MAC address forwarding table data based on the parameters passed<br>Use this command to clear the following: all or specified MAC addresses from the system, all MAC addresses on a specified interface, all MAC addresses on a specified VLAN, or the authentication state of a MAC address.   |
| address <MAC>     | Optional. Clears a specified MAC address from the MAC address table. <ul style="list-style-type: none"> <li>&lt;MAC&gt; - Specify the MAC address in one of the following formats: AA-BB-CC-DD-EE-FF or AA:BB:CC:DD:EE:FF or AABB.CCDD.EEFF</li> </ul> <p><b>Note:</b><br/>If executed without specifying any MAC address(es), all MAC addresses from the MAC address table will be removed.</p> |
| vlan <1-4094>     | Optional. Clears all MAC addresses for a specified VLAN <ul style="list-style-type: none"> <li>&lt;1-4094&gt; - Specify the VLAN ID from 1 - 4094</li> </ul>   |
| on <DEVICE-NAME>  | Optional. Clears a single MAC entry or all MAC entries, for the specified VLAN on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

```
clear mac-address-table {interface [<IF-NAME>|ge <1-X>|port-channel <1-X>]} {on <DEVICE-NAME>}
```

|                   |  |
|-------------------|--|
| mac-address-table | Clears MAC address forwarding table data based on the parameters passed<br>Use this command to clear the following: all or specified MAC addresses from the system, all MAC addresses on a specified interface, all MAC addresses on a specified VLAN, or the authentication state of a MAC address. |
| interface         | Clears all MAC addresses for the selected interface. Use the options available to specify the interface.   |

|                    |   |
|--------------------|---|
| <IF-NAME>          | <p>Clears MAC address forwarding table for the specified layer 2 interface (Ethernet port)</p> <ul style="list-style-type: none"> <li>&lt;IF-NAME&gt; – Specify the layer 2 interface name.</li> </ul>  |
| ge <1-X>           | <p>Clears MAC address forwarding table for the specified GigabitEthernet interface</p> <ul style="list-style-type: none"> <li>&lt;1-X&gt; – Specify the GigabitEthernet interface index from 1 - X.</li> </ul> <p><b>Note:</b><br/>The number of GE interfaces supported varies for different device types.</p>     |
| port-channel <1-X> | <p>Clears MAC address forwarding table for the specified port-channel interface</p> <ul style="list-style-type: none"> <li>&lt;1-X&gt; – Specify the port-channel interface index from 1 - X.</li> </ul> <p><b>Note:</b><br/>The number of port-channel interfaces supported varies for different device types.</p> |
| on <DEVICE-NAME>   | <p>Optional. Clears the MAC address forwarding table, for the selected interface, on a specified device</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

```
clear mac-address-table mac-auth-state address <MAC> vlan <1-4904> {on <DEVICE-NAME>}
```

|  |   |
|--|---|
| mac-address-table mac-auth-state address <MAC> vlan <1-4904> | <p>Clears MAC addresses learned from a particular VLAN when WLAN MAC authentication and <i>captive portal</i> fall back is enabled<br/>Access points/controllers provide WLAN access to clients whose MAC address has been learned and stored in their MAC address tables. Use this command to clear a specified MAC address on the MAC address table. Once cleared the client has to re-authenticate, and is provided access only on successful authentication.</p> <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Specify the MAC address to clear.</li> <li>vlan &lt;1-4904&gt; – Specify the VLAN interface from 1 - 4094. In the AP/controller's MAC address table, the specified MAC address is cleared on the specified VLAN interface.</li> </ul> |
| on <DEVICE-NAME>   | <p>Optional. Clears the specified MAC address on a specified device</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> <p><b>Note:</b><br/>If a device is not specified, the system clears the MAC address on all devices.</p>   |

```
clear mint mlcp history {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| mint             | Clears MiNT related information  |
| mlcp history     | Clears <i>MiNT Link Creation Protocol</i> (MLCP) client history  |
| on <DEVICE-NAME> | Optional. Clears MLCP client history on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear role ldap-stats {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| role ldap-stats  | Clears <i>Lightweight Directory Access Protocol</i> (LDAP) server statistics  |
| on <DEVICE-NAME> | Optional. Clears LDAP server statistics on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear rtls [aeroscout|ekahau] {<MAC/DEVICE-NAME> {on <DEVICE-OR-DOMAIN-NAME>} | on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| rtls                       | Clears <i>Real Time Location Service</i> (RTLS) statistics  |
| aeroscout                  | Clears RTLS Aeroscout statistics  |
| ekahau                     | Clears RTLS Ekahau statistics   |
| <MAC/DEVICE-NAME>          | This keyword is common to the 'aeroscout' and 'ekahau' parameters. <ul style="list-style-type: none"> <li>&lt;MAC/DEVICE-NAME&gt; – Optional. Clears Aeroscout or Ekahau RTLS statistics on a specified AP, wireless controller, or service platform. Specify the AP's MAC address or hostname.</li> </ul>  |
| on <DEVICE-OR-DOMAIN-NAME> | This keyword is common to the 'aeroscout' and 'ekahau' parameters. <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Clears Aeroscout or Ekahau RTLS statistics on a specified AP, wireless controller, service platform, or RF Domain</li> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
clear spanning-tree detected-protocols {on <DEVICE-NAME>}
```

|                    |  |
|--------------------|--|
| spanning-tree      | Clears spanning tree entries on an interface and restarts protocol migration   |
| detected-protocols | Restarts protocol migration  |
| on <DEVICE-NAME>   | Optional. Clears spanning tree entries on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
clear spanning-tree detected-protocols {interface [<INTERFACE-NAME>|ge <1-X>|me1|port-channel <1-X>|pppoe1|up1|vlan <1-4094>|wwan1]} {on <DEVICE-NAME>}
```

|                    |  |
|--------------------|--|
| spanning-tree      | Clears spanning tree entries on an interface and restarts protocol migration |
| detected-protocols | Restarts protocol migration  |

|  |   |
|--|---|
| interface [<INTERFACE-NAME>  ge <1-X> me1  port-channel <1-X>  pppoe1 up1  vlan <1-4094>  wwan1] | <p>Optional. ## clock

Sets a device's system clock. By default all WiNG devices are shipped with the time zone and time format set to UTC and 24-hour clock respectively. If a device's clock is set without resetting the time zone, the time is displayed relative to the *Universal Time Coordinated* (UTC) – Greenwich Time. To display time in the local time zone format, in the device's configuration mode, use the `timezone` command. You can also reset the time zone at the RF Domain level. When configured as RF Domain setting, it applies to all devices within the domain. We recommend that you reset the local time zone on the device prior to setting the clock.

### Note

This command and its syntax is common to both the User Executable and Privilege Executable configuration modes.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
clock set <HH:MM:SS> <1-31> <MONTH> <1993-2035> {on <DEVICE-NAME>}
```

### Parameters

```
clock set <HH:MM:SS> <1-31> <MONTH> <1993-2035> {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| clock set        | Sets a device's software system clock  |
| <HH:MM:SS>       | Sets the current time (in military format hours, minutes, and seconds)<br><br><b>Note:</b><br>By default, the WiNG software displays time in the 24-hour clock format. This setting cannot be changed. |
| <1-31>           | Sets the numerical day of the month  |
| <MONTH>          | Sets the month of the year (Jan to Dec)  |
| <1993-2035>      | Sets a valid four digit year from 1993 - 2035  |
| on <DEVICE-NAME> | Optional. Sets the clock on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>         |

### Examples

```

## cluster

Initiates cluster context. The cluster context provides centralized management to configure all cluster members from any one member. Commands executed under this context are executed on all members of the cluster.

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
cluster start-election
```

*Parameters*

```
cluster start-election
```

|                |                                      |
|----------------|--------------------------------------|
| start-election | Starts a new cluster master election |
|----------------|--------------------------------------|

*Examples*

```
nx9500-6C8809>cluster start-election
```

## commit

Commits changes made in the active session. Use the commit command to save and invoke settings entered during the current transaction.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
commit {write}{memory}
```

*Parameters*

```
commit {write}{memory}
```

|        |   |
|--------|---|
| write  | Optional. Commits changes made in the current session                                   |
| memory | Optional. Writes to memory. This option ensures current changes persist across reboots. |

*Examples*

```
ap510-133B3B#commit
[OK]
ap510-133B3B#
```

## connect

Begins a console connection to a remote device using the remote device's MiNT ID or name

**Note**

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
connect [mint-id <MINT-ID>|<REMOTE-DEVICE-NAME>]
```

### Parameters

```
connect [mint-id <MINT-ID>|<REMOTE-DEVICE-NAME>]
```

|                      |   |
|----------------------|---|
| mint-id <MINT-ID>    | Connects to the remote system using its MiNT ID <ul style="list-style-type: none"> <li>• &lt;MINT-ID&gt; – Specify the remote device's MiNT ID.</li> </ul>      |
| <REMOTE-DEVICE-NAME> | Connects to the remote system using its name <ul style="list-style-type: none"> <li>• &lt;REMOTE-DEVICE-NAME&gt; – Specify the remote device's name.</li> </ul> |

### Examples

## crypto

Enables digital certificate configuration and RSA Keypair management. Digital certificates are issued by CAs and contain user or device specific information, such as name, public key, IP address, serial number, company name etc. Use this command to generate, delete, export, or import encrypted RSA Keypairs and generate *Certificate Signing Request (CSR)*.

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
crypto [key|pki]
crypto key [export|generate|import|zeroize]
crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|on|passphrase}
crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|

crypto pki import trustpoint <TRUSTPOINT-NAME> <IMPORT-FROM-URL> {background|
passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}
crypto pki zeroize trustpoint <TRUSTPOINT-NAME> {del-key} {(on <DEVICE-NAME>)}
```

## Parameters

```
crypto key export rsa <RSA-KEYPAIR-NAME> <EXPORT-TO-URL> {background|
passphrase <KEY-PASSPHRASE> background} {(on <DEVICE-NAME>)}
```

|                               |   |
|-------------------------------|---|
| key                           | Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.  |
| export rsa <RSA-KEYPAIR-NAME> | Exports an existing RSA Keypair to a specified destination <ul style="list-style-type: none"> <li>&lt;RSA-KEYPAIR-NAME&gt; – Specify the RSA Keypair name.</li> </ul> |

|   |  |
|---|--|
| <EXPORT-TO-URL>                           | Specify the RSA Keypair destination address.<br>Both IPv4 and IPv6 address formats are supported. After specifying the destination address (where the RSA Keypair is exported), configure one of the following parameters: background or passphrase.   |
| background                                | Optional. Performs export operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the export on.  |
| passphrase <KEY-PASSPHRASE><br>background | Optional. Encrypts RSA Keypair before exporting <ul style="list-style-type: none"> <li>• &lt;KEY-PASSPHRASE&gt; – Specify a passphrase to encrypt the RSA Keypair.</li> <li>• background – Optional. Performs export operation in the background. After specifying the passphrase, optionally specify the device (access point or controller) to perform the export on.</li> </ul> |
| on <DEVICE-NAME>                          | The following parameter is recursive and common to all of the above parameters: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Performs export operation on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>  |

```
crypto key generate rsa <RSA-KEYPAIR-NAME> [2048|4096] {on <DEVICE-NAME>}
```

|  |  |
|--|--|
| key  | Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.   |
| generate rsa <RSA-KEYPAIR-NAME><br>[2048 4096] | Generates a new RSA Keypair <ul style="list-style-type: none"> <li>• &lt;RSA-KEYPAIR-NAME&gt; – Specify the RSA Keypair name.</li> <li>• [2048 4096] – Sets the size of the RSA key in bits. The options are 2048 bits and 4096 bits. The default size is 2048 bits.</li> </ul> <p>After specifying the key size, optionally specify the device (access point or controller) to generate the key on.</p> |
| on <DEVICE-NAME>                               | Optional. Generates the new RSA Keypair on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>  |

```
crypto key import rsa <RSA-KEYPAIR-NAME> <IMPORT-FROM-URL> {background|  
passphrase <KEY-PASSPHRASE> background} { (on <DEVICE-NAME> ) }
```

|                               |   |
|-------------------------------|---|
| key                           | Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.  |
| import rsa <RSA-KEYPAIR-NAME> | Imports a RSA Keypair from a specified source <ul style="list-style-type: none"> <li>• &lt;RSA-KEYPAIR-NAME&gt; – Specify the RSA Keypair name.</li> </ul>  |
| <IMPORT-FROM-URL>             | Specify the RSA Keypair source address.<br>Both IPv4 and IPv6 address formats are supported. After specifying the source address (where the RSA Keypair is imported from), configure one of the following parameters: background or passphrase. |
| background                    | Optional. Performs import operation in the background. If selecting this option, you can optionally specify the device (access point or controller) to perform the import on.   |

|   |  |
|---|--|
| passphrase <KEY-PASSPHRASE><br>background | Optional. Decrypts the RSA Keypair after importing <ul style="list-style-type: none"> <li>• &lt;KEY-PASSPHRASE&gt; – Specify the passphrase to decrypt the RSA Keypair.</li> <li>• background – Optional. Performs import operation in the background. After specifying the passphrase, optionally specify the device (access point, controller, or service platform) to perform the import on.</li> </ul> |
| on <DEVICE-NAME>                          | The following parameter is recursive and common to the 'background' and 'passphrase' keywords: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Performs import operation on a specific device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>  |

```
crypto key zeroize rsa <RSA-KEYPAIR-NAME> {force} {(on <DEVICE-NAME>) }
```

|                                |   |
|--------------------------------|---|
| key                            | Enables RSA Keypair management. Use this command to export, import, generate, or delete a RSA key.  |
| zeroize rsa <RSA-KEYPAIR-NAME> | Deletes a specified RSA Keypair <ul style="list-style-type: none"> <li>• &lt;RSA-KEYPAIR-NAME&gt; – Specify the RSA Keypair name.</li> </ul> <p><b>Note:</b> All device certificates associated with this key will also be deleted.</p>   |
| force                          | Optional. Forces deletion of all certificates associated with the specified RSA Keypair. Optionally specify a device on which to force certificate deletion.  |
| on <DEVICE-NAME>               | The following parameter is recursive and optional: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Deletes all certificates associated with the RSA Keypair on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
crypto pki authenticate <TRUSTPOINT-NAME> <URL> {background} {(on <DEVICE-NAME>) }
```

|                                |   |
|--------------------------------|---|
| pki                            | Enables <i>Private Key Infrastructure</i> (PKI) management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated <i>Certificate Authority</i> (CA) certificates. |
| authenticate <TRUSTPOINT-NAME> | Authenticates a trustpoint and imports the corresponding CA certificate <ul style="list-style-type: none"> <li>• &lt;TRUSTPOINT-NAME&gt; – Specify the trustpoint name.</li> </ul>                        |
| url                            | Specify CA's location. Both IPv4 and IPv6 address formats are supported. <p><b>Note:</b> The CA certificate is imported from the specified location.</p>  |

|                  |  |
|------------------|--|
| background       | Optional. Performs authentication in the background. If selecting this option, you can optionally specify the device (access point, controller, or service platform) to perform the export on.   |
| on <DEVICE-NAME> | The following parameter is recursive and optional: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. Performs authentication on a specified device</li> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
crypto pki export request [generate-rsa-key|use-rsa-key] <RSA-KEYPAIR-NAME>
autogen-subject-name (<EXPORT-TO-URL>,email <SEND-TO-EMAIL>,fqdn <FQDN>,ip-address <IP>)
```

|   |  |
|---|--|
| pki   | Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.   |
| export request  | Exports CSR to the CA for digital identity certificate. The CSR contains applicant's details and RSA Keypair's public key.   |
| [generate-rsa-key  use-rsa-key]<br><RSA-KEYPAIR-NAME> | Generates a new RSA Keypair or uses an existing RSA Keypair <ul style="list-style-type: none"> <li>generate-rsa-key - Generates a new RSA Keypair for digital authentication</li> <li>use-rsa-key - Uses an existing RSA Keypair for digital authentication <ul style="list-style-type: none"> <li>&lt;RSA-KEYPAIR-NAME&gt; - If generating a new RSA Keypair, specify a name for it. If using an existing RSA Keypair, specify its name.</li> </ul> </li> </ul> |
| autogen-subject-name                                  | Auto generates subject name from configuration parameters. The subject name identifies the certificate.  |
| <EXPORT-TO-URL>                                       | Specify the CA's location. Both IPv4 and IPv6 address formats are supported.<br><br><b>Note:</b> The CSR is exported to the specified location.  |
| email <SEND-TO-EMAIL>                                 | Exports CSR to a specified e-mail address <ul style="list-style-type: none"> <li>&lt;SEND-TO-EMAIL&gt; - Specify the CA's e-mail address.</li> </ul>   |
| fqdn <FQDN>   | Exports CSR to a specified <i>Fully Qualified Domain Name</i> (FQDN) <ul style="list-style-type: none"> <li>&lt;FQDN&gt; - Specify the CA's FQDN.</li> </ul>   |
| ip-address <IP>                                       | Exports CSR to a specified device or system <ul style="list-style-type: none"> <li>&lt;IP&gt; - Specify the CA's IP address.</li> </ul>  |

```
crypto pki export request [generate-rsa-key|short [generate-rsa-key|use-rsa-key] |
use-rsa-key] <RSA-KEYPAIR-NAME> subject-name <COMMON-NAME> <COUNTRY> <STATE> <CITY>

After specifying the passphrase, optionally specify the device (access point or controller) to perform the import on.</li> </ul> |
| on <DEVICE-NAME>                          | The following parameter is recursive and optional: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Performs import operation on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

```
crypto pki zeroize trustpoint <TRUSTPOINT-NAME> {del-key} {(on <DEVICE-NAME>) }
```

|                                      |   |
|--------------------------------------|---|
| pki                                  | Enables PKI management. Use this command to authenticate, export, generate, or delete a trustpoint and its associated CA certificates.  |
| zeroize trustpoint <TRUSTPOINT-NAME> | Imports certificates, CRL, or a trustpoint to the selected device   |
| [certificate crl] <TRUSTPOINT-NAME>  | Deletes a trustpoint and its associated CA certificate, server certificate, and private key <ul style="list-style-type: none"> <li>&lt;TRUSTPOINT-NAME&gt; – Specify the trustpoint name (should be authenticated).</li> </ul>  |
| del-key                              | Optional. Deletes the private key associated with the server certificate. Optionally specify the device to perform deletion on.   |
| on <DEVICE-NAME>                     | The following parameter is recursive and optional: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Deletes the trustpoint on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Usage Guidelines

The system supports both IPv4 and IPv6 address formats. Provide source and destination locations using any one of the following options:

- IPv4 URLs:

tftp://<hostname|IPv4>[:port]/path/file

ftp://<user>:<passwd>@<hostname|IPv4>[:port]/path/file

sftp://<user>@<hostname|IPv4>[:port]/path/file

http://<hostname|IPv4>[:port]/path/file

cf:/path/file

usb<n>:/path/file

- IPv6 URLs:

tftp://<hostname|IPv6>[:port]/path/file

ftp://<user>:<passwd>@<hostname|IPv6>[:port]/path/file

sftp://<user>@<hostname|IPv6>[:port]/path/file

http://<hostname|IPv6>[:port]/path/file

### Examples

```
ap510-133B3B#crypto key generate rsa local 2048 on ap510-133B3B
RSA Keypair successfully generated
ap510-133B3B#
```

## create-cluster

Creates a new device cluster, with the specified name, and assigns it an IP address and routing level

A cluster (or redundancy group) is a set of controllers or service platforms (nodes) uniquely defined by a profile configuration. Within the cluster, members discover and establish connections to other members and provide wireless network self-healing support in the event of member's failure.

A cluster's load balance is typically distributed evenly amongst its members. An administrator needs to define how often the profile is load balanced for radio distribution, as radios can come and go and members join and exit the cluster.

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
create-cluster name <CLUSTER-NAME> ip <IP> {level [1|2]}
```

### Parameters

```
create-cluster name <CLUSTER-NAME> ip <IP> {level [1|2]}
```

|                     |  |
|---------------------|--|
| create-cluster      | Creates a cluster  |
| name <CLUSTER-NAME> | Configures the cluster name <ul style="list-style-type: none"> <li>• &lt;CLUSTER-NAME&gt; – Specify a cluster name. Define a name for the cluster that uniquely identifies its configuration or profile support requirements. The name cannot exceed 64 characters.</li> </ul> |
| ip <IP>             | Specifies the device's IP address used for cluster creation <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Specify the device's IP address in the A.B.C.D format.</li> </ul>  |
| level [1 2]         | Optional. Configures the routing level for this cluster <ul style="list-style-type: none"> <li>• 1 – Configures level 1 (local) routing</li> <li>• 2 – Configures level 2 (inter-site) routing</li> </ul>  |

### Examples

```

## Related Commands

|                                |  |
|--------------------------------|--|
| <b>cluster</b> on page 52      | Initiates cluster context. The cluster context provides centralized management to configure all cluster members from any one member. |
| <b>join-cluster</b> on page 83 | Adds an access point, wireless controller or service platform, as a member, to an existing cluster of controllers                    |

crypto-cmp-cert-update

Triggers a CMP (*Certificate Management Protocol*) certificate update on a specified device or devices

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}
```

### Parameters

```
crypto-cmp-cert-update <TRUSTPOINT-NAME> {on <DEVICE-NAME>}
```

|   |  |
|---|--|
| <p>crypto-cmp-cert-update<br/>         &lt;TRUSTPOINT-NAME&gt; on &lt;DEVICE-NAME&gt;</p> | <p>Triggers a CMP certificate update on a specified device or devices</p> <ul style="list-style-type: none"> <li>• &lt;TRUSTPOINT-NAME&gt; – Specify the target trustpoint name. A trustpoint represents a CA/identity pair containing the identity of the CA, CA specific configuration parameters, and an association with an enrolled identity certificate. Use the crypto-cmp-policy context mode to configure the trustpoint.</li> <li>• on &lt;DEVICE-NAME&gt; – Optional. Initiates a CMP certificate update and response on a specified device or devices. Specify the name of the AP, wireless controller, or service platform. Multiple devices can be provided as a comma separated list.<br/>             &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |
|---|--|

## Examples

```
NOC-NX9500#crypto-cmp-cert-update test on B4-C7-99-71-17-28
CMP Cert update success
NOC-NX9500#
```

## database

Enables automatic repairing (vacuuming) and dropping databases. Also enables keyfile generation.

If enforcing authenticated access to a database, use this command to generate the keyfile. Every keyfile has a set of associated users having a username and password. Access to the database is allowed only if the user credentials entered during database login are valid. For more information on enabling database authentication, see [Enabling Database Authentication](#).

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms*

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
database [drop|keyfile|repair]
database drop [all|captive-portal]
database repair {on <DEVICE-NAME>}
database keyfile [export|generate|import|zerzoise]
database keyfile generate
database keyfile [export|import] <URL>
database keyfile zerzoise
```

### Parameters

```
database drop [all|captive-portal]
```

database drop [all|captive-portal] Drops (deletes) all or a specified database. Execute the command on the device hosting the database.

- all – Drops all databases, captive portal and NSight
- captive-portal – Drops the captive-portal database

```
database repair {on <DEVICE-NAME>}
```

database repair on <DEVICE-NAME>

Enables automatic repairing of all databases. Repairing (vacuuming a database refers to the process of finding and reclaiming space left over from previous DELETE statements. Execute the command on the database host.

- on <DEVICE-NAME> – Optional. Specifies the name of the database host. When specified, databases on the specified host are periodically checked to identify and remove obsolete data documents.
- <DEVICE-NAME> – Specify the name of the access point, wireless controller, or service platform.

**Note:** If no device is specified, the system repairs all databases.

```
database keyfile generate
```

|                           |   |
|---------------------------|---|
| database keyfile generate | <p>Enables database keyfile management. This command is part of a set of configurations required to enforce database authentication. Use this command to generate database keyfiles. After generating the keyfile, create the username and password combination required to access the database. |--|--|

```
database keyfile zerzoise
```

|                           |   |
|---------------------------|---|
| database keyfile zerzoise | <p>Enables database keyfile management. Use this command to delete keyfiles</p> <ul style="list-style-type: none"> <li>zerzoise – Deletes an existing keyfile.</li> </ul> |
|---------------------------|---|

### Examples

```
vx9000-1A1809#database keyfile generate
Database keyfile successfully generated
vx9000-1A1809#
vx9000-1A1809#database keyfile export ftp://1.1.1.111/db-key
Database keyfile successfully exported
vx9000-1A1809#
vx9000-D031F2#database keyfile import ftp://1.1.1.111/db-key
Database keyfile successfully imported
vx9000-D031F2#
```

### Example: Enabling Database Authentication

Follow the steps below to enable database authentication and set up the onboard database. Note, the example uses replica set database deployment.

## 1 On the primary database host,

## a Generate the database keyfile.

```
Primary-DB-HOST>database keyfile generate
Database keyfile successfully generated
Primary-DB-HOST>
```

## b Use the show &gt; database &gt; keyfile command to view the generated keyfile.

## c Export the keyfile to an external location. This is required only in case of database replica-set deployment.

```
Primary-DB-HOST>database keyfile export ftp://1.1.1.111/db-key
Database keyfile successfully exported
Primary-DB-HOST>
```

## d Create the users that are allowed access to the database.

```
Primary-DB-HOST#service database authentication create-user username techpubs
password techPubs@123
Database user [techpubs] created.
Primary-DB-HOST#
```

## e View the database user account created.

```
Primary-DB-HOST#show database users
-----
          DATABASE USER
-----
techpubs
-----
Primary-DB-HOST#
```

## 2 On the replica set host, import the keyfile from the location specified in Step 1 c.

```
Secondary-DB-HOST#database keyfile import ftp://1.1.1.111/db-key
```

## 3 In the database-policy context, - (used on the WiNG device hosting the captive-portal database)

## a Enable authentication.

```
Primary-DB-HOST(config-database-policy-techpubs)#authentication
```

## b Configure the user accounts created in Step 1 d.

```
Primary-DB-HOST(config-database-policy-techpubs)#authentication username techpubs
password S540QFZz9LzS0dX1ZJEqDgAAAAy3b7Gty04Z/Ih2ruxnOYnr
Primary-DB-HOST(config-database-policy-techpubs)#show context
database-policy techpubs
authentication
authentication username techpubs password 2 S540QFZz9LzS0dX1ZJEqDgAAAAy3b7Gty04Z/Ih2ruxnOYnr
replica-set member nx7500-A02B91 arbiter
replica-set member vx9000-1A1809 priority 1
replica-set member vx9000-D031F2 priority 20
Primary-DB-HOST(config-database-policy-techpubs)#
```

## 4 Use the database policy created in the previous step on the primary database.

```
Primary-DB-HOST(config-device-B4-C7-99-6C-88-09)#use database-policy techpubs
```

## 5 In the database-client policy context

**Note**

This configuration is needed in deployments implementing captive-portal registration and database authentication with an onboard database.

## a Configure the user credentials created in Step 1 d.

```
NOC-Controller(config-database-client-policy-techpubs)#authentication username
techpubs password S540QFZz9LzS0dX1ZJEqDgAAAAy3b7Gty04Z/Ih2ruxnOYnr
```

- b View the configuration.

```
NOC-Controller(config-database-client-policy-techpubs)#show context
database-client-policy techpubs
authentication username techpubs password 2 S540QFZz9LzS0dX1ZJEqDgAAAAy3b7Gty04Z/
Ih2ruxn0Ynr
NOC-Controller(config-database-client-policy-techpubs)#
```

- 6 Use the database client policy configured in the previous step on the WiNG device that will access the database.

```
<DB-CLIENT>(config-device-B4-C7-99-6C-88-09)#use database-client-policy techpubs
```

## database-backup

Backs up captive-portal and/or NSight database to a specified location and file on an FTP, SFTP, or TFTP server. Execute this command on the database host.

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

### Supported in the following platforms

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
database-backup database [captive-portal|nsight|nsight-placement-info] <URL>
database-backup database [captive-portal|nsight] <URL>
database-backup database nsight-placement-info <URL>
```

### Parameters

```
database-backup database [captive-portal|nsight] <URL>
```

|  |   |
|--|---|
| database-backup database [captive-portal nsight] | Backs up captive portal and/or NSight database to a specified location. Select the database to backup: <ul style="list-style-type: none"> <li>captive-portal – Backs up captive portal database</li> <li>nsight – Backs up NSight database After specifying the database type, configure the destination location.</li> </ul> |
| <URL>  | Configures the destination location. The database is backed up at the specified location. Specify the location URL in one of the following formats:<br>ftp://<user>:<passwd>@<hostname IP>[:<port>]/path/file.tar.gz<br>sftp://<user>:<passwd>@<hostname IP>[:<port>]/path/file.tar.gz  |

```
database-backup database nsight-placement-info <URL>
```

|  |  |
|--|--|
| database-backup database nsight-placement-info <URL> | Backs up the NSight access point placement related details to a specified location <ul style="list-style-type: none"> <li>&lt;URL&gt; – Specify the URL in one of the following formats:<br/><br/>ftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IP&gt;[:&lt;port&gt;]/path/file.tar.gz<br/><br/>sftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IP&gt;[:&lt;port&gt;]/path/file.tar.gz<br/><br/>tftp://&lt;hostname IP&gt;[:&lt;port&gt;]/path/file.tar.gz</li> </ul> |
|--|--|

### Examples

```
NS-DB-nx9510-6C87EF>database-backup database nsight tftp://192.168.9.50/testbckup
NS-DB-nx9510-6C87EF>show database backup-status
Last Database Backup Status : In_Progress(Starting tftp transfer.)
Last Database Backup Time   : 2018-01-01 12:48:05

## database-restore

Restores a previously exported database, *captive portal* and/or NSight. Previously exported databases (backed up to a specified FTP or SFTP server) are restored from the backed-up location to the original database.

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms*

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
database-restore database [captive-portal|nsight] <URL>
```

### Parameters

```
database-restore database [captive-portal|nsight] <URL>
```

|  |   |
|--|---|
| database-restore database [captive-portal  nsight] | Restores previously exported (backed up) captive-portal and/or NSight database. Specify the database type: <ul style="list-style-type: none"> <li>• captive-portal – Restores captive portal database</li> <li>• nsight – Restores NSight database</li> </ul> After specifying the database type, configure the destination location and file name from where the files are restored. |
| <URL>  | Configures the destination location. The database is restored from the specified location. Specify the location URL in one of the following formats:<br>ftp://<user>:<passwd>@<hostname IP>[:port]/path/file.tar.gz<br>sftp://<user>:<passwd>@<hostname IP>[:port]/path/file.tar.gz<br>tftp://<hostname IP>[:port]/path/file.tar.gz   |

### Examples

```
nx9500-6C874D#database-restore database nsight ftp://anonymous:anonymous@192.168.13.10/backups/nsight/nsight.tar.gz
```

**enable**

Turns on (enables) the privileged mode command set. The prompt changes from ap510-133B3B> to ap510-133B3B#. This command does not do anything in the Privilege Executable mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
enable
```

### Parameters

None

### Examples

```
ap510-133B3B>enable
ap510-133B3B#
```

## file-sync

Syncs trustpoint and/or EAP-TLS X.509 (PKCS#12) certificate between the staging-controller and its adopted devices.

When enabling file syncing, consider the following points:

- The X.509 certificate needs synchronization only if the adopted devices are configured to use EAP-TLS authentication.
- Execute the command on the controller adopting the devices.
- Ensure that the X.509 certificate file is installed on the controller.

Syncing of trustpoint/wireless-bridge certificate can be automated. To automate file syncing, in the controller's device/profile configuration mode, execute the following command: `file-sync [auto | count <1-20>]`.

#### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
file-sync [cancel|load-file|trustpoint|wireless-bridge]
file-sync cancel [trustpoint|wireless-bridge]
file-sync cancel [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all]]
file-sync load-file [trustpoint|wireless-bridge]
file-sync load-file [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] <URL>
file-sync [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all]] {from-controller} {reset-radio|upload-time <TIME>}
```

### Parameters

```
file-sync cancel [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|rf-domain [<DOMAIN-NAME>|all]]
```

```
file-sync cancel [trustpoint
<TRUSTPOINT-NAME>| wireless-
bridge] [<DEVICE-NAME>| all|rf-
domain [<DOMAIN-NAME>| all]]
```

Cancels scheduled file synchronization

- trustpoint – Cancels scheduled trustpoint synchronization on a specified device, all devices, or devices within a specified RF Domain
  - <TRUSTPOINT-NAME> - Specify the trustpoint name.
- wireless-bridge – Cancels scheduled wireless-bridge certificate synchronization on a specified device, all devices, or devices within a specified RF Domain
  - <DEVICE-NAME> – Cancels scheduled trustpoint/certificate synchronization on a specified device. Specify the device's hostname or MAC address.
- all – Cancels scheduled trustpoint/certificate synchronization on all devices
- rf-domain [<DOMAIN-NAME>|all] – Cancels scheduled trustpoint/certificate synchronization on all devices in a specified RF Domain or in all RF Domains
  - <DOMAIN-NAME> – Cancels scheduled trustpoint/certificate synchronization within a specified RF Domain. Specify the RF Domain's name.
  - all – Cancels scheduled trustpoint/certificate synchronization on all RF Domains

```
file-sync load-file [trustpoint|wireless-bridge] <URL>
```

```
file-sync load-file [trustpoint|
wireless-bridge] <URL>
```

Loads the following files on to the staging controller:

- trustpoint – Loads the trustpoint, including CA certificate, server certificate and private key
- wireless-bridge – Loads the wireless-bridge certificate to the staging controller Use this command to load the certificate to the controller before scheduling or initiating a certificate synchronization.
- <URL> – Provide the trustpoint/certificate location using one of the following formats:

```
tftp://<hostname|IP>[:port]/path/file
```

```
ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
```

```
sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
```

```
http://<hostname|IP>[:port]/path/file
```

**Note:** Both IPv4 and IPv6 address types are supported.

```
cf:/path/file
```

```
usb<n>:/path/file
```

```
file-sync [trustpoint <TRUSTPOINT-NAME>|wireless-bridge] [<DEVICE-NAME>|all|rf-domain
[<DOMAIN-NAME>|all] {from-controller}] {reset-radio|upload-time <TIME>}
```

|  |  |
|--|--|
| file-sync trustpoint <TRUSTPOINT-NAME> [<DEVICE-NAME>  all rf-domain [<DOMAIN-NAME>  all] from-controller] | <p>Configures file-syncing parameters</p> <ul style="list-style-type: none"> <li>trustpoint &lt;TRUSTPOINT-NAME&gt; – Syncs a specified trustpoint between controller and its adopted devices</li> <li>&lt;TRUSTPOINT-NAME&gt; – Specify the trustpoint name.</li> </ul> <p><b>Note:</b> Trustpoint are synced all the way down the hierarchical structure. If you issue the command on the NOC controller, the specified trustpoint will be synced all the way down the site controllers and their adopted APs.</p> <ul style="list-style-type: none"> <li>wireless-bridge – Syncs wireless-bridge certificate between controller and its adopted devices</li> </ul> <p>After specifying the file that is to be synced, configure following file-sync parameters:</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Syncs trustpoint/certificate with a specified AP. ## help

Describes the interactive help system. Use this command to access the advanced help feature. Use "?" anytime at the command prompt to access the help topic

Two kinds of help are provided:

- Full help is available when ready to enter a command argument
- Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (for example 'show ve?').

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
help {search|show}
help {search <WORD>} {detailed|only-show|skip-no|skip-show}
```

### Parameters

```
help {search <WORD>} {detailed|only-show|skip-no|skip-show}
```

|               |   |
|---------------|---|
| search <WORD> | Optional. Searches for CLI commands related to a specific target term <ul style="list-style-type: none"> <li>• &lt;WORD&gt; – Specify a target term (for example, a feature or a configuration parameter). After specifying the term, select one of the following options: detailed, only-show, skip-no, or skip-show. The system displays information based on the option selected.</li> </ul> |
| detailed      | Optional. Searches and displays help strings in addition to mode and commands   |
| only-show     | Optional. Displays only "show" commands. Does not display configuration commands.   |
| skip-no       | Optional. Displays only configuration commands. Does not display "no" commands  |
| skip-show     | Optional. Displays only configuration commands. Does not display "show" commands  |

## join-cluster

Adds a device (access point, wireless controller, or service platform), as a member, to an existing cluster of devices. Assign a static IP address to the device before adding to a cluster. Note, a cluster can be only formed of devices of the same model type.

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

join-cluster <IP> user <USERNAME> password <WORD> {level|mode}
join-cluster <IP> user <USERNAME> password <WORD> {level [1|2]|mode [active|standby]}

```

### Parameters

```
join-cluster <IP> user <USERNAME> password <WORD> {level [1|2]|mode [active|standby]}
```

|                       |   |
|-----------------------|---|
| join-cluster          | Adds a access point wireless controller, or service platform to an existing cluster   |
| <IP>                  | Specify the cluster member's IP address.  |
| user <USERNAME>       | Specify a user account with super user privileges on the new cluster member   |
| password <WORD>       | Specify password for the account specified in the user parameter  |
| level [1 2]           | Optional. Configures the routing level <ul style="list-style-type: none"> <li>• 1 – Configures level 1 routing</li> <li>• 2 – Configures level 2 routing</li> </ul>                                     |
| mode [active standby] | Optional. Configures the cluster mode <ul style="list-style-type: none"> <li>• active – Configures this cluster as active</li> <li>• standby – Configures this cluster to be on standby mode</li> </ul> |

### Usage Guidelines

To add a device to an existing cluster:

- Configure a static IP address on the device (access point, wireless controller, or service platform).
- Provide username and password for superuser, network admin, system admin, or operator accounts.

After adding a device to a cluster, execute the "write memory" command to ensure the configuration persists across reboots.

### Examples (User Exec Mode)

```

nx9500-6C8809>join-cluster 192.168.13.15 user admin password superuser level 1
mode standby
... connecting to 192.168.13.15

## l2tpv3

Establishes or brings down a *Layer 2 Tunnel Protocol Version 3* (L2TPv3) tunnel

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
l2tpv3 tunnel [<TUNNEL-NAME>|all]
l2tpv3 tunnel <TUNNEL-NAME> [down|session|up]
l2tpv3 tunnel <TUNNEL-NAME> [down|up] {on <DEVICE-NAME>}
l2tpv3 tunnel <TUNNEL-NAME> session <SESSION-NAME> [down|up] {on <DEVICE-NAME>}
l2tpv3 tunnel all [down|up] {on <DEVICE-NAME>}
```

## Parameters

```
l2tpv3 tunnel <TUNNEL-NAME> [down|up] {on <DEVICE-NAME>}
```

|                         |   |
|-------------------------|---|
| l2tpv3 tunnel           | Establishes or brings down L2TPV3 tunnels   |

## Examples

```
nx9500-6C8809>l2tpv3 tunnel testTunnel session testSession1 up on ap505-13403
```

### Note

For more information on the L2TPV3 tunnel configuration mode and commands, see [L2TPv3 Policy](#) on page 1715.

## logging

Modifies message logging settings

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
logging monitor {<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings}
```

## Parameters

```
logging monitor {<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings}
```

### monitor

Sets the terminal lines logging levels. The logging severity levels can be set from 0 - 7. The system configures default settings, if no logging severity level is specified.

- <0-7> - Optional. Specify the logging severity level from 0-7. The various levels and their implications are as follows:
- alerts - Optional. Immediate action needed (severity=1)
- critical - Optional. Critical conditions (severity=2)
- debugging - Optional. Debugging messages (severity=7)
- emergencies - Optional. System is unusable (severity=0)
- errors - Optional. Error conditions (severity=3)
- informational - Optional. Informational messages (severity=6)
- notifications - Optional. Normal but significant conditions (severity=5)
- warnings - Optional. Warning conditions (severity=4)

**Note:** Before configuring the message logging level, ensure logging module is enabled. To enable message logging, in the device's configuration mode, execute the `logging >` on command. Message logging can also be enabled on a profile. All devices using the profile will have message logging enabled.

### Examples

```

ap510-133B38 (config-device-94-9B-2C-13-3B-38) #logging on
ap510-133B38>logging monitor debugging
ap510-133B38>show logging

Logging module: enabled
  Aggregation time: disabled
  Console logging: level warnings
  Monitor logging: level debugging
  Buffered logging: level warnings
  Syslog logging: level warnings
  Facility: local7

Log Buffer (101 bytes):

Jul 18 18:39:01 2019: ap510-133B38 : %SYSTEM-3-LOGIN_FAIL: Log-in failed for user 'admin'
from 'ssh'
ap510-133B38>

```

## mint

Uses MiNT protocol to perform a ping and trace route to a remote device

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

mint [ping|traceroute]
mint ping <MINT-ID> {(count <1-10000>|size <1-64000>|timeout <1-10>)}
mint traceroute <MINT-ID> {(destination-port <1-65535>|max-hops <1-255>|
source-port <1-65535>|timeout <1-255>)}

```

### Parameters

```

mint ping <MINT-ID> {(count <1-10000>|size <1-64000>|timeout <1-10>)}

```

|                 |   |
|-----------------|---|
| ping <MINT-ID>  | Sends a MiNT echo message to a specified destination <ul style="list-style-type: none"> <li>&lt;MINT-ID&gt; – Specify the destination device's MiNT ID.</li> </ul>                                  |
| count <1-10000> | Optional. Sets the number of ping packets sent to the specified MiNT destination <ul style="list-style-type: none"> <li>&lt;1-60&gt; – Specify a value from 1 - 10000. The default is 3.</li> </ul> |
| size <1-64000>  | Optional. Sets the MiNT payload size in bytes <ul style="list-style-type: none"> <li>&lt;1-64000&gt; – Specify a value from 1 - 640000. The default is 64 bytes.</li> </ul>                         |
| timeout <1-10>  | Optional. Sets a response time in seconds <ul style="list-style-type: none"> <li>&lt;1-10&gt; – Specify a value from 1 sec - 10 sec. The default is 1 second.</li> </ul>                            |

```
mint traceroute <MINT-ID> {(destination-port <1-65535>|max-hops <1-255>|
source-port <1-65535>|timeout <1-255>)}
```

|                            |   |
|----------------------------|---|
| traceroute <MINT-ID>       | Prints the route packets trace to a device <ul style="list-style-type: none"> <li>&lt;MINT-ID&gt; – Specify the destination device's MiNT ID.</li> </ul>  |
| destination-port <1-65535> | Optional. Sets the <i>Equal-cost Multi-path</i> (ECMP) routing destination port <ul style="list-style-type: none"> <li>&lt;1-65535&gt; – Specify a value from 1 - 65535. The default port is 45.</li> </ul>         |
| max-hops <1-255>           | Optional. Sets the maximum number of hops a traceroute packet traverses in the forward direction <ul style="list-style-type: none"> <li>&lt;1-255&gt; – Specify a value from 1 - 255. The default is 30.</li> </ul> |
| source-port <1-65535>      | Optional. Sets the ECMP source port <ul style="list-style-type: none"> <li>&lt;1-65535&gt; – Specify a value from 1 - 65535. The default port is 45.</li> </ul>   |
| timeout <1-255>            | Optional. Sets the minimum response time period in seconds <ul style="list-style-type: none"> <li>&lt;1-65535&gt; – Specify a value from 1 sec - 255 sec. The default is 30 seconds.</li> </ul>                     |

### Examples

```
nx9500-6C8809#mint ping 68.88.0D.A7
MiNT ping 68.88.0D.A7 with 64 bytes of data.
Response from 68.88.0D.A7: id=1 time=0.364 ms
Response from 68.88.0D.A7: id=2 time=0.333 ms
Response from 68.88.0D.A7: id=3 time=0.368 ms

--- 68.88.0D.A7 ping statistics ---
3 packets transmitted, 3 packets received, 0% packet loss
round-trip min/avg/max = 0.333/0.355/0.368 ms
nx9500-6C8809#
```

## no

Use the no command to remove a setting or to revert a setting to its default value.

### Note

The commands have their own set of parameters that can be reset.

### Syntax

```
no [adoption|captive-portal|crypto|debug|logging|page|service|terminal|virtual-machine|
wireless]
no adoption {on <DEVICE-OR-DOMAIN-NAME>}
no captive-portal client [captive-portal <CAPTIVE-PORTAL-NAME>|mac <MAC>] {on <DEVICE-OR-
DOMAIN-NAME>}
no crypto pki [server|trustpoint]
no crypto pki [server|trustpoint] <TRUSTPOINT-NAME> {del-key {on <DEVICE-NAME>}|on
<DEVICE-NAME>}
no logging monitor
no page
no service [block-adopter-config-update|locator|snmp|ssm|wireless]
no service snmp sysoid wing5
no service block-adopter-config-update
no service ssm trace pattern {<WORD>} {on <DEVICE-NAME>}
no service wireless [trace pattern {<WORD>} {on <DEVICE-NAME>}|unsanctioned ap air-
terminate <BSSID> {on <DOMAIN-NAME>}]
no service locator {on <DEVICE-NAME>}
no terminal [length|width]
no virtual-machine assign-usb-ports {on <DEVICE-NAME>}
no wireless client [all|<MAC>]
no wireless client all {filter|on}
no wireless client all {filter [wlan <WLAN-NAME>]}
no wireless client all {on <DEVICE-OR-DOMAIN-NAME>} {filter [wlan <WLAN-NAME>]}
no wireless client mac <MAC> {on <DEVICE-OR-DOMAIN-NAME>}
```

### Parameters

```
no <PARAMETERS>
```

```
no <PARAMETERS>
```

Resets or reverts settings based on the parameters passed

### Usage Guidelines

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

### Examples

```
nx9500-6C8809>no adoption
nx9500-6C8809>no page
nx9500-6C8809>no service cli-tables-expand line
```

## on

Executes the following commands in the RF Domain context: *clrscr*, *do*, *end*, *exit*, *help*, *service*, and *show*

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
on rf-domain [<RF-DOMAIN-NAME>|all]
```

### Parameters

```
on rf-domain [<RF-DOMAIN-NAME>|all]
```

|                                     |  |
|-------------------------------------|--|
| on rf-domain [<RF-DOMAIN-NAME> all] | <p>Enters the RF Domain context based on the parameter specified</p> <ul style="list-style-type: none"> <li>• &lt;RF-DOMAIN-NAME&gt; – Specify the RF Domain name. Enters the specified RF Domain context.</li> <li>• all – Specifies all RF Domains.</li> </ul> |
|-------------------------------------|--|

### Examples

```
nx9500-6C8809>on rf-domain TechPubs
nx9500-6C8809(TechPubs)>?
on RF-Domain Mode commands:

  clrscr  Clears the display screen
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  service  Service Commands
  show     Show running system information

nx9500-6C8809(TechPubs)>
nx9500-6C8809(rf-domain-all)>?
on RF-Domain Mode commands:

  clrscr  Clears the display screen
  do       Run commands from Exec mode
  end      End current mode and change to EXEC mode
  exit     End current mode and down to previous mode
  help     Description of the interactive help system
  service  Service Commands
  show     Show running system information

nx9500-6C8809(rf-domain-all)>
```

## opensns

Fetches the OpenDNS device\_id from the OpenDNS site. Use this command to fetch the OpenDNS device\_id. Once fetched, apply the device\_id to WLANs that are to be OpenDNS enabled.

OpenDNS is a free DNS service that enables swift Web navigation without frequent outages. It is a reliable DNS service that provides the following services: DNS query resolution, Web-filtering, protection against virus and malware attacks, performance enhancement, etc.

This command is part of a set of configurations that are required to integrate WiNG devices with OpenDNS. When integrated, DNS queries going out of the WiNG device (access point, controller, or service platform) are re-directed to OpenDNS (208.67.220.220 or 208.67.222.222) resolvers that act as proxy DNS servers.

For more information on integrating WiNG devices with OpenDNS site, see [Enabling OpenDNS Support](#).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

#### Syntax

```
opendns [APIToken|username]
opendns APIToken <OPENDNS-APITOKEN>
opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>
```

#### Note

Note, as per the current implementation both of the above commands can be used to fetch the device\_id from the OpenDNS site.

#### Parameters

```
opendns APIToken <OPENDNS-APITOKEN>
```

|                             |  |
|-----------------------------|--|
| opendns                     | Fetches the device_id from the OpenDNS site using the OpenDNS API token  |
| APIToken <OPENDNS-APITOKEN> | <p>Configures the OpenDNS APIToken. This is the token provided you by CISCO at the time of subscribing for their OpenDNS service.</p> <ul style="list-style-type: none"> <li>• &lt;OPENDNS-APITOKEN&gt; - Provide the OpenDNS API token (should be a valid token).</li> </ul> <p>For every valid OpenDNS API token provided a device_id is returned. Apply this device_id to WLANs that are to be OpenDNS enabled. Once applied, DNS queries originating from associating clients are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. For information on configuring the device_id in the WLAN context, see <a href="#">opendns</a> on page 551.</p> |

```
opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>
```

|                         |  |
|-------------------------|--|
| opendns                 | Fetches the device_id from the OpenDNS site using the OpenDNS credentials  |
| username <USERNAME>     | Configures the OpenDNS user name. This is your OpenDNS email ID provided by CISCO at the time of subscribing for their OpenDNS service. <ul style="list-style-type: none"> <li>&lt;USERNAME&gt; – Provide the OpenDNS user name (should be a valid OpenDNS username).</li> </ul>   |
| password <OPENDNS-PSWD> | Configures the password associated with the user name specified in the previous step <ul style="list-style-type: none"> <li>&lt;OPENDNS-PSWD&gt; – Provide the OpenDNS password (should be a valid OpenDNS password).</li> </ul>   |
| label <LABEL>           | Configures the network label. This the label (the user friendly name) of your network, and should be the same as the label (name) configured on the OpenDNS portal. <ul style="list-style-type: none"> <li>&lt;LABEL&gt; – Specify your network label.</li> </ul> <p>For every set of user name, password, and label passed only one unique device_id is returned. Apply this device_id to WLANs that are to be OpenDNS enabled. Once applied, DNS queries originating from associating clients are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. For information on configuring the device_id in the WLAN context, see <a href="#">opendns</a> on page 551.</p> |

### Usage Guidelines

Use your OpenDNS credentials to logon to the opendns.org site and use the labels, edit settings, and customize content filtering options to configure Web filtering settings.

### Example

```
ap510-133B38>opendns username bob@examplecompany.com password opendns label company_name
Connecting to OpenDNS server...
device_id = 0014AADF8EDC6C59
ap510-133B38>
nx9600-7F3C7F>opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073 device_id =
001480fe36dcb245
```

### Example: Enabling OpenDNS Support

The following example shows how to enable OpenDNS support:

- 1 Fetch the OpenDNS device\_id from the OpenDNS site.
  - a In the User/Privilege executable mode execute one of the following commands:

```
nx9500-6C8809#opendns ApiToken <OPENDNS-APITOKEN>
nx9500-6C8809#opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073
device_id = 001480fe36dcb245#
```

OR

```
nx9500-6C8809#opendns username <USERNAME> password <OPENDNS-PSWD> label <LABEL>
```

#### Note

The *OpenDNS API token* and/or *user account credentials* are provided the OpenDNS service provider when subscribing for the OpenDNS service.

- b Apply the device\_id fetched in the step 1 to the WLAN.

```
nx9500-6C8809(config-wlan-opendns)#opendns device-id <OPENDNS-DEVICE-ID>
nx9500-6C8809(config-wlan-opendns)#opendns device-id 001480fe36dcb245
nx9500-6C8809(config-wlan-opendns)#show context
wlan opendns
  ssid opendns
  bridging-mode local
  encryption-type none
  authentication-type none
  opendns device-id 001480fe36dcb245
nx9500-6C8809(config-wlan-opendns)#
```

#### Note

Once applied, DNS queries originating from wireless clients associating with the WLAN are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet.

- 2 Configure a DHCP server policy, and set the DHCP pool's DNS server configuration to point to the OpenDNS servers.

```
nx9500-6C8809(config-dhcp-policy-opendns-pool-opendnsPool)#dns-server 208.67.222.222
```

#### Note

You can configure any one of the following OpenDNS servers: 208.67.222.222 OR 208.67.222.220

```
nx9500-6C8809(config-dhcp-policy-opendns-pool-opendnsPool)#show context
dhcp-pool opendnsPool
  dns-server 208.67.222.222
nx9500-6C8809(config-dhcp-policy-opendns-pool-opendnsPool)#
```

- 3 Apply the DHCP server policy configured in step 2 on the access point, controller, or service platform.

```
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#use dhcp-server-policy opendns
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#show context include-factory | include
use
  use profile default-nx9000
  use rf-domain TechPubs
  use database-policy default
  use nsight-policy noc
  use dhcp-server-policy opendns
  use auto-provisioning-policy TechPubs
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#
```

#### Note

When configured, DNS queries are forwarded by the access point, controller, or service platform to the specified OpenDNS resolver.

- 4 Configure an IP Access Control List with the following permit and deny rules:

```
nx9500-6C8809(config-ip-acl-OpenDNS)#permit udp any host 208.67.222.222 eq dns rule-
precedence 1 rule-description "allow dns queries only to OpenDNS"
nx9500-6C8809(config-ip-acl-OpenDNS)#deny udp any any eq dns rule-precedence 10 rule-
description "block all DNS queries"
nx9500-6C8809(config-ip-acl-OpenDNS)#permit ip any any rule-precedence 100 rule-
description "allow all other ip packets"
nx9500-6C8809(config-ip-acl-OpenDNS)#show context
ip access-list OpenDNS
  permit udp any host 208.67.222.222 eq dns rule-precedence 1 rule-description "allow
```

```
dns queries only to OpenDNS"
deny udp any any eq dns rule-precedence 10 rule-description "block all dns queries"
permit ip any any rule-precedence 100 rule-description "allow all other ip packets"
nx9500-6C8809(config-ip-acl-OpenDNS) #
```

**Note**

When configured and applied in the WLAN context, the IP ACL prevents wireless clients from adding their own DNS servers to bypass the Web filtering and network policies enforced by OpenDNS.

- 5 Apply the IP ACL configured in step 4 in the WLAN context.

```
nx9500-6C8809(config-wlan-opendns)#use ip-access-list out OpenDNS
nx9500-6C8809(config-wlan-opendns)#show context
wlan opendns
  ssid opendns
  vlan 1
  bridging-mode local
  encryption-type none
  authentication-type none
  use ip-access-list in OpenDNS
  use ip-access-list out OpenDNS
  opendns device-id 0014AADF8EDC6C59
nx9500-6C8809(config-wlan-opendns) #
```

**Note**

When applied to the WLAN, only the DNS queries directed to the OpenDNS server are forwarded. All other DNS queries are dropped.

## page

Toggles a device's paging function. Enabling this option displays the CLI command output page by page, instead of running the entire output at once.

**Note**

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
page
```

*Parameters*

None

*Examples*

```
nx9500-6C8809#page
nx9500-6C8809#
```

### Related Commands

|  |                 |
|--|-----------------|
| no on page 89 (User executable context)        | Disables paging |
| no on page 151 (Privileged executable context) | Disables paging |

## ping

Sends *Internet Controller Message Protocol* (ICMP) echo messages to a user-specified location

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

### Syntax

```
ping <IP/HOSTNAME> {count <1-10000>|dont-fragment {count|size}|size <1-64000>|
source [<IP>|pppoe|vlan <1-4094>|wwan]}
```

### Parameters

```
ping <IP/HOSTNAME> {count <1-10000>|dont-fragment {count|size}|size <1-64000>|
source [<IP>|pppoe|vlan <1-4094>|wwan]}
```

|                            |  |
|----------------------------|--|
| <IP/HOSTNAME>              | Specify the destination IP address or hostname. When entered without any parameters, this command prompts for an IP address or a hostname.   |
| count <1-10000>            | Optional. Sets the pings to the specified destination <ul style="list-style-type: none"> <li>&lt;1-10000&gt; – Specify a value from 1 - 10000. The default is 5.</li> </ul>  |
| dont-fragment {count size} | Optional. Sets the don't fragment bit in the ping packet. Packets with the dont-fragment bit specified are not fragmented. When a packet, with the dont-fragment bit specified, exceeds the specified <i>maximum transmission unit</i> (MTU) value, an error message is sent from the device trying to fragment it. <ul style="list-style-type: none"> <li>count &lt;1-10000&gt; – Optional. Sets the pings to the specified destination from 1 - 10000. The default is 5.</li> <li>size &lt;1-64000&gt; – Optional. Sets the ping payload size from 1 - 64000 bytes. The default is 100 bytes.</li> </ul> |

|  |   |
|--|---|
| size <1-64000>                           | Optional. Sets the ping payload size in bytes <ul style="list-style-type: none"> <li>&lt;1-64000&gt; – Specify the ping payload size from 1 - 64000. The default is 100 bytes.</li> </ul>   |
| source [<IP> pppoe  vlan <1-4094>  wwan] | Optional. Sets the source address or interface name. This is the source of the ICMP packet to the specified destination. <ul style="list-style-type: none"> <li>&lt;IP&gt; – Specifies the source IP address</li> <li>pppoe – Selects the PPP over Ethernet interface</li> <li>vlan &lt;1-4094&gt; – Selects the VLAN interface from 1 - 4094</li> <li>wwan – Selects the wireless WAN interface</li> </ul> |

### Examples

```
ap510-133B38#ping 10.234.160.5
PING 10.234.160.5 (10.234.160.5) 100(128) bytes of data.

## ping6

Sends ICMPv6 echo messages to a user-specified IPv6 address

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
ping6 <IPv6/HOSTNAME> [{<INTF-NAME>}] {(count <1-10000>|size <1-64000>)}
```

### Parameters

```
ping6 <IPv6/HOSTNAME> {<INTF-NAME>} {(count <1-10000>|size <1-64000>)}
```

|                 |  |
|-----------------|--|
| <IPv6/HOSTNAME> | Specify the destination IPv6 address or hostname.  |
| <INTF-NAME>     | Specify the interface name for link local/broadcast address  |
| count <1-10000> | Optional. Sets the pings to the specified IPv6 destination <ul style="list-style-type: none"> <li>&lt;1-10000&gt; - Specify a value from 1 - 10000. The default is 5.</li> </ul>               |
| size <1-64000>  | Optional. Sets the IPv6 ping payload size in bytes <ul style="list-style-type: none"> <li>&lt;1-64000&gt; - Specify the ping payload size from 1 - 64000. The default is 100 bytes.</li> </ul> |

### Usage Guidelines

To configure a device's IPv6 address, in the VLAN interface configuration mode, use the `ipv6 > address <IPv6-ADDRESS>` command. After configuring the IPv6 address, use the `ipv6 > enable` command to enable IPv6. For more information, see [ipv6](#) on page 1178 (profile config mode).

### Examples

```
nx9500-6C8809(config-device-00-23-68-1B-35-96-if-ge4)#show ipv6 interface brief
-----
INTERFACE  IPV6 MODE  IPV6-ADDRESS/MASK          TYPE          STATUS  PROTOCOL
-----
vlan1      True      fe80::223:68ff:fe88:da7/64  Link-Local    UP      up

## ssh

Opens a *Secure Shell* (SSH) connection between two network devices

#### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
ssh <IP/HOSTNAME> <USER-NAME> {<INF-NAME/LINK-LOCAL-ADD>}
```

### Parameters

```
ssh <IP/HOSTNAME> <USER-NAME> {<INF-NAME/LINK-LOCAL-ADD>}
```

|                            |  |
|----------------------------|--|
| <IP/HOSTNAME>              | Specify the remote system's IP address or hostname.                            |
| <USERNAME>                 | Specify the name of the user requesting SSH connection with the remote system. |
| <INF-NAME/ LINK-LOCAL-ADD> | Optional. Specify the interface's name or link local address.                  |

### Example

```
ap505-13403B#ssh 10.234.160.5 admin
admin@10.234.160.5's password:
nx9500-6C8809>
```

## telnet

Opens a Telnet session between two network devices

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
telnet <IP/HOSTNAME> {<TCP-PORT>} {<INTF-NAME>}
```

### Parameters

```
telnet <IP/HOSTNAME> {<TCP-PORT>} {<INTF-NAME>}
```

|               |  |
|---------------|--|
| <IP/HOSTNAME> | Configures the destination remote system's IP (IPv4 or IPv6) address or hostname. The Telnet session is established between the connecting system and the remote system. <ul style="list-style-type: none"> <li>&lt;IP/HOSTNAME&gt; – Specify the remote system's IPv4 or IPv6 address or hostname.</li> </ul> |
| <TCP-PORT>    | Optional. Specify the <i>Transmission Control Protocol</i> (TCP) port number.  |
| <INTF-NAME>   | Optional. Specify the interface name for the link local address.   |

### Examples

```
nx9500-6C8809#telnet 10.234.160.36
```

```
Entering character mode
Escape character is '^]'.

```

```
AP505 release 7.1.0.0-114D
ap505-13403B login:

```

## terminal

Sets the length and width of the CLI display window on a terminal

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
terminal [length|width] <0-512>
```

### Parameters

```
terminal [length|width] <0-512>
```

|                |  |
|----------------|--|
| length <0-512> | Sets the number of lines displayed on a terminal window <ul style="list-style-type: none"> <li>&lt;0-512&gt; – Specify a value from 0 - 512.</li> </ul>                    |
| width <0-512>  | Sets the width (the number of characters displayed) of the terminal window <ul style="list-style-type: none"> <li>&lt;0-512&gt; – Specify a value from 0 - 512.</li> </ul> |

### Examples

```
ap505-13403B#show terminal
Terminal Type: xterm

```

```

Length: 0      Width: 80
ap505-13403B#
ap505-13403B#terminal length 30
ap505-13403B#terminal width 100
ap505-13403B#show terminal
Terminal Type: xterm
Length: 30      Width: 100
ap505-13403B#

```

### Related Commands

|                |   |
|----------------|---|
| no on page 89  | Resets the width or length of the terminal window |
| no on page 151 | Resets the width or length of the terminal window |

## time-it

Verifies the time taken by a particular command between request and response

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
time-it <COMMAND>
```

### Parameters

```
time-it <COMMAND>
```

|                   |  |
|-------------------|--|
| time-it <COMMAND> | Verifies the time taken by a particular command to execute and provide a result <ul style="list-style-type: none"> <li>• &lt;COMMAND&gt; – Specify the command.</li> </ul> |
|-------------------|--|

### Examples

```

ap505-13403B#time-it config terminal
Enter configuration commands, one per line.  End with CNTL/Z.
That took 0.00 seconds..
ap505-13403B(config)#

```

## traceroute

Traces the route to a defined destination

Use '--help' or '-h' to display a complete list of parameters for the traceroute command

#### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
traceroute <LINE>
```

#### Parameters

```
traceroute <LINE>
```

traceroute <LINE>

Traces the route to a destination IP address or hostname

- <LINE> – Specify the destination IPv4 address or hostname.

#### Examples

```
NOC-NX9500#traceroute 10.234.160.11
traceroute to 10.234.160.11 (10.234.160.11), 30 hops max, 46 byte packets
 1 10.234.160.11 (10.234.160.11) 8.115 ms 0.410 ms 0.370 ms
NOC-NX9500#
```

## traceroute6

Traces the route to a specified IPv6 destination

#### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
traceroute6 <LINE>
```

#### Parameters

```
traceroute6 <LINE>
```

|                 |  |
|-----------------|--|
| tracert6 <LINE> | Traces the route to a destination IPv6 address or hostname   |
|                 | <ul style="list-style-type: none"> <li>&lt;LINE&gt; – Specify the destination IPv6 address or hostname.</li> </ul> |

### Examples

```
nx9500-6C88097#tracert6 2001:10:10:10:10:10:2
tracert6 to 2001:10:10:10:10:10:2 (2001:10:10:10:10:10:2) from
2001:10:10:10:10:10:1, 30 hops max, 16 byte packets
  1  2001:10:10:10:10:10:2 (2001:10:10:10:10:10:2)  0.622 ms  0.497 ms  0.531 ms
nx9500-6C8809#
```

## virtual-machine

Installs, configures, and monitors the status of *virtual machines*

### Note

This command and its syntax is common to both the *User Executable* and *Privilege Executable* configuration modes.

*Supported in the following platforms*

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
virtual-machine [assign-usb-ports|console|export|install|restart|set|start|stop|uninstall]
virtual-machine assign-usb-ports team-vowlan {on <DEVICE-NAME>}
virtual-machine export <VM-NAME> [<FILE>|<URL>] {on <DEVICE-NAME>}
virtual-machine install [<VM-NAME>|team-urc|team-rls|team-vowlan]
virtual-machine restart [<VM-NAME>|hard|team-urc|team-rls|team-vowlan]
virtual-machine set [autostart|memory|vcpus|vif-count|vif-mac|vif-to-vmif|vnc]
virtual-machine set [autostart [ignore|start]|memory <512-8192>|vcpus <1-4>|vif-count
<0-2>|
vif-mac <VIF-INDEX> <MAC-INDEX>|vif-to-vmif <VIF-INDEX> <VMIF-INDEX>|vnc [disable|
enable]]
[<VM-NAME>|team-urc|team-rls|team-vowlan] {on <DEVICE-NAME>}
```

The following virtual-machine commands are supported only on the VX9000 platform:

```
virtual-machine volume-group [add-drive|replace-drive|resize-drive|resize-volume-group]
virtual-machine volume-group [add-drive|replace-drive] <BLOCK-DEVICE-LABEL>
virtual-machine volume-group replace-drive <BLOCK-DEVICE-LABLE> <NEW-BLOCK-DEVICE-LABEL>
virtual-machine volume-group resize-volume-group <BLOCK-DEVICE-LABEL>
```

### Parameters

```
virtual-machine assign-usb-ports team-vowlan {on <DEVICE-NAME>}
```

```
assign-usb-ports team-vowlan
```

Assigns USB ports to TEAM-VoWLAN on a specified device

- on <DEVICE-NAME> – Optional. Specify the device name.

**Note:** Use the `no > virtual-machine > assign-usb-ports` command to reassign the port to WiNG.

**Note:** TEAM-RLS VM cannot be installed when USB ports are assigned to TEAM-VoWLAN.

```
virtual-machine export <VM-NAME> [<FILE>|<URL>] {on <DEVICE-NAME>}
```

```
virtual-machine export
```

Exports an existing VM image and settings. Use this command to export the VM to another device in the same domain.

- <VM-NAME> – Specify the VM name.
  - <FILE> – Specify the location and name of the source file (VM image). The VM image is retrieved and exported from the specified location.
  - <URL> – Specify the destination location. This is the location to which the VM image is copied. Use one of the following formats to provide the destination path:
    - tftp://<hostname|IP>[:port]/path/file
    - ftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
    - sftp://<user>:<passwd>@<hostname|IP>[:port]/path/file
    - http://<hostname|IP>[:port]/path/file
- on <DEVICE-NAME> – Optional. Executes the command on a specified device or devices
  - <DEVICE-NAME> – Specify the service platform name. In case of multiple devices, list the device names separated by commas.

**Note:** The VM should be in a stop state during the export process.

**Note:** If the destination is a device, the image is copied to a predefined location (VM archive).

```
virtual-machine install [<VM-NAME>|team-centro|team-rls|team-vowlan] {on <DEVICE-NAME>}
```

**virtual-machine install**

Installs the VM. The install command internally creates a VM template, consisting of the specified parameters, and starts the installation process.

- <VM-NAME> – Specify the VM name.
- team-centro – Installs the VM TEAM-Centro image
- team-rls – Installs the VM TEAM-RLS image
- team-vowlan – Installs the VM TEAM-VoWLAN image

Specify the device on which to install the VM.

- on <DEVICE-NAME> – Optional. Executes the command on a specified device or devices
  - <DEVICE-NAME> – Specify the service platform name. In case of multiple devices, list the device names separated by commas.

```
virtual-machine set [autostart [ignore|start]|memory <512-8192>|vcpus <1-4>|vif-count
<0-2>|
vif-mac <VIF-INDEX> <MAC-INDEX>|vif-to-vmif <VIF-INDEX> <VMIF-INDEX>|vnc [disable|
enable]]
[<VM-NAME>|team-urc|team-rls|team-vowlan] {on <DEVICE-NAME>}
```

## virtual-machine set

Configures the VM settings

- autostart – Specifies whether to autostart the VM on system reboot
  - ignore – Enables autostart on each system reboot
  - start – Disables autostart
- memory – Defines the VM memory size
  - <512-8192> – Specify the VM memory from 512 - 8192 MB. The default is 1024 MB.
- vcpus – Specifies the number of VCPUS for this VM
  - <1-4> – Specify the number of VCPUS from 1- 4.
- vif-count – Configures or resets the VM's VIFs
  - <0-2> – Specify the VIF number from 0 - 2.
- vif-mac – Configures the MAC address of the selected virtual network interface
  - <1-2> – Select the VIF
    - <1-8> – Specify the MAC index for the selected VIF
    - <MAC> – Specify the customized MAC address for the selected VIF in the AA-BB-CC-DD-EE-FF format.

Each VM has a maximum of two network interfaces (indexed 1 and 2, referred to as VIF). By default, each VIF is automatically assigned a MAC from the range allocated for that device. However, you can use the 'set' keyword to specify the MAC from within the allocated range. Each of these VIFs are mapped to a layer 2 port in the dataplane (referred to as VMIF). These VMIFs are standard I2 ports on the DP bridge, supporting all VLAN and ACL commands. The WiNG software supports up to a maximum of 8 VMIFs. By default, a VM's interface is always mapped to VMIF1. You can map a VIF to any of the 8 VMIFs. Use the vif-to-vmif command to map a VIF to a VMIF on the DP bridge.

- vif-to-vmif – Maps the virtual interface (1 or 2) to the selected VMIF interface. Specify the VMIF interface index from 1 - 8.

WiNG provides a dataplane bridge for external network connectivity for VMs. VM Interfaces define which IP address is associated with each VLAN ID the service platform is connected to and enables remote service platform administration. Each custom VM can have up to a maximum of two VM interfaces. Each VM interface can be mapped to one of the twelve ports for NX9500 on the dataplane bridge. This mapping determines the destination for service platform routing.

By default, VM interfaces are internally connected to the dataplane bridge via VMIF1. VMIF1, by default, is an untagged port providing access to VLAN 1 to support the capability to connect the VM interfaces to any of the VMIF ports. This provides the flexibility to move a VM interface onto different VLANs as well as configure specific firewall and QoS rules.

- vnc – Disables/enables VNC port option for an existing VM. When enabled, provides remote access to VGA through the noVNC client.
  - disable – Disables VNC port
  - enable – Enables VNC port

After configuring the VM settings, identify the VM to apply the settings.

- <VM-NAME> – Applies these settings to the VM identified by the <VM-NAME> keyword. Specify the VM name.
- team-urc – Applies these settings to the VM TEAM-URC

- team-rls – Applies these settings to the VM TEAM-RLS
- team-vowlan – Applies these settings to the VM TEAM-VoWLAN

```
virtual-machine start [<VM-NAME>|team-urc|team-rls|team-vowlan] {on <DEVICE-NAME>}
```

|                       |   |
|-----------------------|---|
| virtual-machine start | <p>Starts the VM, based on the parameters passed. Select one of the following options:</p> <ul style="list-style-type: none"> <li>• &lt;VM-NAME&gt; – Starts the VM identified by the &lt;VM-NAME&gt; keyword. Specify the VM name.</li> <li>• team-urc – Starts the VM TEAM-URC</li> <li>• team-rls – Starts the VM TEAM-RLS</li> <li>• team-vowlan – Starts the VM TEAM-VoWLAN</li> </ul> <p>The following keywords are common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Executes the command on a specified device or devices <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the service platform name. In case of multiple devices, list the device names separated by commas.</li> </ul> </li> </ul> |
|-----------------------|---|

```
virtual-machine stop [<VM-NAME>|team-urc|team-rls|team-vowlan] {on <DEVICE-NAME>}
```

|                           |   |
|---------------------------|---|
| virtual-machine stop hard | <p>Stops the VM, based on the parameters passed. Select one of the following options:</p> <ul style="list-style-type: none"> <li>• &lt;VM-NAME&gt; – Stops the VM identified by the &lt;VM-NAME&gt; keyword. Specify the VM name.</li> <li>• team-urc – Stops the VM TEAM-URC</li> <li>• team-rls – Stops the VM TEAM-RLS</li> <li>• team-vowlan – Stops the VM TEAM-VoWLAN</li> </ul> <p>The following keywords are common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Executes the command on a specified device or devices <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the service platform name. In case of multiple devices, list the device names separated by commas.</li> </ul> </li> </ul> <p>Note: The option 'hard' forces the selected VM to shutdown.</p> |
|---------------------------|---|

```
virtual-machine uninstall [<VM-NAME>|team-urc|team-rls|team-vowlan] {on <DEVICE-NAME>}
```

**virtual-machine uninstall**

Uninstalls the specified VM

- <VM-NAME> - Uninstalls the VM identified by the <VM-NAME> keyword. Specify the VM name.
- team-urc - Uninstalls the VM TEAM-URC
- team-rls - Uninstalls the VM TEAM-RLS team-vowlan - Stops the VM TEAM-VoWLAN

The following keywords are common to all of the above parameters:

- on <DEVICE-NAME> - Optional. Executes the command on a specified device or devices  
     <DEVICE-NAME> - Specify the service platform name. In case of multiple devices, list the device names separated by commas.

**Note:** This command releases the VM's resources, such as memory, VCPUS, VNC port, disk space, and removes the RF Domain reference from the system.

```
virtual-machine volume-group [add-drive|resize-drive] <BLOCK-DEVICE-LABEL>
```

**virtual-machine volume-group [add-drive|resize-drive] <BLOCK-DEVICE-LABEL>]**

Enables provisioning of logical volume-groups on the VX9000 platform. Logical volume-groups are created on the primary storage device, allowing the database storage to be expanded to include additional storage drives. However, volume-groups can be provisioned only on new VX9000 installation and cannot be added to existing VX9000 installation.

- add-drive - Adds a new block-device to the VM. Note, currently a maximum of 3 (three) block devices can be added. To add a new drive, first halt the VM, In the Hypervisor, add a new storage disk to the VM and restart the VM. Once the VM comes up, use this command to add the new drive. To identify the new drive execute the  

```
show > virtual-machine > volume-group > status
```

command.
- resize-drive - Resizes a drive in the VM's volume group. To increase the size of a drive in the volume-group, first halt the VM. In the Hypervisor, increase the size of the existing secondary storage drive and restart the VM. Once the VM comes up, use this command to resize the drive. To identify the drive with the additional free space, execute the `show > virtual-machine > volume-group > status` command.

The following keyword is common to all of the above parameters:

- <BLOCK-DEVICE-LABEL> -Specify the block-device label to be added or resized depending on the action being performed.

```
virtual-machine volume-group replace-drive <BLOCK-DEVICE-LABEL> <NEW-BLOCK-DEVICE-LABEL>
```

```
virtual-machine volume-group
replace-drive <BLOCK-DEVICE-
LABEL> <NEW-BLOCK-DEVICE-
LABEL>]
```

Enables provisioning of VMs as logical volume-groups on the VX9000 platform. Logical volume-group VMs are created on the primary storage device, allowing the database storage to be expanded to include additional storage drives.

- **replace-drive** – Replaces an existing block-device with a new block-device in a volume-group. To replace a drive in the volume-group, first halt the VM. In the Hypervisor, add the new drive and restart the VM. Once the VM comes up, use this command to replace an existing drive with the new drive. To identify the drive with the additional free space, execute the `show > virtual-machine > volume-group > status` command
- **<BLOCK-DEVICE-LABEL>** – Specify the block-device label to be replaced.  
**<BLOCK-DEVICE-LABEL>** – Specify the replacement block-device label.

```
virtual-machine volume-group resize-volume-group <BLOCK-DEVICE-LABEL>
```

```
virtual-machine volume-group
resize-volume-group <BLOCK-
DEVICE-LABEL>
```

Enables provisioning of VMs as logical volume-groups on the VX9000 platform. Logical volume-group VMs are created on the primary storage device, allowing the database storage to be expanded to include additional storage drives

- **resize-volume-group** – Adds drive space to an existing block-device in the volume-group
- **<BLOCK-DEVICE-LABEL>** – Specify the block-device label to which additional drive space is to be provided

### Examples

The following examples show the VM installation process:

#### Installation media: USB

```
<DEVICE>#virtual-machine install <VM-NAME> type iso disk-size 8 install-media usb1://vms/
win7.iso autostart start memory 512 vcpus 3 vif-count 2 vnc enable
```

#### Installation media: pre-installed disk image

```
<DEVICE>#virtual-machine install <VM-NAME> type disk install-media flash:/vms/
win7_disk.img autostart start memory 512 vcpus 3 vif-count 2 vnc-enable on <DEVICE-NAME>
```

In the preceding example, the command is executed on the device identified by the **<DEVICE-NAME>** keyword. In such a scenario, the disk-size is ignored if specified. The VM has the install media as first boot device.

#### Installation media: VM archive

```
<DEVICE>#virtual-machine install type vm-archive install-media flash:/vms/<VM-NAME> vcpus
3
```

In the preceding example, the default configuration attached with the VM archive overrides any parameters specified.

**Exporting an installed VM:**

```

<DEVICE>#virtual-machine export <VM-NAME> <URL> on <DEVICE-NAME>
In the preceding example, the command copies the VM archive on to the URL (VM should be
in stop state).
<DEVICE>>virtual-machine install team-urc
Virtual Machine install team-urc command successfully sent.
<DEVICE>>
VX-DE6F97>cirtual-machine add-drive sdb
VX-DE6F97>show virtual-machine volume-group status
-----
Logical Volume: lv1
-----
STATUS          : available
SIZE            : 81.89 GiB
VOLUME GROUP    : vg0

-----
VX-DE6F97>

```

**watch**

Repeats the specified CLI command at periodic intervals

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
watch <1-3600> <LINE>
```

**Parameters**

```
watch <1-3600> <LINE>
```

|          |   |
|----------|---|
| watch    | Repeats a CLI command at a specified interval (in seconds)                            |
| <1-3600> | Select an interval from 1 - 3600 sec. Pressing CTRL-Z halts execution of the command. |
| <LINE>   | Specify the CLI command.  |

**Examples**

In the following example, the controller pings the specified IP address once in every 40 seconds.

```

NOC-NX9500>watch 40 ping 10.234.160.13
PING 10.234.160.13 (10.234.160.13) 100(128) bytes of data.
108 bytes from 10.234.160.13: icmp_seq=1 ttl=64 time=0.257 ms
108 bytes from 10.234.160.13: icmp_seq=2 ttl=64 time=0.176 ms

```

```

108 bytes from 10.234.160.13: icmp_seq=3 ttl=64 time=0.170 ms
108 bytes from 10.234.160.13: icmp_seq=4 ttl=64 time=0.170 ms
108 bytes from 10.234.160.13: icmp_seq=5 ttl=64 time=0.169 ms

--- 10.234.160.13 ping statistics ---
5 packets transmitted, 5 received, 0% packet loss, time 3998ms
rtt min/avg/max/mdev = 0.169/0.188/0.257/0.036 ms
PING 10.234.160.13 (10.234.160.13) 100(128) bytes of data.
108 bytes from 10.234.160.13: icmp_seq=1 ttl=64 time=0.251 ms
108 bytes from 10.234.160.13: icmp_seq=2 ttl=64 time=0.174 ms
108 bytes from 10.234.160.13: icmp_seq=3 ttl=64 time=0.154 ms
108 bytes from 10.234.160.13: icmp_seq=4 ttl=64 time=0.170 ms
108 bytes from 10.234.160.13: icmp_seq=5 ttl=64 time=0.169 ms

--More--
NOC-NX9500>

```

## exit

Ends the current CLI session and closes the session window

For more information, see [exit](#) on page 616.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
exit
```

### Parameters

```
None
```

### Examples

```
nx9500-6C8809>exit
```

# 4 Privileged Exec Mode Commands

## privileged-exec-commands

Most PRIV EXEC commands set operating parameters. Privileged-level access should be password protected to prevent unauthorized use. The PRIV EXEC command set includes commands contained within the USER EXEC mode. The PRIV EXEC mode also provides access to configuration modes, and includes advanced testing commands.

### Note

To password-protect the Privilege mode, in the Management Policy, configure the privilege-mode-password. For more information, see [privilege-mode-password](#) on page 1544.

The PRIV EXEC mode prompt consists of the hostname of the device followed by a pound sign (#).

To access the PRIV EXEC mode, enter the following at the prompt:

```
<DEVICE>>enable
<DEVICE>#
```

The PRIV EXEC mode is often referred to as the enable mode, because the enable command is used to enter the mode.

There is no provision to configure a password to get direct access to PRIV EXEC (enable) mode.

```
<DEVICE>#?
Privileged command commands:
archive          Manage archive files
boot            Boot commands
captive-portal-page-upload Captive portal internal and advanced page upload
cd              Change current directory
change-passwd   Change password
clear           Clear
clock           Configure software system clock
cluster         Cluster commands
commit          Commit all changes made in this session
configure       Enter configuration mode
connect         Open a console connection to a remote device
copy            Copy contents of one dir to another
cpe             T5 CPE configuration
create-cluster  Create a cluster
crypto          Encryption related commands
crypto-cmp-cert-update Update the cmp certs
database        Database
database-backup Backup database
database-restore Restore database
debug           Debugging functions
delete          Deletes specified file from the system
device-upgrade  Device firmware upgrade
diff            Display differences between two files
dir             List files on a filesystem
disable         Turn off privileged mode command
edit            Edit a text file
enable          Turn on privileged mode command
```

|                      |  |
|----------------------|--|
| erase                | Erase a filesystem   |
| ex3500               | EX3500 commands  |
| factory-reset        | Delete startup configuration on device(s), reload the device(s) and remove configuration entry from the controller |
| file-sync            | File sync between controller and adoptees  |
| format               | Format file system   |
| halt                 | Halt the system  |
| help                 | Description of the interactive help system   |
| join-cluster         | Join the cluster   |
| l2tpv3               | L2tpv3 protocol  |
| logging              | Modify message logging facilities  |
| mint                 | MiNT protocol  |
| mkdir                | Create a directory   |
| more                 | Display the contents of a file   |
| no                   | Negate a command or set its defaults   |
| on                   | On RF-Domain   |
| opendns              | Opendns username/password configuration  |
| operational-mode     | Change personality on next reload  |
| page                 | Toggle paging  |
| ping                 | Send ICMP echo messages  |
| ping6                | Send ICMPv6 echo messages  |
| pwd                  | Display current directory  |
| raid                 | RAID operations  |
| re-elect             | Perform re-election  |
| reload               | Halt and perform a warm reboot   |
| remote-debug         | Troubleshoot remote system(s)  |
| rename               | Rename a file  |
| revert               | Revert changes   |
| rmdir                | Delete a directory   |
| self                 | Config context of the device currently logged into   |
| service              | Service Commands   |
| show                 | Show running system information  |
| ssh                  | Open an ssh connection   |
| t5                   | T5 commands  |
| telnet               | Open a telnet connection   |
| terminal             | Set terminal line parameters   |
| time-it              | Check how long a particular command took between request and completion of response                                |
| traceroute           | Trace route to destination   |
| traceroute6          | Trace route to destination(IPv6)   |
| trigger-smart-sensor | Trigger Smart-sensor feature   |
| upgrade              | Upgrade software image   |
| upgrade-abort        | Abort an ongoing upgrade   |
| virtual-machine      | Virtual Machine  |
| watch                | Repeat the specific CLI command at a periodic interval   |
| write                | Write running configuration to memory or terminal  |
| clrscr               | Clears the display screen  |
| exit                 | Exit from the CLI  |

<DEVICE>

## privileged-exec-commands

The following table summarizes the PRIV EXEC configuration mode commands:

**Table 5: Privileged Exec Commands**

| Command   | Description   |
|---|---|
| <a href="#">archive</a> on page 115                   | Manages file archive operations   |
| <a href="#">boot</a> on page 117                      | Specifies the boot partition as primary or secondary. The device boots using the image stored in the specified partition.   |
| <a href="#">captive-portal-page-upload</a> on page 33 | Uploads captive portal advanced pages to adopted access points  |
| <a href="#">cd</a> on page 118                        | Changes the current directory   |
| <a href="#">change-password</a> on page 36            | Changes the password of the currently logged-in user  |
| <a href="#">clear</a> on page 37                      | Clears parameters, cache entries, table entries, and other similar entries  |
| <a href="#">clock</a> on page 51                      | Configures the system clock   |
| <a href="#">cluster</a> on page 52                    | Initiates a cluster context   |
| <a href="#">configure</a> on page 119                 | Enters the global configuration mode  |
| <a href="#">commit</a> on page 53                     | Commits changes made in the active session.   |
| <a href="#">connect</a> on page 53                    | Begins a console connection to a remote device  |
| <a href="#">copy</a> on page 120                      | Clears parameters, cache entries, table entries, and other similar entries  |
| <a href="#">create-cluster</a> on page 64             | Creates a new cluster on a specified device   |
| <a href="#">crypto</a> on page 54                     | Enables encryption  |
| <a href="#">crypto-cmp-cert-update</a> on page 65     | Triggers a CMP certificate update on a specified device or devices  |
| <a href="#">database</a> on page 66                   | Enables automatic repairing (vacuuming) and dropping of databases (Captive-portal and NSight)   |
| <a href="#">database-backup</a> on page 69            | Backs up captive-portal and/or NSight database to a specified location and file on an FTP or SFTP server  |
| <a href="#">database-restore</a> on page 70           | Restores a previously exported database [captive-portal and/or NSight]. Previously exported databases (backed up to a specified FTP or SFTP server) are restored to the original database.                          |
| <a href="#">delete</a> on page 120                    | Deletes a specified file from the system  |
| <a href="#">device-upgrade</a> on page 71             | Configures device firmware upgrade parameters   |
| <a href="#">diff</a> on page 121                      | Displays the differences between two files  |
| <a href="#">dir</a> on page 122                       | Displays the list of files on a file system   |
| <a href="#">disable</a> on page 123                   | Disables the privileged mode command set  |
| <a href="#">edit</a> on page 123                      | Edits a text file   |
| <a href="#">erase</a> on page 125                     | Erases a file system  |
| <a href="#">factory-reset</a> on page 126             | Erases startup configuration on a specified device or all devices within a specified RF Domain<br><br><b>Note:</b> Use this command to revert an AP505 and AP510 model access points personality flag to 'unknown'. |
| <a href="#">file-sync</a> on page 78                  | Configures parameters enabling syncing of PKCS#12 and wireless-bridge certificate between the staging-controller and adopted access points  |

**Table 5: Privileged Exec Commands (continued)**

| Command                                      | Description   |
|--|---|
| <a href="#">help</a> on page 80              | Describes the interactive help system.  |
| <a href="#">halt</a> on page 131             | Halts a device (access point, wireless controller, or service platform)   |
| <a href="#">join-cluster</a> on page 83      | Adds a device (access point, wireless controller, or service platform), as cluster member, to an existing cluster of devices  |
| <a href="#">l2tpv3</a> on page 84            | Establishes or brings down L2TPV3 tunnels   |
| <a href="#">logging</a> on page 86           | Modifies message logging parameters   |
| <a href="#">mint</a> on page 87              | Configures MiNT settings  |
| <a href="#">mkdir</a> on page 132            | Creates a new directory in the file system  |
| <a href="#">more</a> on page 132             | Displays the contents of a file   |
| <a href="#">no</a> on page 151               | Negates a command or sets its default   |
| <a href="#">on</a> on page 90                | Executes the following commands in the RF Domain context: clrscr, do, end, exit, help, service, and show  |
| <a href="#">opendns</a> on page 90           | Connects to the OpenDNS site using OpenDNS registered credentials (username, password) OR OpenDNS API token to fetch the OpenDNS device_id. This command is a part of the process integrating access points, controllers, and service platforms with OpenDNS. |
| <a href="#">operational-mode</a> on page 133 | Resets a standalone AP's mode of operation from 'distributed' to 'centralized'.<br><br><b>Note:</b> This command is only applicable on AP505, AP510 and AP560 model access points.  |
| <a href="#">page</a> on page 94              | Toggles a device's (access point, wireless controller, or service platform) paging function   |
| <a href="#">ping</a> on page 95              | Sends ICMP echo messages to a user-specified location   |
| <a href="#">ping6</a> on page 96             | Sends ICMPv6 echo messages to a user-specified location   |
| <a href="#">pwd</a> on page 134              | Displays the current directory  |
| <a href="#">re-elect</a> on page 135         | Re-elects the tunnel controller (wireless controller, service platform, or access point)  |
| <a href="#">reload</a> on page 135           | Halts a device (wireless controller, service platform, or access point) and performs a warm reboot  |
| <a href="#">rename</a> on page 141           | Renames a file in the existing file system  |
| <a href="#">rmdir</a> on page 142            | Deletes an existing file from the file system   |
| <a href="#">self</a> on page 143             | Displays the configuration context of the device  |
| <a href="#">ssh</a> on page 97               | Connects to another device using a secure shell   |
| <a href="#">telnet</a> on page 98            | Opens a Telnet session  |
| <a href="#">terminal</a> on page 99          | Sets the length and width of the terminal window  |
| <a href="#">telnet</a> on page 98            | Verifies the time taken by a particular command between request and response  |

**Table 5: Privileged Exec Commands (continued)**

| Command  | Description   |
|--|---|
| <a href="#">time-it</a> on page 100              | Verifies the time taken by a particular command between request and response  |
| <a href="#">traceroute</a> on page 100           | Traces the route to a defined IPv4 destination  |
| <a href="#">traceroute6</a> on page 101          | Traces the route to a defined IPv6 destination  |
| <a href="#">trigger-smart-sensor</a> on page 144 | Triggers the smart-sensor calibration function to provision APs as sensors within a wireless deployment.<br><br><b>Note:</b> Smart-sensor calibration can be triggered on the RF Domain from the controller (RFS4000, NX5500, NX7500, NX9500, NX9600 and VX9000). Alternately, if the RF Domain manager is an AP8533, you issue the command locally on the RF Domain manager. |
| <a href="#">upgrade</a> on page 145              | Upgrades the software image   |
| <a href="#">upgrade-abort</a> on page 149        | Aborts an ongoing software image upgrade  |
| <a href="#">exit</a> on page 110                 | Ends the current CLI session and closes the session window  |
| <a href="#">watch</a> on page 109                | Repeats the specific CLI command at a periodic interval   |
| <a href="#">virtual-machine</a> on page 102      | Installs, configures, and monitors the status of VMs.   |
| <a href="#">raid</a> on page 149                 | Enables RAID management.  |

**Note**

For information on common commands (clrcsr, commit, help, revert, service, show, write, and exit), see [Common Commands](#) on page 614.

**Note**

The input parameter <HOSTNAME>, if used in syntax across this chapter, cannot include an underscore ( \_ ) character.

## archive

Manages file archive operations

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
archive tar /table [<FILE>|<URL>]
archive tar /create [<FILE>|<URL>] <FILE>
archive tar /xtract [<FILE>|<URL>] <DIR>
```

*Parameters*

```
archive tar /table [<FILE>|<URL>]
```

|        |  |
|--------|--|
| tar    | Manipulates (creates, lists, or extracts) a tar file |
| /table | Lists the files in a tar file                        |
| <FILE> | Defines a tar filename                               |
| <URL>  | Sets the tar file URL                                |

```
archive tar /create [<FILE>|<URL>] <FILE>
```

|         |   |
|---------|---|
| tar     | Manipulates (creates, lists or extracts) a tar file |
| /create | Creates a tar file                                  |
| <FILE>  | Defines tar filename                                |
| <URL>   | Sets the tar file URL                               |

```
archive tar /xtract [<FILE>|<URL>] <DIR>
```

|         |   |
|---------|---|
| tar     | Manipulates (creates, lists or extracts) a tar file   |
| /xtract | Extracts content from a tar file  |
| <FILE>  | Defines tar filename  |
| <URL>   | Sets the tar file URL   |
| <DIR>   | Specify a directory name. When used with /create, dir is the source directory for the tar file. When used with /xtract, dir is the destination file where contents of the tar file are extracted. |

*Examples*

Following examples show how to zip the folder flash:/log/?

```
nx9500-6C8809#dir flash:/
Directory of flash:/

nx9500-6C8809#

```

## boot

Changes the next boot partition or image on a specified device or on the logged device. The WiNG devices have two partitions: primary and secondary, with each partition containing an image of the operating system. Whenever the device boots up it loads the image from the partition specified here.

The partition currently in control of the boot process is the active partition, the other partition is the inactive partition with the alternate image. Use this command to manually change the next boot partition or image.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
boot system [active|inactive|primary|secondary] {on <DEVICE-NAME>}
```

### Parameters

```
boot system [active|inactive|primary|secondary] {on <DEVICE-NAME>}
```

|  |  |
|--|--|
| system [active inactive primary secondary] | <p>Specifies the image used by the device to boot up</p> <ul style="list-style-type: none"> <li>• active – Changes the next boot image to the current, running (active) image</li> <li>• inactive – Changes the next boot image to the current, inactive image</li> <li>• primary – Changes the next boot partition to the primary partition.</li> <li>• secondary – Changes the next boot partition to the secondary partition.</li> </ul> <p><b>Note:</b> You will need to reload the device in order for the change to take effect.</p> |
| on <DEVICE-NAME>                           | <p>Optional. Changes the next boot image or partition on a specified device</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> <p><b>Note:</b> If no device is specified, the logged device's next boot-up configuration is changed.</p>  |

### Examples

```
ap510-133B38#show boot
```

| IMAGE     | BUILD DATE          | INSTALL DATE        | VERSION      |
|-----------|---------------------|---------------------|--------------|

Software Fallback : Enabled
ap510-133B38#

ap510-133B38#boot system primary
Updated system boot partition
ap510-133B38#

ap510-133B38#show boot
```

| IMAGE     | BUILD DATE          | INSTALL DATE        | VERSION      |
|-----------|---------------------|---------------------|--------------|
| Primary   | 09/05/2019 23:15:52 | 08/17/2019 18:40:41 | 7.2.1.0-012B |
| Secondary | 09/10/2019 05:08:06 | 08/22/2019 11:05:43 | 7.2.1.0-013B |

```

Current Boot      : Primary
Next Boot        : Primary
Software Fallback : Enabled
ap510-133B38#
```

## cd

Changes the current directory

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
cd {<DIR>}
```

### Parameters

```
cd {<DIR>}
```

<DIR>

Optional. Changes the current directory to the directory identified by the <DIR> keyword. If a directory name is not provided, the system displays the current directory.

### Examples

```
ap505-13403B#cd flash:/log/
ap505-13403B#pwd
flash:/log/
ap505-13403B#
```

## configure

Enters the configuration mode. Use this command to enter the current device's configuration mode, or enable configuration from the terminal.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
configure {self|terminal}
```

### Parameters

```
configure {self|terminal}
```

self

Optional. Enables the logged-in device's configuration mode

terminal

Optional. Enables configuration from the terminal

### Examples

```
ap505-13403B#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ap505-13403B(config)#

nx9500-6C8809#configure self
Enter configuration commands, one per line. End with CNTL/Z.
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#
```

## copy

Copies a file (config,log,txt...etc) from any location to the Access Point, wireless controller, or service platform and vice-versa

### Note

Copying a new config file to an existing running-config file merges it with the existing running-config file on the wireless controller. Both the existing running-config and the new config file are applied as the current running-config. Copying a new config file to a start-up config file replaces the existing start-up config file with the parameters of the new file. It is recommended that you erase the existing start-up config file and then copy the new config file to the startup config.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
copy [<SOURCE-FILE>|<SOURCE-URL>] [<DESTINATION-FILE>|<DESTINATION-URL>]
```

### Parameters

```
copy [<SOURCE-FILE>|<SOURCE-URL>] [<DESTINATION-FILE>|<DESTINATION-URL>]
```

|                    |  |
|--------------------|--|
| <SOURCE-FILE>      | Specify the source file to copy.               |
| <SOURCE-URL>       | Specify the source file's location (URL).      |
| <DESTINATION-FILE> | Specify the destination file to copy to.       |
| <DESTINATION-URL>  | Specify the destination file's location (URL). |

### Examples

Transferring file snmpd.log to remote TFTP server.

```
ap505-13403B#c#copy flash:/log/upgrade.log tftp://10.233.89.183:/upgrade.log
Accessing running-config file from remote TFTP server into switch running-config.
ap505-13403B#c#copy tftp://10.233.89.183:/running-config running-config
```

## delete

Deletes a specified file from the device's file system

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
delete [/force <FILE>|/recursive <FILE>|<FILE>]
```

### Parameters

```
delete [/force <FILE>|/recursive <FILE>|<FILE>]
```

|            |  |
|------------|--|
| /force     | Forces deletion without a prompt   |
| /recursive | Performs a recursive delete  |
| <FILE>     | Specifies the file name <ul style="list-style-type: none"> <li>Deletes the file specified by the &lt;FILE&gt; parameter</li> </ul> |

### Examples

```
nx9500-6C8809#delete flash:/out.tar flash:/out.tar.gz
Delete flash:/out.tar [y/n]? y
Delete flash:/out.tar.gz [y/n]? y
nx9500-6C8809
nx9500-6C8809#delete /force flash:/tmp.txt
nx9500-6C8809#delete /recursive flash:/backup/
Delete flash:/backup//fileMgmt_350_180B.core
[y/n]? y
Delete flash:/backup//fileMgmt_350_18212X.core_bk
[y/n]? n
Delete flash:/backup//imish_1087_18381X.core.gz
[y/n]? n
nx9500-6C8809
```

## diff

Displays the differences between two files on a device's file system or a particular URL

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
diff [<FILE>|<URL>] [<FILE>|<URL>]
```

### Parameters

```
diff [<FILE>|<URL>] [<FILE>|<URL>]
```

|        |   |
|--------|---|
| <FILE> | The first <FILE> is the source file for the diff command. The second <FILE> is used for comparison. |
| <URL>  | The first <URL> is the source file's URL. The second <URL> is the second file's URL.                |

### Examples

```
ap505-13403B#diff startup-config running-config
--- startup-config
+++ running-config

## dir

Lists files on a device's file system

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
dir {/all|/recursive|<DIR>|all-file systems}
```

### Parameters

```
dir {/all|/recursive|<DIR>|all-file systems}
```

|                  |  |
|------------------|--|
| /all             | Optional. Lists all files                    |
| /recursive       | Optional. Lists files recursively            |
| <DIR>            | Optional. Lists files in the named file path |
| all-file systems | Optional. Lists files on all file systems    |

### Examples

```

## disable

Turns off (disables) the privileged mode command set. This command returns to the User Executable mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
disable
```

*Parameters*

None

*Examples*

```

nx9500-6C8809#disable
nx9500-6C8809>

ap505-13403B#disable
ap505-13403B>

```

## edit

Edits a text file on the device's file system

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
edit <FILE>
```

### Parameters

```
edit <FILE>
```

<FILE>

Specify the name of the file to modify.

### Examples

```

## erase

Erases a device's (wireless controller, access point, and service platform) file system. Erases the content of the specified storage device. Also erases the startup configuration to restore the device to its default.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

erase [flash:|nvram:|startup-config|usb1:|usb2:|usb3:|usb4:]
erase [flash:|nvram:|usb1:|usb2:|usb3:|usb4:]
erase startup-config {<HOSTNAME/MAC>|on <DOMAIN-NAME> {containing <SUB-STRING>|
exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}}

```

### Parameters

```
erase [flash:|nvram:|usb1:|usb2:|usb3:|usb4:]
```

|                |   |
|----------------|---|
| flash:         | Erases everything in the device's flash: file   |
| nvram:         | Erases everything in the device's nvram: file   |
| startup-config | Erases the device's startup configuration file. The startup configuration file is used to configure the device when it reboots. |
| usb1:          | Erases everything in the device's usb1: file  |
| usb2:          | Erases everything in the device's usb2: file  |
| usb3:          | Erases everything in the device's usb3: file  |
| usb4:          | Erases everything in the device's usb4: file  |

```

erase startup-config {<HOSTNAME/MAC>|on <DOMAIN-NAME> {containing <SUB-STRING>|
exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}}

```

|  |  |
|--|--|
| startup-config:  | Erases the startup configuration file on a specified device or devices in a specified RF Domain. The specified device(s) are reloaded after the startup configuration file is erased. Use the <b>&lt;HOSTNAME/MAC&gt;</b> or <b>on &lt;DOMAIN-NAME&gt;</b> options to identify the device or RF Domain respectively. Once executed, the configuration file, for the targeted device or for all device(s) in the targeted RF Domain, is also erased from the adopting controller's configuration file. They are automatically reloaded once the startup configuration file has been erased.   |
| <HOSTNAME/MAC>   | Optional. Erases the startup configuration file on the device identified by the <HOSTNAME/MAC> keyword. Specify the device's hostname or MAC address.  |
| on <DOMAIN-NAME> {containing <SUB-STRING>  exclude-controllers  exclude-rf-domain-manager  filter <DEVICE-TYPE>} | <p>Optional. Erases the startup configuration file on all devices or specified device(s) in a specified RF Domain</p> <ul style="list-style-type: none"> <li>• &lt;DOMAIN-NAME&gt; – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, the command is executed on all devices within the RF Domain. These filters are: <ul style="list-style-type: none"> <li>• containing &lt;SUB-STRING&gt; – Optional. Executes the command on all devices containing a specified sub-string in their hostname<br/> &lt;SUB-STRING&gt; – Specify the sub-string to match. The startup configuration file is erased on all devices whose hostname contains the sub-string specified here.</li> <li>• exclude-controllers – Optional. Executes the command on all devices excluding controllers. The startup configuration file is erased on all devices except controllers.</li> <li>• exclude-rf-domain-manager – Optional. Executes the command on all devices excluding RF Domain managers. The startup configuration file is erased on all devices except RF Domain managers.</li> <li>• filter &lt;DEVICE-TYPE&gt; – Optional. Executes the command on all devices of a specified type.<br/> &lt;DEVICE-TYPE&gt; – Specify the device type. The options are: AP505, AP510, AP560, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, NX5000, NX7500, NX9500, NX9600 and VX9000. The startup configuration file is erased on all devices of the type specified here.</li> </ul> </li> </ul> |

### Examples

```

nx9500-6C8809#erase ?
cf:          Erase everything in cf:
flash:       Erase everything in flash:
nvram:       Erase everything in nvram:
startup-config Reset configuration to factory default
usb1:        Erase everything in usb1:
usb2:        Erase everything in usb2:
nx9500-6C8809#

```

## factory-reset

Erases startup configuration on a specified device or all devices based on the parameters passed.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### *Syntax*

```
factory-reset [config-all|config-device-only|deep|on <RF-DOMAIN-NAME>]
factory-reset [config-all|config-device-only] [<HOSTNAME/MAC> {<HOSTNAME/MAC>}|
on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|
exclude-rf-domain-manager|filter <DEVICE-TYPE>}]
factory-reset deep <AP-HOSTNAME>
factory-reset on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|
exclude-rf-domain-manager|filter <DEVICE-TYPE>}
```

### *Parameters*

```
factory-reset [config-all|config-device-only] [<HOSTNAME/MAC> {<HOSTNAME/MAC>}|
on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|
exclude-rf-domain-manager|filter <DEVICE-TYPE>}]
```

|   |  |
|---|--|
| <p>[config-all  config-device-only]</p>   | <p>Erases startup configuration and reloads only controller-adopted devices.</p> <ul style="list-style-type: none"> <li>config-all – Erases startup configuration on all adopted devices or on specified adopted devices. Issue the command on the controller or virtual controller AP. To execute the command on a specified device, provide the device hostname/MAC address.</li> </ul> <p><b>Note:</b> This option also removes the device's configuration staged on the adopting controller.</p> <ul style="list-style-type: none"> <li>config-device-only – Erases only the startup configuration on all adopted devices or on specified adopted devices. Issue the command on the controller or virtual controller AP. To execute the command on a specified device, provide the device hostname/MAC address.</li> </ul> <p><b>Note:</b> This option only erases the startup configuration. It does not remove the device's configuration staged on the adopting controller.</p> <p><b>Note:</b><br/>For more information on the actions performed by this command, click <a href="#">here</a>.</p>  |
| <p>&lt;HOSTNAME/MAC&gt; {&lt;HOSTNAME/MAC&gt;}</p>  | <p>This parameter is common to the 'config-all' and 'config-device-only' keywords:</p> <ul style="list-style-type: none"> <li>&lt;HOSTNAME/MAC&gt; – Erases startup configuration and reloads the device identified by the &lt;HOSTNAME/MAC&gt; keyword. Specify the device's hostname or MAC address.</li> <li>&lt;HOSTNAME/MAC&gt; – Optional. You can optionally specify multiple space-separated devices.</li> </ul>   |
| <p>on &lt;RF-DOMAIN-NAME&gt; {containing &lt;SUB-STRING&gt; exclude-controllers exclude-rf-domain-manager filter &lt;DEVICE-TYPE&gt;}</p> | <p>The following parameters are common to the 'config-all' and 'config-device-only' keywords:</p> <ul style="list-style-type: none"> <li>on &lt;RF-DOMAIN-NAME&gt; – Erases startup configuration and reloads all devices or specified device(s) within a specified RF Domain</li> <li>&lt;RF-DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> <p>After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, the command is executed on all devices within the RF Domain. These filters are:</p> <p>containing &lt;SUB-STRING&gt; – Optional. Executes the command on all devices containing a specified sub-string in their hostname</p> <p>&lt;SUB-STRING&gt; – Specify the sub-string to match.</p> <p>exclude-controllers – Optional. Executes the command on all devices excluding controllers. Since only a NOC controller is capable of adopting other controllers, use this option when executing the command on a NOC controller.</p> <p>exclude-rf-domain-manager – Optional. Executes the command on all devices excluding RF Domain managers. Use this option when executing the command on the NOC, Site controller, or RF Domain manager.</p> <p>filter &lt;DEVICE-TYPE&gt; – Optional. Executes the command on all devices of a specified type</p> |

<DEVICE-TYPE> – Specify the device type. The options are: AP510, AP505.

```
factory-reset deep <AP-HOSTNAME>
```

|               |  |
|---------------|--|
| deep          | <p>Resets an adopted AP's mode of operation to factory-default setting (that is not specified). Issue the command on the adopting WiNG VC/Controller and specify the AP' hostname. Once the AP's mode of operation is reverted to factory-default setting, the AP reboots and moves into the discovery mode to determine its mode of operation.</p> <p>The WiNG 7.1 AP505 and AP510 model access points have the capability of operating in the following two modes: <b>Distributed</b> and <b>Centralized</b>. For a newly-manufactured, out-of-the-box AP505 and AP510 access point the mode of operation is not specified.</p> <p><b>Note:</b> For more information on operational modes and how it is set, see <a href="#">Dual Mode Capability</a>.</p> |
| <AP-HOSTNAME> | Specify the hostname of the AP on which the deep reset is to be implemented.   |

```
factory-reset on <RF-DOMAIN-NAME> {containing <SUB-STRING>|exclude-controllers|
exclude-rf-domain-manager|filter <DEVICE-TYPE>}
```

|  |   |
|--|---|
| factory-reset  | Erases startup configuration and reloads device(s) based on the parameters passed   |
|  | <p><b>Note:</b><br/>For more information on the actions performed by this command, click <a href="#">here</a>.</p>  |
| on <RF-DOMAIN-NAME><br>{containing <SUB-STRING> <br>exclude-controllers  exclude-rf-<br>domain-manager  filter <DEVICE-<br>TYPE>}} | <p>Erases startup configuration and reloads all devices or specified device(s) within a specified RF Domain identified by the &lt;RF-DOMAIN-NAME&gt; keyword</p> <ul style="list-style-type: none"> <li>• &lt;RF-DOMAIN-NAME&gt; – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, the command is executed on all devices within the RF Domain. These filters are: <ul style="list-style-type: none"> <li>• containing &lt;SUB-STRING&gt; – Optional. Use this option when executing the command on the NOC, site controller, or RF Domain manager.</li> <li>• filter &lt;DEVICE-TYPE&gt; – Optional. Executes the command on all devices of a specified type<br/>    &lt;DEVICE-TYPE&gt; – Specify the device type. The options are: AP510, AP505, RFS4000, NX5500, NX7500, NX9500, NX9600, and VX9000. The startup configuration is erased on all devices of the type specified here. For example, if AP510 is the device-type specified, the command is executed on all AP510s within the specified RF Domain.</li> </ul> </li> </ul> |

#### *Usage Guidelines (Actions performed by the factory-reset command)*

The action taken by this command depends on the parameters passed.

- For the **factory-reset** [**<DEVICE-NAME>**|**on <RF-DOMAIN-NAME>**] options, the command:
  - Erases startup configuration on the target device (or) all devices in the target RF Domain.
  - Erases the device configuration entries from the controller's configuration for the target device (or) for all the devices in the target RF Domain.
  - Reloads the target device (or) all devices in the target RF Domain.
- For the **factory-reset config-all** [**<DEVICE-NAME>**|**on <RF-DOMAIN-NAME>**] options, the command:
  - Erases startup configuration on the target device (or) all devices in the target RF Domain.
  - Erases the device configuration entries from the controller's configuration for the target device (or) for all the devices in the target RF Domain.
- For the **factory-reset config-device-only** [**<DEVICE-NAME>**|**on <RF-DOMAIN-NAME>**] options, the command:

- Erases startup configuration on the target device (or) all devices in the target RF Domain.

#### Example

```
nx9500-6C8809#factory-reset config-device-only ap505-134038
In progress ....
Erased startup-config - success 1 fail 0
Successful device deletion - total 1
nx9500-6C8809#
nx9500-6C8809#factory-reset deep ap505-13403B
In progress ....
reset ap deep - success 1 fail 0
Successful device deletion - total 1
nx9500-6C8809#
```

## halt

Stops (halts) a device (access point, wireless controller, or service platform). Once halted, the system must be restarted manually.

This command stops the device immediately. No indications or notifications are provided while the device shuts down.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
halt force {on <DEVICE-NAME>}
```

#### Parameters

```
halt force {on <DEVICE-NAME>}
```

|       |  |
|-------|--|
| halt  | Halts a device   |
| force | Optional. Forces a device to halt ignoring in-progress operations, such as firmware upgrades, downloads, unsaved configuration changes, etc.   |
|       | <p>The following keywords are recursive and applicable to the 'force' parameter:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. Specifies the name of the device to be halted</li> <li>&lt;DEVICE-NAME&gt; - Enter the name of the AP, wireless controller, or service platform.</li> </ul> <p><b>Note:</b> If the device name is not specified, the logged device is halted.</p> |

#### Example

```
nx9500-6C8809#halt on ap505-134038
```

## mkdir

Creates a new directory in the file system

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
mkdir <DIR>
```

### Parameters

```
mkdir <DIR>
```

<DIR>

Specify a directory name.

**Note:** A directory, specified by the <DIR> parameter, is created within the file system.

### Examples

```
nx9500-6C8809#dir
Directory of flash:/.
```

```
nx9500-6C8809#
```

## more

Displays files on the device's file system. This command navigates and displays specific files in the device's file system.

The more command also displays the startup configuration file.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
more <FILE>
```

### Parameters

```
more <FILE>
```

<FILE>

Specify the file name and location. Provide the complete path to the file.

### Examples

```
ap505-13403B#more flash:/archived_logs/startup.2.log
00-09-44-01-01-19

```

## operational-mode

Resets a WiNG standalone AP's mode of operation from 'distributed' or 'centralized'.

The WiNG 7.1.X AP5XX (AP505, AP510 and AP560) model access points have the capability of operating in the following two modes: **Distributed** and **Centralized**. For a newly-manufactured, out-of-the-box AP5XX access point the mode of operation is not specified.

#### Note

For more information on the dual modes of operation, see [Dual Mode Capability](#).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h

### Syntax

```
operational-mode centralized
```

### Parameters

```
operational-mode centralized
```

operational-mode centralized

Resets the WING standalone AP's mode of operation to:

- centralized - In the *Centralized* mode ExtremeWireless AP models AP505i and AP510i adopt to the ExtremeCloud Appliance. A Centralized site topology allows seamless roaming within one geographic location. For more information, please refer to the ExtremeCloud Appliance User Guide available at <https://extremenetworks.com/documentation>.

**Note:** After issuing the command, reload the AP for the change to take effect.

### Examples

```
ap505-134038#operational-mode centralized
ap505-134038#reload
The system will be rebooted, do you want to continue? (y/n): y
ap505-134038#
```

## pwd

Displays the full path of the present working directory, similar to the UNIX pwd command

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
pwd
```

### Parameters

```
None
```

### Examples

```
ap510-133B38#pwd
flash:/
ap510-133B38#
ap510-133B38#dir
Directory of flash:/.

## re-elect

Re-elects the tunnel controller (wireless controller or service platform)

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
re-elect tunnel-controller {<WORD> {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

### Parameters

```
re-elect tunnel-controller {<WORD> {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

|                            |  |
|----------------------------|--|
| re-elect tunnel-controller | Re-elects the tunnel controller  |
| <WORD> {on <DEVICE-NAME>}  | Optional. Re-elects the tunnel controller on all devices whose preferred tunnel controller name matches <WORD> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Re-elects the tunnel controller on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Example

```

nx9500-6C8809#re-elect tunnel-controller
OK
nx9500-6C8809#

```

## reload

Halts a device or devices and performs a warm reboot

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
reload {<DEVICE-MAC-OR-HOSTNAME>|at|cancel|force|in|on|staggered}
reload {(<DEVICE-MAC-OR-HOSTNAME>)}
reload {at <TIME> <1-31> <MONTH> <1993-2035> {on <DEVICE-OR-DOMAIN-NAME>}}
reload {cancel} {on <DEVICE-OR-DOMAIN-NAME>}
reload {force} {(<DEVICE-MAC-OR-HOSTNAME>|on <DOMAIN-NAME>|staggered)}
reload {force} {on <DOMAIN-NAME> {staggered}|staggered {<DEVICE-MAC-OR-HOSTNAME>|
on <DOMAIN-NAME>}} {containing <WORD>|exclude-controllers|exclude-rf-domain-manager|
filter <DEVICE-TYPE>}
reload {in <1-999>} {list|on}
reload {in <1-999>} {list {<LINE>|all}|on <DEVICE-OR-DOMAIN-NAME>}
reload {in <1-999>} {on <DEVICE-OR-DOMAIN-NAME>}
reload {on <DOMAIN-NAME>} {containing <WORD>|exclude-controllers|
exclude-rf-domain-manager|filter <DEVICE-TYPE>}
reload {staggered} {(<DEVICE-MAC-OR-HOSTNAME>|on <DOMAIN-NAME>)} {containing <WORD>|
exclude-controllers|exclude-rf-domain-manager|filter <DEVICE-TYPE>}
```

## Parameters

```
reload {on <DEVICE-OR-DOMAIN-NAME>}
```

reload <DEVICE-MAC-OR-HOSTNAME>

Initiates device(s) reload and configures associated parameters  
The following keyword is recursive and allows you to specify multiple devices:

- <DEVICE-MAC-OR-HOSTNAME> – Optional. Reloads a specified device(s), identified by the <DEVICE-MAC-OR-HOSTNAME> keyword. Specify the device's hostname or MAC address.

**Note:** If no device is specified, the system reloads the logged device.

```
reload {at <TIME> <1-31> <MONTH> <1993-2035> {on <DEVICE-OR-DOMAIN-NAME>}}
```

reload at

Initiates device(s) reload and configures associated parameters

- at – Optional. Schedules a reload at a specified time and day. Use the following keywords to specify the time and day: <TIME>, <1-31>, <MONTH>, and <1993-2035>.

<TIME>

Specifies the time in the HH:MM:SS format

<1-31>

Specifies the day of the month from 1 - 31

<MONTH>

Specifies the month from Jan - Dec

<1993-2035>

Specifies the year from 1993 - 2035. It should be a valid 4 digit year.

on <DEVICE-OR-DOMAIN-NAME>

Optional. Performs reload at the scheduled time, on a specified device or all devices within a specified RF Domain

- <DEVICE-OR-DOMAIN-NAME> – Specify the name of the AP, wireless controller, service platform, or RF Domain. When an RF Domain name is provided, all devices within the specified RF Domain are reloaded at the scheduled time. If no device is specified, the reload is scheduled on the logged device.

```
reload {cancel} {on <DEVICE-OR-DOMAIN-NAME>}
```

|  |   |
|--|---|
| reload cancel on <DEVICE-OR-DOMAIN-NAME> | <p>Cancels pending/scheduled reloads of device(s) cancel – Optional. Cancels all pending reloads</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Cancels reloads pending on a specified device or all devices within a specified RF Domain</li> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> <p><b>Note:</b> If no device is specified, the system cancels reloads pending on the logged device.</p> |
| on <DEVICE-OR-DOMAIN-NAME>               | <p>Optional. Reloads on a specified device or RF Domain</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul>  |

```
reload {force} {(<DEVICE-MAC-OR-HOSTNAME>)}
```

|                          |   |
|--------------------------|---|
| reload force             | <p>Initiates device(s) reload and configures associated parameters</p> <ul style="list-style-type: none"> <li>force – Optional. Forces device(s) to reload, while ignoring conditions like upgrade in progress, unsaved changes, etc. Use the options provided to force a reload on a specified device or all devices in a RF Domain.</li> </ul>  |

## rename

Renames a file in the devices' file system

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
rename <OLD-FILE-NAME> <NEW-FILE-NAME>
```

### Parameters

```
rename <OLD-FILE-NAME> <NEW-FILE-NAME>
```

|                 |                             |
|-----------------|-----------------------------|
| <OLD-FILE-NAME> | Specify the file to rename. |
| <NEW-FILE-NAME> | Specify the new file name.  |

### Examples

```

nx9500-6C8809#dir
Directory of flash:/

drwx      Mon Jul  1 14:22:27 2019  compliance_log

```

## rmdir

Deletes an existing directory from the file system (only empty directories can be removed)

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
rmdir <DIR>
```

### Parameters

```
rmdir <DIR>
```

**rmdir** <DIR>

Specifies the directory name

**Note:** The directory, specified by the <DIR> parameter, is removed from the file system.

### Examples

```
nx9500-6C8809#dir
Directory of flash:/.
```

| <b>drwx</b> | <b>Wed Feb 27 13:42:52 2019</b> | <b>Final</b>   |

```
nx9500-6C8809#
```

## self

Enters the logged device's configuration context

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
self
```

### Parameters

None

### Examples

```
nx9500-6C8809#self
Enter configuration commands, one per line. End with CNTL/Z.
nx9500-6C8809(config-device-B4-C7-99-6C-88-09)#
```

## trigger-smart-sensor

This command triggers the calibration function that provisions APs as sensors within a wireless deployment.

The WiNG 7.2.1 smart-sensor feature uses an algorithm to auto-provision APs as sensors within a site (RF Domain). When triggered, the algorithm, based on inputs from the Smart-RF neighbor table, creates a cluster of cells. Each cell in the cluster represents an AP and adjacent cells are the AP's neighbor. The algorithm then identifies APs with best coverage area and provisions them as sensors.

### Note

Smart-sensor is supported only on AP8533 (tri-radio) model AP. Issue the 'trigger-smart-sensor' command through the controller (RFS4000, NX5500, NX7500, NX9500, NX9600 and VX9000) on the AP's RF Domain. Alternately, if the RF-Domain manager is an AP8533, you can trigger Smart-sensor calibration locally on the RF-Domain manager.

This command works in conjunction with the following commands:

- 1 **smart-sensor** - enables the Smart-sensor feature.
- 2 **smart-sensor-algorithm** - selects the algorithm type (for dense or sparse deployment) to use.

*Supported in the following platforms:*

- Access Points — AP8533

### Syntax

```
trigger-smart-sensor on <RF-DOMAIN-NAME>
```

### Parameters

```
trigger-smart-sensor on <RF-DOMAIN-NAME>
```

|                      |   |
|----------------------|---|
| trigger-smart-sensor | Triggers the calibration function to select the sensor APs.<br><br><b>Note:</b> By default the smart-sensor feature is disabled. Before triggering the algorithmic function, in the Smart-RF policy context, enable smart-sensor and select the algorithm best suited for your deployment. For more information, see <a href="#">smart-sensor</a> on page 1666 and <a href="#">smart-sensor-algorithm</a> on page 1667.                       |
| on <RF-DOMAIN-NAME>  | Triggers the calibration function on a specified RF Domain.<br><ul style="list-style-type: none"> <li>&lt;RF-DOMAIN-NAME&gt; - Specify the RF Domain name. The calibration function is triggered on the specified RF Domain. It results in a list of APs best suited to be provisioned as sensors and also enables them as sensors.</li> </ul> <b>Note:</b> As a best practice, we recommend the RF Domain should consist of only AP8533 APs. |

### Examples

Smart-sensor calibration triggered from the controller on the AP's RF Domain:

```
nx9500-6C8809#trigger-smart-sensor ?
  on  On RF-Domain
  <cr>

nx9500-6C8809#
nx9500-6C8809#trigger-smart-sensor on smt-sensor
```

Alternately, if the RF-Domain manager is AP8533, you can trigger Smart-sensor calibration locally on the RF-Domain manager.

```
ap8533-137E1D#trigger-smart-sensor
```

## upgrade

Upgrades a device's software image

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
upgrade [<FILE>|<URL>|dhcp-vendor-options]
upgrade [<FILE>|<URL>] {background|on <DEVICE-NAME>|on <RF-DOMAIN-NAME>}
upgrade dhcp-vendor-options {<DEVICE-NAME>|on <RF-DOMAIN-NAME>}
upgrade dhcp-vendor-options {<DEVICE-NAME>} {<DEVICE-NAME>}
upgrade dhcp-vendor-options {on <RF-DOMAIN-NAME>} {containing <SUB-STRING>|exclude-
controllers|
exclude-rf-domain-managers|filter <DEVICE-TYPE>}
```

### Parameters

```
upgrade [<FILE>|<URL>] {background|on <DEVICE-NAME>|on <RF-DOMAIN-NAME>}
```

|                     |   |
|---------------------|---|
| <FILE>              | Specify the target firmware image location in one of the following format:<br>cf:/path/file<br>usb1:/path/file<br>usb2:/path/file<br>usb<n>:/path/file  |
| <URL>               | Specify the target firmware image location. Use one of the following formats:<br><ul style="list-style-type: none"> <li>IPv4 URLs: <ul style="list-style-type: none"> <li>tftp://&lt;hostname IP&gt;[:port]/path/file</li> <li>ftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IP&gt;[:port]/path/file</li> <li>sftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IP&gt;[:port]/path/file</li> <li>http://&lt;hostname IP&gt;[:port]/path/file</li> <li>cf:/path/file</li> <li>usb&lt;n&gt;:/path/file</li> </ul> </li> <li>IPv6 URLs: <ul style="list-style-type: none"> <li>tftp://&lt;hostname IPv6&gt;[:port]/path/file</li> <li>ftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv6&gt;[:port]/path/file</li> <li>sftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv6&gt;[:port]/path/file</li> <li>http://&lt;hostname IPv6&gt;[:port]/path/file</li> </ul> </li> </ul> |
| background          | Optional. Performs upgrade in the background  |
| on <DEVICE-NAME>    | Optional. Upgrades the software image on a specified remote device<br><ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |
| on <RF-DOMAIN-NAME> | Optional. Upgrades the software image on all devices within a specified RF Domain<br><ul style="list-style-type: none"> <li>&lt;RF-DOMAIN-NAME&gt; – Specify the name of the RF Domain.</li> </ul>  |

```
upgrade dhcp-vendor-options {<DEVICE-NAME>} {<DEVICE-NAME>}
```

|                               |   |
|-------------------------------|---|
| dhcp-vendor-options           | Uses DHCP vendor options to upgrade device(s)   |
| <DEVICE-NAME> {<DEVICE-NAME>} | Optional. Uses DHCP vendor options to upgrade a specified device. Specify the name of the AP, wireless controller, or service platform.<br><ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Optional. You can optionally specify multiple comma-separated device names/MAC addresses to upgrade.</li> </ul> |

```
upgrade dhcp-vendor-options {on <RF-DOMAIN-NAME>} {containing <SUB-STRING>|  
exclude-controllers|exclude-rf-domain-managers|filter <DEVICE-TYPE>}
```

|  |  |
|--|--|
| dhcp-vendor-options  | Uses DHCP vendor options to upgrade device(s)  |
| on <RF-DOMAIN-NAME><br>{containing <SUB-STRING> <br>exclude-controllers  exclude-rf-<br>domain-managers  filter <DEVICE-<br>TYPE>} | <p>Optional. Uses DHCP vendor options to upgrade all devices or specified device(s) within the RF Domain identified by the &lt;RF-DOMAIN-NAME&gt; keyword</p> <ul style="list-style-type: none"> <li>• &lt;RF-DOMAIN-NAME&gt; – Specify the RF Domain name. After specifying the RF Domain, optionally use the filters provided to identify specific device(s) within the RF Domain. If none of the filters are used, all devices within the RF Domain are upgraded. These filters are: <ul style="list-style-type: none"> <li>• containing &lt;SUB-STRING&gt; – Optional. Upgrades all devices, within the specified RF Domain, containing a specified sub-string in their hostname</li> <li>• &lt;SUB-STRING&gt; – Specify the sub-string to match.</li> </ul> </li> <li>• exclude-controllers – Optional. Upgrades all devices, within the specified RF Domain, excluding controllers. Since only a NOC controller is capable of adopting other controllers, use this option when executing the command on a NOC controller.</li> <li>• exclude-rf-domain-manager – Optional. Upgrades all devices, within the specified RF Domain, excluding RF Domain managers. Use this option when executing the command on the NOC, Site controller, or RF Domain manager.</li> <li>• filter &lt;DEVICE-TYPE&gt; – Optional. Executes the command on all devices, within the specified RF Domain, of a specified type <ul style="list-style-type: none"> <li>• &lt;DEVICE-TYPE&gt; – Specify the device type. The options are: AP505, AP510, AP560, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, NX5500, NX7500, NX9500, NX9600, and VX9000. Upgrades all devices of the type specified here. For example, if AP510 is the device-type specified, all AP510 within the specified RF Domain are upgraded.</li> </ul> </li> </ul> |

### Example

```
nx9500-6C8809#upgrade ftp://symbol:symbol@134.141.244.24/NX9500-7.2.0.0-006D.img
```

```
Running from partition /dev/sda8
Validating image file header
Removing other partition
Making file system
Extracting files (this may take some
time).....
.....
.....
Control C disabled
Version of firmware update file is 7.2.0.0-006D
Removing unneeded files from flash:/crashinfo directory
Removing unneeded files from flash:/var2/log directory
Creating LILO files
Running LILO
Successful
nx9500-6C8809#
nx9500-6C8809#show boot
```

| IMAGE     | BUILD DATE          | INSTALL DATE        | VERSION      |

*Related Commands*`no` on page 151

Removes a patch installed on a specified device

## upgrade-abort

Aborts an ongoing software image upgrade

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
upgrade-abort {on <DEVICE-OR-DOMAIN-NAME>}
```

*Parameters*

```
upgrade-abort {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| upgrade-abort              | Aborts an ongoing software image upgrade  |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Aborts an ongoing software image upgrade on a specified device or domain <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

*Examples*

```
rfs4000-229D58#upgrade ftp://anonymous:anonymous@192.168.13.10/LatestBuilds/W59/

## raid

Enables RAID (*Redundant Array of Independent Disks*) management. RAID is a group of one or more independent, physical drives, referred to as an array or drive group. These physically independent drives are linked together and appear as a single storage unit or multiple virtual drives. Replacing a single, large drive system with an array, improves performance (input and output processes are faster) and increases fault tolerance within the data storage system.

In an array, the drives can be organized in different ways, resulting in different RAID types. Each RAID type is identified by a number, which determines the RAID level. The common RAID levels are 0, 00, 1, 5, 6, 50 and 60. The WiNG MegaRAID implementation supports RAID-1, which provides data mirroring, but does not support data parity. RAID-1 consists of a two-drive array, where the data is simultaneously written on both drives, ensuring total data redundancy. In case of a drive failure the information on the other drive is used to rebuild the failed drive.

An array is said to be degraded when one of its drives has failed. A degraded array continues to function and can be rebooted using the one remaining functional drive. When a drive fails, the chassis sounds an alarm (if enabled), and the CLI prompt changes to “RAID degraded”. The failed drive is automatically replaced with a hot spare (provided a spare is installed). The spare is used to re-build the array.

Use this command to:

- Verify the current array status
- Start and monitor array consistency checks
- Retrieve date and time of the last consistency check
- Shut down drives before physically removing them
- Install new drives
- Assign drives as hot spares
- Identify a degraded drive
- Deactivate an alarm (triggered when a drive is removed from the array)

#### Note

The NX 9500 service platform includes a single Intel MegaRAID controller, configured to provide a single virtual drive. This virtual drive is of the RAID-1 type, and has a maximum of two physical drives. In addition to these two drives, there are three hot spares, which are used in case of a primary drive failure.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

#### Syntax

```
raid [check|install|locate|remove|silence|spare]
raid [check|silence]
raid [install|locate|remove|spare] drive <0-4>
```

#### Parameters

```
raid [check|silence]
```

|         |  |
|---------|--|
| check   | <p>Starts a consistency check on the RAID array. Use the <code>show &gt; raid</code> command to view consistency check status.</p> <p>A consistency check verifies the data stored in the array. When regularly executed, it helps protect against data corruption, and ensures data redundancy. Consistency checks also warn of potential disk failures.</p>  |
| silence | <p>Deactivates an alarm</p> <p><b>Note:</b> When enabled, an audible alarm is triggered when a drive in the array fails. The silence command deactivates the alarm (sound).</p> <p><b>Note:</b> To enable RAID alarm, in the device configuration mode, use the <code>raid &gt; alarm &gt; enable</code> command. An NX 9500 profile can also have the RAID alarm feature activated. For more information on the enabling RAID alarm, see <a href="#">raid</a> on page 1307.</p> |

```
raid [install|locate|remove|spare] drive <0-4>
```

|               |   |
|---------------|---|
| install <0-4> | <p>Includes a new drive, inserted in one of the available slots, in the array. Specify the drive number.</p> <p><b>Note:</b> Drives 0 and 1 are the array drives. Drives 2, 3, and 4 are the hot spare drives. You can include the new drive in a degraded array, or enable it as a hot spare.</p> <p><b>Note:</b> If the array is in a degraded state, the re-build process is triggered and the new drive is used to repair the degraded array.</p> |
| locate <0-4>  | <p>Enables LEDs to blink on a specified drive. Specify the drive number.</p> <p><b>Note:</b> Blinking LEDs enable you correctly locate a drive.</p>   |
| remove <0-4>  | <p>Removes (shuts down) a disk from the array, before it is physically removed from its slot. Specify the drive number containing the disk.</p> <p><b>Note:</b> Use this command to also remove a hot spare.</p>  |
| spare <0-4>   | <p>Converts an unused drive into a hot spare. Specify the drive number.</p>   |

### Example

```
nx9500-6C874D#raid install drive 0
Error: Input Error: Drive 0 is already member of array, can't be added
nx9500-6C874D#
nx9500-6C8809#raid spare drive 1
Error: RAID operation failed, returned 2, output: Input Error: Drive 1 is member of
array, can't be a hotspare
/
nx9500-6C8809#
```

## no

Use the no command to revert to turn off an enabled feature or to revert a setting to default value.

The no commands have their own set of parameters that can be reset. These parameters depend on the context in which the command is being used.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
no [adoption|captive-portal|cpe|crypto|debug|logging|page|raid|service|terminal|
upgrade|virtual-machine|wireless]
no adoption {on <DEVICE-OR-DOMAIN-NAME>}
```

#### Note

The no > adoption command resets the adoption state of a specified device (and all devices adopted to it) or devices within a specified RF Domain. When executed without specifying the device or RF Domain, the command resets the adoption state of the logged device and all devices, if any, adopted to it.

```
no captive-portal client [captive-portal <CAPTIVE-PORTAL-NAME>|mac <MAC>]
{on <DEVICE-OR-DOMAIN-NAME>}
no crypto pki [server|trustpoint]
no crypto pki [server|trustpoint] <TRUSTPOINT-NAME> {del-key {on <DEVICE-NAME>}}|
on <DEVICE-NAME>}
no logging monitor
no page
no service [block-adopter-config-update|locator|snmp|ssm|wireless]
no service block-adopter-config-update
no service locator {on <DEVICE-NAME>}
no service snmp sysoid wing5
no service ssm trace pattern {<WORD>} {(on <DEVICE-NAME>)}
no service wireless [trace pattern {<WORD>} {(on <DEVICE-NAME>)}]|
unsanctioned ap air-terminate <BSSID> {on <DOMAIN-NAME>}}
no terminal [length|width]
no upgrade <PATCH-NAME> {on <DEVICE-NAME>}
no wireless client [all|<MAC>]
no wireless client all {filter|on}
no wireless client all {filter [wlan <WLAN-NAME>]}
no wireless client all {on <DEVICE-OR-DOMAIN-NAME>} {filter [wlan <WLAN-NAME>]}
no wireless client mac <MAC> {on <DEVICE-OR-DOMAIN-NAME>}
```

The following command is available only on the NX9500 and NX9600 series service platforms:

```
no cpe led cpe [<1-24>|all] {on <T5-DEVICE-NAME>}
no virtual-machine assign-usb-ports {on <DEVICE-NAME>}
no raid locate
```

### Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Resets or reverts settings based on the parameters passed ♦ |
|-----------------|---|

### *Usage Guidelines*

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

### *Examples*

```
NOC-NX9500#no adoption on ?
  DEVICE-OR-DOMAIN-NAME  AP/Controller/RF-Domain name

NOC-NX9500#
NOC-NX9500#no page
NOC-NX9500#
NOC-NX9500#no upgrade ?
  WORD  Name of the patch to remove

NOC-NX9500#
```

# 5 Global Configuration Commands

## global-config-commands

This chapter summarizes the global-configuration commands in the CLI command structure.

The term global indicates characteristics or features effecting the system as a whole. Use the Global Configuration Mode to configure the system globally, or enter specific configuration modes to configure specific elements (such as interfaces or protocols). Use the configure terminal command (under PRIV EXEC) to enter the global configuration mode.

The following example describes the process of entering the global configuration mode from the privileged EXEC mode:

```
<DEVICE>#configure terminal
<DEVICE>(config)#
```

### Note

The system prompt changes to indicate you are now in the global configuration mode. The prompt consists of the device host name followed by (config) and a pound sign (#).

Commands entered in the global configuration mode update the running configuration file as soon as they are entered. However, these changes are not saved in the startup configuration file until a `commit` → `write` → `memory` command is issued.

```
<DEVICE>(config)#?
Global configuration commands:
  aaa-policy                Configure a
                             authentication/accounting/authorization
                             policy
  aaa-tacacs-policy          Configure an
                             authentication/accounting/authorization
                             TACACS policy

| ex3500                             | Ex3500 device  |
| ex3500-management-policy           | Configure a ex3500 management policy   |
| ex3500-qos-class-map-policy        | Configure a ex3500 qos class-map policy  |
| ex3500-qos-policy-map              | Configure a ex3500 qos policy-map  |
| ex3524                             | EX3524 wireless controller   |
| ex3548                             | EX3548 wireless controller   |
| firewall-policy                    | Configure firewall policy  |
| global-association-list            | Configure a global association list  |
| guest-management                   | Configure a guest management policy  |
| help                               | Description of the interactive help system   |
| host                               | Enter the configuration context of a device by specifying its hostname                     |
| igmp-snoop-policy                  | Create igmp snoop policy   |
| inline-password-encryption         | Store encryption key in the startup configuration file                                     |
| iot-device-type-imagotag-policy    | Configure a iot imagotag device type policy  |
| ip                                 | Internet Protocol (IP)   |
| ipv6                               | Internet Protocol version 6 (IPv6)   |
| ipv6-router-advertisement-policy   | IPv6 Router Advertisement related configuration  |
| l2tpv3                             | L2tpv3 tunnel protocol   |
| mac                                | MAC configuration  |
| location-policy                    | Configure a location policy used for ExtremeLocation                                       |
| management-policy                  | Configure a management policy  |
| meshpoint                          | Create a new MESHPOINT or enter MESHPOINT configuration context for one or more MESHPOINTS |
| meshpoint-qos-policy               | Configure a meshpoint quality-of-service   |

|                            |  |
|----------------------------|--|
| mint-policy                | policy   |
| nac-list                   | Configure the global mint policy   |
| no                         | Configure a network access control list  |
| nsight-policy              | Negate a command or set its defaults   |
| nx45xx                     | Configure a Nsight policy  |
| nx5500                     | NX45XX integrated services platform  |
| nx65xx                     | NX5500 wireless controller   |
| nx75xx                     | NX65XX integrated services platform  |
| nx9000                     | NX75XX wireless controller   |
| passpoint-policy           | NX9000 wireless controller   |
| password-encryption        | Configure a passpoint policy   |
| profile                    | Encrypt passwords in configuration   |
|                            | Profile related commands - if no parameters are given, all profiles are selected |
| purview-application-group  | Configure a Purview application-group  |
| purview-application-policy | Configure a Purview application policy   |
| radio-qos-policy           | Configure a radio quality-of-service policy                                      |
| radius-group               | Configure radius user group parameters   |
| radius-server-policy       | Create device onboard radius policy  |
| radius-user-pool-policy    | Configure Radius User Pool   |
| rename                     | Clone configuration object   |
| replace                    | Replace configuration object   |
| rf-domain                  | Create a RF Domain or enter rf-domain context for one or more rf-domains         |
| rfs4000                    | RFS4000 wireless controller  |
| rfs6000                    | RFS6000 wireless controller  |
| rfs7000                    | RFS7000 wireless controller  |
| roaming-assist-policy      | Configure a roaming-assist policy  |
| role-policy                | Role based firewall policy   |
| route-map                  | Dynamic routing route map Configuration  |
| routing-policy             | Policy Based Routing Configuration   |
| rtl-server-policy          | Configure a rtl server policy  |
| schedule-policy            | Configure a schedule policy  |
| self                       | Config context of the device currently logged into                               |
| sensor-policy              | Configure a sensor policy  |
| smart-rf-policy            | Configure a Smart-RF policy  |
| t5                         | T5 DSL switch  |
| url-filter                 | Configure a url filter   |
| url-list                   | Configure a URL list   |
| vx9000                     | VX9000 wireless controller   |
| web-filter-policy          | Configure a web filter policy  |
| wips-policy                | Configure a wips policy  |
| wlan                       | Create a new WLAN or enter WLAN configuration context for one or more WLANs      |
| wlan-qos-policy            | Configure a wlan quality-of-service policy                                       |
| write                      | Write running configuration to memory or terminal                                |
| clrscr                     | Clears the display screen  |
| commit                     | Commit all changes made in this session  |
| do                         | Run commands from Exec mode  |
| end                        | End current mode and change to EXEC mode   |
| exit                       | End current mode and down to previous mode                                       |
| revert                     | Revert changes   |
| service                    | Service Commands   |
| show                       | Show running system information  |
| <DEVICE> (config) #        |  |

## global-config-commands

The following table summarizes the Global Configuration Mode commands:

**Table 6: Global Config Commands**

| Command  | Description  |
|--|--|
| <a href="#">aaa-policy</a> on page 161                         | Creates a AAA ( <i>Authentication, Authorization, and Accounting</i> ) policy and enters its configuration mode. This policy enables administrators to define access control within the network.   |
| <a href="#">aaa-tacacs-policy</a> on page 162                  | Creates a AAA-TACACS policy and enters its configuration mode. This policy provides access control to network devices such as routers, network access servers, and other computing devices through centralized servers.  |
| <a href="#">alias</a> on page 163                              | Configures network, VLAN, and service aliases  |
| <a href="#">ap505</a> on page 174                              | Adds an AP505 to the network   |
| <a href="#">ap510</a> on page 174                              | Adds an AP510 to the network   |
| <a href="#">application</a> on page 175                        | Creates an application definition and enters its configuration mode. This command allows you to create a customized application detection definition.  |
| <a href="#">application-group</a> on page 183                  | Creates an application group and enters its configuration mode   |
| <a href="#">application-policy</a> on page 187                 | Creates an application policy and enters its configuration mode. This policy defines the actions executed on recognized HTTP (for example, Facebook), enterprise (for example, Webex) and peer-to-peer (for example, gaming) applications or application-categories. |
| <a href="#">association-acl-policy</a> on page 204             | Creates an association ACL policy and enters its configuration mode. This policy restricts access by specifying a client MAC address or range of addresses to either include or exclude from WLAN connectivity.  |
| <a href="#">auto-provisioning-policy</a> on page 205           | Creates an auto provisioning policy and enters its configuration mode. This policy defines the process by which an access point discovers controllers and associates with it.  |
| <a href="#">bgp</a> on page 206                                | Configures <i>BGP (Border Gateway Protocol)</i> settings   |
| <a href="#">ble-data-export-policy</a> on page 208             | Creates a <i>Bluetooth Low Energy (BLE)</i> data export policy and enters its configuration mode.  |
| <a href="#">bonjour-gw-discovery-policy</a> on page 211        | Creates a <i>Bonjour</i> GW Discovery policy and enters its configuration mode. This policy configures the VLANs on which Bonjour services are located.  |
| <a href="#">bonjour-gw-forwarding-policy</a> on page 215       | Configures a Bonjour GW Forwarding policy and enters its configuration mode. This policy enables the discovery of services on VLANs not visible to the device running the Bonjour Gateway.   |
| <a href="#">bonjour-gw-query-forwarding-policy</a> on page 216 | Creates a Bonjour GW Query Forwarding policy and enters its configuration mode. This policy enables Bonjour query forwarding across multiple VLANs.  |
| <a href="#">captive-portal</a> on page 217                     | Creates a captive portal and enters its configuration mode   |
| <a href="#">clear</a> on page 262                              | Clears the event history   |
| <a href="#">client-identity</a> on page 263                    | Creates a client identity definition and enters its configuration mode. This feature enables client identification through DHCP device fingerprinting.   |
| <a href="#">client-identity-group</a> on page 269              | Creates a new client identity group and enters its configuration mode  |

**Table 6: Global Config Commands (continued)**

| Command  | Description   |
|--|---|
| <a href="#">clone</a> on page 274                                | Clones a specified configuration object   |
| <a href="#">crypto-cmp-policy</a> on page 275                    | Creates a <i>Certificate Management Protocol</i> (CMP) policy and enters its configuration mode. CMP is an Internet protocol designed to obtain and manage digital certificates in a <i>Public Key Infrastructure</i> (PKI) network.  |
| <a href="#">customize</a> on page 276                            | Customizes the CLI command summary output   |
| <a href="#">database-client-policy global-config</a> on page 288 | Creates a database client policy and enters its configuration mode. In case of ExtremeWireless WING deployments integrated with Extreme Nsight and ExtremeGuest, use this option to configure the credentials required to authenticate with the Extreme Nsight or ExtremeGuest server database. |
| <a href="#">database-policy global config</a> on page 291        | Creates a database policy and enters its configuration mode. This policy enables the database, and also configures the database replica set.  |
| <a href="#">device</a> on page 296                               | Specifies configuration on multiple devices   |
| <a href="#">device-categorization</a> on page 297                | Creates a device categorization list and enters its configuration mode. The list categorizes devices as sanctioned or neighboring. Categorization of devices enables quick identification and blocking of unsanctioned devices in the network.  |
| <a href="#">dhcp-server-policy</a> on page 300                   | Creates a <i>DHCP</i> ( <i>Dynamic Host Configuration Protocol</i> ) server policy and enters its configuration mode. This policy allows hosts on an IP network to request and be assigned IP addresses and discover information about the network.   |
| <a href="#">dhcpv6-server-policy</a> on page 301                 | Creates a DHCPv6 server policy and enters its configuration mode. This policy configures hosts with IPv6 addresses, IP prefixes and other configuration attributes required on an IPv6 network.   |
| <a href="#">dns-whitelist</a> on page 302                        | Creates a DNS whitelist and enters its configuration mode. A DNS whitelist is used with a captive portal to provide access services to requesting wireless clients.   |
| <a href="#">event-system-policy</a> on page 344                  | Creates an Event system policy and enters its configuration mode. This policy enables administrators to create notification mechanisms using one, some, or all of the SNMP, syslog, controller forwarding, or email notification options available to the controller or service platform.       |
| <a href="#">ex3500</a> on page 305                               | Creates an EX3500 time range list and enters its configuration mode   |
| <a href="#">ex3500-management-policy</a> on page 310             | Creates an EX3500 management policy and enters its configuration mode. This policy controls access to the EX3500 switch from management stations using SNMP.  |
| <a href="#">ex3500-qos-class-map-policy</a> on page 326          | Creates an EX3500 QoS class map policy and enters its configuration mode. The QoS policy map assigns priority to mission critical EX3500 switch data traffic, prevents EX3500 switch bandwidth congestion, and prevents packet drops.   |
| <a href="#">ex3500-qos-policy-map</a> on page 331                | Creates an EX3500 QoS policy map and enters its configuration mode. This policy defines rules that filter traffic exchanged between the EX3500 switch and its connected devices.  |
| <a href="#">ex3524</a> on page 341                               | Adds a EX3524 switch to the network   |
| <a href="#">ex3548</a> on page 343                               | Adds a EX3548 switch to the network   |

**Table 6: Global Config Commands (continued)**

| Command  | Description  |
|--|--|
| <a href="#">firewall-policy</a> on page 359                    | Creates a firewall policy and enters its configuration mode. This policy configures safe guards against <i>DoS</i> attacks and packet storms. It also configures firewall parameters, such as logging, application layer gateway, TCP protocol checks, state flow checks, etc. |
| <a href="#">global-association-list</a> on page 361            | Configures a global list of client MAC addresses   |
| <a href="#">guest-management-policy</a> on page 363            | Creates a guest management policy and enters its configuration mode. This policy redirects guest users to a registration portal, upon association to a captive portal <i>Service Set Identifier</i> (SSID).  |
| <a href="#">host</a> on page 373                               | Sets the system's network name   |
| <a href="#">inline-password-encryption</a> on page 374         | Stores the encryption key in the startup configuration file  |
| <a href="#">iot-device-type-imagotag-policy</a> on page 374    | Creates an IoT Device-Type Imagotag policy and enters its configuration mode. This policy enables support for SES-imagotag's ESL tags on WiNG APs (with USB ports).  |
| <a href="#">ip</a> on page 383                                 | Creates a IP <i>ACL (Access Control List)</i> and/or a <i>SNMP (Simple Network Management Protocol)</i> ACL, and enters its configuration mode   |
| <a href="#">ipv6</a> on page 385                               | Creates a IPv6 ACL and enters its configuration mode   |
| <a href="#">ipv6-router-advertisement-policy</a> on page 386   | Creates an IPv6 <i>router advertisement</i> (RA) policy and enters its configuration mode  |
| <a href="#">l2tpv3</a> on page 398                             | Configures <i>Layer 2 Tunneling Protocol Version 3</i> (L2TPv3) tunnel policy and enters its configuration mode. This policy defines control and encapsulation protocols for tunneling layer 2 frames between two IP nodes.  |
| <a href="#">location-policy</a> on page 399                    | Configures a location policy and enters its configuration mode   |
| <a href="#">mac</a> on page 403                                | Configures <i>MAC</i> access lists (goes to the MAC ACL mode)  |
| <a href="#">management-policy</a> on page 404                  | Creates a management policy and enters its configuration context. This policy configures services that run on a device, such as welcome messages, banners, etc.  |
| <a href="#">meshpoint</a> on page 406                          | Creates a meshpoint and enters its configuration mode  |
| <a href="#">meshpoint-qos-policy</a> on page 407               | Creates a meshpoint <i>QoS (Quality of Service)</i> policy and enters its configuration mode   |
| <a href="#">mint-policy</a> on page 408                        | Creates a MiNT security policy and enters its configuration mode   |
| <a href="#">nac-list</a> on page 409                           | Creates a network ACL and enters its configuration mode  |
| <a href="#">no</a> on page 609                                 | Negates a command or sets its default  |
| <a href="#">nsight-policy (global-config-mode)</a> on page 412 | Creates an NSight policy and enters its configuration mode   |
| <a href="#">passpoint-policy</a> on page 420                   | Creates a new passpoint policy and enters its configuration mode   |
| <a href="#">password-encryption</a> on page 421                | Enables password encryption  |
| <a href="#">profile</a> on page 422                            | Creates a device profile and enters its configuration mode   |
| <a href="#">purview-application-group</a> on page 425          | Creates a Purview Application Group and enters its configuration mode  |

**Table 6: Global Config Commands (continued)**

| Command  | Description   |
|--|---|
| <a href="#">purview-application-policy</a> on page 430 | Creates a Purview Application Policy and enters its configuration mode  |
| <a href="#">radio-qos-policy</a> on page 446           | Creates a radio <a href="#">QoS</a> policy and enters its configuration mode  |
| <a href="#">radius-group</a> on page 447               | Creates a <a href="#">RADIUS (Remote Authentication Dial In User Service)</a> group and enters its configuration mode   |
| <a href="#">radius-server-policy</a> on page 448       | Creates a RADIUS server policy and enters its configuration mode  |
| <a href="#">radius-user-pool-policy</a> on page 449    | Creates a RADIUS user pool policy and enters its configuration mode   |
| <a href="#">rename</a> on page 450                     | Renames an existing <i>top-level object</i> (TLO)   |
| <a href="#">replace</a> on page 451                    | Selects an existing device by its MAC address or hostname and replaces it with a new device having a different MAC address  |
| <a href="#">rf-domain</a> on page 453                  | Creates an RF Domain and enters its configuration mode  |
| <a href="#">roaming-assist-policy</a> on page 486      | Configures a roaming assist policy and enters its configuration mode. This policy enables access points to assist wireless clients in making roaming decisions, such as which access point to connect, etc. |
| <a href="#">nx5500</a> on page 484                     | Adds an NX5500 to the network   |
| <a href="#">nx7500</a> on page 485                     | Adds an NX7500 to the network   |
| <a href="#">nx9000</a> on page 486                     | Adds an NX9500 to the network   |
| <a href="#">role-policy</a> on page 487                | Creates a role policy and enters its configuration mode   |
| <a href="#">route-map</a> on page 488                  | Creates a dynamic BGP route map and enters its configuration mode   |
| <a href="#">routing-policy</a> on page 489             | Creates a routing policy and enters its configuration mode  |
| <a href="#">rtl-server-policy</a> on page 490          | Creates an RTL server policy and enters its configuration mode. The RTL server policy provides the exact location (URL) at which the Euclid server can be reached.  |
| <a href="#">schedule-policy</a> on page 493            | Creates a schedule policy and enters its configuration mode   |
| <a href="#">self</a> on page 497                       | Displays a logged device's configuration context  |
| <a href="#">sensor-policy</a> on page 497              | Creates a sensor policy and enters its configuration mode   |
| <a href="#">smart-rf-policy</a> on page 502            | Creates a Smart RF policy and enters its configuration mode   |
| <a href="#">t5</a> on page 503                         | Configures a t5 wireless controller. This command is applicable only on the RFS4010, NX7500, NX9500, NX9600, and VX9000 platforms.  |
| <a href="#">web-filter-policy</a> on page 505          | Creates a Web Filtering policy and enters its configuration mode  |
| <a href="#">wips-policy</a> on page 511                | Creates a WIPS policy and enters its configuration mode   |
| <a href="#">wlan</a> on page 512                       | Creates a <a href="#">WLAN (Wireless Local Area Network)</a> and enters its configuration mode  |
| <a href="#">wlan-qos-policy</a> on page 591            | Creates a WLAN QoS policy and enters its configuration mode   |
| <a href="#">url-filter</a> on page 592                 | Creates an URL filter and enters its configuration mode. URL filtering is a licensed feature.   |

**Table 6: Global Config Commands (continued)**

| Command                              | Description  |
|--------------------------------------|--|
| <a href="#">url-list</a> on page 602 | Creates an URL list and enters its configuration mode.   |
| <a href="#">vx9000</a> on page 606   | Configures a <i>Virtual WLAN Controller (V-WLC)</i> in a <i>virtual machine (VM)</i> environment |

**Note**

For more information on common commands (clrscr, commit, help, revert, service, show, write, and exit), see [Common Commands](#) on page 614.

**Note**

The input parameter <HOSTNAME>, wherever used in syntaxes across this chapter, cannot include an underscore (\_) character.

## aaa-policy

Configures an AAA (*Authentication, Accounting, and Authorization*) policy. AAA policies define access control within the network.

A controller, service platform, or access point can interoperate with external RADIUS and LDAP servers (AAA Servers) to provide an additional user database and authentication resource. Each WLAN can maintain its own unique AAA configuration. Up to six servers can be configured for providing AAA services.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
aaa-policy <AAA-POLICY-NAME>
```

### Parameters

```
aaa-policy <AAA-POLICY-NAME>
```

|                   |   |
|-------------------|---|
| <AAA-POLICY-NAME> | Specify the AAA policy name. If the policy does not exist, it is created. |
|-------------------|---|

### Examples

```
nx9500-6C8809(config)#aaa-policy test
nx9500-6C8809(config-aaa-policy-test)#?
AAA Policy Mode commands:
  accounting      Configure accounting parameters
  attribute        Configure RADIUS attributes in access and accounting
                  requests
  authentication   Configure authentication parameters
  health-check     Configure server health-check parameters
  mac-address-format Configure the format in which the MAC address must be
```

|                     |   |
|---------------------|---|
|                     | filled in the Radius-Request frames   |
| no                  | Negate a command or set its defaults  |
| proxy-attribute     | Configure radius attribute behavior when proxying through controller or rf-domain-manager |
| server-pooling-mode | Configure the method of selecting a server from the pool of configured AAA servers        |
| use                 | Set setting to use  |
| clrscr              | Clears the display screen   |
| commit              | Commit all changes made in this session   |
| do                  | Run commands from Exec mode   |
| end                 | End current mode and change to EXEC mode  |
| exit                | End current mode and down to previous mode  |
| help                | Description of the interactive help system  |
| revert              | Revert changes  |
| service             | Service Commands  |
| show                | Show running system information   |
| write               | Write running configuration to memory or terminal   |

```
nx9500-6C8809(config-aaa-policy-test)#
```

### Related Commands

Removes an existing AAA policy

#### Note

For more information on the AAA policy commands, see [AAA Policy](#) on page 1308.

## aaa-tacacs-policy

Configures AAA TACACS+ (*Terminal Access Controller Access-Control System*) policy. TACACS+ is a protocol created by CISCO Systems which provides access control to network devices such as routers, network access servers and other networked computing devices through one or more centralized servers. TACACS provides separate authentication, authorization, and accounting services running on different servers.

TACACS controls user access to devices and network resources while providing separate accounting, authentication, and authorization services. Some of the services provided by TACACS are:

- Authorizing each command with the TACACS+ server before execution.
- Accounting each session's logon and log off events.
- Authenticating each user with the TACACS+ server before enabling access to network resources.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
aaa-tacacs-policy <AAA-TACACS-POLICY-NAME>
```

## Parameters

```
aaa-tacacs-policy <AAA-TACACS-POLICY-NAME>
```

<AAA-TACACS-POLICY-NAME> Specify the AAA-TACACS policy name. If the policy does not exist, it is created.

## Examples

```
nx9500-6C8809(config)#aaa-tacacs-policy testpolicy
nx9500-6C8809(config-aaa-tacacs-policy-testpolicy)#?
AAA TACACS Policy Mode commands:
  accounting      Configure accounting parameters
  authentication   Configure authentication parameters
  authorization    Configure authorization parameters
  no              Negate a command or set its defaults

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  do              Run commands from Exec mode
  end             End current mode and change to EXEC mode
  exit            End current mode and down to previous mode
  help            Description of the interactive help system
  revert          Revert changes
  service         Service Commands
  show            Show running system information
  write           Write running configuration to memory or terminal

nx9500-6C8809(config-aaa-tacacs-policy-testpolicy)#
```

## Related Commands

Removes an existing AAA TACACS policy

### Note

For more information on the AAA-TACACS policy commands, see [AAA-TACACS Policy](#) on page 1780.

## alias

Configures the following types of aliases: network, VLAN, host, string, network-service, etc. Aliases are objects having a unique name and content that is determined by the alias type (for example, network, VLAN, network-service, etc.).

A typical, large enterprise network, consists of multiple sites (RF Domains) having similar configuration parameters with few elements that vary, such as networks or network ranges, hosts having different IP addresses, and VLAN IDs or URLs. These elements can be defined as aliases (object oriented wireless firewalls) and used across sites by applying overrides to the object definition. Using aliases results in a configuration that is easier to understand and maintain.

Multiple instances of an alias (same type and same name) can be defined at any of the following levels: global, RF Domain, profile, or device. An alias defined globally functions as a TLO (*top-level-object*). Global aliases are not mandatory, and can be defined at the domain-level, or profile, or device-level only. An alias defined on a device is applicable to that device only. An alias defined on a profile applies to

every device using the profile. Similarly, aliases defined at the RF Domain level apply to all devices within that domain.

Aliases defined at any given level can be overridden at any of the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

The different aliases types supported are:

- **address-range alias** – Maps a user-friendly name to a range of IP addresses. An address-range alias can be utilized at different deployments. For example, if an ACL defines a pool of network addresses as 192.168.10.10 through 192.168.10.100 for an entire network, and a remote location's network range is 172.16.13.20 through 172.16.13.110, the remote location's ACL can be overridden using an alias. At the remote location, the ACL works with the 172.16.13.20-110 address range. A new ACL need not be created specifically for the remote deployment location.
- **host alias** – Maps a user-friendly name to a specific host (identified by its IP address. For example, 192.168.10.23). A host alias can be utilized at different deployments. For example, if a central network DNS server is set a static IP address, and a remote location's local DNS server is defined, this host can be overridden at the remote location. At the remote location, the network is functional with a local DNS server, but uses the name set at the central network. A new host need not be created at the remote location. This simplifies creating and managing hosts and allows an administrator to better manage specific local requirements.
- **network alias** – Maps a user-friendly name to a network. A network alias can be utilized at different deployments. For example, if a central network ACL defines a network as 192.168.10.0/24, and a remote location's network range is 172.16.10.0/24, the ACL can be overridden at the remote location to suit their local (but remote) requirement. At the remote location, the ACL functions with the 172.16.10.0/24 network. A new ACL need not be created specifically for the remote deployment. This simplifies ACL definition and allows an administrator to better manage specific local requirements.
- **network-group alias** – Maps a user-friendly name to a single or a range of addresses of devices, hosts, and network configurations. Network configurations are complete networks in the form 192.168.10.0/24 or IP address range in the form 192.168.10.10-192.168.10.20.

A network-group alias can contain a maximum of eight (8) host entries, eight (8) network entries, and eight (8) IP address-range entries. A maximum of 32 network-group alias entries can be created.

A network-group alias can be used in IP firewall rules to substitute hosts, subnets, and IP address ranges.

- **network-service alias** – Maps a user-friendly name to service protocols and ports. Both source and destination ports are configurable. For each protocol, up to 2 source port ranges and up to 2 destination port ranges can be configured. A maximum of 4 protocol entries can be configured per network-service alias. When used with an ACL, the network-service alias defines the service-specific components of the ACL rule. Overrides can be applied to the service alias, at the device level, without modifying the ACL. Application of overrides to the service alias allows an ACL to be used across sites.

Use a network-service alias to associate more than one IP address to a network interface, providing multiple connections to a network from a single IP node.

- **number alias** – Maps a user-friendly name to a number

- **vlan alias** – Maps a user-friendly name to a VLAN ID. A VLAN alias can be used at different deployments. For example, if a named VLAN is defined as 10 for the central network, and the VLAN is set at 26 at a remote location, the VLAN can be overridden at the deployment location with an alias. At the remote deployment location, the network is functional with a VLAN ID of 26, but utilizes the name defined at the centrally managed network. A new VLAN need not be created specifically for the remote deployment.
- **string alias** – Maps a user-friendly name to a specific string (for example, RF Domain name). A string alias can be utilized at different deployments. For example, if the main domain at a remote location is called *loc1.domain.com* and at another deployment location it is called *loc2.domain.com*, the alias can be overridden at the remote location to suit the local (but remote) requirement. At one remote location, the alias functions with the *loc1.domain.com* domain and at the other with the *loc2.domain.com* domain.
- **encrypted-string alias** – Maps a user-friendly name to a string value. The string value of this alias is encrypted when "password-encryption" is enabled. Encrypted-string aliases can be used for string configuration parameters that are encrypted by the "password-encryption" feature.
- **hashed-string alias** – Maps a user-friendly name to a hashed-string value. Hashed-string aliases can be used for string configuration parameters that are hashed, such as passwords.

**Note**

When used with ACLs, network, network-group, and network-service aliases act as enhanced firewalls.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
alias [address-range|encrypted-string|hashed-string|host|network|network-group|
network-service|number|string|vlan]
alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>
alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>
alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>

alias number <NUMBER-ALIAS-NAME> <0-4294967295>
alias string <STRING-ALIAS-NAME> <LINE>
alias vlan <VLAN-ALIAS-NAME> <1-4094>
```

*Parameters*

```
alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>
```

|  |  |
|--|--|
| address-range <ADDRESS-RANGE-ALIAS-NAME> | <p>Creates an address range alias, defining a range of IP addresses</p> <ul style="list-style-type: none"> <li>• &lt;ADDRESS-RANGE-ALIAS-NAME&gt; - Specify the address range alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>              |
| <STARTING-IP> to <ENDING-IP>             | <p>Associates a range of IP addresses with this address range alias</p> <ul style="list-style-type: none"> <li>• &lt;STARTING-IP&gt; - Specify the first IP address in the range.</li> <li>• to &lt;ENDING-IP&gt; - Specify the last IP address in the range.</li> </ul> |

```
alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>
```

|  |   |
|--|---|
| encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> | <p>Creates an alias for an encrypted string. Use this alias for string configuration values that are encrypted when "password-encryption" is enabled. For example, in the management-policy, use it to define the SNMP community string. For more information, see <a href="#">snmp-server</a> on page 1549 (management policy config mode).</p> <ul style="list-style-type: none"> <li>• &lt;ENCRYPTED-STRING-ALIAS-NAME&gt; - Specify the encrypted-string alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>  |
| [0 2] <LINE>                                   | <p>Configures the value associated with the alias name specified in the previous step</p> <ul style="list-style-type: none"> <li>• [0 2] &lt;LINE&gt; - Configures the alias value</li> </ul> <p><b>Note:</b> If password-encryption is enabled, in the <code>show &gt; running-config</code> output, this clear text is displayed as an encrypted string, as shown below:</p> <pre>nx9500-6C8809(config)#show running-config !..... alias encrypted-string \$enString 2 fABMK2is7UToNiZE3MQXbgAAAAxB0ZIysdqsEJwr6AH/Da// ! --More-- nx9500-6C8809</pre> <p>In the above <code>show &gt; running-config</code> output, the '2' displayed before the encrypted-string alias value indicates that the displayed text is encrypted and not a clear text.</p> <p>However, if password-encryption is disabled the clear text is displayed as is:</p> <pre>nx9500-6C8809(config)#show running-config !..... ! alias encrypted-string \$enString 0 test11223344 ! --More-- nx9500-6C8809</pre> <p>For more information on enabling password-encryption, see <a href="#">password-encryption</a> on page 421.</p> |

```
alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>
```

hashed-string <HASHED-STRING-  
ALIAS-NAME>

Creates an alias for a hashed string. Use this alias for configuration values that are hashed strings, such as passwords. For example, in the management-policy, use it to define the privilege mode password. For more information, see [privilege-mode-password](#) on page 1543.

- <HASHED-STRING-ALIAS-NAME> – Specify the hashed-string alias name.

**Note:** Alias name should begin with '\$'.

<LINE>

Configures the hashed-string value associated with this alias.

```
nx9500-6C8809(config)#show running-config
!
alias encrypted-string $WRITE 2
sBqVCDAoxs3oByF5PCSuFAAAAd7HT2+EiT/1/BXm9c4SBDv
!
alias hashed-string $PriMode 1
faffdde27cb49ad634ea20df4f7c8ef2685894d10ffcb1b2efba054112e
cfc75
0
--More--
nx9500-6C8809
```

In the above show > running-config output, the '1' displayed before the hashed-string alias value indicates that the displayed text is hashed and not clear text.

```
alias host <HOST-ALIAS-NAME> <HOST-IP>
```

host <HOST-ALIAS-NAME>

Creates a host alias, defining a single network host

- <HOST-ALIAS-NAME> – Specify the host alias name.

**Note:** Alias name should begin with '\$'.

<HOST-IP>

Associates the network host's IP address with this host alias. For example, 'alias host \$HOST 1.1.1.100'. In this example, the host alias name is: \$HOST and the host IP address it is mapped to is: 1.1.1.100.

- <HOST-IP> – Specify the network host's IP address.

```
alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>
```

network <NETWORK-ALIAS-NAME>

Creates a network alias, defining a single network address

- <NETWORK-ALIAS-NAME> – Specify the network alias name.

**Note:** Alias name should begin with '\$'.

<NETWORK-ADDRESS/MASK>

Associates a single network with this network alias. For example, 'alias network \$NET 1.1.1.0/24'. In this example, the network alias name is: \$NET and the network it is mapped to is: 1.1.1.0/24.

- <NETWORK-ADDRESS/MASK> – Specify the network's address and mask.

```
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to <ENDING-IP>
{<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|network <NETWORK-ADDRESS/MASK>
{<NETWORK-ADDRESS/MASK>}]
```

|   |   |
|---|---|
| network <NETWORK-GROUP-ALIAS-NAME>  | <p>Creates a network-group alias</p> <ul style="list-style-type: none"> <li>• &lt;NETWORK-GROUP-ALIAS-NAME&gt; – Specify the network-group alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p> <p>The network-group aliases are used in ACLs, to define the network-specific components. ACLs using aliases can be used across sites by re-defining the network-group alias elements at the device or profile level.</p> <p>After specifying the name, specify the following: a range of IP addresses, host addresses, or a range of network addresses.</p> |
| address-range <STARTING-IP> to <ENDING-IP> {<STARTING-IP> to <ENDING-IP>} | <p>Associates a range of IP addresses with this network-group alias</p> <ul style="list-style-type: none"> <li>• &lt;STARTING-IP&gt; – Specify the first IP address in the range.</li> <li>• to &lt;ENDING-IP&gt; – Specify the last IP address in the range.</li> <li>• &lt;STARTING-IP&gt; to &lt;ENDING-IP&gt; – Optional. Specifies more than one range of IP addresses. A maximum of eight (8) IP address ranges can be configured.</li> </ul>   |
| host <HOST-IP> {<HOST-IP>}  | <p>Associates a single or multiple hosts with this network-group alias</p> <ul style="list-style-type: none"> <li>• &lt;HOST-IP&gt; – Specify the hosts' IP address.</li> <li>• &lt;HOST-IP&gt; – Optional. Specifies more than one host. A maximum of eight (8) hosts can be configured.</li> </ul>  |
| network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}                   | <p>Associates a single or multiple networks with this network-group alias</p> <ul style="list-style-type: none"> <li>• &lt;NETWORK-ADDRESS/MASK&gt; – Specify the network's address and mask.</li> <li>• &lt;NETWORK-ADDRESS/MASK&gt; – Optional. Specifies more than one network. A maximum of eight (8) networks can be configured.</li> </ul>  |

```
alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|gre|igmp|

These keywords are recursive and you can configure multiple protocols and associate multiple destination and source ports.</p> <ul style="list-style-type: none"> <li>• &lt;1-65535&gt; – Optional. Configures a destination port number from 1 - 65535</li> <li>• &lt;WORD&gt; – Optional. Identifies the destination port by the service name provided. For example, the SSH service uses TCP port 22.</li> <li>• bgp – Optional. Configures the default BGP (<i>Border Gateway Protocol</i>) services port (179)</li> <li>• dns – Optional. Configures the default DNS (<i>Domain Name System</i>) services port (53)</li> <li>• ftp – Optional. Configures the default FTP (<i>File Transfer Protocol</i>) control services port (21)</li> <li>• ftp-data – Optional. Configures the default FTP data services port (20)</li> <li>• gopher – Optional. Configures the default gopher services port (70)</li> <li>• https – Optional. Configures the default HTTPS services port (443)</li> <li>• ldap – Optional. Configures the default LDAP (<i>Lightweight Directory Access Protocol</i>) services port (389)</li> <li>• nntp – Optional. Configures the default NNTP (<i>Newsgroup</i>) services port (119)</li> <li>• ntp – Optional. Configures the default NTP (<i>Network Time Protocol</i>) services port (123)</li> </ul> |

- POP3 – Optional. Configures the default POP3 (*Post Office Protocol*) services port (110)
- proto – Optional. Use this option to select another Internet protocol in addition to the one selected in the previous step.
- sip – Optional. Configures the default SIP (*Session Initiation Protocol*) services port (5060)
- smtp – Optional. Configures the default SMTP (*Simple Mail Transfer Protocol*) services port (25)
- sourceport [<1-65535>|<WORD>] – Optional. After specifying the destination port, you may specify a single or range of source ports.
- <1-65535> – Specify the source port from 1 - 65535.
- <WORD> – Specify the source port range, for example 1-10.
- ssh – Optional. Configures the default SSH services port (22)
- telnet – Optional. Configures the default Telnet services port (23)
- tftp – Optional. Configures the default TFTP (*Trivial File Transfer Protocol*) services port (69)
- www – Optional. Configures the default HTTP services port (80)

```
alias number <NUMBER-ALIAS-NAME> <0-4294967295>
```

alias number <NUMBER-ALIAS-NAME> <0-4294967295>

Creates a number alias identified by the <NUMBER-ALIAS-NAME> keyword. Number aliases map a name to a numeric value. For example, 'alias number \$NUMBER 100'. In this example:

- The number alias name is: \$NUMBER
- The value assigned is: 100

The value referenced by alias \$NUMBER, wherever used, is 100.

- <NUMBER-ALIAS-NAME> – Specify the number alias name.

**Note:** Alias name should begin with '\$'.

- <0-4294967295> – Specify the number, from 0 - 4294967295, assigned to the number alias created.

```
alias string <STRING-ALIAS-NAME> <LINE>
```

|                                  |  |
|----------------------------------|--|

| alias vlan <VLAN-ALIAS-NAME> | <p>Creates a VLAN alias identified by the &lt;VLAN-ALIAS-NAME&gt; keyword</p> <ul style="list-style-type: none"> <li>&lt;VLAN-ALIAS-NAME&gt; – Specify the VLAN alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p> |
| <1-4094>                     | <p>Maps the VLAN alias to a VLAN ID</p> <ul style="list-style-type: none"> <li>&lt;1-4094&gt; – Specify the VLAN ID from 1 - 4094.</li> </ul>   |

### Examples

```
rfs4000-229D58(config)#alias address-range $TestAddRanAlias 192.168.13.10 to 192.168.13.13
rfs4000-229D58(config)#alias network $TestNetworkAlias 192.168.13.0/24
rfs4000-229D58(config)#alias host $TestHostAlias 192.168.13.100
rfs4000-229D58(config)#alias vlan $TestVLANAlias 1
rfs4000-229D58(config)#alias address-range $AddRangeAlias 192.168.13.2 to 192.168.13.10
rfs4000-229D58(config)#alias network-service $NetServAlias proto igmp
rfs4000-229D58(config)#show running-config | include alias
alias network-group $NetGrAlias address-range 192.168.13.7 to 192.168.13.9 192.168.13.20
to 192.168.13.25
alias network $NetworkAlias 192.168.13.0/24
alias host $HostAlias 192.168.13.10
alias address-range $AddRangeAlias 192.168.13.2 to 192.168.13.10
alias network-service $NetServAlias proto igmp
alias vlan $VlanAlias 1
rfs4000-229D58(config)#
nx9500-6C8809(config)#alias number $NUMBER 100
nx9500-6C8809(config)#show context include-factory | include alias
alias string $DOMAIN test.examplecompany.com
alias string $DOMAIN2 test.example_company.com
alias number $NUMBER 100
alias string $SN B4C7996C8809
nx9500-6C8809(config)#
```

The following examples show encrypted-string alias configuration:

```
nx9500-6C8809(config)#alias encrypted-string $WRITE 0 private
nx9500-6C8809(config)#alias encrypted-string $READ 0 public
nx9500-6C8809(config)#show context | include alias
alias vlan $BLR-01 1
alias string $IN-Blr-EcoSpace-Floor-4 IBEF4
alias encrypted-string $READ 0 public
alias encrypted-string $WRITE 0 private
nx9500-6C8809(config)#
```

The following example shows the encrypted-string aliases, configured in the previous example, used in the management-policy:

```
nx9500-6C8809(config-management-policy-default)#snmp-server community 0 $WRITE rw
nx9500-6C8809(config-management-policy-default)#snmp-server community 0 $READ ro

## ap505

Invokes an AP505 access point's configuration context.

*Supported in the following platforms:*

- Access Point — AP505
- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
ap505 <MAC>
```

### Parameters

```
ap505 <MAC>
```

|       |                                  |
|-------|----------------------------------|
| <MAC> | Specify the AP505's MAC address. |
|-------|----------------------------------|

### Examples

```
nx9500-6C8809(config)#ap505 2B-16-0c-18-0D-11
nx9500-6C8809(config-device-2B-16-0c-18-0D-11)#show con

## ap510

Invokes an AP510 access point's configuration context.

*Supported in the following platforms:*

- Access Point — AP510
- Wireless Controllers — RFS4000

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
ap510 <MAC>
```

### Parameters

```
ap510 <MAC>
```

<MAC>

Specify the AP510's MAC address.

### Examples

```
nx9500-6C8809(config)#ap510 01-11-CD-21-0B-13
nx9500-6C8809(config-device-01-11-CD-21-0B-13)#show con

## application

[Global Configuration Commands](#) on page 154

Creates an application definition and enters its configuration mode. Use this command to create application detection signatures that are not in the pre-defined set of application definitions provided by ExtremeWireless WiNG.

*Application Visibility and Control* (AVC) enables detection of top-level hosting applications along with the services these applications host. It also provides Metadata extraction capabilities for a variety of protocols and applications.

AVC and statistics reporting is available on both the WiNG 5.9.X and WiNG 7.1.X operating systems. However, the DPI engine used to check the data points varies. The WiNG 7.1.X OS uses [EAA \(Extreme Application Analytics\)](#) (Purview™) libDPI engine to detect applications and manage traffic flow. It recognizes 36 application categories with 2458 applications. The WiNG 5.9.X operating system uses a third-party DPI engine, which recognizes 23 application-categories with a total of 2384 applications.

The `application` command is part of the AVC feature. It allows you to create custom application definitions to detect native applications. Refer to the following on how to use the customized application definitions:

- For WiNG 5.9.X networks, configure the application definition on the controller and apply in the following contexts.
  - To enable packet filtering on WiNG 5.9.X APs, use the application definition in the [application-policy](#) on page 187 and specify allow, deny, mark and rate-limit rules for these application packets.

- To enable mandatory stats reporting on WiNG 5.9.X APs, use the application definition in an [application-group](#) on page 183.
- For WiNG 7.1.2 networks, configure the application definition on the controller and apply in the following contexts:
  - To enable packet filtering on WiNG 7.1.X APs, use the application definition in the [purview-application-policy](#) on page 430 and specify allow, deny, mark, and rate-limit rules for these application packets .
  - To enable packet filtering on WiNG 7.1.X APs, use the custom application definition in an [purview-application-group](#) on page 425.

**Note**

The WiNG 7.1.2 OS does not support Purview™ libDPI engine on NX5500, NX7500, NX9500, NX9600 and VX9000 platforms. This support will be introduced in future releases.

*Supported on the following WiNG 7.1.2 APs:*

- Access Points — AP505i, AP510i/e, AP560i/h

*Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:*

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
application <APPLICATION-NAME>
```

**Parameters**

```
application <APPLICATION-NAME>
```

|   |  |
|---|--|
| <pre>application &lt;APPLICATION-NAME&gt;</pre> | Creates a new application definition and enters its configuration mode <ul style="list-style-type: none"> <li>• &lt;APPLICATION-NAME&gt; – Specify a name of the new application definition. It is created if not already existing in the system.</li> </ul> |
|---|--|

**Examples**

```
nx9500-6C8809(config-application-Custom)#?
Application Mode commands:
app-category          Set application category (default is custom)
description           Add application description

### app-category

[application](#) on page 175

Configures the application category type for this custom application definition.

#### Note

This parameter is applicable only for WiNG 5.9.X supported APs. Define the app-category type for this custom application definition. Use this custom application definition in the [application-group](#) on page 183 and [application-policy](#) on page 187 contexts.

### Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

#### Note

This parameter is not applicable for the WiNG 7.1.2 AP5XX model APs.

### Syntax

```
app-category <APP-CATEGORY-NAME>
```

### Parameters

```
app-category <APP-CATEGORY-NAME>
```

app-category <APP-CATEGORY-NAME>

Select the category best suited for this application definition. There are twenty three categories. These are: business, conference, custom, database, filetransfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote\_control, social\ networking, standard, streaming, tunnel, video, voip, and Web.

The default setting is *custom*. Use this option to categorize your internal custom applications, so that they do not appear as unknown traffic.

### Examples

```
nx9500-6C8809(config-application-Bing)#app-category [TAB]
business          conference          custom
database          filetransfer        gaming
generic           im                mail
mobile            network\ management other
p2p               remote_control    sharehosting
social\ networking streaming        tunnel
voip              web
```

```
nx9500-6C8809(config-application-Bing)#
nx9500-6C8809(config-application-Bing)#app-category custom
nx9500-6C8809(config-application-Bing)#show context
application Bing
  app-category streaming
nx9500-6C8809(config-application-Bing)#
```

### Related Commands

[no](#) on page 182

Resets application category to default (custom)

### description

[application](#) on page 175

Configures a description for this application definition

### Supported on the following WING 7.1.2 APs:

- Access Points — AP505i, AP510i/e, AP560i/h

### Syntax

```
description <WORD>
```

### Parameters

```
description <WORD>
```

description <WORD>

Configures a description for this application definition

- <WORD> – Specify a description not exceeding 80 characters in length. Enter the descriptive text within double quotes.

### Examples

```
nx9500-6C8809(config-application-Bing)#description "Bing is Microsoft's Web search engine"
nx9500-6C8809(config-application-Bing)#show context
application Bing
```

```
description "Bing is Microsoft's Web search engine"
app-category streaming
nx9500-6C8809(config-application-Bing) #
```

### Related Commands

|-----------------------|--|
| <b>no</b> on page 182 | Removes this description configured for this application |
|-----------------------|--|

*https*

**application** on page 175

Configures the HTTPS parameter type, attribute type, match criteria for the HTTPS server name and 64 character maximum server name attribute used in the HTTPS server message exchange

### Supported on the following WiNG 7.1.2 APs:

- Access Points — AP505i, AP510i/e, AP560i/h

### Syntax

```
https server-cert common-name [contains|ends-with] <WORD>
```

### Parameters

```
https server-cert common-name [contains|ends-with] <WORD>
```

|   |   |
|---|---|
| https server-cert                       | Configures the HTTPS parameter type as server certificate   |
| common-name [contains ends-with] <WORD> | Configures the HTTPS attribute match criteria as common name. This is the only option applicable when the HTTPS parameter type is set to server-cert. Use one of the following options to provide the common-name attribute value used as the match criteria: <ul style="list-style-type: none"> <li>• contains – Filters applications having common-name attributes containing the string specified here</li> <li>• ends-with – Filters applications ending with the string specified here <ul style="list-style-type: none"> <li>• &lt;WORD&gt; – Specify the string to match (should not exceed 64 characters).</li> </ul> </li> </ul> |

### Examples

```
nx9500-6C8809(config-application-Bing)#https server-cert common-name exact bing.com
nx9500-6C8809(config-application-Bing)#show context
application Bing
  description "Bing is Microsoft's web search engine"
  app-category streaming
  https server-cert common-name exact bing.com
nx9500-6C8809(config-application-Bing) #
```

### Related Commands

|-----------------------|---|
| <b>no</b> on page 182 | Removes the HTTPS common-name attribute value configured with this application category |
|-----------------------|---|

*purview-app-category*

[application](#) on page 175

Configures the application category type for this custom (user-defined) purview-application definition

**Note**

This parameter is applicable only for WiNG 7.1.2 supported APs. Define the purview-app-category type of this custom application definition. Apply this custom application definition in the [purview-application-group](#) on page 425 and [purview-application-policy](#) on page 430 contexts.

**Supported on the following WiNG 7.1.2 APs:**

- Access Points — AP505i, AP510i/e, AP560i/h

**Syntax**

```
purview-app-category <PURVIEW-APP-CATEGORY-NAME>
```

**Parameters**

```
purview-app-category <PURVIEW-APP-CATEGORY-NAME>
```

`purview-app-category <PURVIEW-APP-CATEGORY-NAME>` Select the category best suited for this application definition. The *EAA*, formerly known as Purview™, supports 36 application categories with 2457 applications.

**Note:** Refer to [Examples](#) below for the app-categories supported by the Purview™ engine.

The default setting is *custom*. Use this option to categorize your internal custom applications, so that they do not appear as unknown traffic.

**Examples**

```
nx9500-6C8809 (config-application-Custom) #purview-app-category
ads          biz          certs          cloud
cloudcpu     corp          custom        db
education    finance        games         health
location     mail           news          other
p2p          proto         realtimecomms restrictcontent
search       shopping      social        sports
storage      streaming     travel        unknown
updates      vpn           webapp        webcontent
webfile      webmeet
nx9500-6C8809 (config-application-Custom) #
```

The following example displays the canned (built-in, system-provided apps) starting with 'h':

```
nx9500-6C8809 (config-purview-app-group-PurvAppGrp) #application h [TAB]
hashforcash hashunited hoopla
nx9500-6C8809 (config-purview-app-group-PurvAppGrp) #
```

The following example, creates application definition 'hulu' and assigns it to the app-category 'streaming'.

```
nx9500-6C8809 (config) #application hulu
nx9500-6C8809 (config-application-hulu) #
nx9500-6C8809 (config-application-hulu) #purview-app-category streaming
```

```
nx9500-6C8809(config-application-hulu)#show context
application hulu
  purview-app-category streaming
nx9500-6C8809(config-application-hulu)#
```

The following example shows 'hulu' application definition added to the list of available applications:

```
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#application h [TAB]
hashforcash hashunited hoopla hulu
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#
```

Related Commands

use

application on page 175

Associates a network-service alias or a URL list with this application definition

For applications using protocols other than HTTPS, use this command to define the protocols, ports, and/or URL host name to match.

Supported on the following WiNG 7.1.2 APs:

- Access Points — AP505i, AP510i/e, AP560i/h

Syntax

```
use [network-service <NETWORK-SERVICE-ALIAS-NAME>|url-list <URL-LIST-NAME>]
```

Parameters

```
use [network-service <NETWORK-SERVICE-ALIAS-NAME>|url-list <URL-LIST-NAME>]
```

|  |   |
|--|---|
| use  | Configures this application definition to use a network-service alias or a URL list   |
| network-service <NETWORK-SERVICE-ALIAS-NAME> | Associates a network-service alias with this application definition <ul style="list-style-type: none"><li>• &lt;NETWORK-SERVICE-ALIAS-NAME&gt; - Specify the network-service alias name (should be existing and configured). The network-service alias should specify the protocols and ports to match.</li></ul>   |
| url-list <URL-LIST-NAME>                     | Associates a URL list with this application definition. URL lists are utilized for whitelisting and blacklisting Web application URLs from being launched and consuming bandwidth within the WiNG managed network. <ul style="list-style-type: none"><li>• &lt;URL-LIST-NAME&gt; - Specify the URL list name (should be existing and configured). The URL list should specify the HTTP URL host names to match.</li></ul> |

Examples

```
nx9500-6C8809(config-application-Bing)#use url-list Bing
nx9500-6C8809(config-application-Bing)#show context
application Bing
description "Bing is Microsoft's web search engine"
```

```

app-category streaming
use url-list Bing
https server-cert common-name exact bing.com
nx9500-6C8809(config-application-Bing)#

```

### Related Commands

**no** on page 182

Removes the network-service alias or the URL list associated with this application definition

*no*

**application** on page 175

Removes or resets this application definition's configured settings

### Supported on the following WiNG 7.1.2 APs:

- Access Points — AP505i, AP510i/e, AP560i/h

### Syntax

```
no [app-category|description|https|purview-app-category|use]
```

#### Note

The 'purview-app-category' parameter is applicable only on the WiNG 7.1.X, AP5XX model APs.

```

no [app-category|purview-app-category|description]
no https server-cert common-name [contains|ends-with] <WORD>
no use [network-service <NETWORK-SERVICE-ALIAS-NAME>|url-list <URL-LIST-NAME>]

```

### Parameters

```
no <PARAMETERS>
```

**no <PARAMETERS>**

Removes or resets this application definition's configured settings based on the parameters passed

### Examples

The following example displays the application definition 'Bing' parameters before the 'no' commands are executed:

```

nx9500-6C8809(config-application-Bing)#show context
application Bing
  description "Bing is Microsoft's web search engine"
  app-category streaming
  use url-list Bing
  https server-cert common-name exact bing.com
nx9500-6C8809(config-application-Bing)#
nx9500-6C8809(config-application-Bing)#no description
nx9500-6C8809(config-application-Bing)#no https server-cert common-name exact bing.com

```

The following example displays the application definition 'Bing' parameters after the 'no' commands are executed:

```
nx9500-6C8809(config-application-Bing)#show context
application Bing
  app-category streaming
  use url-list Bing
nx9500-6C8809(config-application-Bing)#
```

## application-group

[Global Configuration Commands](#) on page 154

Creates an Application Group and enters its configuration mode. An application group is a collection of system-provided and/or user-defined applications. Application group allows you to enforce mandatory stats reporting for specific traffic types.

The WiNG 5.9.X OS uses a third-party DPI engine to implement *Application Visibility and Control (AVC)*. It detects top-level hosting applications (layer 7) along with the services these applications host.

Use AVC to implement:

- Packet filtering - allow, deny or mark packets based on rules defined in the Application policy.
- Mandatory stats reporting - enable mandatory stats reporting for an application or set of applications defined in the Application group.

The `application-group` command is part of the mandatory stats reporting feature. To enable mandatory stats reporting, follow the steps below:

- 1 Create an application-group and specify the applications for which mandatory stats reporting is to be enabled.

### Note

If the required application definition is not system-provided, use the `application` command to create a custom app signature.

- 2 Use this application-group in the NSight policy.
- 3 Apply the NSight policy in the RF Domain context.

### Note

For more information and examples, see [mandatory](#) on page 414.

### Note

For information on enabling mandatory stats reporting on WiNG 7.1.2 APs see [purview-application-group](#).

*Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:*

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

### Syntax

```
application-group <APPLICATION-GROUP-NAME>
```

Parameters

|   |  |
|---|--|
| <code>application-group &lt;APPLICATION-GROUP-NAME&gt;</code> |  |
| <code>application-group &lt;APPLICATION-GROUP-NAME&gt;</code> | <div>Creates an application group and enters its configuration mode<ul style="list-style-type: none"><li>&lt;APPLICATION-GROUP-NAME&gt; - Specify the application group name. If an application group with the specified name does not exist, it is created. The name should not exceed 32 characters in length.</li></ul></div> |

Examples

```
nx9500-6C8809(config)#application-group amazon
nx9500-6C8809(config-app-group-amazon)#?
Application Group Mode commands:
  application  Add application to group
  description  Add application-group description
  no           Negate a command or set its defaults

  clrscr      Clears the display screen
  commit      Commit all changes made in this session
  do          Run commands from Exec mode
  end         End current mode and change to EXEC mode
  exit        End current mode and down to previous mode
  help        Description of the interactive help system
  revert      Revert changes
  service     Service Commands
  show        Show running system information
  write       Write running configuration to memory or terminal

nx9500-6C8809(config-app-group-amazon)#
```

Related Commands

|  |  |
|--|--|
| <code>no</code> on page 609 (global-config-mode) | Removes an existing application group  |
| <code>application-policy</code> on page 187      | Creates an application policy and enters its configuration mode.   |
| <code>application</code> on page 175             | Creates an application definition and enters its configuration mode. Use this command to create customized application detection signatures. |

*application*

`application-group` on page 183

Adds an application to this application group. You can add a system-provided or user-defined application.

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
application <APPLICATION-NAME>
```

## Parameters

`application <APPLICATION-NAME>`

`application <APPLICATION-NAME>` Configures the application to be added to this application group

- `<APPLICATION-NAME>` – Provide the application name (should be available as an option in the system). A maximum of eight (8) applications can be added to a group.

**Note:** If the desired application is not available as an option, use the `application` on page 175 command to add it.

## Examples

To view all applications available in the system, use [TAB], as shown in the following example:

```
nx9500-6C8809(config-app-group-test)#application [TAB]
Display all 300 possibilities? (y or n)
1-clickshare-com          1-upload-com
1-upload-to               10upload-com

--More--
nx9500-6C8809(config-app-group-test)#
```

Select the desired application from the list displayed, as shown in the following examples:

```
nx9500-6C8809(config-app-group-amazon)#application amazon [TAB]
amazon-prime-music  amazon-prime-video  amazon_cloud  amazon_shop
nx9500-6C8809(config-app-group-amazon)#
nx9500-6C8809(config-app-group-amazon)#application amazon-prime-music
nx9500-6C8809(config-app-group-amazon)#application amazon-prime-video
nx9500-6C8809(config-app-group-amazon)#application amazon_cloud
nx9500-6C8809(config-app-group-amazon)#application amazon_shop
nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
  application amazon-prime-music
  application amazon-prime-video
  application amazon_cloud
  application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
```

Note, the system returns an error message if the application entered is not listed, as shown in the following example:

```
nx9500-6C8809(config-app-group-test)#application bing
% Error: application 'bing' is not defined
nx9500-6C8809(config-app-group-test)#
```

## Related Commands

`no` on page 186

Removes a specified application from this application group

*description*

`application-group` on page 183

Configures a description for this application group

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
description <WORD>
```

**Parameters**

```
description <WORD>
```

|                    |  |
|--------------------|--|
| description <WORD> | Configures a description for this application group that uniquely differentiates it from other existing application groups <ul style="list-style-type: none"> <li>&lt;WORD&gt; – Provide a description not exceeding 80 characters in length.</li> </ul> |
|--------------------|--|

**Examples**

```
nx9500-6C8809(config-app-group-amazon)#description "This application-group lists
all Amazon applications."
nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
  description "This application-group lists all Amazon applications."
  application amazon-prime-music
  application amazon-prime-video
  application amazon_cloud
  application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
```

**Related Commands**

|                |   |
|----------------|---|
| no on page 186 | Removes the description configured for this application group |
|----------------|---|

no

application-group on page 183

Removes this application group's configured parameters (application and/or description)

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
no [application <APPLICATION-NAME>|description]
```

**Parameters**

```
no [application <APPLICATION-NAME>|description]
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes an application associated with this group, and removes this group's description |
|-----------------|---|

## Examples

The following example displays the application-group 'amazon' configuration before the execution of 'no' commands:

```
nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
  description "This application-group lists all Amazon applications."
  application amazon-prime-music
  application amazon-prime-video
  application amazon_cloud
  application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
nx9500-6C8809(config-app-group-amazon)#no application amazon_cloud
nx9500-6C8809(config-app-group-amazon)#no description
```

The following example displays the application-group 'amazon' configuration after the execution of 'no' commands:

```
nx9500-6C8809(config-app-group-amazon)#show context
application-group amazon
  application amazon-prime-music
  application amazon-prime-video
  application amazon_shop
nx9500-6C8809(config-app-group-amazon)#
```

## application-policy

[Global Configuration Commands](#) on page 154

Creates an application policy and enters its configuration mode. Application policies allow you to define rules that dictate how each traffic type is managed on your network. An application policy contains application (Layer 7) rules.

An application rule leverages the AP's *deep packet inspection* (DPI) engine to detect the underlying application to which a frame or flow belongs. The rule then applies access control and quality of service actions to all the traffic associated with the application, not just traffic destined for specific IP addresses or ports. The control actions regulate both access control and traffic engineering (rate limit, marking, and prioritization) for applications and groups.

Once created and configured, apply the application policy at the following levels within the network to enforce application assurance:

- **RADIUS change of authorization (CoA) usage** – In the device/profile configuration mode, use the **application-policy → radius → <APPLICATION-POLICY-NAME>** command to apply the policy to every user successfully authenticated by the RADIUS server.
- **User role** – In the role-policy-user-role configuration mode, use the **use → application-policy <APPLICATION-POLICY-NAME>** command to apply the policy to all users assigned to the role.

- WLAN – In the WLAN configuration mode, use the **use → application-policy <APPLICATION-POLICY-NAME>** command to apply the policy to all users accessing the WLAN.
- Bridge VLAN – In the bridge VLAN configuration mode, use the **use → application-policy <APPLICATION-POLICY-NAME>** command to apply the policy for the traffic corresponding to the bridged VLAN.

**Note**

The WiNG 7.1.2 enabled, AP5XX model access points implement application visibility and control through the [purview-application-policy](#) on page 430.

*Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:*

- Access Points – AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

*Syntax*

```
application-policy <APPLICATION-POLICY-NAME>
```

*Parameters*

```
application-policy <APPLICATION-POLICY-NAME>
```

|  |  |
|--|--|
| application-policy <APPLICATION-POLICY-NAME> | Specify the application policy name. If an application policy with the specified name does not exist, it is created. The name should not exceed 32 characters in length. |
|--|--|

*Examples*

```
nx9500-6C8809(config)#application-policy TestAppliPolicy
nx9500-6C8809(config-app-policy-TestAppliPolicy)#?
Application Policy Mode commands:
  allow          Allow packets
  deny           Deny packets
  description     Application policy description
  enforcement-time Configure policy enforcement based on time
  logging         Application recognition logging
  mark           Mark packets
  no             Negate a command or set its defaults
  rate-limit     Rate-limit packets

  clrscr         Clears the display screen
  commit         Commit all changes made in this session
  do             Run commands from Exec mode
  end            End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service        Service Commands
  show           Show running system information
  write          Write running configuration to memory or terminal

nx9500-6C8809(config-app-policy-TestAppliPolicy)#
```

*allow*

**application-policy** on page 187

Creates an allow rule and configures the match criteria based on which packets are filtered and the allow access action applied

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
allow [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>] schedule
<SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

**Parameters**

```
allow [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>] schedule
<SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

|  |  |
|--|--|
| allow                                  | Creates an allow rule and configures the match criteria. The options are app-category and application.   |
| app-category [<APP-CATEGORY-NAME> all] | <p>Uses application category as the match criteria</p> <ul style="list-style-type: none"> <li>&lt;APP-CATEGORY-NAME&gt; – Specify the application category. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system forwards the packet or else drops it.</li> <li>all – The system forwards all packets irrespective of the application category.</li> </ul> |
| application <APPLICATION-NAME>         | <p>Uses application name as the match criteria</p> <ul style="list-style-type: none"> <li>&lt;APPLICATION-NAME&gt; – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system forwards the packet.</li> </ul> <p><b>Note:</b> The WiNG system provides approximately 309 canned applications. In addition to these, the database also includes custom-made applications. These are application definitions created using the <b>application</b> on page 175 command.</p>  |

|                                 |   |
|---------------------------------|---|
| schedule <SCHEDULE-POLICY-NAME> | <p>Schedules an enforcement time for this allow rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>• schedule &lt;SCHEDULE-POLICY-NAME&gt; – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the application-policy &gt; enforcement-time command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>• &lt;SCHEDULE-POLICY-NAME&gt; – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p><b>Note:</b> In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a> on page 195.</p> |
| precedence <1-256>              | <p>Assigns a precedence value for this allow rule. The precedence value differentiates between rules applicable to applications and the application categories to which they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p> <p>Let us consider application <i>youtube</i> belonging to app-category <i>streaming</i>. The action required is: Allow youtube packets, and deny all other applications belonging to app-category streaming.</p> <p>The rules can be defined as:</p> <pre>#allow application youtube precedence 1 #deny app-category streaming precedence 2</pre> <p>The following configuration is incorrect:</p> <pre>#deny app-category streaming precedence 1 #allow application youtube precedence 2</pre> <p>Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.</p> <p>The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.</p>  |

## Examples

The following example shows how to view all built-in, system provided applications:

```
nx9500-6C8809(config-app-policy-test)#allow application [TAB]
Display all 300 possibilities? (y or n)
1-clickshare-com          1-upload-com
1-upload-to               10upload-com
123upload-pl              139pan-com
163pan-com                1clickshare-net
1fichier-com              1kxun
2channel                  2gis
2shared-com               360mobile
```

```

4fastfile-com          4share-ws
Dota\ 2                EA\ Origin
--More--
nx9500-6C8809(config-app-policy-test)#

```

The following examples show two allow rules, allowing access to all packets belonging to the application category 'business' and the application 'Bing':

```

nx9500-6C8809(config-app-policy-Bing)#allow application Bi [TAB]
Bing                               BitTorrent                BitTorrent_encrypted
BitTorrent_plain                  BitTorrent_uTP        BitTorrent_uTP_encrypted
nx9500-6C8809(config-app-policy-Bing)#

```

Note: Bing is not one of the WiNG built-in database applications. It is a customized application created using the application command.

```

nx9500-6C8809(config-app-policy-Bing)#allow application Bing precedence 1
nx9500-6C8809(config-app-policy-Bing)#allow app-category [TAB]
all                               antivirus\ update      audio
business                         conference            custom
database                        filetransfer          gaming
generic                          im                    mail
mobile                          network\ management   other
p2p                             remote_control        social\ networking
standard                        streaming             tunnel
video                          voip                  web
nx9500-6C8809(config-app-policy-Bing)#
nx9500-6C8809(config-app-policy-Bing)#allow app-category business precedence 2
nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
  allow application Bing precedence 1
  allow app-category business precedence 2
nx9500-6C8809(config-app-policy-Bing)#

```

The following example shows an application policy 'SocialNet' having an allow rule with an associated schedule policy named 'FaceBook':

```

nx9500-6C8809(config-app-policy-SocialNet)#allow application facebook schedule Facebook
precedence 1
nx9500-6C8809(config-app-policy-SocialNet)#show context
application-policy SocialNet
  description "This application policy relates to Social Networking sites."
  allow application facebook schedule FaceBook precedence 1
nx9500-6C8809(config-app-policy-SocialNet)#

```

The schedule policy 'FaceBook' configuration is as follows. As per this policy, the above allow rule will apply to all FaceBook packets every Friday between 13:00 and 18:00 hours.

```

nx9500-6C8809(config-schedule-policy-FaceBook)#show context
schedule-policy FaceBook
  description "Allows FaceBook traffic on Fridays."
  time-rule days friday start-time 13:00 end-time 18:00
nx9500-6C8809(config-schedule-policy-FaceBook)#

```

## Related Commands

|                |   |
|----------------|---|
| no on page 203 | Removes this allow rule from the application policy |
|----------------|---|

*deny (application-policy-config-mode)*

[application-policy](#) on page 187

Creates a deny rule and configures the match criteria based on which packets are filtered and the deny access action applied

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
deny [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>] schedule
<SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

**Parameters**

```
deny [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>] schedule
<SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

|  |  |
|--|--|
| deny                                   | Creates a deny rule and configures the match criteria. The options are app-category and application.   |
| app-category [<APP-CATEGORY-NAME> all] | Uses application category as the match criteria <ul style="list-style-type: none"><li>• &lt;APP-CATEGORY-NAME&gt; - Specify the application category name. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. In addition to these, the database displays custom-made applications also. These are application definitions created using the application command.</p>   |

|   |  |
|---|--|
| <p><code>schedule &lt;SCHEDULE-POLICY-NAME&gt;</code></p> | <p>Schedules an enforcement time for this deny rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>• <code>schedule &lt;SCHEDULE-POLICY-NAME&gt;</code> – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the <code>application-policy &gt; enforcement-time</code> command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>• <code>&lt;SCHEDULE-POLICY-NAME&gt;</code> – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p>In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a> on page 195.</p> |
| <p><code>precedence &lt;1-256&gt;</code></p>              | <p>Assigns a precedence value for this deny rule. The precedence value differentiates between rules applicable to applications and the application categories to which they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p> <p>Let us consider application <i>youtube</i> belonging to app-category <i>streaming</i>. The rules can be defined as:</p> <pre>#allow application youtube precedence 1 #deny app-category streaming precedence 2</pre> <p>The following configuration is incorrect:</p> <pre>#deny app-category streaming precedence 1 #allow application youtube precedence 2</pre> <p>Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.</p> <p>The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.</p>   |

## Examples

The following example shows one deny rule, denying access to all packets belonging to the application category 'social\ networking':

```
nx9500-6C8809(config-app-policy-Bing)#deny app-category social\ networking precedence 3
nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
  allow application Bing precedence 1
  allow app-category business precedence 2
  deny app-category "social networking" precedence 3
nx9500-6C8809(config-app-policy-Bing)#
```

The following example displays the schedule policy 'DenyS-N' settings. The time-rule defined in the policy is all weekdays from 9:30 AM to 11:30 PM.

```
nx9500-6C8809(config-schedule-policy-DenyS-N)#show context
schedule-policy DenyS-N
description "Denies all social Networking sites on weekdays."
time-rule days weekdays start-time 09:30 end-time 23:30
nx9500-6C8809(config-schedule-policy-DenyS-N)#
```

The following example displays the schedule policy 'FaceBook' settings. The time-rule defined in the policy is Friday from 1:00 PM to 6:00 PM.

```
nx9500-6C8809(config-schedule-policy-FaceBook)#show context
schedule-policy FaceBook
description "Allows FaceBook traffic on Fridays."
time-rule days friday start-time 13:00 end-time 18:00
nx9500-6C8809(config-schedule-policy-FaceBook)#
```

The following example shows an application policy 'SocialNet' defining an allow and deny rule. Both rules have different enforcement time, defined by their respective schedule policies (DenyS-N and FaceBook). As per these two schedule policy settings, this application policy:

- Denies all social\ networking sites on weekdays (barring Fridays between 1:00 PM to 6:00 PM) from 9:30 AM to 11:30 PM.
- On Fridays, between 1:00 PM to 6:00 PM, it:
  - Denies all social\ networking sites except Facebook.

```
nx9500-6C8809(config-app-policy-SocialNet)#show context
application-policy SocialNet
description "This application policy relates to Social Networking sites."
allow application facebook schedule FaceBook precedence 1
deny app-category "social networking" schedule DenyS-N precedence 2
nx9500-6C8809(config-app-policy-SocialNet)#
```

### enforcement-time

[application-policy](#) on page 187

Configures an enforcement time period in days and hours for this application policy. The enforcement time is applicable only to those rules, within the application policy, that do not have a schedule policy associated. By default an application policy is enforced on all days.

#### Note

Schedule policies are a means of enforcing allow/deny/mark/rate-limit rules at different time periods. If no schedule policy is applied, all rules within an application policy are enforced at the time specified using this enforcement-time command. For more information on configuring a schedule policy, see [schedule-policy](#) on page 493.

### logging

[application-policy](#) on page 187

Enables DPI application recognition logging. It also sets the logging level.

DPI is an advanced packet analysis technique, which analyzes packet and packet content headers to determine the nature of network traffic. When enabled, DPI inspects packets of all flows to identify applications (such as, Netflix, Twitter, Facebook, etc.) and extract metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

**Syntax**

```
logging [level|on]
logging on
logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings]
```

**Parameters**

```
logging on
```

|            |   |
|------------|---|
| logging on | Enables logging of application recognition hits made by the DPI engine. This option is disabled by default. |
|------------|---|

```
logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings]
```

|   |   |
|---|---|
| logging level [<0-7> alerts  critical <br>debugging  emergencies errors <br>informational  notifications  warnings] | <p>Sets the logging level for application recognition hits made by the DPI engine. This option is disabled by default.</p> <ul style="list-style-type: none"> <li>• &lt;0-7&gt; – Sets the message logging severity level on a scale of 0 - 7</li> <li>• emergencies – Severity level 0: System is unusable</li> <li>• alerts – Severity level 1: Requires immediate action</li> <li>• critical – Severity level 2: Critical conditions</li> <li>• errors – Severity level 3: Error conditions</li> <li>• warnings – Severity level 4: Warning conditions</li> <li>• notifications – Severity level 5: Normal but significant conditions (this is the default setting)</li> <li>• informational – Severity level 6: Informational messages</li> <li>• debugging – Severity level 7: Debugging messages</li> </ul> |
|---|---|

**Examples**

```
nx9500-6C8809(config-app-policy-Bing)#logging level critical
nx9500-6C8809(config-app-policy-Bing)#show context
application-policy Bing
description "This application policy allows Bing search engine packets"

*mark*

[application-policy](#) on page 187

Creates a mark rule and configures the match criteria based on which packets are marked

Marks packets, matching a specified set of application categories or applications/protocols, with 802.1p priority level or DSCP ToS (*type of service*) code. Marking packets is a means of identifying them for specific actions, and is used to provide different levels of service to different traffic types.

**Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:**

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

```
mark [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
[8021p <0-7>|dscp <0-63>] schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

**Parameters**

```
mark [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
[8021p <0-7>|dscp <0-63>] schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

|  |  |
|--|--|
| mark                                   | Creates a mark rule and configures the match criteria. When applied, the rule marks packets, matching the criteria configured here, with 802.1p priority value or DSCP code. The match criteria options are: app-category and application.   |
| app-category [<APP-CATEGORY-NAME> all] | <p>Uses application category as the match criteria</p> <ul style="list-style-type: none"> <li>• &lt;APP-CATEGORY-NAME&gt; – Specify the application category. The options are: antivirus\, update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\, management, other, p2p, remote_control, social\, networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system marks the packet.</li> <li>• all – The system marks all packets irrespective of the application category.</li> </ul> |
| application <APPLICATION-NAME>         | <p>Uses application name as the match criteria</p> <ul style="list-style-type: none"> <li>• &lt;APPLICATION-NAME&gt; – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system marks the packet.</li> </ul> <p>The WiNG database provides approximately 309 canned applications. In addition to these, the database includes custom-made applications. These are application definitions created using the <a href="#">application</a> on page 175 command.</p>  |
| 8021p <0-7>                            | <p>Marks packets matching the specified criteria with 802.1p priority value</p> <ul style="list-style-type: none"> <li>• &lt;0-7&gt; – Specify a value from 0 - 7.</li> </ul> <p>The IEEE 802.1p signaling standard enables marking of layer 2 network traffic. Layer 2 network devices (such as switches), using 802.1p standards, group traffic into classes based on their 802.1p priority value, which is appended to the packet's MAC header. In case of traffic congestion, packets with higher priority get precedence over lower priority packets and are forwarded first.</p>   |

|                                 |   |
|---------------------------------|---|
| dscp <0-63>                     | <p>Marks packets matching the specified criteria with DSCP ToS code</p> <ul style="list-style-type: none"> <li>&lt;0-63&gt; – Specify a value from 0 - 63.</li> </ul> <p>The DSCP protocol marks layer 3 network traffic. Layer 3 network devices (such as routers) using DSCP, mark each layer 3 packet with a six-bit DSCP code, which is appended to the packet's IP header. Each DSCP code is assigned a corresponding level of service, enabling packet prioritization.</p>  |
| schedule <SCHEDULE-POLICY-NAME> | <p>Schedules an enforcement time for this mark rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>schedule &lt;SCHEDULE-POLICY-NAME&gt; – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the application-policy &gt; enforcement-time command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>&lt;SCHEDULE-POLICY-NAME&gt; – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p>In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a> on page 195.</p> |
| precedence <1-256>              | <p>Assigns a precedence value for this mark rule. The precedence value differentiates between rules applicable to applications and the application categories they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p> <p>Let us consider application <i>youtube</i> belonging to app-category <i>streaming</i>. The action required is: Allow youtube packets and deny all other applications belonging to app-category streaming.</p> <p>The rules can be defined as:</p> <pre>#allow application youtube precedence 1 #deny app-category streaming precedence 2</pre> <p>The following configuration is incorrect:</p> <pre>#deny app-category streaming precedence 1 #allow application youtube precedence 2</pre> <p>Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.</p> <p>The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.</p>   |

## rate-limit

[application-policy](#) on page 187

Creates a rate-limit rule and configures the match criteria

### Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

## Syntax

```

rate-limit [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
([egress|ingress]) rate <50-1000000> max-burst-size <2-1024> schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)

```

## Parameters

```

rate-limit [app-category [<APP-CATEGORY-NAME>|all]|application <APPLICATION-NAME>]
([egress|ingress]) rate <50-1000000> max-burst-size <2-1024> schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)

```

|  |   |
|--|---|
| rate-limit                             | Creates a rate-limit rule and configures the match criteria. When applied, the rule applies a rate-limit to packets that match the criteria configured here. These packets could be incoming, outgoing, or both. The match criteria options are: <i>app-category</i> and <i>application</i> .   |
| app-category [<APP-CATEGORY-NAME> all] | <p>Uses application category as the match criteria</p> <ul style="list-style-type: none"> <li>&lt;APP-CATEGORY-NAME&gt; – Specify the application category. The options are: antivirus\ update, audio, business, conference, custom, database, file transfer, gaming, generic, im, mail, mobile, network\ management, other, p2p, remote_control, social\ networking, standard, streaming, tunnel, video, voip, and web. Each packet's app-category is matched with the value specified here. In case of a match, the system rate-limits the packet.</li> <li>all – The system rate-limits all packets irrespective of the application category.</li> </ul> |

|                                |   |
|--------------------------------|---|
| application <APPLICATION-NAME> | <p>Uses application name as the match criteria</p> <ul style="list-style-type: none"> <li>• &lt;APPLICATION-NAME&gt; – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system rate-limits the packet.</li> </ul>   |
| [egress ingress]               | <p>The egress and ingress parameters are recursive and can be used to rate limit either incoming, outgoing, or both incoming and outgoing traffic.</p> <ul style="list-style-type: none"> <li>• egress – Selects the traffic type as outgoing</li> <li>• ingress – Selects the traffic type as outgoing</li> </ul> <p>After selecting the traffic type (incoming/outgoing) configure the rate and maximum burst size.</p> |
| rate <50-1000000>              | <p>The following parameters are common to the 'egress' and 'ingress' keywords:</p> <ul style="list-style-type: none"> <li>• rate – Configures the rate limit, in Kbps, for both incoming and outgoing packets <ul style="list-style-type: none"> <li>• &lt;50-1000000&gt; – Specify the rate limit from 50 - 1000000 Kbps.</li> </ul> </li> </ul>   |
| max-burst-size                 | <p>The following parameters are common to the 'egress' and 'ingress' keywords:</p> <ul style="list-style-type: none"> <li>• max-burst-size – Configures the maximum burst size, in Kbytes, for both incoming and outgoing packets <ul style="list-style-type: none"> <li>• &lt;2-1024&gt; – Specify the maximum burst size from 2 - 1024 Kbytes.</li> </ul> </li> </ul>   |

|                                 |  |
|---------------------------------|--|
| schedule <SCHEDULE-POLICY-NAME> | <p>Schedules an enforcement time for this rate-limit rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>• schedule &lt;SCHEDULE-POLICY-NAME&gt; – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the <code>application-policy &gt; enforcement-time</code> command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>• &lt;SCHEDULE-POLICY-NAME&gt; – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p>In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a>.</p> |
| precedence <1-256>              | <p>Assigns a precedence value for this mark rule. The precedence value differentiates between rules applicable to applications and the application categories they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p> <p>Let us consider application <i>youtube</i> belonging to app-category <i>streaming</i>. The action required is: Allow youtube packets and deny all other applications belonging to app-category <i>streaming</i>. The rules can be defined as:</p> <pre>#allow application youtube precedence 1 #deny app-category streaming precedence 2</pre> <p>The following configuration is incorrect:</p> <pre>#deny app-category streaming precedence 1 #allow application youtube precedence 2</pre> <p>Once the deny app-category streaming precedence 1 rule is hit, all streaming packets, including youtube, are dropped. Consequently, there are no packets left to apply the subsequent allow rule.</p> <p>The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.</p>  |

### Examples

```

nx9500-6C8809(config-app-policy-Bing)#rate-limit application BGP ingress rate 100
max-burst-size 25 egress rate 50 max-burst-size 25 precedence 6

```

## association-acl-policy

Configures an association ACL policy. This policy defines a list of devices allowed or denied access to the network.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
association-acl-policy <ASSOCIATION-ACL-POLICY-NAME>
```

### Parameters

```
association-acl-policy <ASSOCIATION-ACL-POLICY-NAME>
```

|                               |   |
|-------------------------------|---|
| <ASSOCIATION-ACL-POLICY-NAME> | Specify the association ACL policy name. If the policy does not exist, it is created. |
|-------------------------------|---|

### Examples

```

NOC-NX9500(config)#association-acl-policy test
NOC-NX9500(config-assoc-acl-test)#?
Association ACL Mode commands:
deny      Specify MAC addresses to be denied
no        Negate a command or set its defaults
permit    Specify MAC addresses to be permitted

clrscr    Clears the display screen
commit    Commit all changes made in this session
do        Run commands from Exec mode
end       End current mode and change to EXEC mode

```

```
exit      End current mode and down to previous mode
help      Description of the interactive help system
revert    Revert changes
service   Service Commands
show      Show running system information
write     Write running configuration to memory or terminal
```

NOC-NX9500 (config-assoc-acl-test) #

*Related Commands*

|----------------|-------------------------------------|
| no on page 609 | Removes this Association ACL Policy |
|----------------|-------------------------------------|

**Note**  
For more information on the association-acl-policy, see [Association-ACL Policy](#) on page 1354.

auto-provisioning-policy

Configures an auto provisioning policy. This policy configures the automatic provisioning of device adoption. The policy configures how an AP is adopted based on its type.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
auto-provisioning-policy <AUTO-PROVISIONING-POLICY-NAME>
```

*Parameters*

```
auto-provisioning-policy <AUTO-PROVISIONING-POLICY-NAME>
```

|                                 |   |
|---------------------------------|---|
| <AUTO-PROVISIONING-POLICY-NAME> | Specify the auto provisioning policy name. If the policy does not exist, it is created. |
|---------------------------------|---|

*Examples*

```
NOC-NX9500 (config) #auto-provisioning-policy test
NOC-NX9500 (config-auto-provisioning-policy-test) #?
Auto-Provisioning Policy Mode commands:
  adopt                Add rule for device adoption
  auto-create-rfd-template  When RF Domain specified by the matching rule
                           template does not exist create new RF Domain
                           automatically
  default-adoption     Adopt devices even when no matching rules are
                           found. Assign default profile and default
                           rf-domain
  deny                 Add rule to deny device adoption
  evaluate-always      Set the flag to evaluate the policy everytime,
                           regardless of previous adoption status
  no                   Negate a command or set its defaults
  redirect             Add rule to redirect device adoption
  upgrade              Add rule for device upgrade
```

|                      |   |
|----------------------|---|
| <code>clrscr</code>  | Clears the display screen                         |
| <code>commit</code>  | Commit all changes made in this session           |
| <code>do</code>      | Run commands from Exec mode                       |
| <code>end</code>     | End current mode and change to EXEC mode          |
| <code>exit</code>    | End current mode and down to previous mode        |
| <code>help</code>    | Description of the interactive help system        |
| <code>revert</code>  | Revert changes                                    |
| <code>service</code> | Service Commands                                  |
| <code>show</code>    | Show running system information                   |

Removes an existing Auto Provisioning policy

#### Note

For more information on the auto-provisioning-policy, see [Auto-Provisioning Policy](#) on page 1331.

## bgp

Configures BGP (*Border Gateway Protocol*) settings

BGP is an inter-ISP routing protocol which establishes routing between ISPs (*Internet Service Providers*). ISPs use BGP to exchange routing and reachability information between AS (*Autonomous Systems*) on the Internet. BGP makes routing decisions based on paths, network policies and/or rules configured by network administrators. The primary role of a BGP system is to exchange network reachability information with other BGP peers. This information includes information on AS that the reachability information traverses. This information is sufficient to create a graph of AS connectivity from which routing decisions can be created and rules enforced.

An AS is a set of routers under the same administration that use IGP (*Interior Gateway Protocol*) and common metrics to define how to route packets within the AS. AS uses inter-AS routing to route packets to other ASs. For an external AS, an AS appears to have a single coherent interior routing plan and presents a consistent picture of the destinations reachable through it.

Routing information exchanged through BGP supports only destination based forwarding (it assumes a router forwards packets based on the destination address carried in the IP header of the packet).

BGP uses TCP as its transport protocol. This eliminates the need to implement explicit update fragmentation, retransmission, acknowledgment, and sequencing. BGP listens on TCP port 179. The error notification mechanism used in BGP assumes that TCP supports a graceful close (all outstanding data is delivered before the connection is closed).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
bgp [as-path-list|community-list|extcommunity-list|ip-access-list|ip-prefix-list] <LIST-NAME>
```

### Parameters

```
bgp [as-path-list|community-list|extcommunity-list|ip-access-list|ip-prefix-list] <LIST-NAME>
```

|                               |  |
|-------------------------------|--|
| as-path-list <LIST-NAME>      | Creates an AS path list and enters its configuration mode <ul style="list-style-type: none"> <li>&lt;LIST-NAME&gt; - Provide the AS-PATH-LIST name.</li> </ul>                 |
| community-list <LIST-NAME>    | Creates a community list and enters its configuration mode <ul style="list-style-type: none"> <li>&lt;LIST-NAME&gt; - Provide the COMMUNITY-LIST name.</li> </ul>              |
| extcommunity-list <LIST-NAME> | Creates an extended community list and enters its configuration mode <ul style="list-style-type: none"> <li>&lt;LIST-NAME&gt; - Provide the EXTCOMMUNITY-LIST name.</li> </ul> |
| ip-access-list <LIST-NAME>    | Creates a BGP IP access list and enters its configuration mode <ul style="list-style-type: none"> <li>&lt;LIST-NAME&gt; - Provide the BGP IP-ACCESS-LIST name.</li> </ul>      |
| ip-prefix-list <LIST-NAME>    | Creates a BGP IP prefix list and enters its configuration mode <ul style="list-style-type: none"> <li>&lt;LIST-NAME&gt; - Provide the BGP IP-PREFIX-LIST name.</li> </ul>      |

### Examples

```
nx9500-6C8809(config)#bgp ?
  as-path-list      BGP AS path list Configuration
  community-list    Add a community list entry
  extcommunity-list Add a extended community list entry (EXPERIMENTAL)
  ip-access-list    Add an access list entry
  ip-prefix-list    Build a prefix list

nx9500-6C8809(config)#
nx9500-6C8809(config)#bgp as-path-list AS-TEST-PATH
nx9500-6C8809(config-bgp-as-path-list-AS-TEST-PATH)#?
BGP AS Path List Mode commands:
  deny      Specify packets to reject
  no        Negate a command or set its defaults
  permit    Specify packets to forward

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

nx9500-6C8809(config-bgp-as-path-list-AS-TEST-PATH)#
```

*Related Commands***no** on page 609

Modifies BGP settings, based on the parameters passed

**Note**

For more information on the association-acl-policy, see [Border Gateway Protocol](#) on page 1886.

**ble-data-export-policy**

Creates a BLE data export policy and enters its configuration mode. This policy enables forwarding of BLE (*Bluetooth Low Energy*) data to an external, third-party server.

The BLE data export policy provides the external, third-party server's REST URL. After configuring the policy apply it on an RF Domain. Once applied, BLE-enabled, WiNG APs, within the domain, sense BLE iBeacon and Eddystone beacons from other BLE-enabled devices and forward device data to the specified third-party server. This data is forwarded in the JASON format.

**Note**

The following WiNG access points support BLE data forwarding: AP7632, AP7662

Before enabling BLE data export, ensure that the APs' Bluetooth radio is active and the mode is set to 'le-sensor'. For more information on configuring the Bluetooth settings on the AP's profile/device context, see [interface-config-bluetooth-instance](#) on page 1155.

After configuring the policy, in the RF Domain context,

- use the BLE data export policy. For more information, see [use \(rf-domain-config-mode\)](#) on page 481.
- use a sensor policy to define the interval at which data is forwarded. For more information, see [use \(rf-domain-config-mode\)](#) on page 481.

*Supported in the following platforms:*

- Access Points — AP7612, AP7632, AP7662, AP8432, AP8533
- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Note**

Not supported on AP505 and AP510.

*Syntax*

```
ble-data-export-policy <POLICY-NAME>
```

*Parameters*

```
ble-data-export-policy <POLICY-NAME>
```

<POLICY-NAME> Specify the policy name. If a BLE data export policy with the specified name does not exist, it is created.

**Note:**

The name should not exceed 32 characters in length.

*Examples*

```
NOC-NX9500 (config) #ble-data-export-policy test
NOC-NX9500 (config-ble-data-export-policy-test) #?
Ble Data Export Policy Mode commands:
  no      Negate a command or set its defaults
  rest    Configure the url to send the real time RSSI feed to

  clrscr  Clears the display screen
  commit  Commit all changes made in this session
  do      Run commands from Exec mode
  end     End current mode and change to EXEC mode
  exit    End current mode and down to previous mode
  help    Description of the interactive help system
  revert  Revert changes
  service Service Commands
  show    Show running system information
  write   Write running configuration to memory or terminal

NOC-NX9500 (config-ble-data-export-policy-test) #
```

*Related Commands*

|                       |  |
|-----------------------|--|
| <b>no</b> on page 609 | Removes an existing BLE data export policy |
|-----------------------|--|

*rest (ble-data-export-commands)*

Configures the third-party, BLE-locationing server's URL. This is the external resource to which WiNG APs forward BLE data (UUID, RSSI, etc.) using the REST API. The data is forwarded in the JASON format.

**Syntax**

```
rest <URL>
```

**Parameters**

```
rest <URL>
```

rest <URL>

Configures the third-party server's URL

- <URL> – Enter the URL. This is the location of the resource to which WiNG APs send real-time RSSI feeds.

**Examples**

```
ap8432-070235 (config-ble-data-export-policy-test) #rest https://test.com/12/
ap8432-070235 (config-ble-data-export-policy-test) #show context
ble-data-export-policy test
  rest https://test.com/12/
ap8432-070235 (config-ble-data-export-policy-test) #
```

The following example shows the configurations will have to configure the following parameters to enable BLE data forwarding:

- 1 On the WiNG AP's profile/device context, configure the following Bluetooth parameters:

```
ap8432-070235(config-profile-test-if-bluetooth1)#mode le-sensor
ap8432-070235(config-profile-test-if-bluetooth1)#no shutdown
ap8432-070235(config-profile-test-if-bluetooth1)#show context
interface bluetooth1
 no shutdown
 mode le-sensor
ap8432-070235(config-profile-test-if-bluetooth1)#
```

This enables the AP as a BLE sensor.

- 2 On the APs' controller,
- a Configure a BLE data export policy, pointing to the external, third-party, REST end-point.

```
NOC-NX9500(config-ble-data-export-policy-test)#rest https://test.com/12/
```

- b Configure a sensor policy.

```
NOC-NX9500((config-sensor-policy-test)#rssi-interval-duration 30
```

- c Navigate to the BLE-enabled, WiNG AP's RF Domain context and:

- Use the BLE data export policy, configured in step 2a.

```
NOC-NX9500(config-rf-domain-ble)#use ble-data-export-policy test
```

This enables BLE data forwarding to the external, third-party server specified in the policy.

- Use the sensor policy, configured in step 2b.

```
NOC-NX9500(config-rf-domain-ble)#use sensor-policy test
```

When applied, BLE data is forwarded at the interval specified in the sensor policy.

**Related Commands**

|   |  |
|---|--|
| <a href="#">no (ble-data-export-commands)</a> on page 210 | Removes the REST endpoint URL configuration        |
| <a href="#">sensor-policy</a> on page 497                 | Documents the Sensor policy configuration commands |

*no (ble-data-export-commands)*

Removes the BLE data export policy settings

**Syntax**

```
no rest
```

**Parameters**

```
no rest
```

|         |   |
|---------|---|
| no rest | Removes the REST API endpoint's URL (in this case it is the third-party locationing server) |
|---------|---|

## Examples

The following example shows the BLE Data Export policy 'test' settings before the 'no' command is executed:

```
ap8432-070235 (config-ble-data-export-policy-test)#show context
ble-data-export-policy test
  rest https://test.com/12/
ap8432-070235 (config-ble-data-export-policy-test)#
ap8432-070235 (config-ble-data-export-policy-test)#no rest
```

The following example shows the BLE Data Export policy 'test' settings after the 'no' command was executed:

```
ap8432-070235 (config-ble-data-export-policy-test)#show context
ble-data-export-policy test
ap8432-070235 (config-ble-data-export-policy-test)#
```

## bonjour-gw-discovery-policy

Bonjour is Apple's zero-configuration networking (Zeroconf) implementation. Bonjour enables automatic IP address assignment, name to address resolution, and service discovery without having to configure a DHCP server, DNS server, and Directory server. When configured and applied on a WLAN, the Bonjour Gateway Discovery policy queries for and locates Bonjour devices (printers, computers, file-sharing servers, etc.) and services these computers provide over a local network. Bonjour works only within a single broadcast domain. However, with a special DNS configuration, it can be extended to find services across broadcast domains.

Use this command to configure a Bonjour GW Discovery policy. The policy defines a list of services clients can discover across subnets. A maximum of 8 (eight) policies can be created on access points, wireless controllers, or service platforms.

When configured and applied, this feature enables Bonjour services on local and tunneled VLANs.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
bonjour-gw-discovery-policy <POLICY-NAME>
```

### Parameters

```
bonjour-gw-discovery-policy <POLICY-NAME>
```

|               |  |
|---------------|--|
| <POLICY-NAME> | <p>Specify the Bonjour GW Discovery policy name. If the policy does not exist, it is created. In the Bonjour GW Discovery policy configuration mode, use the allow-service keyword to configure the services that the Bonjour gateway is allowed to discover. A maximum of 16 (sixteen) service rules can be created. Optionally, you can restrict this facility for users on specific VLANs. To do so, specify the VLAN IDs.</p> <p>Execute the <code>bonjour-gw-forwarding-policy</code> command to enable forwarding of Bonjour service responses across VLANs.</p> <p>To associate a Bonjour GW Discovery policy with a WLAN, in the WLAN configuration mode, execute the following command: <code>use &gt; bonjour-gw-discovery-policy &gt; &lt;POLICY-NAME&gt;</code>. For more information, see <a href="#">use (wlan-config-mode)</a> on page 573.</p> <p>To associate a Bonjour GW Discovery policy with a VLAN, in the interface VLAN configuration mode, execute the following command: <code>use &gt; bonjour-gw-discovery-policy &gt; &lt;POLICY-NAME&gt;</code>. For more information, see <a href="#">use</a> on page 1057.</p> <p>To associate a Bonjour GW Discovery policy with a user role, in the role-policy - user-role - configuration mode, execute the following command: <code>use &gt; bonjour-gw-discovery-policy &gt; &lt;POLICY-NAME&gt;</code>. For more information, see <a href="#">use</a> on page 1641.</p> |
|---------------|--|

Examples

```
nx9500-6C8809(config)#bonjour-gw-discovery-policy TestPolicy
nx9500-6C8809(config-bonjour-gw-discovery-policy-TestPolicy)#?
commands:
  allow-service  Allow Bonjour Service on local or tunneled vlan,Optionally
                  VLAN IDs can be given so service will be discovered for those
                  vlan only
  no             Negate a command or set its defaults

  clrscr        Clears the display screen
  commit        Commit all changes made in this session
  do            Run commands from Exec mode

|--------------------------------|---|

*allow-service*

Enables discovery of Bonjour devices and the services they provide on Local or Tunneled VLANs

Syntax

```
allow-service <BONJOUR-SERVICE-NAME> [local|tunneled]
allow-service <BONJOUR-SERVICE-NAME> local {instance-name contains <WORD>}
({service-vlans <WORD>})
allow-service <BONJOUR-SERVICE-NAME> tunneled {instance-name contains <WORD>}
```

Parameters

```
allow-service <BONJOUR-SERVICE-NAME> local {instance-name contains <WORD>}
({service-vlans <WORD>})
```

|                                      |  |
|--------------------------------------|--|
| allow-service <BONJOUR-SERVICE-NAME> | <p>Configures the services that can be discovered by the Bonjour gateway. And also configures the VLANs on which the selected services can be discovered.</p> <ul style="list-style-type: none"><li>&lt;BONJOUR-SERVICE-NAME&gt; – You can either select the Bonjour services from a set of system-provided, pre-defined Apple services, or use an existing alias to define a service not available in the predefined list.</li></ul> <p>The predefined Apple services available are: Afp, AirPlay, AirPort, AirPrint, AirTunes, AppleTimeMachine, Chromecast, Daap, HomeSharing, Printer, and Scanner.</p> <p>Use the &lt;WORD&gt; keyword to define a service not included in the system-provided, pre-defined list. Ensure this device is registered with the Multicast DNS Responder (mDNSResponder).</p>  |
| local                                | Select to enable the discovery of the selected Bonjour Services on the local VLAN  |
| instance-name contains <WORD>        | <p>Optional. Specifies the selected Bonjour service’s instance name. When specified, the Bonjour service discovery queries contain the instance name of the service to be discovered.</p> <p>This option is useful especially in large distributed, enterprise networks. Use it to create different instances of a Bonjour service for the different organizations or departments (VLANs) within your network. Creating instances allows you to advertise specific service instances for a specific set of VLANs, instead of advertising top-level Bonjour Services to various allocated VLAN(s).</p> <ul style="list-style-type: none"><li>contains &lt;WORD&gt; – Specify the instance name. You can either directly specify the string value to be used as a match criteria, or use a string alias (for example, \$BONJOUR-STRING) to identify the string to match. If using a string alias, ensure that it is existing and configured. For information on configuring a string alias, see <a href="#">alias</a> on page 163.</li></ul> |
| service-vlans <WORD>                 | <p>Optional. Configures a VLAN or a list of VLANs on which the selected service is discoverable. When specified, Bonjour discovery queries are delivered to all clients on the specified VLANs. Applicable only if enabling Bonjour Services discovery on local VLANs.</p>   |

```
allow-service <BONJOUR-SERVICE-NAME> tunneled {instance-name contains <WORD>}
```

|                                      |   |
|--------------------------------------|---|
| allow-service <BONJOUR-SERVICE-NAME> | <p>Configures the services that can be discovered by the Bonjour gateway. And also configures the VLANs on which the selected services can be discovered.</p> <ul style="list-style-type: none"> <li>&lt;BONJOUR-SERVICE-NAME&gt; – You can either select the Bonjour Services from a set of system-provided, pre-defined Apple services, or use an existing alias to define a service not available in the predefined list.</li> </ul> <p>The predefined Apple services available are: Afp, AirPlay, AirPort, AirPrint, AirTunes, AppleTimeMachine, Chromecast, Daap, HomeSharing, Printer, and Scanner.</p> <p>Use the &lt;WORD&gt; keyword to define a service not included in the system-provided, predefined list.</p>   |
| tunneled                             | Select to enable the discovery of the selected Bonjour Services on tunneled VLANs   |

You can either directly specify the string value to be used as a match criteria, or use a string alias (for example, \$BONJOUR-STRING) to identify the string to match. If using a string alias, ensure that it is existing and configured. For information on configuring aliases, see <a href="#">alias</a> on page 163.</li> </ul> |

### Examples

```

nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#allow-service Afp local
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#allow-service Printer lo
cal instance-name contains $Bonjour_Service service-vlans 1,2
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#show context
bonjour-gw-discovery-policy test
  allow-service Printer local service-vlans 1-2 instance-name contains $Bonjour_Service
  allow-service Afp local
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#

```

Following example configures the string alias named \$Bonjour\_Service:

```

nx9500-6C8809(config)#alias string $Bonjour_Service admin
nx9500-6C8809(config)#commit
nx9500-6C8809(config)#show context include-factory | include alias string
alias string $Bonjour_Service admin
nx9500-6C8809(config)#

```

### Related Commands

|                                |  |
|--------------------------------|--|
| <a href="#">no</a> on page 609 | Removes or modifies this Bonjour Gateway Discovery Policy settings |
|--------------------------------|--|

*no*

Removes or modifies the Bonjour Gateway Discovery policy settings

**Syntax**

```
no allow-service <BONJOUR-SERVICE-NAME> [local|tunneled] {service-vlans <WORD>}
```

**Parameters**

```
no allow-service <BONJOUR-SERVICE-NAME> [local|tunneled] {service-vlans <WORD>}
```

|                 |   |
|-----------------|---|
| no <parameters> | Removes allow-service rules in the selected Bonjour GW Discovery policy, based on the parameters passed |
|-----------------|---|

**Examples**

The following example shows the Bonjour GW Discovery policy 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#show context
bonjour-gw-discovery-policy test
  allow-service Printer local service-vlans 1-2 instance-name contains $Bonjour_Service
  allow-service Afp local
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#
nx9500-6C8809(config-bonjour-gw-discovery-policy-test1)#no allow-service Afp local
```

The following example shows the Bonjour GW Discovery policy 'test' settings after the 'no' command was executed:

```
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#show context
bonjour-gw-discovery-policy test
  allow-service Printer local service-vlans 1-2 instance-name contains $Bonjour_Service
nx9500-6C8809(config-bonjour-gw-discovery-policy-test)#
```

**bonjour-gw-forwarding-policy**

Configures a Bonjour GW Forwarding policy. When configured and applied on the controller, the policy defines the service VLANs (the VLANs on which Bonjour services are running) and client VLANs where clients are present. All Bonjour responses from service VLANs are forwarded to client VLANs. A maximum of 2 (two) policies can be created on a wireless controller or service platform. And only 1 (one) policy can be created on an access point.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
bonjour-gw-forwarding-policy <POLICY-NAME>
```

**Parameters**

```
bonjour-gw-forwarding-policy <POLICY-NAME>
```

|               |   |
|---------------|---|
| <POLICY-NAME> | <p>Specify the Bonjour GW Forwarding policy name. If the policy does not exist, it is created.</p> <p>To receive Bonjour service responses from specific VLANs, specify the VLAN IDs. In the Bonjour GW Forwarding policy configuration mode, provide a list of VLAN IDs from which Bonjour responses can be received (format: 10-20, 25, 30-35). And then specify the list of client VLANs that can access Bonjour services.</p> <p>Execute the <code>bonjour-gw-discovery-policy</code> command to define the Bonjour services allowed on local and tunneled VLANs.</p> <p>To associate a Bonjour GW Forwarding policy with a device or profile, in the profile/device configuration mode, execute the <code>use &gt; bonjour-gw-forwarding-policy &gt; &lt;POLICY-NAME&gt;</code> command. For more information, see <a href="#">use (profile/device-config-mode-commands)</a> on page 1251.</p> |
|---------------|---|

### Examples

```

nx9500-6C8809(config)#bonjour-gw-forwarding-policy test
nx9500-6C8809(config-bonjour-gw-forwarding-policy-test)#?
(config-bonjour-gw-forwarding-policy) commands:
  forward-bonjour-response  Forwards bonjour service response across vlans

## bonjour-gw-query-forwarding-policy

Configures a Bonjour GW Query Forwarding policy and enters its configuration mode. When created and applied, this policy enables forwarding of Bonjour queries across VLANs.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
bonjour-gw-query-forwarding-policy <POLICY-NAME>
```

Parameters

|   |  |
|---|--|
| <code>bonjour-gw-query-forwarding-policy &lt;POLICY-NAME&gt;</code> |  |
| <POLICY-NAME>   | <p>Specify the Bonjour GW Query Forwarding policy name. If the policy does not exist, it is created.</p> <p>In the Bonjour GW Query Forwarding policy configuration mode, specify the 'from' and 'to' VLAN(s). The from-vlans option configures the VLAN(s) that are the source of the Bonjour queries. The to-vlans option configures the destination VLAN(s) that can access the Bonjour queries.</p> <p>To associate a Bonjour GW Query Forwarding policy with a device or profile, in the profile/device configuration mode, execute the</p> <pre>use &gt; bonjour-gw-query-forwarding-policy &gt; &lt;POLICY-NAME&gt;</pre> <p>command. For more information, see <a href="#">use (profile/device-config-mode-commands)</a> on page 1251.</p> |

Examples

captive-portal

Configures a captive portal policy and enters its configuration mode. Once created and configured, use the captive portal policy in the WLAN context, and in the device/profile contexts of the access point or controller hosting the captive portal server.

A captive portal is a browser-based authentication mechanism that forces unauthenticated users to a web page. Captive portals capture and re-direct a wireless user's web-browser session to a captive portal login page where the user must enter valid credentials to access the wireless network. Once logged into the captive portal, additional *Acknowledgment*, *Agreement*, *Welcome*, *No Service* and *Fail* customized pages enhance screen flow and user experience.

Captive portals are recommended for providing guests or visitors authenticated access to network resources when 802.1X EAP is not a viable option. Captive portal authentication does not provide end-user data encryption, but it can be used with static WEP, WPA-PSK or WPA2-PSK encryption.

Authentication for captive portal access requests is performed using a username and password pair, authenticated by an integrated RADIUS server. Authentication for private network access is conducted either locally on the requesting wireless client, or centrally at a data center.

Captive portals use a Web provisioning tool to create guest user accounts directly on the controller, service platform, or access point. The connection medium defined for the Web connection is either HTTP or HTTPS. Both HTTP and HTTPS use a request and response procedure to disseminate information to and from requesting wireless clients.

### Syntax

```
captive-portal <CAPTIVE-PORTAL-NAME>
```

### Parameters

```
captive-portal <CAPTIVE-PORTAL-NAME>
```

|                       |   |
|-----------------------|---|
| <CAPTIVE-PORTAL-NAME> | Specify the captive portal name. If a captive portal with the specified name does not exist, it is created. |
|-----------------------|---|

### Examples

```
nx9500-6C8809(config)#captive-portal test
nx9500-6C8809(config-captive-portal-test)#?
Captive Portal Mode commands:
  access-time           Allowed access time for the client. Used when
                        there is no session time in radius response
  access-type           Access type of this captive portal
  accounting            Configure how accounting records are created for
                        this captive portal policy
  bypass               Bypass captive portal
  connection-mode       Connection mode for this captive portal
  custom-auth           Custom user information
  data-limit            Enforce data limit for clients
  frictionless-onboarding Register the client MAC address at ExtremeGuest
                        on redirection
  inactivity-timeout    Inactivity timeout in seconds. If a frame is not
                        received from client for this amount of time,
                        then current session will be removed
  ipv6                 Internet Protocol version 6 (IPv6)
  localization          Configure the FQDN address to get the
                        localization parameters for the client
  logout-fqdn          Configure the FQDN address to logout the session
                        from client
  no                   Negate a command or set its defaults
  oauth                OAuth 2.0 authentication configuration
  php-helper           Configure the captive portal to use a server for
                        help with php
  post-authentication-vlan Configure post authentication vlan for captive
                        portal users
  radius-vlan-assignment Enable radius vlan assignment for captive portal
                        users
  redirection           Configure connection redirection parameters
  report-loyalty-application Report customer loyalty application presence in
                        clients
  server               Configure captive portal server parameters
```

|  |  |
|--|--|
| simultaneous-users                         | Particular username can only be used by a certain number of MAC addresses at a time  |
| terms-agreement                            | User needs to agree for terms and conditions   |
| use  | Set setting to use   |
| webpage                                    | Configure captive portal webpage parameters  |
| webpage-auto-upload                        | Enable automatic upload of internal and advanced webpages  |
| webpage-location                           | The location of the webpages to be used for authentication. These pages can either be hosted on the system or on an external web server. |
| welcome-back                               | Welcome back page settings   |
| clrscr                                     | Clears the display screen  |
| commit                                     | Commit all changes made in this session  |
| do   | Run commands from Exec mode  |
| end  | End current mode and change to EXEC mode   |
| exit                                       | End current mode and down to previous mode   |
| help                                       | Description of the interactive help system   |
| revert                                     | Revert changes   |

### captive-portal-mode-commands

The following table summarizes captive portal configuration mode commands:

**Table 7: Captive-Portal-Mode Commands**

| Command                                    | Description   |
|--|---|
| <b>access-time</b> on page 221             | Defines a client's access time. It is used when no session time is defined in the RADIUS response.  |
| <b>access-type</b> on page 221             | Configures a captive portal's access type   |
| <b>accounting</b> on page 222              | Enables a captive portal's accounting records   |
| <b>bypass</b> on page 223                  | Enables bypassing of captive portal detection requests  |
| <b>connection-mode</b> on page 224         | Configures a captive portal's connection mode   |
| <b>custom-auth</b> on page 225             | Configures custom user information  |
| <b>data-limit</b> on page 225              | Enforces data limit on captive portal clients   |
| <b>frictionless-onboarding</b> on page 226 | Enables wireless clients, associated with guest WLANs, to self-register with the ExtremeGuest server.   |
| <b>inactivity-timeout</b> on page 229      | Defines an inactivity timeout in seconds  |
| <b>ipv6</b> on page 229                    | Configures the IPv6 address of the internal captive portal server   |
| <b>localization</b> on page 230            | Configures an FQDN address string that enables the client to receive localization parameters. This command also allows the configuration of a response message. |

**Table 7: Captive-Portal-Mode Commands (continued)**

| Command   | Description   |
|---|---|
| <a href="#">logout-fqdn</a> on page 232   | Clears the logout FQDN address  |
| <a href="#">no</a> on page 253  | Reverts the selected captive portal's settings or resets settings to default  |
| <a href="#">oauth</a> on page 232   | Enables OAuth-based authentication support on the captive portal. When enabled, OAuth allows captive-portal users to sign in to guest WLANs using their Facebook or Google credentials. |
| <a href="#">php-helper</a> on page 234  | Configures a PHP helper to serve the captive portal's PHP splash pages to guest users using social-media to login to the captive portal.  |
| <a href="#">post-authentication-vlan</a> on page 235  | Assigns a post authentication RADIUS VLAN for this captive portal's users   |
| <a href="#">radius-vlan-assignment</a> on page 236  | Assigns a RADIUS VLAN for this captive portal   |
| <a href="#">redirection</a> on page 237   | Enables redirection of client connections to specified destination ports  |
| <a href="#">report-royalty-application</a> on page 237                                      | Enables detection of captive portal client's loyalty application presence and stores this information in the captive portal's user database   |
| <a href="#">server</a> on page 238  | Configures the captive portal server settings   |
| <a href="#">simultaneous-users</a> on page 240  | Specifies a username used by a MAC address pool   |
| <a href="#">terms-agreement</a> on page 241   | Enforces the user to agree to terms and conditions (included in login page) for captive portal access   |
| <a href="#">use (captive-portal-config-mode)</a> on page 242                                | Associates a AAA policy and a DNS whitelist with a captive portal   |
| <a href="#">webpage</a> on page 243   | Configures captive portal Web page settings   |
| <a href="#">webpage-auto-upload</a> on page 251   | Enables automatic upload of advanced Web pages on a captive portal  |
| <a href="#">webpage-location</a> on page 252  | Specifies the location of Web pages used for captive portal authentication  |
| <a href="#">welcome-back</a> on page 252  | Enables the provision of direct Internet access to once-registered, captive-portal guest users on subsequent log-ins  |
| <a href="#">configuring-device-registration-with-dynamic-vlan-assignment</a> on page 255    | Provides the configuration details required to enable device registration with dynamic VLAN assignment in a multi-vendor environment.   |
| <a href="#">configuring WeChat Wi-Fi hotspot support in WiNG captive portal</a> on page 257 | Provides configuration details required to enable WeChat Wi-Fi hotspot support in WiNG captive portal.  |
| <a href="#">configuring ExtremeGuest captive portal</a> on page 259                         | Provides the basic configurations required to deploy an <i>ExtremeGuest</i> setup   |

**access-time**

Defines the permitted access time for a client. It is used when no session time is defined in the RADIUS response.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
access-time <10-10080>
```

**Parameters**

```
access-time <10-10080>
```

<30-10080> Defines the access time allowed for a wireless client from 10 - 10080 minutes. The default is 1440 minutes.

**Examples**

```
nx9500-6C8809(config-captive-portal-test)#access-time 35
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
  access-time 35
nx9500-6C8809(config-captive-portal-test)#
```

**Related Commands**

|    |   |
|----|---|
| no | Reverts to the default permitted access time (1440 minutes) |
|----|---|

**access-type**

Defines the captive portal's access type. The authentication scheme configured here is applied to wireless clients requesting captive portal guest access to the WiNG network.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
access-type [custom-auth-radius|logging|no-auth|radius|registration]
```

**Parameters**

```
access-type [custom-auth-radius|logging|no-auth|radius|registration]
```

|                    |   |
|--------------------|---|
| custom-auth-radius | Specifies the custom user information used for authentication (RADIUS lookup of given information, such as name, e-mail address, telephone, etc.). When configured, accessing clients are required to provide a 1-32 character lookup data string used to authenticate their credentials. When selecting this option, use the custom-auth command to configure the required user information. |
| logging            | Enables logging of user access details.   |

|              |  |
|--------------|--|
| no-auth      | Defines no authentication required for a guest. Requesting clients are redirected to the captive portal Welcome page without authentication.   |
| radius       | Enables RADIUS authentication for wireless clients. A requesting client's user credentials require authentication before access to the captive portal is permitted. This is the default setting.   |
| registration | Enables captive portal's clients to self register. When enabled, a requesting client's user credentials require authentication locally or through social media credential exchange and validation.<br>If enabled, use the <b>webpage &gt; internal &gt; registration &gt; field</b> command to customize the registration page. If not customized, the default, built-in registration Web page is displayed. |

### Examples

```

nx9500-6C8809(config-captive-portal-test)#access-type logging
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
  access-type logging
  access-time 35
nx9500-6C8809(config-captive-portal-test)#

```

### Related Commands

|           |   |
|-----------|---|
| <b>no</b> | Removes the captive portal access type or reverts to default (radius) |
|-----------|---|

## accounting

Enables support for accounting messages for this captive portal

When enabled, accounting for clients entering and exiting the captive portal is initiated. Accounting is the method of collecting and sending security server information for billing, auditing, and reporting user data. This data includes information, such as start and stop times, executed commands (such as PPP), number of packets and number of bytes transmitted etc. Accounting enables tracking of captive portal services consumed by clients.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

accounting [radius|syslog]
accounting radius
accounting syslog host <IP/HOSTNAME> {port <1-65535>} {proxy-mode [none|through-
controller|through-rf-domain-manager]}

```

### Parameters

```

accounting radius

```

|   |   |
|---|---|
| radius  | Enables support for RADIUS accounting messages. When enabled, this option uses an external RADIUS resource for AAA accounting. This option is disabled by default.  |
| <code>accounting syslog host &lt;IP/HOSTNAME&gt; {port &lt;1-65535&gt;} {proxy-mode [none through-controller through-rf-domain-manager]}</code> |   |
| syslog host <IP/HOSTNAME>   | <p>Enables support for syslog accounting messages. When enabled, data relating to wireless client usage of remote access services is logged on the specified external syslog resource. This information assists in differentiating between local and remote users. Remote user information can be archived to an external location for periodic network and user administration. This option is disabled by default.</p> <ul style="list-style-type: none"> <li>host &lt;IP/HOSTNAME&gt; – Specifies the destination where accounting messages are sent. Specify the destination's IP address or hostname.</li> </ul> |
| port <1-65535>  | <p>Optional. Specifies the syslog server's listener port</p> <ul style="list-style-type: none"> <li>&lt;1-65535&gt; – Specify the UDP port from 1- 65535. The default is 514.</li> </ul>  |
| proxy-mode [none] through-controller  through-rf-domain-manager]  | <p>Optional. Specifies the mode of proxying the syslog server</p> <ul style="list-style-type: none"> <li>none – Accounting messages are sent directly to the syslog server</li> <li>through-controller – Accounting messages are sent through the controller configuring the device</li> <li>through-rf-domain-manager – Accounting messages are sent through the local RF Domain manager</li> </ul>  |

### Examples

```

nx9500-6C8809(config-captive-portal-test)#accounting syslog host 172.16.10.13 port 1
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
access-type logging
access-time 35
accounting syslog host 172.16.10.13 port 1
nx9500-6C8809(config-captive-portal-test)#

```

### Related Commands

|    |   |
|----|---|
| no | Disables accounting records for this captive portal |
|----|---|

### bypass

Enables bypassing of captive portal detection requests from wireless clients

Certain devices, such as Apple iOS devices send CNA (*Captive Network Assistant*) requests to detect existence of captive portals. When enabled, the bypass option does not allow CNA requests to be redirected to the captive portal pages.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
bypass captive-portal-detection
```

## Parameters

```
bypass captive-portal-detection
```

|                                 |  |
|---------------------------------|--|
| bypass captive-portal-detection | Bypasses captive portal detection requests |
|---------------------------------|--|

## Examples

```
rfs4000-229D58(config-captive-portal-test)#bypass captive-portal-detection
rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
bypass captive-portal-detection
rfs4000-229D58(config-captive-portal-test)#
```

## Related Commands

|    |   |
|----|---|
| no | Disables bypassing of captive portal detection requests |
|----|---|

**connection-mode**

Configures a captive portal's mode of connection to the Web server. HTTP uses plain unsecured connection for user requests. HTTPS uses an encrypted connection to support user requests.

Both HTTP and HTTPS use the same URI (*Uniform Resource Identifier*), so controller and client resources can be identified. However, the use of HTTPS is recommended, as it affords controller and client transmissions some measure of data protection HTTP cannot provide.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
connection-mode [http|https]
```

## Parameters

```
connection-mode [http|https]
```

|       |  |
|-------|--|
| http  | Sets HTTP as the default connection mode. This is the default setting.   |
| https | Sets HTTPS as the default connection mode  |
|       | <b>Note:</b> HTTPS is a more secure version of HTTP, and uses encryption while sending and receiving requests. |

## Examples

```
nx9500-6C8809(config-captive-portal-test)#connection-mode https
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
access-type logging
access-time 35
connection-mode https
```

```
accounting syslog host 172.16.10.13 port 1
nx9500-6C8809(config-captive-portal-test)#
```

#### Related Commands

|           |   |
|-----------|---|
| <b>no</b> | Removes this captive portal's connection mode |
|-----------|---|

### custom-auth

Configures custom user information

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
custom-auth info <LINE>
```

#### Parameters

```
custom-auth info <LINE>
```

|                          |   |
|--------------------------|---|
| <b>info &lt;LINE&gt;</b> | <p>Configures information used for RADIUS lookup when <i>custom-auth</i> <i>RADIUS</i> access type is configured</p> <ul style="list-style-type: none"> <li>• &lt;LINE&gt; – Guest data needs to be provided. Specify the <i>name</i>, <i>e-mail address</i>, and <i>telephone number</i> of the user.</li> </ul> |
|--------------------------|---|

#### Examples

```
nx9500-6C8809(config-captive-portal-test)#custom-auth info bob bob@examplecompany.com
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
access-type logging
access-time 35
custom-auth info bob bob@examplecompany.com
connection-mode https
accounting syslog host 172.16.10.13 port 1
nx9500-6C8809(config-captive-portal-test)#
```

#### Related Commands

|           |   |
|-----------|---|
| <b>no</b> | Removes custom user information configured with this captive portal |
|-----------|---|

### data-limit

Enforces data transfer limits on captive portal clients. This feature enables the tracking and logging of user usage. Users exceeding the allowed bandwidth are restricted from the captive portal.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
data-limit <1-102400> {action [log-and-disconnect|log-only]}
```

## Parameters

|   |   |
|---|---|
| <code>data-limit &lt;1-102400&gt; {action [log-and-disconnect log-only]}</code> |   |
| <code>data-limit &lt;1-102400&gt;</code>  | <p>Sets a captive portal client's data transfer limit in megabytes. This limit is applicable for both upstream and downstream data transfer.</p> <ul style="list-style-type: none"> <li><code>&lt;1-102400&gt;</code> – Specify a value from 1 - 102400 MB.</li> </ul>  |
| <code>action [log-and-disconnect  log-only]</code>                              | <p>Optional. Specifies the action taken when a client exceeds the configured data limit. The options are:</p> <ul style="list-style-type: none"> <li><code>log-and-disconnect</code> – When selected, an entry is added to the log file any time a captive portal client exceeds the data limit, and the client is disconnected.</li> <li><code>log-only</code> – When selected, an entry is added to the log file any time a captive portal client exceeds the data limit. the client, however, remains connected to the captive portal. This is the default setting.</li> </ul> |

## Examples

```
rfs4000-229D58(config-captive-portal-test)#data-limit 200 action log-and-disconnect
rfs4000-229D58(config-captive-portal-test)#
rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
  data-limit 200 action log-and-disconnect
rfs4000-229D58(config-captive-portal-test)#
```

## Related Commands

|                 |   |
|-----------------|---|
| <code>no</code> | Removes data limit enforcement for captive portal clients |
|-----------------|---|

**frictionless-onboarding**

Enables wireless clients, associated with guest WLANs, to self-register with the ExtremeGuest server. In other words, this feature enables frictionless on-boarding of guest users to the ExtremeGuest server.

It also provides an integration API, as a means of on-boarding guest users through a loyalty application.

**Note**

To enable this feature, in the Guest WLAN (using this captive-portal), enable MAC authentication and set the registration mode to 'device'. For information on enabling frictionless-onboarding, see [Examples](#) on page 226.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
frictionless-onboarding
```

## Parameters

```
None
```

## Examples

The following configurations are required to enable frictionless on-boarding of guest users to the ExtremeGuest server:

1 Create a captive-portal:

```
NX9500-EGuest(config)#captive-portal EGuest
NX9500-EGuest(config-captive-portal-EGuest)#
```

a Set the *access-type* as registration..

```
NX9500-WC-EGuest(config-captive-portal-EGuest)#access-type registration
```

This sets the guest user access and authentication mode to self-registration.

b Enable *frictionless-onboarding*.

```
NX9500-WC-EGuest(config-captive-portal-EGuest)#frictionless-onboarding
```

This enables auto-redirection of guest users to the ExtremeGuest server, where the user's MAC address is registered. Registered devices, on subsequent logins, are provided immediate access without interaction with Splash pages.

c Configure *Localization* URL..

```
NX9500-WC-EGuest(config-captive-portal-test)#localization fqdn local.guestaccess.com
```

When configured, the defined URL is triggered from a mobile application to derive location information from the wireless network so that an application can be localized to a particular store or region.

```
NX9500-WC-EGuest(config-captive-portal-Guest)#show context
captive-portal EGuest
  access-type registration
    webpage internal registration field city type text enable label "City" placeholder
    "Enter City"
    webpage internal registration field street type text enable label "Address"
    placeholder "123 Any Street"
    webpage internal registration field name type text enable label "Full Name"
    placeholder "Enter First Name, Last Name"
    webpage internal registration field zip type number enable label "Zip" placeholder
    "Zip"
    webpage internal registration field via-sms type checkbox enable title "SMS
    Preferred"
    webpage internal registration field mobile type number enable label "Mobile"
    placeholder "Mobile Number with Country code"
    webpage internal registration field age-range type dropdown-menu enable label "Age
    Range" title "Age Range"
    webpage internal registration field email type e-address enable mandatory label
    "Email" placeholder "you@domain.com"
    webpage internal registration field via-email type checkbox enable title "Email
    Preferred"
  frictionless-onboarding
    localization fqdn local.guestaccess.com
NX9500-WC-EGuest(config-captive-portal-Guest)#
```

**Note**

This is an example fqdn URL.

2 Create a WLAN with the following settings:

a Set authentication-type as 'mac'.

```
NX9500-WC-EGuest(config-wlan-EGuest)#authentication-type mac
```

When configured, enables MAC authentication of guest users.

- b Enable device registration.

```
NX9500-WC-EGuest(config-wlan-EGuest)#registration device group-name test expiry-time 300
```

When enabled, guest users' device MAC addresses are registered in the database. Registered devices are provided immediate access on subsequent logins.

- c Set guest-registration as external.

```
NX9500-WC-EGuest(config-wlan-EGuest)#registration external follow-aaa
```

This enables forwarding of guest registration and authentication requests to an external authentication server resource, specified in an AAA policy.

Note, in this scenario, the external resource is the ExtremeGuest server.

Execute the command in the following step to specify the AAA Policy.

- d Apply an AAA Policy to the WLAN.

```
NX9500-WC-EGuest(config-wlan-EGuest)#use aaa-policy guest
```

When applied, registration and authentication requests are forwarded to the authentication server configured in the specified AAA Policy.

#### Note

In the AAA policy, ensure that the authentication server configuration points to the ExtremeGuest server.

- e Enable captive-portal enforcement.

```
NX9500-WC-EGuest(config-wlan-EGuest)#captive-portal-enforcement fall-back
```

When enabled, captive-portal validation is enforced on clients requesting access. Fall-back is an optional parameter that enforces captive-portal authentication only on failure of WLAN authentication.

- f Use the captive-portal configured in Step 1 in the WLAN..

```
NX9500-WC-EGuest(config-wlan-EGuest)#use captive-portal EGuest
NX9500-WC-EGuest(config-wlan-EGuest)#show context
wlan EGuest
  ssid eguest
  bridging-mode local
  encryption-type none
  authentication-type mac
  use captive-portal EGuest
  captive-portal-enforcement fall-back
  registration device group-name test expiry-time 300
NX9500-WC-EGuest(config-wlan-EGuest)#
```

This is the captive-portal used with this WLAN for captive-portal validation of guest users.

#### Related Commands

no on page 253

Disables frictionless-onboarding of guest users to the ExtremeGuest server

**inactivity-timeout**

Defines an inactivity timeout in seconds. If a frame is not received from a client for the specified interval, the current session is terminated.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
inactivity-timeout <60-86400>
```

**Parameters**

```
inactivity-timeout <60-86400>
```

**<60-86400>** Defines the interval for which a captive portal session is kept alive without receiving a frame from the client. The session is automatically terminated once this interval is over.

- **<60-86400>** – Specify a value from 60 - 86400 seconds. The default is 10 minutes or 600 seconds.

**Examples**

```
nx9500-6C8809(config-captive-portal-test)#inactivity-timeout 750
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
access-type logging
access-time 35
custom-auth info bob bob@examplecompany.com
connection-mode https
inactivity-timeout 750
accounting syslog host 172.16.10.13 port 1
nx9500-6C8809(config-captive-portal-test)#
```

**Related Commands**

|           |  |
|-----------|--|
| <b>no</b> | Removes the client inactivity interval configured with this captive portal |
|-----------|--|

**ipv6**

Configures the internal captive portal server's (running on the centralized mode) IPv6 address. If using centralized server mode, use this option to define the controller, service platform, or access point resource's (hosting the captive portal) IPv6 address. For information on configuring the server mode, see [server](#).

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
ipv6 server host <IPv6>
```

**Parameters**

```
ipv6 server host <IPv6>
```

|  |   |
|--|---|
| <code>ipv6 server host &lt;IPv6&gt;</code> | Configures the IPv6 address of the internal captive portal server <ul style="list-style-type: none"> <li>• &lt;IPv6&gt; – Specify the captive portal server's global IPv6 address.</li> </ul> |
|--|---|

### Examples

```
rfs4000-229D58(config-captive-portal-test2)#ipv6 server host 2001:10:10:10:6d:33:fa:8b
rfs4000-229D58(config-captive-portal-test2)#show context
captive-portal test2
access-type OAuth
ipv6 server host 2001:10:10:10:6d:33:fa:8b
OAuth client-id Google TechPubs.printer.google.com
rfs4000-229D58(config-captive-portal-test2)#
```

### Related Commands

## localization

Configures an FQDN address string to get localization parameters for the client. Use this option to add a URL to trigger a one-time redirect on demand. The defined URL is triggered from a mobile application to derive location information from the wireless network so an application can be localized to a particular store or region.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
localization [fqdn <WORD>|response <WORD>]
```

### Parameters

```
localization [fqdn <WORD>|response <WORD>]
```

|  |   |
|--|---|
| <p>localization</p> <p>fqdn &lt;WORD&gt;</p> | <p>Enables localization and configures the related parameters.</p> <p>Configures the FQDN address (for example, local.guestaccess.com) used to obtain localization parameters for a client.</p> <ul style="list-style-type: none"> <li>&lt;WORD&gt; – Specify the FQDN address string. ## logout-fqdn

the Logout FQDN as the FQDN address to logout of the captive portal session from the client (for example, *logout.guest.com*).

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
logout-fqdn <WORD>
```

#### Parameters

```
logout-fqdn <WORD>
```

|                    |  |
|--------------------|--|
| logout-fqdn <WORD> | Configures the FQDN address used to logout <ul style="list-style-type: none"> <li>• &lt;WORD&gt; - Provide the FQDN address (for example, <i>logout.guestaccess.com</i>).</li> </ul> |
|--------------------|--|

#### Examples

```

rfs4000-229D58 (config-captive-portal-test) #logout-fqdn logout.testuser.com

## oauth

Enables OAuth-driven Google and/or Facebook authentication on captive portals that use internal Web pages.

To enable Google and Facebook captive-portal authentication:

- Enforce captive-portal authentication on the WLAN to which wireless-clients associate. For information, see [captive-portal-enforcement](#).
- Set captive-portal Web page location to internal. For more information, see [webpage-location](#).
- Register your captive-portal individually on Google/FaceBook APIs and generate a client-id and client-secret. The client-ids retrieved during registration are the IDs for the WiNG application running

on the access point/controller. The WiNG application uses these client-ids to access the Google and Facebook Auth APIs, and authenticate the guest client on behalf of the user.

If enabling OAuth-driven Google and/or Facebook authentication on the captive portal, use this command to configure the Google/Facebook client-ids. Once enabled, the captive portal landing page, displayed on the client's browser, provides the Facebook and Google login buttons.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
oauth
oauth client-id [facebook|google] <WORD>
```

#### Parameters

oauth

|       |  |
|-------|--|
| oauth | Execute this command without the associated keywords to enable OAuth on this captive-portal. If enabling OAuth, ensure the captive-portal Web page location is configured as advanced or external. |
|-------|--|

```
oauth client-id [facebook|google] <WORD>
```

|  |  |
|--|--|
| oauth client-id [facebook google] <WORD> | <p>Configures the client-ids retrieved from the Google and Facebook API manager portals during registration</p> <ul style="list-style-type: none"> <li>• facebook – Configures the Facebook API client-id (is a 15 digit entity)</li> <li>• google – Configures the Google API client-id (is a 12 digit number) <ul style="list-style-type: none"> <li>• &lt;WORD&gt; – Provide the Facebook/Google client-id.</li> </ul> </li> </ul> <p>If the captive-portal Web page location is advanced or external, and you are enabling OAuth support, you need not configure the client-id. In such a scenario, the client-id is configured through the EGuest server UI and not the WiNG CLI.</p> |
|--|--|

#### Example (User Exec Mode)

```
nx7500-6DCD39(config-captive-portal-test2)#OAuth
nx7500-6DCD39(config-captive-portal-test2)#OAuth client-id Google
xxxxxxxxxxxxx.apps.googleusercontent.com Facebook yyyyyyyyyyyyyyyy
nx7500-6DCD39(config-captive-portal-test2)#show context
captive-portal test2
server host guest.social.com
oauth
oauth client-id Google xxxxxxxxxxxxx.apps.googleusercontent.com Facebook yyyyyyyyyyyyyyyy
nx7500-6DCD39(config-captive-portal-test)#
```

In the above example,

- xxxxxxxxxxxx - Is the 12 digit numeric part of your Google client-id.
- yyyyyyyyyyyyyyy - Is the 15 digit Facebook client-id

#### Related Commands

**no**

Removes all OAuth client identities configured for this captive portal

**php-helper**

Configures a PHP helper to serve the PHP splash pages to guest users logging in to the captive portal using social-media credentials. Configure a PHP helper only if the following criteria are fulfilled:

- OAuth-based authentication is enabled on the captive portal.
- The captive-portal server mode is “self”.
- The access point, hosting the captive-portal server, has low memory space.
- A hotspot server, hosting the captive-portal PHP splash pages, is up and running.

The WiNG software introduces HybridAuth support on captive portals. HybridAuth is an open-source, social-sign on PHP Library. In addition to Google and Facebook, it allows a variety of third-party social authentications, such as *LinkedIn*, *Twitter*, *Live*, *Yahoo*, *OpenID*, etc. However, HybridAuth uses space-consuming PHP splash pages that cannot be loaded on access points with low memory space. These access points can only serve the initial landing page, where guests clicking on a social login button are redirected by the php-helper to a PHP page hosted on the PHP-helper.

To create PHP splash pages, use the splash template configuration tool available on the EGuest (*ExtremeGuest*) dashboard. Upload the generated tar to both the hotspot server and the php helper. Note, the EGuest dashboard can be launched from the WiNG controller (NX9500/NX9600/VX9000) enabled as the EGuest server.

For more information on enabling the EGuest server, see [eguest-server \(VX9000 only\)](#) on page 987.

For more information on configuring an EGuest captive portal, see [configuring ExtremeGuest captive portal](#) on page 259.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
php-helper [controller|domain-manager]
php-helper controller <IP/HOSTNAME> hosting-vlan-interface <0-4096>
php-helper domain-manager <IP/HOSTNAME>
```

**Parameters**

```
php-helper controller <IP/HOSTNAME> hosting-vlan-interface <0-4096>
```

|                                 |   |
|---------------------------------|---|
| php-helper                      | Configures the php-helper parameters  |
| controller <IP/HOSTNAME>        | Configures the controller adopting the captive-portal access point as the php-helper <ul style="list-style-type: none"> <li>• &lt;IP/HOSTNAME&gt; – Specify the adopting controller's IP address or host name.</li> </ul> |
| hosting-vlan-interface <0-4096> | Optional. Configures the VLAN on which the php-helper is reachable <ul style="list-style-type: none"> <li>• &lt;0-4096&gt; – Specify the VLAN hosting the php-helper from 0 - 4096.</li> </ul>                            |

```
php-helper domain-manager <IP/HOSTNAME>
```

|                              |   |
|------------------------------|---|
| php-helper                   | Configures the php-helper parameters  |
| domain-manager <IP/HOSTNAME> | Configures the captive-portal access point's RF Domain manager as the php-helper <ul style="list-style-type: none"> <li>• &lt;IP/HOSTNAME&gt; – Specify the RF Domain manager's IP address or host name.</li> </ul> |

### Examples

To enable php-helper configure the following parameters in the captive-portal context:

```
ap505-13403B(config-captive-portal-php-helper)#oauth
ap505-13403B(config-captive-portal-php-helper)#php-helper controller nx9500-6C8809
ap505-13403B(config-captive-portal-php-helper)#server mode self
ap505-13403B(config-captive-portal-php-helper)#server host cpsocial.extreme.com
```

Note, when configuring the server, specify the server's hostname and not the IP address, because some social media do not allow IP address as a redirect URL.

```
ap505-13403B(config-captive-portal-php-helper)#show running-config captive-portal php-helper
captive-portal php-helper
  server host cpsocial.extreme.com
  php-helper controller nx9500-6C8809
  oauth
  webpage internal registration field city type text enable label "City" placeholder "Enter City"
  webpage internal registration field street type text enable label "Address" placeholder "123 Any Street"
  webpage internal registration field name type text enable label "Full Name" placeholder
--More--
ap505-13403B(config-captive-portal-php-helper)#
```

### post-authentication-vlan

Configures the VLAN that is assigned to this captive portal's users upon successful authentication

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
post-authentication-vlan [<1-4096>|<VLAN-ALIAS>]
```

#### Parameters

```
post-authentication-vlan [<1-4096>|<VLAN-ALIAS>]
```

**post-authentication-vlan [<1-4096>|<VLAN-ALIAS>]** Configures the post authentication VLAN. The VLAN specified here is assigned to this captive portal's users after they have authenticated and logged on to the network. Provide the VLAN ID, or use an existing VLAN alias to identify the post authentication VLAN.

- <1-4096> – Specify the VLAN's number from 1 - 4096.
- <VLAN-ALIAS> – Specify the VLAN alias (should be existing and configured). VLAN alias names begin with a '\$'.

#### Example

```
rfs4000-229D58(config-captive-portal-test)#post-authentication-vlan 1
rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
  post-authentication-vlan 1
rfs4000-229D58(config-captive-portal-test)#
```

#### Related Commands

|           |   |
|-----------|---|
| <b>no</b> | Removes the post authentication RADIUS VLAN assigned to this captive portal's users |
|-----------|---|

- 

### radius-vlan-assignment

Enables assignment of a RADIUS VLAN for this captive portal

When enabled, if the RADIUS server as part of the authentication process returns a client's VLAN-ID in a RADIUS access-accept packet, then all client traffic is forwarded on the post authentication VLAN. If disabled, the RADIUS server's VLAN assignment is ignored and the VLAN configuration defined within the WLAN configuration is used instead. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
radius-vlan-assignment
```

#### Parameters

None

#### Example

```
rfs4000-229D58(config-captive-portal-test)#radius-vlan-assignment
rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
```

```

post-authentication-vlan 1
  radius-vlan-assignment
rfs4000-229D58(config-captive-portal-test)#

```

#### Related Commands

|           |  |
|-----------|--|
| <b>no</b> | Disables assignment of a RADIUS VLAN for this captive portal |
|-----------|--|

## redirection

Configures a list of destination ports (separated by commas, or using a dash for a range) that are taken into consideration when redirecting client connections

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
redirection ports <LIST-OF-PORTS>
```

#### Parameters

```
redirection ports <LIST-OF-PORTS>
```

|                       |   |
|-----------------------|---|
| ports <LIST-OF-PORTS> | Configures destination ports considered for redirecting client connection<br>A maximum of 16 ports can be specified in a comma-separated list.<br>Standard ports 80 and 443 are always considered for client connections regardless of what's entered by the administrator. |
|-----------------------|---|

#### Example

```

rfs4000-229D58(config-captive-portal-test)#redirection ports 1,2,3
rfs4000-229D58(config-captive-portal-test)#show context
captive-portal test
  redirection ports 1-3
rfs4000-229D58(config-captive-portal-test)#

```

#### Related Commands

|           |   |
|-----------|---|
| <b>no</b> | Disables redirection of client connection |
|-----------|---|

## report-royalty-application

Enables detection of captive portal client's usage of a selected (preferred) loyalty application

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
report-loyalty-application {custom-app <APPLICATION-NAME>}
```

#### Parameters

```
report-loyalty-application {custom-app <APPLICATION-NAME>}
```

```
report-loyalty-application {custom-  
app <APPLICATION-NAME>}
```

Reports a captive portal client's loyalty application presence and stores this information in the captive portal's user database. The client's loyalty application detection occurs on the access point to which the client is associated. Retail administrators can use this information to assess whether patrons' loyalty application usage is as per expectation within specific retail environments. This option is disabled by default.

- custom-app <APPLICATION-NAME> – Optional. Uses a custom application definition as match criteria.
- <APPLICATION-NAME> – Specify the custom application name (should be existing and configured). Ensure that the application specified is available and configured. If not, create an application definition. For more information, see [application](#) on page 175.

If no custom application definition is specified, the system uses localization to detect application presence.

#### Examples

```
nx9500-6C8809(config-captive-portal-test)#report-loyalty-application custom-app  
AntiVirus  
  
nx9500-6C8809(config-captive-portal-test)#show context include-factory | include  
report-loyalty-application  
report-loyalty-application custom-app AntiVirus  
nx9500-6C8809(config-captive-portal-test)#
```

#### Related Commands

[no](#) on page 253

Disables detection of customer-loyalty application presence

### server

Configures captive portal server parameters, such as the hostname, IP address, and mode of operation. This is the captive-portal server hosting the captive portal Web pages.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
server [host|mode]  
server host <IP/HOSTNAME>  
server mode [centralized|centralized-controller {hosting-vlan-interface <0-4096>}|self]
```

#### Parameters

```
server host <IP/HOSTNAME>
```

|  |  |
|--|--|
| host <IP/HOSTNAME>   | <p>Configures the internal captive portal server (wireless controller, access point, service platform)</p> <ul style="list-style-type: none"> <li>• &lt;IP/HOSTNAME&gt; – Specify the IPv4/IPv6 address or hostname of the captive portal server.</li> </ul> <p>For centralized-controller mode, the server host should be a virtual hostname and not an IP address.</p> <p>If enabling OAuth (social-media login) on the captive portal, configure the server's hostname and not the IP address. This is because some social media do not allow IP address as redirect-uri. For more information, see <a href="#">oauth</a> and <a href="#">php-helper</a>.</p>                           |
| <pre>server mode [centralized centralized-controller {hosting-vlan-interface &lt;0-4096&gt;} self]</pre> |  |
| mode   | <p>Configures the captive portal server mode. This parameter identifies the device that will capture and redirect a wireless user's Web browser session to a landing page where the user has to provide login credentials in order to access the managed network. The captive portal implementation is very flexible and allows captive portal services to reside anywhere within the WiNG managed network. For example, the capture and redirection can be performed directly by the access points at the edge of the network, centrally on the controllers or service platforms managing the access points, or on dedicated wireless controller deployed within an isolated network.</p> |
| centralized  | <p>Select this option if capture and redirection is provided by a designated wireless controller/service platform on the network defined using an IPv4/IPv6 address or hostname. This dedicated device can either be managing the dependent/independent access points or be a dedicated device deployed over the intermediate network.</p> <p>Ensure the IPv4 address or hostname of the wireless controller performing the capture and redirection is defined in the captive portal policy. And also, that the wireless controller is reachable via MINT.</p>   |

|  |   |
|--|---|
| centralized-controller {hosting-vlan-interface <0-4096>} | <p>Select this option if capture and redirection is on a cluster of wireless controller/service platforms managing dependent/independent access points when redundancy is required. The capture and redirection is provided by one of the controllers in the cluster that is operating as the designated forwarder for the tunneled VLAN. The cluster can be configured as active/active or active/standby as required.</p> <p>If using this option, ensure a non-resolvable virtual hostname is defined in the captive portal policy which is shared between the controllers in the cluster.</p> <ul style="list-style-type: none"> <li>hosting-vlan-interface – Optional. Configures the VLAN where the client can reach the captive-portal server. This option is available only for the centralized-controller mode.</li> <li>&lt;0-4096&gt; – Specify the VLAN number (0 implies the controller is available on the client's VLAN).</li> </ul> |
| self   | <p>Select this option if capture and redirection is provided by the access point that is servicing the captive portal enabled Wireless LAN. This is the default setting.</p> <p>When enabled each remote access point servicing the captive portal enabled WLAN performs the captive portal capture and redirection internally. The WLAN users are mapped to a locally bridged VLAN for which each access point has a SVI defined. The SVI can either have a static or dynamic (DHCP) IPv4 address assigned. The capture, redirection, and presentation of the captive portal pages are performed using the SVI on each access point the wireless device is associated to.</p>  |

### Examples

```

nx9500-6C8809(config-captive-portal-test)#server host 172.16.10.9
nx9500-6C8809(config-captive-portal-test)#show context

### terms-agreement

Enforces the user to agree to terms and conditions (included in the login page) for captive portal access. This feature is disabled by default.

When enabled, the system enforces a previously registered user to re-confirm the terms of agreement, on successive log ins, only if the interval between the last log out and the current log in exceeds the agreement-refresh timeout configured in the WLAN context. For more information on configuring the agreement-refresh timeout value, see [registration](#).

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
terms-agreement
```

#### Parameters

None

#### Examples

```

nx9500-6C8809(config-captive-portal-test)#terms-agreement
nx9500-6C8809(config-captive-portal-test)#show context

simultaneous-users 5
terms-agreement
nx9500-6C8809(config-captive-portal-test)#

```

#### Related Commands

**no** Resets or disables captive portal commands

**use (captive-portal-config-mode)**

Configures a AAA policy and DNS whitelist with this captive portal policy. AAA policies are used to configure authentication and accounting servers for this captive portal. DNS whitelists restrict users to a set of configurable domains on the Internet.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
use [aaa-policy <AAA-POLICY-NAME>|dns-whitelist <DNS-WHITELIST-NAME>]
```

Parameters

```
use [aaa-policy <AAA-POLICY-NAME>|dns-whitelist <DNS-WHITELIST-NAME>]
```

|                                    |   |
|------------------------------------|---|
| aaa-policy <AAA-POLICY-NAME>       | Associates a AAA policy with this captive portal. AAA policies validate user credentials and provide captive portal access to the network. <ul style="list-style-type: none"><li>• &lt;AAA-POLICY-NAME&gt; - Specify the AAA policy name.</li></ul> For more information on AAA policies, see <a href="#">AAA Policy</a> on page 1308.  |
| dns-whitelist <DNS-WHITELIST-NAME> | Associates a DNS whitelist to use with this captive portal. A DNS whitelist defines a set of allowed destination IP addresses. DNS whitelists restrict captive portal access. <ul style="list-style-type: none"><li>• &lt;DNS-WHITELIST-NAME&gt; - Specify the DNS whitelist name.</li></ul> To effectively host captive portal pages on an external Web server, the IP address of the destination Web server(s) should be added to the DNS whitelist.<br>For more information on DNS whitelists, see <a href="#">dns-whitelist</a> . |

Examples

```
nx9500-6C8809(config-captive-portal-test)#use aaa-policy test
nx9500-6C8809(config-captive-portal-test)#use dns-whitelist test
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
access-time 35
custom-auth info bob bob@examplecompany.com

use dns-whitelist test
nx9500-6C8809(config-captive-portal-test)#
```

Related Commands

**no** Removes a DNS Whitelist or a AAA policy from the captive portal

## webpage

Use this command to define the appearance and flow of Web pages requesting clients encounter when accessing a controller, service platform, or access point managed captive portal. Define whether the Web pages are maintained locally or externally to the managing device as well as messages displayed requesting clients.

Configures Web pages displayed when interacting with a captive portal. There are six (6) different pages.

- acknowledgment – This page displays details for the user to acknowledge.
- agreement – This page displays “Terms and Conditions” that a user accepts before allowed access to the captive portal.
- fail – This page is displayed when the user is not authenticated.
- login – This page is displayed when the user connects to the captive portal. It fetches login credentials from the user.
- no-service – This page is displayed when a captive portal user is unable to access the captive portal due unavailability of critical services.
- registration – This page is displayed when users are redirected to a Web page where they have to register in the captive portal’s database.
- welcome – This page is displayed to welcome an authenticated user to the captive portal.

These Web pages, which interact with captive portal users, can be located either on the controller or an external location.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
webpage [external|internal]

```

### Parameters

```
webpage external [acknowledgment|agreement|fail|login {post}|no-service|
registration|welcome] <URL>
```

|                |  |
|----------------|--|
| external       | Indicates Web pages being served are hosted on an external (to the captive portal) server resource   |
| acknowledgment | Indicates the page is displayed for user acknowledgment of details. Users are redirected to this page to acknowledge information provided.   |
| agreement      | Indicates the page is displayed for “Terms & Conditions”<br>The agreement page provides conditions that must be agreed to before captive portal access is permitted.   |
| fail           | Indicates the page is displayed for login failure<br>The fail page asserts authentication attempt has failed, the user is not allowed to access the Internet (using this captive portal) and must provide the correct login information again to access the Internet.  |
| login {post}   | Indicates the page is displayed for getting user credentials. This page is displayed by default. <ul style="list-style-type: none"> <li>• post – Optional. Redirects users to post externally when they during authentication</li> </ul> <p>The login page prompts the user for a username and password to access the captive portal and proceed to either the agreement page (if used) or the welcome page.</p>   |
| no-service     | Indicates the page is displayed when certain critical services are unavailable and the user fails to access the captive portal. The no-service page asserts the captive portal service is temporarily unavailable due to technical reasons. Once the services become available, the captive portal user is automatically connected back to the services available through the captive portal. The possible scenarios are: <ul style="list-style-type: none"> <li>• The RADIUS server (on-board or external) is not reachable and the user cannot be authenticated</li> <li>• The external captive portal server is not reachable</li> <li>• The connectivity between the adopted AP and controller is lost</li> <li>• The external DHCP server is not reachable</li> </ul> <p>To provide this service, enable the following:</p> <ul style="list-style-type: none"> <li>• External captive portal server monitoring.</li> <li>• AAA server monitoring. This enables detection of RADIUS server failure.</li> <li>• External DHCP server monitoring.</li> <li>• AP to controller connectivity monitoring.</li> </ul> <p>For more information on enabling these critical resource monitoring, see <a href="#">service</a>.</p> |
| registration   | Indicates the page is displayed when users are redirected to a Web page where they have to register in the captive portal’s database.<br>Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register.  |

|         |  |
|---------|--|
| welcome | Indicates the page is displayed after a user has been successfully authenticated<br>The welcome page asserts a user has logged in successfully and can access the captive portal.  |
| <URL>   | Indicates the URL to the Web page displayed. Query String: URL can include query tags.<br>Supported Query Tags are:<br>'WING_TAG_CLIENT_IP' - Captive portal client IPv4 address<br>'WING_TAG_CLIENT_MAC' - Captive portal client MAC address<br>'WING_TAG_WLAN_SSID' - Captive portal client WLAN ssid<br>'WING_TAG_AP_MAC' - Captive portal client AP MAC address<br>'WING_TAG_AP_NAME' - Captive portal client AP Name<br>'WING_TAG_RF_DOMAIN' - Captive portal client RF Domain<br>'WING_TAG_CP_SERVER' - Captive portal server address<br>'WING_TAG_USERNAME' - Captive portal authentication username<br>Example:<br>http://cportal.com/policy/login.html?client_ip=WING_TAG_CLIENT_IP&ap_mac=WING_TAG_AP_MAC.<br>Use '&' or '?' character to separate field-value pair.<br>Enter 'ctrl-v' followed by '?' to configure query string |

```
webpage internal [acknowledgment|agreement|fail|login|no-service|registration|welcome]
[description|footer|header|title] <CONTENT>
```

|                |   |
|----------------|---|
| internal       | Indicates the Web pages are hosted on an internal server resource. This is the default setting.   |
| acknowledgment | Indicates the Web page is displayed for users to acknowledge the information provided   |
| agreement      | Indicates the page is displayed for “Terms & Conditions”  |
| fail           | Indicates the page is displayed for login failure   |
| login          | Indicates the page is displayed for entering user credentials   |
| no-service     | Indicates the page is displayed when certain critical services are unavailable and the user fails to access the captive portal. The possible scenarios are: <ul style="list-style-type: none"> <li>• The RADIUS server (on-board or external) is not reachable and the user cannot be authenticated</li> <li>• The external captive portal server is not reachable</li> <li>• The connectivity between the adopted AP and controller is lost</li> <li>• The external DHCP server is not reachable</li> </ul> To provide this service, enable the following: <ul style="list-style-type: none"> <li>• External captive portal server monitoring.</li> <li>• AAA server monitoring. This enables detection of RADIUS server failure.</li> <li>• External DHCP server monitoring.</li> <li>• AP to controller connectivity monitoring.</li> </ul> For more information on enabling these critical resource monitoring, see <a href="#">service</a> . |
| registration   | Indicates the page is displayed when users are redirected to a Web page where they have to register in the captive portal's database<br>Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register.  |
| welcome        | Indicates the page is displayed after a user has been successfully authenticated  |
| description    | Indicates the content is the description portion of each of the following internal Web pages: acknowledgment, agreement, fail, login, no-service, and welcome   |

|           |   |
|-----------|---|
| footer    | Indicates the content is the footer portion of each of the following internal Web pages: acknowledgment, agreement, fail, no-service, registration, and welcome page. The footer portion contains the signature of the organization that hosts the captive portal.  |
| header    | Indicates the content is the header portion of each of the following internal Web pages: acknowledgment, agreement, fail, no-service, and welcome page. The header portion contains the heading information for each of these pages.  |
| title     | Indicates the content is the title of each of the following internal Web pages: acknowledgment, agreement, fail, no-service, and welcome page. The title for each of these pages is configured here.  |
| <CONTENT> | The following keyword is common to all of the above internal Web page options: <ul style="list-style-type: none"> <li>• &lt;CONTENT&gt; – Specify the content displayed for each of the different components of the internal Web page. Enter up to 900 characters for the description and 256 characters each for header, footer, and title.</li> </ul> |

|--------------|--|
| internal     | Indicates the Web pages are hosted on an internal server resource  |
| registration | <p>Allows you to customize the user registration page. Select this option if the captive-portal's access-type is set to registration. Use the field and type options to define the input fields (for example, age-range, city, email, etc.) and the field type (for example, text, checkbox, dropdown-menu, radio-button, etc.)</p> <p>Guest users are redirected to an internally (or) externally hosted registration page (registration.html) upon association to a captive portal SSID, where previously, not-registered guest users can register.</p> <p>If the registration Web page is not customized, the built-in, default registration page is displayed to the client.</p> |

field [age-range| city|country|  
custom| disclaimer| dob|email|  
gender|member| mobile|name|  
optout| street|via-email|via-sms|  
zip]

Configures the captive portal's registration page fields  
Following are the available fields and the field type for each:

- age-range – Creates the age-range input field (enabled by default and included in the built-in registration page)
  - dropdown-menu – Configures the age-range field as a drop-down menu
  - radio-button – Configures the age-range field as a radio button menu
- city – Creates the postal address: city name input field (enabled by default and included in the built-in registration page)
  - text – Configures the city field as only alpha-numeric and special characters input field
- country – Creates the postal address: country name input field (disabled by default)
  - text – Configures the country field as only alpha-numeric and special characters input field
- custom <WORD> – Creates a customized field (as per your requirement). Use the 'custom' option to create a field not included in the built-in list.
  - <WORD> – Provide a name for the field. On the registration page, the field is displayed under the name specified here.
- disclaimer – Creates client's disclaimer-confirmation input field (disabled by default)
- checkbox – Configures the disclaimer field as a check box
- dob – Creates the client's date of birth (DoB) input field (disabled by default)
  - date – Configures the DoB field as only date-format input field
  - dropdown-menu – Configures the DoB field as a drop-down menu
  - text – Configures the DoB field as only alpha-numeric and special characters input field
- email – Creates the e-mail address input field (enabled by default and included in the built-in registration page)
  - e-address – Configures the e-mail field as only e-mail address format input field
- gender – Creates client's gender input field (disabled by default)
  - dropdown-menu – Configures the gender field as a drop-down menu
  - radio-button – Configures the gender field as a radio button menu
- member – Creates client's loyalty or captive-portal membership card number input field (disabled by default)
  - number – Configures the member field as only-numeric characters input field
  - text – Configures the member field as only alpha-numeric and special characters input field
- mobile – Creates the mobile number input field (enabled by default and included in the built-in registration page)
  - number – Configures the mobile field as only-numeric characters input field
  - text – Configures the mobile field as only alpha-numeric and special characters input field
- name – Creates the client name input field (enabled by default and included in the built-in registration page)
  - text – Configures the name field as only alpha-numeric and special characters input field

|   |   |
|---|---|
|   | <ul style="list-style-type: none"> <li>• optout – Creates an input field that enables clients to opt out from registering             <ul style="list-style-type: none"> <li>• checkbox – Configures the optout field as a check box</li> </ul> </li> <li>• street – Creates the postal address: street name/number input field (enabled by default and included in the built-in registration page)             <ul style="list-style-type: none"> <li>• text – Configures the street field as only alpha-numeric and special characters input field</li> </ul> </li> <li>• via-email – Creates the client's preferred mode of communication as e-mail input field (enabled by default and included in the built-in registration page)             <ul style="list-style-type: none"> <li>• checkbox – Configures the via-email field as a check box</li> </ul> </li> <li>• via-sms – Creates the client's preferred mode of communication as SMS input field (enabled by default and included in the built-in registration page)             <ul style="list-style-type: none"> <li>• checkbox – Configures the via-sms field as a check box</li> </ul> </li> <li>• zip – Creates the postal address: zip input field (enabled by default and included in the built-in registration page)             <ul style="list-style-type: none"> <li>• number – Configures the zip field as only-numeric characters input field</li> <li>• text – Configures the zip field as only alpha-numeric and special characters input field</li> </ul> </li> </ul> |
| type [checkbox date  dropdown-menu e-address number  radio-button text] | <p>After specifying the field, configure the field type. The options displayed depend on the field selected in the previous step. These options are: checkbox, date, dropdown-menu, e-address, number, radio-button, and text.</p> <ul style="list-style-type: none"> <li>• checkbox – Configures the field as a check box</li> <li>• date – Configures the field as only date-format input field</li> <li>• dropdown-menu – Configures the field as a drop-down menu</li> <li>• e-address – Configures the field as an e-mail address input field</li> <li>• number – Configures the field as only-numeric characters input field</li> <li>• radio-button – Configures the field as a radio button</li> <li>• text – Configures the field as only alpha-numeric and special characters input field</li> </ul> <p>Some of the fields can have more than one field type options. For example, the field 'zip' can either be a numerical field or a text. Select the one best suited for your captive-portal.</p>   |
| enable {label <LINE>  mandatory  title <LINE>  placeholder <LINE>}      | <p>Enables the field. When enabled, the field is displayed on the registration page. After enabling the field, optionally configure the following parameters:</p> <ul style="list-style-type: none"> <li>• label &lt;LINE&gt; – Optional. Configures the field's label</li> <li>• mandatory – Optional. Makes the field mandatory</li> <li>• title – Optional. Configures the comma-separated list of items to include in the drop-down menu.</li> <li>• placeholder &lt;LINE&gt; – Optional. Configures a string, not exceeding 300 characters, that is displayed within the field. If not configured, the field remains blank.</li> </ul>   |

```
webpage internal welcome use-external-success-url
```

|                          |   |
|--------------------------|---|
| internal                 | Indicates the Web pages are hosted on an internal server resource   |
| welcome                  | Indicates the page is displayed after a user has been successfully authenticated  |
| use-external-success-url | When configured, redirects the user, on successful authentication, to an externally hosted success URL from the locally-hosted landing page.<br>Use the <b>webpage &gt; external &gt; welcome &gt; &lt;URL&gt;</b> command to specify the location of the Welcome page. |

```
webpage internal [org-name|org-signature] <LINE>
```

|               |   |
|---------------|---|
| internal      | Indicates the Web pages are hosted on an internal server resource   |
| org-name      | Specifies the company's name, included on Web pages along with the main image                               |
| org-signature | Specifies the company's signature information, included in the bottom of Web pages along with a small image |
| <LINE>        | Specify the company's name or signature depending on the option selected.                                   |

### Examples

```

```

#### Related Commands

|           |  |
|-----------|--|
| <b>no</b> | Resets or disables captive portal configurations |
|-----------|--|

### webpage-auto-upload

Enables automatic upload of advanced Web pages to requesting clients on association. Enable this option if the webpage-location is selected as advanced. For more information, see [webpage-location](#).

If this feature is enabled, Access Points shall request for Web pages from the controller during adoption. If the controller has a different set of Web pages, than the ones existing on the Access Points, the controller shall distribute the Web pages uploaded on it to the Access Points.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
webpage-auto-upload
```

#### Parameters

None

#### Examples

```
nx9500-6C8809(config-captive-portal-test)#webpage-auto-upload
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
webpage-auto-upload
logout-fqdn logout.testuser.com
nx9500-6C8809(config-captive-portal-test)#
```

#### Related Commands

|                         |   |
|-------------------------|---|
| <b>no</b>               | Disables automatic upload of advanced Web pages on a captive portal   |
| <b>webpage</b>          | Configures Web pages displayed when interacting with a captive portal |
| <b>webpage-location</b> | Specifies the location of the Web pages used for authentication       |

**webpage-location**

Specifies the location of the Web pages used for authentication. These pages can either be hosted on the system or on an external Web server.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
webpage-location [advanced|external|internal]
```

**Parameters**

```
webpage-location [advanced|external|internal]
```

|          |   |
|----------|---|
| advanced | Uses Web pages for login, welcome, failure, and terms created and stored on the controller. Select advanced to use a custom-developed directory full of Web page content that can be copied in and out of the controller, service platform, or access point.<br>If selecting advanced, enable the webpage-auto-upload option to automatically launch the advanced pages to requesting clients upon association. For more information, see <a href="#">webpage-auto-upload</a> . |
| external | Uses Web pages for login, welcome, failure, and terms located on an external server. Provide the URL for each of these pages.   |
| internal | Uses Web pages for login, welcome, and failure that are automatically generated   |

**Examples**

```
nx9500-6C8809(config-captive-portal-test)#webpage-location external

|----------------------------|--|
| <b>no</b>                  | Resets or disables captive portal Web page settings  |
| <b>webpage</b>             | Configures a captive portal's Web page (acknowledgment, agreement, login, welcome, fail, no-service, and terms) settings |
| <b>webpage-auto-upload</b> | Enables automatic upload of advanced Web pages on a captive portal   |

**welcome-back**

Enables the provision of direct Internet access to once-registered, captive-portal guest users on subsequent log-ins. When enabled, a registered captive-portal guest user, on subsequent logins, is served the Acknowledgement page only if:

- The agreement-refresh option is enabled for device-based (device and device-OTP) registration, and
- The interval between logout and login is lesser than the agreement-refresh timeout configured in the WLAN context. If this interval exceeds the agreement-refresh timeout, the user is served the Agreement page. For more information on configuring the agreement-refresh timeout value, see [registration](#).

Supported in the following platforms:

- Access Points — AP 6522, AP 6562, AP 7161, AP 7502, AP-7522, AP 7532, AP 7562, AP 7602, AP-7612, AP 7622, AP7632, AP7662, AP-8163, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 7510, NX 95XX, NX 96XX, VX

### Syntax

```

### Related Commands

|           |   |
|-----------|---|
| <b>no</b> | Disables the provision of direct Internet access to once-registered, captive-portal guest users on subsequent log-ins |
|-----------|---|

### no

The no command reverts the selected captive portal's settings or resets settings to default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
no [access-time|access-type|accounting|bypass|connection-mode|custom-auth|data-limit|
frictionless-onboarding|inactivity-timeout|ipv6|localization|logout-fqdn|oauth|php-helper|
post-authentication-vlan|radius-vlan-assignment|redirection|report-loyalty-application|

### Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes or resets this captive portal's settings, based on the parameters passed. |
|-----------------|---|

### Example

The following example shows the captive portal 'test' settings before the 'no' commands are executed:

```
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
  access-type logging
  access-time 35
  custom-auth info bob bob@examplecompany.com
  connection-mode https
  inactivity-timeout 750
  accounting syslog host 172.16.10.13 port 1
nx9500-6C8809(config-captive-portal-test)#
nx9500-6C8809(config-captive-portal-test)#no accounting syslog
nx9500-6C8809(config-captive-portal-test)#no access-type
```

The following example shows the captive portal 'test' settings after the 'no' commands are executed:

```
nx9500-6C8809(config-captive-portal-test)#show context
captive-portal test
  access-time 35
  custom-auth info bob bob@examplecompany.com
  connection-mode https
  inactivity-timeout 750
nx9500-6C8809(config-captive-portal-test)#
```

### configuring-device-registration-with-dynamic-vlan-assignment

This section provides the configurations required to enable device registration with dynamic VLAN assignment in a multi-vendor environment.

- 1 Create vendor-specific RADIUS user groups and assign an allowed VLAN to each group, as shown in the following examples:

```
nx9500-6C8809(config)#radius-group Apple
nx9500-6C8809(config-radius-group-Apple)#policy vlan 200
nx9500-6C8809(config)#radius-group Samsung
nx9500-6C8809(config-radius-group-Samsung)#policy vlan 100
nx9500-6C8809(config)#radius-group Devices
nx9500-6C8809(config-radius-group-Devices)#policy vlan 1
```

#### Note

If necessary, configure the session-time for each of the above configured RADIUS group. This is the duration for which a RADIUS group client's session remains active after successful authentication. Upon expiration, the RADIUS session is terminated. Use the `policy > session-time > <5-144000>` command to specify the session-time.

- 2 Create a RADIUS user pool, add users to the pool, and assign the users to the vendor-specific user groups: as shown in the following examples:

```
nx9500-6C8809(config)#radius-user-pool-policy Vendor-Devices
nx9500-6C8809(config-radius-user-pool-Vendor-Devices)#user Samsung password 0 samsung
group Samsung
nx9500-6C8809(config-radius-user-pool-Vendor-Devices)#user test password 0 test123
group Apple
```

- 3 Create a RADIUS server policy, and associate the RADIUS groups and user pool created in steps 1 and 2 respectively, as shown in the following examples:

```
nx9500-6C8809(config)#radius-server-policy Guest-Radius
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-user-pool-policy
Vendor-Devices
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-group Samsung
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-group Sony
nx9500-6C8809(config-radius-server-policy-Guest-Radius)#use radius-group Apple
```

- 4 Create an AAA Policy, on the controller, and configure the authentication server as self, as shown in the following example:

```
nx9500-6C8809(config)#aaa-policy OnBoard-NX
nx9500-6C8809(config-aaa-policy-OnBoard-NX)#authentication server 1 onboard controller
nx9500-6C8809(config-aaa-policy-OnBoard-NX)#show context
aaa-policy OnBoard-NX
authentication server 1 onboard self
nx9500-6C8809(config-aaa-policy-OnBoard-NX)#
```

- 5 Create a captive-portal, and point to the captive-portal's server, enable RADIUS VLAN assignment, and associate the AAA policy, as shown in the following examples:

```
nx9500-6C8809(config)#captive-portal DeviceRegistration
nx9500-6C8809(config-captive-portal-DeviceRegistration)#server host
captive.extremenoc.com
nx9500-6C8809(config-captive-portal-DeviceRegistration)#radius-vlan-assignment
nx9500-6C8809(config-captive-portal-DeviceRegistration)#use aaa-policy OnBoard-NX
nx9500-6C8809(config-captive-portal-DeviceRegistration)#access-type radius
```

- 6 Configure a WLAN and enable RADIUS VLAN assignment, as shown in the following examples:

```
nx9500-6C8809(config)#wlan CP-OnBoarding
nx9500-6C8809(config-wlan-CP-OnBoarding)#ssid CP-OnBoarding
nx9500-6C8809(config-wlan-CP-OnBoarding)#radius vlan-assignment
nx9500-6C8809(config-wlan-CP-OnBoarding)#use aaa-policy OnBoard-NX
nx9500-6C8809(config-wlan-CP-OnBoarding)#use captive-portal DeviceRegistration
nx9500-6C8809(config-wlan-CP-OnBoarding)#captive-portal-enforcement fall-back
nx9500-6C8809(config-wlan-CP-OnBoarding)#registration device group-name Devices expiry-
time 4320
nx9500-6C8809(config-wlan-CP-OnBoarding)#authentication-type mac
```

- 7 Create an access point profile, associate the RADIUS server policy, captive-portal policy to it, and also assign the WLAN to the AP radio, as shown in the following examples:

```
nx9500-6C8809(config-profile-SITE-10)#use radius-server-policy Guest-Radius
nx9500-6C8809(config-profile-SITE-10)#use captive-portal server DeviceRegistration
nx9500-6C8809(config-profile-SITE-10-if-radio2)#wlan CP-OnBoarding bss 1 primary
nx9500-6C8809(config-profile-SITE-10-if-gel)#switchport mode trunk
nx9500-6C8809(config-profile-SITE-10-if-gel)#switchport trunk native vlan 90
nx9500-6C8809(config-profile-SITE-10-if-gel)#switchport trunk allowed vlan
1,90,1000-1002
nx9500-6C8809(config-profile-SITE-10-if-gel)#no switchport trunk native tagged
```

- 8 Use the access point profile in the access point's device context.

### configuring WeChat Wi-Fi hotspot support in WiNG captive portal

WeChat is a popular messaging app used in China with more than 500 million installations. WeChat's WiFi hotspot solution allows businesses to provide Internet access to their customers. The WiNG captive portal can be configured to incorporate the WeChat WiFi hotspot, so that WeChat users, on their first connect to a WiNG access point, can automatically authenticate with the WeChat server through an intermediate server.

This section provides an example that shows the configurations required to be made on the WiNG portal to enable WeChat Wi-Fi hotspot.

- 1 Create an AAA policy re-directing the captive portal user to WeChat's AAA server for authentication, as shown in the following example:

```
nx9500-6C8809(config)#aaa-policy cloud2
nx9500-6C8809(config-aaa-policy-cloud2)#authentication server 1 host
cloud2.synchroweb.com secret 0 firmware
nx9500-6C8809(config-aaa-policy-cloud2)#show context
aaa-policy cloud2
authentication server 1 host cloud2.synchroweb.com secret 0 firmware
nx9500-6C8809(config-aaa-policy-cloud2)#
```

#### Note

Synchroweb is an *independent software vendor* (ISV), whose third-party software is being used as the intermediate server. The AAA server and RADIUS accounting server configured in AAA policy must be as per the specification provided by the ISV.

- 2 Create a DNS whitelist, whitelisting WeChat's server name in order to initiate RADIUS authentication. The "qq.com" domain name is where WeChat server can be reached.

```
nx9500-6C8809(config)#dns-whitelist wxWL
nx9500-6C8809(config-dns-whitelist-wxWL)#permit cloud2.synchroweb.com
nx9500-6C8809(config-dns-whitelist-wxWL)#permit qq.com suffix
nx9500-6C8809(config-dns-whitelist-wxWL)#show context
dns-whitelist wxWL
permit qq.com suffix
permit cloud2.synchroweb.com
nx9500-6C8809(config-dns-whitelist-wxWL)#
```

- 3 Create a captive portal and associate the AAA policy and DNS whitelist created in steps 1 & 2, as shown in the following example:

```
nx9500-6C8809(config)#captive-portal wxCP
nx9500-6C8809(config-captive-portal-wxCP)#use aaa-policy cloud2
nx9500-6C8809(config-captive-portal-wxCP)#use dns-whitelist wxWL
```

- 4 Configure the following parameters in the captive portal created in step 3:

```
nx9500-6C8809(config-captive-portal-wxCP)#access-time 10
nx9500-6C8809(config-captive-portal-wxCP)#server host guest.extreme.com
nx9500-6C8809(config-captive-portal-wxCP)#webpage-location external
nx9500-6C8809(config-captive-portal-wxCP)#webpage external login http://
cloud2.synchroweb.com/wechat.nx/index.php?c=WING_TAG_CLIENT_MAC
nx9500-6C8809(config-captive-portal-wxCP)#show context
captive-portal wxCP
access-time 10
server host guest.extreme.com
webpage-location external
webpage external login http://cloud2.synchroweb.com/wechat.nx/
index.php?c=WING_TAG_CLIENT_MAC
use aaa-policy cloud2
use dns-whitelist wxWL
--More--
nx9500-6C8809(config-captive-portal-wxCP)#
```

#### Note

The login URL configured here must be as per the specifications provided by the ISV.

#### Note

The access-type remains unchanged (i.e. radius, which is the default setting). The access-time is set to a minimum value (10 minutes in this example) in order to avoid the default value of 24 hours being applied, in case the RADIUS response does not contain the session-timeout attribute.

- 5 Create a WLAN and associate the captive portal created in step 3:

```
nx9500-6C8809(config)#wlan wxOpen
nx9500-6C8809(config-wlan-wxOpen)#ssid wxOpen
nx9500-6C8809(config-wlan-wxOpen)#vlan 200
nx9500-6C8809(config-wlan-wxOpen)#use captive-portal wxCP
nx9500-6C8809(config-wlan-wxOpen)#captive-portal-enforcement
nx9500-6C8809(config-wlan-wxOpen)#show context
wlan wxOpen
ssid wxOpen
vlan 200
bridging-mode local
encryption-type none
authentication-type none
use captive-portal wxCP
```

```
captive-portal-enforcement
nx9500-6C8809(config-wlan-wxOpen) #
```

**Note**

The modes of authentication and encryption remain unchanged (i.e. none, which is the default setting for both parameters). Ensure captive-portal-enforcement is enabled on the WLAN.

Following are the related commands:

|--|--|
| <a href="#">AAA Policy</a> on page 1308    | Documents AAA policy configuration mode commands     |
| <a href="#">dns-whitelist</a> on page 302  | Documents DNS whitelist configuration mode commands  |
| <a href="#">captive-portal</a> on page 217 | Documents captive portal configuration mode commands |
| <a href="#">wlan</a> on page 512           | Documents WLAN configuration mode commands           |

**configuring ExtremeGuest captive portal**

This section documents the basic configurations required to deploy an *ExtremeGuest* (EGuest) setup. A typical EGuest deployment consists of the EGuest server, EGuest captive-portal database, and NOC adopting the access points. The EGuest server and database can be hosted only on the VX9000 platform.

In the following example, the EGuest server and database are hosted on the same device.

- 1 On the EGuest server/database host,

- a enable the EGuest daemon. When enabled, the EGuest server is up and running.

```
EG-Server-DB(config-device-02-EE-1A-7E-AE-5B) #eguest-server
```

- b apply a database-policy to enable the EGuest database.

```
EG-Server-DB(config-device-02-EE-1A-7E-AE-5B) #use database-policy default
```

- c configure the NTP server. This is to ensure time synchronization across replica-set members (this is mandatory in replica-set deployments and should be configured either on the replica-set members' device or profile context).

```
EG-Server-DB(config-device-02-EE-1A-7E-AE-5B) #ntp server time.nist.govt
```

- 2 On the NOC,

- a create an AAA policy with the following configurations:

- Configure the EGuest server (configured in Step 1) as the authentication and accounting RADIUS server.

```
NOC(config-aaa-policy-EguestAAA) #authentication server 1 host EG-Server secret 0
extreme123
```

```
NOC(config-aaa-policy-EguestAAA) #accounting server 1 host EG-Server secret 0
extreme123
```

- Configure the proxy-mode as 'through-controller'. When configured, all requests to the server are proxied through the NOC.

```
NOC(config-aaa-policy-EguestAAA) #authentication server 1 proxy-mode through-
controller
```

```
NOC(config-aaa-policy-EguestAAA) #accounting server 1 proxy-mode through-
controller
```

```
NOC(config-aaa-policy-EguestAAA) #show context
aaa-policy EguestAAA
```

```
accounting server 1 host EG-OnBServer secret 0 extreme123
accounting server 1 proxy-mode through-controller
authentication server 1 host EG-Server secret 0 extreme123
authentication server 1 proxy-mode through-controller
NOC(config-aaa-policy-EguestAAA) #
```

- b Create a DNS whitelist. Note, DNS whitelist configuration is required only if enabling OAuth on the EGuest captive-portal. When created and used on the EGuest captive-portal, the DNS whitelist renders social plugin buttons on the client prior to successful captive portal authentication.

- Configure the following permit rules:

```
NOC(config-dns-whitelist-EguestDNS) #permit fbstatic-a.akamaihd.net
NOC(config-dns-whitelist-EguestDNS) #permit connect facebook.net
NOC(config-dns-whitelist-EguestDNS) #permit facebook.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit fbcdn.net suffix
NOC(config-dns-whitelist-EguestDNS) #permit googleapis.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit google.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit googleusercontent.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit linkedin.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit static.licdn.com
NOC(config-dns-whitelist-EguestDNS) #permit twitter.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit twimg.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit instagramstatic-a.akamaihd.net
NOC(config-dns-whitelist-EguestDNS) #permit instagram.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit ssl.gstatic.com
NOC(config-dns-whitelist-EguestDNS) #permit extremenetworks.com suffix
NOC(config-dns-whitelist-EguestDNS) #permit local.extreme.com
```

- c Create a captive-portal with the following configurations:

- Specify the captive-portal server.

```
NOC(config-captive-portal-EguestCP) #server host guest.extreme.com
```

- Use the AAA policy created in Step 2 a.

```
NOC(config-captive-portal-EguestCP) #use aaa-policy EguestAAA
```

- Enable social-media authentication. This setting is optional.

```
NOC(config-captive-portal-EguestCP) #oauth
```

- Use the DNS whitelist created in Step 2 b. Note, the DNS whitelist is required only if enabling OAuth on the captive-portal.

```
NOC(config-captive-portal-EguestCP) #use dns-whitelist EguestDNS
```

- Configure the captive portal's webpage location as advanced.

#### Note

Webpage-location should be 'advanced' if using pages created with EGuest splash templates.

```
NOC(config-captive-portal-EguestCP) #webpage-location advanced
```

- d Create a WLAN policy with the following configurations:

- Enable MAC authentication.

```
NOC(config-wlan-EguestWLAN)#authentication-type mac
```

- Use the AAA policy created in Step 2 a.

```
NOC(config-wlan-EguestWLAN)#use aaa-policy EguestAAA
```

#### Note

When used, access points/controllers forward registration requests to the EGuest server specified in the AAA policy. However, ensure that the `registration > external > follow-aaa` option is configured on the WLAN. See below.

```
NOC(config-wlan-EguestWLAN)#registration external follow-aaa
```

#### Note

This enables the use of the Authentication and Accounting servers specified in the AAA policy applied on the WLAN.

- Use the captive-portal created in Step 2 c.

```
NOC(config-wlan-EguestWLAN)#use captive-portal EguestCP
```

- Enable captive-portal enforcement with fall-back.

```
NOC(config-wlan-EguestWLAN)#captive-portal-enforcement fall-back
```

- Configure the following guest registration parameters:

```
NOC(config-wlan-EguestWLAN)#registration device group-name Eguest expiry-time 4320 agreement-refresh 1440
```

#### Note

This is the RADIUS group assigned to registered users post authentication.

```
NOC(config-wlan-EguestWLAN)#show context
wlan EguestWLAN
ssid _EXTREME-GUEST-NRF2017
vlan 1
bridging-mode local
encryption-type none
authentication-type mac
no answer-broadcast-probes
no client-client-communication
wireless-client hold-time 300
use aaa-policy EguestAAA
use captive-portal EguestCP
captive-portal-enforcement fall-back
registration device group-name Eguest expiry-time 4320 agreement-refresh 1440
registration external follow-aaa
mac-authentication cached-credentials
NOC(config-wlan-EguestWLAN)#
```

- e In the NOC's self context, configure the EGuest server.

```
NOC(config-device-74-67-F7-5C-64-4A)#eguest-server host 1 EG-Server https
```

- 3 In the Access Point's device or profile context, use the captive-portal configured in Step 2 c.

```
Eguest-AP(config-device-74-67-F7-5C-64-4A)#use captive-portal EguestCP
```

- 4 To view EGuest registration status and statistics, on the EGuest server, use the following commands:

```
EGuest-Server-DB#show eguest registration statistics
EGuest-Server-DB#show eguest registration status
```

- 5 To clear EGuest registration statistics, on the EGuest server, use the following command:

```
EGuest-Server-DB#clear eguest registration statistics
```

Following are the related commands:

|   |   |
|---|---|
| <a href="#">AAA Policy</a> on page 1308                 | Documents AAA policy configuration mode commands  |
| <a href="#">dns-whitelist</a> on page 302               | Documents DNS whitelist configuration mode commands   |
| <a href="#">captive-portal</a> on page 217              | Documents captive portal configuration mode commands  |
| <a href="#">wlan</a> on page 512                        | Documents WLAN configuration mode commands  |
| <a href="#">eguest-server (VX9000 only)</a> on page 987 | Documents the eguest-server command. When used in the EGuest server's device/profile context, without the 'host' option, it enables the EGuest daemon. When used on the NOC along with the 'host' option, it points to the EGuest server. |

## clear

Clears parameters, cache entries, table entries, and other similar entries. The clear command is available for specific commands only. The information cleared using this command varies depending on the mode where executed.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
clear event-history
```

### Parameters

```

## client-identity

With an increase in *Bring Your Own Device* (BYOD) corporate networks, there is a parallel increase in the number of possible attack scenarios within the network. BYOD devices are inherently unsafe, as the organization's security mechanisms do not extend to these personal devices deployed in the corporate wireless network. Organizations can protect their network by limiting how and what these BYODs can access on and through the corporate network.

Device fingerprinting assists administrators by controlling how BYOD devices access a corporate wireless domain.

Device fingerprinting uses DHCP options sent by the client in request or discover packets to derive a unique signature specific to device class. For example, Apple devices have a different signature from Android devices. The signature is used to classify the devices and assign permissions and restrictions on each device class.

Device fingerprinting is a technique of collecting, analyzing, and identifying traffic patterns originating from remote computing devices. When enabled, device fingerprinting helps to identify a wireless client's device type. There are two methods of fingerprinting devices: Active and Passive.

Active fingerprinting is based on the fact that traffic patterns vary with varying device types. It involves the sending of requests (HTTP, etc.) to devices (clients) and analyzing their response to determine the device type. For example, an invalid request is sent to a device, and its error response is analyzed to identify the device type. Since active device fingerprinting involves sending of packets, the probability of the network getting flooded is very high, especially when many devices are being fingerprinted simultaneously.

Passive fingerprinting involves monitoring of devices to check for known traffic patterns specific to devices based on the protocol, driver implementation etc. This method accurately classifies a client's TCP/IP configuration, OS fingerprints, wireless settings etc. No packets are sent to the device. Some of the commonly used protocols for passive device fingerprinting are, TCP, DHCP, HTTP etc. This feature implements DHCP device fingerprinting, which relies on specific information sent by a wireless client when acquiring IP address and other configuration information from a DHCP server. The feature uses the DHCP options sent by the wireless client in the DHCP request or discover packets to derive a unique

signature specific to the class of devices. For example, Apple devices have a different signature than Android devices. This unique signature can then be used to classify the devices and assign permissions and restrictions on each device class.

The client-identity command enables device fingerprinting. It creates a new client identity and enters its configuration mode. Client identity is a set of unique fingerprints used to identify a class of devices. This information is used to configure permissions and access rules for the identified class of devices in the network.

#### Note

The WiNG software provides a set of built-in device fingerprints that load by default and identify client device types. Use the `service > show > client-identity-defaults` command to view default client identity fingerprints.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
client-identity <CLIENT-IDENTITY-NAME>
```

#### Parameters

```
client-identity <CLIENT-IDENTITY-NAME>
```

|   |  |
|---|--|
| client-identity<br><CLIENT-IDENTITY-NAME> | <p>Creates a new client identity policy and enters its configuration mode</p> <ul style="list-style-type: none"> <li>• &lt;CLIENT-IDENTITY-NAME&gt; – Specify a client identity policy name. If the client identity policy does not exist, it is created.</li> </ul> |
|---|--|

#### Usage Guidelines

The following points should be considered when configuring the client identity (device fingerprinting) feature:

- Ensure that DHCP is enforced on the WLANs. For more information on enforcing DHCP on WLANs, see [enforce-dhcp](#) on page 541.
- Successful identification of different device types depends on the uniqueness of the configured fingerprints. DHCP fingerprinting identifies clients based on the patterns (fingerprints) in the DHCP discover and request messages sent by clients. If different operating systems have the same fingerprints, it will be difficult to identify the device type.
- When associating client identities with a role policy, ensure that the profile/device, under which the role policy is being used, also has an associated client identity group (containing all the client identities used by the role policy).

#### Examples

```
rfs4000-229D58(config)#client-identity test
nx9500-6C8809(config-client-identity-test)#?
Client Identity Mode commands:
  dhcp                Add a DHCP option based match criteria
  dhcp-match-message-type Specify DHCP message type to match
```

```

no                               Negate a command or set its defaults

| <code>no (client-identity-config-mode)</code> on page 268 | Removes the DHCP option (used for client identification) configurations |

**dhcp**

Configures the DHCP option match criteria (signature) for the discover and request message types received from wireless clients

When accessing a network, DHCP discover and request messages are passed between wireless clients and the DHCP server. These messages contain DHCP options and option values that differ from device to device and are based on the DHCP implementation in the device's *Operating System* (OS). Options and option values contained in a client's messages are parsed and compared against the configured DHCP option values to identify the device. Once a device type is identified, the wireless client database is updated with the discovered device type.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
dhcp <1-16> message-type [discover|request] [option|option-codes]
dhcp <1-16> message-type [discover|request] [option <1-254>|option-codes]
[contains|exact|starts-with] [ascii|hexstring] <WORD>
```

**Parameters**

```
dhcp <1-16> message-type [discover|request] [option <1-254>|option-codes]
[contains|exact|starts-with] [ascii|hexstring] <WORD>
```

#### Usage Guidelines

The following DHCP options are useful for identifying different device types:

- Option 55: Used by a DHCP client to request values for specific configuration parameters. It is a list of DHCP option codes and can be in the client's order of preference.
- Client configured list of DHCP options (all options parsed into a hex string).
- Option 60: Vendor class identifier. Used to identify the vendor and functionality of a DHCP client (some devices do not set the value of this field).

Though it is possible to use any option to configure a device fingerprint, the use of a combination of one or more of the preceding options to define a device is recommended.

#### Examples

```

nx9500-6C8809(config-client-identity-test)#dhcp 1 message-type request option
60 exact ascii MSFT\5.0
nx9500-6C8809(config-client-identity-test)#dhcp 2 message-type discover option
2 exact hexstring 012456c22c44
nx9500-6C8809(config-client-identity-test)#show context
client-identity test
  dhcp 2 message-type discover option 2 exact hexstring 012456c22c44
  dhcp 1 message-type request option 60 exact ascii MSFT5.0
nx9500-6C8809(config-client-identity-test)#

```

#### Related Commands

|-----------|--|

### no (client-identity-config-mode)

Removes the DHCP options match criteria configurations

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
no [dhcp <1-16>|dhcp-match-message-type]
```

#### Parameters

```
no [dhcp <1-16>|dhcp-match-message-type]
```

|                         |   |
|-------------------------|---|
| dhcp <1-16>             | Removes the DHCP option match criteria rule identified by the <1-16> keyword <ul style="list-style-type: none"> <li>&lt;1-16&gt; – Specify the DHCP option match criteria rule index</li> </ul> |
| dhcp-match-message-type | Removes the DHCP message type to match  |

### Examples

The following example shows the client identity 'test' settings before the 'no' commands are executed:

```
nx9500-6C8809(config-client-identity-test)#show context
client-identity test
  dhcp 2 message-type discover option 2 exact hexstring 012456c22c44
  dhcp 1 message-type request option 60 exact ascii MSFT5.0
  dhcp-match-message-type all
nx9500-6C8809(config-client-identity-test)#
```

The following example shows the client identity 'test' settings after the 'no' commands are executed:

```
nx9500-6C8809(config-client-identity-test)#no dhcp 2
nx9500-6C8809(config-client-identity-test)#no dhcp-match-message-type
nx9500-6C8809(config-client-identity-test)#show context
client-identity test
  dhcp 1 message-type request option 60 exact ascii MSFT5.0
nx9500-6C8809(config-client-identity-test)#
```

## client-identity-group

Configures a new client identity group

A client identity group is a collection of client identities. Each client identity included in a client identity group is set a priority value that indicates the priority for that identity when device fingerprinting.

Device fingerprinting relies on specific information sent by a wireless client when acquiring IP address and other configuration information from a DHCP server. The feature uses the DHCP options sent by the wireless client in the DHCP request or discover packets to derive a unique signature specific to the class of devices. For example, Apple devices have a different signature than Android devices. This unique signature can then be used to classify the devices and assign permissions and restrictions on each device class.

A client identity group can be attached to a profile or device, enabling device fingerprinting on them.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
client-identity-group <CLIENT-IDENTITY-GROUP-NAME>
```

### Parameters

```
client-identity-group <CLIENT-IDENTITY-GROUP-NAME>
```

|   |   |
|---|---|
| <code>client-identity-group &lt;CLIENT-IDENTITY-GROUP-NAME&gt;</code> | Creates a new client identity group and enters its configuration mode <ul style="list-style-type: none"> <li>• <code>&lt;CLIENT-IDENTITY-GROUP-NAME&gt;</code> – Specify a client identity group name. If the group does not exist, it is created.</li> </ul> |
|---|---|

### Examples

```

nx9500-6C8809(config)#client-identity-group test
nx9500-6C8809(config-client-identity-group-test)#
Client Identity group Mode commands:
  client-identity  Client identity (DHCP Device Fingerprinting)
  load             Load Client identity Fingerprints
  no              Negate a command or set its defaults

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  do              Run commands from Exec mode
  end             End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service       Service Commands
  show          Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-client-identity-group-test)#

```

### Related Commands

### *client-identity-group-mode-commands*

The following table summarizes the client identity group configuration mode commands:

**Table 9: Client-Identity-Group-Mode Commands**

| Command   | Description  |
|---|--|
| <code>client-identity</code> on page 270                        | Associates an existing and configured client identity (device fingerprinting definition) with this client identity group |
| <code>load</code> on page 272                                   | Loads default (system-provided) client identity fingerprints   |
| <code>no (client-identity-group-config-mode)</code> on page 273 | Removes the client identity associated with this client identity group   |

### **client-identity**

Associates an existing and configured client identity (device fingerprinting definition) with this client identity group

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>
```

### Parameters

```
client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>
```

|   |  |
|---|--|
| client-identity<br><CLIENT-IDENTITY-NAME> | <p>Associates a client identity with this group</p> <ul style="list-style-type: none"> <li>• &lt;CLIENT-IDENTITY-NAME&gt; – Specify a client identity name (should be existing and configured)</li> </ul>  |
| precedence<br><1-10000>                   | <p>Determines the order in which client identity is used.</p> <ul style="list-style-type: none"> <li>• &lt;1-10000&gt; – Specify this client identity precedence from &lt;1-10000&gt;.</li> </ul> <p>The client identity rule is applied based on its precedence value. Lower the value, higher is the precedence. Therefore, a client identity with precedence 5 gets priority over a client identity having precedence 20.</p> |

### Examples

The following example shows two client identities created and configured:

```
nx9500-6C8809(config)#show context
!
! Configuration of NX9500 version 7.1.0.0-010D
!
!
version 2.6
!
!
client-identity TestClientIdentity
  dhcp 1 message-type request option-codes exact hexstring 5e4d36780b3a7f
!
client-identity test
  dhcp 2 message-type discover option 2 exact hexstring 012456c22c44
  dhcp 1 message-type request option 60 exact ascii MSFT5.0
  dhcp-match-message-type all
!
client-identity-group ClientIdentityGroup
  client-identity TestClientIdentity precedence 1
!
client-identity-group test
!
ip access-list BROADCAST-MULTICAST-CONTROL
  permit tcp any any rule-precedence 10 rule-description "permit all TCP traffic"
--More--
nx9500-6C8809(config)#
```

The following example associates client identity 'test' with the client identity group 'test':

```
nx9500-6C8809(config-client-identity-group-test)#client-identity test precedence 1
```

The following example shows the client identity group 'test' with two associated client identities having precedence 1 and 2:

```
nx9500-6C8809(config-client-identity-group-test)#client-identity TestClientIdentity
precedence 2
rfs4000-229D58(config-client-identity-group-test)#show context
client-identity-group test
  client-identity test precedence 1
```

```
client-identity TestClientIdentity precedence 2
nx9500-6C8809(config-client-identity-group-test)#
```

#### Related Commands

|-----------|---|
| <b>no</b> | Removes the client identity associated with the client identity group |
|-----------|---|

## load

Loads default (built-in, system-provided) client identity fingerprints. This option is enabled by default.

The WiNG software provides some built-in client identity fingerprints that are automatically loaded when the client identity group is applied to a device (either directly or through the profile).

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
load default-fingerprints
```

#### Parameters

```
load default-fingerprints
```

|                           |  |
|---------------------------|--|
| load default-fingerprints | Loads client identity default fingerprints. This option is enabled by default. |
|---------------------------|--|

#### Examples

The auto-load default fingerprints option is enabled by default, as shown in the following example:

```
nx9500-6C874D(config-client-identity-group-test)#show context
client-identity-group test
load default-fingerprints
nx9500-6C874D(config-client-identity-group-test)#
```

In scenarios where only customized client identities are to be applied, use the **no > load > default-fingerprints** command to disable auto-loading of default device fingerprints.

```
nx9500-6C874D(config-client-identity-group-test)#no load default-fingerprints
nx9500-6C874D(config-client-identity-group-test)#show context
client-identity-group test
no load default-fingerprints
nx9500-6C874D(config-client-identity-group-test)#
```

#### Note

Use the `service > show > client-identity-defaults` command to view default client identity fingerprints.

```
nx9500-6C874D#service show client-identity-defaults
client-identity Android-2-1
dhcp 1 message-type request option 55 exact hexstring 0103061c21333a3b79
dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.1
client-identity Android-2-2
dhcp 1 message-type request option 55 exact hexstring 01792103061c333a3b
dhcp 6 message-type request option 60 exact ascii dhcpcd\ 4.0.15
```

```

client-identity Android-2-3
dhcp 3 message-type request option 55 exact hexstring 01792103061c333a3b
dhcp 6 message-type request option 60 exact ascii dhcpd\ 4.0.15
dhcp 1 message-type request option-codes exact hexstring 353d32393c37
dhcp 2 message-type request option-codes exact hexstring 353d3236393c37
dhcp 10 message-type request option-codes exact hexstring 353d3236393c0c37
--More--

```

## Related Commands

|           |  |
|-----------|--|
| <b>no</b> | Disables automatic loading of default client identity fingerprints |
|-----------|--|

## no (client-identity-group-config-mode)

Removes the client identity associated with the client identity group

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

no [client-identity|load]
no client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>
no load default-fingerprints

```

## Parameters

```
no client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000>
```

|  |   |
|--|---|
| no client-identity <CLIENT-IDENTITY-NAME> precedence <1-10000> | <p>Disassociates a specified client identity from this client identity group</p> <ul style="list-style-type: none"> <li>&lt;CLIENT-IDENTITY-NAME&gt; – Specify the client identity name.</li> <li>precedence &lt;1-10000&gt; – Specify the above specified client identity's precedence value from &lt;1-10000&gt;.</li> </ul> <p>The client identity rule is applied based on its precedence value. Lower the value, higher is the precedence. Therefore, a client identity with precedence 5 gets precedence over a client identity having precedence 20.</p> |
|--|---|

```
no load default-fingerprints
```

|                              |  |
|------------------------------|--|
| no load default-fingerprints | Disables automatic loading of built-in, system-provided client identity fingerprints |
|------------------------------|--|

## Examples

```

nx9500-6C8809((config-client-identity-group-test)#show context
client-identity-group test
  client-identity test precedence 1
<exsw5>(config-client-identity-group-test)#
nx9500-6C8809((config-client-identity-group-test)#no client-identity test

```

## clone

Creates a replica of an existing object or device. The configuration of the new object or device is an exact copy of the existing object or device configuration. Use this command to copy existing configurations and then modifying only the required parameters.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
clone [TLO|device]
clone TLO <EXISTING-OBJECT-NAME> <NEW-OBJECT-NAME>
clone device <EXISTING-DEVICE-MAC/NAME> <NEW-DEVICE-MAC>
```

### Parameters

```
clone TLO <EXISTING-OBJECT-NAME> <NEW-OBJECT-NAME>
```

TLO <EXISTING-OBJECT-NAME>  
<NEW-OBJECT-NAME>

Creates a new TLO by cloning an existing top-level object. The new object has the same configuration as the cloned object.

- <EXISTING-OBJECT-NAME> - Specify the existing object's (to be cloned) name
- <NEW-OBJECT-NAME> - Provide the new object's name.

**Note:** Enter `clone` and press **Tab** to list objects available for cloning.

```
clone device <EXISTING-DEVICE-MAC/NAME> <NEW-DEVICE-MAC>
```

device <EXISTING-DEVICE-MAC/NAME>  
<NEW-DEVICE-MAC>

Configures a new device based on an existing device configuration

- <EXISTING-DEVICE-MAC/NAME> - Specify the existing device's name or MAC address (the device to be cloned)
- <NEW-DEVICE-MAC> - Provide the new device's MAC address.

**Note:** Enter `clone > device` and press **Tab** to list devices available for cloning.

### Examples

```
nx9500-6C874D(config)#clone rf_domain TechPubs Cloned_TechPubs2
nx9500-6C874D(config)#show context
!
! Configuration of NX9500 version 7.1.0.0-010D
!
!
version 2.6
!
.....
rf-domain TechPubs
location SanJose
timezone America/Los_Angeles
country-code us
!
rf-domain Cloned_TechPubs2
```

```
location SanJose
--More--
nx9500-6C874D(config)#
```

## crypto-cmp-policy

Creates a crypto Certificate Management Protocol (CMP) policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
crypto-cmp-policy <CRYPTO-CMP-POLICY-NAME>
```

### Parameters

```
crypto-cmp-policy <CRYPTO-CMP-POLICY-NAME>
```

|  |  |
|--|--|
| crypto-cmp-policy <CRYPTO-CMP-POLICY-NAME> | Specify the crypto CMP policy name. If the policy does not exist, it is created. |
|--|--|

### Examples

```
nx9500-6C8809(config)#crypto-cmp-policy CMP
nx9500-6C8809(config-cmp-policy-CMP)#?
CMP Policy Mode commands:
  ca-server          CMP CA Server configuration commands
  cert-key-size      Set key size for certificate request
  cert-renewal-timeout Trigger a cert renewal request on timeout
  cross-cert-validate Validate cross-cert using factory-cert
  no                 Negate a command or set its defaults
  subjectAltName     Configure subjectAltName value
  trustpoint         Trustpoint for CMP
  use                Set setting to use

  clrscr             Clears the display screen
  commit             Commit all changes made in this session
  do                 Run commands from Exec mode
  end                End current mode and change to EXEC mode
  exit               End current mode and down to previous mode
  help               Description of the interactive help system
  revert             Revert changes
  service            Service Commands
  show               Show running system information
  write              Write running configuration to memory or terminal

nx9500-6C8809(config-cmp-policy-CMP)#
```

*Related Commands***no** on page 609

Resets values or disables commands

**Note**For more information on the crypto CMP policy, see [Crypto-CMP Policy](#) on page 1864.**customize**

Customizes the output of the summary CLI commands. Use this command to define the data displayed as a result of various show commands.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```

### Parameters

```
customize [cdp-lldp-info-column-width|hostname-column-width] <1-64>
```

|                                   |  |
|-----------------------------------|--|
| hostname-column-width <1-64>      | Configures default width of the hostname column in all show commands <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the hostname column width from 1 - 64 characters</li> </ul>                      |
| cdp-lldp-info-column-width <1-64> | Configures the column width in the <b>show &gt; cdp/lldp &gt; [neighbor report]</b> command output <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the column width from 1 - 64 characters</li> </ul> |

```
customize show-adoption-status (adopted-by, ap-name <1-64>, cdp-lldp-info,
config-status, last-adoption, msgs, uptime, version)
```

|                      |   |
|----------------------|---|
| show-adoption-status | Configures the information displayed in the show > adoption > status command output. Select the columns (information) displayed from the following options: adopted-by, ap-name, cdp-lldp-info, config-status, last-adoption, msgs, uptime, and version. These are recursive parameters and you can select multiple options at a time.<br>The columns displayed by default are: Device-Name, Version, Config-Status, MSGS, Adopted-By, Last-Adoption, and Uptime.<br>Where ever available, you can optionally use the <1-64> parameter to set the column width. |
|----------------------|---|

```
customize show-wireless-client (ap-name <1-64>, auth, client-identity <1-32>,
bss, enc, hostname <1-64>, ip, last-active, location <1-64>, mac, radio-alias <3-67>,
radio-id, radio-type, role <1-32>, state, username <1-64>, vendor, vlan, wlan)
```

|                        |  |
|------------------------|--|
| show-wireless-client   | Customizes the <b>show &gt; wireless &gt; client</b> command output<br>The columns displayed by default are: MAC, IPv4, Vendor, Radio-ID, WLAN, VLAN, and State.   |
| ap-name <1-64>         | Includes the ap-name column, which displays the name of the AP with which this client associates <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the ap-name column width from 1 - 64 characters</li> </ul>   |
| auth                   | Includes the auth column, which displays the authorization protocol used by the wireless client  |
| client-identity <1-32> | Includes the client-identity (device type) column, which displays details gathered from DHCP device fingerprinting feature (when enabled). For more information, see <a href="#">client-identity</a> . <ul style="list-style-type: none"> <li>&lt;1-32&gt; – Sets the client-identity column width from 1 - 32 characters</li> </ul> |
| bss                    | Includes the BSS column, which displays the BSS ID the wireless client is associated with  |
| enc                    | Includes the enc column, which displays the encryption suite used by the wireless client   |
| hostname <1-64>        | Includes the hostname column, which displays the wireless client's hostname <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the hostname column width from 1 - 64 characters</li> </ul>   |
| ip                     | Includes the IP column, which displays the wireless client's current IP address  |
| last-active            | Includes the last-active column, which displays the time of last activity seen from the wireless client  |

|                    |  |
|--------------------|--|
| location <1-64>    | Includes the location column, which displays the location of the client's associated Access Points<br>• <1-64> – Sets the location column width from 1 - 64 characters   |
| mac                | Includes the MAC column, which displays the wireless client's MAC address  |
| radio-alias <3-67> | Includes the radio-alias column, which displays the radio alias with the AP's hostname and radio interface number in the "HOSTNAME:RX" format<br>• <3-67> – Sets the radio-alias column width from 3 - 67 characters |
| radio-id           | Includes the radio-id column, which displays the radio ID with the AP's MAC address and radio interface number in the "AA-BB-CC-DD-EE-FF:RX" format  |
| radio-type         | Includes the radio-type column, which displays the wireless client's radio type  |
| role <1-32>        | Includes the role column, which displays the client's role<br>• <1-32> – Sets the role column width from 1 - 32 characters   |
| state              | Includes the state column, which displays the wireless client's current availability state   |
| username <1-64>    | Includes the username column, which displays the wireless client's username<br>• <1-64> – Specify the username column width from 1 - 64 characters.  |
| vendor             | Includes the vendor column, which displays the wireless client's vendor ID   |
| vlan               | Includes the VLAN column, which displays the wireless client's assigned VLAN   |
| wlan               | Includes the WLAN column, which displays the wireless client's assigned WLAN   |

```
customize show-wireless-client-stats (hostname <1-64>,mac,rx-bytes,rx-errors,rx-packets,rx-throughput,t-index,tx-bytes,tx-dropped,tx-packets,tx-throughput)
```

|                            |  |
|----------------------------|--|
| show-wireless-client-stats | Customizes the <b>show &gt; wireless &gt; client</b> stats command output<br>The columns displayed by default are: MAC, Tx bytes, RX bytes, Tx pkts, Rx pkts, and Tx bps, RX bps, T-Index, and Dropped pkts. |
| hostname <1-64>            | Includes the hostname column, which displays the wireless client's hostname<br>• <1-64> – Sets the hostname column width from 1 - 64 characters  |
| mac                        | Includes the MAC column, which displays the wireless client's MAC address  |
| rx-bytes                   | Includes the rx-bytes column, which displays the total number of bytes received by the wireless client   |
| rx-errors                  | Includes the rx-error column, which displays the total number of errors received by the wireless client  |
| rx-packets                 | Includes the rx-packets column, which displays the total number of packets received by the wireless client   |
| rx-throughput              | Includes the rx-throughput column, which displays the receive throughput at the wireless client  |

|               |   |
|---------------|---|
| t-index       | Includes the t-index column, which displays the traffic utilization index at the particular wireless client   |
| tx-bytes      | Includes the tx-bytes column, which displays the total number of bytes transmitted by the wireless client     |
| tx-dropped    | Includes the tx-dropped column, which displays the total number of dropped packets by the wireless client     |
| tx-packets    | Includes the tx-packets column, which displays the total number of packets transmitted by the wireless client |
| tx-throughput | Includes the tx-throughput column, which displays the transmission throughput at the wireless client          |

```
customize show-wireless-client-stats-rf (average-retry-number,error-rate,noise,q-index,rx-rate,signal,snr,t-index,tx-rate)
```

|                               |   |
|-------------------------------|---|
| show-wireless-client-stats-rf | Customizes the <b>show &gt; wireless &gt; client</b> stats RF command output<br>The columns displayed by default are: MAC, Signal (dBm), Noise (dBm), SNR (dB), TX Rate (Mbps), Retry Avg, Errors (pps), and Q-Index (%). |
| average-retry-number          | Includes the average-retry-number column, which displays the average number of retransmissions made per packet  |
| error-rate                    | Includes the error-rate column, which displays the rate of error for the wireless client  |
| hostname <1-64>               | Includes the hostname column, which displays the wireless client's hostname<br><ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the hostname column width from 1 - 64 characters</li> </ul>                     |
| mac                           | Includes the MAC column, which displays the wireless client's MAC address   |
| noise                         | Includes the noise column, which displays the noise (in dBm) as detected by the wireless client   |
| q-index                       | Includes the q-index column, which displays the RF quality index<br><b>Note:</b> Higher values indicate better RF quality.  |
| rx-rate                       | Includes the rx-rate column, which displays the receive rate at the particular wireless client  |
| signal                        | Includes the signal column, which displays the signal strength (in dBm) at the particular wireless client   |
| snr                           | Includes the snr column, which displays the <i>signal-to-noise</i> (SNR) ratio (in dB) at the particular wireless client  |
| t-index                       | Includes the t-index column, which displays the traffic utilization index at the particular wireless client   |
| tx-rate                       | Includes the tx-rate column, which displays the packet transmission rate at the particular wireless client  |

```
customize show-wireless-meshpoint-accelerated-multicast (ap-hostname,group-addr,mesh-name,neighbor-hostname,neighbor-ifid,radio-alias,radio-id,radio-mac,subscriptions)
```

|   |   |
|---|---|
| show-wireless-meshpoint-accelerated-multicast | Configures the information displayed in the <b>show &gt; wireless &gt; meshpoint &gt; accelerated multicast</b> command output. Select the columns (information) displayed from the following options: ap-hostname, group-addr, mesh-name, neighbor-hostname, neighbor-ifid, radio-alias, radio-id, radio-mac, subscriptions. These are recursive parameters and you can select multiple options at a time.<br>The columns displayed by default are: Mesh, Radio, Neighbor-IFID, Neighbor-Hostname, Group-MAC, and Subscriptions. |

```

|                          |  |
|--------------------------|--|
| show-wireless-meshpoint  | Customizes the <b>show &gt; wireless &gt; meshpoint</b> command output<br>The columns displayed by default are: Mesh, Hostname, Hops, Is-Root, Config-As-Root, Root-Hostname, Root-Bound-Time, Path-Metric, Next-Hop-Hostname, and Next-Hop-Use-Time.    |
| ap-mac                   | Includes the ap-mac column, which displays the AP's MAC address in the AA-BB-CC-DD-EE-FF format. Applicable only in case of non-wireless controller meshpoints   |
| cfg-as-root              | Includes the cfg-as-root column, which displays the configured root state of the meshpoint   |
| hops                     | Includes the hops column, which displays the number of hops to the root for this meshpoint   |
| hostname <1-64>          | Includes the hostname column, which displays the AP's hostname.<br>Applicable only in case of non-wireless controller meshpoints <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the hostname column width from 1 - 64 characters</li> </ul>  |
| interface-ids            | Includes the interface-ids column, which displays the interface identifiers (interfaces used by this meshpoint)  |
| is-root                  | Includes the is-root column, which displays the current root state of the meshpoint  |
| mesh-name <1-64>         | Includes the mesh-name column, which displays the meshpoint's name <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the mesh-name column width from 1 - 64 characters</li> </ul>   |
| mpid                     | Includes the mpid column, which displays the meshpoint identifier in the AA-BB-CC-DD-EE-FF format  |
| next-hop-hostname <1-64> | Includes the next-hop-hostname column, which displays the next-hop AP's name (the AP next in the path to the bound root) <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the next-hop-hostname column width from 1 - 64 characters</li> </ul> |
| next-hop-ifid            | Includes the next-hop-ifid column, which displays the next-hop interface identifier in the AA-BB-CC-DD-EE-FF format  |
| next-hop-use-time        | Includes the next-hop-use-time column, which displays the time since this meshpoint started using this next hop  |
| root-bound-time          | Includes the root-bound-time column, which displays the time since this meshpoint has been bound to the current root   |

|                      |   |
|----------------------|---|
| root-hostname <1-64> | Includes the root-hostname column, which displays the root AP's hostname to which this meshpoint is bound <ul style="list-style-type: none"> <li>&lt;1-64&gt; – Sets the root-hostname column width from 1 - 64 characters</li> </ul> |
| root-mpid            | Includes the root-mpid column, which displays the bound root meshpoint identifier in the AA-BB-CC-DD-EE-FF format   |

```
customize show-wireless-meshpoint-neighbor-stats (ap-hostname <1-64>,

**no** on page 609

Restores custom CLI settings to default

## database-client-policy global-config

Creates a database-client-policy and enters its configuration mode. The database-client-policy is only needed in deployments implementing captive-portal registration and database authentication with an onboard database. If enforcing database authentication, configure the user-name and password required to access the database on the database-client-policy.

### Note

For more information on enabling database authentication, see [Example: Enabling Database Authentication](#) on page 67.

*Supported in the following platforms:*

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
database-client-policy <DATABASE-CLIENT-POLICY-NAME>
```

### Parameters

```
database-client-policy <DATABASE-CLIENT-POLICY-NAME>
```

|  |   |
|--|---|
| database-client-policy <DATABASE-CLIENT-POLICY-NAME> | Specify the database-client-policy name. If the policy does not exist, it is created.<br>Once created and configured, apply this policy on the device hosting the database. |
|--|---|

### Examples

```

vx9000-34B78B(config)#database-client-policy DBClientPolicy
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#?
Database Client Policy Mode commands:
  authentication      Database authentication
  no                  Negate a command or set its defaults

  clrscr             Clears the display screen
  commit             Commit all changes made in this session
  do                 Run commands from Exec mode
  end                End current mode and change to EXEC mode
  exit               End current mode and down to previous mode
  help               Description of the interactive help system
  revert             Revert changes
  service            Service Commands
  show               Show running system information
  write              Write running configuration to memory or terminal

### database-client-policy-commands

The following table summarizes database-client-policy configuration mode commands:

**Table 10: Database Client Policy Config Commands**

| Command   | Description   |
|---|---|
| <a href="#">authentication</a> on page 289                          | Configures the captive-portal/NSight database users   |
| <a href="#">no (database-client-policy-config-mode)</a> on page 290 | Removes the database host's IP/hostname configuration |

### authentication

Configures the database's user account details (username and password)

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000

#### Syntax

```
authentication username <USER-NAME> password <PASSWORD>
```

#### Parameters

```
authentication username <USER-NAME> password <PASSWORD>
```

authentication username <USER-NAME> password <PASSWORD>

Configures the username and password required to access the database. Note, username and password specified here should be the same as those already created on the database host. For more information on creating database users, see [service](#) on page 621 (common commands).

- username <USER-NAME> – Configures the user name
  - password <PASSWORD> – Configures the password for the username specified above.

However, ensure database authentication is enabled in the database-policy.

**Note:** For more information on database-policy, see [database-policy global config](#) on page 291.

**Note:** For more information on enabling database authentication, see [Example: Enabling Database Authentication](#) on page 67.

#### Examples

```
vx9000-65672 (config-database-client-policy-DBClientPolicy) # authentication username
extreme password 2 test@12345

vx9000-656725#show running-config database-client-policy replica-set
database-client-policy replica-set
  database-server 13.13.13.3
  database-server 14.14.14.2
  authentication username extreme password 2 q4cUyedmA4BFsn1kg/
xjCQAAAAliMbdrXKblQbsyrwMGdVzv
vx9000-656725#
```

#### Related Commands

|           |  |
|-----------|--|
| <b>no</b> | Removes an existing database username and password |
|-----------|--|

### no (database-client-policy-config-mode)

Removes the database host's IP/hostname configuration. Also removes database user details.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, VX 9000

#### Syntax

```
no [authentication|database-server]
no authentication username <USER-NAME>
no database-server [<IP>|<HOST-NAME>|<IPv6>]
```

#### Parameters

```
no [authentication|database-server]
```

|                                    |  |
|------------------------------------|--|
| <code>no &lt;PARAMETERS&gt;</code> | Removes the database VM's IPv4/IPv6 address or hostname associated with this database client policy. Also removes database user details. |
|------------------------------------|--|

### Examples

```

vx9000-34B78B(config-database-client-policy-DBClientPolicy)#show context
database-client-policy DBClientPolicy
database-server 192.168.13.10
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#no database-server
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#show context
database-client-policy DBClientPolicy
vx9000-34B78B(config-database-client-policy-DBClientPolicy)#

```

## database-policy global config

Creates a database-policy and enters its configuration mode. After creating the database-policy, use it on the database host. This enables the database. If deploying a database replica-set, use this command to define the replica set configurations.

To enforce database authentication, enable authentication on the database-policy, and configure the username and password required to access the database. Note, this command is part of a set of configurations that are required to enable authentication. For more information on the entire set of configurations, see [Example: Enabling Database Authentication](#) on page 67.

*Supported in the following platforms:*

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
database-policy <DATABASE-POLICY-NAME>
```

### Parameters

```
database-policy <DATABASE-POLICY-NAME>
```

|   |  |
|---|--|
| <code>database-policy &lt;DATABASE-POLICY-NAME&gt;</code> | Specify the database policy name. If the policy with the specified name does not exist, it is created. |
|---|--|

### Examples

```

nx9500-6C8809(config)#database-policy test
nx9500-6C8809(config-database-policy-test)#?
Database Policy Mode commands:
  authentication  Database authentication
  no              Negate a command or set its defaults
  replica-set     Replica Set
  shutdown        Disable database server

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  do              Run commands from Exec mode
  end             End current mode and change to EXEC mode
  exit            End current mode and down to previous mode

```

```

help          Description of the interactive help system
revert        Revert changes
service       Service Commands
show          Show running system information
write         Write running configuration to memory or terminal
nx9500-6C8809(config-database-policy-test)#

```

### Related Commands

### database-policy-config-commands

The following table summarizes database-policy configuration mode commands:

**Table 11: Database Policy Config Commands**

| Command  | Description  |
|--|--|
| <a href="#">authentication</a> on page 292                   | Enables database authentication and configures the username and password required to access the database |
| <a href="#">replica-set</a> on page 293                      | Adds a member to a database replica set  |
| <a href="#">shutdown</a> on page 295                         | Shuts down the database server   |
| <a href="#">no (database-policy-config-mode)</a> on page 295 | Removes a member from the database replica set   |

### authentication

Enables database authentication. When enabled and applied on the database host, this policy enforces authenticated access to the database. This command also configures the username and password required to access the database.

Supported in the following platforms:

- Service Platforms — NX9500, NX9600, VX9000

#### Syntax

```

authentication
authentication username <USER-NAME> password <PASSWORD>

```

#### Parameters

```

authentication

```

|                |   |
|----------------|---|
| authentication | Enables database authentication on this database-policy. When executed without the associated keywords, the command enables authentication on the database host using the policy. Execute the command along with the username and password inputs to configure the user credentials required for access the database. |
|----------------|---|

```
authentication username <USER-NAME> password <PASSWORD>
```

|   |  |
|---|--|
| authentication username <USER-NAME> password <PASSWORD> | <p>Configures the username and password required to access the database. Note, username and password specified here should be the same as those already created on the database host. For more information, see <a href="#">service</a> (common commands).</p> <ul style="list-style-type: none"> <li>username &lt;USER-NAME&gt; – Configures the database username <ul style="list-style-type: none"> <li>password &lt;PASSWORD&gt; – Configures the password for the username specified above</li> </ul> </li> </ul> <p>Users using these credentials are allowed database access. In case of a split NSight/EGuest deployment, ensure that the database-client-policy running on the NSight/EGuest server has the same user details configured. For information on creating database-client-policy, see <a href="#">database-client-policy global-config</a> on page 288. For more information on enabling database authentication, see <a href="#">Example: Enabling Database Authentication</a> on page 67.</p> |
|---|--|

### Examples

```
nx9500-6C874D(config-database-policy-test)#authentication
nx9500-6C874D(config-database-policy-test)#no shutdown
nx9500-6C874D(config-database-policy-test)#authentication username user1 password uesr@123
nx9500-6C874D(config-database-policy-test)#show context
database-policy test
authentication
authentication username user1 password 2 f20/dTjYiMnR/tqbGFaO5gAAAjL/xo8clisk1TZjimo128t

```

### Related Commands

|    |  |
|----|--|
| no | Disables database authentication, and removes the username and password configuration. |
|----|--|

## replica-set

Adds a member to a database replica set. A replica-set is a group of devices (replica-set members) running the database instances that maintain the same data set. Replica sets provide redundancy and high availability and are the basis for all production deployments. The replica set usually consists of: an arbiter, a primary member, and one or more secondary members. The primary member and the secondary member(s) maintain replicas of the data set.

Before deploying a replica set, ensure that each of the replica-set member:

- has the DB instances installed, and
- is able to communicate with every other member in the set.

After ensuring the above,

- Create a database policy (with identical replica-set configuration) on each of the member devices, and
- Use the database policy in the member device's configuration mode.

These member devices elect a primary member, which begins accepting client-write operations. Remaining devices in the replica-set, with the exception of the arbiter, are designated as secondary members.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, VX 9000

#### Syntax

```
replica-set member [<IP>|<FQDN>] {arbiter|priority <0-255>}
```

#### Parameters

```
replica-set member [<IP>|<FQDN>] {arbiter|priority <0-255>}
```

replica-set member [<IP>|<FQDN>] {arbiter|priority <0-255>}

Adds a member to the database replica set. To identify the member, use one of the following options:

- <IP> – Specify the member's IP address.
- <FQDN> – Specify the member's FQDN.

After specifying the IP address or FQDN, specify the following:

- arbiter – Optional. Select to configure the member as the arbiter.
- priority <0-255> – Optional. Configures the priority of a non-arbiter member of the replica set
  - <0-255> – Specify the priority from 0 - 255. This value determines the member's position within the replica set as primary or secondary. It also helps in electing the fall-back primary member in the eventuality of the current primary member being unreachable.

A replica set should have at least three members. The maximum number of members can go up to fifty (50). However, configuring a three-member replica set is recommended. Replica sets should have odd number of members. In case of an even-numbered replica set, add an arbiter to make the member count odd. This ensures that at least one member gets a majority vote in the primary-member election.

#### Examples

```
nx9500-6C874D(config-database-policy-test)#replica-set member 192.168.13.14 arbiter
nx9500-6C874D(config-database-policy-test)#replica-set member 192.168.13.16 priority 1
nx9500-6C874D(config-database-policy-test)#replica-set member 192.168.13.12 priority 2
nx9500-6C874D(config-database-policy-test)#show context
database-policy test
  replica-set member 192.168.13.12 priority 2
  replica-set member 192.168.13.14 arbiter
  replica-set member 192.168.13.16 priority 1
nx9500-6C874D(config-database-policy-test)#
```

#### Related Commands

no

Removes a member from the database replica set

**shutdown**

Shuts down the database server. The factory default is set as `no > shutdown`.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, VX 9000

**Syntax**

```
shutdown
```

**Parameters**

```
None
```

**Examples**

```
nx9500-6C874D(config-database-policy-test)#shutdown
nx9500-6C874D(config-database-policy-test)#show context
database-policy test
  shutdown
nx9500-6C874D(config-database-policy-test)#
```

**Related Commands**

|           |   |
|-----------|---|
| <b>no</b> | Enables (brings-up) the database server |
|-----------|---|

**no (database-policy-config-mode)**

Removes or reverts the database policy settings to default values

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, VX 9000

**Syntax**

```
no [authentication|replica-set|shutdown]
no authentication {username <USER-NAME>}
no replica-set member [<IP>|<FQDN>]
no shutdown
```

**Parameters**

```
no <PARAMETERS>
```

|                                    |   |
|------------------------------------|---|
| <code>no &lt;PARAMETERS&gt;</code> | Removes a member from the database replica set, or brings up a database server that is down. Also disables database authentication and removes user |
|------------------------------------|---|

**Examples**

The following example shows a three-member replica set:

```
nx9500-6C8809(config-database-policy-test)#show context
database-policy test
  replica-set member 192.168.13.12 priority 2
  replica-set member 192.168.13.14 arbiter
  replica-set member 192.168.13.16 priority 1
nx9500-6C8809(config-database-policy-test)#
```

In the following example the arbiter is being removed, leaving the replica set with only two members:

```
nx9500-6C8809(config-database-policy-test)#no replica-set member 192.168.13.14
nx9500-6C8809(config-database-policy-test)#show context
database-policy test
  replica-set member 192.168.13.12 priority 2
  replica-set member 192.168.13.16 priority 1
nx9500-6C8809(config-database-policy-test)#
```

Since a replica set must have at least three members, another member must be added to this replica set. This member may or may not be an arbiter.

```
nx9500-6C8809(config-database-policy-test)#replica-set member 192.168.13.8 priority 3
nx9500-6C8809(config-database-policy-test)#show context
database-policy test
  replica-set member 192.168.13.12 priority 2
  replica-set member 192.168.13.16 priority 1
  replica-set member 192.168.13.8 priority 3
nx9500-6C8809(config-database-policy-test)#
```

## device

Enables simultaneous configuration of multiple devices

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
device {containing|filter}
device {containing <STRING>} {filter type [ap505|ap510|ex3524|ex3548|rfs4000|nx5500|
nx75xx|nx9000|nx9600|t5|vx9000]}
device {filter type [ap505|ap510|ex3524|ex3548|rfs4000|nx5500|nx75xx|nx9000|nx9600|
t5|vx9000]}
```

### Parameters

```
device {containing <STRING>} {filter type [ap505|ap510|ex3524|ex3548|rfs4000|nx5500|
nx75xx|nx9000|nx9600|
t5|vx9000]}
```

|                           |   |
|---------------------------|---|
| device                    | Enters a device's configuration mode. Use this command to simultaneously configure devices having similar configuration.  |
| containing <STRING>       | Optional. Configures the string to search for in the device's hostname. All devices having hostnames containing the string specified here are filtered, and can be configured simultaneously. <ul style="list-style-type: none"> <li>&lt;STRING&gt; – Specify the string to search for in the device's hostname.</li> </ul> |
| filter type <DEVICE-TYPE> | Optional. Filters out a specific device type. After specifying the hostname string, select the device type. The options are: AP510, AP505, EX3424, EX3548, RFS4000, NX5500, NX7500, NX9500, NX9600, VX9000, and T5.   |

```
device {filter type [ap505|ap510|ex3524|ex3548| rfs4000| nx5500| nx75xx| nx9000| nx9600|
t5| vx9000]}
```

|                           |  |
|---------------------------|--|
| device                    | Configures a basic device profile  |
| filter type <DEVICE-TYPE> | Optional. Filters out a specific device type. The options are: AP510, AP505, EX3424, EX3548, RFS4000, NX5500, NX7500, NX9500, NX9600, VX9000, and T5.. |

### Examples

```
ap505-13403B(config)#device filter type ap5
ap510 ap505
ap505-13403B(config)#device filter type ap505 ?
<cr>

ap505-13403B(config)#device filter type ap505
ap505-13403B(config-device-{'type': 'ap505'})#
```

### Related Commands

|                |   |
|----------------|---|
| no on page 609 | Removes multiple devices from the network |
|----------------|---|

## device-categorization

Configures a device categorization list, which categorizes devices as sanctioned or neighboring. Categorization of devices enables quick identification and blocking of unsanctioned devices in the network.

Proper classification and categorization of devices (access points, clients etc.) helps suppress unnecessary unauthorized access point alarms, allowing network administrators to focus on alarms on devices actually behaving in a suspicious manner. An intruder with a device erroneously authorized could potentially perform activities that harm your organization.

Authorized access points and clients are generally known to you and conform with your organization's security policies. Unauthorized devices are those detected as interoperating within the network, but are not approved. These devices should be filtered to avoid jeopardizing the data within a managed network. Use this command to apply the neighboring and sanctioned (approved) filters on peer devices operating within a wireless controller or access point's radio coverage area. Detected client MAC addresses can also be filtered based on their classification.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
device-categorization <DEVICE-CATEGORIZATION-LIST-NAME>
```

Parameters

```
device-categorization <DEVICE-CATEGORIZATION-LIST-NAME>
```

|                                   |  |
|-----------------------------------|--|
| <DEVICE-CATEGORIZATION-LIST-NAME> | Specify the device categorization list name. If a list with the same name does not exist, it is created. |
|-----------------------------------|--|

Examples

```
nx9500-6C8809(config)#device-categorization rfs4000
nx9500-6C8809(config-device-categorization-rfs4000)#?
Device Category Mode commands:

device-categorization-mode-commands

The following table summarizes device categorization configuration mode commands:

**Table 12: Device-Categorization Config Mode Commands**

| Command  | Description  |
|--|--|
| mark-device on page 299                            | Adds a device to the device categorization list      |
| no (device-categorization-config-mode) on page 300 | Removes a device from the device categorization list |

**mark-device**

Adds a device to the device categorization list as sanctioned or neighboring. Devices are further classified as AP or client.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
mark-device <1-1000> [sanctioned|neighboring] [ap|client]
mark-device <1-1000> [sanctioned|neighboring] ap {mac <MAC>|ssid <SSID> {mac <MAC>}}
mark-device <1-1000> [sanctioned|neighboring] client {mac <MAC>}
```

**Parameters**

```
mark-device <1-1000> [sanctioned|neighboring] ap {mac <MAC>|ssid <SSID> {mac <MAC>}}
```

|                            |   |
|----------------------------|---|
| <1-1000>                   | Configures the device categorization entry index number   |
| sanctioned                 | Marks a device as sanctioned. A sanctioned device is authorized to use network resources.   |
| neighboring                | Marks a device as neighboring. A neighboring device is a neighbor in the same network as this device.   |
| ap {mac <MAC> ssid <SSID>} | <p>Marks a specified AP as sanctioned or neighboring based on its MAC address or the SSID it is beaconing</p> <ul style="list-style-type: none"> <li>• mac &lt;MAC&gt; – Optional. Specify the AP's MAC address</li> <li>• ssid &lt;SSID&gt; – Optional. Specify the SSID the AP is beaconing. After specifying the SSID, you can optionally specify MAC address of the radio.</li> </ul> <p>All APs are marked if no specific MAC address or SSID is provided.</p> |

```
mark-device [sanctioned|neighboring] client {mac <MAC>}
```

|                    |   |
|--------------------|---|
| <1-1000>           | Configures the device categorization entry index number   |
| sanctioned         | Marks the wireless client as sanctioned. A sanctioned device is authorized to use network resources.  |
| neighboring        | Marks the wireless client as neighboring. A neighboring device is a neighbor in the same network as this device.  |
| client {mac <MAC>} | <p>Marks a specified wireless client as sanctioned or neighboring based on its MAC address</p> <ul style="list-style-type: none"> <li>• mac &lt;MAC&gt; – Optional. Specify the wireless client's MAC address.</li> </ul> |

**Examples**

```
nx9500-6C8809(config-device-categorization-rfs4000)#mark-device 1 sanctioned ap
mac 11-22-33-44-55-66
nx9500-6C8809(config-device-categorization-rfs4000)#show context
device-categorization rfs4000
mark-device 1 sanctioned ap mac 11-22-33-44-55-66
nx9500-6C8809(config-device-categorization-rfs4000)#

|           |  |
|-----------|--|
| <b>no</b> | Removes an entry from the device categorization list |
|-----------|--|

**no (device-categorization-config-mode)**

Removes a device from the device categorization list

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
no mark-device <1-1000> [neighboring|sanctioned] [ap|client]
no mark-device <1-1000> [sanctioned|neighboring] client {mac <MAC>}
no mark-device <1-1000> [sanctioned|neighboring] ap {mac <MAC>|ssid <SSID> {mac <MAC>}}
```

**Parameters**

```
no <PARAMETERS>
```

```
no <PARAMETERS>  Removes a mark device (AP or wireless client) entry from this device categorization list
```

**Examples**

The following example shows the device categorization list 'rfs7000' settings before the 'no' command is executed:

```
nx9500-6C8809(config-device-categorization-rfs4000)#show context
device-categorization rfs4000
  mark-device 1 sanctioned ap mac 11-22-33-44-55-66
nx9500-6C8809(config-device-categorization-rfs4000)#
nx9500-6C8809(config-device-categorization-rfs4000)#no mark-device 1 sanctioned ap mac
11-22-33-44-55-66
```

The following example shows the device categorization list 'rfs7000' settings after the 'no' command is executed:

```
nx9500-6C8809(config-device-categorization-rfs4000)#show context
device-categorization rfs4000
nx9500-6C8809(config-device-categorization-rfs4000)#
```

**dhcp-server-policy**

Configures DHCPv4 server policy parameters, such as class, address range, and options. A new policy is created if it does not exist.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
dhcp-server-policy <DHCP-SERVER-POLICY-NAME>
```

**Parameters**

```
dhcp-server-policy <DHCP-SERVER-POLICY-NAME>
```

|                    |   |
|--------------------|---|
| <DHCP-POLICY-NAME> | Specify the DHCP server policy name. If the policy does not exist, it is created. |
|--------------------|---|

### Examples

```

nx9500-6C8809(config)#dhcp-server-policy test
nx9500-6C8809(config-dhcp-policy-test)#?
DHCP policy Mode commands:
  bootp          BOOTP specific configuration
  dhcp-class     Configure DHCP class (for address allocation using DHCP
                 user-class options)
  dhcp-pool      Configure DHCP server address pool
  dhcp-server    Activating dhcp server based on criteria
  no             Negate a command or set its defaults
  option         Define DHCP server option
  ping           Specify ping parameters used by DHCP Server

  clrscr        Clears the display screen
  commit         Commit all changes made in this session
  do             Run commands from Exec mode
  end            End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service        Service Commands
  show           Show running system information
  write          Write running configuration to memory or terminal

nx9500-6C8809(config-dhcp-policy-test)#

```

## dhcpv6-server-policy

Creates a DHCPv6 server policy and enters its configuration mode

DHCPv6 is a networking protocol for configuring IPv6 hosts with IP addresses, IP prefixes, or other configuration attributes required on an IPv6 network.

DHCPv6 servers pass IPv6 network addresses to IPv6 clients. The DHCPv6 address assignment feature manages non-duplicate addresses in the correct prefix based on the network where the host is connected. Assigned addresses can be from one or multiple pools. Additional options, such as the default domain and DNS name-server address, can be passed back to the client. Address pools can be assigned for use on a specific interface or on multiple interfaces, or the server can automatically find the appropriate pool.

When configured and applied to a device, the DHCPv6 server policy enables the device to function as a stateless DHCPv6 server.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
dhcpv6-server-policy <DHCPv6-SERVER-POLICY-NAME>
```

### Parameters

```
dhcpv6-server-policy <DHCPv6-SERVER-POLICY-NAME>
```

|                             |   |
|-----------------------------|---|
| <DHCPv6-SERVER-POLICY-NAME> | Specify the DHCPv6 server policy name. If the policy does not exist, it is created. |
|-----------------------------|---|

### Examples

```
nx9500-6C8809(config)#dhcpv6-server-policy test
nx9500-6C8809(config-dhcpv6-server-policy-test)#?
DHCPv6 server policy Mode commands:
  dhcpv6-pool          Configure DHCPV6 server address pool
  no                   Negate a command or set its defaults
  option               Define DHCPv6 server option
  restrict-vendor-options Restrict vendor specific options to be sent in
                      server reply
  server-preference    Server preference value sent in the reply, by the
                      server to client

  clrscr               Clears the display screen
  commit               Commit all changes made in this session
  do                   Run commands from Exec mode
  end                  End current mode and change to EXEC mode
  exit                 End current mode and down to previous mode
  help                 Description of the interactive help system
  revert               Revert changes
  service              Service Commands
  show                 Show running system information
  write                Write running configuration to memory or terminal

nx9500-6C8809(config-dhcpv6-server-policy-test)#
```

#### Note

For more information on DHCPv6 policy, see [DHCP-Server Policy](#) on page 1431.

## dns-whitelist

Configures a DNS whitelist. A DNS whitelist is a list of allowed DNS destination IP addresses pre-approved to access a controller, service platform, or access point managed captive portal.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
dns-whitelist <DNS-WHITELIST-NAME>
```

### Parameters

```
dns-whitelist <DNS-WHITELIST-NAME>
```

|                      |   |
|----------------------|---|
| <DNS-WHITELIST-NAME> | Specify the DNS whitelist name. If the whitelist does not exist, it is created. |
|----------------------|---|

### Examples

```
nx9500-6C8809(config)#dns-whitelist test
nx9500-6C8809(config-dns-whitelist-test)#?
DNS Whitelist Mode commands:
  no      Negate a command or set its defaults
  permit  Match a host

  clrscr  Clears the display screen
  commit  Commit all changes made in this session
  end     End current mode and change to EXEC mode
  exit    End current mode and down to previous mode
  help    Description of the interactive help system
  revert  Revert changes
  service Service Commands
  show    Show running system information
  write   Write running configuration to memory or terminal

nx9500-6C8809(config-dns-whitelist-test)#
```

### Related Commands

|----------------|-----------------------------------|
| no on page 609 | Removes an existing DNS Whitelist |
|----------------|-----------------------------------|

### permit

A whitelist is a list of host names and IP addresses permitted access to the network or captive portal. This command adds a host or destination IP address to the DNS whitelist.

### Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
permit <IPv4/IPv6/HOSTNAME> {suffix}
```

### Parameters

```
permit <IPv4/IPv6/HOSTNAME> {suffix}
```

|                          |  |
|--------------------------|--|
| <IPv4/IPv6/<br>HOSTNAME> | <p>Adds a device to the DNS whitelist</p> <ul style="list-style-type: none"> <li>&lt;IPv4/IPv6/HOSTNAME&gt; - Provide a hostname or numerical IPv4 or IPv6 address for each destination IP address or host included in the whitelist.</li> </ul> <p><b>Note:</b> A maximum of 256 entries can be made.</p> |
| suffix                   | Optional. Matches any hostname including the specified name as suffix  |

### Examples

```

nx9500-6C8809(config-dns-whitelist-test)#permit example_company.com suffix
nx9500-6C8809(config-dns-whitelist-test)#show context
dns-whitelist test
permit example_company.com suffix
nx9500-6C8809(config-dns-whitelist-test)#

```

### Related Commands

|    |                               |
|----|-------------------------------|
| no | Removes a DNS whitelist entry |
|----|-------------------------------|

*no (dns-whitelist-config-mode)*

Removes a specified host or IP address from the DNS whitelist, and prevents it from accessing network resources

### Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
no permit <IPv4/IPv6/HOSTNAME>
```

### Parameters

```
no permit <IPv4/IPv6/HOSTNAME>
```

|                      |   |
|----------------------|---|
| <IPv4/IPv6/HOSTNAME> | <p>Removes a device from the DNS whitelist (identifies the device by its IP address or hostname)</p> <ul style="list-style-type: none"> <li>&lt;IPv4/IPv6/HOSTNAME&gt; - Specify the device's IPv4/IPv6 address or hostname.</li> </ul> |
|----------------------|---|

### Examples

```

nx9500-6C8809(config-dns-whitelist-test)#show context
dns-whitelist test
permit example_company.com suffix
nx9500-6C8809(config-dns-whitelist-test)#
nx9500-6C8809(config-dns-whitelist-test)#no permit example_company.com
nx9500-6C8809(config-dns-whitelist-test)#show context
dns-whitelist test
nx9500-6C8809(config-dns-whitelist-test)#

```

## end

Ends and exits the current mode and moves to the PRIV EXEC mode

The prompt changes to the PRIV EXEC mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
end
```

*Parameters*

```
None
```

*Examples*

```
rfs4000-229D58(config)#end
rfs4000-229D58#
```

## ex3500

Creates an EX3500 time range list and enters its configuration mode

An EX3500 time range list consists of a set of periodic and absolute time range rules. Periodic time ranges recur periodically at specified time periods, such as daily, weekly, weekends, weekdays, and on specific week days, for example on every successive Mondays. Absolute time ranges are not periodic and do not recur. They consist of a range of days during a particular time period (the starting and ending days and time are fixed).

The EX3500 series switch is a Gigabit Ethernet layer 2 switch with either 24 or 48 10/100/1000-BASE-T ports, and four SEP (*Small Form-factor Pluggable*) transceiver slots for fiber connectivity. The EX3500 series switch can adopt to a NOC controller and be managed by it. The EX3500 time range values configured here are used in EX3500 MAC ACL firewall rules that filter an EX3500's incoming and outgoing traffic.

For more information on creating EX3500 rules, see [ex3500 \(mac-acl-config-commands\)](#) on page 1397 and [#unique\\_320](#).

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

*Syntax*

```
ex3500 time-range <TIME-RANGE-NAME>
```

*Parameters*

```
ex3500 time-range <TIME-RANGE-NAME>
```

|   |   |
|---|---|
| <code>ex3500 time-range &lt;TIME-RANGE-NAME&gt;</code><br>Configures EX3500 time range list and enters its configuration mode | <ul style="list-style-type: none"> <li>• <code>&lt;TIME-RANGE-NAME&gt;</code> – Enter a name for this time range. If the time range does not exist, it is created.</li> </ul> |
|---|---|

### Examples

```

nx9500-6C8809(config)#ex3500 time-range EX3500_TimeRange_02
nx9500-6C8809(config-ex3500-time-range-EX3500_TimeRange_02)#?
nx9500-6C8809 Time Range Configuration commands:
  absolute  Absolute time and date
  no        Negate a command or set its defaults
  periodic  Periodic time and date

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

nx9500-6C8809(config-ex3500-time-range-EX3500_TimeRange_02)#

```

### Related Commands

### absolute

Configures an absolute time range rule for this EX3500 time range list. Absolute time ranges are not periodic and do not recur. They consist of a range of days during a particular time period.

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

### Syntax

```

absolute start <0-23> <0-59> <1-31> <MONTH> <2013-2037> {end <0-23> <0-59> <1-31>
<MONTH> <2013-2037>}

```

## Parameters

```
absolute start <0-23> <0-59> <1-31> <MONTH> <2013-2037> {end <0-23> <0-59> <1-31>
<MONTH> <2013-2037>}
```

|   |   |
|---|---|
| absolute  | Configures an absolute time range rule settings   |
| start <0-23> <0-59> <1-31><br><MONTH> <2013-2037> | Configures the start day and time settings <ul style="list-style-type: none"> <li>• &lt;0-23&gt; – Specify the start time from 0 - 23 hours.</li> <li>• &lt;0-59&gt; – Specify the start time from 0 - 59 minutes.</li> </ul> For example, if the values provided are 12 hours and 30 minutes, the start time is 12:30 A.M on the specified day. <ul style="list-style-type: none"> <li>• &lt;1-31&gt; – Specify the day of month from 1 - 31 when the time range starts.</li> <li>• &lt;MONTH&gt; – Specify the month. The options are: April, August, December, February, January, July, June, March, May, November, October, September.</li> <li>• &lt;2013-2037&gt; – Specify the year from 2013 - 2037.</li> </ul> |
| end <0-23> <0-59> <1-31><br><MONTH> <2013-2037>   | Optional. Configures the end day and time settings <ul style="list-style-type: none"> <li>• &lt;0-23&gt; – Specify the end time from 0 - 23 hours.</li> <li>• &lt;0-59&gt; – Specify the end time from 0 - 59 minutes.</li> <li>• &lt;1-31&gt; – Specify the day of month from 1 - 31 when the time range ends.</li> <li>• &lt;MONTH&gt; – Specify the month. The options are: April, August, December, February, January, July, June, March, May, November, October, September.</li> <li>• &lt;2013-2037&gt; – Specify the year from 2013 - 2037.</li> </ul>   |

## Examples

```
EX3500(config-ex3500-time-range-EX3500-TimeRange-01)#absolute start 1 0 1
june 2017 end 1 0 30 june 2018

EX3500(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
absolute start 1 0 1 june 2018 end 1 0 30 june 2018

|--|---|
| no (ex3500-time-range-config-mode) on page 309 | Removes this absolute time range rule from the EX3500 time range list |
|--|---|

**periodic**

Configures a periodic time range rule for this EX3500 time range list

Periodic time ranges are configured to recur based on periodicity such as daily, weekly, weekends, weekdays, and on specific week days, such as on every successive Sunday.

Supported in the following platforms:

- Service Platforms — NX 7500, NX 95XX, NX 96XX

## Syntax

```
periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|weekdays|
weekend] <0-23> <0-59> to [<023> <0-59>|daily|friday|monday|saturday|sunday|thursday|
tuesday|wednesday|weekdays|weekend] <0-23> <0-59> rule-precedence <1-7>
```

## Parameters

```
periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|weekdays|
weekend] <0-23> <0-59> to [<023> <0-59>|daily|friday|monday|saturday|sunday|thursday|
tuesday|wednesday|weekdays|weekend] <0-23> <0-59> rule-precedence <1-7>
```

|   |   |
|---|---|
| periodic [daily friday monday saturday sunday thursday tuesday wednesday weekdays weekend]        | <p>Configures this periodic time range's start day. The options are:</p> <ul style="list-style-type: none"> <li>• daily</li> <li>• Friday</li> <li>• Monday</li> <li>• Saturday</li> <li>• Sunday</li> <li>• Thursday</li> <li>• Tuesday</li> <li>• Wednesday</li> <li>• weekdays</li> <li>• weekend</li> </ul>   |
| <0-23> <0-59>   | <p>After specifying the start day, specify the start time in hours (24 hours format) and minutes</p> <ul style="list-style-type: none"> <li>• &lt;0-23&gt; – Specify the start time from 0 - 23 hours.</li> <li>• &lt;0-59&gt; – Specify the start time from 0 - 59 minutes.</li> </ul> <p>For example, if the values provided are 12 hours and 30 minutes, the start time is 12:30 A.M on the specified day.</p>   |
| to [<023> <0-59> daily friday monday saturday sunday thursday tuesday wednesday weekdays weekend] | <p>Configures this periodic time range's end day. This is the day when the time range ends. The options available changes depending on the start day configured. The options are:</p> <ul style="list-style-type: none"> <li>• &lt;0-23&gt; &lt;0-59&gt; – Select this option to end the time range on the same day as it starts. Specify the end hour from 0 - 23 hours and the minutes from 0 - 59 minutes.</li> <li>• daily – Select this option if the time range starts and ends every day at a specified time</li> <li>• friday – Select this option if the time range ends on Fridays</li> <li>• monday – Select this option if the time range ends on Mondays</li> <li>• saturday – Select this option if the time range ends on Saturdays</li> <li>• sunday – Select this option if the time range ends on Sundays</li> <li>• thursday – Select this option if the time range ends on Thursdays</li> <li>• tuesday – Select this option if the time range ends on Tuesdays</li> <li>• wednesday – Select this option if the time range ends on Wednesdays</li> <li>• weekdays – Select this option if the time range ends on Weekdays</li> <li>• weekend – Select this option if the time range ends on Weekends</li> </ul> <p>If the time range does not end on the same day, select the end day, and then specify the end time, or else just specify the end time.</p> |

|                       |  |
|-----------------------|--|
| <0-23> <0-59>         | <p>After specifying the end day, specify the end time in hours (in 24 hours format) and minutes</p> <ul style="list-style-type: none"> <li>&lt;0-23&gt; - Specify the end time from 0 - 23 hours.</li> <li>&lt;0-59&gt; - Specify the end minute from 0 - 59 minutes.</li> </ul> <p>In case of time ranges starting and ending on the same day, ensure that the end time (hours and minutes) is not lower than the specified start time.</p> |
| rule-precedence <1-7> | <p>Configures a precedence value for this periodic time range rule. Rules with lower precedence have higher priority and are applied first.</p> <ul style="list-style-type: none"> <li>&lt;1-7&gt; - Specify a precedence value from 1 - 7.</li> </ul>   |

### Examples

```
EX3500(config-ex3500-time-range-EX3500-TimeRange-01)#periodic daily 1 10
to daily 23 10 rule-precedence 1

EX3500(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
  periodic daily 1 10 to daily 23 10 rule-precedence 1
  absolute start 1 0 1 june 2017 end 1 0 30 june 2018
EX3500(config-ex3500-time-range-EX3500-TimeRange-01)#
```

| <b>no (ex3500-time-range-config-mode)</b> on page 309 | Removes this periodic time range rule from the EX3500 time range list |
|---|---|

## no (ex3500-time-range-config-mode)

Removes this EX3500 time range list settings

Supported in the following platforms:

- Service Platforms — NX 7500, NX 95XX, NX 96XX

### Syntax

```
no [absolute|periodic]
no absolute

no periodic [daily|friday|monday|saturday|sunday|thursday|tuesday|wednesday|weekdays|
weekend]
<0-23> <0-59> to [<0-23> <0-59>|daily|friday|monday|saturday|sunday|thursday|tuesday|
wednesday|
weekdays|weekend]
```

### Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes this EX3500 time range list settings based on the parameters passed |
|-----------------|---|

### Examples

```
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
  periodic daily 1 10 to daily 23 10 rule-precedence 1
```

```

absolute start 1 0 1 june 2017 end 1 0 30 june 2018
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#no periodic daily 1
10 to daily 23 10 rule-precedence 1
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#show context
ex3500 time-range EX3500-TimeRange-01
absolute start 1 0 1 june 2017 end 1 0 30 june 2018
nx9500-6C8809(config-ex3500-time-range-EX3500-TimeRange-01)#

```

## ex3500-management-policy

Creates an EX3500 management policy and enters its configuration mode. Once configured and applied on a EX3500 switch, the management policy controls access to the switch from management stations using SNMP.

The EX3500 management policy is either applied:

- Individually on an adopted EX3500 series switch (in the device configuration mode), or
- To an EX3524 and EX3548 profile, which is then applied to an adopted EX3500 series switch.

EX3500 devices (EX3524 and EX3548) are layer 2 Gigabit Ethernet switches with either 24 or 48 10/100/1000-BASE-T ports, and four SFP transceiver slots for fiber connectivity. Each 10/100/1000 Mbps port supports both the IEEE 802.3af and IEEE 802.3at-2009 PoE standards. An EX3500 switch has an SNMP-based management agent that provides both in-band and out-of-band management access. The EX3500 switch utilizes an embedded HTTP Web agent and CLI, which in spite of being different from that of the WiNG operating system provides WiNG controllers PoE and port management resources.

Going forward NX7500, NX9500, and NX9600 WiNG managed series service platforms and VMs can discover, adopt, and partially manage EX3500 series Ethernet switches without modifying the proprietary operating system running the EX3500 switches. The WiNG service platforms utilize standardized interfaces to push configuration files to the EX3500 switches, and maintain a translation layer, understood by the EX3500 switch, for statistics retrieval.

WiNG can partially manage an EX3500 without using DHCP option 193, provided the EX3500 is directly configured to specify the IPv4 addresses of potential WiNG adopters. To identify the potential WiNG adopter, in the EX3500's device configuration mode specify the adopter's IPv4 address using the `controller > host > <IP-ADDRESS>` command. WiNG service platforms leave the proprietary operating system running the EX3500 switches unmodified, and partially manage them utilizing standardized WiNG interfaces. WiNG service platforms use a translation layer to communicate with the EX3500.

*Supported in the following platforms:*

- Service Platforms — NZ7500, NX9500, NX9600, VX9000

### Syntax

```
ex3500-management-policy <POLICY-NAME>
```

### Parameters

```
ex3500-management-policy <POLICY-NAME>
```

|               |   |
|---------------|---|
| <POLICY-NAME> | Specify the EX3500 management policy name. If the policy does not exist, it is created. |
|---------------|---|

### Examples

```

nx9500-6C8809(config)#ex3500-management-policy test
nx9500-6C8809(config-ex3500-management-policy-test)#?
nx9500-6C8809 _Management Mode commands:

| <b>ssh</b> on page 323         | Configures the SSH server settings used to authenticate SSH connection to a EX3500 switch   |

**Table 14: EX3500 Management Policy Config Commands (continued)**

| Command  | Description   |
|--|---|
| <code>username</code> on page 324                                  | Configures a EX3500 switch user settings                  |
| <code>no (ex3500-management-policy-config-mode)</code> on page 325 | Removes or reverts this EX3500 management policy settings |

**enable**

Configures an executive password for this EX3500 management policy

Each EX3500 management policy can have a unique executive password with its own privilege level assigned. Utilize these passwords as specific EX3500 management sessions require priority over others.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

**Syntax**

```
enable password [0|7|level]
enable password [0|7] <PASSWORD>
enable password level <0-15> [0 <PASSWORD>|7 <PASSWORD>]
```

**Parameters**

```
enable password [0|7] <PASSWORD>
```

|                                     |  |
|-------------------------------------|--|
| enable password [0 7]<br><PASSWORD> | <p>Creates a new executive password for this EX3500 management policy. The password could be in clear text or encrypted</p> <ul style="list-style-type: none"> <li>• 0 – Configures a clear text password using ASCII characters (should be 1 - 32 characters long)</li> <li>• 7 – Configures an encrypted password using HEX characters (should be 32 characters long)</li> <li>• &lt;PASSWORD&gt; – Specify the password.</li> </ul> |
|-------------------------------------|--|

```
enable password level <0-15> [0 <PASSWORD>|7 <PASSWORD>]
```

|                              |  |
|------------------------------|--|
| enable password level <0-15> | <p>Creates a new executive password for this EX3500 management policy and sets its privilege level</p> <ul style="list-style-type: none"> <li>• &lt;0-15&gt; – Specify the privilege level for this executive password from 0 - 15. Lower values have higher priority, to slot and prioritize executive passwords and EX3500 management sessions.</li> </ul>   |
| [0 7] <PASSWORD>             | <p>After setting the privilege level, configure the password, which could be in clear text or encrypted</p> <ul style="list-style-type: none"> <li>• 0 – Configures a clear text password using ASCII characters (should be 1 - 32 characters long)</li> <li>• 7 – Configures an encrypted password using HEX characters (should be 32 characters long)</li> <li>• &lt;PASSWORD&gt; – Specify the password.</li> </ul> |

## Examples

```

nx9500-6C8809(config-ex3500-management-policy-test)#enable password level 3 7
12345678901020304050607080929291

nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
  enable password level 3 7 12345678901020304050607080929291
  snmp-server notify-filter 1 remote 127.0.0.1
nx9500-6C8809(config-ex3500-management-policy-test)#

```

## Related Commands

|  |   |
|--|---|
| <code>no (ex3500-management-policy-config-mode)</code> on page 325 | Removes a executive password from this EX3500 management policy |
|--|---|

**http**

Configures the HTTP server settings used to authenticate HTTP connection to a EX3500 switch

Management access to an EX3500 switch can be enabled/disabled as required using separate interfaces and protocols (HTTP, SSH). Disabling un-used and insecure interfaces and unused management services can dramatically reduce an attack footprint and free resources within an EX3500 management policy.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

## Syntax

```
http [port <1-65535>|secure-port <1-65535>|secure-server|server]
```

## Parameters

```
http [port <1-65535>|secure-port <1-65535>|secure-server|server]
```

|                       |  |
|-----------------------|--|
| http                  | Configures following HTTP settings: port, secure-port, secure-server, and server   |
| port <1-65535>        | Configures the HTTP port number. This is the port used to connect to the HTTP server. <ul style="list-style-type: none"> <li>• &lt;1-65535&gt; – Specify a value from 1 - 65535. The default port is 80.</li> </ul>  |
| secure-port <1-65535> | Enables secure HTTP connection over a designated secure port. Ensure that the HTTP secure server is enabled before specifying the secure-server port. <ul style="list-style-type: none"> <li>• &lt;1-65535&gt; – Specify the secure HTTP server port from 1 - 65535. The default port is 443.</li> </ul> |
| secure-server         | Enables HTTP secure server. This option is disabled by default.  |
| server                | Enables HTTP server. This option is enabled by default. Consequently, HTTP management access is allowed by default.  |

## Examples

```

nx9500-6C8809(config-ex3500-management-policy-test)#http secure-server
nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
  http secure-server
  enable password level 3 7 12345678901020304050607080929291

```

```
snmp-server notify-filter 1 remote 127.0.0.1
nx9500-6C8809(config-ex3500-management-policy-test)#
```

#### Related Commands

|  |   |
|--|---|
| <code>no (ex3500-management-policy-config-mode)</code> on page 325 | Reverts to default HTTP server settings (HTTP server enabled, HTTP port 80) |
|--|---|

### memory

Configures the EX3500's memory utilization rising (upper) and falling (lower) threshold values. Once configured, the system sends a notification when the memory utilization exceeds the specified rising limit or falls below the specified falling limit.

By customizing an EX3500's memory and CPU utilization's upper and lower thresholds, you can avoid over utilization of the EX3500's processor capacity when sharing network resources with an NX series service platform or a WiNG VM.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

#### Syntax

```
memory [falling-threshold|rising-threshold] <1-100>
```

#### Parameters

```
memory [falling-threshold|rising-threshold] <1-100>
```

|                           |  |
|---------------------------|--|
| memory                    | Configures the EX3500's memory utilization rising and falling threshold values. The system generates a notification when either of these limits is exceeded.   |
| falling-threshold <1-100> | Configures the falling threshold for the EX3500 memory utilization <ul style="list-style-type: none"> <li>• &lt;1-100&gt; - Specify the falling threshold as a percentage from 1 - 100. The default is 70%.</li> </ul> |
| rising-threshold <1-100>  | Configures the rising threshold for the EX3500's memory utilization <ul style="list-style-type: none"> <li>• &lt;1-100&gt; - Specify the rising threshold as a percentage from 1 - 100. The default is 90%.</li> </ul> |

#### Examples

```
nx9500-6C8809(config-ex3500-management-policy-test)#memory falling-threshold 50
nx9500-6C8809(config-ex3500-management-policy-test)#memory rising-threshold 95
nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
  http secure-server
  enable password level 3 7 12345678901020304050607080929291
  snmp-server notify-filter 1 remote 127.0.0.1
  memory falling-threshold 50
  memory rising-threshold 95
nx9500-6C8809(config-ex3500-management-policy-test)#
```

#### Related Commands

|  |  |
|--|--|
| <code>no (ex3500-management-policy-config-mode)</code> on page 325 | Reverts the memory utilization's falling-threshold and/or rising threshold to 70% and 90% respectively |
|--|--|

## process-cpu

Configures the EX3500's CPU (processor) utilization rising (upper) and falling (lower) threshold values. Once configured, the system sends a notification when the CPU utilization exceeds the specified rising limit or falls below the specified falling limit.

By customizing an EX3500's memory and CPU utilization's upper and lower thresholds, you can avoid over utilization of the EX3500's processor capacity when sharing network resources with an NX series service platform or a WiNG VM.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

### Syntax

```
process-cpu [falling-threshold|rising-threshold] <1-100>
```

### Parameters

```
process-cpu [falling-threshold|rising-threshold] <1-100>
```

|                           |   |
|---------------------------|---|
| process-cpu               | Configures the EX3500's CPU utilization rising and falling threshold values. The system generates a notification when either of these limits is exceeded.   |
| falling-threshold <1-100> | Configures the falling threshold for the EX3500's CPU utilization <ul style="list-style-type: none"> <li>• &lt;1-100&gt; - Specify the falling threshold as a percentage from 1 - 100. The default is 70%.</li> </ul> |
| rising-threshold <1-100>  | Configures the rising threshold for the EX3500's CPU utilization <ul style="list-style-type: none"> <li>• &lt;1-100&gt; - Specify the rising threshold as a percentage from 1 - 100. The default is 90%.</li> </ul>   |

### Example

```
nx9500-6C8809(config-ex3500-management-policy-test)#process-cpu falling-threshold 60
nx9500-6C8809(config-ex3500-management-policy-test)#process-cpu rising-threshold 80
nx9500-6C8809(config-ex3500-management-policy-test)#show context
ex3500-management-policy test
  http secure-server
  enable password level 3 7 12345678901020304050607080929291
  snmp-server notify-filter 1 remote 127.0.0.1
  memory falling-threshold 50
  memory rising-threshold 95
  process-cpu falling-threshold 60
  process-cpu rising-threshold 80
nx9500-6C8809(config-ex3500-management-policy-test)#
```

### Related Commands

|  |   |
|--|---|
| <code>no (ex3500-management-policy-config-mode)</code> on page 325 | Reverts the CPU utilization's falling-threshold and/or rising threshold to 70% and 90% respectively |
|--|---|

**snmp-server**

Configures *Simple Network Management Protocol* (SNMP) server settings. Once configured and applied on a EX3500 switch, the management policy controls access to the switch from management stations using SNMP.

SNMP is an application layer protocol that facilitates the exchange of management information between the management stations and a managed EX3500 switch. SNMP-enabled devices listen on port 162 (by default) for SNMP packets from the management server. SNMP uses read-only and read-write community strings as an authentication mechanism to monitor and configure supported devices. The read-only community string is used to gather statistics and configuration parameters from a supported wireless device. The read-write community string is used by a management server to set device parameters. SNMP is generally used to monitor a system's performance and other parameters.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

**Syntax**

```
snmp-server {community|contact|enable|engine-id|group|host|location|notify-filter|
user|view}
snmp-server {community <STRING> {ro|rw}}
snmp-server {contact <NAME>}
snmp-server {enable traps {authentication|link-up-down}}
snmp-server {engine-id [local <WORD>|remote <IP> <WORD>]}
snmp-server {group <GROUP-NAME> [v1|v2c|v3 [auth|noauth|priv]] {notify <WORD>|read <WORD>|
write <WORD>}}
snmp-server {host <IP> [<STRING>|inform]}
snmp-server {host <IP> <STRING> version [v1|v2c|v3 [auth|noauth|priv]]
{udp-port <1-65535>}}
snmp-server {host <IP> inform [retry <0-255>|timeout <0-2147483647>]
<STRING> version [v2c|v3 [auth|noauth|priv]] {udp-port <1-65535>}}
snmp-server {location <WORD>}
snmp-server {notify-filter <WORD> remote <IP>}
snmp-server {user <USER-NAME> <GROUP-NAME> [remote-host|v1|v2c|v3]}
snmp-server {user <USER-NAME> <GROUP-NAME> remote-host <IP> v3 [auth|encrypted auth]
[md5|sha] <WORD> {priv [3des|aes128|aes192|aes256|des56] <WORD>}}
snmp-server {user <USER-NAME> <GROUP-NAME> [v1|v2c|v3]}
snmp-server {view <VIEW-NAME> <OID-TREE-STRING> [excluded|included]}
```

**Parameters**

```
snmp-server {community <STRING> {ro|rw}}
```

|  |  |
|--|--|
| snmp-server {community <STRING> {ro rw}} | <p>Configures SNMP-server related settings</p> <ul style="list-style-type: none"> <li>community – Optional. Configures an SNMP community access string used to authorize management access by clients using SNMP v1, v2c, or v3</li> <li>&lt;STRING&gt; – Specify the SNMP community access string (should not exceed 32 characters).</li> </ul> <p>After specifying the string, optionally specify the access type associated with it.</p> <ul style="list-style-type: none"> <li>ro – Optional. Provides read-only access with this SNMP community string. Allows authorized clients to only retrieve MIB (<i>Management Information Base</i>) objects. This is the default setting.</li> <li>rw – Optional. Provides read-write access with this SNMP community string. Allows authorized clients to retrieve as well as modify MIB objects.</li> </ul> <p>You can configure a maximum of five (5) community strings per vEX3500 management policy.</p> |
|--|--|

```
snmp-server {contact <NAME>}
```

|                              |  |
|------------------------------|--|
| snmp-server {contact <NAME>} | <p>Configures SNMP-server related settings</p> <ul style="list-style-type: none"> <li>contact – Optional. Configures the system's contact information</li> <li>&lt;NAME&gt; – Specify the contact person's name (should not exceed 255 characters).</li> </ul> |
|------------------------------|--|

```
snmp-server {enable traps {authentication|link-up-down}}
```

|  |  |
|--|--|
| snmp-server {enable traps {authentication link-up-down}} | <p>Configures SNMP-server related settings</p> <ul style="list-style-type: none"> <li>enable traps – Optional. Enables the EX3500 switch to send following SNMP traps or notifications: <ul style="list-style-type: none"> <li>authentication – Optional. Enables SNMP authentication trap. This option is disabled by default.</li> <li>link-up-down – Optional. Enables SNMP link up and link down traps. This option is disabled by default.</li> </ul> </li> </ul> <p>If the command is executed without either of the above mentioned trap options, the system enables both authentication and link-up-down traps.</p> <p>If enabling SNMP traps, use the <code>snmp-server &gt; host</code> command to specify the host(s) receiving the SNMP notifications.</p> |
|--|--|

```
snmp-server {engine-id [local <WORD>|remote <IP> <WORD>]}
```

|   |   |
|---|---|
| snmp-server {engine-id [local <WORD> remote <IP> <WORD>]} | <p>Configures SNMP-server related settings</p> <ul style="list-style-type: none"> <li>engine-id – Optional. Configures an identification string for the SNMPv3 engine. The SNMP engine is an independent SNMP agent residing either on the logged switch or on a remote device. It prevents message replay, delay, and redirection. In SNMPv3, the engine ID in combination with user passwords generates the security keys that is used for SNMPv3 packet authentication and encryption.</li> <li>local – Configures the SNMP engine on the logged switch <ul style="list-style-type: none"> <li>&lt;WORD&gt; – Specify the hexadecimal engine ID string identifying the SNMP engine (should be 9 - 64 characters in length).</li> </ul> </li> <li>remote &lt;IP&gt; &lt;WORD&gt; – Configures a remote device as the SNMP engine <ul style="list-style-type: none"> <li>&lt;IP&gt; – Specify the remote device's IP address.</li> <li>&lt;WORD&gt; – Specify the hexadecimal engine ID string identifying the SNMP engine (should be 9 - 64 characters in length).</li> </ul> </li> </ul> <p>Configure the remote engine ID when using SNMPv3 informs. The remote ID configured here is used to generate the security digest for authentication and encryption of packets exchanged between the switch and the and the remote host user. SNMP passwords are localized using the engine ID of the authoritative agent. For informs, the authoritative SNMP agent is the remote agent. You therefore need to configure the remote agent's SNMP engine ID before you can send proxy requests or informs to it.</p> |
|---|---|

```
snmp-server {group <GROUP-NAME> [v1|v2c|v3 [auth|noauth|priv]] {notify <WORD>|
read <WORD>|write <WORD>}}
```

|                                |  |
|--------------------------------|--|
| snmp-server group <GROUP-NAME> | <p>Configures SNMP-server related settings</p> <ul style="list-style-type: none"> <li>group – Optional. Configures an SNMP user group, mapping SNMP users to SNMP views <ul style="list-style-type: none"> <li>&lt;GROUP-NAME&gt; – Specify the SNMP group name (should not exceed 32 characters).</li> </ul> </li> </ul>  |
| [v1 v2c v3 [auth noauth priv]] | <p>Configures the SNMP version used for authentication by this user group</p> <ul style="list-style-type: none"> <li>v1 – Configures the SNMP version as v1.</li> <li>v2c – Configures SNMP version as v2c</li> <li>v3 – Configures the SNMP version as v3. If using SNMP v3, specify the authentication and encryption levels. <ul style="list-style-type: none"> <li>auth – Uses SNMP v3 with authentication and no privacy</li> <li>noauth – Uses SNMP v3 with no authentication and no privacy</li> <li>priv – Uses SNMP v3 with authentication and privacy</li> </ul> </li> </ul> |

## Related Commands

**no (ex3500-management-policy-config-mode)** on page 325 Removes SNMP server related settings or reverts them to default

## ssh

Configures the SSH server settings used to authenticate SSH connection to a EX3500 switch

Management access to an EX3500 switch can be enabled/disabled as required using separate interfaces and protocols (HTTP, SSH). Disabling unused and insecure interfaces and unused management services can dramatically reduce an attack footprint and free resources within an EX3500 management policy.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

### Syntax

```
ssh [authentication-retries <1-5>|server|server-key size <512-1024>|timeout <1-120>]
```

### Parameters

```
ssh [authentication-retries <1-5>|server|server-key size <512-1024>|timeout <1-120>]
```

|                              |  |
|------------------------------|--|
| ssh                          | Enables SSH management access to an EX3500 switch. This option is disabled by default. Use this command to configure SSH access settings.  |
| authentication-retries <1-5> | Configures the maximum number of retries made to connect to the SSH server resource <ul style="list-style-type: none"> <li>• &lt;1-5&gt; – Specify a value from 1 - 5. The default setting is 3.</li> </ul>  |
| server                       | Enables SSH server connection  |
| server-key size <512-1024>   | Configures the SSH server key size <ul style="list-style-type: none"> <li>• &lt;512-1024&gt; – Specify the SSH server key from 512 - 1,024. The default length is 768.</li> </ul>  |
| timeout <1-120>              | Configures the SSH server resource inactivity timeout value in seconds. When the specified time is exceeded, the SSH server resource becomes unreachable and must be re-authenticated. <ul style="list-style-type: none"> <li>• &lt;1-120&gt; – Specify a value from 1 120 seconds. The default is 120 seconds.</li> </ul> |

### Examples

### Related Commands

**no (ex3500-management-policy-config-mode)** on page 325 Disables SSH management access to an EX3500 switch

### username

Configures a vEX3500 switch user settings

The EX3500 switch user details are stored in a local database on the NX 95XX, NX 96XX, NX 7510, or WiNG VM. You can configure multiple users, each having a unique name, access level, and password.

Supported in the following platforms:

- Service Platforms — NX 95XX, NX 96XX, NX 7510

### Syntax

```
username <USER-NAME> [access-level <0-15>|nopassword|password [0|7] <PASSWORD>]
```

### Parameters

```
username <USER-NAME> [access-level <0-15>|nopassword|password [0|7] <PASSWORD>]
```

|                              |   |
|------------------------------|---|
| username <USER-NAME>         | Configures the TACACS server port username <ul style="list-style-type: none"> <li>• &lt;USER-NAME&gt; - Specify the user name (should not exceed 32 characters)</li> </ul>  |
| access-level <0-15>          | Configures the access level for this user. This value determines the access priority of each user requesting access and interoperability with EX3500 switch. <ul style="list-style-type: none"> <li>• &lt;0-15&gt; - Specify the access level from 0 - 15. The default is 0.</li> </ul> |
| nopassword                   | Allows user to login without a password   |
| password [0 7]<br><PASSWORD> | Configures the password for this user <ul style="list-style-type: none"> <li>• 0 - Configures a plain text password</li> <li>• 7 - Configures an encrypted password (should be 32 characters in length)</li> <li>• &lt;PASSWORD&gt; - Specify the password.</li> </ul>                  |

### Examples

## ex3500-qos-class-map-policy

Creates a EX3500 QoS (*Quality of Service*) class map policy and enters its configuration mode

A QoS class map policy contains a set of DiffServ (*Differentiated Services*) classification criteria that are used to classify incoming traffic into different category and provide differentiated service based on this classification. Each policy defines a set match criteria rules that use objects, such as access lists, IP precedence or DSCP values, and VLANs. When configured and applied, the policy classifies traffic based on layer 2, layer 3, or layer 4 information contained in each incoming packet.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

### Syntax

```
ex3500-qos-class-map-policy <POLICY-NAME>
```

### Parameters

```
ex3500-qos-class-map-policy <POLICY-NAME>
```

|               |  |

### description

Configures this EX3500 QoS class map policy's description

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

#### Syntax

```
description <LINE>
```

#### Parameters

```
description <LINE>
```

|                    |   |
|--------------------|---|
| description <LINE> | Configures this EX3500 QoS class map policy's description <ul style="list-style-type: none"> <li>&lt;LINE&gt; – Enter a description that allows to you differentiate it from other policies with similar configuration (should not exceed 64 characters)</li> </ul> |
|--------------------|---|

### Examples

```

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#description "Matches packets
marked for DSCP service 3"
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy dscp
  description "Matches packets marked for DSCP service 3"
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#

```

## match

Configures match criteria rules used to classify traffic

Access lists, IP precedence, DSCP values, or VLANs are commonly used to classify traffic. Access lists select traffic based on layer 2, layer 3, or layer 4 information contained in each packet.

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

### Syntax

```

match [access-list [ex3500-ext-access-list|ex3500-std-access-list|mac-acl]
<ACL-NAME>|cos <0-7>|ip [dscp <0-63>|precedence <0-7>]|ipv6 dscp <0-63>|vlan <1-4094>]

```

### Parameters

```

match [access-list [ex3500-ext-access-list|ex3500-std-access-list|mac-acl]
<ACL-NAME>|cos <0-7>|ip [dscp <0-63>|precedence <0-7>]|ipv6 dscp <0-63>|vlan <1-4094>]

```

|  |  |
|--|--|
| match  | Configures the match criteria.<br>The options are: access-list, cos, ip, ipv6, vlan Incoming packets matching the specified criteria are included in this QoS class map.   |
| access-list [ex3500-ext-access-list  ex3500-std-access-list  mac-acl] <ACL-NAME> | Uses access lists to provide the match criteria. You can use any one the following ACL types to classify traffic: <ul style="list-style-type: none"> <li>ex3500-ext-access-list – Uses an IPv4 EX3500 extended ACL</li> <li>ex3500-std-access-list – Uses an IPv4 EX3500 standard ACL</li> <li>mac-acl – Uses a MAC EX3500 ACL</li> </ul> <p>The following keyword is common to all of the above ACL types:</p> <ul style="list-style-type: none"> <li>&lt;ACL-NAME&gt; – Specify the ACL name (should be existing and configured).</li> </ul> |

|                                    |  |
|------------------------------------|--|
| cos <0-7>                          | <p>Configures the <i>class of service</i> (CoS) value used to apply user priority. CoS is a form of QoS applicable only to layer 2 Ethernet frames. It uses 3-bits (8 values) of the 802.1Q tag to differentiate and shape network traffic.</p> <ul style="list-style-type: none"> <li>• &lt;0-7&gt; – Specify the CoS value from 0 - 7.</li> </ul> <p>Following are the 8 traffic classes based on the CoS value:</p> <ul style="list-style-type: none"> <li>• 000 (0) - Routine</li> <li>• 001 (1) - Priority</li> <li>• 010 (2) - Immediate</li> <li>• 011 (3) - Flash</li> <li>• 100 (4) - Flash Override</li> <li>• 101 (5) - Critical</li> <li>• 110 (6) - Internetwork Control</li> <li>• 111 (7) - Network Control</li> </ul>  |
| ip [dscp <0-63>  precedence <0-7>] | <p>Configures the IPv4 DSCP value to match and/or the IP precedence value to match.</p> <ul style="list-style-type: none"> <li>• &lt;0-63&gt; – Specify the DSCP value from 0 - 63. Use this option to specify the <i>type of service</i> (ToS) field values included in the IP header. The ToS field exists between the header length and the total length fields. The DSCP constitutes the first 6 bits of the ToS field.</li> <li>• precedence &lt;0-7&gt; – Configures the IP precedence to match. Following are the 8 traffic classes based on the IP precedence values: <ul style="list-style-type: none"> <li>• 000 (0) - Routine</li> <li>• 001 (1) - Priority</li> <li>• 010 (2) - Immediate</li> <li>• 011 (3) - Flash</li> <li>• 100 (4) - Flash Override</li> <li>• 101 (5) - Critical</li> <li>• 110 (6) - Internetwork Control</li> <li>• 111 (7) - Network Control</li> </ul> </li> </ul> |
| ipv6 dscp <0-63>                   | <p>Configures the IPv6 DSCP value to match</p> <ul style="list-style-type: none"> <li>• &lt;0-63&gt; – Specify the DSCP value from 0 - 63.</li> </ul>  |
| vlan <1-4094>                      | <p>Configures the VLAN to match</p> <ul style="list-style-type: none"> <li>• &lt;1-4094&gt; – Specify the VLAN ID.</li> </ul>  |

#### Usage Guidelines

When configuring match entries, take into consideration the following points:

- Deny rules included in an ACL (associated with a vEX3500 QoS class map policy) are ignored whenever an incoming packet matches the ACL.
- A class map policy cannot include both IP ACL or IP precedence rule and a VLAN rule.
- A class map policy containing a MAC ACL or VLAN rule cannot include either an IP ACL or a IP precedence rule.
- A class map policy can include a maximum of 16 match entries.

#### Examples

```

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#match ip dscp 3
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy dscp
description "Matches packets marked for DSCP service 3"

```

```

match ip dscp 3
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
nx9500-6C8809(config-ex3500-qos-class-map-policy-test2)#match ip precedence 1

```

#### Related Commands

**no (ex3500-qos-class-map-policy-config-commands)** Removes match criteria rules configured for this EX3500 QoS class map policy on page 330

## rename

Renames an existing EX3500 QoS class map policy

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

#### Syntax

```
rename <EX3500-QOS-CLASS-MAP-POLICY-NAME> <NEW-EX3500-QOS-CLASS-MAP-POLICY-NAME>
```

#### Parameters

```
rename <EX3500-QOS-CLASS-MAP-POLICY-NAME> <NEW-EX3500-QOS-CLASS-MAP-POLICY-NAME>
```

|   |   |
|---|---|
| <pre>rename &lt;EX3500-QOS-CLASS-MAP-POLICY-NAME&gt; &lt;NEW-EX3500-QOS-CLASS-MAP-POLICY-NAME&gt;</pre> | <p>Renames an existing EX3500 QoS class map</p> <ul style="list-style-type: none"> <li>• &lt;EX3500-QOS-CLASS-MAP-POLICY-NAME&gt; - Enter the EX3500 QoS class map's current name.</li> <li>• &lt;NEW-EX3500-QOS-CLASS-MAP-POLICY-NAME&gt; - Enter the new name.</li> </ul> |
|---|---|

#### Examples

```

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#rename [TAB]
dscp test test2

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#rename test2 IP_Precedence

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#rename [TAB]
dscp IP_Precedence test

nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#

```

## no (ex3500-qos-class-map-policy-config-commands)

#### description

Removes this EX3500 QoS class map policy's description and match criteria

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

#### Syntax

```

no [description|match]
no description

no match [access-list [ex3500-ext-access-list|ex3500-std-access-list|mac-acl]
<ACL-NAME>|cos <0-7>|ip [dscp <0-63>|precedence <0-7>]|ipv6 dscp <0-63>|vlan <1-4094>]

```

#### Parameters

```
no <PARAMETERS>
```

|                                    |   |
|------------------------------------|---|
| <code>no &lt;PARAMETERS&gt;</code> | Removes the EX3500 QoS class map policy's settings based on the parameters passed |
|------------------------------------|---|

### Examples

The following example shows the EX3500 QoS class map policy 'test' settings before the 'no' command are executed:

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy dscp
  description "Matches packets marked for DSCP service 3"
  match ip dscp 3
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#no description
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#no match ip dscp
```

The following example shows the EX3500 QoS class map policy 'test' settings after the 'no' command are executed:

```
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#show context
ex3500-qos-class-map-policy test
nx9500-6C8809(config-ex3500-qos-class-map-policy-dscp)#
```

## ex3500-qos-policy-map

Creates an EX3500 policy map and enters its configuration mode

An EX3500 policy map contains one or more EX3500 QoS class maps traffic classifications (existing and configured) and can be attached to multiple interfaces. Create a EX3500 policy map, and then use the class parameter to configure policies for traffic that matches the criteria defined in the EX3500 QoS class map policy. For more information, see [match](#) on page 328.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

### Syntax

```
ex3500-qos-policy-map <EX3500-QOS-POLICY-MAP-NAME>
```

### Parameters

```
ex3500-qos-policy-map <EX3500-QOS-POLICY-MAP-NAME>
```

|                              |                                      |
|------------------------------|--------------------------------------|
| <EX3500-QOS-POLICY-MAP-NAME> | Specify the EX3500 policy map's name |
|------------------------------|--------------------------------------|

### Examples

```
nx9500-6C8809(config)#ex3500-qos-policy-map testPolicyMap
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap)#?
nx9500-6C8809_Qos_policy_map Mode commands:
  class          Defines a traffic classification for the policy
  description    Policy-map description
  no             Negate a command or set its defaults
  clrscr         Clears the display screen
```

ex3500-qos-policy-map config commands

The following table summarizes EX3500 QoS policy map configuration mode commands:

Table 16: EX3500 QoS Policy Map Config Commands

| Command                                | Description   |
|--|---|
| class on page 332                      | Creates a policy map class and enters its configuration mode  |
| description on page 340                | Configures this EX3500 QoS policy map's description   |
| no (ex3500-qos-policy-map) on page 341 | Removes this EX3500 QoS policy map's settings. Use this keyword to remove or modify the description and to remove the QoS traffic classification created. |

class

Creates a policy map class and enters its configuration mode. The policy map class is a traffic classification upon which a policy can act.

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

Syntax

```
class <EX3500-QoS-CLASS-MAP-POLICY-NAME>
```

Parameters

```
class <EX3500-QoS-CLASS-MAP-POLICY-NAME>
```

|  |  |
|--|--|
| class <EX3500-QoS-CLASS-MAP-POLICY-NAME> | Specify the EX3500 QoS class map policy's name (should be existing and configured) |
|--|--|

Examples

```
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap)#class dscp
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#?
commands:
  no      Negate a command or set its defaults
  police  Defines a policer for classified traffic
  set     Classify IP traffic

  clrscr  Clears the display screen
```

```
commit    Commit all changes made in this session

### Usage Guidelines

When configuring the traffic class enforcer parameters, consider the following factors:

- You can configure up to 200 enforcers/policers (i.e., class maps) for ingress ports.
- The committed-rate cannot exceed the configured interface speed, and the committed-burst cannot exceed 16 Mbytes.

### Examples

The following example uses the `police > trtcm-color-blind` command to limit the average bandwidth to 100,000 Kbps, the committed burst rate to 4000 bytes, the peak information rate to 1,000,000 Kbps, the peak burst size to 6000, to remark any packets exceeding the committed burst size, and to drop any packets exceeding the peak information rate.

```
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#police
trtcm-color-blind 100000 4000 100000 6000 conform-action transmit exceed-action 0
violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#show context
class dscp
  police trtcm-color-blind 100000 4000 100000 6000 conform-action transmit exceed-action
0 violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#
```

### set

Sets CoS value, PHB value, and IP DSCP value in matching packets

Supported in the following platforms:

- Service Platforms — NX 7510, NX 95XX, NX 96XX

### Syntax

```
set [cos <0-7>|ip dscp <0-63>|phb <0-7>]
```

### Parameters

```
set [cos <0-7>|ip dscp <0-63>|phb <0-7>]
```

|                |   |
|----------------|---|
| set            | Sets the match criteria used to identify and classify traffic into different classes. The match criteria options are: CoS, IP DSCP, and PHB values.   |
| cos <0-7>      | Configures the CoS value for a matching packet (as specified by the match command) in the packet's VLAN tag <ul style="list-style-type: none"> <li>• &lt;0-7&gt; - Specify a value from 0 - 7. The CoS is modified to the value specified here.</li> </ul>  |
| ip dscp <0-63> | Modifies the IP DSCP value in a matching packet (as specified by the match command) <ul style="list-style-type: none"> <li>• &lt;0-63&gt; - Specify a value from 0 - 63. The DSCP value is modified to the value specified here.</li> </ul>   |
| phb <0-7>      | Configures a PHB value for a matching packets <ul style="list-style-type: none"> <li>• &lt;0-7&gt; - Specify a value from 0 - 7.</li> </ul> <p>The PHB label is composed of five bits, three bits for per-hop behavior, and two bits for the color scheme used to control queue congestion. A packet is marked green, yellow, or red as per the following:</p> <ul style="list-style-type: none"> <li>• green if it does not exceed the CIR and BC limits</li> <li>• yellow if it exceeds the CIR and BC limits, but not the BE limit, and</li> <li>• red otherwise.</li> </ul> |

### Examples

The following example uses the **set > phb** command to classify the service that incoming packets will receive, and then uses the **police > trtcm-color-blind** command to limit the average bandwidth to 100,000 Kbps, the committed burst rate to 4000 bytes, the peak information rate to 1,000,000 Kbps, the peak burst size to 6000 bytes, to remark any packets exceeding the committed burst size, and to drop any packets exceeding the peak information rate.

```

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-test2)#set phb 3
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-test2)# police
trtcm-color-blind 100000 4000 1000000 6000 conform-action transmit exceed-action 0
violate-action drop
nx9500-6C8809nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-
test2)#show
context
class test2
  set phb 3
  police trtcm-color-blind 100000 4000 100000 6000 conform-action transmit exceed-action
0 violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-test2)#

```

The following example uses the **set > ip dscp** command to classify the service that incoming packets will receive, and then uses the **police > flow** command to limit the average bandwidth to 100,000 Kbps, the burst rate to 4000 bytes, and configure the response to drop any violating packets:

```

nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#set ip dscp 3
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)# police flow
100000 4000
conform-action transmit violate-action drop
nx9500-6C8809(config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp)#show context
class dscp
  set ip dscp 3

```

```

police flow 100000 4000 conform-action transmit violate-action drop
nx9500-6C8809 (config-ex3500-qos-policy-map-testPolicyMap-pmap-class-dscp) #

```

## Examples

The following example shows the EX3500 QoS policy map 'test' settings before the 'no' command are executed:

```

nx9500-6C8809(config-ex3500-qos-policy-map-test)#show context
ex3500-qos-policy-map test
  description "This is a test EX3500 QoS Policy Map"
  class test
nx9500-6C8809(config-ex3500-qos-policy-map-test)#
EX3500(config-ex3500-qos-policy-map-test)#no description
EX3500(config-ex3500-qos-policy-map-test)#no class test

```

The following example shows the EX3500 QoS policy map 'test' settings after the 'no' command are executed:

```

EX3500(config-ex3500-qos-policy-map-test)#show context
ex3500-qos-policy-map test
EX3500(config-ex3500-qos-policy-map-test)#

```

**ex3524**

Adds a EX3524 switch to the network

The EX3524 series switch is a Gigabit Ethernet layer 2 switch with either 24 or 48 10/100/1000-BASE-T ports, and four SFP transceiver slots for fiber connectivity.

To enable layer 3 adoption of the logged EX3524 switch to a NOC controller, navigate to the switch's device configuration mode and execute the following command: `controller > host > <IP/HOSTNAME>`.

EX3524 devices are layer 2 Gigabit Ethernet switches with either 24 or 48 10/100/1000-BASE-T ports, and four SFP transceiver slots for fiber connectivity. Each 10/100/1000 Mbps port supports both the IEEE 802.3af and IEEE 802.3at-2009 PoE standards. An EX3524 switch has an SNMP-based management agent that provides both in-band and out-of-band management access. The EX3524 switch utilizes an embedded HTTP Web agent and CLI, which in spite of being different from that of the EX3524 operating system provides EX3524 controllers PoE and port management resources.

Going forward NX7500, NX9500, and NX9600 series service platforms and WiNG VMs can discover, adopt, and partially manage EX3524 series Ethernet switches without modifying the proprietary operating system running the EX3524 switches. The WiNG service platforms utilize standardized WiNG interfaces to push configuration files to the EX3524 switches, and maintain a translation layer, understood by the EX3524 switch, for statistics retrieval.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

### Syntax

```
ex3524 <DEVICE-EX3524-MAC>

Removes a EX3548 switch from the network

**event-system-policy**

Configures a system wide events handling policy

Event system policies enable administrators to create notification mechanisms using one, some, or all of the SNMP, syslog, controller forwarding, or email notification options available to the controller or service platform. Each listed event can have customized notification settings defined and saved as part of an event policy. Thus, policies can be configured and administrated in respect to specific sets of client association, authentication or encryption, and performance events. Once policies are defined, they can be mapped to device profiles strategically as the likelihood of an event applies to particular devices.

To view an existing event system policy configuration details, use the `show > event-system-policy` command.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
event-system-policy <EVENT-SYSTEM-POLICY-NAME>
```

*Parameters*

```
event-system-policy <EVENT-SYSTEM-POLICY-NAME>
```

<EVENT-SYSTEM-POLICY-NAME> Specify the event system policy name. If the policy does not exist, it is created.

*Examples*

```
nx9500-6C8809(config)#event-system-policy event-testpolicy
nx9500-6C8809(config-event-system-policy-event-testpolicy)#?
Event System Policy Mode commands:
  event      Configure an event
  no         Negate a command or set its defaults

  clrscr     Clears the display screen
  commit     Commit all changes made in this session
  do         Run commands from Exec mode
  end        End current mode and change to EXEC mode
  exit       End current mode and down to previous mode
  help       Description of the interactive help system
  revert     Revert changes
  service    Service Commands
  show       Show running system information
  write      Write running configuration to memory or terminal

nx9500-6C8809(config-event-system-policy-event-testpolicy)#
```

*Related Commands*

|                             |   |
|-----------------------------|---|
| <code>no</code> on page 609 | Removes an existing event system policy |
|-----------------------------|---|

*event-system-policy-mode-commands*

The following table summarizes event system policy configuration mode commands:

**Table 17: Event-System-Policy Config Mode Commands**

| Command   | Description                             |
|---|---|
| <code>event</code> on page 345                                | Configures an event                     |
| <code>no (event-system-policy-config-mode)</code> on page 359 | Negates a command or reverts to default |

**event**

Configures an event and sets the action performed when the event happens

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
event <EVENT-TYPE> <EVENT-NAME> (email,forward-to-switch,snmp,syslog) [default|on|off]
```

The even types are:

```
nx9500-6C8809(config-event-system-policy-testpolicy)#event ?

```

### Note

The parameter values for <EVENT-TYPE> and <EVENT-NAME> are summarized in the table under the Parameters section.

### Parameters

```
event <EVENT-TYPE> <EVENT-NAME> (email,forward-to-switch,snmp,syslog) [default|on|off]
```

| <event-type>   | <event-name>  |
|----------------|---|
| aaa            | Enables and configures logging of the following authentication, authorization, and accounting related events: <ul style="list-style-type: none"> <li>radius-discon-msg – RADIUS disconnection message</li> <li>radius-session-expired – RADIUS session expired message</li> <li>radius-session-not-started – RADIUS session not started message</li> <li>radius-vlan-update – RADIUS VLAN update message</li> </ul> |
| adapt          | Enables and configures logging of the following adaptivity module related events: <ul style="list-style-type: none"> <li>adaptivity-change – Event adaptivity change</li> <li>adaptivity-rehome – Event adaptivity rehome</li> </ul>  |
| adopt-services | Enables and configures the logging of adopted services related events   |
| adv-wips       | Enables and configures the logging of advanced WIPS related events  |

| <event-type>   | <event-name>   |
|----------------|--|
| ap             | <p>Enables and configures logging of the following AP related events:</p> <ul style="list-style-type: none"> <li>• adopted – Event AP adopted</li> <li>• adopted-to-controller – Event AP adopted to wireless controller</li> <li>• ap-adopted – Event access port adopted</li> <li>• ap-autoup-done – Event AP autoup done</li> <li>• ap-autoup-fail – Event AP autoup fail</li> <li>• ap-autoup-needed – Event AP autoup needed</li> <li>• ap-autoup-no-need – Event AP autoup not needed</li> <li>• ap-autoup-reboot – Event AP autoup reboot</li> <li>• ap-autoup-timeout – Event AP autoup timeout</li> <li>• ap-autoup-ver – Event AP autoup version</li> <li>• ap-reset-detected – Event access port reset detected</li> <li>• ap-reset-request – Event access port user requested reset</li> <li>• ap-timeout – Event access port timed out</li> <li>• ap-unadopted – Event access port unadopted</li> <li>• image-parse-failure – Event image parse failure</li> <li>• legacy-auto-update – Event legacy auto update</li> <li>• no-image-file – Event no image file</li> <li>• offline – Event AP detected as offline</li> <li>• online – Event offline AP detected as online</li> <li>• reset – Event reset</li> <li>• sw-conn-lost – Event software connection lost</li> <li>• unadopted – Event unadopted</li> </ul> |
| bt             | <p>Enables and configures logging of the following bluetooth related events:</p> <ul style="list-style-type: none"> <li>• bt-started – Event bluetooth (bt) started</li> <li>• bt-state-change – Event bt state change</li> <li>• bt-tron-license – Logs a TRON license exists event</li> <li>• bt-tron-no-license – Logs a TRON license missing event</li> </ul>  |
| captive-portal | <p>Enables and configures logging of the following captive portal (hotspot) related events:</p> <ul style="list-style-type: none"> <li>• allow-access – Event client allowed access</li> <li>• auth-failed – Event client authentication failed</li> <li>• auth-success – Event client authentication success</li> <li>• client-disconnect – Event client disconnected</li> <li>• client-removed – Event client removed</li> <li>• data-limit-exceed – Event client data limit exceeded</li> <li>• flex-log-access – Event flexible log access granted to client</li> <li>• inactivity-timeout – Event client time-out due to inactivity</li> <li>• page-cre-failed – Event page creation failure</li> <li>• purge-client – Event client purged</li> <li>• session-timeout – Event session timeout</li> <li>• vlan-switch – Event client switched VLAN</li> </ul>  |

| <event-type> | <event-name>  |
|--------------|---|
| cdp          | Enables and configures logging of the following <i>CISCO Discovery Protocol</i> (CDP) related event: <ul style="list-style-type: none"> <li>• duplex-mismatch – Event duplex mismatch detected between CDP neighbors</li> </ul>   |
| certmgr      | Enables and configures logging of the following certificate manager related events: <ul style="list-style-type: none"> <li>• ca-cert-actions-failure – Event CA certificate actions failure</li> <li>• ca-cert-actions-success – Event CA certificate actions success</li> <li>• ca-key-actions-failure – Event CA key actions failure</li> <li>• ca-key-actions-success – Event CA key actions success</li> <li>• cert-expiry – Event certificate expiry</li> <li>• crl-actions-failure – Event <i>Certificate Revocation List</i> (CRL ) actions failure</li> <li>• crl-actions-success – Event CRL actions success</li> <li>• csr-export-failure – Event CSR export failure</li> <li>• csr-export-success – Event CSR export success</li> <li>• delete-trustpoint-action – Event delete trustpoint action</li> <li>• export-trustpoint – Event trustpoint exported</li> <li>• import-trustpoint – Event trustpoint imported</li> <li>• rsa-key-actions-failure – Event RSA key actions failure</li> <li>• rsa-key-actions-success – Event RSA key actions success</li> <li>• svr-cert-actions-success – Event server certificate actions success</li> <li>• svr-cert-actions-failure – Event server certificate actions failure</li> </ul> |
| certmgr-lite | Enables and configures logging of certificate manager (lite version) related event messages   |
| cfgd         | Enables and configures logging of the following configuration daemon module related events: <ul style="list-style-type: none"> <li>• acl-attached-altered – Event <i>Access List</i> (ACL) attached altered</li> <li>• acl-rule-altered – Event ACL rule altered</li> </ul>   |
| cluster      | Enables and configures logging of the following cluster module related events: <ul style="list-style-type: none"> <li>• cmaster-cfg-update-fail – Event cluster master config update failed</li> <li>• max-exceeded – Event maximum cluster count exceeded</li> <li>• state-change – Event cluster state change (active/inactive)</li> <li>• state-change-active – Event cluster state change to active</li> <li>• state-change-inactive – Event cluster state change to inactive</li> <li>• state-retain-active – Event cluster state retained as active</li> </ul>  |
| crm          | Enables and configures logging of the following <i>Critical Resource Monitoring</i> (CRM) related event <ul style="list-style-type: none"> <li>• critical-resource-down – Event critical resource goes down</li> <li>• critical-resource-up – Event critical resource comes up</li> </ul>   |
| device       | Enables and configures the logging of device module related events  |

| <event-type> | <event-name>  |
|--------------|---|
| database     | <p>Enables and configures logging of the following error conditions in the captive-portal/NSight database:</p> <ul style="list-style-type: none"> <li>• database-election-fail – Event primary database node selection failure. Requires manual intervention to select primary database node.</li> <li>• database-exception – Event database may need to be dropped and device restarted</li> <li>• database-low-disk-space – Event database low disk space</li> <li>• database-new-state – Event database state change</li> <li>• database-op-failure – Event database failure</li> <li>• database-set-name-mismatch – Event replica-set not enabled on host</li> <li>• database-storage-mismatch – Event database mismatch. All database files must be removed.</li> <li>• operation-complete – Event database operation completed successfully</li> <li>• operation-failed – Event database operation failure</li> </ul> |
| dhcpsvr      | <p>Enables and configures logging of the following DHCP server related events:</p> <ul style="list-style-type: none"> <li>• dhcp-start – Event DHCP server started</li> <li>• dhcpsvr-stop – Event DHCP sever stopped</li> <li>• relay-iface-no-ip – Event no IP address on DHCP relay interface</li> <li>• relay-no-iface – Event no interface for DHCP relay</li> <li>• relay-start – Event relay agent started</li> <li>• relay-stop – Event DHCP relay agent stopped</li> </ul>   |

| <event-type> | <event-name>  |
|--------------|---|
| diag         | <p>Enables and configures logging of the following diagnostics module related events:</p> <ul style="list-style-type: none"> <li>• autogen-tech-sprt – Event autogen technical support</li> <li>• buf-usage – Event buffer usage</li> <li>• cpu-load – Event CPU load</li> <li>• cpu-usage-too-high – Event CPU usage high</li> <li>• cpu-usage-too-high-recovery – Event recovery from high CPU usage</li> <li>• disk-usage – Event disk usage</li> <li>• elapsed-time – Event elapsed time</li> <li>• fan-underspeed – Event fan underspeed</li> <li>• fd-count – Event forward count</li> <li>• free-flash-disk – Event free flash disk</li> <li>• free-flash-inodes – Event free flash inodes</li> <li>• free-nvram-disk – Event free nvram disk</li> <li>• free-nvram-inodes – Event free nvram inodes</li> <li>• free-ram – Event free ram</li> <li>• free-ram-disk – Event free ram disk</li> <li>• free-ram-inodes – Event free ram inodes</li> <li>• head-cache-usage – Event head cache usage</li> <li>• high-temp – Event high temp</li> <li>• ip-dest-usage – Event ip destination usage</li> <li>• led-identify – Event led identify</li> <li>• low-temp – Event low temp</li> <li>• mem-usage-too-high – Event memory usage high</li> <li>• mem-usage-too-high-recovery – Event recovery from high memory usage</li> <li>• new-led-state – Event new led state</li> <li>• over-temp – Event over temp</li> <li>• over-voltage – Event over voltage</li> <li>• poe-init-fail – Event PoE init fail</li> <li>• poe-power-level – Event PoE power level</li> <li>• poe-read-fail – Event PoE read fail</li> <li>• poe-state-change – Event PoE state change</li> <li>• poe-state-change – Event PoE state change</li> <li>• pwrsply-fail – Event failure of power supply</li> <li>• raid-degraded – Event <i>Redundant Array of Independent Disks</i> (RAID) degraded</li> <li>• raid-error – Event RAID error</li> <li>• ram-usage – Event ram usage</li> <li>• under-voltage – Event under voltage</li> <li>• wd-reset-sys – Event wd reset system</li> <li>• wd-state-change – Event wd state change</li> </ul> |

| <event-type> | <event-name>  |
|--------------|---|
| dot11        | <p>Enables and configures logging of the following 802.11 management module related events:</p> <ul style="list-style-type: none"> <li>• client-assoc-ignored – Wireless client association ignored event</li> <li>• client-associated – Wireless client associated event</li> <li>• client-denied-assoc – Event client denied association</li> <li>• client-disassociated – Wireless client disassociated</li> <li>• country-code – Event country code applied</li> <li>• country-code-error – Event country code error</li> <li>• eap-cached-keys – Event <i>Extensible Authentication Protocol</i> (EAP) cached keys</li> <li>• eap-client-timeout – Event EAP client timeout</li> <li>• eap-failed – Event EAP failed</li> <li>• eap-opp-cached-keys – Event EAP opp cached keys</li> <li>• eap-preauth-client-timeout – Event EAP pre authentication client timeout</li> <li>• eap-preauth-failed – Event EAP pre authentication failed</li> <li>• eap-preauth-server-timeout – Event EAP pre authentication server timeout</li> <li>• eap-preauth-success – Event EAP pre authentication success</li> <li>• eap-server-timeout – Event EAP server timeout</li> <li>• eap-success – Event EAP success</li> <li>• ft-roam-success – Event client fast BSS transition</li> <li>• gal-rx-request – Event GAL request received event</li> <li>• gal-tx-response – Event response sent to GAL request</li> <li>• gal-validate-failed – Event GAL validation failed</li> <li>• gal-validate-req – Event GAL validation request</li> <li>• gal-validate-success – Event GAL validation success</li> <li>• kerberos-client-success – Event client Kerberos authentication success</li> <li>• kerberos-wlan-failed – Event WLAN Kerberos authentication failed</li> <li>• kerberos-wlan-success – Event WLAN Kerberos authentication success</li> <li>• kerberos-wlan-timeout – Event Kerberos authentication timed out</li> <li>• move-operation-success – Event move operation success</li> <li>• tkip-cntrmeas-end – Event TKIP countermeasures ended</li> <li>• tkip-cntrmeas-start – Event TKIP countermeasures initiated</li> <li>• tkip-mic-fail-report – Event TKIP MIC failure report</li> <li>• tkip-mic-failure – Event TKIP MIC check failed</li> <li>• neighbor-denied-assoc – Event neighbor denied association</li> <li>• unsanctioned-ap-active – Event unsanctioned AP active</li> <li>• unsanctioned-ap-inactive – Event unsanctioned AP inactive</li> <li>• unsanctioned-ap-status-change – Event unsanctioned AP status change</li> <li>• voice-call-completed – Event voice call completed</li> <li>• voice-call-established – Event voice call established</li> <li>• voice-call-failed – Event voice call failed</li> <li>• wlan-time-access-disable – Event WLAN disabled by time-based-access</li> <li>• wlan-time-access-enable – Event WLAN re-enabled by time-based-access</li> </ul> |

| <event-type> | <event-name>   |
|--------------|--|
|              | <ul style="list-style-type: none"> <li>• wpa-wpa2-failed – Event WPA-WPA2 failed</li> <li>• wpa-wpa2-key-rotn – Event WPA-WPA2 key rotn</li> <li>• wpa-wpa2-success – Event WPA-WPA2 success</li> </ul>  |
| dot1x        | <p>Enables and configures logging of the following 802.1X authentication related events:</p> <ul style="list-style-type: none"> <li>• dot1x-failed – Event EAP authentication failure</li> <li>• dot1x-success – Event dot1x-success</li> </ul>  |
| fa           | <p>Enables and configures logging of fabric attach related events:</p> <ul style="list-style-type: none"> <li>• fa-accepted – Event fa-accepted</li> <li>• fa-pending – Event fa-pending</li> </ul>  |
| fwu          | <p>Enables and configures logging of the following <i>firmware update</i> (FWU) related events:</p> <ul style="list-style-type: none"> <li>• fwuaborted – Event fwu aborted</li> <li>• fwubadconfig – Event fwu aborted due to bad config</li> <li>• fwucorruptedfile – Event fwu aborted due to corrupted file</li> <li>• fwucouldntgetfile – Event fwu aborted because the system could not get file</li> <li>• fwudone – Event fwu done</li> <li>• fwufileundef – Event fwu aborted due to file undefined</li> <li>• fwunoneed – Event fwu no need</li> <li>• fwuprodmismatch – Event fwu aborted due to product mismatch</li> <li>• fwuserverundef – Event fwu aborted due to server undefined</li> <li>• fwuserverunreachable – Event fwu aborted due to server unreachable</li> <li>• fwusignmismatch – Event fwu aborted due to signature mismatch</li> <li>• fwusyserr – Event fwu aborted due to system error</li> <li>• fwuunsupportedhw – Event fwu aborted due to unsupported hardware</li> <li>• fwuunsupportedmodelnum – Event fwu aborted due to unsupported FIPS model number</li> <li>• fwuvermismatch – Event fwu aborted due to version mismatch</li> </ul> |
| isdn         | <p>Configures file <i>Integrated Service Digital Network</i> (ISDN) module related event s</p> <ul style="list-style-type: none"> <li>• isdn-alert – Event ISDN alert</li> <li>• isdn-crit – Event ISDN critical</li> <li>• isdn-debug – Event ISDN debug</li> <li>• isdn-emerg – Event ISDN emergency</li> <li>• isdn-err – Event ISDN error</li> <li>• isdn-info – Event ISDN info</li> <li>• isdn-notice – Event ISDN notice</li> <li>• isdn-warning – Event ISDN warning</li> </ul>  |
| l2gre        | <p>Enables and configures logging of the following <i>Layer 2 GRE</i> (L2GRE) tunnel related events:</p> <ul style="list-style-type: none"> <li>• l2gre-tunnel-down – Event L2GRE tunnel down</li> <li>• l2gre-tunnel-failover – Event L2GRE tunnel failover</li> <li>• l2gre-tunnel-up – Event L2GRE tunnel up</li> </ul>   |

| <event-type> | <event-name>   |
|--------------|--|
| l2tpv3       | Enables and configures logging of the following <i>Layer 2 TPV3</i> (L2TPv3) tunnel related events: <ul style="list-style-type: none"> <li>• l2tpv3-tunnel-down – Event L2TPv3 tunnel down</li> <li>• l2tpv3-tunnel-up – Event L2TPv3 tunnel up</li> </ul>   |
| licmgr       | Enables and configures logging of the following license manager module related events: <ul style="list-style-type: none"> <li>• lic-installed-count – Event total number of license installed count</li> <li>• lic-installed-default – Event default license installation</li> <li>• lic-installed – Event license installed</li> <li>• lic-invalid – Event license installation failed</li> <li>• lic-removed – Event license removed</li> </ul>  |
| lldp         | Enables and configures logging of the following <i>Link Layer Discovery Protocol</i> (LLDP) related events: <ul style="list-style-type: none"> <li>• lldp-loop-detected – Event layer 2 switching loop</li> <li>• lldp-loop-recovery – Event recovery from layer 2 switching loop</li> </ul>   |
| mgmt         | Enables and configures logging of the following management services module related events: <ul style="list-style-type: none"> <li>• log-http-init – Event Web server started</li> <li>• log-http-local-start – Event Web server started in local mode</li> <li>• log-http-start – Event Web server started in external mode</li> <li>• log-https-start – Event secure Web server started</li> <li>• log-https-wait – Event waiting for Web server to start</li> <li>• log-key-deleted – Event RSA key associated with SSH is deleted</li> <li>• log-key-restored – Event RSA key associated with SSH is added</li> <li>• log-trustpoint-deleted – Event trustpoint associated with HTTPS is deleted</li> </ul> |
| mesh         | Enables and configures logging of the following mesh module related events: <ul style="list-style-type: none"> <li>• mesh-link-down – Event mesh link down</li> <li>• mesh-link-up – Event mesh link up</li> <li>• meshpoint-down – Event meshpoint down</li> <li>• meshpoint-loop-prevent-off – Event meshpoint loop prevent off</li> <li>• meshpoint-loop-prevent-on – Event meshpoint loop prevent on</li> <li>• meshpoint-path-change – Event meshpoint-path-change</li> <li>• meshpoint-root-change – Event meshpoint-root-change</li> <li>• meshpoint-up – Event meshpoint up</li> </ul>   |

| <event-type> | <event-name>   |
|--------------|--|
| nsm          | <p>Configures <i>Network Service Module</i> (NSM) related event</p> <ul style="list-style-type: none"> <li>• dhcpc-err – Event DHCP certification error</li> <li>• dhcpcdefrt – Event DHCP defrt</li> <li>• dhcpcip – Event DHCP IP</li> <li>• dhcpcipchg – Event DHCP IP change</li> <li>• dhcpcipnoadd – Event DHCP IP overlaps static IP address</li> <li>• dhcplsexp – Event DHCP lease expiry</li> <li>• dhcpnak – Event DHCP server returned DHCP NAK response</li> <li>• dhcpcnodefrt – Event interface no default route</li> <li>• if-failback – Event interface failback</li> <li>• if-failover – Event interface failover</li> <li>• ifdown – Event interface down</li> <li>• ifipcfg – Event interface IP config</li> <li>• ifup – Event interface up</li> <li>• nsm-ntp – Event translate host name</li> </ul> |

|---|-------------------------------------|
| <code>no (event-system-policy-config-mode)</code> on page 359 | Resets or disables event monitoring |
|---|-------------------------------------|

### **no (event-system-policy-config-mode)**

Negates an event monitoring configuration

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
no event <EVENT-TYPE> <EVENT-NAME> [email|forward-to-switch|snmp|syslog] [default|on|off]
```

#### Parameters

```
no <PARAMETERS>
```

|   |
|---|
| <p><code>no &lt;PARAMETERS&gt;</code> Removes event monitoring and message forwarding activity based on the parameters passed</p> <p>The system stops network monitoring for the occurrence of the specified event and no notification is sent if the event occurs.</p> |
|---|

#### Examples

```
rfs4000-229D58(config-event-system-policy-TestPolicy)#event ap adopted syslog default
rfs4000-229D58(config-event-system-policy-TestPolicy)#no event ap adopted syslog
```

#### Related Commands

|--------------------------------|--|

## firewall-policy

Configures a firewall policy. This policy defines a set of rules for managing network traffic and prevents unauthorized access to the network behind the firewall.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
firewall-policy <FIREWALL-POLICY-NAME>
```

### Parameters

```
firewall-policy <FIREWALL-POLICY-NAME>
```

|                        |   |
|------------------------|---|
| <FIREWALL-POLICY-NAME> | Specify the firewall policy name. If a firewall policy, with the specified name, does not exist, it is created. |
|------------------------|---|

### Examples

```

nx9500-6C8809(config)#firewall-policy test
nx9500-6C8809(config-fw-policy-test)#?
Firewall policy Mode commands:
  acl-logging          Log on flow creating traffic
  alg                  Enable ALG
  clamp                Clamp value
  dhcp-offer-convert   Enable conversion of broadcast dhcp offers to
                      unicast
  dns-snoop            DNS Snooping
  firewall             Wireless firewall
  flow                Firewall flow
  ip                   Internet Protocol (IP)
  ip-mac               Action based on ip-mac table
  ipv6                Internet Protocol version 6 (IPv6)
  ipv6-mac             Action based on ipv6-mac table
  logging              Firewall enhanced logging
  no                   Negate a command or set its defaults
  proxy-arp            Enable generation of ARP responses on behalf
                      of another device
  proxy-nd             Enable generation of ND responses (for IPv6)
                      on behalf of another device
  stateful-packet-inspection-l2 Enable stateful packet inspection in layer2
                      firewall
  storm-control        Storm-control
  virtual-defragmentation Enable virtual defragmentation for IPv4
                      packets (recommended for proper functioning
                      of firewall)

  clrscr              Clears the display screen
  commit              Commit all changes made in this session
  do                  Run commands from Exec mode
  end                 End current mode and change to EXEC mode
  exit                End current mode and down to previous mode
  help                Description of the interactive help system
  revert              Revert changes
  service             Service Commands
  show                Show running system information
  write               Write running configuration to memory or
                      terminal

nx9500-6C8809(config-fw-policy-test)#

```

### Related Commands

|-----------------------|-------------------------------------|

**Note**

For more information on Firewall policy, see [Firewall Policy](#) on page 1488.

## global-association-list

Configures a global list of client MAC addresses. Based on the deny or permit rules specified, clients are either allowed or denied access to the managed network.

The global association list serves the same purpose as an *Association Access Control List (ACL)*. However, the Association ACL allows a limited number of entries, a few thousand only, and does not suffice the requirements of a large deployment. This gap is filled by a global association list, which is much larger (with tens of thousands of entries). Both lists co-exist in the system. When an access request comes in, the association ACL is looked up first and if the requesting MAC address is listed in one of the deny ACLs, the association is denied. But, if the requesting client is permitted access, or if in case none of the ACLs list the client's MAC address, the global association ACL is checked. Once authenticated, the client's credentials are cached on the Access Point, and subsequent requests are not referenced to the controller. An entry in an APs credential cache means a pass in the global association list.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
global-association-list <GLOBAL-ASSOC-LIST-NAME>
```

### Parameters

```
global-association-list <GLOBAL-ASSOC-LIST-NAME>
```

|                          |   |
|--------------------------|---|
| <GLOBAL-ASSOC-LIST-NAME> | Specify the global association list name. If a list with the same name does not exist, it is created.<br>Map this global association list to a device (controller) or a controller profile. Once associated, the controller applies this association list to requests received from all adopted APs. For more information, see <a href="#">use (profile/device-config-mode-commands)</a> on page 1251.<br>The global association list can also be mapped to a WLAN. The usage of global access lists is controlled on a per-WLAN basis. For more information, see <a href="#">association-list</a> on page 523. |
|--------------------------|---|

### Examples

```
rfs4000-229D58(config)#global-association-list my-clients
rfs4000-229D58(config-global-assoc-list-my-clients)#?
Global Association List Mode commands:
  default-action  Configure the default action when the client MAC does not
                  match any rule
  deny           Specify MAC addresses to be denied
  no            Negate a command or set its defaults
  permit        Specify MAC addresses to be permitted

  clrscr         Clears the display screen
  commit        Commit all changes made in this session
  do            Run commands from Exec mode
  end           End current mode and change to EXEC mode
  exit          End current mode and down to previous mode
  help          Description of the interactive help system
```

|         |   |
|---------|---|
| revert  | Revert changes                                    |
| service | Service Commands                                  |
| show    | Show running system information                   |
| write   | Write running configuration to memory or terminal |

```
rfs4000-229D58(config-global-assoc-list-my-clients)#
```

To enable global-association-list controlled client association, execute the following commands:

- 1 Create a global association list, and configure it as shown in the following examples:

```
rfs4000-880DA7(config)#global-association-list vtt-list
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 01-22-33-44-55-66 description
sample
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 40-B8-9A-39-F1-27 description
acer
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 42-B8-9A-39-F1-27 description
ami
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit 6C-40-08-B2-80-6C description
mac
rfs4000-880DA7(config-global-assoc-list-vtt-list)#permit E0-98-61-34-11-47 description
my_mobile
rfs4000-880DA7(config-global-assoc-list-vtt-list)#show context
global-association-list vtt-list
default-action deny
permit 01-22-33-44-55-66 description sample
permit 40-B8-9A-39-F1-27 description acer
permit 42-B8-9A-39-F1-27 description ami
permit 6C-40-08-B2-80-6C description mac
permit E0-98-61-34-11-47 description my_mobile
rfs4000-880DA7(config-global-assoc-list-vtt-list)#
```

- 2 Attach this global association list to the profile or device context of the access point or controller, as shown in the following examples:

On the access point's profile context:

#### Note

Ensure that the global association list is associated with the profile being applied on the access point.

```
rfs4000-880DA7(config-profile-testAP505)#use global-association-list server vtt-list
rfs4000-880DA7(config-profile-testAP505)#show context include-factory | include g
lobal-association-list
service global-association-list blacklist-interval 60
use global-association-list server vtt-list
rfs4000-880DA7(config-profile-testAP505)#
```

On the access point's device context:

```
ap505-13403B(config-device-94-9B-2C-13-40-38)#use global-association-list server vtt-
list
ap505-13403B(config-device-94-9B-2C-13-40-38)#show context include-factory | in
clude global-association-list
use global-association-list server vtt-list
ap505-13403B(config-device-94-9B-2C-13-40-38)#
```

On the controller's device context:

```
rfs4000-880DA7(config-device-00-23-68-88-0D-A7)#use global-association-list server vtt-list
rfs4000-880DA7(config-device-00-23-68-88-0D-A7)#show context include-factory | include global-association-list
use global-association-list server vtt-list
rfs4000-880DA7(config-device-00-23-68-88-0D-A7)#
```

- 3 Attach this global association list with the WLAN, as shown in the following example:

```
rfs4000-880DA7(config-wlan-GLAssList)#association-list global vtt-list
rfs4000-880DA7(config-wlan-GLAssList)#show context include-factory | include association-list
association-list global vtt-list
rfs4000-880DA7(config-wlan-GLAssList)#
```

## guest-management-policy

Configures a guest management policy that redirects guest users to a registration portal upon association to a captive portal. Guest users are redirected to an internally (or) externally hosted registration page (registration.html) where previously, not-registered guest users can register. The internally hosted captive portal registration page can be customized based on business requirements.

Use the guest management policy commands to configure parameters, such as E-mail host and SMS gateway along with the credentials required for sending pass code to guest via e-mail and SMS. You can configure up to 32 different guest management policies. Each guest management policy allows you to configure the SMS gateway, SMS message body, E-mail SMTP server, E-mail subject contents, and E-mail message body. Although, at any point-in-time, multiple guest management policies may exist, only one guest management policy can be active per device.

Guest registration is supported only on the NX9500 and NX7500 series service platforms. However, the number of user identity entries supported on each varies. It is 2 million and 1 million user-identity entries for the NX9500 and NX7500 model service platforms respectively.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

### Syntax

```
guest-management <POLICY-NAME>
```

### Parameters

```
guest-management <POLICY-NAME>
```

<POLICY-NAME>

Specify the guest management policy name. If the policy does not exist, it is created.

### Examples

```
nx9500-6C8809(config)#guest-management guest
nx9500-6C8809(config-guest-management-guest)#?
Guest Management Mode commands:
email          Email guest-notification configuration
guest-database-backup  Configure guest-database-backup parameters
```

```

guest-database-export  Configure guest-database-export parameters
no                     Negate a command or set its defaults
sms                   SMS guest-notification configuration

### *guest-management-policy config commands*

The following table summarizes guest management policy configuration mode commands:

**Table 18: Guest Management Policy Config Commands**

| Command   | Description   |
|---|---|
| <b>email</b> on page 364  | Configures guest user e-mail notification settings  |
| <b>guest-database-backup</b> on page 367                        | Enables periodic backup of the captive portal's guest registration user database  |
| <b>guest-database-export</b> on page 367                        | Schedules an export of the Guest Management User database to a specified external server  |
| <b>sms</b> on page 368  | Configures guest user SMS notification settings   |
| <b>sms-over-smtp</b> on page 370                                | Configures an e-mail host server along with sender credentials and the recipient's gateway e-mail address to which the message is e-mailed. The gateway server converts the e-mail into SMS and forwards the message to the guest user's mobile device. |
| <b>no (guest-management-policy-config-commands)</b> on page 372 | Removes this guest management policy settings   |

### email

Configures guest user e-mail notification settings. When configured, guest users can register themselves with their e-mail credentials as a primary key for authentication. The captive portal system provides the pass code for their registration. Guest users need to use their registered e-mail, mobile, or member ID and the received pass code for subsequent logins to the captive portal.

Supported in the following platforms:

- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
email [host|message|subject]
email host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS>
security [none|ssl|starttls] username <USER-NAME> password <PASSWORD>
email message <LINE>
email subject <LINE>
```

## Parameters

```
email host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS> security
[none|ssl|starttls] username <USER-NAME> password <PASSWORD>
```

|  |   |
|--|---|
| email                                  | Configures guest user e-mail notification settings  |
| host [<IP/HOSTNAME> <HOST-ALIAS-NAME>] | <p>Configures the SMTP server's IP address or hostname used for guest management e-mail traffic, guest user credential validation, and pass code reception. Optionally you can use an existing host alias to identify the SMTP server host.</p> <ul style="list-style-type: none"> <li>• &lt;IP/HOSTNAME&gt; – Specify the SMTP server's IPv4 address or hostname.</li> <li>• &lt;HOST-ALIAS-NAME&gt; – Specify the host alias name (should be existing and configured). Consider providing the host as an alias. A host alias is a configuration item that maps the alias to a hostname. Once created, it can be used across different configuration modes. Where ever used the alias is replaced by the associated hostname.</li> </ul> |
| sender <EMAIL-ADDRESS>                 | <p>Configures the sender's name for the guest user receiving the passcode required for registering their guest E-mail credentials using SMTP.</p> <ul style="list-style-type: none"> <li>• &lt;EMAIL-SENDER&gt; – Specify the sender's name (should not exceed 100 characters).</li> </ul>  |
| security [none ssl starttls]           | <p>Configures the encryption protocol used by the SMTP server when communicating the pass code</p> <ul style="list-style-type: none"> <li>• none – No encryption used. Use if no additional user authentication is needed beyond the required username and password combination.</li> <li>• SSL – Uses SSL encryption. This is the default setting.</li> <li>• STARTTLS – Uses STARTTLS encryption</li> </ul>   |
| username <USER-NAME>                   | <p>Configures a username unique to this SMS guest management configuration. After configuring the username, specify the associated password. Ensure that the password is correctly provided to receive the pass code required for registering guest user credentials with SMS.</p> <ul style="list-style-type: none"> <li>• &lt;USER-NAME&gt; – Specify the username (should not exceed 100 characters).</li> </ul>   |

## guest-database-backup

Enables periodic backup of a captive portal's guest registration user database. This option is enabled by default.

Supported in the following platforms:

- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
guest-database-backup enable {<TIME>}
```

### Parameters

```
guest-database-backup enable {<TIME>}
```

|                                       |  |
|---------------------------------------|--|
| guest-database-backup enable {<TIME>} | <p>Enables periodic backup of a captive portal's guest registration user database. This command also allows you to configure the time at which the system starts backing up the database. The default backup-start time is '00:00' (midnight every day).</p> <ul style="list-style-type: none"> <li>• &lt;TIME&gt; – Optional. Resets the periodic database backup-start time to a user-defined value in the HH;MM format. When specified, the system starts periodic backup of the database, every day, at the specified time.</li> </ul> |
|---------------------------------------|--|

### Examples

```

nx9500-6C8809(config-guest-management-test)#guest-database-backup enable 12:30

## guest-database-export

Schedules an export of the Guest Management user database to a specified external server. This option is enabled by default.

Supported in the following platforms:

- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
guest-database-export <TIME> frequency <1-168> url-directory <URL>
{ (format [csv|json])|last-visit-within <1-168> }
```

### Parameters

```
guest-database-export <TIME> frequency <1-168> url-directory <URL>
{ (format [csv|json])|last-visit-within <1-168> }
```

|                              |   |
|------------------------------|---|
| guest-database-export <TIME> | Schedules an export of the Guest Management User collection to an external server <ul style="list-style-type: none"> <li>&lt;TIME&gt; – Configures the start time of the export operation in the HH:MM format</li> </ul>  |
| frequency <1-168>            | Configures the user collection export frequency in hours <ul style="list-style-type: none"> <li>&lt;1-168&gt; – Configures the frequency from 1 - 168 hours. If the frequency is set at 3 hours, the user database is exported once in every 3 hours. The default is 4 hours.</li> </ul>  |
| url-directory <URL>          | Configures external server's URL and directory to where the collection is exported <ul style="list-style-type: none"> <li>&lt;URL&gt; – Specify the external server's URL</li> </ul>  |
| format [csv json]            | Optional. Configures the file format <ul style="list-style-type: none"> <li>csv – Exports collection to the specified location in CSV format. This is the default setting.</li> <li>json – Exports collection to the specified location in JSON format</li> </ul>   |
| last-visit-within <1-168>    | Configures a filters guest users who have last visited within a specified period of time <ul style="list-style-type: none"> <li>&lt;1-168&gt; – Specify a time period from 1 - 168 hours. If for example, the last-visit-within value is set at 2 hours, then only the last two hours guest user collections will be exported. The default is 4 hours.</li> </ul> |

### Examples

```

nx9500-6C8809(config-guest-management-gml)#guest-database-export 10:30 frequency 6 url-
directory ftp://admin:xxxxxx@192.168.13.10/dbc_dir format json last-visit-within 168

guest-management test
  guest-database-export 12:30 frequency 20 url-directory ftp://admin:xxxxxx@192.168.13.10/
  dbc_dir format json last-visit-within 168
nx9500-6C8809(config-guest-management-test)#

```

### Related Commands

**no (guest-management-policy-config-commands)** Reverts the guest database export parameters to default on page 372

## sms

Configures guest user SMS notification settings. When configured, guest users can register themselves with their e-mail or mobile device ID as the primary key for authentication. The captive portal provides the pass code for registration. Guest users use their registered e-mail or mobile device ID and the received pass code for subsequent logins to the captive portal.

### Note

When using SMS, ensure that the WLAN's mode of authentication is set to none and the mode of registration is set to user. In other words, captive portal authentication must always enforce guest registration.

SMS is similar to MAC address-based self registration, but in addition the captive portal sends an SMS message, containing an access code, to the user's mobile phone number provided at the time of registration. The captive portal verifies the code, returns the Welcome page and provides access. This allows the administrator to verify the phone number provided and can be traced back to a specific individual should the need arise.

The default gateway used with SMS is Clickatell. A pass code can be sent with SMS to the guest user directly using Clickatell, or the pass code can be sent via e-mail to the SMS Clickatell gateway server, and Clickatell sends the pass code SMS to the guest user.

Supported in the following platforms:

- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
sms [host|message] sms host clickatell username <USER-NAME> password <PASSWORD>
api-id <ID> user-agent <PYCLICKATELL> {source-number <WORD>}
sms message <LINE>
```

### Parameters

```
sms host clickatell username <USER-NAME> password <PASSWORD>
api-id <ID> user-agent <PYCLICKATELL> {source-number <WORD>}
```

|                           |   |
|---------------------------|---|
| sms                       | Configures guest user SMS notification settings   |
| host clickatell           | By default, clickatell is the host SMS gateway server resource. Upon receiving the pass code e-mail, the SMS gateway sends the actual notification pass code SMS to the guest user.   |
| username <USER-NAME>      | Configures a username unique to this SMS guest management configuration. After configuring the username, specify the associated password. Ensure that the password is correctly provided to receive the pass code required for registering guest user credentials with SMS. <ul style="list-style-type: none"> <li>• &lt;USER-NAME&gt; – Specify the username (should not exceed 32 characters).</li> </ul> |
| password <PASSWORD>       | Configures the password associated with the specified username <ul style="list-style-type: none"> <li>• &lt;PASSWORD&gt; – Specify the password (should not exceed 63 characters).</li> </ul>   |
| api-id <ID>               | Set a 32 character maximum API ID <ul style="list-style-type: none"> <li>• &lt;API-ID&gt; – Specify the API ID (should not exceed 32 characters).</li> </ul>  |
| user-agent <PYCLICKATELL> | Since the SMS service provider by default is Clickatell, set the user agent name to pyclickatell. The user-agent value ensures the Clickatell SMS gateway server and its related credentials, needed for sending the pass code to guest users, are configured.  |
| source-number <WORD>      | Optional. Configures the long-address or the from-number associated with this Clickatell user account <ul style="list-style-type: none"> <li>• &lt;WORD&gt; – Specify the source number (should not exceed 32 characters).</li> </ul>   |

```
sms message <LINE>
```

|                |   |
|----------------|---|
| sms            | Configures guest user SMS notification content  |
| message <LINE> | <p>Configures the content of the SMS sent to the guest user notifying the pass code (should not exceed 1024 characters)</p> <ul style="list-style-type: none"> <li>• &lt;LINE&gt; – Specify the message content. When entering the message, use the following tags:</li> </ul> <p>GM-NAME – for the guest user's name</p> <p>GM_PASSCODE – for the pass code</p> <p>For example: Dear GM_NAME, your internet access pass code is GM_PASSCODE.</p> |

### Examples

```

nx9500-6C8809(config-guest-management-test)#sms host clickatell username guest1
password guest1@123 api-id test user-agent pyclickatell

nx9500-6C8809(config-guest-management-test)#sms message Dear guest1, Your passcode for
internet access is GM-guest1

## sms-over-smtp

Configures an e-mail host server (for example: smtp.gmail.com) along with sender related credentials and the recipient gateway e-mail address to which the message is E-mailed. The gateway server converts the e-mail into SMS and sends the message to the guest user's mobile device.

When sending an e-mail, the e-mail client interacts with a SMTP server to handle the content transmission. The SMTP server on the host may have conversations with other SMTP servers to deliver the e-mail.

Supported in the following platforms:

- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```

sms-over-smtp [host|message|subject]

sms-over-smtp host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS>
security [none|ssl|starttls] username <USER-NAME> password <PASSWORD> recipient <EMAIL-
ADDRESS>

sms-over-smtp message <LINE>

sms-over-smtp subject <LINE>

```

## Parameters

```
sms-over-smtp host [<IP/HOSTNAME>|<HOST-ALIAS-NAME>] sender <EMAIL-ADDRESS> security
[none|ssl|starttls] username <USER-NAME> password <PASSWORD> recipient <EMAIL-ADDRESS>
```

|  |  |
|--|--|
| sms-over-smtp                          | Configures guest user SMS over SMTP notification settings  |
| host [<IP/HOSTNAME> <HOST-ALIAS-NAME>] | <p>Configures the SMS gateway server resource's IPv4 address or hostname used for guest management SMS over SMTP traffic, guest user credential validation and pass code reception. Optionally you can use an existing host alias to identify the SMS gateway server resource.</p> <ul style="list-style-type: none"> <li>• &lt;IP/HOSTNAME&gt; – Specify the SMTP gateway server resource's IP address or hostname.</li> <li>• &lt;HOST-ALIAS-NAME&gt; – Specify the host alias name (should existing and configured). Consider providing the host as an alias. A host alias is a configuration item that maps the alias to a hostname. Once created, it can be used across different configuration modes. Where ever used the alias is replaced by the associated hostname.</li> </ul> |
| sender <EMAIL-ADDRESS>                 | <p>Configures the sender's e-mail address. The sender here is the guest user receiving the pass code. Guest users require this pass code for registering their guest e-mail credentials using SMTP.</p> <ul style="list-style-type: none"> <li>• &lt;EMAIL-ADDRESS&gt; – Specify the e-mail address (should not exceed 64 characters).</li> </ul>  |
| security [none ssl starttls]           | <p>Configures the encryption protocol used by the SMTP server when communicating the pass code</p> <ul style="list-style-type: none"> <li>• none – No encryption used. Use if no additional user authentication is needed beyond the required username and password combination.</li> <li>• SSL – Uses SSL encryption. This is the default setting. <ul style="list-style-type: none"> <li>• STARTTLS – Uses STARTTLS encryption</li> </ul> </li> </ul>  |
| username <USER-NAME>                   | <p>Configures a username unique to this SMTP guest management configuration. After configuring the username, specify the associated password. Ensure that the correct password is provided to receive the pass code required for registering guest user credentials with SMTP.</p> <ul style="list-style-type: none"> <li>• &lt;USER-NAME&gt; – Specify the username (should not exceed 64 characters).</li> </ul>   |
| password <PASSWORD>                    | <p>Configures the password associated with the specified SMTP user name</p> <ul style="list-style-type: none"> <li>• &lt;PASSWORD&gt; – Specify the password (should not exceed 64 characters).</li> </ul>   |
| recipient <EMAIL-ADDRESS>              | <p>Configures the e-mail recipient's e-mail address</p> <ul style="list-style-type: none"> <li>• &lt;EMAIL-ADDRESS&gt; – Specify the recipient's e-mail address (should not exceed 64 characters in length).</li> </ul>  |

```

default/NOC-NX9500    default/RFS6K-SITE1-VLAN20
NOC-NX9500            RFS6K-SITE1-VLAN20
```

```
RFS6K-SITE2-VLAN192          default/RFS6K-SITE2-VLAN192
NOC-NX9500 (config) #host ap7522-8330A4
NOC-NX9500 (config-device-84-24-8D-83-30-A4) #
```

inline-password-encryption

Stores the encryption key in the startup configuration file. By default, the encryption key is not stored in the startup-config file. Use the inline-password-encryption command to move the encrypted key to the startup-config file. This command uses the master key to encrypt the password, then moves it to the startup-config file.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
inline-password-encryption
```

Parameters

```
None
```

Usage Guidelines

When the configuration file is imported to a different device, it first decrypts the encryption key using the default key and then decrypts the rest of the configuration using the administrator configured encryption key.

Examples

The following command uses the specified password for encryption key and stores it outside of startup-config:

```
nx9500-6C8809(config)#password-encryption secret 2 12345678
nx9500-6C8809(config)#commit write memory
```

The following command moves the same password to the startup-config and encrypts it with the master key:

```
nx9500-6C8809(config)#inline-password-encryption
```

iot-device-type-imagotag-policy

Creates an IoT Device-Type Imagotag policy and enters its configuration mode. Use this option to enable support for SES-imagotag's ESL (*Electronic Shelf Label*) tags on WiNG APs with USB interfaces.

ESL tags are small, battery-powered devices used by retail businesses to display information, such as product code, pricing, etc. These tags are activated, configured, and managed through an SES-Imagotag provided server. The tags and server communicate through an ESL communicator (a USB dongle), connected to the USB port on the WiNG AP. This communication is over the 2.4 GHz band using a proprietary RF protocol. The ESL communicator acts as a bridge between the tags and the server, using WiNG AP as an infrastructure device.

This policy, when applied on an AP, enables the AP recognize the ESL communicator, and facilitate communication between communicator and tags.

The policy can be applied to the AP's self (in case of stand alone AP), or pushed to the AP through the adopting controller. In the latter case, apply the policy on the AP's profile.

*Supported in the following platforms:*

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

#### Note

The policy is applicable only on the AP-8432 model access point, which supports the USB interface.

#### Syntax

```
iot-device-type-imagotag-policy <POLICY-NAME>
```

#### Parameters

```
iot-device-type-imagotag-policy <POLICY-NAME>
```

|  |   |
|--|---|
| iot-device-type-imagotag-policy<br><POLICY-NAME> | Specify an IoT Device Type Imagotag policy name. If another policy by the specified name does not exist, the policy is created. |
|--|---|

#### Example

```
nx9500-6C8809(config)#iot-device-type-imagotag-policy ImagoTagPolicy
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#?
Iot Imagotag Policy Mode commands:
  channel      Auto channel selection
  enable       Enable ESL communicator
  fcc-mode     Enable fcc compatibility mode on ESL communicator
  no           Negate a command or set its defaults
  output-power Maximum output power
  payload-size Configure payload size
  server       ESL server
  ssl          Enable ssl on ESL communicator
  window-size  Configure window size

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
```

```

show          Show running system information
write         Write running configuration to memory or terminal

nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #

```

### Related Commands

### *iot-device-type-imagotag-policy* config commands

The following table summarizes IoT Device-Type Imagotag policy configuration mode commands:

**Table 19: IoT-Device-Type Imagotag Policy Config Commands**

| Command  | Description   |
|--|---|
| <b>channel</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 376      | Configures the channel assigned for ESL communicator to tag communication in the 2.4 GHz band                           |
| <b>enable</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 377       | Enables the ESL communicator  |
| <b>fcc-mode</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 377     | Enables the FCC compatibility mode on the ESL communicator  |
| <b>output-power</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 378 | Configures the maximum output power for the ESL communicator  |
| <b>payload-size</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 379 | Configures the maximum payload size in packets exchanged between ESL communicator and tags                              |
| <b>server</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 380       | Configures the ESL SES-Imagotag server's hostname or IP address   |
| <b>ssl</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 381          | Enables SSL ( <i>Secure Socket Layer</i> ) encryption mode of communication between the AP and the SES-imagotag server. |
| <b>window-size</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 380  | Configures the transmission window size for messages exchanged between ESL communicator and tags.                       |
| <b>no</b> ( <i>iot-device-type-imagotag-policy</i> ) on page 382           | Reverts this IoT Device-Type Imagotag policy settings to default values   |

### **channel** (*iot-device-type-imagotag-policy*)

Manually configures the channel assigned for the *ESL communicator* to *tag* communication in the 2.4 GHz band. Or, enables ACS (*Auto-Channel Selection*) mode.

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

#### Syntax

```
channel [<0-10>|acs]
```

## Parameters

```
channel [<0-10>|acs]
```

|                      |   |
|----------------------|---|
| channel [<0-10> acs] | Configures the 2.4 GHz frequency channel, using one of the following options: <ul style="list-style-type: none"> <li>&lt;0-10&gt; - Manually configures the channel from 0 - 10.</li> <li>acs - Enables ACS channel selection mode. This is the default setting.</li> </ul> |
|----------------------|---|

## Examples

```
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#channel 9
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#show context
iot-device-type-imagotag-policy ImagoTagPolicy
channel 9
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#
```

## Related Commands

|  |   |
|--|---|
| no (iot-device-type-imagotag-policy) on page 382 | Reverts the channel selection mode to ACS |
|--|---|

**enable (iot-device-type-imagotag-policy)**

Enables the ESL communicator

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
enable
```

## Parameters

```
None
```

## Examples

```
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#enable
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#show context
iot-device-type-imagotag-policy ImagoTagPolicy
enable
channel 9
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#
```

## Related Commands

|  |                               |
|--|-------------------------------|
| no (iot-device-type-imagotag-policy) on page 382 | Disables the ESL communicator |
|--|-------------------------------|

**fcc-mode (iot-device-type-imagotag-policy)**

Enables the FCC (*Federal Communications Commission*) compatibility mode on the ESL communicator. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

#### Syntax

```
fcc-mode
```

#### Parameters

```
None
```

#### Examples

```
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#fcc-mode
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#show context
iot-device-type-imagotag-policy ImagoTagPolicy
enable
fcc-mode
channel 9
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#
```

#### Related Commands

**no (iot-device-type-imagotag-policy)** Disables FCC compatibility mode on page 382

### output-power (iot-device-type-imagotag-policy)

Configures the maximum output power for the ESL communicator.

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

#### Syntax

```
output-power [Level-A|Level-B|Level-C|Level-D|Level-E|Level-F|Level-G|Level-H]
```

#### Parameters

```
output-power [Level-A|Level-B|Level-C|Level-D|Level-E|Level-F|Level-G|Level-H]
```

output-power [Level-A|Level-B|Level-C|Level-D|Level-E|Level-F|Level-G|Level-H]

Configure the ESL communicator's output power in dBm. The options are:

- Level-A - 1 dBm. This is the default setting.
- Level-B - -4 dBm
- Level-C - -6 dBm
- Level-D - -12 dBm
- Level-E - 0 dBm
- Level-F - -2 dBm
- Level-G - -8 dBm
- Level-H - -10 dBm

**Note:** SES-Imagotags recommends NOT to change the default setting, which is in conformance to various country/region specific RF regulations.

## Examples

```

nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #output-power Level-B
nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #show context
iot-device-type-imagotag-policy ImagoTagPolicy
enable
output-power Level-B
fcc-enable
channel 9
nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #

```

## Related Commands

|   |  |
|---|--|
| <code>no (iot-device-type-imagotag-policy)</code> | Reverts the ESL communicator's output-power to default (Level-A) on page 382 |
|---|--|

**payload-size (iot-device-type-imagotag-policy)**

Configures the maximum size of the payload in packets exchanged between ESL communicator and tags

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
payload-size <1-32>
```

## Parameters

```
payload-size <1-32>
```

|                     |  |
|---------------------|--|
| payload-size <1-32> | <p>Configures the packet's payload size</p> <ul style="list-style-type: none"> <li>• &lt;1-32&gt; – Specify the value from 1 - 32 bytes. The default setting is 32 bytes.</li> </ul> <p><b>Note:</b> SES-Imagotags recommends NOT to change the default setting.</p> |
|---------------------|--|

## Examples

```

nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #payload-size 25
nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #show context
iot-device-type-imagotag-policy ImagoTagPolicy
enable
output-power Level-B
payload-size 25
fcc-enable
channel 9
nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #

```

## Related Commands

|   |  |
|---|--|
| <code>no (iot-device-type-imagotag-policy)</code> | Reverts the payload size to default (32 bytes) on page 382 |
|---|--|

**window-size (iot-device-type-imagotag-policy)**

Configures the transmission window size for messages exchanged between ESL communicator and tags

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

Syntax

```
window-size <1-14>
```

Parameters

```
window-size <1-14>
```

window-size <1-14>

Configures the window size

- <1-14> – Specify a value from 1 - 14 bytes. The default value is 14 bytes.

**Note:** SES-Imagotags recommends NOT to change the default setting.

Examples

```
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#window-size 12
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#show context
iot-device-type-imagotag-policy ImagoTagPolicy
enable
output-power Level-B
window-size 12
payload-size 25
port 200
ssl-enable
fcc-enable
channel 9
nx9500-6C8809(config-iot-device-type-imagotag-policy-ImagoTagPolicy)#
```

Related Commands

**no (iot-device-type-imagotag-policy)** Reverts the window-size to 14 bytes.  
on page 382

**server (iot-device-type-imagotag-policy)**

Configures the ESL SES-Imagotag server's IP address or hostname. As per the current implementation, at the ESL server end, the WiNG AP's IP address was configured to enable the server contact the AP and establish connection with the ESL communicator (USB Dongle). Starting with WiNG 5.9.3, the WiNG AP will send a connection request to the ESL server. For this purpose, the ESL Imagotag server's IP address or hostname has to be configured in the IOT Imagotag policy. Use this command to provide the SES-Imagotag server's IP address or hostname.

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
server [hostname|ip-address]
server [hostname <HOST-NAME>|ip-address [<IP>|<HOST-ALIAS-NAME>]] {port <1-65535>}
```

## Parameters

```
server [hostname <HOST-NAME>|ip-address [<IP>|<HOST-ALIAS-NAME>]] {port <1-65535>}
```

|                                     |  |
|-------------------------------------|--|
| server                              | Configures the ESL server's hostname or IP address   |
| hostname <HOST-NAME>                | Use this option to configure the ESL server's hostname. <ul style="list-style-type: none"> <li>&lt;HOSTNAME&gt; - Provide the hostname (could be FQDN, partial DN, etc.)</li> </ul>  |
| ip-address [<IP> <HOST-ALIAS-NAME>] | Use this option to configure the ESL server's IP address <ul style="list-style-type: none"> <li>&lt;IP&gt; - Provide the IP address</li> <li>&lt;HOST-ALIAS-NAME&gt; - Provide a host alias name. Note, if using this option, ensure that the host alias is existing and pointing to the ESL server host.</li> </ul> |
| port <1-65535>                      | Optional. Configures the port on which the ESL server can be reached. <ul style="list-style-type: none"> <li>&lt;1-65535&gt; - Specify the port from 1 - 65535.</li> </ul>   |

## Examples

```
NOC-NX9500(config-iot-device-type-imagotag-policy-test)#server ip-address
10.234.160.225

NOC-NX9500(config-iot-device-type-imagotag-policy-test)#show context
iot-device-type-imagotag-policy test
enable
output-power Level-B
window-size 12
payload-size 25
ssl
fcc-mode
channel 9
server ip-address 10.234.160.225
NOC-NX9500(config-iot-device-type-imagotag-policy-test)#
```

## Related Commands

**no (iot-device-type-imagotag-policy)** Removes the ESL server's hostname or IP address configuration on page 382

**ssl (iot-device-type-imagotag-policy)**

Enables secure, encrypted communication over the SSL (*Secure Socket Layer*) between the AP and SES-imagotag server. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
ssl
```

## Parameters

None

## Examples

```

nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #ssl
nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #show context
  iot-device-type-imagotag-policy ImagoTagPolicy
    enable
    output-power Level-B
    payload-size 25
    port 200
    ssl
    fcc-enable
    channel 9
nx9500-6C8809 (config-iot-device-type-imagotag-policy-ImagoTagPolicy) #

```

## Related Commands

|   |
|---|
| <b>no (iot-device-type-imagotag-policy)</b> Disables SSL encryption mode of communication on page 382 |
|---|

**no (iot-device-type-imagotag-policy)**

Reverts this IoT Device-Type ImagoTag policy settings to default values

Supported in the following platforms:

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
no [channel|enable|fcc-mode|output-power|payload-size|port|server|ssl>window-size]
```

## Parameters

```
no <PARAMETERS>
```

|                 |  |
|-----------------|--|
| no <PARAMETERS> | Reverts this IoT Device-Type ImagoTag policy settings to default value |
|-----------------|--|

## Examples

The following example shows the ImagoTag policy settings before the no commands are executed:

```

NOC-NX9500 (config-iot-device-type-imagotag-policy-test) #no ?
iot-device-type-imagotag-policy test
  enable
  output-power Level-B
  window-size 12
  payload-size 25
  ssl
  fcc-mode
  channel 9
  server ip-address 10.234.160.225
NOC-NX9500 (config-iot-device-type-imagotag-policy-test) #
NOC-NX9500 (config-iot-device-type-imagotag-policy-test) #no payload-size
NOC-NX9500 (config-iot-device-type-imagotag-policy-test) #no window-size
NOC-NX9500 (config-iot-device-type-imagotag-policy-test) #no server

```

The following example shows the Imagotag policy settings after the ‘no’ commands are executed:

```
nx9500-6C8809(config-iot-device-type-imagotag-policy-test)#show context
iot-device-type-imagotag-policy test
  enable
  output-power Level-B
  ssl-enable
  fcc-enable
  channel 9
nx9500-6C8809(config-iot-device-type-imagotag-policy-test)#
```

ip

Creates an *access control list* (ACL) and enters its configuration mode. Access lists define access permissions to the network using a set of rules. Each rule specifies an action taken when a packet matches the rule. If the action is deny, the packet is dropped. If the action is permit, the packet is allowed.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
ip [access-list|ex3500-ext-access-list|ex3500-std-access-list|snmp-access-list]
ip ex3500-ext-access-list <EX3500-EXT-ACL-NAME>
ip ex3500-std-access-list <EX3500-STD-ACL-NAME>
ip access-list <IP-ACL-NAME>
ip snmp-access-list <IP-SNMP-ACL-NAME>
```

Parameters

```
ip access-list <IP-ACL-NAME>
```

|                           |   |
|---------------------------|---|
| access-list <IP-ACL-NAME> | Creates an IP ACL and enters its configuration mode <ul style="list-style-type: none"><li>• &lt;IP-ACL-NAME&gt; - Specify the ACL name. If the access list does not exist, it is created.</li></ul> |
|---------------------------|---|

```
ip ex3500-ext-access-list <EX3500-EXT-ACL-NAME>
```

|  |   |
|--|---|
| ex3500-ext-access-list <EX3500-EXT-ACL-NAME> | Creates an EX3500 Extended ACL and enters its configuration mode <ul style="list-style-type: none"><li>• &lt;EX3500-EXT-ACL-NAME&gt; - Specify the ACL name. If an ACL with the specified name does not exist, it is created.</li></ul> |
|--|---|

```
ip ex3500-std-access-list <EX3500-STD-ACL-NAME>
```

|  |  |
|--|--|
| ex3500-std-access-list <EX3500-STD-ACL-NAME> | <p>Creates an EX3500 Standard ACL and enters its configuration mode</p> <ul style="list-style-type: none"> <li>• &lt;EX3500-EXT-ACL-NAME&gt; – Specify the ACL name. If an ACL with the specified name does not exist, it is created.</li> </ul> |
|--|--|

```
ip snmp-access-list <IP-SNMP-ACL-NAME>
```

|                                     |  |
|-------------------------------------|--|
| snmp-access-list <IP-SNMP-ACL-NAME> | <p>Creates a SNMP IP ACL and enters its configuration mode. An SNMP IP ACL is an access control mechanism that uses a combination of IP ACL and SNMP community string.</p> <p>SNMP performs network management functions using a data structure called a MIB. SNMP is widely implemented but not very secure, since it uses only text community strings for accessing controller or service platform configuration files.</p> <p>Use SNMP ACLs (firewalls) to help reduce SNMP's vulnerabilities, as SNMP traffic can be easily exploited to produce a DoS.</p> <ul style="list-style-type: none"> <li>• &lt;IP-SNMP-ACL-NAME&gt; – Specify the SNMP IP ACL name. If the access list does not exist, it is created. After creating the SNMP ACL, define the deny/permit rules based on the network and/or host IP addresses. Once created and configured, link this SNMP IP ACL with a SNMP community string.</li> </ul> <p>To link the SNMP community string with the SNMP IP ACL, in the management-policy-config-mode, use the following command: <code>snmp-server &gt; community &lt;COMMUNITY-STRING&gt; &gt; [ro rw]</code></p> <p>&gt; ip-snmp-access-list &lt;IP-SNMP-ACL-NAME&gt;.</p> |
|-------------------------------------|--|

### Examples

```

nx9500-6C8809(config)#ip access-list test
nx9500-6C8809(config-ip-acl-test)#?
ACL Configuration commands:
  deny      Specify packets to reject

### Related Commands

**no** on page 609

Removes an existing IP access control list

#### Note

For more information on Access Control Lists, see [Access-List Policy](#) on page 1359.

## ipv6

Creates an IPv6 ACL and enters its configuration mode. An IPv6 ACL defines a set of rules that filter IPv6 packets flowing through a port or interface. Each rule specifies the action taken when a packet matches the rule. If the action is deny, the packet is dropped. If the action is permit, the packet is allowed.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
ipv6 access-list <IPv6-ACL-NAME>
```

### Parameters

```
ipv6 access-list <IPv6-ACL-NAME>
```

access-list <IPv6-ACL-NAME>

Configures an IPv6 access list and enters its configuration mode

- <IPv6-ACL-NAME> - Specify the IPv6 ACL name. If the access list does not exist, it is created.

### Examples

```

rfs4000-229D58(config)#ipv6 access-list IPv6ACLTest
rfs4000-229D58(config-ipv6-acl-IPv6ACLTest)#?
IPv6 Access Control Mode commands:
deny      Specify packets to reject
no        Negate a command or set its defaults
permit    Specify packets to forward

clrscr    Clears the display screen
commit    Commit all changes made in this session
do        Run commands from Exec mode
end       End current mode and change to EXEC mode
exit      End current mode and down to previous mode

ipv6-router-advertisement-policy

Creates an IPv6 RA policy and enters its configuration mode. An IPv6 router policy allows routers to advertise their presence in response to solicitation messages. After receiving a neighbor solicitation message, the destination node sends an advertisement message, which includes the link layer address of the source node. After receiving the advertisement, the destination device replies with a neighbor advertisement message on the local link. After the source receives the advertisement it can communicate with other devices.

Advertisement messages are also sent to indicate a change in link layer address for a node on the local link. With such a change, the multicast address becomes the destination address for advertisement messages.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
ipv6-router-advertisement-policy <POLICY-NAME>
```

Parameters

```
ipv6-router-advertisement-policy <POLICY-NAME>
```

|               |  |
|---------------|--|
| <POLICY-NAME> | Specify an IPv6 RA policy name. If a policy with the specified name does not exist, it is created. |
|---------------|--|

Examples

```
rfs4000-229D58NOC-NX9500 (config) #ipv6-router-advertisement-policy test
rfs4000-229D58NOC-NX9500 (config-ipv6-radv-policy-test) #?
IPv6 Router Advertisement Policy Mode commands:
  advertise                Option to advertise in router advertisement
  assist-neighbor-discovery Send the Source Link Layer address option

### ipv6-router-advertisement-policy config commands

The following table summarizes the IPv6 *router advertisement* (RA) policy configuration mode commands:

**Table 20: IPv6 Router Advertisement Policy Config Commands**

| Command                               | Description   |
|---------------------------------------|---|
| advertise on page 388                 | Enables advertisement of IPv6 MTU ( <i>maximum transmission unit</i> ) and hop-count value in RAs                                       |
| assist-neighbor-discovery on page 389 | Enables advertisement of the source link layer address in RAs   |
| check-ra-consistency on page 389      | Enables checking of consistency in RA values advertised by this router with those advertised by other routers, if any, on the same link |
| dns-server on page 390                | Configures the DNS server's IPv6 address and lifetime advertised in RAs   |

**Table 20: IPv6 Router Advertisement Policy Config Commands (continued)**

| Command  | Description   |
|--|---|
| <code>domain-name</code> on page 390                         | Configures the Domain name search label advertised in RAs   |
| <code>managed-config-flag</code> on page 391                 | Sets the managed address configuration flag in RAs  |
| <code>nd-reachable-time</code> on page 392                   | Enables advertisement of neighbor reachable time in RAs   |
| <code>ns-interval</code> on page 393                         | Configures the interval between two successive retransmitted NS ( <i>neighbor solicitation</i> ) messages |
| <code>other-config-flag</code> on page 394                   | Sets the other-configuration flag in RAs  |
| <code>ra</code> on page 394                                  | Configures RA related parameters, such as the interval between two unsolicited successive RAs             |
| <code>router-lifetime</code> on page 395                     | Configures the default router's lifetime, in seconds, advertised in RAs                                   |
| <code>router-preference</code> on page 396                   | Configures the router preference field value advertised in RAs  |
| <code>unicast-solicited-advertisement</code> on page 396     | Enables unicasting of solicited RAs   |
| <code>no (ipv6-ra-policy-config-commands)</code> on page 397 | Removes or reverts router advertisement policy settings   |

**advertise**

Enables advertisement of IPv6 MTU and hop-count value in RAs

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
advertise [hop-limit|mtu]
```

**Parameters**

```
advertise [hop-limit|mtu]
```

|  |  |
|--|--|
| <code>advertise [hop-limit mtu]</code> | Enables advertisement of IPv6 MTU and hop-count value in RAs. Both these features are disabled by default. |
|--|--|

**Examples**

```
nx9500-6C8809(config-ipv6-radv-policy-test)#advertise hop-limit
nx9500-6C8809(config-ipv6-radv-policy-test)#advertise mtu
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  advertise mtu
  advertise hop-limit
nx9500-6C8809(config-ipv6-radv-policy-test)#
```

**Related Commands**

**no (ipv6-ra-policy-config-commands)** on page 397

Disables advertisement of IPv6 MTU and hop-count value in RAs

### assist-neighbor-discovery

Enables advertisement of the source link layer address in RAs to facilitate neighbor discovery. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
assist-neighbor-discovery
```

#### Parameters

None

#### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#assist-neighbor-discovery
```

#### Related Commands

**no (ipv6-ra-policy-config-commands)** on page 397

Disables the advertisement of the source link layer address in RAs

### check-ra-consistency

Enables checking of consistency in RA values advertised by this router with those advertised by other routers, if any, on the same link. If the values advertised are inconsistent, a conflict is logged.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
check-ra-consistency
```

#### Parameters

None

#### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#check-ra-consistency
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  advertise mtu
  advertise hop-limit
  check-ra-consistency
nx9500-6C8809(config-ipv6-radv-policy-test)#
```

#### Related Commands

|  |   |
|--|---|
| <b>no (ipv6-ra-policy-config-commands)</b> on page 397 | Disables comparison of interface-specific parameters advertised by other routers, within the link, with those advertised with this router |
|--|---|

## dns-server

Configures the DNS server's IPv6 address and lifetime. The configured values are advertised in RAs.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
dns-server <IPv6> {lifetime [<4-3600>|expired|infinite]}
```

### Parameters

```
dns-server <IPv6> {lifetime [<4-3600>|expired|infinite]}
```

|                                      |  |
|--------------------------------------|--|
| dns-server <IPv6>                    | Configures the DNS server's IPv6 address<br>Enables the use of a DNS server to resolve host names to IPv6 addresses. When an IPv6 host is configured with the address of a DNS server, the host sends DNS name queries to the server for resolution. <ul style="list-style-type: none"> <li>• &lt;IPv6&gt; – Specify the DNS server's address. This address is advertised in RAs. A maximum of four (4) entries can be made per policy.</li> </ul> |
| lifetime [<4-3600> expired infinite] | Optional. Configures the DNS server's (identified by the <IPv6> parameter) lifetime <ul style="list-style-type: none"> <li>• &lt;4-3600&gt; – Configures a lifetime in seconds. Specify a value form 4 - 3600 seconds. The default is 600 seconds.</li> <li>• expired – Advertises that this DNS server's lifetime has expired and should not be used</li> <li>• infinite – Advertises that this DNS server's lifetime is infinite</li> </ul>      |

### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#dns-server 2002::2 lifetime 3000
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  advertise mtu
  advertise hop-limit
  check-ra-consistency
  dns-server 2002::2 lifetime 3000
nx9500-6C8809(config-ipv6-radv-policy-test)#
```

### Related Commands

|  |   |
|--|---|
| <b>no (ipv6-ra-policy-config-commands)</b> on page 397 | Removes the DNS server settings advertised in RAs. Once removed these values are not advertised in RAs. |
|--|---|

## domain-name

Configures the Domain name search label advertised in RAs

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
domain-name <WORD> {lifetime [<4-3600>|expired|infinite]}
```

#### Parameters

```
domain-name <WORD> {lifetime [<4-3600>|expired|infinite]}
```

|                                      |  |
|--------------------------------------|--|
| domain-name <WORD>                   | <p>Configures the Domain name search label advertised in RAs<br/>Enter a FQDN (<i>fully qualified domain name</i>), which is an unambiguous domain name available in a router advertisement resource. To distinguish an FQDN from a regular domain name, a trailing period is added. For example, somehost.example.com.</p> <ul style="list-style-type: none"> <li>• &lt;WORD&gt; – Specify the Domain name search label. A maximum of four (4) entries can be made per policy.</li> </ul> |
| lifetime [<4-3600> expired infinite] | <p>Optional. Configures the Domain name search label's lifetime</p> <ul style="list-style-type: none"> <li>• &lt;4-3600&gt; – Configures a lifetime in seconds. Specify a value form 4 - 3600 seconds. The default is 600 seconds.</li> <li>• expired – Advertises that this Domain name search label's lifetime has expired and should not be used</li> <li>• infinite – Advertises that this Domain name search label's lifetime is infinite</li> </ul>                                  |

#### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  advertise mtu
  advertise hop-limit
  check-ra-consistency
  dns-server 2002::2 lifetime 3000
  domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#
```

#### Related Commands

|  |  |
|--|--|
| <b>no (ipv6-ra-policy-config-commands)</b> on page 397 | Removes the Domain name settings advertised in RAs. Once removed these values are not advertised in RAs. |
|--|--|

### managed-config-flag

Sets the managed address configuration flag in RAs. When set, it indicates that IPv6 addresses are available through DHCPv6. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
managed-config-flag
```

## Parameters

None

## Examples

```

nx9500-6C8809(config-ipv6-radv-policy-test)#managed-config-flag
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
managed-config-flag
  advertise mtu
  advertise hop-limit
  check-ra-consistency
  dns-server 2002::2 lifetime 3000
  domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#

```

## Related Commands

|  |  |
|--|--|
| <code>no (ipv6-ra-policy-config-commands)</code> on page 397 | Removes the managed address configuration flag advertised in RAs |
|--|--|

**nd-reachable-time**

Enables advertisement of *neighbor discovery* (ND) reachable time in RAs. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
nd-reachable-time [<5000-3600000>|global]
```

## Parameters

```
nd-reachable-time [<5000-3600000>|global]
```

```
nd-reachable-time
[<5000-3600000>| global]
```

Configures the interval, in milliseconds, that a node assumes a neighbor is reachable after receiving a reachability confirmation from the neighbor. Therefore, a neighbor is reachable, after being discovered, for a period specified here. This value is advertised in RAs. Use one of the following options:

- <5000-3600000> – Configures an interface-specific value. Specify a value from 5000 - 3600000 milliseconds. The default is 5000 milliseconds.
- global – Advertises the neighbor reachable time configured for the system. This is the value configured at the device configuration mode. For more information, see [use \(profile/device-config-mode-commands\)](#) on page 1251 (profile config mode).

## Examples

```

nx9500-6C8809(config-ipv6-radv-policy-test)#nd-reachable-time 6000
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  managed-config-flag
  nd-reachable-time 6000

```

```

advertise mtu
advertise hop-limit
check-ra-consistency
dns-server 2002::2 lifetime 3000
domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#

```

#### Related Commands

|  |  |
|--|--|
| <code>no (ipv6-ra-policy-config-commands)</code> on page 397 | Disables advertisement of neighbor reachable time in RAs |
|--|--|

### ns-interval

Configures the NS (*neighbor solicitation*) retransmit timer value advertised in RAs. This is the interval between two successive NS messages. When specified, it enables the sending of the specified value in RAs. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
ns-interval [<1000-3600000>|global]
```

#### Parameters

```
ns-interval [<1000-3600000>|global]
```

|                                     |   |
|-------------------------------------|---|
| ns-interval [<1000-3600000> global] | <p>Configures the NS interval advertised in RAs. Use one of the following options:</p> <ul style="list-style-type: none"> <li>• &lt;1000-3600000&gt; – Specify a value from 1000 - 3600000 milliseconds. The default is 1000 milliseconds.</li> <li>• global – Advertises the NS interval configured for the system. This is configured on the device in the device configuration mode. For more information, see <a href="#">ipv6</a> on page 1178 (profile config mode).</li> </ul> |
|-------------------------------------|---|

#### Examples

```

nx9500-6C8809nx9500-6C8809(config-ipv6-radv-policy-test)#ns-interval 3000
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
managed-config-flag
nd-reachable-time global
ns-interval 3000
advertise mtu
advertise hop-limit
check-ra-consistency
dns-server 2002::2 lifetime 3000
domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#

```

#### Related Commands

|  |  |
|--|--|
| <code>no (ipv6-ra-policy-config-commands)</code> on page 397 | Disables advertisement of NS interval in RAs |
|--|--|

**other-config-flag**

Sets the other-configuration flag in RAs. When set, it indicates that other configuration details, such as DNS-related information, are available through DHCPv6. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
other-config-flag
```

**Parameters**

None

**Examples**

```
nx9500-6C8809(config-ipv6-radv-policy-test)#other-config-flag
```

**Related Commands**

|  |   |
|--|---|
| <b>no (ipv6-ra-policy-config-commands)</b> on page 397 | Removes the other-config-flag advertised on RAs |
|--|---|

**ra**

Configures RA related parameters, such as the interval between two unsolicited successive RAs. It also allows suppression of RAs.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
ra [interval <3-1800>|suppress]
```

**Parameters**

```
ra [interval <3-1800>|suppress]
```

|                   |  |
|-------------------|--|
| interval <3-1800> | <p>Configures the interval, in seconds, between two unsolicited successive RAs</p> <ul style="list-style-type: none"> <li>• &lt;3-1800&gt; - Specify a value from 3 - 1800 seconds. The default is 300 seconds.</li> </ul> <p><b>Note:</b> The router-lifetime should be at least three times the specified router interval.</p> |
| suppress          | <p>Enables the suppression of RAs. When enabled, the transmission of RAs in IPv6 packets is suppressed. This option is disabled by default. The <b>no &gt; ra &gt; suppress</b> command enables the sending of RAs.</p>  |

**Examples**

```
nx9500-6C8809(config-ipv6-radv-policy-test)#ra interval 200
nx9500-6C8809(config-ipv6-radv-policy-test)#ra suppress
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
```

```

ra suppress
ra interval 200
managed-config-flag
nd-reachable-time global
advertise mtu
advertise hop-limit
check-ra-consistency
dns-server 2002::2 lifetime 3000
domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#

```

#### Related Commands

**no (ipv6-ra-policy-config-commands)** on page 397 Removes the RA interval, and enables the sending of RAs

### router-lifetime

Configures the default router's lifetime, in seconds, advertised in RAs

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
router-lifetime <0-9000>
```

#### Parameters

```
router-lifetime <0-9000>
```

**router-lifetime <0-9000>** Configures the default router's lifetime

- **<0-9000>** – Specify a value from 0 - 9000 seconds. The default value is 1500 seconds.

**Note:** A value of "0" indicates that this router is not the default router.

#### Examples

```

nx9500-6C8809(config-ipv6-radv-policy-test)#router-lifetime 2000
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  ra suppress
  ra interval 200
  managed-config-flag
  nd-reachable-time global
router-lifetime 2000
  advertise mtu
  advertise hop-limit
  check-ra-consistency
  dns-server 2002::2 lifetime 3000
  domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#

```

#### Related Commands

**no (ipv6-ra-policy-config-commands)** on page 397 Removes the default router's lifetime

## router-preference

Configures the router preference field value advertised in RAs. The options are high, medium, and low. This value is used to prioritize and select the default router when multiple routers are discovered.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
router-preference [high|medium|low]
```

### Parameters

```
router-preference [high|medium|low]
```

router-preference [high|medium|low]

Sets this router's preference over other routers, in the link, to be the default router. The options are **high**, **low**, and **medium**. The default value is medium.

The following points should be taken into consideration when configuring router preference:

- For a router to be selected as a default router, the router's lifetime should not be equal to "0".
- To enable default router selection, using router information contained in RAs, configure default router selection on that interface.

### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#router-preference high
nx9500-6C8809-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  ra suppress
  ra interval 200
  managed-config-flag
  nd-reachable-time global
  router-lifetime 2000
  advertise mtu
  advertise hop-limit
  router-preference high
  check-ra-consistency
  dns-server 2002::2 lifetime 3000
  domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#
```

### Related Commands

## unicast-solicited-advertisement

Enables unicasting of solicited RAs. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
unicast-solicited-advertisement
```

### Parameters

None

### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#unicast-solicited-advertisement
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  ra suppress
  ra interval 200
  unicast-solicited-advertisement
  managed-config-flag
  nd-reachable-time global
  router-lifetime 2000
  advertise mtu
  advertise hop-limit
  router-preference high
  check-ra-consistency
  dns-server 2002::2 lifetime 3000
  domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#
```

### Related Commands

**no (ipv6-ra-policy-config-commands)** on page 397

Disables unicasting of solicited RAs

## no (ipv6-ra-policy-config-commands)

Removes or reverts router advertisement policy settings. Use the no command to remove or revert the interface-specific parameters that are advertised by link router.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
no [advertise [hop-limit|mtu]|assist-neighbor-discovery|check-ra-consistency|
dns-server <IPv6>|domain-name <WORD>|managed-config-flag|nd-reachable-time|ns-interval|
other-config-flag|ra [interval|suppress]|router-lifetime|unicast-solicited-advertisement]
```

### Parameters

no <PARAMETERS>

no <PARAMETERS>

Removes or reverts this IPv6 router advertisement policy's settings based on the parameters passed

### Examples

```
nx9500-6C8809(config-ipv6-radv-policy-test)#show context
ipv6-router-advertisement-policy test
  managed-config-flag
  nd-reachable-time global
```

```

advertise mtu
advertise hop-limit

advertise hop-limit
dns-server 2002::2 lifetime 3000
domain-name TechPubs lifetime infinite
nx9500-6C8809(config-ipv6-radv-policy-test)#

```

## l2tpv3

Configures a L2TPv3 tunnel policy, used to create one or more L2TPv3 tunnels.

The L2TPv3 policy defines the control and encapsulation protocols needed for tunneling layer 2 frames between two IP nodes. This policy enables creation of L2TPv3 tunnels for transporting Ethernet frames between bridge VLANs and physical GE ports. L2TPv3 tunnels can be created between any vendor devices supporting L2TPv3 protocol.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
l2tpv3 policy <L2TPV3-POLICY-NAME>
```

### Parameters

```
l2tpv3 policy <L2TPV3-POLICY-NAME>
```

|                                    |   |
|------------------------------------|---|
| l2tpv3 policy <L2TPV3-POLICY-NAME> | <p>Configures an L2TPv3 tunnel policy</p> <ul style="list-style-type: none"> <li>• &lt;L2TPV3-POLICY-NAME&gt; - Specify a policy name. If a policy with the specified does not already exist, it is created. To modify an existing L2TPv3, specify its name.</li> </ul> |
|------------------------------------|---|

### Examples

```

nx9500-6C8809(config)#l2tpv3 policy L2TPV3Policy1
nx9500-6C8809(config-l2tpv3-policy-L2TPV3Policy1)#?
L2tpv3 Policy Mode commands:
  cookie-size          Size of the cookie field present in each l2tpv3 data
                        message
  failover-delay        Time interval for re-establishing the tunnel after
                        the failover (RF-Domain
                        manager/VRRP-master/Cluster-master failover)
  force-l2-path-recovery Enables force learning of servers, gateways etc.,

```

|  |  |
|--|--|
|  | behind the l2tpv3 tunnel when the tunnel is established  |
| hello-interval                                     | Configure the time interval (in seconds) between l2tpv3 Hello keep-alive messages exchanged in l2tpv3 control connection |
| no   | Negate a command or set its defaults   |
| reconnect-attempts                                 | Maximum number of attempts to reestablish the tunnel.  |
| reconnect-interval                                 | Time interval between the successive attempts to reestablish the l2tpv3 tunnel   |
| retry-attempts                                     | Configure the maximum number of retransmissions for signaling message  |
| retry-interval                                     | Time interval (in seconds) before the initiating a retransmission of any l2tpv3 signaling message                        |
| rx-window-size                                     | Number of signaling messages that can be received without sending the acknowledgement                                    |
| tx-window-size                                     | Number of signaling messages that can be sent without receiving the acknowledgement                                      |

**Note**  
For more information on the L2TPV3 tunnel configuration mode and commands, see [l2tpv3](#) on page 398.

location-policy

Creates a Location policy and enters its configuration mode. Use this command to configure a policy that provides the ExtremeLocation server hostname, and the ExtremeLocation Tenant’s API key needed to authenticate and authorize with the server. Apply this Location policy on the WiNG devices (site controller, virtual controllers, and standalone APs). When applied, these devices push/export site hierarchy to the ExtremeLocation server. The site hierarchy includes site details along with details of APs deployed within the site.

**Note**  
Once created and configured, apply this Location policy on the WiNG controller’s self, to enable Tenant site hierarchy reporting by the controller to the ExtremeLocation server.

Supported in the following platforms:

- Access Points — AP510, AP505
- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
location-policy <LOCATION-POLICY-NAME>
```

Parameters

```
location-policy <LOCATION-POLICY-NAME>
```

|  |  |
|--|--|
| location-policy <LOCATION-POLICY-NAME> | Specify the Location Policy name. If a policy with the specified name does not exist, it is created. |
|--|--|

Examples

```
nx9500-6C8809(config)#eloc-policy testLocPolicy
nx9500-6C8809(config-eloc-policy-testLocPolicy)#?
Eloc Policy Mode commands:
  enable      Enable this eloc policy
  location-key API key used for location service
  no          Negate a command or set its defaults
  server-host ExtremeLocation server configuration

  clrscr      Clears the display screen
  commit      Commit all changes made in this session
  end         End current mode and change to EXEC mode
  exit        End current mode and down to previous mode
  help        Description of the interactive help system
  revert      Revert changes
  service     Service Commands
  show        Show running system information
  write       Write running configuration to memory or terminal

nx9500-6C8809(config-eloc-policy-testLocPolicy)#
```

Related Commands

|                |   |
|----------------|---|
| no on page 609 | Removes an existing Location policy from the system |
|----------------|---|

location-policy-config-mode commands

The following table summarizes the Location Policy configuration commands:

**Table 21: Location Policy Config Mode Commands**

| Command                  | Description   |
|--------------------------|---|
| enable on page 401       | Enables the location policy   |
| location-key on page 401 | Configures the ExtremeLocation Tenant's API key. This key is used by the WiNG controller to authenticate with the ExtremeLocation server. |

**Table 21: Location Policy Config Mode Commands (continued)**

| Command   | Description  |
|---|--|
| <code>server-host</code> on page 402                          | Configures the ExtremeLocation server's hostname                   |
| <code>no (location-policy-config-commands)</code> on page 403 | Removes Location policy settings or reverts them to default values |

**enable**

Enables this Location policy

Supported in the following platforms:

- Access Points — AP-7522, AP 7532, AP 7562, AP 7602, AP-7612, AP 7622, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 95XX, VX 9000

**Syntax**

```
enable
```

**Parameters**

```
None
```

**Examples**

```
nx9500-6C8809(config-location-policy-ELocPolicy)#enable
nx9500-6C8809(config-location-policy-ELocPolicy)#show context
location-policy ELocPolicy
enable
nx9500-6C8809(config-location-policy-ELocPolicy)#
```

**Related Commands**

|---|-------------------------------|
| <code>no (location-policy-config-commands)</code> on page 403 | Disables this Location policy |
|---|-------------------------------|

**location-key**

Configures the ExtremeLocation Tenant's API key. The WiNG controller uses this key to authenticate with the ExtremeLocation server, and stage the Tenant's site hierarchy (includes site details and details of AP deployed within the site).

Supported in the following platforms:

- Access Points — AP-7522, AP 7532, AP 7562, AP 7602, AP-7612, AP 7622, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 95XX, VX 9000

**Syntax**

```
location-key <API-KEY>
```

**Parameters**

```
location-key <API-KEY>
```

|                        |   |
|------------------------|---|
| location-key <API-KEY> | <p>Enter the 64-bit key that the WiNG controller uses to authenticate with the ExtremeLocation server.</p> <ul style="list-style-type: none"> <li>• &lt;API-KEY&gt; - Enter the key.</li> </ul> <p><b>Note:</b> To generate API-Key, log into your ExtremeLocation Tenant account and use the ExtremeLocation UI. Enter that key here in the Location Policy.</p> |
|------------------------|---|

### Examples

```

nx9500-6C8809(config-location-policy-ELocPolicy)#location-key dGVzdEAXMjM0NQo
vnx9500-6C8809(config-location-policy-ELocPolicy)#show context
location-policy ELocPolicy
enable
location-key dGVzdEAXMjM0NQo
nx9500-6C8809(config-location-policy-ELocPolicy)#

```

### Related Commands

**no (location-policy-config-commands)** on page 403 Removes the Tenant's API-Key from the Location policy

## server-host

Configures the ExtremeLocation server's hostname. When configured, the WiNG controller stages the Tenant's site hierarchy information to the specified server.

Supported in the following platforms:

- Access Points — AP-7522, AP 7532, AP 7562, AP 7602, AP-7612, AP 7622, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 95XX, VX 9000

### Syntax

```
server-host 1 ip <HOSTNAME> {port <1-65535>}
```

### Parameters

```
server-host 1 ip <HOSTNAME> {port <1-65535>}
```

|                             |   |
|-----------------------------|---|
| server-host 1 ip <HOSTNAME> | <p>Identifies the ExtremeLocation server by its hostname</p> <ul style="list-style-type: none"> <li>• &lt;HOSTNAME&gt; - Enter ExtremeLocation server's hostname.</li> </ul> <p><b>Note:</b> Enter the server's hostname and not the IP address, as the IP address is likely to change periodically in order to balance load across multiple Location server instances.</p> |
| {port <1-65535>}            | <p>optional. Configures the port on which the ExtremeLocation server is reachable</p> <ul style="list-style-type: none"> <li>• &lt;1-63335&gt; - Selects a port from 1 - 65535 for the ExtremeLocation server.</li> </ul> <p><b>Note:</b> By default the ExtremeLocation server is reachable on port 443.</p>   |

### Examples

```

nx9500-6C8809(config-location-policy-ELocPolicy)#server-host 1 ip xyz.com
nx9500-6C8809(config-location-policy-ELocPolicy)#show context
location-policy ELocPolicy
enable

```

```
server-host 1 ip xyz.com port 443
location-key dGVzdEAXMjMONQo
nx9500-6C8809(config-location-policy-ELocPolicy) #
```

#### Related Commands

|   |   |
|---|---|
| <b>no (location-policy-config-commands)</b> on page 403 | Removes ExtremeLocation server's hostname from the policy |
|---|---|

### no (location-policy-config-commands)

Removes this Location Policy settings or reverts them to default values

Supported in the following platforms:

- Access Points — AP-7522, AP 7532, AP 7562, AP 7602, AP-7612, AP 7622, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 95XX, VX 9000

#### Syntax

```
no [enable|location-key|server-host]
```

#### Parameters

```
no <PARAMETERS>
```

|                 |  |
|-----------------|--|
| no <PARAMETERS> | Removes this Location Policy settings or reverts to default values, based on the parameters passed |
|-----------------|--|

#### Examples

The following example shows the 'ELocPolicy' policy settings before the 'no' commands were executed:

```
nx9500-6C8809(config-location-policy-ELocPolicy)#show context
location-policy ELocPolicy
enable
server-host 1 ip xyz.com port 443
location-key dGVzdEAXMjMONQo
nx9500-6C8809(config-location-policy-ELocPolicy) #
nx9500-6C8809(config-location-policy-ELocPolicy)#no server-host 1
nx9500-6C8809(config-location-policy-ELocPolicy)#no enable
nx9500-6C8809(config-location-policy-ELocPolicy)#no location-key
```

The following example shows the 'ELocPolicy' policy settings after the 'no' commands were executed:

```
nx9500-6C8809(config-location-policy-ELocPolicy)#show context
location-policy ELocPolicy
nx9500-6C8809(config-location-policy-ELocPolicy) #
```

## mac

Configures a MAC ACL. Access lists define access permissions to the network using a set of rules. Each rule specifies an action taken when a packet matches the rule. If the action is deny, the packet is dropped. If the action is permit, the packet is allowed.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
mac access-list <MAC-ACL-NAME>
```

Parameters

```
mac access-list <MAC-ACL-NAME>
```

|                            |  |
|----------------------------|--|
| access-list <MAC-ACL-NAME> | Configures a MAC access control list   |
|                            | <ul style="list-style-type: none"><li>• &lt;MAC-ACL-NAME&gt; - Specify the ACL name. If a MAC ACL with the specified name does not exist, it is created.</li></ul> |

Examples

```
nx9500-6C8809(config)#mac access-list test
nx9500-6C8809(config-mac-acl-test)#?
MAC Extended ACL Configuration commands:
deny      Specify packets to reject
disable   Disable rule if not needed
ex3500    Ex3500 device
insert    Insert this rule (instead of overwriting a existing rule)
no        Negate a command or set its defaults
permit    Specify packets to forward

clrscr    Clears the display screen
commit    Commit all changes made in this session
do        Run commands from Exec mode
end       End current mode and change to EXEC mode
exit      End current mode and down to previous mode
help      Description of the interactive help system
revert    Revert changes
service   Service Commands
show      Show running system information
write     Write running configuration to memory or terminal

nx9500-6C8809(config-mac-acl-test)#
```

Related Commands

**Note**  
For more information on Access Control Lists, see [Access-List Policy](#) on page 1359 .

management-policy

Configures a management policy. Management policies include services that run on a device, welcome messages, banners, etc.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
management-policy <MANAGEMENT-POLICY-NAME>
```

### Parameters

```
management-policy <MANAGEMENT-POLICY-NAME>
```

|                          |  |
|--------------------------|--|
| <MANAGEMENT-POLICY-NAME> | Specify the management policy name. If a policy with the specified name does not exist, it is created. |
|--------------------------|--|

### Examples

```
nx9500-6C8809(config)#management-policy test
nx9500-6C8809(config-management-policy-test)#?
Management Mode commands:
  aaa-login          Set authentication for logins
  allowed-locations  Add allowed locations
  banner             Define a login banner
  ftp               Enable FTP server
  http              Hyper Text Terminal Protocol (HTTP)
  https             Secure HTTP
  idle-session-timeout  Configure idle timeout for a configuration session
                    (GUI or CLI)
  ipv6              IPv6 management access restriction
  no                Negate a command or set its defaults
  passwd-retry       Lockout user if too many consecutive login failures
  privilege-mode-password  Set the password for entering CLI privilege mode
  rest-server        Enable rest server for device on-boarding
                    functionality
  restrict-access    Restrict management access to the device
  snmp-server        SNMP
  ssh               Enable ssh
  t5                 T5 configuration
  telnet             Enable telnet
  user              Add a user account

  clrscr            Clears the display screen
  commit            Commit all changes made in this session
  do                Run commands from Exec mode
  end               End current mode and change to EXEC mode
  exit              End current mode and down to previous mode
  help              Description of the interactive help system
  revert            Revert changes
  service           Service Commands
  show              Show running system information
  write             Write running configuration to memory or terminal

nx9500-6C8809(config-management-policy-test)#
```

*Related Commands*

|                             |                                       |
|-----------------------------|---------------------------------------|
| <code>no</code> on page 609 | Removes an existing management policy |
|-----------------------------|---------------------------------------|

**Note**

For more information on Management policy configuration, see [Management Policy](#) on page 1527.

**meshpoint**

Creates a new meshpoint and enters its configuration mode. Use this command to select and configure existing meshpoints.

**Note**

The WiNG 7.1.X release does not support Meshpoint configuration on AP5XX model access points. This feature will be supported in future releases.

*Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:*

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

*Syntax*

```
meshpoint [<MESHPOINT-NAME>|containing <WORD>]
```

*Parameters*

```
meshpoint [<MESHPOINT-NAME>|containing <WORD>]
```

|                   |   |
|-------------------|---|
| <MESHPOINT-NAME>  | Specify the meshpoint name. If the meshpoint does not exist, it is created. |
| containing <WORD> | Selects existing meshpoints containing the sub-string <WORD> in their names |

*Examples*

```

nx9500-6C8809(config)#meshpoint testMeshpoint
nx9500-6C8809(config-meshpoint-testMeshpoint)#?
Mesh Point Mode commands:
  allowed-vlans    Set the allowed VLANs
  beacon-format    The beacon format of this meshpoint
  control-vlan     VLAN for meshpoint control traffic
  data-rates       Specify the 802.11 rates to be supported on this meshpoint
  description      Configure a description of the usage of this meshpoint
  force           Force suboptimal paths
  meshid          Configure the Service Set Identifier for this meshpoint
  neighbor        Configure neighbor specific parameters
  no              Negate a command or set its defaults
  root            Set this meshpoint as root
  security-mode    The security mode of this meshpoint
  shutdown        Shutdown this meshpoint
  use             Set setting to use
  wpa2            Modify ccmp wpa2 related parameters

  clrscr          Clears the display screen
  commit          Commit all changes made in this session

```

```

do          Run commands from Exec mode
end         End current mode and change to EXEC mode
exit       End current mode and down to previous mode
help       Description of the interactive help system
revert     Revert changes
service    Service Commands
show       Show running system information
write      Write running configuration to memory or terminal

```

```
nx9500-6C8809(config-meshpoint-testMeshpoint)#
```

### Related Commands

|-----------------------|-------------------------------|
| <b>no</b> on page 609 | Removes an existing meshpoint |
|-----------------------|-------------------------------|

#### Note

For more information on Meshpoint configuration, see [Meshpoint Policy](#) on page 1790.

## meshpoint-qos-policy

Configures a set of parameters that defines the meshpoint QoS policy.

#### Note

The WiNG 7.1.X release does not support Meshpoint configuration on AP5XX model access points. This feature will be supported in future releases.

*Configured on WiNG 7.1.X controller and pushed to the following WiNG 5.9.X APs:*

- Access Points — AP7502, AP7522, AP7532, AP7562, AP7602, AP7612, AP7622, AP7632, AP7662, AP8163, AP8543, AP8533

### Syntax

```
meshpoint-qos-policy <MESHPOINT-QOS-POLICY-NAME>
```

### Parameters

```
meshpoint-qos-policy <MESHPOINT-QOS-POLICY-NAME>
```

|                             |   |
|-----------------------------|---|
| <MESHPOINT-QOS-POLICY-NAME> | Specify the meshpoint QoS policy name. If a policy with the specified name does not exist, it is created. |
|-----------------------------|---|

### Examples

```

nx9500-6C8809(config)#meshpoint-qos-policy test
nx9500-6C8809(config-meshpoint-qos-test)#?
Mesh Point QoS Mode commands:
  accelerated-multicast  Configure accelerated multicast streams address and
                        forwarding QoS classification
  no                     Negate a command or set its defaults
  rate-limit             Configure traffic rate-limiting parameters on a
                        per-meshpoint/per-neighbor basis

  clrscr                 Clears the display screen
  commit                Commit all changes made in this session
  do                     Run commands from Exec mode

```

```

end          End current mode and change to EXEC mode
exit        End current mode and down to previous mode
help        Description of the interactive help system
revert       Revert changes
service      Service Commands
show         Show running system information
write        Write running configuration to memory or terminal

```

```
nx9500-6C8809(config-meshpoint-qos-test)#
```

| <b>no</b> on page 609 | Removes an existing meshpoint QoS policy |
|-----------------------|--|

#### Note

For more information on Meshpoint QoS policy configuration, see [Meshpoint Policy](#) on page 1790.

## mint-policy

Configures the global MiNT policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
mint-policy global-default
```

### Parameters

```
mint-policy global-default
```

|                |   |
|----------------|---|
| global-default | Configures the global default MiNT policy |
|----------------|---|

### Examples

```

nx9500-6C8809(config)#mint-policy global-default
nx9500-6C8809(config-mint-policy-global-default)#?
Mint Policy Mode commands:
  level      Mint routing level
  lsp        LSP
  mtu         Configure the global Mint MTU
  no          Negate a command or set its defaults
  router      Mint router
  udp         Configure mint UDP/IP encapsulation

  clrscr      Clears the display screen
  commit      Commit all changes made in this session
  do          Run commands from Exec mode
  end         End current mode and change to EXEC mode
  exit        End current mode and down to previous mode
  help        Description of the interactive help system
  revert      Revert changes

```

```

service  Service Commands
show     Show running system information
write    Write running configuration to memory or terminal

```

```
nx9500-6C8809(config-mint-policy-global-default)#
```

**Note**

For more information on MiNT policy configuration, see [MiNT Policy](#) on page 1520.

## nac-list

Configures a *Network Access Control* (NAC) list that manages access to the network. A NAC list configures a list of devices that can access a network based on their MAC addresses.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
nac-list <NAC-LIST-NAME>
```

### Parameters

```
nac-list <NAC-LIST-NAME>
```

|                 |   |
|-----------------|---|
| <NAC-LIST-NAME> | Specify the NAC list name. If a NAC list with the specified name does not exist, it is created. |
|-----------------|---|

### Examples

```

nx9500-6C8809(config)#nac-list test
nx9500-6C8809(config-nac-list-test)#?
NAC List Mode commands:
  exclude  Specify MAC addresses to be excluded from the NAC enforcement list
  include   Specify MAC addresses to be included in the NAC enforcement list
  no        Negate a command or set its defaults

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do         Run commands from Exec mode
  end        End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert     Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

nx9500-6C8809(config-nac-list-test)#

```

### Related Commands

|                                |                              |
|--------------------------------|------------------------------|
| <a href="#">no</a> on page 609 | Removes an existing NAC list |
|--------------------------------|------------------------------|

*nac-list-mode-commands*

The following table summarizes NAC list configuration mode commands:

**Table 22: NAC-List Config Mode Commands**

| Command  | Description  |
|--|--|
| <code>exclude</code> on page 410                       | Specifies the MAC addresses excluded from the NAC enforcement list |
| <code>include</code> on page 411                       | Specifies the MAC addresses included in the NAC enforcement list   |
| <code>no (nac-list-config-commands)</code> on page 411 | Cancels an exclude or include NAC list rule                        |

## exclude

Specifies the MAC addresses excluded from the NAC enforcement list

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
exclude <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

### Parameters

```
exclude <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

|                        |   |
|------------------------|---|
| <START-MAC>            | Specifies a range of MAC addresses or a single MAC address to exclude from the NAC enforcement list <ul style="list-style-type: none"> <li>&lt;START-MAC&gt; – Specify the first MAC address in the range.</li> </ul> <p><b>Note:</b> Use this parameter to specify a single MAC address.</p> |
| <END-MAC>              | Specifies the last MAC address in the range (optional if a single MAC is added to the list) <ul style="list-style-type: none"> <li>&lt;END-MAC&gt; – Specify the last MAC address in the range.</li> </ul>  |
| precedence<br><1-1000> | Sets the rule precedence. Exclude entries are checked in the order of their rule precedence. <ul style="list-style-type: none"> <li>&lt;1-1000&gt; – Specify a value from 1 - 1000.</li> </ul>  |

### Examples

```
nx9500-6C8809(config-nac-list-test)#exclude 00-40-96-B0-BA-2A precedence 1
nx9500-6C8809(config-nac-list-test)#show context
nac-list test
  exclude 00-40-96-B0-BA-2A 00-40-96-B0-BA-2A precedence 1
nx9500-6C8809(config-nac-list-test)#
```

### Related Commands

|  |  |
|--|--|
| <code>no (nac-list-config-commands)</code> on page 411 | Removes an exclude rule from this NAC list |
|--|--|

**include**

Specifies the MAC addresses included in the NAC enforcement list

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
include <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

**Parameters**

```
include <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

|                     |   |
|---------------------|---|
| <START-MAC>         | Specifies a range of MAC addresses or a single MAC address to include in the NAC enforcement list <ul style="list-style-type: none"> <li>• &lt;START-MAC&gt; – Specify the first MAC address in the range.</li> </ul> <p><b>Note:</b> Use this parameter to specify a single MAC address.</p> |
| <END-MAC>           | Specifies the last MAC address in the range (optional if a single MAC is added to the list) <ul style="list-style-type: none"> <li>• &lt;END-MAC&gt; – Specify the last MAC address in the range.</li> </ul>  |
| precedence <1-1000> | Sets the rule precedence. Include entries are checked in the order of their rule precedence. <ul style="list-style-type: none"> <li>• &lt;1-1000&gt; – Specify a value from 1 - 1000.</li> </ul>  |

**Examples**

```
nx9500-6C8809(config-nac-list-test)#include 00-15-70-38-06-49 precedence 2
nx9500-6C8809(config-nac-list-test)#show context
nac-list test
  exclude 00-04-96-B0-BA-2A 00-04-96-B0-BA-2A precedence 1
  include 00-15-70-38-06-49 00-15-70-38-06-49 precedence 2
nx9500-6C8809(config-nac-list-test)#
```

**Related Commands**

**no (nac-list-config-commands)** Removes an include rule from this NAC list  
on page 411

**no (nac-list-config-commands)**

Cancels an exclude or include NAC list rule

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
no [exclude|include]
no [exclude|include] <START-MAC> [<END-MAC> precedence <1-1000>|precedence <1-1000>]
```

## Parameters

```
no <PARAMETERS>
```

|                 |  |
|-----------------|--|
| no <PARAMETERS> | Removes or reverts this NAC list's settings based on the parameters passed |
|-----------------|--|

## Examples

The following example shows the NAC list 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-nac-list-test)#show context
nac-list test
  exclude 00-04-96-B0-BA-2A 00-04-96-B0-BA-2A precedence 1
  include 00-15-70-38-06-49 00-15-70-38-06-49 precedence 2
nx9500-6C8809(config-nac-list-test)#
nx9500-6C8809(config-nac-list-test)#no exclude 00-40-96-B0-BA-2A precedence 1
```

The following example shows the NAC list 'test' settings after the 'no' command is executed:

```
nx9500-6C8809(config-nac-list-test)#show context
nac-list test
  include 00-15-70-38-06-49 00-15-70-38-06-49 precedence 2
nx9500-6C8809(config-nac-list-test)#
```

## nsight-policy (global-config-mode)

Creates an NSight policy and enters its configuration mode. Starting with WiNG 5.9.4, Extreme NSight is a separate target, with the Extreme NSight server enabled on an external VM appliance. On the WiNG controller, the NSight policy configures this external NSight server's IP address or hostname.

Configure the NSight policy and apply to the RF Domain context. When applied, the RF Domain manager posts statistics (polled from devices within the RF Domain) to the external Extreme NSight server specified in the policy.

### Note

Extreme NSight is a licensed feature. For more information on Extreme NSight™, please refer to the Extreme NSight™ User Guide, available at <https://extremenetworks.com/documentation>.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

### Syntax

```
nsight-policy <NSIGHT-POLICY-NAME>
```

### Parameters

```
nsight-policy <NSIGHT-POLICY-NAME>
```

|                      |  |
|----------------------|--|
| <NSIGHT-POLICY-NAME> | Specify the NSight policy name. If a policy with the specified name does not exist, it is created. |
|----------------------|--|

Examples

```
nx9500-6C8809(config)#nsight-policy test
nx9500-6C8809(config-nsight-policy-test)#?
Nsight Policy Mode commands:
  enable          Enable this Nsight policy
  mandatory       Configure mandatory app stats reporting
  no              Negate a command or set its defaults
  server          Configure Nsight server

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  end             End current mode and change to EXEC mode
  exit            End current mode and down to previous mode
  help           Description of the interactive help system
  revert          Revert changes
  service         Service Commands
  show            Show running system information
  write          Write running configuration to memory or terminal

nx9500-6C8809(config-nsight-policy-test)#
```

Related Commands

|                |                                   |
|----------------|-----------------------------------|
| no on page 609 | Removes an existing NSight policy |
|----------------|-----------------------------------|

nsight-policy config commands

The following table summarizes NSight policy configuration mode commands:

Table 23: NSight-Policy Config Mode Commands

| Command  | Description  |
|--|--|
| enable on page 413                             | Enables this NSight policy   |
| mandatory on page 414                          | Enables mandatory <i>Application Visibility and Control</i> (AVC) statistics reporting |
| server on page 418                             | Configures the external NSight server host's IP address or hostname.                   |
| no (nsight-policy-config-commands) on page 419 | Removes this NSight policy settings  |

enable

Enables this NSight policy. The default setting is enabled.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

Syntax

```
enable
```

Parameters

```
None
```

Examples

```
nx9510-6C8A5C(config-nsight-policy-test2)#enable
```

## Related Commands

`no (nsight-policy-config-commands)` Disables this NSight policy on page 419

**mandatory**

Enables mandatory *Application Visibility Control* (AVC) statistics reporting for a specified application group. When configured, the RF Domain manager reports usage stats for applications, in the specified group, to the on-premise, Extreme NSight server. By default, only the top-ten applications by usage are reported. This option allows you to configure mandatory stats reporting for applications that are not in the top-ten list.

To enable mandatory stats reporting for an application or set of applications, create an application group, add the desired application(s) and enable mandatory stats reporting for the group.

The RF Domain manager reports only the top-ten applications, by usage, to the Extreme NSight server. However, if you enable mandatory application stats reporting, applications that are not in the top-ten, most-used applications list are included in the report. This is done by dropping some of the top-ten applications. For example, if mandatory application reporting is enabled for five (5) applications, the report will contain these 5 applications, plus first 5 of the top-ten, most-used applications identified by the system. Thereby totaling the number to ten.

AVC and statistics reporting is available on both the WiNG 5.9.X and WiNG 7.1.X operating systems. However, the DPI engine used to check the data points varies. The WiNG 7.1.2 OS uses EAA, formerly known as Purview™, and WiNG 5.9.X uses a third-party DPI engine. Consequently, the configuration differs depending on AP type. Refer to the following for configuration details required for WiNG 5.9.X and WiNG 7.1.X APs:

- [Example 1: Configuring mandatory, app-usage stats reporting for WiNG 5.9.X APs. on page 415](#)
- [Example 2: Configuring mandatory, app-usage stats reporting for the new, WiNG 7.1.X, AP5XX APs. on page 416](#)
- [Example 3: Configuring mandatory, app-usage stats reporting in a mixed deployment of WiNG 5.9.X and WiNG 7.1.X APs. on page 416](#)

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

**Syntax**

```
mandatory app stats [app-group|purview-app-group]
mandatory app stats app-group <APP-GROUP-NAME>
mandatory app stats purview-app-group <PURVIEW-APP-GROUP-NAME>
```

**Parameters**

```
mandatory app stats app-group <APP-GROUP-NAME>
```

|                            |  |
|----------------------------|--|
| mandatory app stats        | Enables mandatory, app-usage stats reporting for a specified <i>application group</i>  |
| app-group <APP-GROUP-NAME> | Specifies the application group for which usage statistics reporting is to be made mandatory. Use this option for the WiNG 5.9.X access points that use a third-party DPI engine for data inspection. <ul style="list-style-type: none"> <li>&lt;APP-GROUP-NAME&gt; – Specify the application group name.</li> </ul> |

```
mandatory app stats purview-app-group <PURVIEW-APP-GROUP-NAME>
```

|                                    |  |
|------------------------------------|--|
| mandatory app stats                | Enables mandatory, app-usage stats reporting for a specified <i>purview application group</i>  |
| app-group <PURVIEW-APP-GROUP-NAME> | Specifies the Purview application group for which usage statistics reporting is to be made mandatory. Use this option for the new, 802.11ax, WiNG 7.1.X access points that use the Purview™ DPI engine for data inspection. <ul style="list-style-type: none"> <li>&lt;PURVIEW-APP-GROUP-NAME&gt; – Specify the Purview application group name.</li> </ul> |

Example 1: Configuring mandatory, app-usage stats reporting for WiNG 5.9.X APs.

The WiNG 5.9.X APs use a third-party DPI engine. If you have WiNG 5.9.X APs adopted to a WiNG 7.1.X controller, follow the steps below to enable mandatory, app-usage stats reporting:

1 Create an **application-group**.

```
<CONTROLLER>(config)#application-group <APP-GROUP-NAME>
```

Example,

```
nx9500-6C8809(config)#application-group APPGRP
```

a Specify the target applications for which mandatory stats reporting is to be enabled.

```
<CONTROLLER>(config-app-group-APPGRP)#application <APPLICATION-NAME>
```

Example,

```
nx9500-6C8809(config-app-group-APPGRP)#show context
application-group APPGRP
  application ChatCube
  application ChatCube_apache
nx9500-6C8809(config-app-group-APPGRP)#
```

2 Create an NSight policy.

```
<CONTROLLER>(config)#nsight-policy <POLICY-NAME>
```

Example,

```
nx9500-6C8809(config)#nsight-policy APPGRP
```

a Enable mandatory stats reporting for the application-group created in Step 1.

```
nx9500-6C8809(config-nsight-policy-APPGRP)#mandatory app stats app-group APPGRP
```

b Specify the NSight server's IP address or hostname.

```
nx9500-6C8809(config-nsight-policy-APPGRP)#server host 1.2.3.4
```

c Enable the NSight policy.

```
nx9500-6C8809(config-nsight-policy-APPGRP)#enable
```

3 Use the NSight policy created in Step 2 in the AP's RF Domain.

For example,

```
nx9500-6C8809(config-rf-domain-APPGRP)#use nsight-policy APPGRP
```

Example 2: Configuring mandatory, app-usage stats reporting for the new, WiNG 7.1.X, AP5XX APs.

The WiNG 7.1.X APs use Extreme Networks' Purview™ DPI engine. Follow the steps below to enable mandatory, app-usage stats reporting on these APs:

- 1 Create a **purview-application-group** on page 425.

```
<CONTROLLER>(config)#purview-application-group <APP-GROUP-NAME>
```

Example,

```
nx9500-6C8809(config)#purview-application-group PURVIEW
```

- a Specify the target applications for mandatory stats reporting.

```
<CONTROLLER>(config-purview-app-group-PURVIEW)#application <APPLICATION-NAME>
```

Example,

```
nx9500-6C8809(config-purview-app-group-PURVIEW)#show context
purview-application-group PURVIEW
  application ChatCube
  application ChatCube_apache
nx9500-6C8809(config-purview-app-group-PURVIEW)#
```

- 2 Create an NSight policy.

```
<CONTROLLER>(config)#nsight-policy <POLICY-NAME>
```

Example,

```
nx9500-6C8809(config)#nsight-policy PURVIEW
```

- a Enable mandatory stats reporting for the application-group created in Step 1.

```
nx9500-6C8809(config-nsight-policy-PURVIEW)#mandatory app stats purview-app-group
PURVIEW
```

- b Specify the Extreme NSight server's IP address or hostname.

```
nx9500-6C8809(config-nsight-policy-PURVIEW)#server host 1.2.3.4 https
```

- c Enable the NSight policy.

```
nx9500-6C8809(config-nsight-policy-PURVIEW)#enable
```

- 3 Use the NSight policy created in Step 2 in the AP's RF Domain context.

Example,

```
nx9500-6C8809(config-rf-domain-PURVIEW)#use nsight-policy PURVIEW
```

Example 3: Configuring mandatory, app-usage stats reporting in a mixed deployment of WiNG 5.9.X and WiNG 7.1.X APs.

In a mixed deployment, consisting of WiNG 5.9.X and WiNG 7.1.X APs, adopted to a WiNG 7.1.X controller, follow the steps below:

- 1 Place the WiNG 5.9.X and WiNG 7.1.X APs in separate RF Domains, as shown in the following example.

Example,

```
nx9500-6C8809(config)#show adoption timeline
```

```
-----
AP-NAME      RF-DOMAIN    EVENT        TIME-STAMP      TIME-SINCE-EVENT
-----
```

```

ap7562-84A224  WiNG5    adopted    2019-05-08 15:56:30    0 days 01:25:56
ap7532-DF9A4C  WiNG5    adopted    2019-05-08 15:56:30    0 days 01:25:56
ap505-134038   WiNG7    adopted    2019-05-08 15:56:30    0 days 01:25:56
ap8432-070235  WiNG5    adopted    2019-05-08 15:56:28    0 days 01:25:58
-----

```

Total number of devices displayed: 4  
 nx9500-6C8809(config)#

#### Note

The WiNG 5.9.X and WiNG 7.1.X APs are placed in the WiNG5 and WiNG7 RF Domains respectively.

### 2 Create application groups for the WiNG 5.9.X and WiNG 7.1.X APs.

- For the WiNG 5.9.X APs, use the **application-group** command.

```
<CONTROLLER> (config) #application-group <APP-GROUP-NAME>
```

Specify the applications for which mandatory, app-usage stats is to be enabled.

```
<CONTROLLER> (config-purview-app-group-PURVIEW) #application <APPLICATION-NAME>
```

Example,

```

nx9500-6C8809(config-purview-app-group-WiNG5) #show context
application-group WiNG5
  application ChatCube
  application ChatCube_apache
nx9500-6C8809(config-purview-app-group-WiNG5) #

```

- For WiNG 7.1.X APs, use the **purview-application-group** on page 425 command.

```
<CONTROLLER> (config) #purview-application-group <APP-GROUP-NAME>
```

Specify the applications for which mandatory, app-usage stats is to be enabled.

```
<CONTROLLER> (config-purview-app-group-WiNG7) #application <APPLICATION-NAME>
```

Example,

```

nx9500-6C8809(config-purview-app-group-WiNG7) #show context
purview-application-group WiNG7
  application ChatCube
  application ChatCube_apache
nx9500-6C8809(config-purview-app-group-WiNG7) #

```

### 3 Create two NSight policies and enable mandatory, app-usage stats reporting for the application groups created in Step 1.

- For the WiNG 5.9.X APs:

Example,

```
nx9500-6C8809(config) #nsight-policy WiNG5
```

#### 1 Enable mandatory stats reporting.

```
nx9500-6C8809(config-nsight-policy-WiNG5) #mandatory app stats app-group WiNG5
```

#### 2 Specify the Extreme NSight server's IP address or hostname.

```
nx9500-6C8809(config-nsight-policy-WiNG5) #server host 1.2.3.4 https
```

#### 3 Enable the NSight policy.

```
nx9500-6C8809(config-nsight-policy-WiNG5) #enable
```

- For the WiNG 7.1.X APs:

Example,

```
nx9500-6C8809(config)#nsight-policy WiNG7
```

- 1 Enable mandatory stats reporting.

```
nx9500-6C8809(config-nsight-policy-WiNG7)#mandatory app stats purview-app-group  
WiNG7
```

- 2 Specify the NSight server's IP address or hostname.

```
nx9500-6C8809(config-nsight-policy-WiNG7)#server host 1.2.3.4 https
```

- 3 Enable the NSight policy.

```
nx9500-6C8809(config-nsight-policy-WiNG7)#enable
```

- 4 Use the appropriate NSight policy in the WiNG 5.9.X and WiNG 7.1.X AP's RF Domains.

- For the WiNG 5.9.X APs:

```
nx9500-6C8809(config-rf-domain-WiNG5)#use nsight-policy WiNG5
```

- For the WiNG 7.1.X APs:

```
nx9500-6C8809(config-rf-domain-WiNG7)#use nsight-policy WiNG7
```

#### Related Commands

**no (nsight-policy-config-  
commands)** on page 419

Disables mandatory app-usage statistics reporting

## server

Configures the external NSight server's IP address or hostname

### Note

Starting with WiNG 5.9.4 NSight server cannot be configured on the VX9000, NX9500, or NX9600 platforms. Extreme NSight is a separate target that can only be deployed on an external VM appliance.

### Note

For more information on Extreme NSight™, please refer to the Extreme NSight™ User Guide, available at <https://extremenetworks.com/documentation>.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX900

#### Syntax

```
server host [<IP>|<HOSTNAME>|<X:X::X:X>] {http|https}
```

#### Parameters

```
server host [<IP>|<HOSTNAME>|<X:X::X:X>] {http|https}
```

|   |  |
|---|--|
| server host [<IP>  <HOSTNAME> <br><X:X::X:X>] | Configures the NSight server's IP address or hostname. Use one of the following options to identify the NSight server: <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Configures the NSight server's IPv4 address</li> <li>• &lt;HOSTNAME&gt; – Configures the NSight server's hostname</li> <li>• &lt;X:X::X:X&gt; – Configures the NSight server's IPv6 address</li> </ul> <p><b>Note:</b> When this NSight policy is applied to an RF Domain, the RF Domain manager posts statistics (polled from devices within the RF Domain) to the external Extreme NSight server host specified here.</p> |
| {http https}                                  | Optional. Configures the protocol used to communicate with the NSight server <ul style="list-style-type: none"> <li>• http – Optional. Uses HTTP to communicate</li> <li>• https – Optional. Uses HTTPS to communicate (this is the default setting)</li> </ul>  |

### Examples

```

nx9510-6C8A5C(config-nsight-policy-test2)#server host 172.22.0.153 http
nx9510-6C8A5C(config-nsight-policy-test2)#show context
nsight-policy test2
  server host 172.22.0.153 http
nx9510-6C8A5C(config-nsight-policy-test2)#

```

### Related Commands

|                                    |  |
|------------------------------------|--|
| no (nsight-policy-config-commands) | Removes NSight server's IP address or hostname configuration from this NSight policy on page 419 |
|------------------------------------|--|

## no (nsight-policy-config-commands)

Removes NSight policy settings or reverts them to default values

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

### Syntax

```
no [enable|mandatory app stats app-group <APPLICATION-GROUP-NAME>|server host [<IPv4>|  
<HOST-NAME>|<IPv6>]]]
```

### Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes NSight policy settings based on the parameters passed |
|-----------------|---|

### Examples

The following example shows the NSight policy 'test2' settings before the 'no' command is executed:

```

nx9510-6C8A5C(config-nsight-policy-test2)#show context
nsight-policy test2
  server host 172.22.0.153 http
nx9510-6C8A5C(config-nsight-policy-test2)#
nx9510-6C8A5C(config-nsight-policy-test2)#no server host 172.22.0.153

```

The following example shows the NSight policy 'test2' settings after the 'no' command is executed:

```
nx9510-6C8A5C(config-nsight-policy-test2)#show context
nsight-policy test2
nx9510-6C8A5C(config-nsight-policy-test2)#
```

## passpoint-policy

Creates a new passpoint policy and enters its configuration mode. The passpoint policy implements the Hotspot 2.0 Wi-Fi Alliance standard, enabling interoperability between clients, infrastructure, and operators. It makes a portion of the IEEE 802.11u standard mandatory and adds Hotspot 2.0 extensions that allow clients to query a network before actually attempting to join it.

The passpoint policy allows a single or set of Hotspot 2.0 configurations to be global and referenced by the devices that use it. It is mapped to a WLAN. However, only primary WLANs on a BSSID will have their passpoint policy configuration used.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
passpoint-policy <POLICY-NAME>
```

### Parameters

```
passpoint-policy <POLICY-NAME>
```

|                                |   |
|--------------------------------|---|
| passpoint-policy <POLICY-NAME> | Specify the passpoint policy name. If a passpoint policy with the specified name does not exist, it is created. |
|--------------------------------|---|

### Examples

```
rfs4000-229D58(config)#passpoint-policy test
rfs4000-229D58(config-passpoint-policy-test)#?
Passpoint Policy Mode commands:
 3gpp                Configure a 3gpp plmn (public land mobile network) id
access-network-type  Set the access network type for the passpoint
connection-capability Configure the connection capability for the passpoint

#### Note

For more information on Passpoint policy, see [Passpoint Policy](#) on page 1834.

## password-encryption

Enables password encryption and configures the passphrase used to encrypt passwords. When enabled, passwords configured within the system are not displayed as clear text.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
password-encryption secret 2 <LINE>
```

### Parameters

```
password-encryption secret 2 <LINE>
```

secret 2 <LINE>

Encrypts passwords with a secret phrase

- 2 - Specifies the encryption type as either SHA256-AES256
- <LINE> - Specify the encryption passphrase.

### Examples

```
nx9500-6C8809(config)#password-encryption secret 2 test@123
```

To confirm if password encryption is enabled, execute the following command:

```

nx9500-6C8809(config)#show password-encryption status
Password encryption is enabled
nx9500-6C8809(config)#

```

The following example shows the privilege-mode-password as encrypted text. Note, the digit '1' preceding the password implies that displayed text is the encrypted password and not clear text.

```
nx9500-6C8809(config-management-policy-test)#show context include-factory |
include privilege-mode-password
privilege-mode-password 1
bc28e4d82bb11fa75a3c56346441d48f50f19c47184e2575a59a6a5d18e63925
nx9500-6C8809(config-management-policy-test)#
```

|----------------|------------------------------|
| no on page 609 | Disables password encryption |
|----------------|------------------------------|

profile

Configures profile related commands. If no parameters are given, all profiles are selected.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
profile {anyap|ap505|ap510|containing|filter|nx5500|nx75xx|nx9000|nx9600|vx9000}
profile {anyap|ap505|ap510|nx5500|nx75xx|nx9000|nx9600|vx9000} <DEVICE-PROFILE-NAME>
profile {containing <DEVICE-PROFILE-NAME>} {filter type [ap505|ap510|nx75xx|nx9000|
nx9600|
vx9000]}
profile {filter type [ap505|ap510|rfs6000|nx5500|nx75xx|nx9000|nx9600|vx9000]}
```

Parameters

```

## purview-application-group

[Global Configuration Commands](#) on page 154

Creates a Purview Application Group and enters its configuration mode. A Purview application group is a collection of system-provided and/or user-defined application definitions. Application group allows you to enforce mandatory stats reporting for specific traffic types.

Extreme Network's AP5xx model APs, running WiNG 7.1.2 and later versions of the WiNG 7 OS, use [EAA](#) (Purview™) libDPI engine to implement *Application Visibility and Control* (AVC) within a managed network. libDPI detects top-level hosting applications along with the services these applications host.

Use AVC to implement:

- Packet filtering - allow, deny, mark, or rate-limit packets based on rules defined in the Purview application policy.
- Mandatory stats reporting - enable mandatory stats reporting for an application or set of applications defined in the Purview application group. See [Enabling Mandatory Stats Reporting](#) on page 426.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h

#### Note

Legacy WiNG devices, running WiNG 5.9.X or WiNG 7.2.1 do not support Purview libDPI engine. Legacy WiNG devices use a third-party, DPI engine to enforce AVC within the managed network. For more information on configuring AVC on legacy devices, see [application-policy](#) on page 187 and [application-group](#) on page 183.

These legacy devices are: AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533, NX500, NX7500, NX9500, NX9600 and VX9000.

#### Syntax

```
purview-application-group <PURVIEW-APP-GROUP-NAME>
```

#### Parameters

```
purview-application-group <PURVIEW-APP-GROUP-NAME>
```

purview-application-group  
<PURVIEW-APP-GROUP-NAME>

Creates a Purview application group and enters its configuration mode

- <PURVIEW-APP-GROUP-NAME> - Specify the application group name. If a Purview application group with the specified name does not exist, it is created. The name should not exceed 32 characters in length.

#### Enabling Mandatory Stats Reporting

The `purview-application-group` command is part of the mandatory stats reporting feature. To enable mandatory stats reporting, follow the steps below:

- 1 Create a Purview application group, specify the applications for which mandatory stats reporting is to be enabled.

#### Note

If the required application definition is not system-provided, create a custom application signature. For information on creating custom application signatures, see [application](#)

- 2 Enforce mandatory stats reporting for this Purview application group in the NSight policy.

**Note**

For more information and examples, see the [mandatory](#) on page 414 command in the NSight policy context.

- 3 Apply the NSight policy in the RF Domain context.

**Note**

For more information, see [use \(rf-domain-config-mode\)](#) on page 481.

*Examples*

```

nx9500-6C8809(config)#purview-application-group PurvAppGrp
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#?
Purview Application Group Mode commands:
  application  Add application to group
  description  Add application-group description
  no           Negate a command or set its defaults

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-purview-app-group-PurvAppGrp)#

```

*Related Commands*

|  |   |
|--|---|
| <a href="#">no</a> on page 609 (global-config-mode)            | Removes an existing Purview application group                           |

*application*

[purview-application-group](#) on page 425

Adds an application definition to this Purview application group. You can add a system-provided or customized (user-defined) application.

**Supported in the following platforms:**

- Access Points — AP505i, AP510i/e, AP560i/h

## Syntax

```
application <PURVIEW-APP-NAME>
```

## Parameters

```
application <PURVIEW-APP-NAME>
```

`application <PURVIEW-APP-NAME>` Configures the application to be added to this application group

- `<PURVIEW-APP-NAME>` – Provide the application name (should be available as an option in the system). A maximum of eight (8) applications can be added to a group.

**Note:** The Purview™ libDPI engine recognizes 36 app categories with 2406 applications. If the desired application is not available as an option, use the [application](#) on page 175 command to add it.

## Examples

To view all applications supported by the Purview™ libDPI engine, use [TAB], as shown in the following example:

```
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#application[TAB]
Display all 365 possibilities? (y or n)
163_com                1Fichier
24x7_Media              2K_Games
360_Software            360buy
4chan                   4shared
5Dimes                  8Track
9gag                    A_Feed
AB_Tutor                Abacast
--More--
nx9500-6C8809(config-purview-app-group-PurvAppGrp)
```

Select the desired application from the list displayed, as shown in the following examples:

```
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#application Ali[TAB]
Alibaba    Alibaba_Ads  AliExpress  Alipay
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#application Alipay
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#application Alibaba
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#application AliExpress
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#show context
application-group PurvAppGrp
  application Alipay
  application Alibaba
  application AliExpress
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#
```

## Related Commands

| <a href="#">no</a> on page 429 | Removes the description configured for this purview application group |
|--------------------------------|---|

*no*

[purview-application-group](#) on page 425

Removes this Purview application group's configurations (application and/or description)

**Supported in the following platforms:**

- Access Points — AP505i, AP510i/e, AP560i/h

**Syntax**

```
no [application <PURVIEW-APP-NAME>|description]
```

**Parameters**

```
no [application <PURVIEW-APP-NAME>|description]
```

|                 |  |
|-----------------|--|
| no <PARAMETERS> | Removes an application associated with this group, and removes the group's description |
|-----------------|--|

## Examples

The following example displays the purview-application-group 'PurvAppGrp' configuration before the execution of 'no' commands:

```
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#show context
application-group PurvAppGrp
  description "This Purview Application Group contains Alibaba application."
  application Alipay
  application Alibaba
  application AliExpress
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#no application Alipay
nx9500-6C8809(config-app-group-amazon)#no description
```

The following example displays the purview-application-group 'PurvAppGrp' configuration after the execution of 'no' commands:

```
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#show context
application-group PurvAppGrp
  application Alibaba
  application AliExpress
nx9500-6C8809(config-purview-app-group-PurvAppGrp)#
```

## purview-application-policy

[Global Configuration Commands](#) on page 154

Creates a Purview Application Policy and enters its configuration mode. Purview application policies allow you to define rules that dictate how each traffic type is managed on your network.

Extreme Network's AP5xx model APs, running WiNG 7.1.2 and later versions of the WiNG 7 OS, use [EAA](#) (Purview™) libDPI engine to implement *Application Visibility and Control* (AVC). libDPI detects top-level hosting applications along with the services these applications host.

A Purview application policy contains rules that leverage the AP's libDPI engine to detect the underlying application to which a flow belongs. The rule then applies access control and quality of service actions to all the traffic associated with the application, not just traffic destined for specific IP addresses or ports. The control actions regulate both access control and traffic engineering (rate limit, marking, and prioritization) for applications and groups.

Once created and configured, apply the Purview application policy at the following levels:

- **RADIUS change of authorization (CoA)** – In the device/profile configuration mode, use the `application-policy → radius → <PURVIEW-APP-POLICY-NAME>` command to apply the policy to every user successfully authenticated by the RADIUS server. See [purview-application-policy](#) on page 1234 in the profile/device context.
- **User role** – In the role-policy-user-role configuration mode, use the `use → application-policy <PURVIEW-APP-POLICY-NAME>` command to apply the policy to all users assigned to the role. See [use](#) on page 1641 in the user-role policy context.

- **WLAN** – In the WLAN configuration mode, use the `use → application-policy <PURVIEW-APP-POLICY-NAME>` command to apply the policy to all users accessing the WLAN. See [use \(wlan-config-mode\)](#) on page 573
- **Bridge VLAN** – In the bridge VLAN configuration mode, use the `use → application-policy <PURVIEW-APP-POLICY-NAME>` command to apply the policy for the traffic corresponding to the bridged VLAN. See [use](#) on page 907 in the bridge VLAN context.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h

#### Note

Legacy WiNG devices, running WiNG 5.9.X or WiNG 7.2.1 do not support Purview libDPI engine. Legacy WiNG devices use a third-party, DPI engine to enforce AVC within the managed network. For more information on configuring AVC on legacy devices, see [application-policy](#) on page 187 and [application-group](#) on page 183.

These legacy devices are: AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533, NX500, NX7500, NX9500, NX9600 and VX9000.

#### Syntax

```
purview-application-policy <PURVIEW-APP-POLICY-NAME>
```

#### Parameters

```
purview-application-policy <PURVIEW-APP-POLICY-NAME>
```

*allow*

[purview-application-policy](#) on page 430

Creates an allow rule and configures the match criteria based on which packets are filtered and the allow access action applied

**Supported in the following platforms:**

- Access Points — AP505i, AP510i/e, AP560i/h

**Syntax**

```
allow [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

**Parameters**

```
allow [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

|  |  |
|--|--|
| allow  | Creates an allow rule and configures the match criteria. The match criteria options are: app-category and application.   |
| app-category [<PURVIEW-APP-CATEGORY-NAME> all] | Uses application category as the match criteria <ul style="list-style-type: none"> <li>• &lt;PURVIEW-APP-CATEGORY-NAME&gt; – Specify the application category.</li> <li>• all – Select this option to allow all packets irrespective of the application category.</li> </ul>   |
| application <PURVIEW-APP-NAME>                 | Uses application name as the match criteria <ul style="list-style-type: none"> <li>• application &lt;PURVIEW-APP-NAME&gt; – Specify the application name. Each packet's application is matched with the application specified here. In case of a match, the system forwards the packet.</li> </ul> <p><b>Note:</b> The Purview™ engine recognizes 36 app-categories with 2406 canned applications. If the application you are looking for is not in this list, use the <a href="#">application</a> on page 175 command to add the application to the list.</p> |

|   |   |
|---|---|
| <p><code>schedule &lt;SCHEDULE-POLICY-NAME&gt;</code></p> | <p>Schedules an enforcement time for this allow rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>• <code>schedule &lt;SCHEDULE-POLICY-NAME&gt;</code> – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the <code>purview-application-policy → enforcement-time</code> command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>• <code>&lt;SCHEDULE-POLICY-NAME&gt;</code> – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p><b>Note:</b> In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a> on page 438.</p> |
| <p><code>precedence &lt;1-256&gt;</code></p>              | <p>Assigns a precedence value for this allow rule. The precedence value differentiates between rules applicable to applications and the application categories to which they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p> <p>Let us consider application <i>Apple_Streaming</i> belonging to app-category <i>streaming</i>.</p> <p>The action required is: Allow <i>Apple_Streaming</i> packets and deny all other applications belonging to app-category <i>streaming</i>.</p> <p>The rules can be defined as:</p> <pre>#allow application Apple_Streaming precedence 1 #deny app-category streaming precedence 2</pre> <p>The following configuration is incorrect:</p> <pre>#deny app-category streaming precedence 1 #allow application Apple_Streaming precedence 2</pre> <p>Application policy rules are applied in the increasing order of their precedence value. Once the <i>deny app-category streaming precedence 1</i> rule is hit, all streaming packets, including <i>Apple_Streaming</i>, are dropped. Consequently, there are no packets left to apply the subsequent allow rule. The mark and rate-limit rules are the only two actions that can be combined for a specific application or application category type.</p>   |

## Examples

The following example shows how to view all built-in, system provided Purview™ applications:

```
nx9500-6C8809(config-purview-app-policy-PurAppPolicy)#allow application[TAB]
Display all 365 possibilities? (y or n)
163_com                1Fichier
24x7_Media             2K_Games
360_Software           360buy
4chan                  4shared
```

```

About
nx9500-6C8809(config-purview-app-policy-PurAppPolicy)#

```

The following example shows an allow rule with precedence 1.

```

nx9500-6C8809(config-purview-app-policy-PurAppPolicy)#allow application Apple_Streaming
precedence 1

```

The following example shows a Purview application policy 'SocialNet' having an *allow* rule with an associated schedule policy named 'Flickr':

```

nx9500-6C8809(config-purview-app-policy-SocialNet)#allow application flickr schedule
Flickr precedence 1
nx9500-6C8809(config-purview-app-policy-SocialNet)#show context
purview-application-policy SocialNet
description "This application policy relates to Social Networking sites."
allow application flickr schedule Flickr precedence 1
nx9500-6C8809(config-purview-app-policy-SocialNet)#

```

The schedule policy 'Flickr' configuration is as follows. As per this policy, the above allow rule will apply to all Flickr packets every Friday between 13:00 and 18:00 hours.

```

nx9500-6C8809(config-schedule-policy-Flickr)#show context
schedule-policy Flickr
description "Allows Flickr traffic on Fridays."
time-rule days friday start-time 13:00 end-time 18:00
nx9500-6C8809(config-schedule-policy-Flickr)#

```

## Related Commands

[no](#) on page 444

Removes this allow rule from the Purview application policy

*deny*

[purview-application-policy](#) on page 430

Creates a deny rule and configures the match criteria based on which packets are filtered and the deny access action applied

## Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h

## Syntax

```

deny [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)

```

## Parameters

```

deny [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)

```

|  |  |
|--|--|
| deny   | Creates a deny rule and configures the match criteria. The match criteria options are: app-category and application.   |
| app-category [<PURVIEW-APP-CATEGORY-NAME> all] | Uses application category as the match criteria <ul style="list-style-type: none"><li>• &lt;PURVIEW-APP-CATEGORY-NAME&gt; – Specify the application category name.</li><li>• all – Select this option to deny all packets irrespective of the application category.</li></ul>  |

## Examples

The following example shows how to view all built-in, system provided Purview™ app-categories:

```
nx9500-6C8809 (config-purview-app-policy-PurAppPolicy) #allow app-category[TAB]
ads          all          biz          certs
cloud        cloudcpu    corp        custom
db           education    finance     games
health       location      mail        news
other        p2p          proto       realtimecomms
restrictcontent search      shopping    social
```

```
sports      storage      streaming    travel
unknown     updates      vpn          webapp
webcontent  webfile      webmeet
nx9500-6C8809(config-purview-app-policy-PurAppPolicy) #
```

The following example shows a deny rule with precedence 2.

```
nx9500-6C8809(config-purview-app-policy-PurAppPolicy)#deny app-category streaming
precedence 2
```

The following example displays an application policy denying app-category 'social'. The policy is enforceable on weekdays from 9:30 AM to 10 PM.

```
nx9500-6C8809(config-purview-app-policy-DenyS-N)#show context
purview-application-policy DenyS-N
description "This application policy denies Social Networking sites on weedays."
enforcement-time days weekdays start-time 09:30 end-time 22:00
deny app-category social precedence 1
nx9500-6C8809(config-purview-app-policy-DenyS-N) #
```

|--------------------------------|--|

*description*

[purview-application-policy](#) on page 430

Configures a brief description for this application policy that enables you to differentiate it from other application policies

**Supported in the following platforms:**

- Access Points — AP505i, AP510i/e, AP560i/h

**Syntax**

```
description <LINE>
```

**Parameters**

```
description <LINE>
```

|                    |  |
|--------------------|--|
| description <LINE> | Configures this application policy's description <ul style="list-style-type: none"><li>• &lt;LINE&gt; - Specify a brief description not exceeding 80 characters in length.</li></ul> |
|--------------------|--|

**Examples**

```
nx9500-6C8809(config-purview-app-policy-SocialNet)#description "This application policy
relates to Social Networking sites."
nx9500-6C8809(config-purview-app-policy-SocialNet)#show context
purview-application-policy SocialNet
description "This application policy relates to Social Networking sites."
nx9500-6C8809(config-purview-app-policy-SocialNet) #
```

**Related Commands**[no](#) on page 203

Removes this application policy's description

*enforcement-time*[purview-application-policy](#) on page 430

Configures an enforcement time in days and hours. The enforcement time is applicable only to those rules, within the application policy, that do not have a schedule policy associated. By default an application policy is enforced on all days.

**Note**

Schedule policies enforce allow/deny/mark/rate-limit rules at different time periods. If absence of a schedule policy, application policy rules are enforced at the enforcement-time specified within the policy. For more information on configuring a schedule policy, see [schedule-policy](#) on page 493.

**Supported in the following platforms:**

- Access Points — AP505i, AP510i/e, AP560i/h

**Syntax**

```
enforcement-time days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|
all|weekends|weekdays] {start-time <HH:MM> end-time <HH:MM>}
```

**Parameters**

```
enforcement-time days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|
all|weekends|weekdays] {start-time <HH:MM> end-time <HH:MM>}
```

|                                     |   |

### logging

[purview-application-policy](#) on page 430

Enables DPI application recognition logging. It also sets the logging level.

DPI analyzes packet and packet content headers to determine the nature of network traffic. When enabled, the Purview™ DPI engine inspects layer 7 traffic to identify applications (such as, Netflix, Twitter, Facebook, etc.) and extract metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

### Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h

## Syntax

```
logging [level|on]
logging on
logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings]
```

## Parameters

```
logging on
```

|            |  |
|------------|--|
| logging on | Enables logging of application recognition hits made by the Purview™ DPI engine. This option is disabled by default. |
|------------|--|

```
logging level [<0-7>|alerts|critical|debugging|emergencies|errors|informational|
notifications|warnings]
```

|   |  |
|---|--|
| logging level [<0-7> alerts critical debugging emergencies errors informational notifications warnings] | <p>Sets the logging level for application recognition hits made by the Purview™ DPI engine. This option is disabled by default.</p> <ul style="list-style-type: none"> <li>• &lt;0-7&gt; – Sets the message logging severity level on a scale of 0 - 7</li> <li>• emergencies – Severity level 0: System is unusable</li> <li>• alerts – Severity level 1: Requires immediate action</li> <li>• critical – Severity level 2: Critical conditions</li> <li>• errors – Severity level 3: Error conditions</li> <li>• warnings – Severity level 4: Warning conditions</li> <li>• notifications – Severity level 5: Normal but significant conditions (this is the default setting)</li> <li>• informational – Severity level 6: Informational messages</li> <li>• debugging – Severity level 7: Debugging messages</li> </ul> |
|---|--|

## Examples

```
nx9500-6C8809(config-purview-app-policy-Bing)#logging level critical
nx9500-6C8809(config-purview-app-policy-Bing)#show context

allow app-category business precedence 2
deny app-category "social networking" precedence 3
logging level critical
nx9500-6C8809(config-purview-app-policy-Bing)#
```

## Related Commands

|                       |   |
|-----------------------|---|
| <b>no</b> on page 444 | Resets the logging level to default (notifications). And the <b>no</b> → <b>logging</b> → <b>on</b> command disables DPI logging. |
|-----------------------|---|

*mark*

**purview-application-policy** on page 430

Creates a mark rule and configures the match criteria based on which packets are marked

Marks packets, matching a specified set of application categories or applications/protocols, with 802.1p priority level or DSCP *type of service* (ToS) code. Marking packets is a means of identifying them for specific actions, and is used to provide different levels of service to different traffic types.

#### Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h

#### Syntax

```
mark [app-category [<APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
[8021p <0-7>|dscp <0-63>] schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

#### Parameters

```
mark [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
[8021p <0-7>|dscp <0-63>] schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

|  |   |
|--|---|
| mark   | Creates a mark rule and configures the match criteria. When applied, the rule marks packets, matching the criteria configured here, with 802.1p priority value or DSCP code. The match criteria options are: app-category and application.  |
| app-category [<PURVIEW-APP-CATEGORY-NAME> all] | Uses application category as the match criteria <ul style="list-style-type: none"> <li>&lt;PURVIEW-APP-CATEGORY-NAME&gt; – Specify the application category.</li> <li>all – The system marks all packets.</li> </ul>  |
| application <PURVIEW-APP-NAME>                 | Uses application name as the match criteria <ul style="list-style-type: none"> <li>&lt;PURVIEW-APP-NAME&gt; – Specify the application name. Each packet's application is matched with the application name specified here. In case of a match, the system marks the packet.</li> </ul> <p><b>Note:</b> The Purview™ engine recognizes 36 app-categories with 2406 canned applications. If the application you are looking for is not in this list, use the <a href="#">application</a> on page 175 command to add the application to the list.</p>                            |
| 8021p <0-7>                                    | Marks packets matching the specified criteria with 802.1p priority value <ul style="list-style-type: none"> <li>&lt;0-7&gt; – Specify a value from 0 - 7.</li> </ul> <p>The IEEE 802.1p signaling standard enables marking of layer 2 network traffic. Layer 2 network devices (such as switches), using 802.1p standards, group traffic into classes based on their 802.1p priority value, which is appended to the packet's MAC header. In case of traffic congestion, packets with higher priority get precedence over lower priority packets and are forwarded first.</p> |
| dscp <0-63>                                    | Marks packets matching the specified criteria with DSCP ToS code <ul style="list-style-type: none"> <li>&lt;0-63&gt; – Specify a value from 0 - 63.</li> </ul> <p>The DSCP protocol marks layer 3 network traffic. Layer 3 network devices (such as routers) using DSCP, mark each layer 3 packet with a six-bit DSCP code, which is appended to the packet's IP header. Each DSCP code is assigned a corresponding level of service, enabling packet prioritization.</p>   |

|                                 |  |
|---------------------------------|--|
| schedule <SCHEDULE-POLICY-NAME> | <p>Schedules an enforcement time for this mark rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>• schedule &lt;SCHEDULE-POLICY-NAME&gt; – Associates a schedule policy with this rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the <code>purview-application-policy → enforcement-time</code> command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>• &lt;SCHEDULE-POLICY-NAME&gt; – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p>In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a> on page 438.</p> |
| precedence <1-256>              | <p>Assigns a precedence value for this mark rule. The precedence value differentiates between rules applicable to applications and the application categories they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p>   |

### Examples

```

nx9500-6C8809(config-purview-app-policy-Bing)#mark app-category video dscp 9 precedence 4
nx9500-6C8809(config-purview-app-policy-Bing)#mark application facetime dscp 10
precedence 5
nx9500-6C8809(config-purview-app-policy-Bing)#show context
purview-application-policy Bing

### rate-limit

[purview-application-policy](#) on page 430

Creates a rate-limit rule and configures the match criteria

**Supported in the following platforms:**

- Access Points — AP505i, AP510i/e, AP560i/h

**Syntax**

```
rate-limit [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]] application <PURVIEW-APP-NAME>]
([egress|ingress]) rate <50-1000000> max-burst-size <2-1024> schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

**Parameters**

```
rate-limit [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]] application <PURVIEW-APP-NAME>]
([egress|ingress]) rate <50-1000000> max-burst-size <2-1024> schedule <SCHEDULE-POLICY-NAME> (precedence <1-256>)
```

|  |   |
|--|---|
| rate-limit                                     | Creates a rate-limit rule and configures the match criteria. When applied, a rate-limit is applied to packets that match the configured criteria. These packets could be incoming, outgoing, or both. The match criteria options are: <b>app-category</b> and <b>application</b> .  |
| app-category [<PURVIEW-APP-CATEGORY-NAME> all] | Uses application category as the match criteria <ul style="list-style-type: none"> <li>• &lt;PURVIEW-APP-CATEGORY-NAME&gt; – Specify the application category.</li> <li>• all – The system rate-limits all packets irrespective of the application category.</li> </ul>   |
| application <PURVIEW-APP-NAME>                 | Uses application name as the match criteria <ul style="list-style-type: none"> <li>• &lt;PURVIEW-APP-NAME&gt; – Specify the application name. Each packet's application is matched with the application specified here. In case of a match, the system rate-limits the packet.</li> </ul>   |
| [egress ingress]                               | The egress and ingress parameters are recursive and can be used to rate limit either incoming, outgoing, or both incoming and outgoing traffic. <ul style="list-style-type: none"> <li>• egress – Rate limits outgoing traffic</li> <li>• ingress – Rate limits incoming traffic</li> </ul> After selecting the traffic type (incoming/outgoing) configure the rate and maximum burst size. |
| rate <50-1000000>                              | The following parameters are common to the 'egress' and 'ingress' keywords: <ul style="list-style-type: none"> <li>• rate – Configures the rate limit, in Kbps, for both incoming and outgoing packets</li> <li>• &lt;50-1000000&gt; – Specify the rate limit from 50 - 1000000 Kbps.</li> </ul>  |
| max-burst-size                                 | The following parameters are common to the 'egress' and 'ingress' keywords: <ul style="list-style-type: none"> <li>• max-burst-size – Configures the maximum burst size, in Kbytes, for both incoming and outgoing packets</li> <li>• &lt;2-1024&gt; – Specify the maximum burst size from 2 - 1024 Kbytes.</li> </ul>  |

|                                 |  |
|---------------------------------|--|
| schedule <SCHEDULE-POLICY-NAME> | <p>Schedules an enforcement time for this rate-limit rule by associating a schedule policy with it. Use this parameter to apply rule-specific enforcement time.</p> <ul style="list-style-type: none"> <li>• schedule &lt;SCHEDULE-POLICY-NAME&gt; – Associates a schedule policy with the rule. When associated, the rule is enforced only on the days and time configured in the schedule policy. Without the association of a schedule policy, all rules within an application policy are enforced concurrently (defined by the <code>purview-application-policy → enforcement-time</code> command). If scheduling a rule, ensure that the time configured in the schedule policy is a subset of the application policy's enforcement time. In other words the application policy should be active when the rule is being enforced. For example, if the application policy is enforced on Mondays from 10:00 to 22:00 hours and the schedule policy time-rule is set for Fridays, then this rule will never be hit. When enforcing rules at different times the best practice would be to keep the application policy active at all time (i.e., retain the default enforcement-time setting as 'all').</li> <li>• &lt;SCHEDULE-POLICY-NAME&gt; – Specify the policy name (should be existing and configured). After applying a schedule policy, specify a precedence for the rule.</li> </ul> <p>In case of no schedule policy being applied, the rule is enforced as per the enforcement-time configured in the application policy. For more information, see <a href="#">enforcement-time</a> on page 438 .</p> |
| precedence <1-256>              | <p>Assigns a precedence value for this mark rule. The precedence value differentiates between rules applicable to applications and the application categories they belong. The allow, deny, mark, rate-limit options are mutually exclusive. In other words, in an application policy, for a specific application or application category, you can create either an allow rule, or a deny rule, or a mark and rate-limit rule.</p>   |

### Examples

```

nx9500-6C8809(config-purview-app-policy-Bing)#rate-limit application BGP ingress rate 100
max-burst-size 25 egress rate 50 max-burst-size 25 precedence 6
nx9500-6C8809(config-purview-app-policy-Bing)#show context
purview-application-policy Bing
description "This application policy allows Bing search engine packets"
enforcement-time days weekdays start-time 12:30 end-time 20:00
allow application Bing precedence 1
allow app-category business precedence 2
deny app-category "social networking" precedence 3
mark app-category video dscp 9 precedence 4
mark application facetime dscp 10 precedence 5
rate-limit application BGP ingress rate 100 max-burst-size 25 egress rate 50 max-burst-
size 25 precedence 6
logging level critical
nx9500-6C8809(config-purview-app-policy-Bing)#

[purview-application-policy](#) on page 430

Removes or resets this Purview application policy's settings

### Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h

### Syntax

```
no [allow|deny|description|enforcement-time|logging|mark|rate-limit]
no allow [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
precedence <1-256>
no deny [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
precedence <1-256>
no description
no enforcement-time days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|all|
weekends|weekdays]
no logging [level|on]
no mark [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-NAME>]
precedence <1-256>
no rate-limit [app-category [<PURVIEW-APP-CATEGORY-NAME>|all]|application <PURVIEW-APP-
NAME>]
precedence <0-256>
```

### Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes or resets this Purview application policy settings based on the parameters passed |
|-----------------|---|

### Examples

The following example shows the Purview application policy 'Bing' settings before the 'no' commands are executed:

```
nx9500-6C8809(config-purview-app-policy-Bing)#show context
purview-application-policy Bing
  description "This application policy allows Bing search engine packets"
  enforcement-time days weekdays start-time 12:30 end-time 20:00
  allow application Bing precedence 1
  allow app-category business precedence 2
  deny app-category "social networking" precedence 3
  mark app-category video dscp 9 precedence 4
  mark application facetime dscp 10 precedence 5
  rate-limit application BGP ingress rate 100 max-burst-size 25 egress rate 50 max-burst-
size 25 precedence 6
  logging level critical
nx9500-6C8809(config-purview-app-policy-Bing)#
nx9500-6C8809(config-purview-app-policy-Bing)#no allow app-category business precedence 2
nx9500-6C8809(config-purview-app-policy-Bing)#no deny app-category social\ networking
precedence 3
```

The following example shows the Purview application policy 'Bing' settings after the 'no' commands are executed:

```
nx9500-6C8809(config-purview-app-policy-Bing)#show context
purview-application-policy Bing
  description "This application policy allows Bing search engine packets"
```

```

enforcement-time days weekdays start-time 12:30 end-time 20:00
allow application Bing precedence 1
mark app-category video dscp 9 precedence 4
mark application facetime dscp 10 precedence 5
rate-limit application BGP ingress rate 100 max-burst-size 25 egress rate 50 max-burst-
size 25 precedence 6
logging level critical
nx9500-6C8809(config-purview-app-policy-Bing)#

```

## radio-qos-policy

Configures a radio QoS policy

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
radio-qos-policy <RADIO-QOS-POLICY-NAME>
```

### Parameters

```
radio-qos-policy <RADIO-QOS-POLICY-NAME>
```

|                         |   |
|-------------------------|---|
| <RADIO-QOS-POLICY-NAME> | Specify the radio QoS policy name. If a policy with the specified name does not exist, it is created. |
|-------------------------|---|

### Examples

```

nx9500-6C8809(config)#radio-qos-policy test
nx9500-6C8809(config-radio-qos-test)#?
Radio QoS Mode commands:
  accelerated-multicast  Configure multicast streams for acceleration
  admission-control      Configure admission-control on this radio for one or
                        more access categories
  no                     Negate a command or set its defaults
  smart-aggregation      Configure smart aggregation parameters
  wmm                    Configure 802.11e/Wireless MultiMedia parameters

  clrscr                 Clears the display screen
  commit                 Commit all changes made in this session
  do                     Run commands from Exec mode
  end                    End current mode and change to EXEC mode
  exit                   End current mode and down to previous mode
  help                   Description of the interactive help system
  revert                 Revert changes
  service                Service Commands
  show                   Show running system information
  write                  Write running configuration to memory or terminal

nx9500-6C8809(config-radio-qos-test)#

```

*Related Commands***no** on page 609

Removes an existing Radio QoS policy

**Note**For more information on radio qos policy, see [Radio-QoS Policy](#) on page 1598.

## radius-group

Configures RADIUS user group and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*`radius-group <RADIUS-GROUP-NAME>`*Parameters*`radius-group <RADIUS-GROUP-NAME>`

&lt;RADIUS-GROUP-NAME&gt;

Specify a RADIUS user group name. The name should not exceed 64 characters. If a RADIUS user group with the specified name does not exist, it is created.

*Examples*

```

nx9500-6C8809(config)#radius-group testRadiusGr
nx9500-6C8809(config-radius-group-testRadiusGr)#?
Radius user group configuration commands:
  guest      Make this group a Guest group
  no         Negate a command or set its defaults
  policy     Radius group access policy configuration
  rate-limit Set rate limit for group

  clrscr     Clears the display screen
  commit     Commit all changes made in this session
  do         Run commands from Exec mode
  end        End current mode and change to EXEC mode
  exit       End current mode and down to previous mode
  help       Description of the interactive help system
  revert     Revert changes
  service    Service Commands
  show       Show running system information
  write      Write running configuration to memory or terminal

nx9500-6C8809(config-radius-group-testRadiusGr)#

```

*Related Commands***no** on page 609

Removes an existing RADIUS group

**Note**For more information on RADIUS user group commands, see [RADIUS Policy](#) on page 1567.

## radius-server-policy

Creates a RADIUS server policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*`radius-server-policy <RADIUS-SERVER-POLICY-NAME>`*Parameters*`radius-server-policy <RADIUS-SERVER-POLICY-NAME>`

|                             |   |
|-----------------------------|---|
| <RADIUS-SERVER-POLICY-NAME> | Specify the RADIUS server policy name. If a policy with the specified name does not exist, it is created. |
|-----------------------------|---|

*Examples*

```

nx9500-6C8809(config)#radius-server-policy testRadiusServerPolicy
nx9500-6C8809(config-radius-server-policy-testRadiusServerPolicy)#?
Radius Configuration commands:
  authentication      Radius authentication
  bypass              Bypass Certificate Revocation List( CRL ) check
  chase-referral      Enable chasing referrals from LDAP server
  crl-check            Enable Certificate Revocation List( CRL ) check
  ldap-agent          LDAP Agent configuration parameters
  ldap-group-verification Enable LDAP Group Verification setting
  ldap-server         LDAP server parameters
  local               RADIUS local realm
  nas                 RADIUS client
  no                  Negate a command or set its defaults
  proxy               RADIUS proxy server
  session-resumption  Enable session resumption/fast reauthentication by
                     using cached attributes
  termination         Enable Eap termination for proxy requests
  use                 Set setting to use

  clrscr              Clears the display screen
  commit              Commit all changes made in this session
  do                  Run commands from Exec mode
  end                 End current mode and change to EXEC mode
  exit                End current mode and down to previous mode
  help                Description of the interactive help system
  revert              Revert changes
  service              Service Commands

```

```
show          Show running system information
write        Write running configuration to memory or terminal
```

```
nx9500-6C8809(config-radius-server-policy-testRadiusServerPolicy)#
```

### Related Commands

#### Note

For more information on RADIUS server policy commands, see [RADIUS Policy](#) on page 1567.

## radius-user-pool-policy

Configures a RADIUS user pool and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
radius-user-pool-policy <RADIUS-USER-POOL-NAME>
```

### Parameters

```
radius-user-pool-policy <RADIUS-USER-POOL-NAME>
```

|                                |  |
|--------------------------------|--|
| <RADIUS-USER-POOL-POLICY-NAME> | Specify the RADIUS user pool policy name. If a policy with the specified name does not exist, it is created. |
|--------------------------------|--|

### Examples

```
nx9500-6C8809(config)#radius-user-pool-policy testRadiusUserPool
nx9500-6C8809(config-radius-user-pool-testRadiusUserPool)#?
Radius User Pool Mode commands:
  duration  Set a guest user's access duration
  no        Negate a command or set its defaults
  user      Radius user configuration

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands
  show      Show running system information
  write     Write running configuration to memory or terminal

vnx9500-6C8809(config-radius-user-pool-testRadiusUserPool)#
```

*Related Commands*

no on page 609

Removes an existing RADIUS user pool policy

**Note**For more information on RADIUS user group commands, see [RADIUS Policy](#) on page 1567.**rename**

Renames and existing TLO

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
rename tlo <TLO-NAME> <NEW-TLO-NAME>
```

*Parameters*

```
rename tlo <TLO-NAME> <NEW-TLO-NAME>
```

```
rename tlo <TLO-NAME> <NEW-  
TLO-NAME>
```

Renames an existing TLO object

- <TLO-NAME> – Specify the TLO's name. This is the TLO that is to be renamed.
- <NEW-TLO-NAME> – Specify the new name for this TLO.

*Examples*

The following example shows the top level objects available for renaming:

**Note**Enter rename and press **Tab** to list top level objects available for renaming.

```
nx9500-6C8809(config)#rename [TAB]
aaa_policy                aaa_tacacs_policy
address_range_alias       aif_policy
app_policy                application
assoc_acl                 auto_provisioning_policy
bgp_as_path_list          bgp_community_list
bgp_extcommunity_list     bgp_ip_access_list
bgp_ip_prefix_list        bonjour_gw_discovery_policy
bonjour_gw_forwarding_policy bonjour_gw_query_forwarding_policy
bridging_policy           captive_portal
centro_policy             client_identity
client_identity_group     content_cache_policy
content_filter_policy      crypto_cmp_policy
database_client_policy    database_policy
device_categorization     dhcp_server_policy
dhcpv6_server_policy       dns_whitelist
dr_route_map              encrypted_string_alias
event_system_policy        ex3500_ext_ip_acl
```

```

ex3500_management_policy      ex3500_qos_class_map_policy
ex3500_qos_policy_map        ex3500_std_ip_acl
ex3500_time_range            firewall_policy
global_assoc_list            guest_management
hashed_string_alias          host_alias
ip_acl                       ip_snmp_acl
--More--
nx9500-6C8809(config)#

```

The following examples first clones the existing IP access list BROADCAST-MULTICAST-CONTROL, and then renames the cloned IP access list:

```

nx9500-6C8809(config)#show context include-factory | include ip access-list
ip access-list BROADCAST-MULTICAST-CONTROL
nx9500-6C8809(config)#

nx9500-6C8809(config)#clone ip_acl BROADCAST-MULTICAST-CONTROL Test_IP_CLONED
nx9500-6C8809(config)#commit

nx9500-6C8809(config)#show context include-factory | include ip access-list
ip access-list BROADCAST-MULTICAST-CONTROL
ip access-list Test_IP_CLONED

nx9500-6C8809(config)#

```

### Related Commands

[clone](#) on page 274

Creates a replica of an existing TLO or device

## replace

Selects an existing device by its MAC address or hostname and replaces it with a new device having a different MAC address. Internally, a new device is created with the new MAC address. The old device's configuration is copied to the new device, and then removed from the controller's configuration (i.e., the old device's configuration is no longer staged on the controller).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
replace device [<MAC-ADDRESS>|<HOSTNAME>] <NEW-MAC-ADDRESS>
```

### Parameters

```
replace device [<MAC-ADDRESS>|<HOSTNAME>] <NEW-MAC-ADDRESS>
```

|                             |  |
|-----------------------------|--|
| replace-device              | Replaces an existing device with a new device, such that the old device's configuration is copied on to the new device   |
| [<MAC-ADDRESS>] <HOSTNAME>] | Identifies the device to replace by its MAC address or hostname <ul style="list-style-type: none"> <li>• &lt;MAC-ADDRESS&gt; – Identifies the device to replace by its MAC address. Specify the device's existing MAC address.</li> <li>• &lt;HOSTNAME&gt; – Identifies the device to replace by its hostname. Specify the device's hostname.</li> </ul> |
| <NEW-MAC-ADDRESS>           | Specifies the new device's MAC address. Both the new and old devices should of the same model type.  |

### Examples

```
rfs4000-882A17(config)#replace device ap7161-4BF364 ?
AA-BB-CC-DD-EE-FF New device MAC address
rfs4000-882A17(config)#replace device ap7161-4BF364 00-15-0F-BB-98-30
```

The following example shows an existing AP 7502 (MAC: DD-AA-BB-88-12-43) configuration staged on a VX 9000 controller:

```
VX9000-NOC-DE9D(config-device-DD-AA-BB-88-12-43)#show context
ap7502 DD-AA-BB-88-12-43
 use profile default-ap7502
 use rf-domain default
 hostname ap7502-881243
 interface radiol
  wlan theMOZART bss 1 primary
 interface radio2
  wlan theMOZART bss 1 primary
 interface gel
  switchport mode access
  switchport access vlan 1
 controller host 12.12.12.2
VX9000-NOC-DE9D(config-device-DD-AA-BB-88-12-43)#
```

The following example shows AP 7502 (MAC: DD-AA-BB-88-12-43) replaced by another vAP 7502 having MAC address 11-22-33-44-55-66:

Note that the new AP 7502 device has the same configuration as the old AP 7502 device. The HOSTNAME remains the same. Consequently, objects that refer to this particular hostname need not be updated. For example, an hostname alias identifying this particular device, and TLOs using this alias, such as IP/MAC ACLs, remain unchanged.

```
VX9000-NOC-DE9D(config)#replace device DD-AA-BB-88-12-43 11-22-33-44-55-66
VX9000-NOC-DE9D(config)#ap7502 11-22-33-44-55-66
VX9000-NOC-DE9D(config-device-11-22-33-44-55-66)#show context
ap7502 11-22-33-44-55-66
 use profile default-ap7502
 use rf-domain default
 hostname ap7502-881243
 interface radiol
  wlan theMOZART bss 1 primary
 interface radio2
  wlan theMOZART bss 1 primary
 interface gel
  switchport mode access
  switchport access vlan 1
 controller host 12.12.12.2
VX9000-NOC-DE9D(config-device-11-22-33-44-55-66)#
```

## rf-domain

Creates an RF Domain or enters the RF Domain configuration context for one or more RF Domains.

The configuration of controllers (wireless controllers, service platforms, and access points) comprises of RF Domains that define regulatory, location, and other relevant policies. At least one default RF Domain is assigned to each controller. RF Domains allow administrators to assign configuration data to multiple devices deployed in a common coverage area, such as in a floor, building, or site. Each RF Domain contains policies that set the Smart RF or WIPS configuration.

RF Domains also enable administrators to override WLAN SSID name and VLAN assignments. This enables the deployment of a global WLAN across multiple sites and unique SSID name or VLAN assignments to groups of access points servicing the global WLAN. This WLAN override eliminates the need to define and manage a large number of individual WLANs and profiles.

A controller's configuration contains:

- A default RF Domain - Each controller utilizes a default RF Domain. Access Points are assigned to this default RF Domain as they are discovered by the controller. A default RF Domain can be used for single-site and multi-site deployments.
- Single-site deployment - The default RF Domain can be used for single site deployments, where regional, regulatory, and RF policies are common between devices.
- Multi-site deployment - A default RF Domain can omit configuration parameters to prohibit regulatory configuration from automatically being inherited by devices as they are discovered. This is desirable in multi-site deployments with devices spanning multiple countries. Omitting specific configuration parameters eliminates the risk of an incorrect country code from being automatically assigned to a device.
- A user-defined RF Domain - Created by administrators. A user-defined RF Domain can be assigned to multiple devices manually or automatically.
- Manually assigned - Use the CLI or UI to manually assign a user-defined RF Domain to controllers and service platforms.
- Automatically assigned - Use a AP provisioning policy to automatically assign specific RF Domains to access points based on the access point's model, serial number, VLAN, DHCP option, and IP address or MAC address. Automatic RF Domain assignments are useful in large deployments, as they enable plug-n-play access point deployments by automatically applying RF Domains to remote access points. For more information on auto provisioning policy, see [Auto-Provisioning Policy](#) on page 1331.

Configure and deploy user-defined RF Domains for single or multiple sites where devices require unique regulatory and regional configurations, or unique Smart RF and WIPS policies. User-defined RF Domains can be used to:

- Assign unique Smart RF or WIPS policies to access points deployed on different floors or buildings within in a site.
- Assign unique regional or regulatory configurations to devices deployed in different states or countries.

- Assign unique WLAN SSIDs and/or VLAN IDs to sites assigned a common WLAN without having to define individual WLANs for each site.

**Note**

WiNG access points only support one RF Domain, which is the **default** RF Domain. If needed, use this command to override the built-in default RF Domain configuration.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
rf-domain {<RF-DOMAIN-NAME>|containing <RF-DOMAIN-NAME>}
```

**Parameters**

```
rf-domain {<RF-DOMAIN-NAME>|containing <RF-DOMAIN-NAME>}
```

|                             |   |
|-----------------------------|---|
| rf-domain                   | Creates a new RF Domain or enters its configuration context   |
| <RF-DOMAIN-NAME>            | Optional. Specify the RF Domain name (should not exceed 32 characters and should represent the intended purpose). Once created, the name cannot be edited.  |
| containing <RF-DOMAIN-NAME> | Optional. Identifies an existing RF Domain that contains a specified sub-string in the domain name <ul style="list-style-type: none"> <li>&lt;RF-DOMAIN-NAME&gt; - Specify a sub-string of the RF Domain name.</li> </ul> |

**Examples**

```
nx9500-6C8809(config)#rf-domain ecospace
nx9500-6C8809(config-rf-domain-ecospace)#?
RF Domain Mode commands:
  alias                Alias
  channel-list         Configure channel list to be advertised to wireless
                       clients
  contact              Configure the contact
  control-vlan         VLAN for control traffic on this RF Domain
  controller-managed   RF Domain manager for this domain will be an adopting
                       controller
  country-code         Configure the country of operation
  geo-coordinates      Configure geo coordinates for this device
  layout               Configure layout
  location              Configure the location
  location-server      Configuration ExtremeLocation server
  location-tenantid    Set ExtremeLocation tenant id
  mac-name             Configure MAC address to name mappings
  no                   Negate a command or set its defaults
  nsight-sensor        Enable sensor for Nsight
  override-smarttrf    Configured RF Domain level overrides for smart-rf
  override-wlan        Configure RF Domain level overrides for wlan
  sensor-server        AirDefense sensor server configuration
  stats               Configure the stats related setting
  timezone             Configure the timezone
  tree-node            Configure tree node under which this rf-domain appears
  use                  Set setting to use
```

```

clrscr          Clears the display screen
commit         Commit all changes made in this session
do             Run commands from Exec mode
end            End current mode and change to EXEC mode
exit           End current mode and down to previous mode
help           Description of the interactive help system
revert         Revert changes
service        Service Commands
show           Show running system information
write          Write running configuration to memory or terminal

nx9500-6C8809(config-rf-domain-ecospace)#

```

### Related Commands

|                                |  |
|--------------------------------|--|
| <a href="#">no</a> on page 609 | Removes an existing RF Domain. Specify the RF Domain's name. |
|--------------------------------|--|

### rf-domain-mode-commands

The following table lists the RF Domain configuration mode commands:

**Table 24: RF-Domain Config Mode Commands**

| Command  | Description   |
|--|---|
| <a href="#">alias</a> on page 456              | Creates various types of aliases, such as network, VLAN, network-group, network-service, encrypted-string, hashed-string, etc. at the RF Domain level |
| <a href="#">channel-list</a> on page 463       | Configures the channel list advertised by radios  |
| <a href="#">contact</a> on page 464            | Configures network administrator's contact information (needed in case of any problems impacting the RF Domain)                                       |
| <a href="#">control-vlan</a> on page 465       | Configures VLAN for traffic control on a RF Domain  |
| <a href="#">controller-managed</a> on page 465 | Configures the adopting controller or service platform as this RF Domain's manager  |
| <a href="#">country-code</a> on page 466       | Configures the country of operation   |
| <a href="#">geo-coordinates</a> on page 467    | Configures the longitude and latitude of the RF Domain in order to fix its exact geographical location on a map                                       |
| <a href="#">layout</a>                         | Configures layout information   |
| <a href="#">location</a> on page 469           | Configures the physical location of an RF Domain  |
| <a href="#">location-server</a> on page 470    | Configures an ExtremeLocation server on the selected RF Domain. This command is supported only on the NX 95XX and NX 96XX series service platforms.   |
| <a href="#">location-tenantid</a> on page 471  | Configures the ExtremeLocation Tenant's account number  |
| <a href="#">mac-name</a> on page 472           | Maps MAC addresses to names   |
| <a href="#">override-smart-rf</a> on page 473  | Configures RF Domain level overrides for Smart RF   |
| <a href="#">override-wlan</a> on page 474      | Configures RF Domain level overrides for a WLAN   |
| <a href="#">sensor-server</a> on page 477      | Configures an AirDefense sensor server on this RF Domain  |

**Table 24: RF-Domain Config Mode Commands (continued)**

| Command   | Description  |
|---|--|
| <a href="#">stats</a> on page 478                       | Configures stats related settings on this RF Domain. These settings define how RF Domain statistics are updated. |
| <a href="#">timezone</a> on page 479                    | Configures a RF Domain's geographic time zone  |
| <a href="#">tree-node</a> on page 480                   | Configures the hierarchical (tree-node) structure under which this RF Domain appears                             |
| <a href="#">use (rf-domain-config-mode)</a> on page 481 | Enables the use of a specified Smart RF and/or WIPS policy with this RF Domain                                   |
| <a href="#">no (rf-domain-config-mode)</a> on page 483  | Negates a command or reverts configured settings to their default  |

**alias**

Configures network, VLAN, host, string, network-service, etc. aliases at the RF Domain level

For information on aliases, see [alias](#) on page 163.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
alias [address-range|encrypted-string|hashed-string|host|network|network-group|
network-service|number|string|vlan]
alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>
alias hashed-string <HASHED-STRING-ALIAS-NAME> 1 <LINE>
alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>
alias host <HOST-ALIAS-NAME> <HOST-IP>
alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range|host|network]
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to
<ENDING-IP> {<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|
network <NETWORK-ADDRESS/MASK> {<NETWORK-ADDRESS/MASK>}]
alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|
gre|igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|
ldap|nntp|ntp|pop3|proto|sip|smtp|sourceport|ssh|telnet|tftp|www)}
alias number <NUMBER-ALIAS-NAME> <0-4294967295>
alias network-service <NETWORK-SERVICE-ALIAS-NAME> proto [<0-254>|<WORD>|eigrp|gre|
igmp|igp|ospf|vrrp] {(<1-65535>|<WORD>|bgp|dns|ftp|ftp-data|gopher|https|ldap|nntp|
ntp|pop3|proto|sip|smtp|sourceport [<1-65535>|<WORD>]|ssh|telnet|tftp|www)}
alias string <STRING-ALIAS-NAME> <LINE>
alias vlan <VLAN-ALIAS-NAME> <1-4094>
```

**Parameters**

```
alias address-range <ADDRESS-RANGE-ALIAS-NAME> <STARTING-IP> to <ENDING-IP>
```

|   |   |
|---|---|
| address-range<br><ADDRESS-RANGE-<br>ALIAS-NAME> | <p>Creates a new address-range alias for this RF Domain. Or associates an existing address-range alias with this RF Domain. An address-range alias maps a name to a range of IP addresses.</p> <ul style="list-style-type: none"> <li>• &lt;ADDRESS-RANGE-ALIAS-NAME&gt; – Specify the address range alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>  |
| <STARTING-IP> to<br><ENDING-IP>                 | <p>Associates a range of IP addresses with this address range alias</p> <ul style="list-style-type: none"> <li>• &lt;STARTING-IP&gt; – Specify the first IP address in the range.</li> <li>• to &lt;ENDING-IP&gt; – Specify the last IP address in the range.</li> </ul> <p><b>Note:</b> Aliases defined at any given level can be overridden at the next lower level. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.</p> |

```
alias encrypted-string <ENCRYPTED-STRING-ALIAS-NAME> [0|2] <LINE>
```

|   |  |
|---|--|
| encrypted-string<br><ENCRYPTED-STRING-<br>ALIAS-NAME> | <p>Creates an alias for an encrypted string. Use this alias for string configuration values that are encrypted when "password-encryption" is enabled. For example, in the management-policy, use it to define the SNMP community string.</p> <ul style="list-style-type: none"> <li>• &lt;ENCRYPTED-STRING-ALIAS-NAME&gt; – Specify the encrypted-string alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>   |
| [0 2] <LINE>  | <p>Configures the value associated with the alias name specified in the previous step</p> <ul style="list-style-type: none"> <li>• [0 2] &lt;LINE&gt; – Configures the alias value</li> </ul> <p>Note, if password-encryption is enabled, in the <code>show &gt; running-config</code> output, this clear text is displayed as an encrypted string, as shown below:</p> <pre>nx9500-6C8809(config)#show running-config !..... alias encrypted-string \$enString 2 fABMK2is7UToNiZE3MQXbgAAA AxBOZIysdqsEJwr6AH/Da// ! --More-- nx9500-6C8809</pre> <p>In the above output, the '2' displayed before the encrypted-string alias value indicates that the displayed text is encrypted and not a clear text. However, if password-encryption is disabled the clear text is displayed as is:</p> <pre>nx9500-6C8809(config)#show running-config !..... ! alias encrypted-string \$enString 0 test11223344 ! --More-- nx9500-6C8809</pre> <p>For more information on enabling password-encryption, see <a href="#">password-encryption</a> on page 421.</p> |

```
alias hashed-string <HASHED-STRING-ALIAS-NAME> <LINE>
```

|  |  |
|--|--|
| hashed-string <HASHED-STRING-ALIAS-NAME> | <p>Creates an alias for a hashed string. Use this alias for configuration values that are hashed string, such as passwords. For example, in the management-policy, use it to define the privilege mode password. For more information, see <a href="#">privilege-mode-password</a> on page 1544.</p> <ul style="list-style-type: none"> <li>• &lt;HASHED-STRING-ALIAS-NAME&gt; – Specify the hashed-string alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>   |
| <LINE>                                   | <p>Configures the hashed-string value associated with this alias.</p> <pre> nx9500-6C8809(config)#show running-config ! alias encrypted-string \$WRITE 2 sBqVCDaOxs3oByF5PCSuFAAA AAAd7HT2+EiT/1/BXm9c4SBDv ! alias hashed-string \$PriMode 1 faffdde27cb49ad634ea20df4f 7c8ef2685894d10ffcb1b2efba054112ecfc75 --More-- nx9500-6C8809 </pre> <p>In the above <code>show &gt; running-config</code> output, the '!' displayed before the hashed-string alias value indicates that the displayed text is hashed and not a clear text.</p> |

```
alias host <HOST-ALIAS-NAME> <HOST-IP>
```

|                        |   |
|------------------------|---|
| host <HOST-ALIAS-NAME> | <p>Creates a host alias for this RF Domain. Or associates an existing host alias with this RF Domain. A host alias maps a name to a single network host.</p> <ul style="list-style-type: none"> <li>• &lt;HOST-ALIAS-NAME&gt; – Specify the host alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>  |
| <HOST-IP>              | <p>Associates the network host's IP address with this host alias</p> <ul style="list-style-type: none"> <li>• &lt;HOST-IP&gt; – Specify the network host's IP address.</li> </ul> <p><b>Note:</b> Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.</p> |

```
alias network <NETWORK-ALIAS-NAME> <NETWORK-ADDRESS/MASK>
```

|                              |   |
|------------------------------|---|
| network <NETWORK-ALIAS-NAME> | <p>Creates a network alias for this RF Domain. Or associates an existing network alias with this RF Domain. A network alias maps a name to a single network address.</p> <ul style="list-style-type: none"> <li>• &lt;NETWORK-ALIAS-NAME&gt; – Specify the network alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>  |
| <NETWORK-ADDRESS/MASK>       | <p>Associates a single network with this network alias</p> <ul style="list-style-type: none"> <li>• &lt;NETWORK-ADDRESS/MASK&gt; – Specify the network's address and mask.</li> </ul> <p><b>Note:</b> Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.</p> |

```
alias network-group <NETWORK-GROUP-ALIAS-NAME> [address-range <STARTING-IP> to <ENDING-IP>
```

```
{<STARTING-IP> to <ENDING-IP>}|host <HOST-IP> {<HOST-IP>}|network <NETWORK-ADDRESS/MASK>
{<NETWORK-ADDRESS/MASK>}]
```

|   |  |
|---|--|
| network <NETWORK-GROUP-ALIAS-NAME>  | <p>Creates a network-group alias for this RF Domain. Or associates an existing network-group alias with this RF Domain.</p> <ul style="list-style-type: none"> <li>• &lt;NETWORK-GROUP-ALIAS-NAME&gt; – Specify the network-group alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p> <p>After specifying the name, specify the following: a range of IP addresses, host addresses, or a range of network addresses.</p> <p><b>Note:</b> Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.</p> |
| address-range<br><STARTING-IP> to<br><ENDING-IP><br>{<STARTING-IP> to<br><ENDING-IP>} | <p>Associates a range of IP addresses with this network-group alias</p> <ul style="list-style-type: none"> <li>• &lt;STARTING-IP&gt; – Specify the first IP address in the range.</li> <li>• to &lt;ENDING-IP&gt; – Specify the last IP address in the range.</li> <li>• &lt;STARTING-IP&gt; to &lt;ENDING-IP&gt; – Optional. Specifies more than one range of IP addresses. A maximum of eight (8) IP address ranges can be configured.</li> </ul>  |
| host <HOST-IP> {<HOST-IP>}  | <p>Associates a single or multiple hosts with this network-group alias</p> <ul style="list-style-type: none"> <li>• &lt;HOST-IP&gt; – Specify the hosts' IP address.</li> <li>• &lt;HOST-IP&gt; – Optional. Configures the default <i>Post Office Protocol</i> (POP3 ) services port (110)</li> </ul> |

- `proto` – Optional. Use this option to select another Internet protocol in addition to the one selected in the previous step.
- `sip` – Optional. Configures the default *Session Initiation Protocol* (SIP) services port (5060)
- `smtp` – Optional. Configures the default *Simple Mail Transfer Protocol* (SMTP) services port (25)
- `sourceport` [`<1-65535>`|`<WORD>`] – Optional. After specifying the destination port, you may specify a single or range of source ports.
  - `<1-65535>` – Specify the source port from 1 - 65535.
  - `<WORD>` – Specify the source port range, for example 1-10.
- `ssh` – Optional. Configures the default SSH services port (22)
- `telnet` – Optional. Configures the default Telnet services port (23)
- `tftp` – Optional. Configures the default *Trivial File Transfer Protocol* (TFTP) services port (69)
- `www` – Optional. Configures the default HTTP services port (80)

```
alias number <NUMBER-ALIAS-NAME> <0-4294967295>
```

`alias number <NUMBER-ALIAS-NAME>`  
`<0-4294967295>`

Creates a new number alias or applies an existing number, identified by the `<NUMBER-ALIAS-NAME>` keyword

- `<NUMBER-ALIAS-NAME>` – Specify the number alias name.
  - `<0-4294967295>` – Specify the number, from 0 - 4294967295, assigned to the number alias created.

Number aliases map a name to a numeric value. For example, 'alias number \$NUMBER 100'.

- The number alias name is: \$NUMBER
- The value assigned is: 100

**Note:** The value referenced by alias \$NUMBER, wherever used, is 100.

```
alias string <STRING-ALIAS-NAME> <LINE>
```

`alias string <STRING-ALIAS-NAME>`

Creates a string alias for this RF Domain. Or associates an existing string alias with this RF Domain. String aliases map a name to an arbitrary string value. For example, 'alias string \$DOMAIN test.example\_company.com'. In this example, the string alias name is: \$DOMAIN and the string value it is mapped to is: test.example\_company.com. In this example, the string alias refers to a domain name.

- `<VLAN-ALIAS-NAME>` – Specify the string alias name.
  - `<LINE>` – Specify the string value.

**Note:** Alias name should begin with '\$'.

**Note:** Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.

```
alias vlan <VLAN-ALIAS-NAME> <1-4094>
```

|                              |   |
|------------------------------|---|
| alias vlan <VLAN-ALIAS-NAME> | <p>Creates a VLAN alias for this RF Domain. Or associates an existing VLAN alias with this RF Domain. A VLAN alias maps a name to a VLAN ID.</p> <ul style="list-style-type: none"> <li>• &lt;VLAN-ALIAS-NAME&gt; - Specify the VLAN alias name.</li> </ul> <p><b>Note:</b> Alias name should begin with '\$'.</p>  |
| <1-4094>                     | <p>Maps the VLAN alias to a VLAN ID</p> <ul style="list-style-type: none"> <li>• &lt;1-4094&gt; - Specify the VLAN ID from 1 - 4094.</li> </ul> <p><b>Note:</b> Aliases defined at any given level can be overridden at the next lower levels. For example, a global alias can be redefined on a selected set of RF Domains, profiles, or devices. Overrides applied at the device level take precedence.</p> |

### Examples

```

nx9500-6C8809(config)#show context
!
! Configuration of NX9500 version 7.1.0.0-010D
!
!
version 2.6
!
!
alias network-group $TestNetGrpAlias network 192.168.13.0/24 192.168.16.0/24
alias network-group $TestNetGrpAlias address-range 192.168.13.7 to 192.168.13.16
192.168.13.20 to 192.168.13.25
!
alias network $TestNetworkAlias 192.168.13.0/24
!
alias host $TestHostAlias 192.168.13.10
!
alias address-range $TestAddRanAlias 192.168.13.10 to 192.168.13.13
!
alias network-service $NetworkServAlias proto udp
!
alias network-service $kerberos proto tcp 749 750 80 proto udp 68 sourceport 67
!
alias vlan $TestVLANAlias 1
--More--
nx9500-6C8809(config)#

```

In the following examples the global aliases '\$kerberos' and '\$TestVLANAlias' are associated with the RF Domain 'test' and overrides applied:

```

nx9500-6C8809(config-rf-domain-test)#alias network-service $kerberos proto tcp
749 750 80
nx9500-6C8809(config-rf-domain-test)#alias vlan $TestVLANAlias 10
vnx9500-6C8809(config-rf-domain-test)#show context
rf-domain test
no country-code
alias network-service $kerberos proto tcp 749 750 80
alias vlan $TestVLANAlias 10
nx9500-6C8809(config-rf-domain-test)#
nx9500-6C8809(config-rf-domain-test)#alias string $test example_company.com
nx9500-6C8809(config-rf-domain-test)#show context
rf-domain test
no country-code

```

```
alias string $test example_company.com
nx9500-6C8809(config-rf-domain-test)#
Example 1:
```

In the following examples, the network-group alias '\$test' is configured to include hosts 192.168.1.10 and 192.168.1.11, networks 192.168.2.0/24 and 192.168.3.0/24 and address-range 192.168.4.10 to 192.168.4.20.

```
nx9500-6C8809(config)#alias network-group $test host 192.168.1.10 192.168.1.11
nx9500-6C8809(config)#alias network-group $test network 192.168.2.0/24 192.168.3.0/24
rfs4000-229D58(config)#alias network-group $test address-range 192.168.4.10 to
192.168.4.20
```

Associate this network-group alias '\$test' to the RF Domain 'test' and override the 'host' element of the alias.

```
nx9500-6C8809(config-rf-domain-test)#alias network-group $test host 192.168.10.10
nx9500-6C8809#show context
rf-domain test
no country-code
alias network-service $kerberos proto tcp 749 750 80
alias network-group $test host 192.168.10.10
alias network-group $test network 192.168.2.0/24 192.168.3.0/24
alias network-group $test address-range 192.168.4.10 to 192.168.4.20
alias vlan $TestVLANAlias 10
nx9500-6C8809(config-rf-domain-test)#
```

In the preceding example, the 'host' element of the network-group alias '\$test' has been overridden. But the 'network' and 'address-range' elements have been retained as is.

#### Related Commands

**no (rf-domain-config-mode)** on page 483 Removes a network, network-group, network-service, VLAN, or string alias from this RF Domain

## channel-list

Configures the channel list advertised by the AP radios. This command also enables dynamic update of a channel list.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
channel-list [2.4GHz|5GHz|5GHZ-Hi|5GZ-Lo|dynamic]
channel-list dynamic
channel-list [2.4GHz|5GHz] <CHANNEL-LIST>
channel-list 5GHz-Hi <CHANNEL-LIST>
channel-list 5GHz-Lo <CHANNEL-LIST>
```

#### Parameters

```
channel-list dynamic
```

|         |  |
|---------|--|
| dynamic | Configure this setting to enable the dynamic channel listing mode for smart scans in the 2.4 and 5 GHz bands. This setting is disabled by default. |
|---------|--|

```
channel-list 5GHz-Hi <CHANNEL-LIST>
```

|                        |  |
|------------------------|--|
| 5GHz-Hi <CHANNEL-LIST> | <p>In case of AP510i/e and AP56i/h access points functioning in the dual 5GHz mode, use this command to configure the channel list advertised by radios operating in 5GHz high frequency band mode.</p> <ul style="list-style-type: none"> <li>• &lt;CHANNEL-LIST&gt; – Specify the list of channels (100 - 165) separated by commas or hyphens.</li> </ul> <p><b>Note:</b> Formoreinformation on the software modes supported on the AP510i/e and AP560i/h model access points, see <a href="#">rf-mode</a> on page 1132.</p> |
|------------------------|--|

```
channel-list 5GHz-Lo <CHANNEL-LIST>
```

|                        |   |
|------------------------|---|
| 5GHz-Lo <CHANNEL-LIST> | <p>In case of AP510i/e and AP56i/h access points functioning in the dual 5GHz mode, use this command to configure the channel list advertised by radios operating in 5GHz low frequency band mode.</p> <ul style="list-style-type: none"> <li>• &lt;CHANNEL-LIST&gt; – Specify the list of channels (36 - 64) separated by commas or hyphens.</li> </ul> <p><b>Note:</b> Formoreinformation on the software modes supported on the AP510i/e and AP560i/h model access points, see <a href="#">rf-mode</a> on page 1132.</p> |
|------------------------|---|

### Examples

```

nx9500-6C8809(config-rf-domain-default)#channel-list 2.4GHz 1-10
nx9500-6C8809(config-rf-domain-default)#show context
rf-domain default
no country-code
channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
nx9500-6C8809(config-rf-domain-default)#

```

### Related Commands

|--|--|
| <a href="#">no (rf-domain-config-mode)</a> on page 483 | Removes the list of channels configured on the selected RF Domain for 2.4 GHz and 5.0 GHz bands. Also disables dynamic update of a channel list. |
|--|--|

## contact

Configures the network administrator's contact details. The network administrator is responsible for addressing problems impacting the network.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
contact <WORD>
```

### Parameters

```
contact <WORD>
```

|                |   |
|----------------|---|
| contact <WORD> | Specify contact details, such as name and number. |
|----------------|---|

#### Examples

```

nx9500-6C8809(config-rf-domain-default)#contact Bob+14082778691
nx9500-6C8809(config-rf-domain-default)#show context
rf-domain default
  contact Bob+14082778691
  no country-code
  channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
nx9500-6C8809(config-rf-domain-default)#

```

#### Related Commands

|                            |   |

| no (rf-domain-config-mode) | Removes the network administrator's contact details on page 483 |
|----------------------------|---|

### control-vlan

Configures the VLAN designated for traffic control in this RF Domain

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
control-vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

#### Parameters

```
control-vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

|                         |   |
|-------------------------|---|
| control-vlan [<1-4094>] | Specify the VLAN ID from 1 - 4094. Alternately, use a vlan-alias to identify the control VLAN. If using a vlan-alias, ensure that the alias is existing and configured. |
| <VLAN-ALIAS-NAME>]      |   |

#### Examples

```

nx9500-6C8809(config-rf-domain-default)#control-vlan 1
nx9500-6C8809(config-rf-domain-default)#show context
rf-domain default
  contact Bob+14082778691
  no country-code
  channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
  control-vlan 1
nx9500-6C8809(config-rf-domain-default)#

```

#### Related Commands

|                            |  |
|----------------------------|--|
| no (rf-domain-config-mode) | Disables the VLAN designated for controlling RF Domain traffic on page 483 |
|----------------------------|--|

### controller-managed

Configures the RF Domain manager as the adopting controller.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
controller-managed
```

Parameters

```
None
```

Examples

```
nx9500-6C8809(config-rf-domain-test)#controller-managed
nx9500-6C8809(config-rf-domain-test)#show context
rf-domain test
country-code in
controller-managed
network-alias techPubs host 192.168.13.8
network-alias techPubs address-range 192.168.13.10 to 192.168.13.15
service-alias testing index 10 proto 9 destination-port range 21 21
nx9500-6C8809(config-rf-domain-test)#
```

Related Commands

country-code

Configures a RF Domain's country of operation. Since device channels transmit in specific channels unique to the country of operation, it is essential to configure the country code correctly or risk using illegal operation.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
country-code <WORD>
```

Parameters

```
country-code <WORD>
```

|              |   |
|--------------|---|
| country-code | Configures the RF Domain's country of operation   |
| <WORD>       | Specify the two (2) letter ISO-3166 country code. |

Examples

```
nx9500-6C8809(config-rf-domain-default)#country-code ?
WORD  The 2 letter ISO-3166 country code
ae    United Arab Emirates
ag    Antigua and Barbuda

## geo-coordinates

Configures the longitude and latitude of the RF Domain in order to fix its exact geographical location on a map. Use this command to define the geographical area where a common set of device configurations are deployed and managed by this RF Domain policy.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
geo-coordinates <-90.0000-90.0000> <-180.0000-180.0000>
```

### Parameters

```
geo-coordinates <-90.0000-90.0000> <-180.0000-180.0000>
```

|   |  |
|---|--|
| geo-coordinates<br><-90.0000-90.0000><br><-180.0000-180.0000> | Configures the geo-coordinates of this RF Domain <ul style="list-style-type: none"> <li>• &lt;-90.0000-90.0000&gt; – Specify the latitude from -90.0000 - 90.0000.</li> <li>• -180.0000-180.0000 – Specify the longitude from -180.0000 - 180.0000.</li> </ul> |

|---|---|

layout

Configures the RF Domain's layout in terms of area, floor, and location on a map. It allows users to place APs across the deployment map. A maximum of 256 layouts is permitted.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
layout [area|description|floor|map-location] {(area|description|floor|map-location)}
layout [area <AREA-NAME>|description <LINE>|floor <FLOOR-NAME> {<1-4094>}|
map-location <URL> units [feet|meters]] {(area <AREA-NAME>|description <LINE>|
floor <FLOOR-NAME> {<1-4094>}|map-location <URL> units [feet|meters])}
```

Parameters

```
layout [area <AREA-NAME>|description <LINE>|floor <FLOOR-NAME> {<1-4094>}|
map-location <URL> units [feet|meters]] {(area <AREA-NAME>|description <LINE>|
floor <FLOOR-NAME> {<1-4094>}|map-location <URL> units [feet|meters])}
```

|                    |   |
|--------------------|---|

## location

Configures the RF Domain's physical location. The location could be as specific as the building name or floor number. Or it could be generic and include an entire site. The location defines the physical area where a common set of device configurations are deployed and managed by an RF Domain policy.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
location <WORD>
```

### Parameters

```
location <WORD>
```

|                 |  |
|-----------------|--|
| location <WORD> | Configures the RF Domain location by specifying the area or building name <ul style="list-style-type: none"> <li>• &lt;WORD&gt; – Specify the location.</li> </ul> |
|-----------------|--|

## Examples

```

nx9500-6C8809(config-rf-domain-default)#location SanJose

| <p><b>no (rf-domain-config-mode)</b> on Removes the RF Domain's location configuration<br/>page 483</p> |
|---|

**location-server**

Configures the ExtremeLocation server's hostname on the RF Domain. When configured, RF Domain access points use a Websocket to forward 802.11 frames and BLE beacons to the specified ExtremeLocation server.

Starting with WiNG 7.1.2, AP5XX APs will not use WIPS to collect WiFi packets and BLE (iBeacons and Eddystone) beacons. The information will be collected in the Collector Table and forwarded to the ExtremeLocation server from the Collector Table.

ExtremeLocation is a highly scalable indoor locationing platform that gathers location-related analytics, such as visitor trends, peak and off-peak times, dwell time, heat-maps, etc. to enable entrepreneurs deeper visibility at a venue. To enable the location tracking system, the ExtremeLocation server should be up and running and the RF Domain configuration should point to the ExtremeLocation server.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
location-server 1 ip <EL-SERVER-IP/HOSTNAME> {port <1-65535>}
```

## Parameters

```
location-server 1 ip <IP/HOSTNAME> {port <1-65535>}
```

|                                    |   |
|------------------------------------|---|
| location-server 1 ip <IP/HOSTNAME> | Identifies the ExtremeLocation server by its hostname <ul style="list-style-type: none"> <li>1 – Sets the server ID as 1. As of now only one ExtremeLocation server is configurable.</li> <li>ip &lt;IP/HOSTNAME&gt; – Enter ExtremeLocation server's hostname. This is the ExtremeLocation server designated to receive RSSI scan data from a WiNG dedicated sensor.</li> </ul> <p><b>Note:</b> Enter the server's hostname and not the IP address, as the IP address is likely to change periodically in order to balance load across multiple Location server instances.</p> |
| port <1-65535>                     | Optional. Configures the port where the ExtremeLocation server is reachable. <ul style="list-style-type: none"> <li>&lt;1-65535&gt; – Specify a port from 1 - 65535.</li> </ul> <p><b>Note:</b> By default, the ExtremeLocation server is reachable on port 443.</p>  |

### Examples

```

nx9500-6C8809(config-rf-domain-test)#location-server 1 ip feeds.extremelocation.com port
200
nx9500-6C8809(config-rf-domain-test)#show context
rf-domain test
no country-code
location-server 1 ip feeds.extremelocation.com port 200
nx9500-6C8809(config-rf-domain-test)#

```

### Enabling Data (WiFi and BLE Beacons) forwarding to the ExtremeLocation Server

#### 1 Configure sensor policy.

```
nx9500-6C8809(config-sensor-policy-ble)#rssi-interval-duration 35
```

#### 2 In the RF Domain context:

##### a Use the sensor policy.

```
nx9500-6C8809(config-rf-domain-test)#use sensor-policy ble
```

##### b Configure the ExtremeLocation server hostname.

```
nx9500-6C8809(config-rf-domain-test)#location-server 1 ip feeds.extremelocation.com
```

##### c Configure the ExtremeLocation TenantID.

```
nx9500-6C8809(config-device-94-9B-2C-13-40-38)#location-tenantid 1234
```

### Related Commands

|  |   |
|--|---|
| <code>no (rf-domain-config-mode) on</code><br>page 483 | Removes the ExtremeLocation server configurations |
|--|---|

### location-tenantid

Configures the ExtremeLocation Tenant's account number. ExtremeLocation Tenants, at the time of registration, are communicated (via, email) an account number uniquely identifying the Tenant. Configure this account number in the RF Domain context. When configured, data (802.11 frames and/or BLE beacons) pushed to the ExtremeLocation server, include the Tenant's account number along with

the reporting RF Domain manager's MAC address. Including the Tenant account number reinforces the Tenant's identity.

#### Note

For information on enabling data forwarding to the ExtremeLocation server, see [location-server](#) on page 470.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
location-tenantid <WORD>
```

#### Parameters

```
location-tenantid <WORD>
```

`location-tenantid <WORD>` Configures the ExtremeLocation Tenant's account number

- `<WORD>` – Specify the account number.

#### Examples

```
nx9500-6C8809(config-rf-domain-ExLocTenant1)#location-tenantid 123456
nx9500-6C8809(config-rf-domain-ExLocTenant1)#show context
rf-domain ExLocTenant1
country-code us
location-tenantid 123456
nx9500-6C8809(config-rf-domain-ExLocTenant1)#
```

#### Related Commands

`no (rf-domain-config-mode)` Removes the ExtremeLocation Tenant's account number configured on the RF Domain on page 483

### mac-name

Configures a relevant name for each MAC address. Use this command to associate client names to specific connected client MAC addresses for improved client management.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
mac-name <MAC> <NAME>
```

#### Parameters

```
mac-name <MAC> <NAME>
```

|          |   |
|----------|---|
| mac-name | Assigns a user-friendly name to this RF Domain's member access point's connected client to assist in its easy recognition   |
| <MAC>    |   |
| <NAME>   | <ul style="list-style-type: none"> <li>• &lt;MAC&gt; - Specify the MAC address</li> <li>• &lt;NAME&gt; - Specify the client name for the specified MAC address. The name specified here will be used in events and statistics.</li> </ul> |

### Examples

```

nx9500-6C8809(config-rf-domain-default)#mac-name 11-22-33-44-55-66 TestDevice

```

## override-smart-rf

Enables dynamic channel switching for Smart RF radios. This command allows you to configure an override list of channels that Smart RF can use for channel compensations on 2.4 GHz and 5.0 GHz radios.

When a radio fails or is faulty, a Smart RF policy provides automatic recovery by instructing neighboring access points to increase their transmit power to compensate for the coverage loss. Once correct access point placement has been established, Smart-RF can optionally be leveraged for automatic detector radio selection. Smart-RF uses detector radios to monitor RF events and can ensure availability of adequate detector coverage.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
override-smartrf channel-list [2.4GHz|5GHz] <CHANNEL-LIST>
```

### Parameters

```
override-smartrf channel-list [2.4GHz|5GHz] <CHANNEL-LIST>
```

## override-wlan

Configures RF Domain level overrides for a WLAN

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

override-wlan <WLAN-NAME> [shutdown|ssid|template|vlan-pool|wep128|wpa-wpa2-psk]
override-wlan <WLAN-NAME> [shutdown|ssid <SSID>|template <TEMPLATE-NAME>|vlan-pool
<1-4094> {limit <0-8192>}]
override-wlan <WLAN-NAME> wpa-wpa2-psk [0 <WORD>|2 <WORD>]
override-wlan <WLAN-NAME> wep128 [key <1-4> hex [0 <WORD>|2 <WORD>]|transmit-key <1-4>]

```

## Parameters

```

override-wlan <WLAN-NAME> [shutdown|ssid <SSID>|template <TEMPLATE-NAME>|vlan-pool
<1-4094> {limit <0-8192>}]

```

|                                     |   |
|-------------------------------------|---|
| <WLAN-NAME>                         | Configures the WLAN name. If applying RF Domain level overrides to an existing WLAN, specify its name. If creating a new WLAN, specify a name not exceeding 32 characters and representing the WLAN's coverage area.  |
| shutdown                            | Shuts down WLAN operation on all mapped radios  |
| ssid <SSID>                         | <p>Configures a override SSID associated with this WLAN</p> <ul style="list-style-type: none"> <li>&lt;SSID&gt; – Specify the SSID (should not exceed 32 characters in length).</li> </ul> <p>Each WLAN provides associated wireless clients with a SSID. This has limitations, because it requires wireless clients to associate with different SSIDs to obtain QoS and security policies. However, a WiNG-managed RF Domain can have WLANs assigned and advertise a single SSID, and yet allow users to inherit different QoS or security policies.</p>   |
| template <TEMPLATE-NAME>            | <p>Configures a template name for this RF Domain</p> <ul style="list-style-type: none"> <li>&lt;TEMPLATE-NAME&gt; – Specify the template name (should not exceed 32 characters in length).</li> </ul>   |
| vlan-pool <1-4094> {limit <0-8192>} | <p>Configures the override VLANs available to this WLAN</p> <ul style="list-style-type: none"> <li>&lt;1-4094&gt; – Specify the VLAN ID from 1 - 4094.</li> <li>limit &lt;0-8192&gt; – Optional. Sets a limit to the number of users on this VLAN from 0 - 8192. The default is 0.</li> </ul> <p>Controllers and service platforms allow the mapping of a WLAN to more than one VLAN. Wireless clients associating with a WLAN are assigned VLANs, from the pool representative of the WLAN, in a way that ensures proper load balancing across VLANs. Clients are tracked per VLAN, and assigned to the least used/loaded VLAN. Client VLAN usage is tracked on a per-WLAN basis. The maximum allowed client limit is 8192 per VLAN.</p> |

```

override-wlan <WLAN-NAME> wpa-wpa2-psk [0 <WORD>|2 <WORD>]

```

|                              |   |
|------------------------------|---|
| <WLAN-NAME>                  | Configures the WLAN name. If applying RF Domain level overrides to an existing WLAN, specify its name. If creating a new WLAN, specify a name not exceeding 32 characters and representing the WLAN's coverage area. After creating the WLAN, configure its override parameters.  |
| wpa-wpa2-psk<br><PASSPHRASE> | <p>Overrides a WLAN's existing WPA-WPA2 pre-shared key or passphrase at the RF Domain level. WPA2 is a newer 802.11i standard that provides wireless security that is stronger than <i>Wi-Fi Protected Access</i> (WPA) and WEP.</p> <ul style="list-style-type: none"> <li>&lt;PASSPHRASE&gt; – Specify a WPA-WPA2 key or passphrase. It is an alphanumeric string of 8 to 64 ASCII characters or 64 HEX characters as the primary string, which both the transmitting and receiving authenticators must share in this new override PSK. The alphanumeric string allows character spaces. The string is converted to a numeric value. This passphrase saves the you the necessity of entering the 256-bit key each time keys are generated.</li> </ul> |

```
override-wlan <WLAN-NAME> wep128 [key <1-4> hex [0 <WORD>|2 <WORD>]|transmit-key <1-4>]
```

|                                   |  |
|-----------------------------------|--|
| <WLAN-NAME>                       | Configures the WLAN name. If applying RF Domain level overrides to an existing WLAN, specify its name. If creating a new WLAN, specify a name not exceeding 32 characters and representing the WLAN's coverage area. After creating the WLAN, configure its override parameters.   |
| wep128                            | Overrides a WLAN's existing WEP128 keys at the RF Domain level (not the profile level). WEP128 uses a 104 bit key, which is concatenated with a 24-bit <i>initialization vector</i> (IV) to form the RC4 traffic key. WEP may be all a small-business user needs for the simple encryption of wireless data on the WLAN. However, networks that require more security are at risk from a WEP flaw. WEP is only recommended if there are client devices incapable of using higher forms of security. The existing 802.11 standard alone offers administrators no effective method to update keys. |
| key <1-4> hex [0 <WORD> 2 <WORD>] | <p>Configures the WEP128 key. A total of four keys can be configured.</p> <ul style="list-style-type: none"> <li>&lt;1-4&gt; – Select the key index from 1- 4. <ul style="list-style-type: none"> <li>hex – Configures a hexadecimal key <ul style="list-style-type: none"> <li>&lt;WORD&gt; – Specify the WEP128/Keyguard key (should not exceed 26 hexadecimal characters in length).</li> </ul> </li> </ul> </li> </ul>   |
| transmit-key <1-4>                | <p>Configures transmit WEP/Keyguard key settings</p> <ul style="list-style-type: none"> <li>&lt;1-4&gt; – Transmit the key identified by the key index specified here. Specify the index from 1 - 4.</li> </ul>  |

```

### Related Commands

**no (rf-domain-config-mode)** Resets the override WLAN settings to default  
on page 483

**sensor-server**

Configures an AirDefense sensor server on this RF Domain. Sensor servers allow network administrators to monitor and download data from multiple sensors remote locations using Ethernet TCP/IP or serial communications. This enables administrators to respond quickly to interferences and coverage problems.

Access point radios can function as a sensor and upload information to a dedicated AirDefense server (external to the controller). Unique AirDefense server configurations can be used by RF Domains to ensure a WIPS server configuration is available to support the unique data protection needs of individual RF Domains. The access point works in conjunction with a dedicated AirDefense server forms a *Wireless Intrusion Protection System* (WIPS).

WIPS protects the controller managed network, wireless clients and access point radio traffic from attacks and unauthorized access. WIPS provides tools for standards compliance and around-the-clock wireless network security in a distributed environment. WIPS allows administrators to identify and accurately locate attacks, rogue devices and network vulnerabilities in real time and permits both a wired and wireless lockdown of wireless device connections upon acknowledgment of a threat.

WIPS is not supported on a WLAN basis, rather sensor functionality is supported on the access point radio(s) available to each controller managed WLAN. When an access point radio is functioning as a WIPS sensor, it is able to scan in sensor mode across all legal channels within the 2.4 and 5.0 GHz bands. Sensor support requires a AirDefense WIPS Server on the network. Sensor functionality is not provided by the access point alone. The access point works in conjunction with a dedicated WIPS server.

**Note**

Starting with the WiNG 7.2.0 release, AP5XX model access points are capable of capturing WPA3 frames in the sensor mode. For more information, see [rf-mode](#) on page 1132.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
sensor-server <1-3> ip <IP/HOSTNAME> {port [443|<1-65535>]}
```

**Parameters**

```
sensor-server <1-3> ip <IP/HOSTNAME> {port [443|<1-65535>]}
```

**timezone**

Configures the RF Domain's geographic time zone. By default all WiNG devices are shipped with the time zone and time format set to UTC (*Universal Time Coordinated*) and 24-hour clock respectively. If the time zone is not reset, all devices within the RF Domain will display time relative to the UTC - Greenwich Time. Resetting the time zone is recommended, especially for RF Domains deployed across different geographical locations. The time zone can either be set on a specific device or on an RF Domain. When configured as RF Domain setting, it applies to all devices within the domain. For more information on configuring the time zone on a device, see [timezone](#) on page 1304 (device config mode).

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
timezone <TIMEZONE>
```

## Parameters

```
timezone <TIMEZONE>
```

|                 |  |
|-----------------|--|
| time <TIMEZONE> | Specify the RF Domain's time zone. The configured time zone will apply to all devices within the selected RF Domain. |
|-----------------|--|

## Examples

```

nx9500-6C8809(config-rf-domain-default)#timezone America/Los_Angeles
nx9500-6C8809(config-rf-domain-default)#show context
rf-domain default
contact Bob+14082778691
timezone America/Los_Angeles
stats update-interval 200
country-code us
sensor-server 2 ip 172.16.10.3
override-smartrf channel-list 2.4GHz 1,2,3
override-wlan test vlan-pool 2 limit 20
layout area Ecospace floor Floor1 map-location www.firstfloor.com units meters
nx9500-6C8809(config-rf-domain-default)#

```

Use [TAB] to view the built-in timezones.

```
nx9500-6C8809(config-rf-domain-test)#timezone <TAB>
Africa/      Asia/      Atlantic/    Australia/  CET          CST6CDT
EET          EST5EDT      Etc/        Europe/     MST7MDT      Pacific/
PST8PDT      US/         America/
nx9500-6C8809(config-rf-domain-test)#
```

Each of these time zones are further differentiated into sub time zones. For example, as shown in the following example:

```
nx9500-6C8809(config-rf-domain-test)#timezone Africa/
Africa/Cairo      Africa/Casablanca  Africa/Harare
Africa/Johannesburg  Africa/Lagos      Africa/Nairobi
nx9500-6C8809(config-rf-domain-test)#
```

|---|---------------------------------|
| <code>no (rf-domain-config-mode)</code> on page 483 | Removes a RF Domain's time zone |
|---|---------------------------------|

tree-node

Configures the hierarchical (tree-node) structure under which this RF Domain is located

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
tree-node [campus|city|country|region] { (campus|city|country|region) }
```

Parameters

```
tree-node [campus|city|country|region] { (campus|city|country|region) }
```

|           |  |
|-----------|--|
| tree-node | Configures the hierarchical tree structure defining the RF Domain's location. The tree node hierarchy can be configured in any order, but will always appear as: <code>country &gt; region &gt; city &gt; campus</code> . Further, a higher node, such as country, cannot be defined under a lower node, such as region. An RF Domain can be placed under any one of the tree nodes. But, an RF Domain at the country level may have all four nodes defined. Whereas, an RF Domain restricted to a campus, cannot have the country, city, and region nodes. At least one of these four nodes must be defined. This feature is disabled by default. |
| campus    | Configures the campus name for this RF Domain <ul style="list-style-type: none"><li>• campus-description - Provide a brief decription of the campus.</li></ul>   |
| city      | Configures the city for this RF Domain <ul style="list-style-type: none"><li>• city-description - Provide a brief description of the city.</li></ul>   |
| country   | Configures the country for this RF Domain  |
| region    | Configures the region for this RF Domain   |

Usage Guidelines

The following points need to be taken into consideration when creating the tree-node structure:

- Adding a *country* first is a good idea since region, city, and campus can all be added as sub-nodes in the tree structure. However, the selected country is an invalid tree node until a RF Domain is mapped.
- A *city* and *campus* can be added in the tree structure as sub-nodes under a region. An RF Domain can be mapped anywhere down the hierarchy for a region and not just directly under a country. For example, a region can have city, campus, and one RF Domain mapped.
- Only a campus can be added as a sub-node under a city. The city is an invalid tree node until a RF Domain is mapped somewhere within the directory tree.
- A campus is the last node in the hierarchy before a RF Domain, and it is not valid unless it has a RF Domain mapped.
- After creating the tree structure do a commit and save for the tree configuration to take effect and persist across reboots.

#### Examples

```
ap505-13403B(config-rf-domain-default)#tree-node campus SanJoseUniversity
city SanJose country us
ap505-13403B(config-rf-domain-default)#show context
rf-domain default
country-code us
tree-node country us city SanJose campus SanJoseUniversity
ap505-13403B(config-rf-domain-default)#t
```

|---|---|

### use (rf-domain-config-mode)

Associates the following with an RF Domain: database policy, NSight policy, sensor policy, Smart RF policy, WIPS policy, RTL server policy, and Web filtering license.

#### Syntax

```
use [ble-data-export-policy|database-policy|license|nsight-policy|
rtl-server-policy|sensor-policy|smart-rf-policy|wips-policy]
use [ble-data-export-policy <POLICY-NAME>|database-policy <DATABASE-POLICY-NAME>|
license <WEB-FILTERING-LICENSE>|nsight-policy <NSIGHT-POLICY-NAME>|
rtl-server-policy <RTL-SERVER-POLICY-NAME>|sensor-policy <SENSOR-POLICY-NAME>|
smart-rf-policy <SMART-RF-POLICY-NAME>|wips-policy <WIPS-POLICY-NAME>]
```

#### Parameters

```
use [ble-data-export-policy <POLICY-NAME>|database-policy <DATABASE-POLICY-NAME>|
license <WEB-FILTERING-LICENSE>|nsight-policy <NSIGHT-POLICY-NAME>|
rtl-server-policy <RTL-SERVER-POLICY-NAME>|sensor-policy <SENSOR-POLICY-NAME>|
smart-rf-policy <SMART-RF-POLICY-NAME>|wips-policy <WIPS-POLICY-NAME>]
```

|  |  |
|--|--|
| use  | Associates the following policies with the RF Domain: ble data export policy, database policy, NSight policy, sensor policy, Smart RF policy, WIPS policy. It also applies a Web filtering license to the selected RF Domain.  |
| ble-data-export-policy <POLICY-NAME>       | <p>Associates a BLE data export policy with this RF Domain</p> <ul style="list-style-type: none"> <li>• &lt;POLICY-NAME&gt; – Specify the BLE data export policy name (should be existing and configured). When associated, access points within the RF Domain send BLE data to an external, third-party locationing-server using a Websocket and REST API. The BLE data export policy provides the external, locationing-server's URL. For more information on configuring the BLE data export policy, see <a href="#">ble-data-export-policy</a> on page 208.</li> </ul> |
| database-policy <DATABASE-POLICY-NAME>     | <p>Associates a database policy with the selected RF Domain</p> <ul style="list-style-type: none"> <li>• &lt;DATABASE-POLICY-NAME&gt; – Specify the database policy name (should be existing and configured).</li> </ul> <p><b>Note:</b><br/>This feature is not supported on the AP5XX model access points.</p>   |
| license <WEB-FILTERING-LICENSE>            | <p>Obtains the specified Web filtering license from the adopting controller</p> <ul style="list-style-type: none"> <li>• &lt;WEB-FILTERING-LICENSE&gt; – Specify the WEBF license name.</li> </ul>   |
| nsight-policy <NSIGHT-POLICY-NAME>         | <p>Associates an NSight policy with the selected RF Domain</p> <ul style="list-style-type: none"> <li>• Specify the NSight policy name (should be existing and configured). When applied, it enables the RF Domain manager to gather statistical data from access points within the domain and forward to the external Extreme NSight server specified in the NSight policy.</li> </ul>  |
| rtl-server-policy <RTL-SERVER-POLICY-NAME> | <p>Associates an <i>Real Time Locationing</i> (RTL) server policy with the selected RF Domain</p> <ul style="list-style-type: none"> <li>• &lt;RTL-SERVER-POLICY-NAME&gt; – Specify the RTL server policy name (should be existing and configured)</li> </ul>  |
| sensor-policy <SENSOR-POLICY-NAME>         | <p>Associates a sensor policy with the selected RF Domain</p> <ul style="list-style-type: none"> <li>• &lt;SENSOR-POLICY-NAME&gt; – Specify the sensor policy name (should be existing and configured).</li> </ul>   |

|  |  |
|--|--|
| smart-rf-policy <SMART-RF-POLICY-NAME> | <p>Associates a Smart RF policy with the selected RF Domain. When associated, the Smart RF policy provides automatic recovery from coverage loss (due to failed or faulty radio) by instructing neighboring access points to increase their transmit power.</p> <p>Once correct access point placement has been established, Smart-RF can optionally be leveraged for automatic detector radio selection. Smart-RF uses detector radios to monitor RF events to ensure availability of adequate detector coverage.</p> <ul style="list-style-type: none"> <li>• &lt;SMART-RF-POLICY-NAME&gt; – Specify the Smart RF policy name (should be existing and configured).</li> </ul> <p><b>Note:</b> SMART RF is only applicable on AP510i/e and AP560i/h functioning in the dual-5GHz mode. That is, on the AP, RF mode for both radios is set to WLAN-5GHz.</p> |
| wips-policy <WIPS-POLICY-NAME>         | <p>Associates a WIPS policy with the selected RF Domain. A WIPS policy provides protection against wireless threats and acts as a key layer of security complementing wireless VPNs, encryption and authentication. A WIPS policy uses a dedicated sensor for actively detecting and locating rogue AP devices. After detection, WIPS uses mitigation techniques to block the devices by manual termination, air lockdown, or port suppression.</p> <ul style="list-style-type: none"> <li>• &lt;WIPS-POLICY-NAME&gt; – Specify the WIPS policy name (should be existing and configured).</li> </ul>   |

### Examples

```

nx9500-6C8809(config-rf-domain-default)#use smart-rf-policy Smart-RF1

### Related Commands

|   |   |
|---|---|
| <b>no (rf-domain-config-mode)</b> on page 483 | Removes policies associated with this RF Domain |
|---|---|

### no (rf-domain-config-mode)

Negates a command or reverts configured settings to their default. When used in the RF Domain context, the no command removes the RF Domain settings, or reverts them to default values.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

no [alias|channel-list|contact|control-vlan|controller-managed|country-code|geo-
coordinates|layout|location|location-server|location-tenantid|mac-name|nsight-sensor|
override-smartrf|override-wlan|sensor-server|stats|timezone|tree-node|use]

no [channel-list [2.4GHz|5GHz|dynamic]|contact|control-vlan|controller-managed|country-
code|location|location-server 1|location-tenantid|mac-name <MAC>|nsight-sensor|sensor-
server <1-3>|stats update-interval|timezone|tree-node]

no alias [address-range|host|network|network-group [address-range|host|network]|network-
service|number|string|vlan] <ALIAS-NAME>

no layout {(area <AREA-NAME>|floor <FLOOR-NAME>)}

no override-smartrf channel-list [2.4GHz|5GHz]

no override-wlan <WLAN-NAME> [shutdown|ssid|template|vlan-pool [<1-4094>|all]|wep128 [key
<1-3>|transmit-key]|wpa-wpa2-psk]

no use [ble-data-export-policy|database-policy|license|nsight-policy|rtl-server-policy|
sensor-policy|smart-rf-policy|wips-policy]

```

## Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes or reverts this RF Domain's settings based on the parameters passed |
|-----------------|---|

## Examples

The following example shows the default RF Domain settings before the 'no' commands are executed:

```

nx9500-6C8809(config-rf-domain-default)#show context
rf-domain default
  location SanJose
  contact Bob+14082778691
  country-code us
  channel-list 2.4GHz 1,2,3,4,5,6,7,8,9,10
  mac-name 11-22-33-44-55-66 TestDevice
  layout area Ecospace floor Floor1 map-location www.firstfloor.com units meters
  control-vlan 1
nx9500-6C8809(config-rf-domain-default)#
nx9500-6C8809(config-rf-domain-default)#no channel-list 2.4GHz 1-10
nx9500-6C8809(config-rf-domain-default)#no mac-name 11-22-33-44-55-66
nx9500-6C8809(config-rf-domain-default)#no location
nx9500-6C8809(config-rf-domain-default)#no control-vlan

```

The following example shows the default RF Domain settings after the 'no' commands are executed:

```

nx9500-6C8809(config-rf-domain-default)#show context
rf-domain default
  contact Bob+14082778691
  country-code us
  layout area Ecospace floor Floor1 map-location www.firstfloor.com units meters
nx9500-6C8809(config-rf-domain-default)#

```

## nx5500

Adds an integrated NX 5500 series service platform to the network. If a profile for this service platform is not available, a new profile is created.

*Supported in the following platforms:*

- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

*Syntax*

```
nx5500 <DEVICE-NX5500-MAC>
```

*Parameters*

```
nx5500 <DEVICE-NX5500-MAC>
```

|                     |   |
|---------------------|---|
| <DEVICE-NX5500-MAC> | Specifies the MAC address of a NX 5500 series service platform. |
|---------------------|---|

*Examples*

```
nx9500-6C8809(config)#nx5500 B4-C7-02-3C-FA-6E
nx9500-6C8809(config-device-B4-C7-02-3C-FA-6E)#
```

## nx7500

Adds an integrated NX7500 series service platform to the network. If a profile for service platform is not available, a new profile is created.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

*Syntax*

```
nx75xx <DEVICE-NX75XX-MAC>
```

*Parameters*

```
nx75xx <DEVICE-NX75XX-MAC>
```

|                     |   |
|---------------------|---|
| <DEVICE-NX75XX-MAC> | Specifies the MAC address of the NX7500 series service platform |
|---------------------|---|

*Examples*

```
nx9500-6C8809(config)#nx75xx B4-C9-81-6C-FA-7C
nx9500-6C8809(config-device-B4-C9-81-6C-FA-7C)#show context
nx75xx B4-C9-81-6C-FA-7C

## nx9000

Adds an NX9500 series service platform to the network

*Supported in the following platforms:*

- Service Platforms — NX9500, NX9600, VX9000

### Syntax

```
nx9000 <DEVICE-NX9XXX-MAC>
```

### Parameters

```
nx9000 <DEVICE-NX9XXX-MAC>
```

|                     |  |
|---------------------|--|
| <DEVICE-NX9000-MAC> | Specifies the MAC address of a NX9500 series service platform. |
|---------------------|--|

### Examples

```
nx9500-6C8809(config)#nx9000 B4-C7-89-7C-81-08
nx9500-6C8809(config-device-B4-C7-89-7C-81-08)#
```

## roaming-assist-policy

Configures a roaming assist policy that enables access points to assist wireless clients in making roaming decisions, such as which access point to connect, etc.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
roaming-assist-policy <ROAMING-ASSIST-POLICY-NAME>
```

### Parameters

```
roaming-assist-policy <ROAMING-ASSIST-POLICY-NAME>
```

<ROAMING-ASSIST-POLICY-NAME> Specify the roaming-assist policy name. If a policy with the specified name does not exist, it is created.

### Examples

```
nx9500-6C8809(config)#roaming-assist-policy test
nx9500-6C8809(config-roaming-assist-policy-test)#?
Roaming Assist Mode commands:
  action          Configure action - action is deauth / log /
                  assisted-roam
  aggressiveness  Configure the roaming aggressiveness for a wireless
                  client
  detection-threshold Configure the detection threshold - when exceeded,
                  client monitoring starts
  disassoc-time   Configure the disassociation time - time after which a
                  disassociation is sent
  handoff-count   Configure the handoff count - number of times client
                  can exceed handoff threshold
  handoff-threshold Configure the handoff threshold - when exceeds an
                  action is taken.
  monitoring-interval Configure the monitoring interval - interval at which
                  client monitoring occurs
  no              Negate a command or set its defaults
  sampling-interval Configure the sampling interval - interval at which
                  client rssi values are checked

  clrscr          Clears the display screen
  commit          Commit all changes made in this session
  end             End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service        Service Commands
  show           Show running system information
  write          Write running configuration to memory or terminal

nx9500-6C8809(config-roaming-assist-policy-test)#
```

### Related Commands

## role-policy

Creates a role-based firewall policy and enters its configuration mode

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
role-policy <ROLE-POLICY-NAME>
```

Parameters

```
role-policy <ROLE-POLICY-NAME>
```

|                    |  |
|--------------------|--|
| <ROLE-POLICY-NAME> | Specify the role policy name. If a policy with the specified name does not exist, it is created. |
|--------------------|--|

Examples

```
nx9500-6C8809(config)#role-policy role1
nx9500-6C8809(config-role-policy-role1)#?
Role Policy Mode commands:
  default-role      Configuration for Wireless Clients not matching any role
  ldap-deadperiod   Ldap dead period interval
  ldap-query        Set the ldap query mode
  ldap-server       Add a ldap server
  ldap-timeout      Ldap query timeout interval
  no                Negate a command or set its defaults
  user-role         Create a role

  clrscr            Clears the display screen
  commit            Commit all changes made in this session
  do                Run commands from Exec mode
  end               End current mode and change to EXEC mode
  exit              End current mode and down to previous mode
  help              Description of the interactive help system
  revert            Revert changes
  service           Service Commands
  show              Show running system information
  write             Write running configuration to memory or terminal

nx9500-6C8809(config-role-policy-role1)#
```

Related Commands

**Note**  
For more information on Role Policy commands, see [Role Policy](#) on page 1612.

route-map

Creates a dynamic BGP (*Border Gateway Protocol*) route map and enters its configuration mode

BGP route maps are used by network administrators to define rules controlling redistribution of routes between routers and routing processes. These route maps are also used to control and modify routing information.

*Supported in the following platforms:*

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
route-map <ROUTE-MAP-NAME>
```

### Parameters

```
route-map <ROUTE-MAP-NAME>
```

|                            |   |
|----------------------------|---|
| route-map <ROUTE-MAP-NAME> | Creates a new BGP route map and enters its configuration mode |
|----------------------------|---|

### Examples

```
nx9500-6C8809(config)#route-map test
nx9500-6C8809(config-dr-route-map-test)#?
Route Map Mode commands:
  deny      Add a deny route map rule to deny set operations
  no        Negate a command or set its defaults
  permit     Add a permit route map rule to permit set operations

  clrscr    Clears the display screen
  commit    Commit all changes made in this session
  do        Run commands from Exec mode
  end       End current mode and change to EXEC mode
  exit      End current mode and down to previous mode
  help      Description of the interactive help system
  revert    Revert changes
  service   Service Commands

|----------------|---|
| no on page 609 | Removes an existing dynamic BGP route map |
|----------------|---|

## routing-policy

Creates a routing policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
routing-policy <ROUTING-POLICY-NAME>
```

### Parameters

```
routing-policy <ROUTING-POLICY-NAME>
```

|                       |  |
|-----------------------|--|
| <ROUTING-POLICY-NAME> | Specify the role policy name. If the policy does not exist, it is created. |
|-----------------------|--|

### Examples

```
nx9500-6C8809(config)#routing-policy test
nx9500-6C8809(config-routing-policy-test)#?
Routing Policy Mode commands:
  apply-to-local-packets  Use Policy Based Routing for packets generated by
                           the device
  logging                 Enable logging for this Route Map
  no                      Negate a command or set its defaults
  route-map               Create a Route Map
  use                     Set setting to use

  clrscr                  Clears the display screen
  commit                  Commit all changes made in this session
  do                      Run commands from Exec mode
  end                     End current mode and change to EXEC mode
  exit                    End current mode and down to previous mode
  help                    Description of the interactive help system
  revert                  Revert changes
  service                 Service Commands
  show                    Show running system information
  write                   Write running configuration to memory or terminal

nx9500-6C8809(config-routing-policy-test)#
```

### Related Commands

**Note**

For more information on Routing Policy commands, see [Routing Policy](#) on page 1766.

## rtl-server-policy

Creates an RTL server policy and enters its configuration mode. When configured and applied on an access point, this policy enables the sending of RSSI feeds from the access point to a server. The RTL server policy provides the exact location (URL) of the server. The RSSI feeds sent are as per the sensor-policy configured and applied on the access point. Therefore, ensure that a sensor-policy, with the rssi-interval-duration specified, is existing, configured, and applied on the access points.

To initiate RSSI feed posts to the Euclid locationing server, use the RTL server policy on the:

- AP's device/profile context, or
- AP's RF Domain context.

Supported in the following platforms:

- Access Points — AP 505, AP510
- Wireless Controllers — RFS4000
- Service Platforms — NX9500, NX9600, VX9000

Syntax

```
rtl-server-policy <RTL-POLICY-NAME>
```

Parameters

```
rtl-server-policy <RTL-POLICY-NAME>
```

|                   |  |
|-------------------|--|
| <RTL-POLICY-NAME> | Specify the RTL server policy name. If an RTL server policy with the specified name does not exist, it is created. |
|-------------------|--|

```
nx9500-6C8809(config)#rtl-server-policy test
nx9500-6C8809(config-rtl-server-policy-test)#?
RTL Server Policy Mode commands:
  no          Negate a command or set its defaults
  url         Configure the url to send the real time RSSI feed to

  clrscr      Clears the display screen
  commit      Commit all changes made in this session
  do          Run commands from Exec mode
  end         End current mode and change to EXEC mode
  exit        End current mode and down to previous mode
  help        Description of the interactive help system
  revert      Revert changes
  service     Service Commands
  show        Show running system information
  write       Write running configuration to memory or terminal

nx9500-6C8809(config-rtl-server-policy-test)#
```

|  |  |
|--|--|
| no on page 609   | Removes an existing RTL server policy  |
| use (profile/device-config-mode-commands) on page 1251 | Documents the 'use' command in a device's profile or device configuration context. Use this option to associate this RTL server policy to an access point's profile or device.   |
| use (rf-domain-config-mode) on page 481                | Documents the 'use' command in the RF Domain configuration context. Use this option to associate this RTL server policy to an RF Domain. When associated, the policy is applied to all access points within the RF Domain. |

rtl-server-policy-config-commands

The following table summarizes the RTL server policy configuration mode commands:

**Table 25: RTL Server Policy Config Mode Commands**

| Command  | Description                                |
|--|--|
| <code>url</code> on page 492   | Configures the RTL server's URL            |
| <code>no (rtl-server-policy-config-mode-commands)</code> on page 492 | Removes the RTL server's URL configuration |

**url**

Configures the RTL server's exact location. This is the URL at which the server can be reached.

Supported in the following platforms:

- Access Points — AP-7522, AP 7532, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 95XX, NX 96XX, VX 9000

**Syntax**

```
url <URL>
```

**Parameters**

```
url <URL>
```

|                              |  |
|------------------------------|--|
| <code>url &lt;URL&gt;</code> | Configures the RTL server's URL <ul style="list-style-type: none"> <li>• &lt;URL&gt; – Specify the URL.</li> </ul> |
|------------------------------|--|

**Examples**

```
nx9500-6C8809(config-rtl-server-policy-test)#url https://testrtlserver.com
nx9500-6C8809(config-rtl-server-policy-test)#show context
rtl-server-policy test
  url https://testrtlserver.com
nx9500-6C8809(config-rtl-server-policy-test)#
```

**Related Commands**

|  |   |
|--|---|
| <code>no (rtl-server-policy-config-mode-commands)</code> on page 492 | Removes the RTL server's configured URL |
|--|---|

**no (rtl-server-policy-config-mode-commands)**

Removes the locationing server's URL configuration

Supported in the following platforms:

- Access Points — AP-7522, AP 7532, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 95XX, NX 96XX, VX 9000

**Syntax**

```
no <URL>
```

## Parameters

```
no <URL>
```

```
no <URL>
```

Removes the RTL server's URL

## Examples

The following example displays the RTL server policy 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-rtl-server-policy-test)#show context
rtl-server-policy test
  url https://testrtlserver.com
nx9500-6C8809(config-rtl-server-policy-test)#
nx9500-6C8809(config-rtl-server-policy-test)#no url
```

The following example displays the RTL server policy 'test' settings after the 'no' command is executed:

```
nx9500-6C8809(config-rtl-server-policy-test)#show context
rtl-server-policy test
nx9500-6C8809(config-rtl-server-policy-test)#
```

## schedule-policy

Creates a schedule policy and enters its configuration mode. A schedule policy strategically enforces application filter policy rules during administrator assigned intervals.

*Supported in the following platforms:*

- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
schedule-policy <SCHEDULE-POLICY-NAME>
```

## Parameters

```
schedule-policy <SCHEDULE-POLICY-NAME>
```

```
schedule-policy <SCHEDULE-  
POLICY-NAME>
```

Specify the Schedule policy name. If a policy with the specified name does not exist, it is created. The name should not exceed 32 characters in length.

## Examples

```
nx9500-6C8809(config)#schedule-policy test
nx9500-6C8809(config-schedule-policy-test)#?
Schedule Policy Mode commands:
  description  Schedule policy description
  no           Negate a command or set its defaults
  time-rule    Configure a time rule

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit        End current mode and down to previous mode
```

|         |   |
|---------|---|
| help    | Description of the interactive help system        |
| revert  | Revert changes                                    |
| service | Service Commands                                  |
| show    | Show running system information                   |
| write   | Write running configuration to memory or terminal |

```
nx9500-6C8809(config-schedule-policy-test)#
```

Related Commands

|                |                                     |
|----------------|-------------------------------------|
| no on page 609 | Removes an existing schedule policy |
|----------------|-------------------------------------|

schedule-policy-config-commands

The following table summarizes schedule-policy configuration mode commands:

Table 26: Schedule Policy Config Mode Commands

| Command   | Description  |
|---|--|
| description on page 494                               | Configures a description for this schedule policy that differentiates it from other policies with similar time rule configurations |
| time-rule on page 495                                 | Configures a time rule specifying the days and optionally the start and end times  |
| no (schedule-policy-config-mode-commands) on page 496 | Removes the selected schedule policy's settings  |

description

Configures a description for this schedule policy that differentiates it from other policies with similar time rule configurations

Supported in the following platforms:

- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
description <WORD>
```

Parameters

```
description <WORD>
```

|                    |   |
|--------------------|---|
| description <WORD> | Configures this schedule policy's description <ul style="list-style-type: none"><li>• &lt;WORD&gt; - Enter a description not exceeding 80 characters in length. The description should uniquely identify the policy from other policies with similar configuration.</li></ul> |
|--------------------|---|

Examples

```
nx9500-6C8809(config-schedule-policy-test)#description "Denies social networking sites on weekdays."
nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
```

```
description "Denies social networking sites on weekdays."
nx9500-6C8809 (config-schedule-policy-test) #
```

#### Related Commands

|   |  |
|---|--|
| no (schedule-policy-config-mode-commands) | Removes or modifies this schedule policy's description on page 496 |
|---|--|

### time-rule

Configures a time rule specifying the days and optionally the start and end times. When applied to an application-policy rule, the schedule policy defines the enforcement time of the rule. For more information, see [application-policy](#) on page 187.

Supported in the following platforms:

- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
time-rule days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|all|
weekends|weekdays] {start-time <HH:MM> [end-time <HH:MM>]}
```

#### Parameters

```
time-rule days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|all|
weekends|weekdays] {start-time <HH:MM> [end-time <HH:MM>]}
```

|  |   |
|--|---|
| time-rule  | Configures a time rule in days and hours and minutes<br>A schedule policy can have more than one non-overlapping time-rules. The following time-rules, having overlapping time periods, are invalid: 'weekdays, start-time 9:30 am, end-time 11:30 pm' and 'all, start-time 12:00 am, end-time 12:00 pm'.   |
| days [sunday monday tuesday wednesday thursday friday saturday all weekends  weekdays] | Specifies the days on which the time rule is applicable <ul style="list-style-type: none"> <li>• sunday – Applicable on Sundays only</li> <li>• monday – Applicable on Mondays only</li> <li>• tuesday – Applicable on Tuesdays only</li> <li>• wednesday – Applicable on Wednesdays only</li> <li>• thursday – Applicable on Thursdays only</li> <li>• friday – Applicable on Fridays only</li> <li>• saturday – Applicable on Saturdays only</li> <li>• weekends – Applicable on weekends only</li> <li>• weekdays – Applicable on weekdays only</li> <li>• all – Applicable on all days</li> </ul>   |
| start-time <HH:MM> [end-time <HH:MM>]  | After specifying the days of enforcement, specify the following: <ul style="list-style-type: none"> <li>• start-time – Optional. Specifies the enforcement start time <ul style="list-style-type: none"> <li>• &lt;HH:MM&gt; – Specify the start time in hours and minutes in the HH:MM format.</li> </ul> </li> </ul> <p>If no start time is specified, the time rule is enforced, on the specified days, at all time.</p> <ul style="list-style-type: none"> <li>• end-time – Specifies the enforcement end time <ul style="list-style-type: none"> <li>• &lt;HH:MM&gt; – Specify the time in hours and minutes in the HH:MM format.</li> </ul> </li> </ul> |

## Examples

```

nx9500-6C8809(config-schedule-policy-test)#time-rule days weekdays start-time 10:00 end-time 23:30
nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
  description "Denies social networking sites on weekdays."
  time-rule days weekdays start-time 10:00 end-time 23:30
nx9500-6C8809(config-schedule-policy-test)#

```

## Related Commands

|  |  |
|--|--|
| <b>no (schedule-policy-config-mode-commands)</b> on page 496 | Removes the time-rule from the schedule policy |
|--|--|

**no (schedule-policy-config-mode-commands)**

Removes the selected schedule policy's settings

Supported in the following platforms:

- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

no [description|time-rule]
no description
no time-rule days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|all|weekends|weekdays]

```

## Parameters

```
no <PARAMETERS>
```

|                              |   |
|------------------------------|---|
| <b>no &lt;PARAMETERS&gt;</b> | Removes the schedule policy's settings based on the parameters passed |
|------------------------------|---|

## Examples

The following example displays the schedule policy 'test' settings before the 'no' commands have been executed:

```

nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
  description "Denies social networking sites on weekdays."
  time-rule days weekdays start-time 10:00 end-time 23:30
nx9500-6C8809(config-schedule-policy-test)#

```

The following example displays the schedule policy 'test' settings after the 'no' commands have been executed:

```

nx9500-6C8809(config-schedule-policy-test)#no description
nx9500-6C8809(config-schedule-policy-test)#no time-rule days weekdays
nx9500-6C8809(config-schedule-policy-test)#show context
schedule-policy test
nx9500-6C8809(config-schedule-policy-test)#

```

## self

Invokes the logged device's configuration context

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
self
```

*Parameters*

```
None
```

*Examples*

```
nx9500-6C8809 (config) #self
nx9500-6C8809 (config-device-B4-C7-99-6C-88-09) #
```

## sensor-policy

Creates a sensor policy and enters its configuration mode.

Access point radios, functioning as sensors, along with AirDefense WIPS servers protect networks from attacks and unauthorized access. These access point sensors scan legal channels and (based on a WIPS policy settings) identify events potential threats to the managed network. These events are reported to the AirDefense WIPS server, which determines the action taken.

In addition to WIPS support, sensor functionality has now been added for the Extreme Network's locationing system. The ExtremeLocation system for Wi-Fi locationing includes WiNG controllers, and access points functioning as sensors. Within the Locationing architecture, sensors scan for RSSI data on an administrator-defined interval and send to a dedicated ExtremeLocation Server resource, as opposed to an ADSP server. The ExtremeLocation Server collects the RSSI data from WiNG sensor devices, and calculates the location of Wi-Fi devices for ExtremeLocation administrators.

Use this command to configure a policy defining the mode of scanning, the channels to scan (in case scan-mode is set to custom-scan), and the RSSI interval. For the sensor policy to take effect, use the policy either in the access point's RF Domain context or in the access point's device context.

### Note

If a dedicated sensor is utilized with WIPS for rogue detection, any sensor policy used is discarded and not utilized by the sensor. To avoid this situation, use ADSP channel settings exclusively to configure the sensor and not the WiNG interface.

*Supported in the following platforms:*

- Service Platforms — NX7500, NX9500, NX9600, VX9000

Syntax

```
sensor-policy <SENSOR-POLICY-NAME>
```

Parameters

```
sensor-policy <SENSOR-POLICY-NAME>
```

|                      |   |
|----------------------|---|
| <SENSOR-POLICY-NAME> | Specify the Sensor policy name. If a sensor policy with the specified name does not exist, it is created. The name should not exceed 32 characters in length. No character spaces are permitted within the name. Define a name unique to the policy's channel and scan mode configuration to help differentiate it from other policies. |
|----------------------|---|

Examples

```
nx9500-6C8809(config)#sensor-policy test
nx9500-6C8809(config-sensor-policy-test)#?
Sensor Policy Mode commands:
  custom-scan      Channel configuration in Custom Scan channels
  no               Negate a command or set its defaults
  rssi-interval-duration  Configure the periodicity of sending RSSI info from
                        sensor to server
  scan-mode        Configure the Scan mode

  clrscr           Clears the display screen
  commit           Commit all changes made in this session
  do               Run commands from Exec mode
  end              End current mode and change to EXEC mode
  exit             End current mode and down to previous mode
  help             Description of the interactive help system
  revert           Revert changes
  service          Service Commands
  show             Show running system information
  write            Write running configuration to memory or terminal

nx9500-6C8809(config-sensor-policy-test)#
```

Related Commands

|                |                                   |
|----------------|-----------------------------------|
| no on page 609 | Removes an existing sensor policy |
|----------------|-----------------------------------|

sensor-policy-config-commands

The following table summarizes sensor-policy configuration mode commands:

Table 27: Sensor Policy Config Mode Commands

| Command                            | Description  |
|------------------------------------|--|
| custom-scan on page 499            | Configures the channel scanning settings when the scan-mode is set to custom-scan  |
| rssi-interval-duration on page 500 | Configures the interval at which dedicated sensors scan channels for RSSI assessments and send the collected data to a specified MPact server resource |

**Table 27: Sensor Policy Config Mode Commands (continued)**

| Command   | Description   |
|---|---|
| <a href="#">scan-mode</a> on page 501                               | Configures the mode of scanning used by dedicated sensors (access point radios) |
| <a href="#">no (sensor-policy-config-mode-commands)</a> on page 502 | Removes or reverts to default a sensor policy's settings                        |

**custom-scan**

Configures the channel scanning settings when the scan-mode is set to custom-scan

**Note**

If the mode of scanning is set to Custom-Scan, use this command to configure the channels to be scanned. To set the mode of scanning to custom-scan, use the [scan-mode > Custom-Scan](#) command. For more information, see [scan-mode](#) on page 501.

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

**Syntax**

```
custom-scan channel-frequency <CHANNEL-FREQUENCY> width
[20MHz|40MHz-Bth|40MHz-Lower|40MHz-Upper|80MHz] scan-weight <SCAN-WEIGHT>
```

**Parameters**

```
custom-scan channel-frequency <CHANNEL-FREQUENCY> width
[20MHz|40MHz-Bth|40MHz-Lower|40MHz-Upper|80MHz] scan-weight <SCAN-WEIGHT>
```

|  |   |
|--|---|
| custom-scan  | Configures the custom-scan channel frequency, channel width, and scan weight  |
| channel-frequency <CHANNEL-FREQUENCY>                      | Configures the channel frequency. A list of unique channels in the 2.4, 4.9, 5 and 6 GHz band can be collectively or individually enabled for customized channel scans and RSSI reporting. <ul style="list-style-type: none"> <li>• &lt;CHANNEL-FREQUENCY&gt; – Specify a single or multiple, 'comma-separated' channel frequencies.</li> </ul>   |
| width [20MHz  40MHz-Both  40MHz-Lower  40MHz-Upper  80MHz] | Configures the channel width. When custom channels are selected for RSSI scans, each selected channel can have its own width defined. Numerous channels have their width fixed at 20MHz, 802.11a radios support 20 and 40 MHz channel widths. <ul style="list-style-type: none"> <li>• 20MHz – Sets the channel width as 20 Mhz</li> <li>• 40Mhz-Both – Sets the channel width as 40Mhz-Both</li> <li>• 40Mhz-Lowe – Sets the channel width as 40Mhz-Lower</li> <li>• 40Mhz-Upper – Sets the channel width as 40Mhz-Upper</li> <li>• 80Mhz – Sets the channel width as 80Mhz</li> </ul> |
| scan-weight <SCAN-WEIGHT>                                  | Configures the scan-weight (scanning duration) for each of the selected channels. Each selected channel can have its weight prioritized in respect to the amount of time a scan is permitted within the defined RSSI scan interval. <ul style="list-style-type: none"> <li>• &lt;SCAN-WEIGHT&gt; – Specify the scan weightage given to each selected channel.</li> </ul>  |

## Examples

```

nx9500-6C8809(config-sensor-policy-test)#custom-scan channel-frequency 2412 width 20MHz
scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#custom-scan channel-frequency 2417 width 20MHz
scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
scan-mode Custom-Scan
custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#

```

| <a href="#">no (sensor-policy-config-mode-commands)</a> on page 502 | Removes channels from the channels-to-scan list in case of scan-mode being set to Custom-Scan |
|---|---|

**rssi-interval-duration**

Configures the interval, in seconds, at which dedicated sensors scan channels for RSSI assessments and send the RSSI data obtained to a specified server resource

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

## Syntax

```
rssi-interval-duration <1-60>
```

## Parameters

```
rssi-interval-duration <1-60>
```

|                               |  |
|-------------------------------|--|
| rssi-interval-duration <1-60> | <p>Configures the RSSI interval duration in seconds. This is the interval at which the sensor scans channels for RSSI data and forwards the data to a dedicated server resource. The server calculates real-time locations of Wi-Fi devices based on the this data.</p> <ul style="list-style-type: none"> <li>• &lt;1-60&gt; – Specify the RSSI interval duration from 1 - 60 seconds. The default is 1 second.</li> </ul> <p>The channels scanned for RSSI assessment depends on the scan-mode selected. For more information, see <a href="#">scan-mode</a> on page 501 and <a href="#">custom-scan</a> on page 499.</p> <p>Ensure that the server's IP address or hostname has been configured in the access point sensor's RF Domain context.</p> |
|-------------------------------|--|

## Examples

```

nx9500-6C8809(config-sensor-policy-test)#rssi-interval-duration 30
nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
rssi-interval-duration 30
scan-mode Custom-Scan
custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#

```

## Related Commands

|  |  |
|--|--|
| <code>no (sensor-policy-config-mode-commands)</code> on page 502 | Resets the interval at which RSSI data is collected and sent by the sensor to the NSight server host to default (1 second) |
|--|--|

scan-mode

Configures the mode of scanning used by dedicated sensors (access point radios)

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

Syntax

```
scan-mode [Channel-Lock|Custom-Scan|Default-Scan]
scan-mode Channel-Lock lock-frequency <LOCK-FREQUENCY>
scan-mode [Custom-Scan|Default-Scan]
```

Parameters

```
scan-mode Channel-Lock lock-frequency <LOCK-FREQUENCY>
```

|  |   |
|--|---|
| scan-mode                                    | Configures the mode of scanning used by the sensors to scan system-defined or user-defined channels for RSSI assessments. The options are: Channel-Lock, Custom-Scan, and Default-Scan.   |
| Channel-Lock lock-frequency <LOCK-FREQUENCY> | Configures the mode of scanning as channel-lock <ul style="list-style-type: none"><li>• lock-frequency &lt;LOCK-FREQUENCY&gt; – Locks scanning for RSSI data to one specific channel identified by the &lt;LOCK-FREQUENCY&gt; parameter.</li><li>• &lt;LOCK-FREQUENCY&gt; – Specify the channel frequency in MHz. When specified, the sensor scans only this specified channel.</li></ul> |

```
scan-mode [Custom-Scan|Default-Scan]
```

|              |   |
|--------------|---|
| scan-mode    | Configures the mode of scanning used by the sensor. The options are: channel-lock, custom-scan, and default-scan.   |
| Custom-Scan  | Configures the mode of scanning as custom-scan<br>Select this option to restrict scanning to user-defined channels. If selecting this option, use the custom-scan > channel-frequency command to configure the channels scanned by the dedicated sensor. For more information, see <a href="#">custom-scan</a> on page 499. |
| Default-Scan | Configures the mode of scanning as Default-Scan. This is the default setting.<br>By default the system has a fixed, built-in list of channels that are scanned. These channels are hard coded in a spread pattern of 1, 6, 11, 36, 40, 44, and 48. When selected, the dedicated sensor scans only these default channels.   |

Examples

```
nx9500-6C8809(config-sensor-policy-test)#scan-mode Custom-Scan
nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
  rssi-interval-duration 30
  scan-mode Custom-Scan
  custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
  custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(config-sensor-policy-test)#
```

Related Commands

|  |   |
|--|---|
| <code>no (sensor-policy-config-mode-commands)</code> on page 502 | Reverts the scan-mode to default (Default-Scan) |
|--|---|

**no (sensor-policy-config-mode-commands)**

Removes or reverts to default a sensor policy's settings

Supported in the following platforms:

- Service Platforms — NX7500, NX9500, NX9600, VX9000

**Syntax**

```
no [custom-scan|rsi-interval-duration|scan-mode]
no custom-scan channel-frequency <CHANNEL-FREQUENCY-LIST>
no rssi-interval-duration
no scan-mode
```

**Parameters**

```
no <PARAMETERS>
```

|                                    |   |
|------------------------------------|---|
| <code>no &lt;PARAMETERS&gt;</code> | Removes or reverts to default a sensor policy settings based on the parameters passed |
|------------------------------------|---|

**Examples**

The following example shows the sensor-policy 'test' settings before the 'no' commands are executed:

```
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
  rssi-interval-duration 30
  scan-mode Custom-Scan
  custom-scan channel-frequency 2412 width 20MHz scan-weight 1000
  custom-scan channel-frequency 2417 width 20MHz scan-weight 1000
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#
```

The scan-mode is reverted back to the default setting of 'Default-Scan', as show in the following output:

```
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#no scan-mode
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#no custom-scan channel-frequency 2412
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#no custom-scan channel-frequency 2417
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#show context
sensor-policy test
  rssi-interval-duration 30
  scan-mode Default-Scan
nx9500-6C8809(nx9500-6C8809(config-sensor-policy-test)#
```

**smart-rf-policy**

Configures a Smart RF policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
smart-rf-policy <SMART-RF-POLICY-NAME>
```

Parameters

```
smart-rf-policy <SMART-RF-POLICY-NAME>
```

|                        |  |
|------------------------|--|
| <SMART-RF-POLICY-NAME> | Specify the Smart RF policy name. If a policy with the specified name does not exist, it is created. |
|------------------------|--|

Examples

```
nx9500-6C8809(config)#smart-rf-policy test
nx9500-6C8809(config-smart-rf-policy-test)#?
Smart RF Mode commands:
  area                               Specify channel list/ power for an area
  assignable-power                   Specify the assignable power during power-assignment
  avoidance-time                     Time to avoid a channel once dfs/adaptivity
                                     avoidance is necessary
  channel-list                       Select channel list for smart-rf
  channel-width                      Select channel width for smart-rf
  coverage-hole-recovery             Recover from coverage hole
  enable                             Enable this smart-rf policy
  group-by                           Configure grouping parameters
  interference-recovery              Recover issues due to excessive noise and
                                     interference
  neighbor-recovery                  Recover issues due to faulty neighbor radios
  no                                 Negate a command or set its defaults
  select-shutdown                    Select redundant 2.4GHz Radios to shutdown
  sensitivity                         Configure smart-rf sensitivity (Modifies various
                                     other smart-rf configuration items)
  smart-ocs-monitoring               Smart off channel scanning

  clrscr                             Clears the display screen
  commit                             Commit all changes made in this session
  end                                End current mode and change to EXEC mode
  exit                               End current mode and down to previous mode
  help                               Description of the interactive help system
  revert                             Revert changes
  service                            Service Commands
  show                               Show running system information
  write                              Write running configuration to memory or term

nx9500-6C8809(config-smart-rf-policy-test)#
```

Related Commands

|                |                                     |
|----------------|-------------------------------------|
| no on page 609 | Removes an existing Smart RF policy |
|----------------|-------------------------------------|

**Note**

t5

Invokes the configuration mode of a t5 wireless controller

Supported in the following platforms:

- Wireless Controllers — RFS4000
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
t5 <T5-DEVICE-MAC>
```

### Parameters

```
t5 <T5-DEVICE-MAC>
```

|                    |  |
|--------------------|--|
| t5 <T5-DEVICE-MAC> | <p>Specify the T5 device's MAC address. The system enters the identified device's configuration mode.</p> <p>A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS wireless controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs (<i>Customer Premises Equipments</i>) are the T5 controller managed radio devices using the IPX operating system. These CPEs use a DSL (<i>Digital Subscriber Line</i>) as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack. After logging on to the T5 device, use the 'cpe' keyword and configure the following mandatory settings:</p> <ul style="list-style-type: none"> <li>• vlan – Set a VLAN from 1 - 4,094 used as a virtual interface for connections between the T5 controller and its managed CPE devices.</li> <li>• start ip – Set a starting IP address used in a range of addresses available to T5 controller connecting CPE devices.</li> <li>• end ip – Set an end IP address used in a range of addresses available to T5 controller connecting CPE devices.</li> </ul> |
|--------------------|--|

### Examples

```
nx9500-6C8809(config)#t5 B4:C7:99:ED:5C:2C
nx9500-6C8809(config-device-B4:C7:99:ED:5C:2C)#?
T5 Device Mode commands:
  adsp-sensor-server  Configure WIPS server
  bridge              Sets MAC address expiration time in the bridge address
                     table
  clock               Configure clock options
  cpe                  T5 CPE configuration
  hostname             Set system's network name
  interface            Select an interface to configure
  ip                   Internet Protocol (IP)
  no                   Negate a command or set its defaults
  ntp                  Configure NTP
  override-wlan        Configure RF Domain level overrides for wlan
  password             T5 password configuration
  qos                  QOS settings
  radius-server        Radius server settings
  t5                   T5 configuration
  t5-logging           Modify message logging facilities
  use                  Set setting to use

  clrscr              Clears the display screen
  commit              Commit all changes made in this session
  do                   Run commands from Exec mode
```

```

end                End current mode and change to EXEC mode
exit              End current mode and down to previous mode
help             Description of the interactive help system
revert          Revert changes
service        Service Commands
show           Show running system information
write         Write running configuration to memory or terminal

```

```
nx9500-6C8809(config-device-B4:C7:99:ED:5C:2C) #
```

## web-filter-policy

Creates a Web Filtering policy and enters its configuration mode. This policy defines rules managing the local classification database and the cached data. When configured and applied, this policy also enables caching of URL classification records in a local database in a controller-based, *hierarchically managed* (HM) deployment. Use this option to specify the following: classification server details, size of the local database, time for which records are cached in the database, the action taken in case the classification server is unavailable, etc.

The Web filter policy is applied at the profile or device level.

For more information on URL filtering, see [url-filter](#) on page 592.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
web-filter-policy <WEB-FILTER-POLICY-NAME>
```

### Parameters

```
web-filter-policy <WEB-FILTER-POLICY-NAME>
```

|                          |  |
|--------------------------|--|
| <WEB-FILTER-POLICY-NAME> | Specify the Web filter policy name. If the policy with the specified name does not exist, it is created. |
|--------------------------|--|

### Examples

```

nx9500-6C8809(config)#web-filter-policy test
nx9500-6C8809(config-web-filter-policy-test)#?
Content Filter Mode commands:
  cache-max-recs      Configure the maximum number of records in local cache
  cache-save-interval Configure the time a record is saved in local cache
  logging             Select logging method
  no                  Negate a command or set its defaults
  server-host         Configure URL classification server if it is not the
                     adopted controller
  server-unreachable  Permission to access website when classification server

```

```

uncategorized-url    is unreachable (default is pass)
                    Permission to website when server fails to classify the
                    URL request (default is pass)

clrscr               Clears the display screen
commit              Commit all changes made in this session
do                  Run commands from Exec mode
end                 End current mode and change to EXEC mode
exit                End current mode and down to previous mode
help                Description of the interactive help system
revert              Revert changes
service             Service Commands
show                Show running system information
write               Write running configuration to memory or terminal

nx9500-6C8809(config-web-filter-policy-test)#

```

### Related Commands

### web-filter-config-commands

The following table summarizes Web Filter policy configuration mode commands:

**Table 28: Web Filter Config Mode Commands**

| Command  | Description   |
|--|---|
| <code>cache-max-recs</code> on page 506                              | Configures the maximum number of records (URLs and Web pages) cached in the local database                                    |
| <code>cache-save-interval</code> on page 507                         | Configures the maximum time period for which a record (URL and Web page classification entry) is cached in the local database |
| <code>logging</code> on page 508                                     | Configures the method used to log Web filtering events  |
| <code>server-host</code> on page 508                                 | Configures the URL classification server in case it is not the adopted controller   |
| <code>server-unreachable</code> on page 509                          | Configures the action taken in case the classification server is unreachable  |
| <code>uncategorized-url</code> on page 510                           | Configures the action taken in case the classification server fails to classify a URL/Website                                 |
| <code>no (web-filter-policy-config-mode-commands)</code> on page 510 | Reverts the selected Web Filter policy settings to default  |

### cache-max-recs

Configures the maximum number of records (URL and Web page classification entries) cached in the local database

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
cache-max-recs <1-1000000>
```

## Parameters

```
cache-max-recs <1-1000000>
```

|                            |  |
|----------------------------|--|
| cache-max-recs <1-1000000> | <p>Specify the maximum number of records cached in the local database from 1 - 1000000.</p> <p>When configuring this value take into consideration the type of device using the Web Filter policy. The value should approximately be as per the following information:</p> <ul style="list-style-type: none"> <li>• NX95XX - &lt;1-1000000&gt; (default is 100000)</li> <li>• NX75XX - &lt;1-100000&gt; (default is 10000)</li> <li>• RFS Switches - &lt;1-10000&gt; (default is 1000)</li> <li>• Access Points - &lt;1-1500&gt; (default is 500)</li> </ul> |
|----------------------------|--|

## Examples

```
nx9500-6C8809(config-web-filter-policy-test)#cache-max-recs 9000
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
  cache-max-recs 9000
nx9500-6C8809(config-web-filter-policy-test)#
```

## Related Commands

|   |  |
|---|--|
| no (web-filter-policy-config-mode-commands) on page 510 | Reverts the maximum number of stored records to default. Please see the parameter table for default values for the different device types. |
|---|--|

**cache-save-interval**

Configures the maximum time period, in seconds, for which a record (URL and Web page classification entry) is cached in the local database. Once the specified time has expired the record is removed from the cache.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
cache-save-interval <1-86400>
```

## Parameters

```
cache-save-interval <1-86400>
```

|                               |  |
|-------------------------------|--|
| cache-save-interval <1-86400> | Specify the maximum time period, in seconds, for which a record is cached in the local database from 1 - 86400 seconds. The default is 60 seconds. |
|-------------------------------|--|

## Examples

```

nx9500-6C8809(config-web-filter-policy-test)#cache-save-interval 1000
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
  cache-max-recs 9000
  cache-save-interval 1000
nx9500-6C8809(config-web-filter-policy-test)#

```

## Related Commands

|   |  |
|---|--|
| <b>no (web-filter-policy-config-mode-commands)</b><br>on page 510 | Reverts the maximum time period for which a record (URL and Web page classification entry) is cached in the local database to default (60) |
|---|--|

**logging**

Configures the method used to log Web filtering events

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
logging [logfile|syslog]
```

## Parameters

```
logging [logfile|syslog]
```

|                          |   |
|--------------------------|---|
| logging [logfile syslog] | Selects the method used to log Web filtering events. The options are: <ul style="list-style-type: none"> <li>• logfile – Logs to a file.</li> <li>• syslog – Logs to the syslog server. This is the default setting.</li> </ul> |
|--------------------------|---|

## Examples

```

nx9500-6C8809(config-web-filter-policy-test)#logging logfile
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test

```

**server-host**

Configures the URL classification server in case it is not the adopted controller

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
server-host [host-name <SERVER-HOST-NAME>|ip-address <SERVER-IPv4>|mint-id <SERVER-MiNT-ID>]
```

## Parameters

```
server-host [host-name <SERVER-HOST-NAME>|ip-address <SERVER-IPv4>|mint-id <SERVER-MiNT-ID>]
```

```
server-host [host-name <SERVER-  
HOST-NAME>|ip-address  
<SERVER-IPv4>|mint-id <SERVER-  
MiNT-ID>]
```

Use one of the following options to identify the URL classification server:

- host-name <SERVER-HOST-NAME> - Identifies the classification server by its hostname.
- ip-address <SERVER-IPv4> - Identifies the classification server by its IP address.
- mint-id <SERVER-MiNT-ID> - Identifies the classification server by its MiNT ID.

## Examples

```
nx9500-6C8809(config-web-filter-policy-test)#server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
  cache-max-recs 9000
  cache-save-interval 1000
  server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

## Related Commands

**no (web-filter-policy-  
config-mode-  
commands)** on page  
510

Removes the URL classification server's configured details, such as hostname, ip-address, or MiNT ID.

**server-unreachable**

Configures the action taken in case the classification server is unreachable. Based on the value configured the an end user's request for a URL/Website is either blocked or passed.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
server-unreachable [block|pass]
```

## Parameters

```
server-unreachable [block|pass]
```

```
server-unreachable  
[block|pass]
```

Configures the action taken in case the classification server is unreachable. The options are:

- block - Denies access to the requested URL/Website
- pass - Allows access to the requested URL/Website. This is the default value.

## Examples

```
nx9500-6C8809(config-web-filter-policy-test)#server-unreachable block
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
```

```
cache-max-recs 9000
cache-save-interval 1000
server-unreachable block
server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

#### Related Commands

|--|--|
| <b>no (web-filter-policy-config-mode-commands)</b> on page 510 | Reverts the action taken, in case the classification server is unreachable, to default (pass), |
|--|--|

### uncategorized-url

Configures the action taken in case the classification server fails to classify a URL/Website. Based on the value configured the an end user's request for a non-classified URL/Website is either blocked or passed.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
uncategorized-url [block|pass]
```

#### Parameters

```
uncategorized-url [block|pass]
```

|                                |  |
|--------------------------------|--|
| uncategorized-url [block pass] | <p>Configures the action taken in case the classification server fails to classify a URL/Website. The options are:</p> <ul style="list-style-type: none"> <li>• block - Denies access to the requested non-classified URL/Website</li> <li>• pass - Allows access to the requested non-classified URL/Website. This is the default value.</li> </ul> |
|--------------------------------|--|

#### Examples

```
nx9500-6C8809(config-web-filter-policy-test)#uncategorized-url block
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
cache-max-recs 9000
cache-save-interval 1000
uncategorized-url block
server-unreachable block
server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

#### Related Commands

|  |  |
|--|--|
| <b>no (web-filter-policy-config-mode-commands)</b> on page 510 | Reverts the action taken, in case the classification server fails to classify a URL/Website, to default (pass) |
|--|--|

### no (web-filter-policy-config-mode-commands)

Reverts the selected Web Filter policy settings to default, based on the parameters passed

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
no [cache-max-recs|cache-save-interval|server-host|server-unreachable|uncategorized-url]
```

### Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Reverts the selected Web Filter policy settings to default, based on the parameters passed. Specify the parameters to revert back to default value. |
|-----------------|---|

### Examples

The following example shows the Web Filter policy 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
  cache-max-recs 9000
  cache-save-interval 1000
  uncategorized-url block
  server-unreachable block
  server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
nx9500-6C8809(config-web-filter-policy-test)#no cache-max-recs
nx9500-6C8809(config-web-filter-policy-test)#no server-unreachable
nx9500-6C8809(config-web-filter-policy-test)#no uncategorized-url
```

The following example shows the Web Filter policy 'test' settings after the 'no' command has been executed:

```
nx9500-6C8809(config-web-filter-policy-test)#show context
web-filter-policy test
  cache-save-interval 1000
  server-host ip-address 192.168.13.13
nx9500-6C8809(config-web-filter-policy-test)#
```

## wips-policy

Configures a WIPS policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
wips-policy <WIPS-POLICY-NAME>
```

### Parameters

```
wips-policy <WIPS-POLICY-NAME>
```

|                    |  |
|--------------------|--|
| <WIPS-POLICY-NAME> | Specify the WIPS policy name. If a policy with the specified name does not exist, it is created. |
|--------------------|--|

Examples

```
nx9500-6C8809(config)#wips-policy test
nx9500-6C8809(config-wips-policy-test)#?
Wips Policy Mode commands:
  ap-detection      Rogue AP detection
  enable            Enable this wips policy
  event             Configure an event
  history-throttle-duration  Configure the duration for which event duplicates
                        are not stored in history
  interference-event  Specify events which will contribute to smart-rf
                        wifi interference calculations
  no                Negate a command or set its defaults
  signature          Signature to configure
  use               Set setting to use

  clrscr            Clears the display screen
  commit            Commit all changes made in this session
  do                Run commands from Exec mode
  end               End current mode and change to EXEC mode
  exit              End current mode and down to previous mode
  help              Description of the interactive help system
  revert            Revert changes
  service           Service Commands
  show              Show running system information
  write             Write running configuration to memory or terminal

nx9500-6C8809(config-wips-policy-test)#
```

Related Commands

|                |                                 |
|----------------|---------------------------------|
| no on page 609 | Removes an existing WIPS policy |
|----------------|---------------------------------|

**Note**  
For more information on WIPS Policy commands, see [WIPS Policy](#) on page 1676.

wlan

Configures a WLAN and enters its configuration mode. Use this command to modify an existing WLAN's settings.

A WLAN is a data-communications system that flexibly extends the functionality of a wired LAN. A WLAN links two or more computers or devices using spread-spectrum or OFDM (*Orthogonal Frequency Division Multiplexing*) modulation based technology. WLANs do not require lining up devices for line-of-sight transmission, and are thus, desirable for wireless networking. Roaming users can be handed off from one access point to another, like a cellular phone system. WLANs can therefore be configured around the needs of specific user groups, even when they are not in physical proximity.

WLANs can provide an abundance of services, including data communications (allowing mobile devices to access applications), e-mail, file, and print services or even specialty applications (such as guest access control and asset tracking).

Each WLAN configuration contains encryption, authentication and QoS policies and conditions for user connections. Connected access point radios transmit periodic beacons for each BSS. A beacon advertises the SSID, security requirements, supported data rates of the wireless network to enable clients to locate and connect to the WLAN.

WLANs are mapped to radios on each access point. A WLAN can be advertised from a single access point radio or can span multiple access points and radios. WLAN configurations can be defined to provide service to specific areas of a site. For example, a guest access WLAN may only be mapped to a 2.4 GHz radio in a lobby or conference room providing limited coverage, while a data WLAN is mapped to all 2.4 GHz and 5.0 GHz radios at the branch site to provide complete coverage.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
wlan {<WLAN-NAME>|containing <WLAN-NAME>}
```

*Parameters*

```
wlan {<WLAN-NAME>|containing <WLAN-NAME>}
```

|                        |   |
|------------------------|---|
| wlan <WLAN-NAME>       | Configures a new WLAN <ul style="list-style-type: none"><li>• &lt;WLAN-NAME&gt; - Optional. Specify the WLAN name.</li></ul> <p><b>Note:</b> The WLAN name could be a logical representation of its coverage area (for example, engineering, marketing etc.). The name cannot exceed 32 characters.</p> |
| containing <WLAN-NAME> | Optional. Configures an existing WLAN's settings <ul style="list-style-type: none"><li>• &lt;WLAN-NAME&gt; - Specify a sub-string in the WLAN name. Use this parameter to filter a WLAN. This option allows you to select and enter the configuration mode of one or more WLANs.</li></ul>              |

*Examples*

```
nx9500-6C8809(config)#wlan wlan1
nx9500-6C8809(config-wlan-wlan1)#?
Wireless LAN Mode commands:
  802.11v          Configure 802.11v parameters
  accounting       Configure how accounting records are
                   created for this wlan
  acl              Actions taken based on ACL
                   configuration [ packet drop being one
                   of them]
  answer-broadcast-probes Include this wlan when responding to
                   probe requests that do not specify an
                   SSID
  assoc-response   Association response threshold
  association-list  Configure the association list for
                   the wlan
  authentication-type The authentication type of this WLAN
  bridging-mode    Configure how packets to/from this
                   wlan are bridged
```

|                                       |  |
|---------------------------------------|--|
| broadcast-dhcp                        | Configure broadcast DHCP packet handling   |
| broadcast-ssid                        | Advertise the SSID of the WLAN in beacons  |
| captive-portal-enforcement            | Enable captive-portal enforcement on the wlan                                      |
| client-access                         | Enable client-access (normal data operations) on this wlan                         |
| client-client-communication           | Allow switching of frames from one wireless client to another on this wlan         |
| client-load-balancing                 | Configure load balancing of clients on this wlan                                   |
| controller-assisted-mobility          | Enable controller assisted mobility to determine wireless clients' VLAN assignment |
| data-rates                            | Specify the 802.11 rates to be supported on this wlan                              |
| description                           | Configure a description of the usage of this wlan                                  |
| downstream-group-addressed-forwarding | Enable downstream group addressed forwarding of packets                            |
| dpi                                   | Deep-Packet-Inspection (Application Assurance)                                     |
| dynamic-vlan-assignment               | Dynamic VLAN assignment configuration  |
| eap-types                             | Configure client access based on eap-type used for authentication                  |
| encryption-type                       | Configure the encryption to use on this wlan                                       |
| enforce-dhcp                          | Drop packets from Wireless Clients with static IP address                          |
| fast-bss-transition                   | Configure support for 802.11r Fast BSS Transition                                  |
| http-analyze                          | Enable HTTP URL analysis on the wlan   |
| ip                                    | Internet Protocol (IP)   |
| ipv6                                  | Internet Protocol version 6 (IPv6)   |
| kerberos                              | Configure kerberos authentication parameters                                       |
| mac-authentication                    | Configure mac-authentication related parameters                                    |
| multi-band-operation                  | Configure support for Agile Multiband  |
| no                                    | Negate a command or set its defaults   |
| nsight                                | Nsight Server  |
| opendns                               | OpenDNS related config for this wlan   |
| protected-mgmt-frames                 | Protected Management Frames (IEEE 802.11w) related configuration                   |
| proxy-arp-mode                        | Configure handling of ARP requests with proxy-arp is enabled                       |
| proxy-nd-mode                         | Configure handling of IPv6 ND requests with proxy-nd is enabled                    |
| qos-map                               | Support the 802.11u QoS map element and frame                                      |
| radio-resource-measurement            | Configure support for 802.11k Radio Resource Measurement                           |
| radius                                | Configure RADIUS related parameters  |
| registration                          | Enable dynamic registration of device (or) user                                    |
| relay-agent                           | Configure dhcp relay agent info  |
| shutdown                              | Shutdown this wlan   |
| ssid                                  | Configure the Service Set Identifier for this WLAN                                 |
| t5-client-isolation                   | Isolate traffic among clients  |
| t5-security                           | Configure encryption and authentication  |

|                   |   |
|-------------------|---|
| time-based-access | Configure client access based on time   |
| use               | Set setting to use  |
| vlan              | Configure the vlan where traffic from this wlan is mapped   |
| vlan-pool-member  | Add a member vlan to the pool of vlans for the wlan (Note: configuration of a vlan-pool overrides the 'vlan' configuration) |
| wep128            | Configure WEP128 parameters   |
| wep64             | Configure WEP64 parameters  |
| wing-extensions   | Enable support for WiNG-Specific extensions to 802.11   |
| wireless-client   | Configure wireless-client specific parameters   |
| wpa-wpa2          | Modify tkip-ccmp (wpa/wpa2) related parameters  |
| clrscr            | Clears the display screen   |
| commit            | Commit all changes made in this session   |
| do                | Run commands from Exec mode   |
| end               | End current mode and change to EXEC mode  |
| exit              | End current mode and down to previous mode  |
| help              | Description of the interactive help system  |
| revert            | Revert changes  |
| service           | Service Commands  |
| show              | Show running system information   |
| write             | Write running configuration to memory or terminal   |

nx9500-6C8809(config-wlan-wlan1)#

The following example shows how to use the 'containing' keyword to enter the configuration mode of an existing WLAN:

```
nx9500-6C8809(config)#wlan containing wlan1
nx9500-6C8809(config-wlan-{'containing': 'wlan1'})#
```

### wlan-config-mode-commands

This section documents the WLAN configuration mode commands in detail.

Use the (config) instance to configure WLAN related parameters. To navigate to this instance, use the following command:

```
<DEVICE>(config)#wlan <WLAN-NAME>
```

The following table lists the WLAN configuration mode commands:

**Table 29: WLAN Config Mode Commands**

| Command   | Description  |
|---|--|
| <a href="#">802.11v</a> on page 518                               | Configures the IEEE 802.11v standard parameters on this WLAN   |
| <a href="#">accounting (wlan-config-mode)</a> on page 518         | Defines a WLAN's accounting settings   |
| <a href="#">acl</a> on page 521                                   | Defines the actions based on an ACL rule configuration   |
| <a href="#">answer-broadcast-probes</a> on page 522               | Allows a WLAN to respond to probes for broadcast ESS   |
| <a href="#">assoc-response</a> on page 522                        | Configures a minimum <i>receive signal strength indication</i> (RSSI) value, below which the WLAN does not send a response to a client's association request |
| <a href="#">association-list</a> on page 523                      | Attaches an existing global association list to a WLAN   |
| <a href="#">authentication-type</a>                               | Sets a WLAN's authentication type  |
| <a href="#">bridging-mode</a> on page 527                         | Configures how packets are bridged to/from this WLAN   |
| <a href="#">broadcast-dhcp</a> on page 528                        | Configures broadcast DHCP packet handling  |
| <a href="#">broadcast-ssid</a> on page 528                        | Advertises a WLAN's SSID in beacons  |
| <a href="#">captive-portal-enforcement</a> on page 529            | Configures a WLAN's captive portal enforcement   |
| <a href="#">client-access</a> on page 530                         | Enables WLAN client access (normal data operations)  |
| <a href="#">client-client-communication</a> on page 530           | Allows the switching of frames from one wireless client to another on a WLAN   |
| <a href="#">client-load-balancing</a> on page 531                 | Enables load balancing of WLAN clients   |
| <a href="#">controller-assisted-mobility</a> on page 532          | Enables controller assisted mobility to determine wireless clients' VLAN assignment  |
| <a href="#">data-rates</a> on page 533                            | Specifies the 802.11 rates supported on the WLAN   |
| <a href="#">description</a> on page 535                           | Sets a WLAN's description  |
| <a href="#">downstream-group-addressed-forwarding</a> on page 536 | Enables forwarding of downstream packets addressed to a group  |
| <a href="#">dpi</a> on page 536                                   | Enables extraction of metadata flows on the WLAN   |
| <a href="#">dynamic-vlan-assignment</a> on page 538               | Configures dynamic VLAN assignment on this WLAN  |
| <a href="#">eap-types</a> on page 538                             | Configures client access based on eap-type used for authentication   |
| <a href="#">encryption-type</a> on page 540                       | Sets the WLAN's encryption type  |
| <a href="#">enforce-dhcp</a> on page 541                          | Drops packets from clients with a static IP address  |
| <a href="#">fast-bss-transition</a> on page 542                   | Configures support for 802.11r fast BSS transition on a WLAN   |
| <a href="#">http-analyze</a> on page 543                          | Enables HTTP URL analysis on the WLAN  |
| <a href="#">ip (wlan-config-mode)</a> on page 544                 | Configures IPv4 settings on this WLAN  |
| <a href="#">ipv6 (wlan-config-mode)</a> on page 545               | Configures IPv6 settings on this WLAN  |
| <a href="#">kerberos</a> on page 546                              | Configures Kerberos authentication parameters  |

**Table 29: WLAN Config Mode Commands (continued)**

| Command   | Description   |
|---|---|
| <a href="#">mac-authentication</a> on page 548            | Configures MAC authentication parameters  |
| <a href="#">multi-band-operation</a> on page 548          | Enables Wi-Fi Agile Multiband dynamic monitoring of network conditions.   |
| <a href="#">nsight</a> on page 550                        | Enables retention of guest client history in the NSight database  |
| <a href="#">opendns</a> on page 551                       | Configures the device ID, which is embedded in each DNS query packet going out from an access point, wireless controller, or service platform to the OpenDNS server |
| <a href="#">protected-mgmt-frames</a> on page 552         | Enables and configures the WLAN's frame protection mode and security association  |
| <a href="#">proxy-arp-mode</a> on page 553                | Enables the proxy ARP mode for ARP requests   |
| <a href="#">proxy-nd-mode</a> on page 554                 | Configures the proxy ND mode for this WLAN member clients as either strict or dynamic   |
| <a href="#">qos-map</a> on page 555                       | Enables support for 802.11u QoS map element and frames  |
| <a href="#">radio-resource-measurement</a> on page 555    | Enables support for 802.11k radio resource measurement  |
| <a href="#">radius</a> on page 557                        | Configures RADIUS parameters  |
| <a href="#">registration</a> on page 558                  | Configures settings enabling dynamic registration of devices. Use this command to specify the mode of registration and to configure corresponding parameters.       |
| <a href="#">relay-agent</a> on page 561                   | Enables support for DHCP relay agent information (option 82) feature on this WLAN   |
| <a href="#">service (wlan-config-context)</a> on page 562 | Invokes service commands applicable in the WLAN configuration mode  |
| <a href="#">shutdown</a> on page 568                      | Shuts down a WLAN   |
| <a href="#">ssid</a> on page 569                          | Configures the WLAN's SSID  |
| <a href="#">t5-client-isolation</a> on page 570           | Disallows clients connecting to the WLAN to communicate with one another  |
| <a href="#">t5-security</a> on page 571                   | Configures T5 PowerBroadband security settings  |
| <a href="#">time-based-access</a> on page 572             | Configures time-based client access   |
| <a href="#">use (wlan-config-mode)</a> on page 573        | Defines WLAN mode configuration settings  |
| <a href="#">vlan</a> on page 577                          | Assigns a VLAN for the WLAN   |
| <a href="#">vlan-pool-member</a> on page 578              | Adds a member VLAN to the pool of VLANs for a WLAN  |
| <a href="#">wep128</a> on page 579                        | Configures WEP128 parameters  |
| <a href="#">wep64</a> on page 580                         | Configures WEP64 parameters   |
| <a href="#">wing-extensions</a> on page 581               | Enables support for WiNG specific extensions to 802.11  |
| <a href="#">wireless-client</a> on page 583               | Configures the transmit power for wireless clients transmission   |
| <a href="#">wpa-wpa2</a> on page 586                      | Modifies TKIP and CCMP (WPA/WPA2) related parameters  |
| <a href="#">no (wlan-config-mode)</a> on page 588         | Negates a command or reverts settings to their default  |

### 802.11v

The IEEE 802.11v standard allows client devices to exchange information about the network topology, including information about the *RF* environment, making each client network aware, facilitating overall improvement of the wireless network. Use this command to configure 802.11v parameters on this WLAN.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
802.11v [bss-transition|session-information-url <URL>]
```

#### Parameters

```
802.11v [bss-transition|session-information-url <URL>]
```

|                               |   |
|-------------------------------|---|
| 802.11v                       | Configures IEEE 802.11v parameters, such as 'bss-transition' and session-information-url'.  |
| bss-transition                | Enables <i>Base station Subsystem</i> (BSS) transition management capabilities on the WLAN APs. When enabled, WLAN APs send <i>BSS Transition Management Request</i> frames to 802.11v capable clients. These request frames suggest a specific AP, or a set of APs to which the client can transition for better throughput and <i>Quality of Service</i> (QoS).<br><br><b>Note:</b> This feature is enabled by default. |
| session-information-url <URL> | Configures the session information URL.<br>This is the URL containing specific information about the client session. This is the URL to which the WLAN AP sends the BSS Transition Management Request frames. <ul style="list-style-type: none"> <li>&lt;URL&gt; - Specify the session information URL.</li> </ul>  |

#### Examples

```
NOC-NX9500 (config-wlan-test)#802.11v bss-transition
NOC-NX9500 (config-wlan-test)#show context
wlan test
  ssid test123
  bridging-mode local
  encryption-type none
  authentication-type none
  802.11v bss-transition
NOC-NX9500 (config-wlan-test)#
```

#### Related Commands

|   |   |
|---|---|
| <a href="#">no (wlan-config-mode)</a> on page 588 | Disables 802.11v BSS Transition Management capabilities and removes the session-information-url |
|---|---|

### accounting (wlan-config-mode)

Defines the WLAN's accounting configuration

Accounting is the method of collecting user data, such as start and stop times, executed commands (for example, PPP), number of packets and number of bytes received and transmitted. This data is sent to the security server for billing, auditing, and reporting purposes. Accounting enables wireless network administrators to track the services and network resources accessed and consumed by users. When enabled, this feature allows the network access server to report and log user activity to a RADIUS security server in the form of accounting records. Each accounting record is comprised of AV pairs and is stored on the access control server. The data can be analyzed for network management, client billing, and/or auditing. Accounting methods must be defined through AAA policies.

Accounting can be enabled and applied to access point, wireless controller, or service platform managed WLANs. Once enabled, it uniquely logs accounting events specific to the managed WLAN. Accounting logs contain information about the use of remote access services by users. This information is of great assistance in partitioning local versus remote users and how to best accommodate each. Remote user information can be archived to a location outside of the access point for periodic network and user permission administration.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
accounting [radius|syslog|wait-client-ip]
accounting [radius|wait-client-ip]
accounting syslog [host|mac-address-format]
accounting syslog host <IP/HOSTNAME> {port <1-65535>}
{proxy-mode [none|through-controller|through-rf-domain-manager]}
accounting syslog mac-address-format [middle-hyphen|no-delim|pair-colon|
pair-hyphen|quad-dot] case [lower|upper]
```

#### Parameters

```
accounting [radius|wait-client-ip]
```

|                           |  |
|---------------------------|--|
| accounting radius         | Enables support for WLAN RADIUS accounting messages. When enabled, the WLAN uses an external RADIUS resource for accounting. This option is disabled by default. Use the <code>use &gt; aaa-policy &gt; &lt;AAA-POLICY-NAME&gt;</code> command to associate an appropriate AAA policy with this WLAN. This AAA policy should be existing and should define the accounting, authentication, and authorization parameters. |
| accounting wait-client-ip | Enables waiting for client's IP before commencing the accounting procedure   |

```
accounting syslog host <IP/HOSTNAME> {port <1-65535>}
{proxy-mode [none|through-controller|through-rf-domain-manager]}
```

|                    |   |
|--------------------|---|
| accounting syslog  | Enables support for WLAN syslog accounting messages in standard syslog format (RFC 3164). This option is disabled by default.   |
| host <IP/HOSTNAME> | Configures a syslog destination hostname or IP address for accounting records <ul style="list-style-type: none"> <li>• &lt;IP/HOSTNAME&gt; – Specify the IP address or name of the destination host.</li> </ul> |

|  |  |
|--|--|
| port <1-65535>   | Optional. Configures the syslog server's UDP port (this port is used to connect to the server) <ul style="list-style-type: none"> <li>&lt;1-65535&gt; – Specify the port from 1 - 65535. Default port is 514.</li> </ul>   |
| proxy-mode [none]<br>through-controller through-rf-domain-manager] | Optional. Configures the request proxying mode <ul style="list-style-type: none"> <li>none – Requests are directly sent to the server from the device</li> <li>through-controller – Proxies requests through the controller (access point, wireless controller, or service platform) configuring the device</li> <li>through-rf-domain-manager – Proxies requests through the local RF Domain manager</li> </ul> |

```
accounting syslog mac-address-format [middle-hyphen|no-delim|pair-colon|pair-hyphen|quad-dot] case [lower|upper]
```

|                    |  |
|--------------------|--|
| accounting syslog  | Enables support for WLAN syslog accounting messages  |
| mac-address-format | Configures the MAC address format used in syslog messages  |
| middle-hyphen      | Configures the MAC address format with middle hyphen (AABBCC-DDEEFF)   |
| no-delim           | Configures the MAC address format without delimiters (AABBCCDDEEFF)  |
| pair-colon         | Configures the MAC address format with pair-colon delimiters (AA:BB:CC:DD:EE:FF)   |
| pair-hyphen        | Configures the MAC address format with pair-hyphen delimiters (AA-BB-CC-DD-EE-FF). This is the default setting.  |
| quad-dot           | Configures the MAC address format with quad-dot delimiters (AABB.CCDD.EEFF)  |
| case [lower upper] | The following keywords are common to all: <ul style="list-style-type: none"> <li>case – Specifies MAC address case (upper or lower) <ul style="list-style-type: none"> <li>lower – Specifies MAC address is filled in lower case (for example, aa-bb-cc-dd-ee-ff)</li> <li>upper – Specifies MAC address is filled in upper case (for example, AA-BB-CC-DD-EE-FF)</li> </ul> </li> </ul> |

### Examples

```
nx9500-6C8809(config-wlan-test)#accounting syslog host 172.16.10.4 port 2 proxy-mode none
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
accounting syslog host 172.16.10.4 port 2
nx9500-6C8809(config-wlan-test)#
```

### Related Commands

|                                   |   |
|-----------------------------------|---|
| no (wlan-config-mode) on page 588 | Disables sending of accounting message to the RADIUS server, disables syslog accounting, or disables waiting for client's IP before sending accounting messages |
|-----------------------------------|---|

**acl**

Defines the actions taken based on an ACL rule configuration. Use the `use > ip-access-list <IP-ACCESS-LIST-NAME>` command to associate an ACL with the WLAN. The ACL rule is determined by the associated ACL's configuration.

A firewall is a mechanism enforcing access control, and is considered a first line of defense in protecting proprietary information within the network. The means by which this is accomplished varies, but in principle, a Firewall can be thought of as mechanisms allowing and denying data traffic in respect to administrator defined rules.

WLANs use firewalls like *Access Control Lists* (ACLs) to filter/mark packets based on the WLAN from which they arrive, as opposed to filtering packets on layer 2 ports. An ACL contains an ordered list of *Access Control Entries* (ACEs). Each ACE specifies an action and a set of conditions (rules) a packet must satisfy to match the ACE. The order of conditions in the list is critical since filtering is stopped after the first match.

IP based Firewall rules are specific to source and destination IP addresses and the unique rules and precedence orders assigned. Both IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC.

Additionally, you can filter layer 2 traffic on a physical layer 2 interface using MAC addresses. A MAC Firewall rule uses source and destination MAC addresses for matching operations, where the result is a typical allow, deny or mark designation to WLAN packet traffic.

Keep in mind IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC ACL to the interface.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
acl exceed-rate wireless-client-denied-traffic <0-1000000> {blacklist <0-86400>|
disassociate}
```

**Parameters**

```
acl exceed-rate wireless-client-denied-traffic <0-1000000> {blacklist <0-86400>|
disassociate}
```

|  |  |
|--|--|
| acl exceed-rate                            | <p>Sets the action taken based on an ACL rule configuration (for example, drop a packet)</p> <ul style="list-style-type: none"> <li>• exceed-rate – Action is taken when the rate exceeds a specified value</li> </ul>   |
| wireless-client-denied-traffic <0-1000000> | <p>Sets the action to deny traffic to the wireless client when the rate exceeds the specified value</p> <ul style="list-style-type: none"> <li>• &lt;0-1000000&gt; – Specify a allowed rate threshold of disallowed traffic in packets/sec.</li> </ul> <p>If enabled, this option allows an associated client, exceeding the thresholds configured for storm traffic, to be either de-authenticated or blacklisted depending on the action selected. This option is disabled by default.</p> |

|  |  |
|--|--|
| <code>blacklist &lt;0-86400&gt;</code> | Optional. Sets the time period for which an offending wireless client is blacklisted. <ul style="list-style-type: none"> <li><code>&lt;0-86400&gt;</code> - Configures the blacklist duration from 0 - 86400 seconds. Offending clients are re-authenticated once the blacklist duration, configured here, is over.</li> </ul> |
| <code>disassociate</code>              | Optional. When enabled, disassociates a blacklisted wireless client.   |

### Examples

```

nx9500-6C8809(config-wlan-test)#acl exceed-rate wireless-client-denied-traffic
20 disassociate
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  accounting syslog host 172.16.10.4 port 2
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
nx9500-6C8809(config-wlan-test)#

```

### Related Commands

|   |   |
|---|---|
| <code>no (wlan-config-mode) on</code><br>page 588 | Removes the action (de-authenticate or blacklist) to be taken when an associated client exceeds the thresholds configured for storm traffic |
|---|---|

## answer-broadcast-probes

Allows the WLAN to respond to probe requests that do not specify an SSID. These probes are for broadcast ESS. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
answer-broadcast-probes
```

### Parameters

None

### Examples

```

nx9500-6C8809(config-wlan-1)#answer-broadcast-probes
nx9500-6C8809(config-wlan-1)#

```

### Related Commands

|   |  |
|---|--|
| <code>no (wlan-config-mode) on</code><br>page 588 | Does not allow this WLAN to respond to probe requests that do not specify a SSID |
|---|--|

## assoc-response

Configures the deny-threshold and rssi-threshold values. These threshold values are considered when responding to a client's association/authentication request.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
assoc-response [deny-threshold <1-12>|rssi-threshold <-100--40>]
```

#### Parameters

```
assoc-response [deny-threshold <1-12>|rssi-threshold <-100--40>]
```

|                           |  |
|---------------------------|--|
| assoc-response            | Configures the association response thresholds   |
| deny-threshold <1-12>     | Configures the number of times association/authentication request, from a client, is ignored if the RSSI is less than the configured RSSI threshold. This option is disabled by default. <ul style="list-style-type: none"> <li>• &lt;1-12&gt; – Specify the deny-threshold from 1 - 12.</li> </ul>                                      |
| rssi-threshold <-100--40> | Configures an association response RSSI threshold value. If the RSSI is below the configured threshold value, the client's association/authentication request is ignored. This option is disabled by default. rssi-threshold <ul style="list-style-type: none"> <li>• &lt;-100--40&gt; – Specify a value from -100 - -40 dBm.</li> </ul> |

#### Examples

```
nx9500-6C8809(config-wlan-test)#assoc-response rssi-threshold -60
nx9500-6C8809(config-wlan-test)#assoc-response deny-threshold 4
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  assoc-response rssi-threshold -60
  assoc-response deny-threshold 4
  registration user group-name guest expiry-time 2000 agreement-refresh 14400
nx9500-6C8809(config-wlan-test)#
```

#### Related Commands

|   |

| <b>no (wlan-config-mode) on</b> Removes the configured deny-threshold and rssi-threshold values<br>page 588 |
|---|

### association-list

Attaches an existing global association list with this WLAN. For more information on global association lists, see [global-association-list](#) on page 361.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
association-list global <GLOBAL-ASSO-LIST-NAME>
```

## Parameters

```
association-list global <GLOBAL-ASSO-LIST-NAME>
```

|   |   |
|---|---|
| association-list global <GLOBAL-ASSO-LIST-NAME> | Attaches an existing global association list with this WLAN <ul style="list-style-type: none"> <li>• &lt;GLOBAL-ASSO-LIST-NAME&gt; - Specify the global association list name (should be existing and configured).</li> </ul> |
|---|---|

## Examples

```

nx9500-6C8809(config-wlan-test)#association-list global my-clients
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  association-list global my-clients
nx9500-6C8809(config-wlan-test)#

```

## Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Removes the global association list associated with this WLAN |
|--|---|

**authentication-type**

Sets the WLAN's mode of authentication

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
authentication-type [eap|eap-mac|eap-psk|kerberos|mac|none|sae|sae-psk]
```

## Parameters

```
authentication-type [eap|eap-mac|eap-psk|kerberos|mac|none|sae|sae-psk]
```

|                     |   |
|---------------------|---|
| authentication-type | Configures a WLAN's authentication type<br>The authentication types are: <b>EAP</b> , <b>EAP-MAC</b> , <b>EAP-PSK</b> , <b>Kerberos</b> , <b>MAC</b> , <b>SAE</b> , <b>SAE-PSK</b> , and <b>none</b> .  |
| eap                 | Configures EAP authentication (802.1X)<br>EAP is the de-facto standard authentication method used to provide secure authenticated access to controller managed WLANs. EAP provides mutual authentication, secured credential exchange, dynamic keying and strong encryption. 802.1X EAP can be deployed with WEP, WPA or WPA2 encryption schemes to further protect user information forwarded over controller managed WLANs.<br>The EAP process begins when an unauthenticated supplicant (client device) tries to connect with an authenticator (in this case, the authentication server). An access point passes EAP packets from the client to an authentication server on the wired side of the Access Point. All other packet types are blocked until the authentication server (typically, a RADIUS server) verifies the client's identity.<br>If using EAP authentication ensure that a AAA policy is mapped to the WLAN. |
| eap-mac             | Configures EAP or MAC authentication depending on client. (This setting is valid only with the None encryption type).<br>EAP-MAC is useful when in a hotspot environment, as some clients support EAP and an administrator may want to authenticate based on just the MAC address of the device.  |
| eap-psk             | Configures EAP authentication or pre-shared keys depending on client (This setting is only valid with <i>Temporal Key Integrity Protocol</i> (TKIP) or Counter Mode with <i>Cipher Block Chaining Message Authentication Code Protocol</i> (CCMP) encryption types.<br>When using PSK with EAP, the controller sends a packet requesting a secure link using a pre-shared key. The controller and authenticating device must use the same authenticating algorithm and passcode during authentication. EAP-PSK is useful when transitioning from a PSK network to one that supports EAP.<br>If using eap-psk authentication ensure that a AAA policy is mapped to the WLAN.   |
| kerberos            | Configures Kerberos authentication (encryption will change to WEP128 if it's not already WEP128 or Keyguard)<br>Kerberos (designed and developed by MIT) provides strong authentication for client/server applications using secret-key cryptography. Using Kerberos, a client must prove its identity to a server (and vice versa) across an insecure network connection.<br>Once a client and server use Kerberos to validate their identity, they encrypt all communications to assure privacy and data integrity. Kerberos can only be used on the access point with 802.11b clients. Kerberos uses <i>Network Time Protocol</i> (NTP) for synchronizing the clocks of its <i>Key Distribution Center</i> (KDC) server(s).  |

|         |  |
|---------|--|
| mac     | <p>Configures MAC authentication (RADIUS lookup of MAC address)</p> <p>MAC is a device level authentication method used to augment other security schemes when legacy devices are deployed using static WEP. MAC authentication can be used for device level authentication by permitting WLAN access based on device MAC address. MAC authentication is typically used to augment WLAN security options that do not use authentication (such as static WEP, WPA-PSK and WPA2-PSK)</p> <p>MAC authentication can also be used to assign VLAN memberships, firewall policies and time and date restrictions.</p> <p>MAC authentication can only identify devices, not users.</p> <p>If using mac authentication ensure that an AAA policy is mapped to the WLAN.</p>  |
| none    | No authentication is used or the client uses pre-shared keys   |
| sae     | <p>Enables WPA3-Personal (SAE Authentication) on this WLAN.</p> <p><b>Note:</b> SAE authentication is only supported with <b>mandatory</b> protected management frames. For more information, see <a href="#">protected-mgmt-frames</a> on page 552.</p> <p>WPA3 is the latest security protocol developed by the WiFi Alliance as part of its series of <i>Wi-Fi Protected Access</i> (WPA) protocols. It has stronger configuration, authentication, and encryption features. WPA3 is more secure and protects against offline brute force attacks that WPA2 could not provide. WPA3 offers two levels of protection: WPA3-Personal (with 128-bit encryption) and WPA3-Enterprise (with 192-bit encryption).</p> <p>WPA3-Personal uses <i>Simultaneous Authentication of Equals</i> (SAE) authentication method. SAE was first defined in the IEEE 802.11s standard for authentication between 802.11s enabled mesh peers. SAE is a zero-knowledge proof key exchange protocol that uses finite group cryptography. The client and access point go through an SAE handshake to negotiate a fresh <i>Pairwise Master Key</i> (PMK). This PMK is used in a traditional four-way handshake to generate a session key.</p> <p><b>Note:</b> The 32-byte PMK negotiated through the SAE handshake cannot be guessed using offline dictionary attacks, even though it is later used in a four-way handshake.</p> <p>Enable this option to allow only WPA3-capable clients authenticate with the access point and access the wireless network.</p> |
| sae-psk | <p>Enables WPA3-Compatibility mode. Use this option to enable WPA2 in addition with WPA3-Personal. When enabled, both WPA3-capable and WPA2-capable clients can authenticate with the access point and access the wireless network.</p> <p><b>Note:</b> SAE-PSK authentication is supported with <b>optional</b> management frames. For more information, see <a href="#">protected-mgmt-frames</a> on page 552.</p>   |

|--|--|
| <b>no (wlan-config-mode)</b> on page 588 | Resets the authentication mode used with this WLAN to default (none/pre-shared keys) |
|--|--|

### bridging-mode

Configures the mode used to bridge packets to and from a WLAN. Use this command to define which VLANs are bridged, and how local VLANs are bridged between the wired and wireless sides of the network.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
bridging-mode [local|tunnel]
```

#### Parameters

```
bridging-mode [local|tunnel]
```

|               |   |
|---------------|---|
| bridging-mode | Configures bridging mode on this WLAN. The options are <b>local</b> and <b>tunnel</b> . |
| local         | Bridges packets between WLAN and local ethernet ports. This is the default mode.        |
| tunnel        | Tunnels packets to other devices (typically a wireless controller or service platform)  |

## Examples

```

nx9500-6C8809(config-wlan-test)#bridging-mode local
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
bridging-mode local
  encryption-type none
  authentication-type eap
  accounting syslog host 172.16.10.4 port 2
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
nx9500-6C8809(config-wlan-test)#

```

**broadcast-dhcp**

Configures broadcast DHCP packet handling parameters

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
broadcast-dhcp validate-offer
```

## Parameters

```
broadcast-dhcp validate-offer
```

|                |   |
|----------------|---|
| validate-offer | Enables validation of the broadcast DHCP packet destination (a wireless client associated to the radio) before forwarding over the air. This option is disabled by default. |
|----------------|---|

## Examples

```

nx9500-6C8809(config-wlan-test)#broadcast-dhcp validate-offer
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type eap
  accounting syslog host 172.16.10.4 port 2
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
broadcast-dhcp validate-offer
nx9500-6C8809(config-wlan-test)#

```

## Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Disables validation of the broadcast DHCP packet destination (a wireless client associated to the radio) before forwarding over the air |
|--|---|

**broadcast-ssid**

Advertises the WLAN SSID in beacons. If a hacker tries to isolate and hack a SSID from a client, the SSID will display since the ESSID is in the beacon. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
broadcast-ssid
```

#### Parameters

None

#### Examples

```
nx9500-6C8809(config-wlan-1)#broadcast-ssid
nx9500-6C8809(config-wlan-1)#
```

|---------------------------------------|---|

### **captive-portal-enforcement**

Configures the captive portal enforcement on this WLAN. When enabled, provides successfully authenticated guests temporary and restricted access to the network. If enforcing captive-portal authentication, associate captive-portal policy with the WLAN. For more information, see [use \(wlan-config-mode\)](#) on page 573.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
captive-portal-enforcement {fall-back}
```

#### Parameters

```
captive-portal-enforcement {fall-back}
```

|                            |  |
|----------------------------|--|
| captive-portal-enforcement | Enables captive portal enforcement on a WLAN. This option is disabled by default.  |
| fall-back                  | Optional. Enforces captive portal validation if WLAN authentication fails (applicable to EAP or MAC authentication only) |

#### Examples

```
nx9500-6C8809(config-wlan-test)#captive-portal-enforcement fall-back
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type eap
  accounting syslog host 172.16.10.4 port 2

|--|-------------------------------------|

**client-access**

Enables WLAN client access (for normal data operations)

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
client-access
```

## Parameters

None

## Examples

```
nx9500-6C8809(config-wlan-1)#client-access
nx9500-6C8809(config-wlan-1)#
```

## Related Commands

| <code>no (wlan-config-mode)</code> on page 588 | Disables WLAN client access |
|--|-----------------------------|

**client-client-communication**

Allows frame switching from one client to another on a WLAN. This option is enabled by default. It allows clients to exchange packets with other clients. It does not necessarily prevent clients on other WLANs from sending packets to this WLAN, but as long as this setting is also disabled on that WLAN, clients are not permitted to interoperate.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
client-client-communication
```

## Parameters

None

## Examples

```
nx9500-6C8809(config-wlan-1)#client-client-communication
nx9500-6C8809(config-wlan-1)#
```

## Related Commands

`no (wlan-config-mode) on` Disables frame switching from one client to another on a WLAN  
page 588

## client-load-balancing

Enforces client load balancing on a WLAN's access point radios. When enforced, probe and association requests are not responded to, forcing a client to associate with another access point radio. This feature is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
client-load-balancing {allow-single-band-clients|band-discovery-intvl|
capability-ageout-time|max-probe-req|probe-req-intvl}
client-load-balancing {allow-single-band-clients [2.4ghz|5ghz]|
band-discovery-intvl <0-10000>|capability-ageout-time <0-10000>}
client-load-balancing {max-probe-req|probe-req-intvl} [2.4ghz|5ghz] <0-10000>
```

### Parameters

```
client-load-balancing {allow-single-band-clients [2.4ghz|5ghz]|
band-discovery-intvl <0-10000>|capability-ageout-time <0-10000>}
```

|   |   |
|---|---|
| client-load-balancing                   | Configures client load balancing on a WLAN  |
| allow-single-band-clients [2.4GHz 5GHz] | Optional. Allows single band clients to associate even during load balancing <ul style="list-style-type: none"> <li>• 2.4GHz – Enables load balancing across 2.4 GHz channels</li> <li>• 5GHz – Enables load balancing across 5.0 GHz channels</li> </ul> This option is enabled by default for 2.4 and 5.0 GHz bands.  |
| band-discovery-intvl <0-10000>          | Optional. Configures time interval to discover a client's band capability before connection <ul style="list-style-type: none"> <li>• &lt;0-10000&gt; – Specify a value from 0 - 10000 seconds. The default is 10 seconds.</li> </ul>  |
| capability-ageout-time <0-10000>        | Optional. Configures a client's capability ageout interval. This is the time for which a client's capabilities are retained in the device's internal table. Once this time is exceeded the client's capabilities are aged out. <ul style="list-style-type: none"> <li>• &lt;0-10000&gt; – Specify a value from 0 - 10000 seconds. The default is 3600 seconds.</li> </ul> |

```

## controller-assisted-mobility

Enables controller or service platform assisted mobility to determine a wireless client's VLAN assignment. When enabled, a controller or service platform's mobility database is used to assist in roaming between RF Domains. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
controller-assisted-mobility
```

### Parameters

None

## Examples

```

ap505-13403B(config-wlan-test)#controller-assisted-mobility
ap505-13403B(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode local
  encryption-type ccmp
  authentication-type sae-psk
  protected-mgmt-frames optional
  controller-assisted-mobility

```

## Parameters

```
data-rates 2.4GHz [b-only|bg|bgn|default|g-only|gn]
```

|            |   |
|------------|---|
| data-rates | Specifies the 802.11 rates supported when mapped to a 2.4 GHz radio |
| b-only     | Uses rates that support only 11b clients                            |
| bg         | Uses rates that support both 11b and 11g clients                    |
| bgn        | Uses rates that support 11b, 11g and 11n clients                    |
| default    | Uses the default rates configured for a 2.4 GHz radio               |
| g-only     | Uses rates that support operation in 11g only                       |
| gn         | Uses rates that support 11g and 11n clients                         |

```
data-rates 5GHz [a-only|an|default]
```

|            |   |
|------------|---|
| data-rates | Specifies the 802.11 rates supported when mapped to a 5.0 GHz radio |
| a-only     | Uses rates that support operation in 11a only                       |
| an         | Uses rates that support 11a and 11n clients                         |
| default    | Uses default rates configured for a 5.0 GHz                         |

```
data-rates 2.4GHz custom [1|11|12|18|2|24|36|48|5.5|54|6|9|basic-1|basic-11|
basic-12|basic-18|basic-2|basic-24|basic-36|basic-48|basic-5.5|basic-54|basic-6|
basic-9|basic-mcs-1s|mcs-1s|mcs-2s|mcs-3s|basic-mcs-1s|basic-mcs0-7|mcs-1s|mcs-2s|
mcs-3s|mcs0-15|mcs0-23|mcs0-7|mcs16-23|mcs8-15|mcs8-23]
```

|  |   |
|--|---|
| data-rates [2.4GHz 5GHz]   | Specifies the 802.11 rates supported when mapped to a 2.4 GHz or 5.0 GHz radio  |
| custom   | Configures a data rates list by specifying each rate individually. Use 'basic-' prefix before a rate to indicate it is used as a basic rate (For example, 'data-rates custom basic-1 basic-2 5.5 11').<br>The data-rates for 2.4 GHz and 5.0 GHz channels are the same with a few exceptions. The 2.4 GHz channel has a few extra data rates: 1, 11, 2, and 5.5.  |
| 1,11,2,5.5   | The following data rates are specific to the 2.4 GHz channel: <ul style="list-style-type: none"> <li>• 1 – 1-Mbps</li> <li>• 11 – 11-Mbps</li> <li>• 2 – 2-Mbps</li> <li>• 5.5 – 5.5-Mbps</li> </ul>  |
| 12,18,24,36,48,54,6,9, basic-1,basic-11, basic-12,basic-18, basic-2, basic-36,basic-48, basic-5.5, basic-54,basic-6, basic-9, basic-mcs0-7,mcs0-15, mcs0-7,mcs8-15 | The following data rates are common to both the 2.4 GHz and 5.0 GHz channels: <ul style="list-style-type: none"> <li>• 12 – 12 Mbps</li> <li>• 18 – 18-Mbps</li> <li>• 24 – 24 Mbps</li> <li>• 36 – 36-Mbps</li> <li>• 48 – 48-Mbps</li> <li>• 54 – 54-Mbps</li> <li>• 6 – 6-Mbps</li> <li>• 9 – 9-Mbps</li> <li>• basic-1 – basic 1-Mbps</li> <li>• basic-11 – basic 11-Mbps</li> <li>• basic-12 – basic 12-Mbps</li> <li>• basic-18 – basic 18-Mbps</li> <li>• basic-2 – basic 2-Mbps</li> <li>• basic-36 – basic 36-Mbps</li> <li>• basic-48 – basic 48-Mbps</li> <li>• basic-5.5 – basic 5.5-Mbps</li> <li>• basic-54 – basic 54-Mbps</li> <li>• basic-6 – basic 6-Mbps</li> <li>• basic-9 – basic 9-Mbps</li> <li>• basic-mcs-1s – Modulation and coding scheme data rates for 1 Spatial Stream</li> <li>• mcs-1s – Applicable to 1-spatial stream data rates</li> <li>• mcs-2s – Applicable to 2-spatial stream data rates</li> <li>• mcs-3s – Applicable to 3-spatial stream data rates</li> </ul> |

## Examples

```

nx9500-6C8809(config-wlan-test)#data-rates 2.4GHz gn
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type eap
  accounting syslog host 172.16.10.4 port 2
  data-rates 2.4GHz gn
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  captive-portal-enforcement fall-back
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
  broadcast-dhcp validate-offer
nx9500-6C8809(config-wlan-test)#

|---|--|

**description**

Configures a description for this WLAN

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
description <LINE>
```

## Parameters

```
description <LINE>
```

|        |  |
|--------|--|
| <LINE> | Specify a description for this WLAN<br>The WLAN's description should help differentiate it from others with similar configurations. The description should not exceed 64 characters. |
|--------|--|

## Examples

```

nx9500-6C8809(config-wlan-test)#description TestWLAN
nx9500-6C8809(config-wlan-test)#show context
wlan test
  description TestWLAN
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type eap
  accounting syslog host 172.16.10.4 port 2
  data-rates 2.4GHz gn
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  captive-portal-enforcement fall-back

### downstream-group-addressed-forwarding

Enables forwarding of downstream broadcast/multicast (BC/MC) packets to a group on this WLAN. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
downstream-group-addressed-forwarding
```

#### Parameters

None

#### Examples

```
ap505-13403B(config-wlan-test)#downstream-group-addressed-forwarding
ap505-13403B(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode local
  encryption-type ccmp
  authentication-type sae-psk
  dynamic-vlan-assignment allowed-vlans 1-3
  protected-mgmt-frames optional
  controller-assisted-mobility
  dpi metadata http
ap505-13403B(config-wlan-test)#
```

#### Related Commands

|  |  |
|--|--|
| <code>no (wlan-config-mode)</code> on page 588 | Disables forwarding of downstream BCMC packets to a group on this WLAN |
|--|--|

### dpi

Enables DPI on this WLAN. When enabled, all traffic is subjected to DPI for detection of applications, application categories, custom applications, and metadata extraction.

DPI is an advanced packet analysis technique, which analyzes packet and packet content headers to determine the nature of network traffic. When enabled, DPI inspects packets of all flows to identify applications (such as, Netflix, Twitter, Facebook, etc.) and extract metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
dpi metadata [http|ssl|tcp-rtt|voice-video]
```

### Parameters

```
dpi metadata [http|ssl|tcp-rtt|voice-video]
```

|   |  |
|---|--|
| dpi metadata [http ssl tcp-rtt voice-video] | <p>Enables extraction of the following metadata flows:</p> <ul style="list-style-type: none"> <li>• http – Extracts HTTP flows. When enabled, administrators can track HTTP Websites accessed by both internal and guest clients and visualize HTTP data usage, hits, active time and total clients on the NSight application's dashboard. This setting is disabled by default.</li> <li>• ssl – Extracts SSL flows. When enabled, administrators can track SSL Websites accessed by both internal and guest clients and visualize SSL data usage, hits, active time and total clients on the NSight application's dashboard. This setting is disabled by default</li> <li>• tcp-rtt – Extracts RTT (<i>Round Trip Time</i>) information from TCP (<i>Transmission Control Protocol</i>) flows. However, this TCP-RTT metadata is viewable only on the NSight dashboard. Therefore, ensure the NSight server is up and NSight analytics data collection is enabled.</li> <li>• voice-video – Extracts voice and video flows. When enabled, voice and video calls can be tracked by extracting parameters, such as packets transferred and lost, jitter, and application name. Most Enterprise VoIP applications like facetime, skype for business and VoIP terminals can be monitored for call quality and visualized on the NSight dashboard in manner similar to HTTP and SSL. Call quality and metrics can only be determined from calls established unencrypted. This setting is disabled by default.</li> </ul> |
|---|--|

### Examples

```
nx9500-6C8809(config-wlan-test)#dpi metadata http
nx9500-6C8809(config-wlan-test)#dpi metadata ssl
nx9500-6C8809(config-wlan-test)#dpi metadata voice-video
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  dpi metadata voice-video
  dpi metadata http
  dpi metadata ssl
nx9500-6C8809(config-wlan-test)#
```

### Related Commands

### dynamic-vlan-assignment

Enables dynamic VLAN assignment on this WLAN, and adds or removes VLANs for the selected WLAN. Configure this feature to allow an override to the WLAN configuration. If, as part of the authentication process, the RADIUS server returns a client's VLAN-ID in a RADIUS Access-Accept packet, and this feature is enabled, all client traffic is forward on that VLAN. If disabled, the RADIUS server returns VLAN-ID is ignored and the WLAN's VLAN configuration is used. For more information, see [vlan](#) on page 577. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
dynamic-vlan-assignment allowed-vlan <VLAN-ID>
```

#### Parameters

```
dynamic-vlan-assignment allowed-vlan <VLAN-ID>
```

|                                      |  |
|--------------------------------------|--|
| dynamic-vlan-assignment allowed-vlan | Enables dynamic VLAN assignment and configures a list of VLAN IDs or VLAN alias allowed access to the WLAN   |
| <VLAN-ID>                            | Specify the list of VLAN IDs or the VLAN alias names. For example, 10-20, 25, 30-35, \$guest. For example, 10-20, 25, 30-35, \$guest. For information on VLAN aliases, see <a href="#">alias</a> on page 163 . |

#### Examples

```
ap505-13403B(config-wlan-test)#dynamic-vlan-assignment allowed-vlans 2,3,4
ap505-13403B(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode local
  encryption-type ccmp
  authentication-type sae-psk
  dynamic-vlan-assignment allowed-vlans 2-4
  protected-mgmt-frames optional
  controller-assisted-mobility
  dpi metadata http
ap505-13403B(config-wlan-test)#
```

#### Related Commands

|   |   |
|---|---|
| <a href="#">no (wlan-config-mode)</a> on page 588 | Disables dynamic VLAN assignment on this WLAN |
|---|---|

### eap-types

Configures client access based on the EAP type used

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
eap-types [allow|deny] [aka|all|fast|peap|sim|tls|ttls] { (aka|all|fast|peap|sim|tls|ttls) }
```

## Parameters

```
eap-types [allow|deny] [aka|all|fast|peap|sim|tls|ttls] { (aka|all|fast|peap|sim|tls|ttls) }
```

|                                  |  |
|----------------------------------|--|
| eap-types [allow deny]           | <p>Configures a list of allowed or denied EAP types</p> <ul style="list-style-type: none"> <li>allow – Configures a list of EAP types allowed for WLAN client authentication</li> <li>deny – Configures a list of EAP types not allowed for WLAN client authentication</li> </ul>  |
| [aka all fast peap sim tls ttls] | <p>The following EAP types are common to the 'allow' and 'deny' keywords:</p> <ul style="list-style-type: none"> <li>aka – Configures EAP <i>Authentication and Key Agreement</i> (AKA) and EAP-AKA' (AKA Prime). EAP-AKA is one of the methods in the EAP authentication framework. It uses <i>Universal Mobile Telecommunications System</i> (UMTS) and <i>Universal Subscriber Identity Module</i> (USIM) for client authentication and key distribution.</li> <li>all – Allows or denies usage of all EAP types on the WLAN</li> <li>fast – Configures EAP <i>Flexible Authentication via Secure Tunneling</i> (FAST). EAP-FAST establishes a <i>Transport Layer Security</i> (TLS) tunnel, to verify client credentials, using <i>Protected Access Credentials</i> (PAC).</li> <li>peap – Configures <i>Protected Extensible Authentication Protocol</i> (PEAP). PEAP or Protected EAP uses encrypted and authenticated TLS tunnel to encapsulate EAP.</li> <li>sim – Configures EAP <i>Subscriber Identity Module</i> (SIM ). EAP-SIM uses <i>Global System for Mobile Communications</i> (GSMC) SIM for client authentication and key distribution.</li> <li>tls – Configures EAP TLS. EAP-TLS is an EAP authentication method that uses PKI to communicate with a RADIUS server or any other authentication server.</li> <li>ttls – Configures <i>Tunneled Transport Layer Security</i> (TTLS). EAP-TTLS is an extension of TLS. Unlike TLS, TTLS does not require every client to generate and install a CA- signed certificate.</li> <li>These options are recursive, and more than one EAP type can be selected. The selected options are added to the allowed or denied EAP types list.</li> </ul> |

## Examples

```
nx9500-6C8809(config-wlan-test)#eap-types allow fast sim tls
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  eap-types allow fast sim tls
nx9500-6C8809(config-wlan-test)#
```

## Related Commands

|-----------------------------------|--|

**encryption-type**

Sets the WLAN's encryption type

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
encryption-type [ccmp|gcmp256|keyguard|none|tkip-ccmp|wep128|wep128-keyguard|wep64]
```

**Parameters**

```
encryption-type [ccmp|gcmp256|keyguard|none|tkip-ccmp|wep128|wep128-keyguard|wep64]
```

|                 |  |
|-----------------|--|
| encryption-type | Configures the WLAN's data encryption parameters   |
| ccmp            | Configures <i>Advanced Encryption Standard Counter Mode CBC-MAC Protocol</i> (AES-128CCM/CCMP)<br><br><b>Note:</b> This is the default setting.  |
| gcmp256         | Configures AES-GCM ( <i>Advanced Encryption Standard-Galois Counter Mode</i> ) protocol (WPA3-Enterprise 192-bit) encryption mode. GCMP-256 is a block cipher which works on 256-bit blocks.<br><br><b>Note:</b> GCMP encryption is only supported with eap authentication-type. For more information, see <a href="#">authentication-type</a> on page 524.<br><br><b>Note:</b> GCMP encryption is only supported with mandatory protected management frames. #### Related Commands

**no (wlan-config-mode)** on page 588 Resets the WLAN's encryption type to default (none)

### enforce-dhcp

Enables dropping of packets from clients with a static IP address. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
enforce-dhcp
```

#### Parameters

None

#### Examples

```

nx9500-6C8809(config-wlan-test)#enforce-dhcp
nx9500-6C8809(config-wlan-test)#show context
wlan test
  description TestWLAN
  ssid test

`no (wlan-config-mode)` on page 588 Disables dropping of packets from clients with a static IP address

**fast-bss-transition**

Enables or disables support for 802.11r *Fast-BSS Transition* (FT) on the selected WLAN. This feature is disabled by default.

802.11r is an attempt to undo the burden that security and QoS added to the handoff process, and restore it back to an original four message exchange process. The central application for the 802.11r standard is VOIP using mobile phones within wireless Internet networks. 802.11r FT redefines the security key negotiation protocol, allowing parallel processing of negotiation and requests for wireless resources.

Enabling FT standards provides wireless clients fast, secure and seamless transfer from one base station to another, ensuring continuous connectivity.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
fast-bss-transition {over-ds}
```

Parameters

```
fast-bss-transition {over-ds}
```

|                             |   |
|-----------------------------|---|
| fast-bss-transition over-ds | Enables 802.11r FT support on this WLAN <ul style="list-style-type: none"><li>• over-ds – Optional. Enables 802.11r client roaming over the <i>Distribution System</i> (DS). When enabled, all client communication with the target AP is via the current AP. This communication, carried in FT action frames, is first sent by the client to the current AP, then forwarded to the target AP through the controller.</li></ul> |
|-----------------------------|---|

Examples

```
nx9500-6C8809(config-wlan-test)#fast-bss-transition
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  fast-bss-transition
nx9500-6C8809(config-wlan-test)#
```

Related Commands

`no (wlan-config-mode)` on page 588 Disables support for 802.11r FT on the WLAN

**http-analyze**

Enables HTTP URL analysis on the WLAN

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
http-analyze [filter|syslog]
http-analyze filter [images|post|query-string]
http-analyze syslog host <IP/HOSTNAME> {port <1-65535>}
{proxy-mode [none|through-controller|through-rf-domain-manager]}
```

**Parameters**

```
http-analyze filter [images|post|query-string]
```

|              |   |
|--------------|---|
| filter       | Filters URLs, based on the parameters set, before forwarding them   |
| images       | Filters out URLs referring to images (does not forward URL requesting images)   |
| post         | Filters out URLs requesting POST (does not forward POST requests). This option is disabled by default.                      |
| query-string | Removes query strings from URLs before forwarding them (forwards requests and no data). This option is disabled by default. |

```
http-analyze syslog host <IP/HOSTNAME> {port <1-65535>}
{proxy-mode [none|through-controller|through-rf-domain-manager]}
```

|  |   |
|--|---|
| syslog host <IP/HOSTNAME>                                      | Forwards client and URL information to a syslog server <ul style="list-style-type: none"> <li>• host &lt;IP/HOSTNAME&gt; - Specify the syslog server's IP address or hostname</li> </ul>  |
| port <1-65535>   | Optional. Specifies the UDP port to connect to the syslog server from 1 - 65535   |
| proxy-mode [none through-controller through-rf-domain-manager] | Optional. Specifies if the request is to be proxied through another device <ul style="list-style-type: none"> <li>• none - Requests are sent directly to syslog server from device</li> <li>• through-controller - Proxies requests through the wireless controller configuring the device</li> <li>• through-rf-domain-manager - Proxies the requests through the local RF Domain manager</li> </ul> |

**Examples**

```
ap505-13403B(config-wlan-test)#http-analyze syslog host 10.234.160.4 port 21 proxy-mode
through-controller
ap505-13403B(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode local
  encryption-type gcmp256
  authentication-type eap
  dynamic-vlan-assignment allowed-vlans 2-4
```

```
protected-mgmt-frames mandatory
protected-mgmt-frames sa-query attempts 1
use aaa-policy test
http-analyze syslog host 10.234.160.4 port 21 proxy-mode through-controller
controller-assisted-mobility
dpi metadata http
ap505-13403B(config-wlan-test)#
```

### ip (wlan-config-mode)

Configures IPv4 settings

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
ip [arp|dhcp]
ip arp [header-mismatch-validation|trust]
ip dhcp trust
```

#### Parameters

```
ip arp [header-mismatch-validation|trust]
```

|                            |   |
|----------------------------|---|
| ip arp                     | Configures the IP settings for ARP packets  |
| header-mismatch-validation | Verifies mismatch of source MAC address in the ARP and Ethernet headers. This option is enabled by default. |

ipv6 (wlan-config-mode)

Sets the DHCPv6 and ICMPv6 *neighbor discovery* (ND) components for this WLAN

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
ipv6 [dhcpv6|nd]
ipv6 dhcpv6 trust
ipv6 nd [header-mismatch-validation|raguard|trust]
```

Parameters

```
ipv6 dhcpv6 trust
```

|                   |   |
|-------------------|---|
| ipv6 dhcpv6 trust | Enables DHCPv6 trust state for DHCPv6 responses on this WLAN. When enabled, all DHCPv6 responses received on this WLAN are trusted and forwarded. This option is disabled by default. |
|-------------------|---|

```
ipv6 nd [header-mismatch-validation|raguard|trust]
```

|                            |  |
|----------------------------|--|
| ipv6 nd                    | Sets the IPv6 ND settings for this WLAN  |
| header-mismatch-validation | Checks for mismatch of source MAC address in the ICMPv6 ND message and Ethernet header (link layer option). This option is enabled by default.                               |
| raguard                    | Allows redirection of <i>router advertisements</i> (RAs) and ICMPv6 packets originating on this WLAN. This option is disabled by default.                                    |
| trust                      | Enables trust state for ND requests received on this WLAN. When enabled, all ND requests on an IPv6 firewall, on this WLAN, are trusted. This option is disabled by default. |

Examples

```
nx9500-6C8809(config-wlan-test)#ipv6 dhcpv6 trust
nx9500-6C8809(config-wlan-test)#ipv6 nd trust
nx9500-6C8809(config-wlan-test)#show context
wlan test
ssid test
vlan 1
```

```
bridging-mode tunnel
encryption-type none
authentication-type none
ipv6 dhcpv6 trust
ipv6 nd trust
nx9500-6C8809(config-wlan-test)#
```

|--|--|

kerberos

Configures Kerberos authentication parameters on a WLAN. Kerberos (designed and developed by MIT) provides strong authentication for client/server applications using secret-key cryptography. Using Kerberos, a client must prove its identity to a server (and vice versa) across an insecure network connection.

Once a client and server use Kerberos to validate their identity, they encrypt all communications to assure privacy and data integrity. Kerberos can only be used on the access point with 802.11b clients. Kerberos uses NTP for synchronizing the clocks of its KDC server(s).

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
kerberos [password|realm|server]
kerberos password [0 <LINE>|2 <LINE>|<LINE>]
kerberos realm <REALM>
kerberos server [primary|secondary|timeout]
kerberos server [primary|secondary] host <IP/HOSTNAME> {port <1-65535>}
kerberos server timeout <1-60>
```

Parameters

```
kerberos password [0 <LINE>|2 <LINE>|<LINE>]
```

|          |  |
|----------|--|
| kerberos | Configures a WLAN's Kerberos authentication parameters. The parameters are: password, realm, and server.   |
| password | Configures a Kerberos KDC server password. The password should not exceed 127 characters. The password options are: <ul style="list-style-type: none"><li>• 0 &lt;LINE&gt; - Configures a clear text password</li><li>• 2 &lt;LINE&gt; - Configures an encrypted password</li><li>• &lt;LINE&gt; - Specify the password.</li></ul> |

```
kerberos realm <REALM>
```

|               |  |
|---------------|--|
| kerberos      | Configures a WLAN's Kerberos authentication parameters<br>The parameters are: password, realm, and server. |
| realm <REALM> | Configures a Kerberos KDC server realm. The REALM should not exceed 127 characters.                        |

```
kerberos server [primary|secondary] host <IP/HOSTNAME> {port <1-65535>}
```

|                            |   |
|----------------------------|---|
| kerberos                   | Configures a WLAN's Kerberos authentication parameters<br>The parameters are: password, realm, and server.  |

## mac-authentication

Enables MAC authentication. When enabled, the system uses cached credentials (RADIUS server lookups are skipped) to authenticate clients.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
mac-authentication [cached-credentials|enforce-always]
```

### Parameters

```
mac-authentication [cached-credentials|enforce-always]
```

|                    |  |
|--------------------|--|
| mac-authentication | Enables MAC authentication on this WLAN and configures related parameters  |
| cached-credentials | Uses cached credentials to skip RADIUS lookups. This option is disabled by default.  |
| enforce-always     | Enforces MAC authentication on this WLAN. When enabled, MAC authentication is enforced, each time a client logs in, even when the authentication type specified (using the authentication-type command) is not MAC authentication. This option is disabled by default. |

### Examples

```
rfs4000-229D58(config-wlan-test)#mac-authentication cached-credentials
rfs4000-229D58(config-wlan-test)#
```

### Related Commands

## multi-band-operation

Starting with WiNG 7.2.1, Extreme Network's AP5XX line of 802.11ax access points will support Agile Multiband operation. WiFi Agile Multiband uses IEEE 802.11 (802.11k, 802.11v, 802.11u, 802.11r) standards to facilitate optimum utilization of spectrum within a managed wireless network.

Multiband-enabled APs exchange information about the WiFi environment with each other and with multiband-enabled stations connected with them. This dynamic monitoring of network conditions allows APs to steer clients to other APs, frequency bands, channels, or a cellular service in case of network congestion.

Use this command to enable Agile Multiband operation on the WLAN.

Supported in the following platforms

- Access Points - AP505i, AP510i/e, AP560i/h

### Syntax

```
multi-band-operation
```

## Parameters

None

## Examples

To enable agile-multiband operation:

- 1 Ensure the following configurations are defined:

- a Encryption type is set to the CCMP. For more information, see [encryption-type](#) on page 540.

```
nx9500-6C8809(config-wlan-Testing)#show context include-factory | include encryption
encryption-type ccmp
nx9500-6C8809(config-wlan-Testing)#
```

**Note**

Multiband operation capabilities is enabled by default only if the encryption protocol used is CCMP.

- b *Protected-management-frames* (PMF) enforcement is set to the default 'optional' mode. For more information, see [protected-mgmt-frames](#) on page 552.

The IEEE 802.11w PMF standard provides protection for robust management frame. De-authentication, disassociation, action and channel switch announcement unicast frames forwarded to a client are protected. Robust management frame protection is achieved by using CCMP for unicast management frames, broadcast/multicast integrity protocol for broadcast/multicast management frames and SA query protocol for protection against (re)association attacks.

```
nx9500-6C8809(config-wlan-Testing)#show context include-factory | include protected-
mgmt-frames
protected-mgmt-frames optional
protected-mgmt-frames sa-query timeout 201
protected-mgmt-frames sa-query attempts 5
nx9500-6C8809(config-wlan-Testing)#
```

**Note**

PMF is enabled by default only if the encryption protocol used is CCMP.

- c 802.11v BSS transition is enabled. For more information, see [802.11v](#) on page 518.

WLAN APs send BSS Transition Management Request frames to 802.11v capable clients. These request frames suggest a specific AP, or a set of APs to which the client can transition for better throughput and QoS.

```
nx9500-6C8809(config-wlan-Testing)#show context include-factory | include 802.11v
no 802.11v session-information-url
802.11v bss-transition
nx9500-6C8809(config-wlan-Testing)#
```

- d *Radio resource measurement* (RRM) capabilities are enabled. For more information, see [radio-resource-measurement](#) on page 555.

In a WLAN, devices normally connect to the access point with the strongest signal. Depending on the number and location of clients, this arrangement can lead to excessive demand on one access point and under utilization of others. With RRM (IEEE 802.11k) you can monitor channel interference, radio resources, etc. within the wireless network. This information is utilized by agile-multiband enabled APs to influence clients to associate with under-utilized access points. In

spite of the signal being weaker, the overall throughput is greater since it's an efficient use of the network resources.

```
nx9500-6C8809(config-wlan-Testing)#show context include-factory | include radio-
resource-measurement
radio-resource-measurement
radio-resource-measurement channel-report
radio-resource-measurement tpc-report
radio-resource-measurement neighbor-report
nx9500-6C8809(config-wlan-Testing)#
```

2 Enable Agile Multiband Operation on the WLAN:

```
nx9500-6C8809(config-wlan-Testing)#multi-band-operation
```

3 Optionally, you can include non-WiNG APs in the neighbor report response sent to wireless clients. For more information, see [service > wireless > add-neighbor](#).

```
nx9500-6C8809#service wireless add-neighbor 1 mac A8-DB-03-6E-39-9C preference 30
nx9500-6C8809#
```

### Related Commands

|---|--|

## nsight

Enables retention of client-history. A typical NSight-server enabled, guest access environment may be visited by thousands of unique clients on a daily basis. Some of these guest clients are not regular visitors, accessing the network infrequently. However, by default, historical data of all guest clients, irrespective of their network access frequency, is retained by the NSight server for up to 180 days. This results in the database containing thousands if not millions of unique MAC addresses of infrequent guest clients. To address this potential problem it is recommended to disable client-history retention on a guest WLAN, and use the nsight-policy context to configure a separate timer (8 hours by default) specifying the guest client data lifespan in the database.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
nsight client-history
```

### Parameters

```
nsight client-history
```

|                       |   |
|-----------------------|---|
| nsight client-history | Enables retention of client-history in the database. This option is enabled by default. |
|-----------------------|---|

### Examples

On a WLAN, the client-history option is enabled by default. When enabled, all client history (including guest-clients) is retained in the NSight server database for 180 days.

To disable this option, execute the `no > nsight > client-history` command. When disabled, guest client history is retained only for 8 hours, which is the default setting defined by the NSight policy

applied on the access point (through which the guest client accesses the WLAN) or the access point's RF Domain. However, the default historical data retention duration for regular clients and devices (access point and controllers) remains unchanged (180 days) as per the NSight policy settings.

```
nx9500-6C8809(config-wlan-test3)#no nsight client-history
nx9500-6C8809(config-wlan-test3)#show context
wlan test3
  ssid test3
  bridging-mode local
  encryption-type none
  authentication-type none
  no nsight client-history
nx9500-6C8809(config-wlan-test3)#
```

Use the NSight policy context to define separate client-history retention time for regular clients, devices, and guest clients. For more information, see [nsight-policy \(global-config-mode\)](#) on page 412.

## opendns

Configures the per-fetched OpenDNS device\_id. Once configured, all DNS queries originating from wireless clients associating with the WLAN are appended with an additional 31 bytes of data (representing the device ID) at the end of the DNS packet. The device ID is a sixteen (16) character hex string representing a 64 bit unsigned integer and is fetched from the OpenDNS site.

This command is part of a series of configurations that are required to integrate WiNG access points, wireless controllers, and service platforms with OpenDNS. When all the parameters have been configured, DNS queries from wireless clients, associating with the WLAN, are redirected to OpenDNS (208.67.220.220 OR 208.67.222.222). These OpenDNS resolvers act as proxy DNS servers that provide additional functionalities, such as Web filtering, reporting, and performance enhancement. For more information on the entire configuration, see [opendns](#) on page 90.

#### Syntax

```
opendns device-id <DEVICE-ID>
```

#### Parameters

```
opendns device-id <DEVICE-ID>
```

|                               |   |
|-------------------------------|---|
| opendns device-id <DEVICE-ID> | Configures the device ID to embed in DNS queries sent to OpenDNS <ul style="list-style-type: none"> <li>• &lt;DEVICE-ID&gt; - Specify the device ID.</li> </ul> |
|-------------------------------|---|

#### Examples

The following command fetches the device\_id from the OpenDNS site.

```
ap505-13403B(#opendns ApiToken 9110B39543DEB2ECA1F473AE03E8899C00019073
device_id = 0014AADF8EDC6C59
ap505-13403B(#
```

Use this device\_id in the WLAN configuration context.

```
ap505-13403B((config)#wlan opendns
ap505-13403B((config-wlan-opendns)#opendns device-id 0014AADF8EDC6C59
ap505-13403B((config-wlan-opendns)#commit

ap505-13403B((config-wlan-opendns)#show context
wlan opendns
  ssid opendns
  vlan 1
  bridging-mode local
  encryption-type none
  authentication-type none
  opendns device-id 0014AADF8EDC6C59
ap7161-E6D512(config-wlan-opendns)#
```

Related Commands

|--|--|

protected-mgmt-frames

Configures the WLAN's frame protection mode and *security association* (SA) query parameters.

The IEEE 802.11w *Protected management frames* (PMF) standard provides protection for the following robust management frame types: de-authentication, disassociation, action and channel switch announcement unicast frames forwarded to a client. Robust management frame protection is achieved by using CCMP for unicast management frames, broadcast/multicast integrity protocol for broadcast/multicast management frames and SA query protocol for protection against (re)association attacks.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
protected-mgmt-frames [mandatory|optional|sa-query [attempts <1-10>|timeout <100-1000>]
```

Parameters

```
protected-mgmt-frames [mandatory|optional|sa-query [attempts <1-10>|timeout <100-1000>]
```

|                       |   |
|-----------------------|---|
| protected-mgmt-frames | Enables and configures WLAN's frame protection mode and SA query parameters. Use this command to specify whether management frame protection is mandatory or optional.  |
| mandatory             | Enforces PMF on this WLAN (management frames are always protected). This option requires clients to negotiate PMF when joining a WLAN.<br><br><b>Note:</b> This option does not allow non-PMF capable clients to associate. |

|  |  |
|--|--|
| optional                                       | <p>Provides PMF only for PMF-capable clients (that is, management frame protection is optional).</p> <p><b>Note:</b> This option allows both PMF-capable and non-PMF capable wireless clients to associate. However, only the management frames of PMF-capable clients is protected.</p> <p><b>Note:</b> This is the default setting. By default, PMF is enabled and set to the 'optional' mode.</p>   |
| sa-query [attempts <1-10>] timeout <100-1000>] | <p>Configures the following SA parameters:</p> <ul style="list-style-type: none"> <li>attempts &lt;1-10&gt; – Configures the number of SA query attempts from 1 - 10. The default is 5.</li> <li>timeout &lt;100-1000&gt; – Configures the interval, in milliseconds, used to timeout association requests that exceed the defined interval. This setting is required to determine if a client is a real and not a rogue. If the client response is timed out the client association is deleted from the controller. Specify a value from 100 - 1000 milliseconds. The default value is 201 milliseconds.</li> </ul> |

#### Examples

```

nx9500-6C8809(config-wlan-test)#protected-mgmt-frames mandatory
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
nx9500-6C8809(config-wlan-test)#

```

#### Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Disables enforcement of protected management frames on this WLAN. And reverts protected management frames sa-query timeout and attempts to 201 milliseconds and 5 respectively. |
|--|---|

### proxy-arp-mode

Enables proxy ARP mode for handling ARP requests. Proxy ARP is the technique used to answer ARP requests intended for another system. By faking its identity, the access point accepts responsibility for routing packets to the actual destination.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
proxy-arp-mode [dynamic|strict]
```

#### Parameters

```
proxy-arp-mode [dynamic|strict]
```

|                |   |
|----------------|---|
| proxy-arp-mode | Enables proxy ARP mode for handling ARP requests. The options available are dynamic and strict. |
| dynamic        | Forwards ARP requests to the wireless side (for which a response could not be proxied)          |
| strict         | Does not forward ARP requests to the wireless side  |

### Examples

```

nx9500-6C8809(config-wlan-test)#proxy-arp-mode strict
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
  wmm-extensions wmm-load-information
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
  proxy-arp-mode strict
  broadcast-dhcp validate-offer
  http-analyze controller
nx9500-6C8809(config-wlan-test)#

```

### Related Commands

|   |   |
|---|---|
| <code>no (wlan-config-mode) on</code><br>page 588 | Reverts the proxy ARP mode to default (dynamic) |
|---|---|

## proxy-nd-mode

Configures the proxy ND mode for this WLAN member clients as either strict or dynamic. ND proxy is used in IPv6 to provide reachability by allowing a client to act as proxy. Proxy certificate signing can be done either dynamically (requiring exchanges of identity and authorization information) or statically when the network topology is defined.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
proxy-nd-mode [dynamic|strict]
```

### Parameters

```
proxy-nd-mode [dynamic|strict]
```

|                                |   |
|--------------------------------|---|
| proxy-nd-mode [dynamic strict] | <p>Configures the proxy ND mode for this WLAN member clients. The options are: dynamic and strict</p> <ul style="list-style-type: none"> <li>dynamic – Forwards ND request to wireless for which a response could not be proxied. This is the default value.</li> <li>strict – Does not forward ND requests to the wireless side</li> </ul> |
|--------------------------------|---|

## Examples

```

nx9500-6C8809(config-wlan-test)#proxy-nd-mode strict
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  wpa-wpa2 server-only-authentication
  proxy-nd-mode strict
 .opendns device-id 44-55-66
nx9500-6C8809(config-wlan-test)#

```

## Related Commands

**no (wlan-config-mode)** on page 588 Reverts the proxy ND mode to default (dynamic)

**qos-map**

Enables support for 802.11u QoS map element and frames

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
qos-map
```

## Parameters

None

## Examples

```

nx9500-6C8809(config-wlan-test)#qos-map
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode tunnel
  encryption-type none
  authentication-type none
  qos-map
  wpa-wpa2 server-only-authentication
  proxy-nd-mode strict
  .opendns device-id 44-55-66
nx9500-6C8809(config-wlan-test)#

```

## Related Commands

**no (wlan-config-mode)** on page 588 Disables support for 802.11u QoS map element and frames

**radio-resource-measurement**

Enables support for 802.11k radio resource measurement capabilities (IEEE 802.11k) on this WLAN. 802.11k improves how traffic is distributed. In a WLAN, devices normally connect to the access point

with the strongest signal. Depending on the number and location of clients, this arrangement can lead to excessive demand on one access point and under utilization of others, resulting in degradation of overall network performance. With 802.11k, if the access point with the strongest signal is loaded to its capacity, a client connects to an under-utilized access point. Even if the signal is weaker, the overall throughput is greater since it's an efficient use of the network's resources. This feature is enabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
radio-resource-measurement {channel-report|neighbor-report {hybrid}|tpc-report}
```

### Parameters

```
radio-resource-measurement {channel-report|neighbor-report {hybrid}|tpc-report}
```

|                            |  |
|----------------------------|--|
| radio-resource-measurement | Enables support for 802.11k radio resource measurement capabilities  |
| channel-report             | Optional. Includes the channel-report element in beacons and probe responses   |
| neighbor-report {hybrid}   | Optional. Enables responding to neighbor-report requests <ul style="list-style-type: none"> <li>• hybrid - Optional. Uses the hybrid model of smart-rf neighbors and roaming frequency to neighbors</li> </ul>                   |
| tpc-report                 | Optional. Includes the tpc-report element in beacons and probe responses. The TPC report element is a 4 byte long element sent in response to a TPC request element. It contains the transmit power and link margin information. |

### Examples

```
ap505-13403B(config-wlan-test)#radio-resource-measurement neighbor-report hybrid
ap505-13403B(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode local
  encryption-type gcmp256
  authentication-type eap
  dynamic-vlan-assignment allowed-vlans 2-4
  protected-mgmt-frames mandatory
  protected-mgmt-frames sa-query attempts 1
  radio-resource-measurement neighbor-report hybrid
  use aaa-policy test
  http-analyze syslog host 10.234.160.4 port 21 proxy-mode through-controller
  controller-assisted-mobility
 .opendns device-id 0014AADF8EDC6C59
  dpi metadata http
ap505-13403B(config-wlan-test)#
```

### Related Commands

**radius**

Configures RADIUS related parameters

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
radius [dynamic-authorization|nas-identifier|nas-port-id|vlan-assignment]
radius [dynamic-authorization|nas-identifier <NAS-ID>|nas-port-id <NAS-PORT-ID>|
vlan-assignment]
```

**Parameters**

```
radius [dynamic-authorization|nas-identifier <NAS-ID>|nas-port-id <NAS-PORT-ID>|
vlan-assignment]
```

|                           |  |
|---------------------------|--|
| dynamic-authorization     | Enables support for disconnect and change of authorization messages (RFC5176). When enabled, this option extends the RADIUS protocol to support unsolicited messages from the RADIUS server. These messages allow administrators to issue <i>change of authorization</i> (CoA) messages, which affect session authorization, or <i>disconnect messages</i> (DM) that terminate a session immediately. This option is disabled by default.  |
| nas-identifier <NAS-ID>   | Configures the <i>network access server</i> (NAS) identifier attribute, a value that identifies the access point or controller where the RADIUS messages originate. The value specified here is included in the RADIUS NAS-Identifier field for WLAN authentication and accounting packets. <ul style="list-style-type: none"> <li>• &lt;NAS-ID&gt; – Specify the NAS identifier attribute (should not exceed 256 characters in length).</li> </ul>  |
| nas-port-id <NAS-PORT-ID> | Configures the WLAN NAS port ID sent to the RADIUS server. The NAS port identifier should not exceed 256 characters. <ul style="list-style-type: none"> <li>• &lt;NAS-PORT-ID&gt; – Specify the NAS port ID attribute (should not exceed 256 characters in length).</li> </ul> <p>The profile database on the RADIUS server consists of user profiles for each connected NAS port. Each profile is matched to a username representing a physical port. When authorizing users, it queries the user profile database using a username representative of the physical NAS port making the connection. Set the numeric port value from 0 - 4294967295.</p>  |
| vlan-assignment           | Configures the VLAN assignment of a WLAN. RADIUS VLAN assignment is disabled by default. When enabled, this option assigns clients to the RADIUS server specified VLANs, overriding the WLAN configuration. This option is disabled by default. If, as part of the authentication process, the RADIUS server returns a client's VLAN-ID in a RADIUS access-accept packet, and this feature is enabled, all client traffic is forwarded on that VLAN. If disabled, the RADIUS server returned VLAN-ID is ignored and the VLAN specified using the <a href="#">vlan/vlan-pool-member</a> options (in the WLAN config mode) is used. If both the RADIUS VLAN assignment and the post authentication VLAN options are enabled, then RADIUS VLAN assignment takes priority over post authentication VLAN configuration. |

## Examples

```

nx9500-6C8809(config-wlan-test)#radius vlan-assignment
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
  radius vlan-assignment
  wmm-extensions wmm-load-information
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  --More--
nx9500-6C8809(config-wlan-test)#

```

## Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Disables support for disconnect and change of authorization messages. Disables the use of VLAN information received in RADIUS server responses, instead uses the VLAN provided in the WLAN configuration. Removes the NAS identifier and NAS port identifiers configured. |
|--|---|

**registration**

Configures settings enabling dynamic registration and validation of devices by their MAC addresses. When configured, this option registers a device's MAC address, and allows direct access to a previously registered device.

This command also configures the external guest registration and validation server details. If using an external server to perform guest registration, authentication and accounting, use this command to configure the external server's IP address/hostname. When configured, access points and controllers forward guest registration requests to the specified registration server. In case of EGuest deployment, this external resource should point to the EGuest registration server.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

registration [device|device-OTP|external|user]
registration [device|device-OTP|user] group-name <RAD-GROUP-NAME> {agreement-refresh
<0-144000>|
expiry-time <1-43800>}
registration external [follow-aaa|host]
registration external follow-aaa {send-mode [http|https|udp]}
registration external host <IP/HOSTNAME> {proxy-mode|send-mode}
registration external host <IP/HOSTNAME> {proxy-mode [none|through-controller|
through-rf-domain-manager|through-centralized-controller]|send-mode [https|https|udp]}

```

## Parameters

```

registration external follow-aaa {send-mode [http|https|udp]}

```

|                             |  |
|-----------------------------|--|
| registration                | Enables dynamic guest-user registration and validation. This option is disabled by default.  |
| external                    | Specifies that the guest registration is handled by an external resource. Access points/controllers send registration requests to the external registration server.  |
| follow-aaa                  | Uses an AAA policy to point to the guest registration, authentication, and accounting server. When used, guest registration is handled by the RADIUS server specified in the AAA policy used in the WLAN context.<br>In case of EGuest deployment, the RADIUS authentication and accounting server configuration in the AAA policy should point to the EGuest server. The use of 'follow-aaa' option is recommended in EGuest replica-set deployments.<br>For more information on enabling the EGuest server, see <a href="#">eguest-server (VX9000 only)</a> on page 987 (profile config mode).<br>For more information on configuring an EGuest deployment, see <a href="#">configuring ExtremeGuest captive portal</a> on page 259. |
| send-mode [https https udp] | Optional. Specifies the protocol used to forward registration requests to the external AAA policy servers. The options are: <ul style="list-style-type: none"> <li>• HTTPS – Sends registration requests as HTTPS packet</li> <li>• HTTP – Sends registration requests as HTTP packet</li> <li>• UDP – Sends registration requests as UDP packet, using the UDP port 12322. This is the default setting.</li> </ul>  |

```
registration external host <IP/HOSTNAME> {proxy-mode [none|through-controller|
through-rf-domain-manager|through-centralized-controller]|send-mode [https|https|udp]}
```

|                    |  |
|--------------------|--|
| registration       | Configures dynamic guest registration and validation parameters. This option is disabled by default.   |
| external           | Specifies that the guest registration is handled by an external resource. Access points/controllers send registration requests to the external registration server.                                      |
| host <IP/HOSTNAME> | Specifies the external registration server's IP address or hostname. When configured, access points/ controllers forward guest registration requests to the external registration server specified here. |

|   |  |
|---|--|
| proxy-mode {none through-controller through-rf-domain-manager through-centralized-controller} | <p>Optional. Specifies the proxy mode. If a proxy is needed for connection, specify the proxy mode as through-controller, through-rf-domain. If no proxy is needed, select none.</p> <ul style="list-style-type: none"> <li>• none – Optional. Requests are sent directly to the controller from the requesting device</li> <li>• through-controller – Optional. Requests are proxied through the controller configuring the device</li> <li>• through-rf-domain-manager – Optional. Requests are proxied through the local RF Domain manager</li> <li>• through-centralized-controller – Optional. Requests are proxied through one of the controllers in a cluster, operating as the designated forwarder. Select this option if capture and redirection is on a cluster of wireless controller/service platforms managing dependent/independent access points when redundancy is required.</li> </ul> <p>After specifying the proxy-mode, optionally specify the protocol used to send the requests to the external registration server host.</p> |
| send-mode [https https udp]   | <p>Optional. Specifies the communication protocol used. The options are;</p> <ul style="list-style-type: none"> <li>• HTTPS – Sends registration requests as HTTPS packets</li> <li>• HTTP – Sends registration requests as HTTP packets</li> <li>• UDP – Sends registration requests as UDP packet, using the UDP port 12322. This is the default setting.</li> </ul>   |

```
registration [device|device-OTP|user] group-name <RAD-GROUP-NAME>
{agreement-refresh <0-144000>|expiry-time <1-43800>}
```

|                             |  |
|-----------------------------|--|
| registration                | Configures dynamic guest registration and validation parameters. This option is disabled by default.   |
| [device device-OTP  user]   | <p>Configures the mode used to register guest users of this WLAN. Options include device, external, user, and device-OTP</p> <ul style="list-style-type: none"> <li>• device-OTP – Registers a device by its MAC address. During registration, the user, using the registered device, has to provide the e-mail address, mobile number, or member id, and the <i>one-time-passcode</i> (OTP) sent to the registered e-mail id or mobile number to complete registration. On subsequent logins, the user has to enter the OTP. If the MAC address of the device attempting login and the OTP combination matches, the user is allowed access. If using this option, set the WLAN authentication type as MAC authentication.</li> <li>• device – Registers a device by its MAC address. On subsequent logins, already registered MAC addresses are allowed access. If using this option, set the WLAN authentication type as <i>MAC authentication</i>.</li> <li>• user – Registers guest users using one of the following options: e-mail address, mobile-number, or member-id.</li> </ul> <p>If using any one of the above modes of registration, specify the RADIUS group to which the registered device or user is to be assigned post authentication.</p> |
| group-name <RAD-GROUP-NAME> | <p>Configures the RADIUS group name to which registered users are associated. When left blank, users are not associated with a RADIUS group.</p> <ul style="list-style-type: none"> <li>• &lt;RAD-GROUP-NAME&gt; – Specify the RADIUS group name (should not exceed 64 characters).</li> </ul>   |

|                              |  |
|------------------------------|--|
| expiry-time <1-43800>        | Optional. Configures the amount of time, in hours, before registered addresses expire and must be re-entered <ul style="list-style-type: none"> <li>&lt;1-43800&gt; – Specify a value from 1 - 43800 hrs. The default is 1500 hrs.</li> </ul>  |
| agreement-refresh <0-144000> | Optional. Sets the time, in minutes, after which an inactive user has to refresh the WLAN's terms of agreement. For example, if the agreement refresh period is set to 1440 minutes, a user, who has been inactive for more than 1440 minutes (1 day) is served the agreement page, and is allowed access only after refreshing the terms of agreement. <ul style="list-style-type: none"> <li>&lt;0-100&gt; – Specify a value from 0 - 144000. The default is 0 minutes.</li> </ul> |

### Examples

```

nx9500-6C8809(config-wlan-test)#registration user group-name guest agreement-ref
resh 14400 expiry-time 2000

nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  registration user group-name guest expiry-time 2000 agreement-refresh 14400
nx9500-6C8809(config-wlan-test)#

```

### Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Disables dynamic user registration and removes associated configurations. Also disables forwarding of user information to an external device. |
|--|---|

## relay-agent

Enables support for DHCP/DHCPv6 relay agent information (option 82 and DHCPv6-LDRA) feature on this WLAN. This option is disabled by default.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
relay-agent [dhcp-option82|dhcpv6-ldra]
```

### Parameters

```
relay-agent [dhcp-option82|dhcpv6-ldra]
```

|               |  |
|---------------|--|
| relay-agent   | Enables support for the following DHCP and DHCPv6 options: option 82 and <i>Lightweight DHCPv6 Relay Agent</i> (LDRA) respectively. When enabled, this feature allows the DHCP/DHCPv6 relay agent to insert the relay agent information option (option 82, LDRA) in client requests forwarded to the DHCP/DHCPv6 server. This information provides the following: <ul style="list-style-type: none"> <li>circuit ID suboption – Provides the SNMP port interface index</li> <li>remote ID – Provides the controller's MAC address</li> </ul> |
| dhcp-option82 | Enables DHCP option 82. DHCP option 82 provides client physical attachment information. This option is disabled by default.  |
| dhcpv6-ldra   | Enables the DHCPv6 relay agent. The LDRA feature allows DHCPv6 messages to be transmitted on existing networks that do not currently support IPv6 or DHCPv6. This option is disabled by default.   |

### Examples

```
ap505-13403B(config-wlan-test)#relay-agent dhcp-option82

service unresponsive-client [attempts <1-1000>|ps-detect {threshold <1-1000>}|timeout
<1-60>]

service wpa-wpa2 exclude-ccmp

```

## Parameters

```
service accounting-migration-on-roaming
```

|                                 |  |
|---------------------------------|--|
| accounting-migration-on-roaming | <p>Enables migration of accounting session information and data usage details from one AP to another for roaming clients.</p> <p>When a client roams from AP1 to AP2, accounting for the client stops on AP1 and is resumed only after AP2 authenticates with the accounting server. By enabling this feature, accounting session information and data usage details migrates to the new AP, and the AP does not have to re-authenticate with the accounting server.</p> <p><b>Note:</b> Accounting session information is supported on all WiNG APs. In case of controllers, this feature is valid only when APs use the controller as a proxy.</p> |
|---------------------------------|--|

```

service [allow-ht-only|allow-open-passpoint|cred-cache [clear-on-4way-timeout|
clear-on-disconnect]|eap-mac-multicopy|eap-mac-multikeys|enforce-pmkid-validation|radio-
crypto|
reauthentication seamless|session-timeout mac|tx-deauth-on-roam-detection|show cli]

```

|                      |   |
|----------------------|---|
| allow-ht-only        | Only allows clients capable of High Throughput (802.11n) data rates to associate. This option is disabled by default.   |
| allow-open-passpoint | <p>Enables non-WPA2 security for passpoint WLANs. This option is disabled by default.</p> <p>For more information on passpoint policy and configuration, see <a href="#">Passpoint Policy</a> on page 1834.</p> |

|  |   |
|--|---|
| cred-cache [clear-on-4way-timeout clear-on-disconnect] | <p>Clears credential cache based on the parameter passed</p> <ul style="list-style-type: none"> <li>clear-on-4way-timeout – Clears cached client credentials after the 4way handshake with a client has timed out. This option is enabled by default.</li> <li>clear-on-disconnect – Clears cached client credentials after the client has disconnected from the network. This option is disabled by default.</li> </ul>  |
| eap-mac-multicopy                                      | Enables sending of multiple copies of broadcast and unicast messages. This option is disabled by default.   |
| eap-mac-multikeys                                      | Enables configuration of different key indices for MAC authentication. This option is disabled by default.  |
| enforce-pmkid-validation                               | <p>Validates the Predictive real-time <i>Pairwise Master Key Identifier</i> (PMKID) contained in a client's association request against the one present in the wpa-wpa2 handshake. This option is enabled by default.</p> <p>This functionality is based on the <i>Proactive Key Caching</i> (PKC) extension of the 802.11i IEEE standard. Whenever a wireless client successfully authenticates with a AP it receives a <i>Pairwise Master Key</i> (PMK). PKC allows clients to cache this PMK and reuse it for future re-authentications with the same AP. The PMK is unique for every client and is identified by the PMKID. The PMKID is a combination of the hash of the PMK, a string, the station and the MAC addresses of the AP.</p> |
| radio-crypto   | Uses radio hardware for encryption and decryption. This is applicable only for devices using <i>Counter Cipher Mode with Block Chaining Message Authentication Code Protocol</i> (CCMP) encryption mode.  |
| reauthentication seamless                              | Enables seamless EAP client reauthentication without disconnecting client after the session has timed out. This option is enabled by default.   |
| session-timeout mac                                    | Enables reauthentication of MAC authenticated clients without disconnecting client after the session has timed out. This option is enabled by default.  |
| tx-deauth-on-roam-detection                            | Transmits a de-authentication on the air while disassociating a client because its roam is detected on the wired side. This option is disabled by default.  |
| show cli   | Displays the CLI tree of the current mode. When used in the WLAN mode, this command displays the WLAN CLI structure.  |

```
service eap-mac-mode [mac-always|normal]
```

|              |  |
|--------------|--|
| eap-mac-mode | Configures the EAP and/or MAC authentication mode used with this WLAN. This option is enabled by default.  |
| mac-always   | Enables both EAP and MAC authentication. MAC authentication is performed first, followed by EAP authentication. Clients are granted access based on the EAP authentication result. If a client does not have EAP, the MAC authentication result is used to grant access. |
| normal       | Grants client access if the client clears either EAP or MAC authentication. This is the default setting.   |

```
service eap-throttle <0-254>
```

|   |  |
|---|--|
| eap-throttle <0-254>  | <p>Enables EAP request throttling. Use this command to specify the maximum number of parallel EAP sessions allowed on this WLAN. Once this specified value is exceeded, all incoming EAP session requests are throttled. This option is enabled by default.</p> <ul style="list-style-type: none"> <li>• &lt;0-254&gt; – Specify a value from 0 - 254. This default value is 0.</li> </ul> |
| <code>service key-index eap-wep-unicast &lt;1-4&gt;</code>  |  |
| key-index eap-wep-unicast <1-4>   | <p>Configures an index with each key during EAP authentication with WEP. This option is enabled by default.</p> <ul style="list-style-type: none"> <li>• &lt;1-4&gt; – Select a index from 1 - 4. The default value is 1.</li> </ul>   |
| <code>service wpa-wpa2 exclude-ccmp</code>  |  |
| wpa-wpa2 exclude-ccmp   | <p>Configures exclusion of CCMP requests when the authentication mode is set to tkip-ccmp. When enabled, it provides compatibility for client devices not compliant with tkip-ccmp. This option is disabled by default.</p>  |
| <code>service monitor [aaa-server adoption vlan &lt;1-4094&gt; captive-portal external-server]</code> |  |
| monitor   | <p>Enables critical resource monitoring. In a WLAN, service monitoring enables regular monitoring of external AAA servers, captive portal servers, access point adoption, DHCP and DNS servers. When enabled, it allows administrators to notify users of a service's availability and make resource substitutions in case of unavailability of a service.</p>                             |
| aaa-server  | <p>Enables external AAA server failure monitoring. When enabled monitors an external RADIUS server resource's AAA activity and ensures its adoption and availability. This feature is disabled by default.</p>   |

|                                |  |
|--------------------------------|--|
| adoption vlan <1-4094>         | <p>Enables adoption failure monitoring on an adopted AP. Also configures a adoption failover VLAN. This feature is disabled by default.</p> <ul style="list-style-type: none"> <li>VLAN &lt;1-4094&gt; – Specify the VLAN on which clients are placed when the connectivity between the AAP and the controller is lost.</li> </ul> <p>Configure a DHCP pool and gateway for the failover VLAN. Ensure the DHCP server is running on the AP. Also ensure that the DHCP pool is configured to have less lease time.</p> <p>When this feature is enabled on a WLAN, it allows adopted APs to monitor their connectivity with the controller. If and when this connectivity is lost, all new clients are placed in the configured adoption failover VLAN. They are served an IP by the DHCP server running on the AP. In this situation if a client tries to access a Web URL, the AP redirects the client to a page stating that the service is down.</p> <p>When the AAP's link to the switch is restored, clients are placed back in the WLAN's configured VLAN, and are served an IP from the corresponding configured DHCP server (external or on the AP/controller).</p> |
| captive-portal external-server | <p>Enables external captive portal server failure monitoring. When enabled, monitors externally hosted captive portal activity, and user access to the controller or service platform managed network. This feature is disabled by default.</p> <p>When enabled, this feature enables APs to display, to an externally located captive portal's user, the no-service page when the captive portal's server is not reachable.</p>   |

```
service monitor [dhcp|dns] crm <RESOURCE-NAME> vlan <1-4094>
```

|         |  |
|---------|--|
| monitor | Enables DHCP and/or DNS server monitoring on this WLAN.  |
| dhcp    | <p>Enables monitoring of a specified DHCP server. When the connection to the DHCP server is lost, captive portal users automatically migrate to a pre-defined VLAN. The feature is disabled by default.</p> <p>Use the <i>crm</i> keyword to specify the DHCP server to monitor.</p> |
| dns     | <p>Enables monitoring of a specified DNS server. When the connection to the DNS server is lost, captive portal users automatically migrate to a pre-defined VLAN. The feature is disabled by default.</p> <p>Use the <i>crm</i> keyword to specify the DNS server to monitor.</p>    |

|                     |  |
|---------------------|--|
| crm <RESOURCE-NAME> | <p>This keyword is common to the 'dhcp' and 'dns' parameters.</p> <ul style="list-style-type: none"> <li>crm – Identifies the DHCP and/or DNS server to monitor</li> <li>&lt;RESOURCE-NAME&gt; – Specify the name of the DHCP or DNS server.</li> </ul> <p>Once enabled, the CRM server monitors the DHCP/DNS server and updates their status as 'up' or 'down' depending on the availability of the resource. When either of these resources is down the wireless client is mapped to the failover VLAN and served with the 'no-service' page through the access point.</p>   |
| vlan <1-4094>       | <p>This keyword is common to the 'dhcp' and 'dns' parameters. After specifying the DHCP/DNS sever resource, specify the failover VLAN.</p> <ul style="list-style-type: none"> <li>VLAN &lt;1-4094&gt; – Configures the failover VLAN from 1 - 4094.</li> </ul> <p>When the DHCP server resource becomes unavailable, the device falls back to the VLAN defined here. This VLAN has a DHCP server configured that provides a pool of IP addresses with a lease time less than the main DHCP server.</p> <p>When this DNS server resource becomes unavailable, the device falls back to the VLAN defined here. This VLAN has a DNS server configured that provides DNS address resolution until the main DNS server becomes available.</p> |

```
service unresponsive-client [attempts <1-1000>|ps-detect {threshold <1-1000>}]
timeout <1-60>]
```

|                                |  |
|--------------------------------|--|
| unresponsive                   | Configures handling of unresponsive clients  |
| attempts <1-1000>              | <p>Configures the maximum number of successive packets that failed transmission</p> <ul style="list-style-type: none"> <li>&lt;1-1000&gt; – Specify a value from 1 - 1000. The default is 7.</li> </ul>  |
| ps-detect {threshold <1-1000>} | <p>Enables the detection of power-save mode clients, whose PS stats has not been updated on the AP. This option is enabled by default.</p> <ul style="list-style-type: none"> <li>threshold – Optional. Configures the threshold at which power-save client detection is triggered</li> <li>&lt;1-1000&gt; – Configures the number of successive unacknowledged packets received before power-save detection is triggered. Specify a value from 1 - 1000. The default is 3.</li> </ul> |
| timeout <1-60>                 | <p>Configures the interval, in seconds, for successive packets not acknowledged by the client</p> <ul style="list-style-type: none"> <li>&lt;1-60&gt; – Specify a value from 1 - 60 seconds. The default is 3 seconds.</li> </ul>  |

### Examples

```
nx9500-6C8809(config-wlan-test)#service allow-ht-only
nx9500-6C8809(config-wlan-test)#service monitor aaa-server
nx9500-6C8809(config-wlan-test)#service accounting-migration-on-roaming
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  vlan 1
  bridging-mode tunnel
  encryption-type none
```

```

authentication-type none
service accounting-migration-on-roaming
service monitor aaa-server
service allow-ht-only
controller-assisted-mobility
nx9500-6C8809(config-wlan-test)#

```

#### Related Commands

|--|--|

## shutdown

Shuts down a WLAN. The shutdown mechanism helps regulate the availability of a WLAN based on an administrator defined access period. Use this feature to shut down a WLAN on specific days and hours and restrict periods when the WLAN traffic is either not desired or cannot be properly administrated. The normal practice is to shut down WLANs when there are no users on the network, such as after hours, weekends or holidays. This allows administrators more time to manage mission critical tasks since the WLAN's availability is automated.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
shutdown {on-critical-resource <CR-NAME>|on-meshpoint-loss|on-primary-port-link-loss|on-unadoption}
```

#### Parameters

```
shutdown {on-critical-resource <CR-NAME>|on-meshpoint-loss|on-primary-port-link-loss|on-unadoption}
```

|                                |  |
|--------------------------------|--|
| shutdown                       | Shuts down the WLAN when specified events occur. Disabled by default.  |
| on-critical-resource <CR-NAME> | Optional. Shuts down the WLAN when critical resource failure occurs. Disabled by default. <ul style="list-style-type: none"> <li>&lt;CR-NAME&gt; - Specifies the name of the critical resource being monitored for this WLAN.</li> </ul> |
| on-meshpoint-loss              | Optional. Shuts down the WLAN when the root meshpoint link fails (is unreachable). Disabled by default.  |
| on-primary-port-link-loss      | Optional. Shuts down the WLAN when a device losses its primary Ethernet port (ge1/up1) link. Disabled by default.  |
| on-unadoption                  | Optional. Shuts down the WLAN when an adopted device becomes unadopted. Disabled by default.   |

#### Usage Guidelines

If the shutdown on-meshpoint-loss feature is enabled, the WLAN status changes only if the meshpoint and the WLAN are mapped to the same VLAN. If the meshpoint is mapped to VLAN 1 and the WLAN is mapped to VLAN 2, then the WLAN status does not change on loss of the meshpoint.

## Examples

```

nx9500-6C8809(config-wlan-test)#shutdown on-unadoption
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
  radius vlan-assignment
  wing-extensions wmm-load-information
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
  proxy-arp-mode strict
  broadcast-dhcp validate-offer
  shutdown on-unadoption
  http-analyze controller
nx9500-6C8809(config-wlan-test)#

```

## Related Commands

|  |  |
|--|--|
| <b>no (wlan-config-mode)</b> on page 588 | Disables auto shut down WLAN. Use the optional keywords provided to disable auto shut down of the WLAN upon critical resource failure, when meshpoint links fail, when the primary Ethernet port (e1/up1) loses link, or when the WLAN gets unadopted. |
|--|--|

**ssid**

Configures the WLAN's SSID

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
ssid <SSID>
```

## Parameters

```
ssid <SSID>
```

|        |   |
|--------|---|
| <SSID> | Specify the WLAN's SSID. The WLAN SSID is case sensitive and alphanumeric. It's length should not exceed 32 characters. |
|--------|---|

## Examples

```

nx9500-6C8809(config-wlan-test)#ssid testWLAN1
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid testWLAN1
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
  radius vlan-assignment
  wing-extensions wmm-load-information
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2

```

```
acl exceed-rate wireless-client-denied-traffic 20 disassociate
proxy-arp-mode strict
broadcast-dhcp validate-offer
shutdown on-unadoption
http-analyze controller
nx9500-6C8809(config-wlan-test)#
```

### t5-client-isolation

Disallows clients connecting to the WLAN to communicate with one another. This setting applies exclusively to CPE devices managed by a T5 controller and is disabled by default.

A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS wireless controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within the WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the IPX operating system. These CPEs use a DSL as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.

#### Note

This setting is applicable only when this WLAN supports T5 controllers and their connected CPEs.

Supported in the following platforms:

- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

#### Syntax

```
t5-client-isolation
```

#### Parameters

None

#### Examples

```
nx9500-6C8809(config-wlan-test)#t5-client-isolation
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  t5-client-isolation
nx9500-6C8809(config-wlan-test)#
```

t5-security

Configures T5 PowerBroadband security settings. A T5 controller uses the IPX operating system to manage its connected radio devices, as opposed to the WiNG operating system used by RFS wireless controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within the WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the IPX operating system. These CPEs use a DSL as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.

**Note**  
This setting is applicable only when this WLAN supports T5 controllers and their connected CPEs.

Supported in the following platforms:

- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

Syntax

```
t5-security [static-wep|wpa-enterprise|wpa-personal]
t5-security static-wep encryption-type [wep128|wep64] [hex <STRING>|passphrase <STRING>]
t5-security [wpa-enterprise|wpa-personal] encryption-type [ccmp|tkip|tkip-ccmp]
version [mixed|wpa|wpa2]
```

Parameters

```
t5-security static-wep encryption-type [wep128|wep64] [hex <STRING>|passphrase <STRING>]
```

|                                |   |
|--------------------------------|---|
| t5-security static-wep         | Configures the T5 WLAN security type as static-wep  |
| encryption-type [wep128 wep64] | Applies one of the following encryption algorithms to the T5 support WLAN configuration: WEP64 or WEP128  |
| hex <STRING>                   | Configures the hex password (used to derive the security key) <ul style="list-style-type: none"><li>• &lt;STRING&gt; – Specify the hex password (should not exceed the 10 - 26 characters).</li></ul>   |
| passphrase <STRING>            | Configures the passphrase shared by both transmitting and receiving authenticators <ul style="list-style-type: none"><li>• &lt;STRING&gt; – Specify the passphrase. It could either be an alphanumeric string of 8 to 63 ASCII characters or 64 HEX characters. The alphanumeric string allows character spaces. This string is converted to a numeric value. Configuring a passphrase saves you the need to create a 256-bit key each time keys are generated.</li></ul> |

```
t5-security [wpa-enterprise|wpa-personal] encryption-type [ccmp|tkip|tkip-ccmp]
version [mixed|wpa|wpa2]
```

|   |  |
|---|--|
| <code>t5-security [wpa-enterprise  wpa-personal]</code> | Configures the T5 WLAN security type as: <i>wpa-enterprise</i> OR <i>wpa-personal</i>  |
| <code>encryption-type [ccmp tkip tkip-ccmp]</code>      | <p>The following parameters are common to the <i>wpa-enterprise</i> and <i>wpa-personal</i> keywords:</p> <ul style="list-style-type: none"> <li><code>[ccmp tkip tkip-ccmp]</code> – Applies one of the following encryption algorithms to the T5 support WLAN configuration: <b>CCMP</b>, <b>TKIP</b>, or <b>TKIP-CCMP</b>.</li> </ul> |
| <code>version [mixed wpa wpa2]</code>                   | <p>The following parameters are common to the <i>wpa-enterprise</i> and <i>wpa-personal</i> keywords:</p> <ul style="list-style-type: none"> <li><code>version</code> – Applies one of the following encryption schemes to the vT5 support WLAN configuration: <b>WPA</b>, <b>WPA2</b>, or <b>mixed</b>.</li> </ul>                      |

### Examples

```

nx9500-6C8809(config-wlan-test)#t5-security wpa-enterprise encryption-type ccmp version wpa
nx9500-6C8809(config-wlan-test)#show context

## time-based-access

Configures time-based client access to the network resources. Use this feature to assign fixed days and time of WLAN access for wireless clients.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

time-based-access days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|
all|weekends|weekdays] {start <START-TIME>} [end <END-TIME>]

```

### Parameters

```

time-based-access days [sunday|monday|tuesday|wednesday|thursday|friday|saturday|
all|weekends|weekdays] {start <START-TIME>} [end <END-TIME>]

```

|                    |  |
|--------------------|--|
| day <option>       | Specifies the day or days on which the client can access the WLAN <ul style="list-style-type: none"> <li>• sunday – Allows access on Sundays only</li> <li>• monday – Allows access on Mondays only</li> <li>• Tuesdays – Allows access on Tuesdays only</li> <li>• wednesday – Allows access on Wednesdays only</li> <li>• thursday – Allows access on Thursdays only</li> <li>• friday – Allows access on Fridays only</li> <li>• saturday – Allows access on Saturdays only</li> <li>• weekends – Allows access on weekends only</li> <li>• weekdays – Allows access on weekdays only</li> <li>• all – Allows access on all days</li> </ul> |
| start <START-TIME> | Optional. Specifies the access start time in hours and minutes (HH:MM)   |
| end <END-TIME>     | Specifies the access end time in hours and minutes (HH:MM)   |

#### Examples

```

nx9500-6C8809(config-wlan-test)#time-based-access days weekdays start 10:00 end 16:30
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid testWLAN1
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory

### use (wlan-config-mode)

This command associates an existing captive portal and other policies with a WLAN.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```

use [aaa-policy|application-policy|association-acl-policy|bonjour-gw-discovery-policy|
captive-portal|ip-access-list|ipv6-access-list|mac-access-list|passpoint-policy|
purview-application-policy|roaming-assist-policy|url-filter|wlan-qos-policy]
use [aaa-policy <AAA-POLICY-NAME>|application-policy <APP-POLICY-NAME>|
association-acl-policy <ASSOCIATION-POLICY-NAME>|bonjour-gw-discovery-policy <POLICY-
NAME>|
captive-portal <CAPTIVE-PORTAL-NAME>|passpoint-policy <PASSPOINT-POLICY-NAME>|

```

```

purview-application-policy <POLICY-NAME>|roaming-assist-policy <POLICY-NAME>|
url-filter <URL-FILTER-NAME>|wlan-qos-policy <WLAN-QOS-POLICY-NAME>]

use ip-access-list [in|out] <IP-ACCESS-LIST-NAME>

use ipv6-access-list [in|out] <IPv6-ACCESS-LIST-NAME>

use mac-access-list [in|out] <MAC-ACCESS-LIST-NAME>

```

### Parameters

```

use [aaa-policy <AAA-POLICY-NAME>|application-policy <APP-POLICY-NAME>|
association-acl-policy <ASSOCIATION-POLICY-NAME>|bonjour-gw-discovery-policy <POLICY-
NAME>|
captive-portal <CAPTIVE-PORTAL-NAME>|passpoint-policy <PASSPOINT-POLICY-NAME>|
purview-application-policy <POLICY-NAME>|roaming-assist-policy <POLICY-NAME>|
url-filter <URL-FILTER-NAME>|wlan-qos-policy <WLAN-QOS-POLICY-NAME>]

```

|   |  |
|---|--|
| aaa-policy <AAA-POLICY-NAME>              | <p>Uses an existing AAA policy with a WLAN</p> <ul style="list-style-type: none"> <li>&lt;AAA-POLICY-NAME&gt; - Specify the AAA policy name.</li> </ul>  |
| association-acl <ASSOCIATION-POLICY-NAME> | <p>Uses an existing association ACL policy with a WLAN</p> <ul style="list-style-type: none"> <li>&lt;ASSOCIATION-POLICY-NAME&gt; - Specify the association ACL policy name.</li> </ul>  |
| application-policy <APP-POLICY-NAME>      | <p>Uses an existing application policy with the WLAN. WLAN traffic is inspected and access control and quality of service actions applied based on the rules defined in the application policy.</p> <ul style="list-style-type: none"> <li>&lt;APP-POLICY-NAME&gt; - Specify the Application policy name. The policy should be existing and configured.</li> </ul> <p><b>Note:</b> The WiNG 5.9.X enabled devices use a third-party, DPI engine to detect pre-defined application definitions. To enable AVC and app-usage stats reporting in a WiNG 5.9.X network, see <a href="#">application-group</a> on page 183 and <a href="#">application-policy</a> on page 187.</p>  |
| bonjour-gw-discovery-policy <POLICY-NAME> | <p>Uses an existing Bonjour GW Discovery policy with a WLAN. When associated, the Bonjour GW Discovery policy defines a list of Apple services clients can discover across subnets. Bonjour enables discovery of services on a LAN. Bonjour allows the setting up a network (without any configuration) in which services such as printers, scanners and file-sharing servers can be found using Bonjour. Bonjour only works within a single broadcast domain. However, with a special DNS configuration, it can be extended to find services across broadcast domains.</p> <ul style="list-style-type: none"> <li>&lt;POLICY-NAME&gt; - Specify the Bonjour GW Discovery policy name. Should be existing and configured.</li> </ul> |
| captive-portal <CAPTIVE-PORTAL-NAME>      | <p>Specifies the captive-portal policy to use if enforcing captive-portal authentication on this WLAN</p> <ul style="list-style-type: none"> <li>&lt;CAPTIVE-PORTAL-NAME&gt; - Specify the captive-portal policy name. Should be existing and configured.</li> </ul>   |

|  |  |
|--|--|
| passpoint-policy <PASSPOINT-POLICY-NAME>             | <p>Associates a passpoint policy (Hotspot2 configuration) with this WLAN.</p> <ul style="list-style-type: none"> <li>• &lt;PASSPOINT-POLICY-NAME&gt; - Specify the Passpoint policy name. Should be existing and configured.</li> </ul> <p>Map a passpoint policy to a WLAN. Since the configuration gets applied to the radio by BSS, only the Hotspot 2.0 configuration of primary WLANs on a BSSID is used. Incoming Hotspot 2.0 GAQ/ANQP requests from clients are identified by their destination MAC addresses and are handled by the passpoint policy from the primary WLAN on that BSS. Define one passpoint policy for every WLAN configured.</p>   |
| purview-application-policy <PURVIEW-APP-POLICY-NAME> | <p>Uses an existing Purview application policy with the WLAN. WLAN traffic is inspected and access control and quality of service actions applied based on the rules defined in the Purview application policy.</p> <ul style="list-style-type: none"> <li>• &lt;PURVIEW-APP-POLICY-NAME&gt; - Specify the Purview Application policy name. The policy should be existing and configured.</li> </ul> <p><b>Note:</b> The WiNG 7.1.X enabled devices use Extreme Networks' <i>EAA</i> (Purview™) DPI engine to detect pre-defined application definitions. To enable AVC in a WiNG 7.1.X network, see <a href="#">purview-application-group</a> on page 425 and <a href="#">purview-application-policy</a> on page 430.</p> |

|---|---|

### Usage Guidelines

IP and MAC ACLs act as firewalls within a WLAN. WLANs use ACLs as firewalls to filter or mark packets based on the WLAN from which they arrive, as opposed to filtering packets on layer 2 ports. An ACL contains an ordered list of *Access Control Entries* (ACEs). Each ACE specifies a set of conditions (rules) and the action taken in case of a match. The action can be permit, deny, or mark. Therefore, when a packet matches an ACE's conditions, it is either forwarded, dropped, or marked depending on the action specified in the ACE. The order of conditions in the list is critical since filtering is stopped after the first match.

IP ACLs contain deny and permit rules specifying source and destination IP addresses. Each rule has a precedence order assigned. Both IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC.

Additionally, you can filter layer 2 traffic on a physical layer 2 interface using MAC addresses. A MAC firewall rule uses source and destination MAC addresses for matching operations, where the result is a typical allow, deny, or mark designation to WLAN packet traffic.

Keep in mind IP and non-IP traffic on the same layer 2 interface can be filtered by applying both an IP ACL and a MAC ACL to the interface.

### Examples

```

nx9500-6C8809(config-wlan-test)#use aaa-policy test
nx9500-6C8809(config-wlan-test)#use association-acl-policy test
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid testWLAN1
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
  radius vlan-assignment
  time-based-access days weekdays start 10:00 end 16:30
  wing-extensions wmm-load-information
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  use aaa-policy test
  use association-acl-policy test

  ssid ipad_clients
  vlan 41
  bridging-mode local
  encryption-type none

```

```
authentication-type none
use bonjour-gw-discovery-policy generic
nx9500-6C8809(config-wlan-ipad_clients)#
```

#### Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Removes the following policies associated with a WLAN: aaa-policy, application-policy, association-acl-policy, bonjour-gw-discovery-policy, captive-portal, ip-access-list, ipv6-access-list, mac-access-list, passpoint-policy, roaming-assist-policy, url-filter, or wlan-qos-policy. |
|--|---|

## vlan

Sets the VLAN where traffic from this WLAN is mapped

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

#### Parameters

```
vlan [<1-4094>|<VLAN-ALIAS-NAME>]
```

|                   |  |
|-------------------|--|
| <1-4094>          | Sets a WLAN's VLAN ID. This command starts a new VLAN assignment for a WLAN index. All prior VLAN settings are erased.<br>Use this command to assign just one VLAN to the WLAN. Utilizing a single VLAN per WLAN is a more typical deployment scenario than using a VLAN pool.   |
| <VLAN-ALIAS-NAME> | Assigns a VLAN alias to the WLAN. The VLAN alias should be pre-existing and configured. A VLAN alias maps a name to a VLAN ID. When applied to ports (for example GE ports) using the trunk mode, a VLAN alias denies or permits traffic, on the port, to and from the VLANs specified in the alias. For more information on aliases, see <a href="#">alias</a> on page 163. |

#### Examples

```
nx9500-6C8809(config-wlan-test)#vlan 4
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid testWLAN1
  vlan 4
  bridging-mode local
  encryption-type none
  authentication-type none
  protected-mgmt-frames mandatory
  radius vlan-assignment

  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  use aaa-policy test
  use association-acl-policy test
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
  proxy-arp-mode strict
  broadcast-dhcp validate-offer
  shutdown on-unadoption
```

```
http-analyze controller
nx9500-6C8809(config-wlan-test)#
```

Related Commands

no (wlan-config-mode) on page 588

Removes a WLAN's default VLAN mapping

vlan-pool-member

Adds a member VLAN to a WLAN's VLAN pool. Use this option to define the VLANs available to this WLAN. Additionally, define the number of wireless clients supported by each VLAN.

**Note**  
Configuration of a VLAN pool overrides the 'vlan' configuration.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
vlan-pool-member <WORD> {limit <0-8192>}
```

Parameters

```
vlan-pool-member <WORD> {limit <0-8192>}
```

|                  |  |
|------------------|--|
| vlan-pool-member | Adds a member VLAN to a WLAN's VLAN pool<br>Since users belonging to separate VLANs can share the same WLAN, it is not necessary to create a new WLAN for every VLAN in the network.                                       |
| <WORD>           | Define the VLANs available to this WLAN. It is either a single index, or a list of VLAN IDs (for example, 1,3,7), or a range (for example, 1-10)   |
| limit <0-8192>   | Optional. Is ignored if the number of clients are limited and well within the limits of the DHCP pool on the VLAN <ul style="list-style-type: none"><li>• &lt;0-8192&gt; – Specifies the number of users allowed</li></ul> |

Examples

```
nx9500-6C8809(config-wlan-test)#vlan-pool-member 1-10 limit 1
nx9500-6C8809(config-wlan-test)#show context
wlan test
  ssid testWLAN1
  vlan-pool-member 1 limit 1
  vlan-pool-member 2 limit 1
  vlan-pool-member 3 limit 1
  vlan-pool-member 4 limit 1
  vlan-pool-member 5 limit 1
  vlan-pool-member 6 limit 1
  vlan-pool-member 7 limit 1
  vlan-pool-member 8 limit 1
  vlan-pool-member 9 limit 1
  vlan-pool-member 10 limit 1
  bridging-mode local
  encryption-type none
  authentication-type none
```

```
protected-mgmt-frames mandatory
radius vlan-assignment
time-based-access days weekdays start 10:00 end 16:30

wep128

Configures WEP128 parameters

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
wep128 [key|keys-from-passkey|transmit-key]
wep128 key <1-4> [ascii|hex] [0 <WORD>|2 <WORD>|<WORD>]
wep128 keys-from-passkey <WORD>
wep128 transmit-key <1-4>
```

Parameters

```
wep128 key <1-4> [ascii|hex] [0 <WORD>|2 <WORD>|<WORD>]
```

|                                    |   |
|------------------------------------|---|
| wep128                             | Configures WEP128 parameters. The parameters are: key, key-from-passkey, and transmit-key.  |
| key <1-4>                          | Use to configure the key number <ul style="list-style-type: none"><li>• &lt;1-4&gt; - Specify the key number from 1 - 4.</li></ul>  |
| ascii [0 <WORD>  2 <WORD>  <WORD>] | Sets keys as ASCII characters (5 characters for WEP64, 13 for WEP128) <ul style="list-style-type: none"><li>• 0 &lt;WORD&gt; - Configures a clear text key</li><li>• 2 &lt;WORD&gt; - Configures an encrypted key</li><li>• &lt;WORD&gt; - Configures keys as 13 ASCII characters converted to hex, or 26 hexadecimal characters</li></ul>        |
| hex [0 <WORD>  2 <WORD>  <WORD>]   | Sets keys as hexadecimal characters (10 characters for WEP64, 26 for WEP128) <ul style="list-style-type: none"><li>• 0 &lt;WORD&gt; - Configures a clear text key</li><li>• 2 &lt;WORD&gt; - Configures an encrypted key</li><li>• &lt;WORD&gt; - Configures keys as 13 ASCII characters converted to hex, or 26 hexadecimal characters</li></ul> |

```
wep128 keys-from-passkey <WORD>
```

|   |   |
|---|---|
| <code>keys-from-passkey &lt;WORD&gt;</code> | <p>Specifies a pass key. The pass key can be any alphanumeric string. Controllers, service platforms, Access Points and their connected clients use the algorithm to convert an ASCII string to the same hexadecimal number. Clients without adapters need to use WEP keys manually configured as hexadecimal numbers.</p> <ul style="list-style-type: none"> <li><code>&lt;WORD&gt;</code> – Specify a pass key from 4 - 32 characters.</li> </ul> |
|---|---|

```
wep128 transmit-key <1-4>
```

|                                       |  |
|---------------------------------------|--|
| <code>transmit-key &lt;1-4&gt;</code> | <p>Configures the key index used for transmission from an AP to a wireless client or service platform</p> <ul style="list-style-type: none"> <li><code>&lt;1-4&gt;</code> – Specify a key index from 1 - 4.</li> </ul> |
|---------------------------------------|--|

### Examples

```
NOC-NX9500(config-wlan-test)#wep128 key 1 ascii 123456789abcd
NOC-NX9500(config-wlan-test)#show context

`no (wlan-config-mode)` on page 588 Resets the WEP64 parameters to factory-default values

## wing-extensions

Enables support for WiNG-specific client extensions to the IEEE 802.11x WLAN standards that potentially increase client roaming reliability and handshake speed

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
wing-extensions [ap-attributes-information {include-hostname}|
coverage-hole-detection {11k-clients|offset <5-20>|threshold <-80--60>}|
ft-over-ds-aggregate|move-command|scan-assist {channel-info-interval <6-9>}|
smart-scan|wing-load-information|wmm-load-information]
```

## Parameters

```
wing-extensions [ap-attributes-information {include-hostname}|
coverage-hole-detection {11k-clients|offset <5-20>|threshold <-80--60>}|
ft-over-ds-aggregate|move-command|scan-assist {channel-info-interval <6-9>}|
smart-scan|wing-load-information|wmm-load-information]
```

|   |  |
|---|--|
| wing-extensions   | Enables support for inclusion of WiNG-specific client extensions in radio transmissions  |
| ap-attributes-information {include-hostname}                            | <p>Enables support for AP attributes IE (<i>information element</i>)</p> <ul style="list-style-type: none"> <li>include-hostname – Optional. When enabled, includes AP's hostname, as a sub-element, in the AP attributes IE.</li> </ul> <p>The AP attributes IE is vendor-specific and, when enabled, is added to beacons and probe responses. Inclusion of AP attributes IE allows Extreme Networks terminals to:</p> <ul style="list-style-type: none"> <li>- Recognize Extreme APs</li> <li>- Determine if the AP supports PAN BU features, irrespective of whether these features are enabled or not.</li> </ul> <p>AP attributes IE is not added to beacons and probe responses by default.</p>  |
| coverage-hole-detection {11k-clients offset <5-20> threshold <-80--60>} | <p>Enables <i>coverage hole detection</i> (CHD) and configures CHD parameters. When enabled, allows clients (MUs) to inform an access point when it experiences a coverage hole. A coverage hole is an area of poor wireless coverage not supported by a WiNG managed access point radio. Enable radio resource measurement prior to enabling CHD. For enabling radio resource measurement, see <a href="#">radio-resource-measurement</a> on page 555. CHD is disabled by default.</p> <p>After enabling CHD, optionally configure the following parameters:</p> <ul style="list-style-type: none"> <li>11k-clients – Optional. Provides coverage hole detection to 802.11k-only-capable clients. This is a reduced set of coverage hole detection capabilities (standard 11k messages and behaviors). This option is disabled by default.</li> <li>offset &lt;5-20&gt; – Optional. Configures the offset added to the threshold to obtain the access point's signal strength (as seen by the client) considered adequate. <ul style="list-style-type: none"> <li>&lt;5-20&gt; – Specify the offset value from 5 - 20. The default is 5.</li> </ul> </li> <li>threshold – Optional. Configures the access point's signal strength threshold. When Radio Resource Measurement and CVG Hole are enabled, specify a threshold for the AP's signal strength (as seen by the client) below which a coverage hole incident is reported by the client. <ul style="list-style-type: none"> <li>&lt;-80--60&gt; – Specify the threshold from -80 - -60 dBm. The default is -70 dBm.</li> </ul> </li> </ul> |
| ft-over-ds-aggregate  | <p>Enables <i>fast-transition</i> (FT) aggregation of action frames. When enabled, increases roaming speed by eliminating separate key exchange handshake frames with potential roam candidates. Enable fast transition to complete an initial FT over <i>distribution system</i> (DS) handshake with multiple roam candidates (up to 6) at once, eliminating the need to send separate FT over DS handshakes to each roam candidate.</p> <p>This option is disabled by default.</p>   |

|   |   |
|---|---|
| move-command                              | Enables use of <i>Hyper Fast Secure Roaming</i> (HFSR) for clients on this WLAN. This feature applies only to certain client devices. This option is disabled by default.   |
| scan-assist {channel-info-interval <6-9>} | Enables support for scanning assist. When enabled, allows faster roams on <i>Dynamic Frequency Selection</i> (DFS) channels by eliminating passive scans. Clients get channel information directly from possible roam candidates. This option is disabled by default. <ul style="list-style-type: none"> <li>channel-info-interval &lt;6-9&gt; – Optional. Configures the interval at which channel information is periodically retrieved from potential roam candidates without requesting scan assist.</li> <li>&lt;6-9&gt; – Specify the interval from 6 - 9 seconds. When enabled, the default value is 8 seconds.</li> </ul> |
| smart-scan                                | Enables a smart scan to refine a clients channel scans to just a few channels as opposed to all available channels. This option is disabled by default.   |
| wing-load-information                     | Enables support for the WiNG load information element (Element ID 173) with legacy Symbol Technology clients, thus making them optimally interoperable with the latest Extreme Networks access points. This option is enabled by default.   |
| wmm-load-information                      | Enables support for WiNG <i>Wi-Fi MultiMedia</i> (WMM) Load Information Element in radio transmissions with legacy clients. This option is disabled by default.   |

### Examples

wireless-client roam-notification [after-association|after-data-ready|auto]
```

## Parameters

```
wireless-client [count-per-radio <0-256>|cred-cache-ageout <60-86400>|
hold-time <1-86400>|inactivity-timeout <60-86400>|max-firewall-sessions <10-10000>|
reauthentication <30-86400>|t5-inactivity-timeout <60-86400>|tx-power <0-20>|
vlan-cache-ageout <60-86400>]
```

|                                  |  |
|----------------------------------|--|
| wireless-client                  | Configures the transmit power indicated to wireless clients for transmission   |
| count-per-radio <0-256>          | Configures the maximum number of clients allowed on this WLAN per radio <ul style="list-style-type: none"> <li>&lt;0-256&gt; – Specify a value from 0 - 256.</li> </ul>  |
| cred-cache-ageout <60-86400>     | Configures the timeout period for which client credentials are cached across associations <ul style="list-style-type: none"> <li>&lt;60-86400&gt; – Specify a value from 60 - 86400 seconds.</li> </ul>  |
| hold-time <1-86400>              | Configures the time period for which wireless client state information is cached post roaming <ul style="list-style-type: none"> <li>&lt;1-86400&gt; – Specify a value from 1 - 86400 seconds.</li> </ul>  |
| inactivity-timeout <60-86400>    | Configures an inactivity timeout period in seconds. If a frame is not received from a wireless client for this period of time, the client is disassociated. <ul style="list-style-type: none"> <li>&lt;60-86400&gt; – Specify a value from 60 - 86400 seconds.</li> </ul>  |
| max-firewall-sessions <10-10000> | Configures the maximum firewall sessions allowed per client on a WLAN <ul style="list-style-type: none"> <li>&lt;10-10000&gt; – Specify the maximum number of firewall sessions allowed from 10 - 10000.</li> </ul>  |
| reauthentication <30-86400>      | Configures periodic reauthentication of associated clients <ul style="list-style-type: none"> <li>&lt;30-86400&gt; – Specify the client reauthentication interval from 30 - 86400 seconds.</li> </ul>  |
| t5-inactivity-timeout <60-86400> | Configures and inactivity timeout, in seconds, for T5 devices. When configured, the T5 device is disassociated if the time lapsed after the last frame received from it exceeds the value specified here. <ul style="list-style-type: none"> <li>&lt;60-86400&gt; – Specify a value from 60 - 86400 seconds. The default is 60 seconds.</li> </ul> |

|                              |  |
|------------------------------|--|
| tx-power <0-20>              | Configures the transmit power indicated to clients <ul style="list-style-type: none"> <li>&lt;0-20&gt; - Specify a value from 0 - 20 dBm.</li> </ul>   |
| vlan-cache-ageout <60-86400> | Configures the timeout period for which client VLAN information is cached across associations. <ul style="list-style-type: none"> <li>&lt;60-86400&gt; - Specify a value from 60 - 86400 seconds.</li> </ul> |

```
wireless-client roam-notification [after-association|after-data-ready|auto]
```

|                   |   |
|-------------------|---|
| wireless-client   | Configures the transmit power indicated to wireless clients for transmission  |
| roam-notification | Configures when a roam notification is transmitted  |
| after-association | Transmits a roam notification after a client has associated   |
| after-data-ready  | Transmits a roam notification after a client is data-ready (after completion of authentication, handshakes etc.)    |
| auto              | Transmits a roam notification upon client association (if the client is known to have authenticated to the network) |

| <code>no (wlan-config-mode)</code> on page 588 | Removes or reverts to default configured wireless client related parameters |
|--|---|

## wpa-wpa2

Modifies TKIP-CCMP (WPA/WPA2) related parameters

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
wpa-wpa2 [exclude-wpa2-tkip|handshake|key-rotation|opp-pmk-caching|pmk-caching|
preauthentication|server-only-authentication|psk|tkip-countermeasures|use-sha256-akm]

wpa-wpa2 [exclude-wpa2-tkip|opp-pmk-caching|pmk-caching|preauthentication|
server-only-authentication|use-sha256-akm]

wpa-wpa2 handshake [attempts|init-wait|priority|timeout]

wpa-wpa2 handshake [attempts <1-5>|init-wait <5-1000000>|priority [high|normal]]|
timeout <10-5000> {10-5000}]

wpa-wpa2 key-rotation [broadcast|unicast] <30-86400>

wpa-wpa2 psk [0 <LINE>|2 <LINE>|<LINE>]

wpa-wpa2 tkip-countermeasures holdtime <0-65535>
```

## Parameters

```
wpa-wpa2 [exclude-wpa2-tkip|opp-pmk-caching|pmk-caching|preauthentication|
server-only-authentication|use-sha256-akm]
```

|                   |  |
|-------------------|--|
| wpa-wpa2          | Modifies TKIP-CCMP (WPA/WPA2) related parameters   |
| exclude-wpa2-tkip | Excludes the <i>Wi-Fi Protected Access II</i> (WPA2) version of TKIP. It supports the WPA version of TKIP only. This option is disabled by default.  |
| opp-pmk-caching   | Uses opportunistic key caching (same <i>Pairwise Master Key</i> (PMK) across APs for fast roaming with EAP802.1x. This option is enabled by default. |
| pmk-caching       | Uses cached pair-wise master keys (fast roaming with eap/802.1x). This option is enabled by default.   |
| preauthentication | Uses pre-authentication mode (WPA2 fast roaming)   |
| use-sha256-akm    | Uses sha256 authentication key management suite  |

```
wpa-wpa2 handshake [attempts <1-5>|init-wait <5-1000000>|priority [high|normal]]|
timeout <10-5000> {10-5000}]
```

|           |  |
|-----------|--|
| wpa-wpa2  | Modifies TKIP-CCMP (WPA/WPA2) related parameters |
| handshake | Configures WPA/WPA2 handshake parameters         |

|                             |   |
|-----------------------------|---|
| attempts <1-5>              | Configures the total number of times a message is transmitted towards a non-responsive client <ul style="list-style-type: none"> <li>&lt;1-5&gt; – Specify a value from 1 - 5. The default is 2.</li> </ul>   |
| init-wait <5-1000000>       | Configures a minimum wait-time period, in microseconds, before the first handshake message is transmitted from the AP. This option is disabled by default. <ul style="list-style-type: none"> <li>&lt;5-1000000&gt; – Specify a value from 5 - 1000000 microseconds.</li> </ul>   |
| priority [high normal]      | Configures the relative priority of handshake messages compared to other data traffic <ul style="list-style-type: none"> <li>high – Treats handshake messages as high priority packets on a radio. This is the default setting.</li> <li>normal – Treats handshake messages as normal priority packets on a radio</li> </ul>  |
| timeout <10-5000> <10-5000> | Configures the timeout period, in milliseconds, for a handshake message to retire. Once this period is exceeded, the handshake message is retired. <ul style="list-style-type: none"> <li>&lt;10-5000&gt; – Specify a value from 10 - 5000 milliseconds. The default is 500 milliseconds.</li> <li>&lt;10-5000&gt; – Optional. Configures a different timeout between the second and third attempts'</li> </ul> |

```
wpa-wpa2 key-rotation [broadcast|unicast] <30-86400>
```

|                      |  |
|----------------------|--|
| wpa-wpa2             | Modifies TKIP-CCMP (WPA/WPA2) related parameters   |
| key-rotation         | Configures parameters related to periodic rotation of encryption keys. The periodic key rotation parameters are broadcast, multicast, and unicast traffic.   |
| broadcast <30-86400> | Configures the periodic rotation of keys used for broadcast and multicast traffic. This parameter specifies the interval, in seconds, at which keys are rotated. This option is disabled by default. <ul style="list-style-type: none"> <li>&lt;30-86400&gt; – Specify a value from 30 - 86400 seconds.</li> </ul> |
| unicast <30-86400>   | Configures a periodic interval for the rotation of keys, used for unicast traffic. This option is disabled by default. <ul style="list-style-type: none"> <li>&lt;30-86400&gt; – Specify a value from 30 - 86400 seconds.</li> </ul>   |

### Related Commands

|  |   |
|--|---|
| <b>no (wlan-config-mode)</b> on page 588 | Removes or reverts to default TKIP-CCMP (WPA/WPA2) related parameters |
|--|---|

### no (wlan-config-mode)

Negates WLAN mode commands and reverts values to their default

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
no <PARAMETERS>
```

### Parameters

```
no <PARAMETERS>
```

|                                    |   |
|------------------------------------|---|
| <code>no &lt;PARAMETERS&gt;</code> | Removes this WLAN's settings or reverts them to default values, based on the parameters passed. |
|------------------------------------|---|

### Usage Guidelines

The `no` command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

### Examples

|  |  |
|--|--|
| <code>nx9500-6C8809(config-wlan-test)#no ?</code>  |  |
| <code>802.11v</code>                               | Configure 802.11v parameters   |
| <code>accounting</code>                            | Configure how accounting records are created for this wlan                             |
| <code>acl</code>                                   | Actions taken based on ACL configuration [ packet drop being one of them]              |
| <code>answer-broadcast-probes</code>               | Do not Include this wlan when responding to probe requests that do not specify an SSID |
| <code>assoc-response</code>                        | Association response threshold   |
| <code>association-list</code>                      | Configure the association list for the wlan  |
| <code>authentication-type</code>                   | Reset the authentication to use on this wlan to default (none/Pre-shared keys)         |
| <code>broadcast-dhcp</code>                        | Configure broadcast DHCP packet handling   |
| <code>broadcast-ssid</code>                        | Do not advertise the SSID of the WLAN in beacons                                       |
| <code>captive-portal-enforcement</code>            | Configure how captive-portal is enforced on the wlan                                   |
| <code>client-access</code>                         | Disallow client access on this wlan (no data operations)                               |
| <code>client-client-communication</code>           | Disallow switching of frames from one wireless client to another on this wlan          |
| <code>client-load-balancing</code>                 | Disable load-balancing of clients on this wlan   |
| <code>controller-assisted-mobility</code>          | Disable configure assisted mobility  |
| <code>data-rates</code>                            | Reset data rate configuration to default   |
| <code>description</code>                           | Reset the description of the wlan  |
| <code>downstream-group-addressed-forwarding</code> | Disable downstream group addressed forwarding of packets                               |
| <code>dpi</code>                                   | Deep-Packet-Inspection (Application Assurance)   |
| <code>dynamic-vlan-assignment</code>               | Dynamic VLAN assignment configuration  |
| <code>eap-types</code>                             | Allow all EAP types on this wlan   |
| <code>encryption-type</code>                       | Reset the encryption to use on this wlan to default (none)                             |
| <code>enforce-dhcp</code>                          | Drop packets from Wireless Clients with static IP address                              |
| <code>fast-bss-transition</code>                   | Disable support for 802.11r Fast BSS Transition  |
| <code>http-analyze</code>                          | Enable HTTP URL analysis on the wlan   |
| <code>ip</code>                                    | Internet Protocol (IP)   |
| <code>ipv6</code>                                  | Internet Protocol version 6 (IPv6)   |
| <code>kerberos</code>                              | Configure kerberos authentication parameters   |
| <code>mac-authentication</code>                    | Configure mac-authentication related parameters  |
| <code>multi-band-operation</code>                  | Disable support for Agile Multiband  |

|                            |   |
|----------------------------|---|
| nsight                     | Nsight Server   |
| opendns                    | OpenDNS related config for this wlan                            |
| protected-mgmt-frames      | Disable support for Protected Management Frames (IEEE 802.11w)  |
| proxy-arp-mode             | Configure handling of ARP requests with proxy-arp is enabled    |
| proxy-nd-mode              | Configure handling of IPv6 ND requests with proxy-nd is enabled |
| qos-map                    | Disable the 802.11u QoS map element and frame                   |
| radio-resource-measurement | Disable support for 802.11k Radio Resource Measurement          |
| radius                     | Configure RADIUS related parameters                             |
| registration               | Dynamic registration of device (or) user                        |
| relay-agent                | Configure dhcp relay agent info                                 |
| shutdown                   | Enable the use of this wlan                                     |
| ssid                       | Configure ssid  |
| t5-client-isolation        | Do not Isolate traffic among clients                            |
| t5-security                | Configure encryption and authentication                         |
| time-based-access          | Reset time-based-access parameters to default                   |
| use                        | Set setting to use  |
| vlan                       | Map the default vlan (vlan-id 1) to the wlan                    |
| vlan-pool-member           | Delete a mapped vlan from this wlan                             |
| wep128                     | Reset WEP128 parameters   |
| wep64                      | Reset WEP64 parameters  |
| wing-extensions            | Disable support for WiNG-Specific extensions to 802.11          |
| wireless-client            | Configure wireless-client specific parameters                   |
| wpa-wpa2                   | Modify tkip-ccmp (wpa/wpa2) related parameters                  |
| service                    | Service to monitor to show no-service page to user              |

nx9500-6C8809(config-wlan-test)#

The WLAN 'test' settings before execution of the no command:

```

  ssid test
  bridging-mode local
  encryption-type none
  authentication-type none
  wing-extensions wmm-load-information
  client-load-balancing probe-req-intvl 5ghz 5
  client-load-balancing band-discovery-intvl 2
  acl exceed-rate wireless-client-denied-traffic 20 disassociate
  broadcast-dhcp validate-offer
  http-analyze controller
nx9500-6C8809(config-wlan-test)#

```

## wlan-qos-policy

Configures a WLAN QoS policy and enters its configuration mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
wlan-qos-policy <WLAN-QOS-POLICY-NAME>
```

### Parameters

```
wlan-qos-policy <WLAN-QOS-POLICY-NAME>
```

|                        |  |
|------------------------|--|
| <WLAN-QOS-POLICY-NAME> | Specify the WLAN QoS policy name. If a policy with the specified name does not exist, it is created. |
|------------------------|--|

### Examples

```

nx9500-6C8809(config)#wlan-qos-policy test
nx9500-6C8809(config-wlan-qos-test)#?
WLAN QoS Mode commands:

```

|                       |   |
|-----------------------|---|
| accelerated-multicast | Configure accelerated multicast streams address and forwarding QoS classification   |
| classification        | Select how traffic on this WLAN must be classified (relative prioritization on the radio)   |
| multicast-mask        | Egress multicast mask (frames that match bypass the PSPQueue. This permits intercom mode operation without delay even in the presence of PSP clients) |
| no                    | Negate a command or set its defaults  |
| qos                   | Quality of service  |
| rate-limit            | Configure traffic rate-limiting parameters on a per-wlan/per-client basis   |
| svp-prioritization    | Enable spectralink voice protocol support on this wlan  |
| voice-prioritization  | Prioritize voice client over other client (for non-WMM clients)   |
| wmm                   | Configure 802.11e/Wireless MultiMedia parameters  |
| clrscr                | Clears the display screen   |
| commit                | Commit all changes made in this session   |
| do                    | Run commands from Exec mode   |
| end                   | End current mode and change to EXEC mode  |
| exit                  | End current mode and down to previous mode  |
| help                  | Description of the interactive help system  |
| revert                | Revert changes  |
| service               | Service Commands  |
| show                  | Show running system information   |
| write                 | Write running configuration to memory or terminal   |

nx9500-6C8809 (config-wlan-qos-test) #

### Related Commands

**no** on page 609

Removes an existing WLAN QoS POLICY

#### Note

For more information on WLAN QoS policy commands, see [WLAN-QoS Policy](#) on page 1699.

## url-filter

Creates a new URL filter (Web filter) and enters its configuration mode. URL filtering is a licensed feature. When applied to a WiNG device the license allows you to enable URL filtering on the device, create and apply a URL filter defining the banned and/or allowed URLs. When enabled, the URL filter is applied to all user-initiated URL requests to determine if the requested URL is banned or allowed. Only if allowed is the user's request (in the form of a HTTP request packet) forwarded to the Web server.

URL filters can be applied at any of the following points: the user's application (browser/email reader), the network's gateway, at the *Internet service provider* (ISP) end, and also on a Web portal. For wireless clients, the WLAN infrastructure is the best place to implement these filters.

A URL filter is a set of whitelist and/or blacklist rules. The whitelist allows access only to those Websites and URLs specified in it. All other Websites and URLs, apart from those specified in the whitelist, are banned. On the other hand, the blacklist bans all Websites and URLs specified in it. All other Websites and URLs, apart from those specified in the blacklist, are allowed.

To simplify URL filter configuration, Websites have been classified into pre-defined category-types and categories. The system provides 12 category-types and 64 categories. To further simplify configuration, these 12 category-types have been grouped into five (5) pre-defined levels. (See Usage Guidelines section for the list of category-types, categories, and levels). The actual classification of URLs (on the basis of the pre-defined factors mentioned above) is done by the classification server. A local database also helps by caching URL records for a user-defined time period. The classification server host is specified in the Web filter policy. The Web filter policy also defines the URL database parameters. For more information, see [web-filter-policy](#) on page 505 .

The WiNG software also allows you to create URL lists. Each URL list contains a list of user-defined URLs. Use the URL list in a URL filter (whitelist or blacklist rule) to identify the URLs to ban or allow. For example, a URL list named SocialNetworking is created listing the following three sites: Facebook, Twitter, and LinkedIn. When applied to a URL filter's blacklist these three sites are banned. Where as, when applied to a whitelist only these three sites are allowed. For more information on configuring a URL list, see [url-list](#) on page 602.

#### Note

URL filtering is a licensed feature. Procure and install the license in the device configuration mode. For more information, see [license](#) on page 1285 (device config mode).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

#### Syntax

```
url-filter <URL-FILTER-NAME>
```

#### Parameters

```
url-filter <URL-FILTER-NAME>
```

<URL-FILTER-NAME>

Creates a new URL filter and enters its configuration mode. Specify the URL filter name. If a filter with the specified name does not exist, it is created.

#### Usage Guidelines

| Sl No. | Category Type           | Category   |
|--------|-------------------------|--|
| 1      | Adult Content           | Alcohol & Tobacco, Dating & Personals, Gambling, Nudity, Pornography/Sexually Explicit, Sex Education, Weapons |
| 2      | Business                | Web-based Email  |
| 3      | Communication           | Chat, Instant Messaging  |
| 4      | Entertainment           | Streaming Media & Downloads  |
| 5      | File Sharing and Backup | Download Sites   |
| 6      | Gaming                  | Games  |

| SI No. | Category Type            | Category   |
|--------|--------------------------|--|
| 7      | News Sports and General  | Arts, Business, Computer & Technology, Education, Entertainment, Fashion & Beauty, Finance, Forum & Newsgroups, General, Government, Greeting Card, Health & Medicine, Information Security, Job Search, Leisure & Recreation, Network Errors, News, Non-Profits & NGO, Personal Sites, Politics, Private IP Addresses, Real Estates, Religion, Restaurants & Dining, Search Engine & Portals, Shopping, Sports, Transportation, Translators, Travel |
| 8      | Peer-to-Peer (P2P)       | Peer to Peer   |
| 9      | Questionable/Unethical   | Child Abuse Images, Cults, Hacking, Hate & Intolerance, Illegal Drug, Illegal Sharing, Illegal Software, School Cheating, Tasteless, Violence  |
| 10     | Security Risk            | Advertisement & Pop-ups, Anonymizers, Botnets, Compromised, Criminal Activity, Malware, Parked Domains, Phishing & Fraud, Spam Sites   |
| 11     | Social and Photo Sharing | Social Networking  |
| 12     | Software Update          | N/A  |

| SI No. | Level       | Description  |
|--------|-------------|--|
| 1      | Basic       | Blocks sites/URL categorized as Security Risk  |
| 2      | Low         | Blocks sites/URL categorized as Adult Content + Basic  |
| 3      | Medium      | Blocks sites/URL categorized as File Sharing and Backup, P2P, Questionable / Unethical + Low         |
| 4      | Medium High | Blocks sites/URL categorized as Gaming + Medium  |
| 5      | High        | Blocks sites/URL categorized as Communication, Entertainment, Social and Photo Sharing + Medium High |

### Examples

```

nx9500-6C8809(config-url-filter-test)#?
URL Filter Mode commands:
  blacklist      Block access to URL
  blockpage      Configure blocking page parameters
  description    Url filter description
  no             Negate a command or set its defaults
  whitelist      Allow access to URL

  clrscr         Clears the display screen
  commit         Commit all changes made in this session
  do             Run commands from Exec mode
  end            End current mode and change to EXEC mode
  exit           End current mode and down to previous mode
  help           Description of the interactive help system
  revert         Revert changes
  service        Service Commands
  show           Show running system information
  write          Write running configuration to memory or terminal

nx9500-6C8809(config-url-filter-test)#

```

*url-filter-config-commands*

The following table summarizes URL filter configuration mode commands:

**Table 30: URL Filter Config Mode Commands**

| Command   | Description  |
|---|--|
| <code>blacklist</code> on page 595                            | Creates a blacklist rule defining a list of banned Websites and URLs   |
| <code>blockpage</code> on page 597                            | Configures the parameters that retrieve the page or content displayed by the client's browser when a requested URL is blocked and cannot be viewed |
| <code>description</code> on page 599                          | Configures an appropriate description for this URL filter  |
| <code>whitelist</code> on page 600                            | Creates a whitelist rule defining a list of Websites and URLs allowed access by clients.   |
| <code>no (url-filter-config-mode-commands)</code> on page 601 | Removes this URL filter's configured parameters  |

**blacklist**

Creates a blacklist rule. A blacklist is a list of Websites and URLs denied access by clients. Clients requesting blacklisted URLs are presented with a page displaying the 'Web page blocked' message. Parameters relating to this page are configured using the 'blockpage' option.

URL filtering is based on the classification of Websites into pre-defined category-types. Some of the category-types are further divided into multiple categories. Currently available are 12 built-in category types, and 64 categories. These built-in category-types and categories cannot be modified.

Use the available options to identify the URL category-types and categories to include in the blacklist.

In addition to identifying URLs by the categories and category-types they are classified into, the system also provides five (5) levels of Web filtering (basic, high, low, medium, and medium-high). Each level identifies a specific set of URL categories to blacklist. For more information on category-types, categories, and URL filtering levels, see [url-filter](#) on page 592.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
blacklist [category-type|level|url-list]
blacklist category-type [adult-content|all|business|communication|entertainment|
file-sharing-backup|gaming|news-sports-general|p2p|questionable|security-risk|
social-photo-sharing|software-updates] precedence <1-500> {description <LINE>}
blacklist level [basic|high|low|medium|medium-high] precedence <1-500>
{description <LINE>}
blacklist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}
```

## Parameters

```
blacklist category-type [adult-content|all|business|communication|entertainment|
file-sharing-backup|gaming|news-sports-general|p2p|questionable|security-risk|social-
photo-sharing|
software-updates] precedence <1-500> {description <LINE>}
```

|   |  |
|---|--|
| blacklist category-type<br><SELECT-CATEGORY-TYPE> | <p>Selects the category-type to blacklist. A category is a pre-defined URL list available in the WiNG software. Categories are based on an external database, and cannot be modified or removed. Custom categories can be created with the URL List and added to the database.</p> <p>Websites have been classified into the following 12 category types: adult-content, business, communication, entertainment, file-sharing-backup, gaming, news-sports-general, p2p, questionable, security-risk, social-photo-sharing, and software-updates</p> <p>Select 'all' to blacklist all category-types.</p> <p>Some of the category-types are further classified into categories. For example, the 'adult-content' category-type is differentiated into the following categories:</p> <ul style="list-style-type: none"> <li>• alcohol-tobacco, dating-personals, gambling, nudity, pornography-sexually-explicit, sex-education, and weapons.</li> </ul> <p>The system blocks all categories (URLs falling within their limits) within the selected category-type.</p> |
| precedence <1-500>                                | Configures the precedence value for this blacklist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.  |
| description <LINE>                                | Optional. Configures a description (not exceeding 80 characters) for this blacklist rule. Enter a description that allows you to identify the purpose of the rule.   |

```
blacklist level [basic|high|low|medium|medium-high] precedence <1-500> {description
<LINE>}
```

|   |  |
|---|--|
| blacklist level [basic high low medium medium-high] | Configures the Web filtering level as basic, high, low, medium, or medium-high. Each of these filter-levels are pre-configured to use a set of category types and this mapping cannot be modified. |
| precedence <1-500>                                  | Configures the precedence value for this blacklist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.                  |
| description <LINE>                                  | Optional. Configures a description (not exceeding 80 characters) for this blacklist rule. Enter a description that allows you to identify the purpose of the rule.                                 |

```
blacklist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}
```

|   |   |
|---|---|
| <code>blacklist url-list &lt;URL-LIST-NAME&gt;</code> | Associates a URL list with this URL filter. When associated with a blacklist rule, all URLs listed in the specified URL list are blacklisted. URL lists are customized categories included in the custom filter-level setting. URL lists enable an administrator to blacklist or whitelist URLs in addition to the built-in categories. For more information on configuring a URL list, see <a href="#">url-list</a> on page 602 . <ul style="list-style-type: none"> <li>• <code>&lt;URL-LIST-NAME&gt;</code> – Enter URL list name (should be existing and configured)</li> </ul> |
| <code>precedence &lt;1-500&gt;</code>                 | Configures the precedence value for this blacklist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.   |
| <code>description &lt;LINE&gt;</code>                 | Optional. Configures a description (not exceeding 80 characters) for this blacklist rule. Enter a description that allows you to identify the purpose of the rule.  |

### Examples

```

nx9500-6C8809(config-url-filter-test)#blacklist level medium-high precedence 10
nx9500-6C8809(config-url-filter-test)#blacklist category-type adult-content category
alcohol-tobacco precedence 1
nx9500-6C8809(config-url-filter-test)#blacklist category-type security-risk category
botnets precedence 3
nx9500-6C8809(config-url-filter-test)#show context
url-filter test
  blacklist level medium-high precedence 10
  blacklist category-type security-risk category botnets precedence 3
  blacklist category-type adult-content category alcohol-tobacco precedence 1
nx9500-6C8809(config-url-filter-test)#

```

### Related Commands

|  |  |
|--|--|
| <a href="#">no (url-filter-config-mode-commands)</a> on page 601 | Removes a blacklist rule from this URL filter. Specify the category-type, category, and precedence to identify the blacklist rule. The identified rule is removed from the URL filter. |
|--|--|

## blockpage

Configures the parameters that retrieve the page or content displayed by the client's browser when a requested URL is blocked and cannot be viewed

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

blockpage [external|internal|path]
blockpage path [external|internal]
blockpage external url <URL>
blockpage internal [content|footer|header|main-logo|org-name|org-signature|
small-logo|title] <LINE/IMAGE-URL>

```

## Parameters

```
blockpage path [external|internal]
```

|                                    |  |
|------------------------------------|--|
| blockpage path [external internal] | <p>Specifies if the location of the page displayed, to the client when a requested URL is blocked, is external or internal</p> <ul style="list-style-type: none"> <li>external – Indicates the page displayed is hosted on an external Web server resource. If selecting this option, use the <code>blockpage &gt; external &gt; url &lt;URL&gt;</code> command to provide the path to the external Web server hosting the page.</li> <li>internal – Indicates the page displayed is hosted internally. This is the default setting. If selecting this option, use the <code>blockpage &gt; internal &gt; &lt;SELECT-PAGE-TYPE&gt; &gt; &lt;LINE/IMAGE-URL&gt;</code> command to define the page configuration.</li> </ul> |
|------------------------------------|--|

```
blockpage external url <URL>
```

|                              |  |
|------------------------------|--|
| blockpage external url <URL> | <p>Configures the URL of the external Web server hosting the page (displayed to the client when a requested URL is blocked).</p> <ul style="list-style-type: none"> <li>url &lt;URL&gt; – Specify the URL of the Web server and the blocking page name</li> </ul> <p>Valid URLs should begin with <code>http://</code> or <code>https://</code><br/> The URL can contain query strings.<br/> Use <code>'&amp;'</code> or <code>'?'</code> character to separate field-value pair.<br/> Enter <code>'ctrl-v'</code> followed by <code>'?'</code> to configure query strings</p> |
|------------------------------|--|

```
blockpage internal [content|footer|header|main-logo|org-name|org-signature|
small-logo|title] <LINE/IMAGE-URL>
```

|  |  |
|--|--|
| blockpage internal [content <br>footer header main-logo org-<br>name org-signature  small-logo <br>title] <LINE/IMAGE-URL> | <p>Configures the internally hosted blocking page parameters, such as the content displayed, page footer and header, organization (the organization enforcing the Web page blocking) details (name, signature, and logo), and page title</p> <ul style="list-style-type: none"> <li>content – Configures the text (message) displayed on the blocking page</li> <li>footer – Configures the text displayed as the blocking page footer</li> <li>header – Configures the text displayed as the blocking page header</li> <li>org-name – Configures the organization's name displayed on the blocking page</li> <li>org-signature – Configures the organization's signature displayed on the blocking page</li> <li>title – Configures the title of the blocking page.</li> <li>main-logo – Configures the location of the main logo (organization's large logo)</li> <li>small-logo – Configures the location of the small logo (organization's small logo)</li> </ul> <p>The following keyword is common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>&lt;LINE/IMAGE-URL&gt; – Specify the location of the logo (main and small) image file. The image is retrieved and displayed from the location configured here. If you are using this option to provide content, such as organization name, footer, header, etc. enter a text string not exceeding 255 characters in length.</li> </ul> |
|--|--|

## Examples

```

nx9500-6C8809(config-url-filter-test)#blockpage internal content "The requested Web page
is blocked and cannot be displayed for viewing"
nx9500-6C8809(config-url-filter-test)#show context
url-filter test
  blacklist level medium-high precedence 10
  blacklist category-type security-risk category botnets precedence 3
  blacklist category-type adult-content category alcohol-tobacco precedence 1
  blockpage internal content "The requested Web page is blocked and cannot be displayed
for viewing"
nx9500-6C8809(config-url-filter-test)#

```

## Related Commands

|   |  |
|---|--|
| <code>no (url-filter-config-mode-commands)</code> on page 601 | Removes the blocking page configurations |
|---|--|

**description**

Configures a description for this URL filter. Provide a description that enables you to identify the purpose of this URL filter.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
description <LINE>
```

## Parameters

```
description <LINE>
```

|                    |   |
|--------------------|---|
| description <LINE> | Enter an appropriate description for this URL filter. The description should identify the URL filter's purpose and should not exceed 80 characters in length. |
|--------------------|---|

## Examples

```

nx9500-6C8809(config-url-filter-test)#description "Blacklists sites inappropriate for
children and are security risks."
nx9500-6C8809(config-url-filter-test)#show context
url-filter test
  description "Blacklists sites inappropriate for children and are security risks."
  blacklist level medium-high precedence 10
  blacklist category-type security-risk category botnets precedence 3
  blacklist category-type adult-content category alcohol-tobacco precedence 1
  blockpage internal content "The requested Web page is blocked and cannot be displayed
for viewing"
nx9500-6C8809(config-url-filter-test)#

```

## Related Commands

|   |                                       |
|---|---------------------------------------|
| <code>no (url-filter-config-mode-commands)</code> on page 601 | Removes this URL filter's description |
|---|---------------------------------------|

## whitelist

Creates a whitelist rule. A whitelist is a list of Websites and URLs allowed access by clients. URL filtering is based on the classification of Websites into pre-defined category-types. Some of the category-types are further divided into multiple categories. Currently available are 12 built-in category types, and 64 categories. These built-in category-types and categories cannot be modified.

Use the available options to identify the category-types and categories to include in the whitelist.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
whitelist [category-type|url-list]
whitelist category-type [adult-content|all|business|communication|entertainment|
file-sharing-backup|gaming|news-sports-general|p2p|questionable|security-risk|
social-photo-sharing|software-updates] precedence <1-500> {description <LINE>}
```

### Parameters

```
whitelist category-type [adult-content|all|business|communication|entertainment|
file-sharing-backup|gaming|news-sports-general|p2p|questionable|security-risk|
social-photo-sharing|software-updates] precedence <1-500> {description <LINE>}
```

|  |   |
|--|---|
| whitelist category-type <SELECT-CATEGORY-TYPE> | <p>Selects the category-type to add to this whitelist. A category is a pre-defined URL list available in the WiNG software. Categories are based on an external database, and cannot be modified or removed. Custom categories can be created with the URL List and added to the database.</p> <p>Websites have been classified into the following 12 category types: adult-content, business, communication, entertainment, file-sharing-backup, gaming, news-sports-general, p2p, questionable, security-risk, social-photo-sharing, and software-updates.</p> <p>Select 'all' to whitelist all category-types.</p> <p>Some of the category-types are further classified into categories. For example, the 'adult-content' category-type is differentiated into the following categories:</p> <ul style="list-style-type: none"> <li>• alcohol-tobacco, dating-personals, gambling, nudity, pornography-sexually-explicit, sex-education, and weapons.</li> </ul> <p>The system allows all categories (URLs falling within their limits) within the selected category-type.</p> |
| precedence <1-500>                             | <p>Configures the precedence value for this whitelist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.</p>  |
| description <LINE>                             | <p>Optional. Configures a description (not exceeding 80 characters) for this whitelist rule. Enter a description that allows you to identify the purpose of the rule.</p>   |

```
whitelist url-list <URL-LIST-NAME> precedence <1-500> {description <LINE>}
```

|   |  |
|---|--|
| <code>whitelist url-list &lt;URL-LIST-NAME&gt;</code> | <p>Associates a URL list with this URL filter. When associated with a whitelist rule, all URLs listed in the specified URL list are allowed access. URL lists are customized categories included in the custom filter-level setting. URL lists enable an administrator to blacklist or whitelist URLs in addition to the built-in categories. For more information on configuring a URL list, see <a href="#">url-list</a> on page 602.</p> <ul style="list-style-type: none"> <li>• <code>&lt;URL-LIST-NAME&gt;</code> – Enter URL list name (should be existing and configured)</li> </ul> |
| <code>precedence &lt;1-500&gt;</code>                 | Configures the precedence value for this whitelist rule. Rules are applied in the increasing order of their precedence. Therefore, rules with lower precedence are applied first.  |
| <code>description &lt;LINE&gt;</code>                 | Optional. Configures a description (not exceeding 80 characters) for this whitelist rule. Enter a description that allows you to identify the purpose of the rule.   |

### Examples

```

nx9500-6C8809(config-url-filter-test)#whitelist category-type communication category chat
precedence 7
nx9500-6C8809(config-url-filter-test)#show context
url-filter test
description "Blacklists sites inappropriate for children and are security risks."
blacklist level medium-high precedence 10
whitelist category-type communication category chat precedence 7
blacklist category-type security-risk category botnets precedence 3
blacklist category-type adult-content category alcohol-tobacco precedence 1
blockpage internal content "The requested Web page is blocked and cannot be displayed
for viewing"
nx9500-6C8809(config-url-filter-test)#

```

### Related Commands

|   |  |
|---|--|
| <code>no (url-filter-config-mode-commands)</code> on page 601 | Removes a whitelist rule from this URL filter. Specify the category-type, category, and precedence to identify the blacklist rule. The identified rule is removed from the URL filter. |
|---|--|

### no (url-filter-config-mode-commands)

Use the no command to remove this URL filter's configured parameters

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
no [blacklist|blockpage|description|whitelist]
no blacklist [category-type|level|url-list]
no blacklist [category-type <SELECT-CATEGORY-TYPE>|level <SELECT-LEVEL>|
url-list <URL-LIST-NAME>] precedence <1-500>
no blockpage [external|internal [content|footer|header|main-logo|org-name|
org-signature|small-logo|title]|path]
no description
no whitelist [category-type|url-list]
no whitelist [category-type <SELECT-CATEGORY-TYPE>|url-list <URL-LIST-NAME>]
precedence <1-500>
```

## Parameters

```
no <PARAMETERS>
```

|                 |   |
|-----------------|---|
| no <PARAMETERS> | Removes this URL filter's configured parameters based on the values passed here |
|-----------------|---|

## Examples

The following example displays the URL filter 'test' settings before the 'no' is executed:

```
nx9500-6C8809(config-url-filter-test)#show context
url-filter test
  description "Blacklists sites inappropriate for children and are security risks."
  blacklist level medium-high precedence 10
  whitelist category-type communication category chat precedence 7
  blacklist category-type security-risk category botnets precedence 3
  blacklist category-type adult-content category alcohol-tobacco precedence 1
  blockpage internal content "The requested Web page is blocked and cannot be displayed
for viewing"
nx9500-6C8809(config-url-filter-test)#
nx9500-6C8809(config-url-filter-test)#no description
nx9500-6C8809(config-url-filter-test)#no blacklist category-type adult-content
category alcohol-tobacco precedence 1
nx9500-6C8809(config-url-filter-test)#no whitelist category-type communication
category chat precedence 7
```

The following example displays the URL filter 'test' settings after the 'no' is executed:

```
nx9500-6C8809(config-url-filter-test)#show context
url-filter test
  blacklist level medium-high precedence 10
  blacklist category-type security-risk category botnets precedence 3
  blockpage internal content "The requested Web page is blocked and cannot be displayed
for viewing"
nx9500-6C8809(config-url-filter-test)#
```

## url-list

Creates a URL list and enters its configuration mode. URL lists are a means of categorizing URLs on the basis of various criteria, such as frequently used, not-permitted, etc. It is used in URL filters to identify whitelisted/blacklisted URLs. Web requests are blocked or approved based on URL filter whitelist/blacklist rules. A whitelist bans all sites except the categories and URL lists defined in the whitelist. The blacklist allows all sites except the categories and URL lists defined in the blacklist.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
url-list <URL-LIST-NAME>
```

Parameters

```
url-list <URL-LIST-NAME>
```

|                 |   |
|-----------------|---|
| <URL-LIST-NAME> | <ul style="list-style-type: none"><li>• Specify the URL list name. The URL list is created if another list with the same name does not exist.</li></ul> |
|-----------------|---|

Examples

```
nx9500-6C8809(config)#url-list URLlist1
nx9500-6C8809(config-url-list-URLlist1)#?
URL List Mode commands:
  description  Description of the category
  no           Negate a command or set its defaults
  url          Add a URL entry

  clrscr       Clears the display screen
  commit       Commit all changes made in this session
  do           Run commands from Exec mode
  end          End current mode and change to EXEC mode
  exit         End current mode and down to previous mode
  help         Description of the interactive help system
  revert       Revert changes
  service      Service Commands
  show         Show running system information
  write        Write running configuration to memory or terminal

nx9500-6C8809(config-url-list-URLlist1)#
nx9500-6C8809(config-url-list-URLlist1)#url http://www.example_company.com depth 10
nx9500-6C8809(config-url-list-test)#show context
url-list test
  url http://www.example_company.com depth 10
nx9500-6C8809(config-url-list-URLlist1)#
```

Related Commands

|                |                              |
|----------------|------------------------------|
| no on page 609 | Removes an existing URL list |
|----------------|------------------------------|

url-list-config-commands

The following table summarizes URL list configuration mode commands:

**Table 31: URL List Config Mode Commands**

| Command   | Description   |
|---|---|
| <code>url</code> on page 604                                | Adds URL entries to this URL list                                     |
| <code>description</code> on page 604                        | Creates a blacklist rule defining a list of banned Web sites and URLs |
| <code>no (url-list-config-mode-commands)</code> on page 605 | Removes this URL list's settings                                      |

**url**

Adds URL entries to this URL list

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

**Syntax**

```
url <WORD> {depth <1-10>}
```

**Parameters**

```
url <WORD> {depth <1-10>}
```

`url <WORD> {depth <1-10>}`

Adds a URL entry

- `<WORD>` – Specify the URL to add.
- `depth` – Optional. Sets number of levels to be cached. Since Web sites have different parameters to uniquely identify specific content, the same content may be stored on multiple origin servers. Smart caching uses subsets of these parameters to recognize that the content is the same and serves it from cache.

`<1-10>` – Specify the depth from 1 - 10.

**Examples**

```
nx9500-6C8809(config-url-list-test)#url http://www.facebook.com depth 5
nx9500-6C8809(config-url-list-test)#show context
url-list test
description "This URL list contains social media URLs."
url https://www.facebook.com depth 5
nx9500-6C8809(config-url-list-test)#
```

**Related Commands**

`no (url-list-config-mode-commands)` on page 605

Removes a URL entry from this URL list

**description**

Configures a description for this URL list. The description should be unique and enable you to identify the type of URLs listed in the URL list.

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
description <LINE>
```

## Parameters

```
description <LINE>
```

|                    |  |
|--------------------|--|
| description <LINE> | Provide a unique description for this URL list (should not exceed 500 characters in length). |
|--------------------|--|

## Examples

```
nx9500-6C8809(config-url-list-test)#description ""This URL list contains social media
URLs.""
nx9500-6C8809(config-url-list-test)#show context
url-list test
  description "This URL list contains social media URLs."
nx9500-6C8809(config-url-list-test)#
```

## Related Commands

|  |                                     |
|--|-------------------------------------|
| no (url-list-config-mode-<br>commands) on page 605 | Removes this URL list's description |
|--|-------------------------------------|

**no (url-list-config-mode-commands)**

Removes this URL list's settings

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
no [description|url]
no description
no url <WORD>
```

## Parameters

```
no <PARAMETERS>
```

|                 |  |
|-----------------|--|
| no <PARAMETERS> | Removes this URL's settings based on the parameters passed |
|-----------------|--|

## Examples

The following example displays the URL list 'test' settings before the 'no' command is executed:

```
nx9500-6C8809(config-url-list-test)#show context
url-list test
  description "This URL list contains social media URLs."
  url https://www.facebook.com depth 5
nx9500-6C8809(config-url-list-test)#
nx9500-6C8809(config-url-list-test)#no url www.facebook.com
```

The following example displays the URL list 'test' settings after the 'no' command is executed:

```
nx9500-6C8809(config-url-list-test)#show context
url-list test
  description "This URL list contains social communication URLs"
nx9500-6C8809(config-url-list-test)#
```

## vx9000

Configures a *Virtual WLAN Controller* (V-WLC) in a *virtual machine* (VM) environment. V-WLC can be deployed on a shared, third-party server hardware, thereby reducing overhead costs of procuring and maintaining dedicated appliances. The external, third-party hardware needs to have installed hypervisors, such as VmWare, Xen, VirtualBox, KVM, Amazon EC2 or Hyper-V, enabling it to communicate with V-WLC software.

The V-WLC controls and manages access points and other controllers (at NOC or as a site-controller) in the network. The traffic between the access points and the V-WLC is over the layer-3 MINT protocol.

V-WLC is a licensed feature, and the WiNG software provides the following two new licenses:

- VX – When installed, this license activates VM controller instance, and enables the V-WLC to trigger adoption process allowing access points to adopt to the V-WLC. The adoption capacity of the V-WLC is determined by the number of licenses installed on it.
- VX – When installed, this license activates VM controller instance, and enables the V-WLC to trigger adoption process allowing access points to adopt to the V-WLC. The adoption capacity of the V-WLC is determined by the number of licenses installed on it.

To install the VX or VX-DEMO license on an existing V-WLC instance, use the license command. For more information, see the examples provided in this section.

*Supported in the following platforms:*

- Service Platforms — NX 95XX, NX 96XX

### Syntax

```
vx9000 <MAC>
```

### Parameters

```
vx9000 <MAC>
```

vx9000 <MAC>

Configures a V-WLC and enters its configuration mode. The V-WLC configuration is the same as that of a normal controller.

### Examples

```
nx9500-6C8809(config)#vx9000 11-22-33-44-55-66
nx9500-6C8809(config-device-11-22-33-44-55-66)#?

|-----------------------|---------------------------------------|
| <b>no</b> on page 609 | Removes a VX 9000 wireless controller |
|-----------------------|---------------------------------------|

## no

Negates a command, or reverts configured settings to their default.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

# 6 Common Commands

## common-commands

This chapter describes the CLI commands common to the USER EXEC, PRIV EXEC, and GLOBAL CONFIG modes.

The PRIV EXEC command set contains commands available within the USER EXEC mode. Some commands can be entered in either mode. Commands entered in either the USER EXEC or PRIV EXEC mode are referred to as EXEC mode commands. If a user or privilege is not specified, the referenced command can be entered in either mode.

## common-commands

The following table summarizes the commands common to the User Exec, Priv Exec, Global Config modes, and all other configuration contexts:

**Table 32: Common Commands**

| Command                          | Description  |
|----------------------------------|--|
| <code>clrscr</code> on page 614  | Clears the display screen  |
| <code>commit</code> on page 615  | Commits (saves) changes made in the current session  |
| <code>exit</code> on page 616    | Ends and exits the current mode. In the Global configuration mode, this command and moves to the PRIV EXEC mode. |
| <code>help</code> on page 616    | Displays the interactive help system   |
| <code>no</code> on page 618      | Negates a command or reverts values to their default settings  |
| <code>revert</code> on page 621  | Reverts changes to their last saved configuration  |
| <code>service</code> on page 621 | Invokes service commands to troubleshoot or debug (config-if) instance configurations                            |
| <code>show</code> on page 671    | Displays running system information  |
| <code>write</code> on page 674   | Writes the system's running configuration to memory or terminal  |

## clrscr

Clears the screen and refreshes the prompt, irrespective of the mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
clrscr
```

### Parameters

None

### Examples

The following example shows the terminal window or screen before the clrscr command is executed:

```

ap505-13403B>device-upgrade ?
  DEVICE-NAME      Name/MAC address of device
  all              Upgrade all devices
  ap505            Upgrade AP505 Device
  ap510            Upgrade AP510 Device
  cancel-upgrade   Cancel upgrading the device
  containing       Specify devices that contain a sub-string in the hostname
  load-image       Load the device images to controller for device-upgrades
  rf-domain        Upgrade all devices belonging to an RF Domain

ap505-13403B>
ap505-13403B>clrscr [ENTER]

```

The terminal window or screen after the clrscr command is executed:

```
ap505-13403B>
```

## commit

Commits changes made in the active session. Use the commit command to save and invoke settings entered during the current transaction.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
commit {write}{memory}
```

### Parameters

```
commit {write}{memory}
```

|        |   |
|--------|---|
| write  | Optional. Commits changes made in the current session                                   |
| memory | Optional. Writes to memory. This option ensures current changes persist across reboots. |

### Examples

```

nx9500-6C8809#commit write memory
[OK]
nx9500-6C8809#

```

## exit

The exit command works differently in the User Exec, Priv Exec, and Global Config modes. In the Global Config mode, it ends the current mode and moves to the previous mode, which is Priv Exec mode. The prompt changes from *(config)#* to *#*. When used in the Priv Exec and User Exec modes, the exit command ends the current session, and connection to the terminal device is terminated. If the current session has changes that have not been committed, the system will prompt you to either do a commit or a revert before terminating the session.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
exit
```

### Parameters

```
None
```

### Examples

```
nx9500-6C8809(config)#exit
nx9500-6C8809#
```

## help

Describes the interactive help system. Use this command to access the advanced help feature. Use "?" anytime at the command prompt to access the help topic

Two kinds of help are provided:

- Full help is available when ready to enter a command argument
- Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (for example 'show ve?').

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
help {search|show}
help {search <WORD>} {detailed|only-show|skip-no|skip-show}
```

### Parameters

```
help {search <WORD>} {detailed|only-show|skip-no|skip-show}
```

|               |   |
|---------------|---|
| search <WORD> | Optional. Searches for CLI commands related to a specific target term <ul style="list-style-type: none"> <li>&lt;WORD&gt; - Specify a target term (for example, a feature or a configuration parameter). After specifying the term, select one of the following options: detailed, only-show, skip-no, or skip-show. The system displays information based on the option selected.</li> </ul> |
| detailed      | Optional. Searches and displays help strings in addition to mode and commands   |
| only-show     | Optional. Displays only "show" commands. Does not display configuration commands.   |
| skip-no       | Optional. Displays only configuration commands. Does not display "no" commands  |
| skip-show     | Optional. Displays only configuration commands. Does not display "show" commands  |

### Examples

nx9500-6C8809>

```

## no

Negates a command or sets its default. Though the no command is common to the User Exec, Priv Exec, and Global Config modes, it negates a different set of commands in each mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
no <PARAMETER>
```

## Parameters

|                 |  |
|-----------------|--|
| no <PARAMETERS> | The no command is common across all configuration modes and sub modes. It resets or reverts settings based on the mode in which executed. For example, when executed in the AAA policy configuration mode, it allows you to reset or revert a specific AAA policy settings. Similarly, when executed in the global configuration mode, it only resets or reverts settings configured in the global configuration mode. |
|-----------------|--|

## Usage Guidelines

The no command negates any command associated with it. Wherever required, use the same parameters associated with the command getting negated.

Global Config mode: No command options

|                                    |   |
|------------------------------------|---|
| ap8432-070235 (config) #no ?       |   |
| aaa-policy                         | Delete a aaa policy                               |
| aaa-tacacs-policy                  | Delete a aaa tacacs policy                        |
| alias                              | Alias   |
| ap7522                             | Delete an AP7522 access point                     |
| ap7532                             | Delete an AP7532 access point                     |
| ap7562                             | Delete an AP7562 access point                     |

| association-acl-policy             | Delete an association-acl policy                  |
| auto-provisioning-policy           | Delete an auto-provisioning policy                |
| bonjour-gw-discovery-policy        | Disable Bonjour Gateway discovery policy          |
| bonjour-gw-forwarding-policy       | Disable Bonjour Gateway Forwarding policy         |
| bonjour-gw-query-forwarding-policy | Disable Bonjour Gateway Query Forwarding policy   |
| captive-portal                     | Delete a captive portal                           |
| client-identity                    | Client identity (DHCP Device Fingerprinting)      |
| client-identity-group              | Client identity group (DHCP Fingerprint Database) |
| crypto-cmp-policy                  | CMP policy  |
| customize                          | Restore the custom cli commands to default        |
| device                             | Delete multiple devices                           |
| device-categorization              | Delete device categorization object               |
| dhcp-server-policy                 | DHCP server policy                                |
| dhcpv6-server-policy               | DHCPv6 server related configuration               |
| dns-whitelist                      | Delete a whitelist object                         |
| event-system-policy                | Delete a event system policy                      |
| ex3500-qos-class-map-policy        | Delete a ex3500 qos class-map policy              |
| ex3500-qos-policy-map              | Delete a ex3500 qos policy-map                    |
| firewall-policy                    | Configure firewall policy                         |

|                                  |   |
|----------------------------------|---|
| global-association-list          | Delete a global association list                                      |
| igmp-snoop-policy                | Remove device onboard igmp snoop policy                               |
| inline-password-encryption       | Disable storing encryption key in the startup configuration file      |
| ip                               | Internet Protocol (IP)  |
| ipv6                             | Internet Protocol version 6 (IPv6)                                    |
| ipv6-router-advertisement-policy | IPv6 Router Advertisement related configuration                       |
| l2tpv3                           | Negate a command or set its defaults                                  |
| mac                              | MAC configuration   |
| management-policy                | Delete a management policy  |
| meshpoint                        | Delete a meshpoint object   |
| meshpoint-qos-policy             | Delete a mesh point QoS configuration policy                          |
| nac-list                         | Delete an network access control list                                 |
| nsight-policy                    | Delete a nsight policy  |
| passpoint-policy                 | Delete a passpoint configuration policy                               |
| password-encryption              | Disable password encryption in configuration                          |
| profile                          | Delete a profile and all its associated configuration                 |
| radio-qos-policy                 | Delete a radio QoS configuration policy                               |
| radius-group                     | Local radius server group configuration                               |
| radius-server-policy             | Remove device onboard radius policy                                   |
| radius-user-pool-policy          | Configure Radius User Pool  |
| rf-domain                        | Delete one or more RF-domains and all their associated configurations |
| roaming-assist-policy            | Delete a roaming-assist policy  |
| role-policy                      | Role based firewall policy  |
| routing-policy                   | Policy Based Routing Configuratio                                     |
| rtl-server-policy                | Delete a rtl server policy  |
| schedule-policy                  | Delete a schedule policy  |
| sensor-policy                    | Delete a sensor policy  |
| smart-rf-policy                  | Delete a smart-rf-policy  |
| url-filter                       | Delete a url filter   |

## revert

Reverts changes made, in the current session, to their last saved configuration

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
revert
```

### Parameters

None

### Examples

```
nx9500-6C8809revert
nx9500-6C8809
```

## service

Service commands are used to view and manage configurations. The service commands and their corresponding parameters vary from mode to mode. The *User Exec mode* and *Priv Exec mode* commands provide same functionalities with a few minor changes. The Global Config service command sets the size of history files. It also enables viewing the current mode's CLI tree.

This topic is organized into the following sections:

- [Syntax \(User Exec Mode\)](#)
- [Parameters \(User Exec Mode\)](#)
- [Syntax \(Privi Exec Mode\)](#)
- [Parameters \(Privi Exec Mode\)](#)
- [Syntax - NX9XXX-Specific \(Privi Exec Mode\)](#)
- [Parameters - NX9XXX-Specific \(Privi Exec Mode\)](#)
- [Syntax \(Global Config Mode\)](#)
- [Parameters \(Global Config Mode\)](#)
- [Examples](#)

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

### Parameters (User Exec Mode)

#### Service Commands - Intro

```

service [block-adopter-config-update|request-full-config-from-adopter]

```

|                                   |   |
|-----------------------------------|---|
| block-adopter-config- update      | Blocks the configuration updates pushed from the <i>Network Operations Center</i> (NOC) server to adopted devices   |
| request-full-config-from- adopter | Configures a request for full configuration updates from the adopter device. In an <i>hierarchically managed</i> (HM) network devices are deployed in two levels. The first level consists of the NOC controllers. The second level consists of the site controllers that can be grouped to form clusters. The NOC controllers adopt and manage the site controllers. Access points within the network are adopted and managed by the site controllers. The adopted devices (Access Points and site controllers) are referred to as the adoptee. The devices adopting the adoptee are the 'adopters'. |

```
service clear adoption history {on <DEVICE-NAME>}
```

|                        |   |
|------------------------|---|
| clear adoption history | Clears adoption history on this device and its adopted Access Points  |
| on <DEVICE-NAME>       | Optional. Clears adoption history on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service clear device-upgrade history {on <DOMAIN-NAME>}
```

|                              |  |
|------------------------------|--|
| clear device-upgrade history | Clears device upgrade history  |
| on <DOMAIN-NAME>             | Optional. Clears all firmware upgrade history on a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> |

```
service clear diag pkts
```

|                 |   |
|-----------------|---|
| clear diag pkts | Clears the looped packets queue logged by the dataplane. The dataplane logs up to 16 looped packets at a time in a separate queue, which has to be manually cleared to make space for new packet logging.<br>For more information on viewing logged looped packet information execute the <code>service &gt; show &gt; diag &gt; pkts</code> command. |
|-----------------|---|

```
service clear dpi [all|app|app-category] stats {on <DEVICE-OR-DOMAIN-NAME>}
```

|                              |  |
|------------------------------|--|
| clear dpi                    | Clears <i>Deep Packet Inspection</i> (DPI) statistics<br>When enabled, DPI allows application and/or application category recognition. The DPI statistics are maintained by the system for every hit registered by the DPI engine.   |
| [all app app-category] stats | Use the following filter options to clear all or specific DPI statistics: <ul style="list-style-type: none"> <li>all – Clears all DPI related (application and app-category) statistics</li> <li>app – Clears only application related statistics</li> <li>app-category – Clears only app-category related statistics</li> </ul> |
| on <DEVICE-OR-DOMAIN-NAME>   | Optional. Clears DPI statistics based on the parameters passed on a specified device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the access point, controller, service platform, or RF Domain.</li> </ul>  |

```
service clear file-sync history {on <DOMAIN-NAME>}
```

|                         |  |
|-------------------------|--|
| clear file-sync history | Clears client-bridge certificate synchronization statistics<br>When an access point is configured as a client bridge, the EAP-TLS X.509 (PKCS#12) certificate is synchronized between the staging-controller and adoptee client-bridge access points. This command allows you to clear client-bridge certificate synchronization statistics. |
| on <DOMAIN-NAME>        | Optional. Clears file synchronization history on all devices within a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul>  |

```
service clear captive-portal-page-upload history {on <DOMAIN-NAME>}
```

|   |  |
|---|--|
| clear captive-portal-page- upload-history | Clears captive portal page upload history  |
| on <DOMAIN-NAME>                          | Optional. Clears captive portal page upload history on a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> |

```
service clear [command-history|reboot-history|upgrade-history|virtual-machine-history]
{on <DEVICE-NAME>}
```

|  |   |
|--|---|
| clear [command-history  reboot-history  upgrade-history] | Clears command history, reboot history, and/or device upgrade history   |
| clear virtual-machine-history                            | Clears virtual-machine history on the logged device or a specified device<br>This command is applicable only on the NX9500 and NX9600 series service platforms.   |
| on <DEVICE-NAME>   | Optional. Clears history on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform</li> </ul> <p><b>Note:</b> When executing the clear virtual-machine-history command, provide the name of the service platform running the VMs.</p> |

```
service clear noc statistics
```

|                      |   |
|----------------------|---|
| clear noc statistics | Clears NOC applicable statistics counters |
|----------------------|---|

```
service clear unsanctioned aps {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| clear unsanctioned aps     | Clears the list of unsanctioned APs   |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Clears the list of unsanctioned APs on a specified device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
service clear wireless [ap|client] {<MAC>} {(on <DEVICE-OR-DOMAIN-NAME>) }
```

|                                       |   |
|---------------------------------------|---|
| clear wireless [ap client] statistics | <p>Clears wireless statistics counters based on the parameters passed</p> <ul style="list-style-type: none"> <li>• ap statistics – Clears applicable AP statistics counters</li> <li>• client statistics – Clears applicable wireless client statistics counters</li> </ul>   |
| <MAC> {on <DEVICE-OR-DOMAIN-NAME>}    | <p>The following keywords are common to the 'ap' and 'client' parameters:</p> <ul style="list-style-type: none"> <li>• &lt;MAC&gt; – Optional. Clears statistics counters for a specified AP or client. Specify the AP/client MAC address.</li> <li>• on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Clears AP/client statistics counters on a specified device or RF Domain. Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
service clear wireless controller-mobility-database
```

|   |  |
|---|--|
| clear wireless controller-mobility-database | Clears the controller assisted mobility database |
|---|--|

```
service clear web-filter cache {on <DEVICE-NAME>}
```

|                        |   |
|------------------------|---|
| clear web-filter cache | Clears the cache used for Web filtering   |
| on <DEVICE-NAME>       | <p>Optional. Clears the Web filtering cache on a specified device</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service clear wireless radio statistics {<MAC/HOSTNAME> {<1-3>}}
{ (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|                                 |  |
|---------------------------------|--|
| clear wireless radio statistics | Clears applicable wireless radio statistics counters   |
| <MAC/HOSTNAME> <1-3>            | <p>Optional. Specify the MAC address or hostname of the radio, or append the interface number to form the radio ID in the AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX format.</p> <ul style="list-style-type: none"> <li>• &lt;1-3&gt; – Optional. Specify the radio interface index, if not specified as part of the radio ID.</li> </ul> |
| on <DEVICE-OR-DOMAIN-NAME>      | <p>Optional. This is a recursive parameter, which clears wireless radio statistics on a specified device or RF Domain.</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul>                                    |

```
service clear wireless wlan statistics {<WLAN-NAME>} { (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|                                |   |
|--------------------------------|---|
| clear wireless wlan statistics | Clears WLAN statistics counters   |
| <WLAN-NAME>                    | Optional. Clears statistics counters on a specified WLAN. Specify the WLAN name.  |
| on <DEVICE-OR-DOMAIN-NAME>     | <p>Optional. This is a recursive parameter, which clears WLAN statistics on a specified device or RF Domain.</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
service clear xpath requests {<1-100000>}
```

|             |  |
|-------------|--|
| clear xpath | Clears XPATH related information   |
| requests    | Clears pending XPATH get requests  |
| <1-100000>  | Optional. Specifies the session number (cookie from show sessions) <ul style="list-style-type: none"> <li>&lt;1-100000&gt; - Specify the session number from 1 - 100000.</li> </ul> <p><b>Note:</b> Omits clearing the current session's pending XPATH get requests.</p> |

```
service cli-tables-skin [ansi|hashes|minimal|none|percent|stars|thick|thin|utf-8]
{grid}
```

|   |   |
|---|---|
| cli-tables-skin [ansi hashes minimal none percent stars thick thin utf-8] | Selects a formatting layout or skin for CLI tabular outputs <ul style="list-style-type: none"> <li>ansi - Uses ANSI characters for borders</li> <li>hashes - Uses hashes (#) for borders</li> <li>minimal - Uses one horizontal line between title and data rows</li> <li>none - Displays space separated items with no decoration</li> <li>percent - Uses the percent sign (%) for borders</li> <li>stars - Uses asterisks (*) for borders</li> <li>thick - Uses thick lines for borders</li> <li>thin - Uses thin lines for borders</li> <li>utf-8 - Uses UTF-8 characters for borders</li> </ul> |
| grid  | Optional. Uses a complete grid instead of just title lines  |

```
service cluster force [active|configured-state|standby]
```

|                  |   |
|------------------|---|
| cluster          | Enables cluster protocol management   |
| force            | Forces action commands on a cluster (active, configured-state, and standby) |
| active           | Changes the cluster run status to active                                    |
| configured-state | Restores a cluster to the configured state                                  |
| standby          | Changes the cluster run status to standby                                   |

```
service database authentication create-user username <USER-NAME> password <PASSWORD>
```

|   |   |
|---|---|
| database  | Performs database related actions   |
| authentication create-user username <USER-NAME> password <PASSWORD> | <p>Creates users having access rights to the database. Execute this command on the database host. However, before creating users, on the database, generate the database keyfile. For more information on generating the keyfile, see <a href="#">database</a> on page 66 (user/priv exec modes).</p> <ul style="list-style-type: none"> <li>username &lt;USER-NAME&gt; – Configures database username</li> <li>password &lt;PASSWORD&gt; – Configures a password for the username specified above</li> </ul> <p>In the database-policy ensure that authentication is enabled and username and password is configured. The database-client-policy also should have the same username and password configured. For more information on database-policy and database-client-policy, see <a href="#">database-policy global config</a> on page 291 and <a href="#">database-client-policy global-config</a> on page 288.</p> |

```
service database authentication delete-user username <USER-NAME>
```

|  |   |
|--|---|
| database   | <p>Performs database related actions</p> <p>This command is supported only on the NX9500, NX9600, and VX9000 platforms.</p>   |

| client-identity-defaults | Displays default client-identities and their configuration  |
| configuration-revision   | Displays current configuration revision number  |
| mac-user-import-status   | Displays status of file import initiated by a MAC-user  |
| mac-vendor <OUI/MAC>     | Displays vendor name for a specified MAC address or <i>Organizationally Unique Identifier</i> (OUI) part of the MAC address <ul style="list-style-type: none"> <li>&lt;OUI/MAC&gt; – Specify the MAC address or its OUI. The first six digits of the MAC address is the OUI. Use the AABBCC or AA-BB-CC format to provide the OUI.</li> </ul> |
| noc diag                 | Displays NOC diagnostic details   |
| snmp session             | Displays SNMP session details   |
| xpath-history            | Displays XPath history  |

```
service show [command-history|crash-info|info|mem|process|reboot-history|
startup-log|ssh-authorized-keys|sysinfo|top|upgrade-history|watchdog] {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| show             | Displays running system statistics based on the parameters passed   |
| command-history  | Displays command history (lists all commands executed)  |
| crash-info       | Displays information about core, panic, and AP dump files   |
| info             | Displays snapshot of available support information  |
| mem              | Displays a system's current memory usage (displays the total memory and available memory)   |
| process          | Displays active system process information (displays all processes currently running on the system)   |
| reboot-history   | Displays the device's reboot history  |
| startup-log      | Displays the device's startup log   |
| sysinfo          | Displays system's memory usage information  |
| top              | Displays system resource information  |
| upgrade-history  | Displays the device's upgrade history (displays details, such as date, time, and status of the upgrade, old version, new version, etc.)   |
| watchdog         | Displays the device's watchdog status   |
| on <DEVICE-NAME> | The following keywords are common to all of the above: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays information for a specified device. If no device is specified, the system displays information for logged device(s)</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service show ip-access-list wlan <WLAN-NAME> status {detail} {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| show ip-access-list        | Displays status of IP ACL to WLAN mappings on a specified device or all devices within a specified RF Domain. This command also displays if IP ACLs are properly applied in the dataplane.  |
| wlan <WLAN-NAME>           | Specifies the WLAN, for which the IP ACL to WLAN mapping status is required <ul style="list-style-type: none"> <li>&lt;WLAN-NAME&gt; – Specify the WLAN name.</li> </ul>  |
| status detail              | Displays only failed IP ACL to WLAN mappings <ul style="list-style-type: none"> <li>details – Optional. Displays all (failed as well as successful) IP ACL to WLAN mapping status</li> </ul>  |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Specifies the device name or the RF Domain name. <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the device name or the RF Domain. When specified, the system displays IP ACL to WLAN mapping status on the specified device or all devices within the specified RF Domain.</li> </ul> |

```
service show dhcp-lease {<INTERFACE-NAME>|on|pppoe1|vlan <1-4094>|wwan1}
{ (on <DEVICE-NAME>) }
```

|                  |  |
|------------------|--|
| show             | Displays running system statistics based on the parameters passed  |
| dhcp-lease       | Displays DHCP lease information received from the server   |
| <INTERFACE>      | Optional. Displays DHCP lease information for a specified router interface <ul style="list-style-type: none"> <li>&lt;INTERFACE&gt; – Specify the router interface name.</li> </ul>  |
| on               | Optional. Displays DHCP lease information for a specified device   |
| pppoe1           | Optional. Displays DHCP lease information for a PPP over Ethernet interface  |
| vlan <1-4094>    | Optional. Displays DHCP lease information for a VLAN interface <ul style="list-style-type: none"> <li>&lt;1-4094&gt; – Specify a VLAN index from 1 - 4094.</li> </ul>  |
| wwan1            | Optional. Displays DHCP lease information for a Wireless WAN interface   |
| on <DEVICE-NAME> | The following keywords are common to all of the above: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays DHCP lease information for a specified device. If no device is specified, the system displays information for the logged device.</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service show diag [fds|pkts]
```

|                      |   |
|----------------------|---|
| show diag [fds pkts] | Displays diagnostic statistics, such as LED status, fan speed, sensor temperature, open file descriptors, looped packets, etc.  |
| fds                  | Displays the number of <i>file descriptors</i> (fds) opened by key processes, such as the CFGD. When executed, the command displays only the file name and FD.  |
| pkts                 | <p>Displays details of looped packets captured by the dataplane and pushed to a separate queue. These queued packets are written to a log file (named loop_pkt_info.log) available at the /var2/log/ directory. Use the <code>service &gt; start-shell</code> command and enter the path 'cat /var2/log/' to view if the loop_pkt_info.log file exists. However, looped packet logging has to be enabled in the profile/device context. For more information, see <a href="#">diag</a> on page 980 (profile config mode).</p> <p>The dataplane can log up to 16 looped packets at a time. Once the queue is full, no new loop packet is logged until the existing queue is cleared. To clear the logged looped packet queue execute the <code>service &gt; clear &gt; diag &gt; pkts</code> command.</p> <p>Following are the loop codes and the corresponding loop reasons:</p> <ul style="list-style-type: none"> <li>• (5) - "pkt looping in dataplane"</li> <li>• (51) - "loop in packet path"</li> <li>• (367) - "wispe encapsulation loop"</li> <li>• (432) - "mcx loop prevention"</li> <li>• (532) - "Port loop detected"</li> <li>• (536) - "packet loop detected by wireless bridge"</li> <li>• (41) - "IPv4 TTL exceeded"</li> <li>• (493) - "IPv6 TTL exceeded"</li> <li>• (540) - "mint TTL exceeded"</li> </ul> |

```
service show diag [led-status|psu|stats] { (on <DEVICE-NAME>) }
```

|                  |   |
|------------------|---|
| show             | Displays running system statistics based on the parameters passed   |
| diag             | Displays diagnostic statistics, such as LED status, fan speed, and sensor temperature   |
| led-status       | Displays LED state variables and the current state  |
| psu              | Displays power supply information   |
| stats            | Displays fan speed and sensor temperature statistics  |
| on <DEVICE-NAME> | <p>Optional. Displays diagnostic statistics for a specified device. If no device is specified, the system displays information for the logged device.</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service show guest-registration [export-status|import-status|restore-status]
```

|                    |   |
|--------------------|---|
| show               | Displays running system statistics based on the parameters passed   |
| guest-registration | Displays status of the guest-registration database snapshot related processes (export, import, and restore)<br><br><b>Note:</b> To export, import, or restore a guest-registration database, use the <code>service &gt; guest-registration &gt; [backup export import]</code> command.] |
| export-status      | Displays the status of the latest export process initiated  |
| import-status      | Displays the status of the latest import process initiated  |
| export-status      | Displays the status of the latest restore process initiated   |

```
service show fast-switching {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| show             | Displays running system statistics based on the parameters passed   |
| fast-switching   | Displays fast switching state (enabled or disabled)   |
| on <DEVICE-NAME> | Optional. Displays fast switching state for a specified device. If no device is specified, the system displays information for the logged device. <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service show [fib|fib6] {table-id <0-255>}
```

|                  |  |
|------------------|--|
| show             | Displays running system statistics based on the parameters passed  |
| fib              | Displays entries in the <i>Forwarding Information Base</i> (FIB)   |
| fib6             | Displays FIB IPv6 static routing entries<br>The WiNG software allows the IPv6 FIB to maintain only IPv6 static and interface routes.<br>FIB is a collection of routing entries. A route entry consists of IPv6 network (which can also be a host) address, the prefix length for the network (for IPv6 routes this is between 0 - 128), and the next hop's (gateway) IPv6 address. Since a destination can be reached through multiple next hops, you can configure multiple routes to the same destination with multiple next hops. |
| table-id <0-255> | Optional. Displays FIB information maintained by the system based on the table ID <ul style="list-style-type: none"> <li>&lt;0-255&gt; - Specify the table ID from 0 - 255.</li> </ul>   |

```
service show mint [adopted-devices {on <DEVICE-NAME>}|ports]
```

|      |   |
|------|---|
| show | Displays running system statistics based on the parameters passed |
| mint | Displays MiNT protocol details                                    |

|                                  |   |
|----------------------------------|---|
| adopted-devices on <DEVICE-NAME> | <p>Displays adopted devices status in dpd2</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays MiNT protocol details for a specified device. If no device is specified, the system displays information for the logged device.</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |
| ports                            | Displays MiNT ports used by various services and features   |

```
service show pm {history} { (on <DEVICE-NAME> ) }
```

|                  |  |
|------------------|--|
| show             | Displays running system statistics based on the parameters passed  |
| pm               | Displays the <i>Process Monitor</i> (PM) controlled process details  |
| history          | Optional. Displays process change history (the time at which the change was implemented, and the events that triggered the change)   |
| on <DEVICE-NAME> | <p>Optional. Displays process change history for a specified device. If no device is specified, the system displays information for the logged device.</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service show rf-domain-manager [diag|info] {<MAC/HOSTNAME>}
{ (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|                            |  |
|----------------------------|--|
| show                       | Displays running system statistics based on the parameters passed  |
| rf-domain-manager          | Displays RF Domain manager information   |
| diag                       | Displays RF Domain manager related diagnostics statistics  |
| info                       | Displays RF Domain manager related information   |
| <MAC/HOSTNAME>             | <p>The following keyword is common to the 'diag' and 'info' parameters: Optional. Specify the MAC address or hostname of the RF Domain manager.</p>  |
| on <DEVICE-OR-DOMAIN-NAME> | <p>The following keyword is common to the 'diag' and 'info' parameters: Optional. Displays diagnostics statistics on a specified device or domain</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
service show sites
```

|       |   |
|-------|---|
| show  | Displays running system statistics based on the parameters passed |
| sites | Displays NOC sites related information                            |

```
service show virtual-machine-history { (on <DEVICE-NAME> ) }
```

|                              |   |
|------------------------------|---|
| show virtual-machine-history | Displays virtual machine history based on the parameters passed<br>This command is applicable only to the NX 95XX and NX 96XX series service platforms. It is also available on the Privilege Executable Mode of these devices.                                       |
| on <DEVICE-NAME>             | Optional. Displays virtual machine history on a specified device. If no device is specified, the system displays information for the logged device. <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the service platform.</li> </ul> |

```
service show wireless [aaa-stats|adaptivity-status|credential-cache|dns-cache|
radar-status|vlan-usage] {on <DEVICE-NAME>}
```

|                   |  |
|-------------------|--|
| show              | Displays running system statistics based on the parameters passed  |
| wireless          | Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN assignment, etc.)  |
| aaa-stats         | Displays AAA policy statistics   |
| adaptivity-status | Displays the current list of channels (with interference levels exceeding the configured threshold resulting in adaptivity kicking in) and time when adaptivity kicked in on a device  |
| credential-cache  | Displays clients cached credentials statistics (VLAN, keys, etc.)  |
| dns-cache         | Displays cache of resolved names of servers related to wireless networking   |
| radar-status      | Displays radar discovery status. This option displays following information: <ul style="list-style-type: none"> <li>If a radar has been discovered by the AP</li> <li>The time of discovery</li> </ul>   |
| vlan-usage        | Displays VLAN statistics across WLANs  |
| on <DEVICE-NAME>  | The following keywords are common to all of the above: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays running system statistics on a specified device. If no device is specified, the system displays information for the logged device.</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service show wireless [config-internal|log-internal|neighbors]
```

|                 |  |
|-----------------|--|
| show            | Displays running system statistics based on the parameters passed                      |
| wireless        | Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.) |
| config-internal | Displays internal configuration parameters   |
| log-internal    | Displays recent internal wireless debug logs (info and above severity)                 |
| neighbors       | Displays neighboring device statistics for roaming and flow migration                  |

```
service show wireless [client|meshpoint neighbor] proc [info|stats] {<MAC>}
{ (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|          |  |
|----------|--|
| show     | Displays running system statistics based on the parameters passed                      |
| wireless | Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.) |

|                            |  |
|----------------------------|--|
| client                     | Displays WLAN client statistics  |
| meshpoint neighbor         | Displays meshpoint related proc entries  |
| proc                       | <p>The following keyword is common to client and meshpoint neighbor parameters:</p> <ul style="list-style-type: none"> <li>proc – Displays dataplane proc entries based on the parameter selected</li> </ul> <p><b>Note:</b> These proc entries provide statistics on each wireless client on the WLAN.</p> <p><b>Note:</b> For the meshpoint parameter, it displays proc entries about neighbors.</p> |
| info                       | This parameter is common to client and meshpoint neighbor parameters. Displays information for a specified device (wireless client or neighbor) or RF Domain.  |
| stats                      | This parameter is common to client and meshpoint neighbor parameters. Displays information for a specified device (wireless client or neighbor) or RF Domain.  |
| <MAC>                      | Displays information for a specified device (wireless client or neighbor) or RF Domain.  |
| on <DEVICE-OR-DOMAIN-NAME> | <p>This parameter is common to client and meshpoint neighbor parameters. Displays information for a specified device (wireless client or neighbor) or RF Domain.</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul>  |

```
service show wireless radio-internal [radio1|radio2] <LINE>
```

|                                |   |
|--------------------------------|---|
| show                           | Displays running system statistics based on the parameters passed   |
| wireless                       | Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.)  |
| radio-internal [radio1 radio2] | <p>Displays radio internal debug logs. Select the radio from the following options:</p> <ul style="list-style-type: none"> <li>radio1 – Selects radio 1</li> <li>radio2 – Selects radio 2.</li> </ul> |
| <LINE>                         | Specify the radio internal debug command to enable.   |

```
service show wireless reference [channels|frame|handshake|mcs-rates|reason-codes|status-codes]
```

|           |  |
|-----------|--|
| show      | Displays running system statistics based on the parameters passed                      |
| wireless  | Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage, etc.) |
| reference | Displays look up reference information related to standards, protocols, etc.           |
| channels  | Displays 802.11 channels information   |
| frame     | Displays 802.11 frame structure  |
| handshake | Displays a flow diagram of 802.11 handshakes   |

|              |   |
|--------------|---|
| mcs-rates    | Displays MCS rate information   |
| reason-codes | Displays 802.11 reason codes (for deauthentication, disassociation, etc.) |
| status-codes | Displays 802.11 status codes (for association response)                   |

```
service show wireless stats-client diag {<MAC/HOSTNAME>}
{ (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|                            |   |
|----------------------------|---|
| show                       | Displays running system statistics based on the parameters passed   |
| wireless                   | Displays WLAN statistics (WLAN AAA policy, configuration parameters, VLAN usage etc.)   |
| stats-client               | Displays managed AP statistics  |
| <MAC/HOSTNAME>             | Optional. Specify the MAC address or hostname of the AP.  |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Displays statistics on a specified AP, or all APs on a specified domain. <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; - Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
service smart-rf clear-config {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>}
```

|                  |  |
|------------------|--|
| smart-rf         | Enables Smart RF management  |
| clear-config     | Clears WLAN Smart RF configuration on a specified device or on all devices   |
| <MAC>            | Optional. Clears WLAN Smart RF configuration on a device identified by its MAC address. Specify the device's MAC address in the AA-BB-CC-DD-EE-FF format.                                |
| <DEVICE-NAME>    | Optional. Clears WLAN Smart RF configuration on a device identified by its hostname. Specify the device's hostname.  |
| on <DOMAIN-NAME> | Optional. Clears WLAN Smart RF configuration on all devices in a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; - Specify the RF Domain name.</li> </ul> |

```
service smart-rf [clear-history|clear-interfering-aps|save-config] {on <DOMAIN-NAME>}
```

|                       |  |
|-----------------------|--|
| smart-rf              | Enables Smart RF management  |
| clear-history         | Clears WLAN Smart RF history on all devices  |
| clear-interfering-aps | Clears Smart-RF interfering APs  |
| save-config           | Saves the Smart RF configuration on all devices, and also saves the history on the RF Domain Manager   |
| on <DOMAIN-NAME>      | Optional. Clears WLAN Smart RF configuration on all devices in a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; - Specify the RF Domain name.</li> </ul> |

```
service snmp sysoid wing5
```

```
service snmp sysoid wing5
```

Configures a new *sysObjectID* (sysoid), in the MIB, for devices running WiNG 5.X devices

When configured, the SNMP manager returns sysoid for WiNG 5.X OS. Hardware running the WiNG 4.X and WiNG 5.X images have different sysoids. For example, the sysoid for a RFS4000 using the WiNG 4.X image differs from another RFS4000 running the WiNG 5.X image.

This command is applicable only to RFS4000 platform, since it has the same sysoid supported in WiNG 4.X and WiNG 5.X.

The WiNG 4.X sysoids are:

- RFS4000 – 1.3.6.1.4.1.388.18

The WiNG 5.X sysoids are:

- RFS4000 – 1.3.6.1.4.1.388.50.1.1.35

```
service ssm dump-core-snapshot
```

```
service ssm dump-core-snapshot
```

Triggers a debug core dump of the SSM module

```
service syslog test {level [<0-7>|alerts|critical|debugging|emergencies|
errors|informational|notifications|warnings]} {on <DEVICE-NAME>}
```

```
syslog test
```

Sends a test message to the syslog server to confirm server availability

Optional. Sets the logging level. In case syslog server is unreachable, an event is logged based on the logging level defined. This is an optional parameter, and the system configures default settings, if no logging severity level is specified.

- <0-7> – Optional. Specify the logging severity level from 0-7. The various levels and their implications are as follows:
  - alerts – Optional. Immediate action needed (severity=1)
  - critical – Optional. Critical conditions (severity=2)
  - debugging – Optional. Debugging messages (severity=7)
  - emergencies – Optional. System is unusable (severity=0)
  - errors – Optional. Error conditions (severity=3)
  - informational – Optional. Informational messages (severity=6)
  - notifications – Optional. Normal but significant conditions (severity=5)
  - warnings – Optional. Warning conditions (severity=4). This is the default setting.

```
on <DEVICE-NAME>
```

Optional. Executes the command on a specified device

- <DEVICE-NAME> – Specify the name of the AP, wireless controller, or service platform.

```
service ssm trace pattern <WORD> {on <DOMAIN-NAME>}
```

|                  |   |
|------------------|---|
| ssm trace        | Displays the SSM module trace based on parameters passed  |
| pattern <WORD>   | Configures the pattern to match <ul style="list-style-type: none"> <li>&lt;WORD&gt; - Specify the pattern to match.</li> </ul>  |
| on <DEVICE-NAME> | Optional. Displays the SSM module trace on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service wireless add-neighbor <1-2> mac <MAC-ADDRESS> preference <0-255>
```

|                             |   |
|-----------------------------|---|
| wireless add-neighbor <1-2> | Includes non-WiNG APs in the neighbor report response sent by AP to the client stations. Use this command to specify the non-WiNG AP MAC addresses. |
| mac <MAC-ADDRESS>           | Enter the non-WiNG AP's MAC address.  |
| preference <0-255>          | Set a preference for the AP from 0-255  |

```
service wireless client beacon-request <MAC> mode [active|passive|table]
channel [<CHANNEL-NUMBER>|any] duration <1-255> ssid [<SSID>|any] channel-report
[<CHANNEL-LIST>|none]
bssid [<MAC>|any] randomization-interval <0-1000> {on <DEVICE-NAME>}
```

|                                      |  |
|--------------------------------------|--|
| wireless client beacon-requests      | Sends beacon measurement requests to a wireless client   |
| <MAC>                                | Specify the wireless client's MAC address.   |
| mode [active passive table]          | Specifies the beacon measurement mode. The following modes are available: <ul style="list-style-type: none"> <li>Active - Requests beacon measurements in the active mode</li> <li>Passive - Requests beacon measurements in the passive mode</li> <li>Table - Requests beacon measurements in the table mode</li> </ul>   |
| ssid [<SSID> any]                    | Specifies if the measurements have to be made for a specified SSID or for any SSID <ul style="list-style-type: none"> <li>&lt;SSID&gt; - Requests beacon measurement for a specified SSID</li> <li>any - Requests beacon measurement for any SSID</li> </ul>   |
| channel-report [<CHANNEL-LIST> none] | Configures channel report in the request. The request can include a list of channels or can apply to all channels. <ul style="list-style-type: none"> <li>&lt;CHANNEL-LIST&gt; - Request includes a list of channels. The client has to send beacon measurements only for those channels included in the request.</li> <li>none - Request applies to all channels</li> </ul> |
| on <DEVICE-NAME>                     | Optional. Sends requests on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

```
service wireless client quiet-element [start|stop]
```

|                               |  |
|-------------------------------|--|
| wireless client quiet-element | Enables the quiet-element information in beacons sent to wireless clients  |
| start                         | Enables the quiet-element information in beacons sent to wireless clients. This is the start of the time period when wireless clients are to remain quiet. |
| stop                          | Disables the quiet-element information in beacons sent to wireless clients. Once disabled, this information is no longer included in beacons.              |

```
service wireless client trigger-bss-transition mac <MAC> {timeout <0-65535>
{url <URL>}} {on <DEVICE-OR-DOMAIN-NAME>}
```

|  |  |
|--|--|
| wireless client trigger-bss-transition | Sends a 80211v-Wireless Network Management BSS transition request to a client  |
| <MAC>                                  | Specifies the wireless client's MAC address  |
| timeout <0-65535>                      | Specifies the time remaining, for this client, before BSS transition is initiated. In other words on completion of the specified time period, BSS transition is triggered. <ul style="list-style-type: none"> <li>&lt;0-65535&gt; – Specify a time from 0 -65535 seconds.</li> </ul> |
| url <URL>                              | Specifies session termination URL  |
| on <DEVICE-OR-DOMAIN-NAME>             | Optional. Sends request on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-OR_DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul>   |

```
service wireless client trigger-wnm mac <MAC> type [deauth-imminent|subscription-remediation]
{uri <WORD>}
```

|   |   |
|---|---|
| wireless client trigger-wnm                     | Sends a WNM notification (action frame) to a wireless client  |
| mac <MAC>                                       | Specifies the wireless client's MAC address   |
| type [deauth-imminent subscription-remediation] | Configures the WNM notification type <ul style="list-style-type: none"> <li>deauth-imminent – Sends a de-authentication imminent frame</li> <li>subscription-remediation – Sends a subscription remediation needed frame</li> </ul> |
| uri <WORD>                                      | Optional. Specifies the <i>unique resource identifier</i> (URI)   |

```
service wireless dump-core-snapshot
```

|                             |   |
|-----------------------------|---|
| wireless dump-core-snapshot | Triggers a debug core dump of the wireless module |
|-----------------------------|---|

```
service wireless meshpoint zl <MESHPOINT-NAME> [on <DEVICE-NAME>] {<ARGS>|
timeout <1-65535>}
```

|                               |   |
|-------------------------------|---|
| service wireless meshpoint zl | Triggers a zonal level debug of a specified meshpoint's modules   |
| <MESHPOINT-NAME>              | Specify the meshpoint name  |
| on <DEVICE-NAME>              | Triggers zonal level debug of a specified meshpoint's modules on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the device (AP, wireless controller, or service platform)</li> </ul> |

|                   |  |
|-------------------|--|
| <ARGS>            | Optional. Specifies the zonal arguments. These zonal arguments represent the meshpoint modules identified by the zonal and subzonal arguments passed here. Also specify the debug level from 0 - 7. Please see the Examples section, at the end of this topic, for more information. |
| timeout <1-65535> | Optional. Specifies a timeout value from 1 - 65535 seconds. When specified, meshpoint logs are debugged for the time specified here.   |

```
service wireless qos delete-tspec <MAC> tid <0-7>
```

|                           |  |
|---------------------------|--|
| wireless qos delete-tspec | Sends a delete TSPEC request to a wireless client  |
| <MAC>                     | Specify the MAC address of the wireless client.  |
| tid <0-7>                 | Deletes the <i>Traffic Identifier</i> (TID) <ul style="list-style-type: none"> <li>&lt;0-7&gt; - Select the TID from 0 - 7.</li> </ul> |

```
service wireless trace pattern <WORD> {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| wireless trace   | Displays the wireless module trace based on parameters passed  |
| pattern <WORD>   | Configures the pattern to match <ul style="list-style-type: none"> <li>&lt;WORD&gt; - Specify the pattern to match.</li> </ul>   |
| on <DEVICE-NAME> | Optional. Displays the wireless module trace on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service wireless unsanctioned ap air-terminate <MAC> {on <DOMAIN-NAME>}
```

|  |  |
|--|--|
| wireless unsanctioned ap air-terminate | Enables unsanctioned access points termination   |
| <MAC>                                  | Configures the unsanctioned access points' BSSID (MAC address)   |
| on <DOMAIN-NAME>                       | Optional. Specifies the RD Domain of the access point <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; - Specify the name of the RF Domain.</li> </ul> |

```
service wireless wips clear-client-blacklist [all|mac <MAC>]
```

|  |  |
|--|--|
| wireless wips                          | Enables management of WIPS parameters  |
| clear-client-blacklist [all mac <MAC>] | Removes a specified client or all clients from the blacklist <ul style="list-style-type: none"> <li>all - Removes all clients from the blacklist</li> <li>mac &lt;MAC&gt; - Removes a specified client from the blacklist <ul style="list-style-type: none"> <li>&lt;MAC&gt; - Specify the wireless client's MAC address.</li> </ul> </li> </ul> |

```
service wireless wips clear-event-history {on <DEVICE-OR-DOMAIN-NAME>}
```

|                             |  |
|-----------------------------|--|
| wireless wips               | Enables management of WIPS parameters  |
| clear-event-history         | Clears event history   |
| on <DEVICE-OR-DOMAIN- NAME> | Optional. Clears event history on a device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; - Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

### Syntax (Privilege Exec Mode)

#### Service Commands - Intro

#### Note

The "service" command of the Priv Exec Mode is the same as the service command in the User Exec Mode. There are a few modifications that have been documented in this section. For the syntax and parameters of the other commands refer to the [Syntax \(User Exec Mode\)](#) and [Parameters \(User Exec Mode\)](#) sections of this chapter.

```

service [block-adopter-config-updates|clear|cli-tables-skin|cluster|copy|
database|delete|delete-offline-aps|force-send-config|force-update-vm-stats|

service trace <PROCESS-NAME> {summary}

```

### Parameters (Privilege Exec Mode)

#### Service Commands - Intro

```
service copy tech-support <FILE> <URL>
```

|                   |  |
|-------------------|--|
| copy tech-support | Copies extensive system information used for troubleshooting   |
| <FILE>            | Specify the location of the file to be copied, using the following format: <ul style="list-style-type: none"> <li>• usbX:/path/file</li> </ul>   |
| <URL>             | Specify the location URL of the file to be copied. Both IPv4 and IPv6 address formats are supported. <ul style="list-style-type: none"> <li>• tftp://&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> <li>• ftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> <li>• sftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> </ul> |

```
service copy stats-report [global|rf-domain <DOMAIN-NAME>] (<FILE>|<URL>)
```

|                                  |  |
|----------------------------------|--|
| copy stats-report                | Copies extensive statistical data useful for troubleshooting   |
| [global rf-domain <DOMAIN-NAME>] | Identifies the RF Domain to copy statistical data <ul style="list-style-type: none"> <li>• global - Copies extensive statistical data of all configured RF Domains</li> <li>• rf-domain &lt;DOMAIN-NAME&gt; - Copies extensive statistical data of a specified RF Domain. Specify the domain name.</li> </ul>  |
| <FILE>                           | Specify the location to copy file using the following format: <ul style="list-style-type: none"> <li>• usbX:/path/file</li> </ul>  |
| <URL>                            | Specify the location URL of the file to be copied. Both IPv4 and IPv6 address formats are supported. <ul style="list-style-type: none"> <li>• tftp://&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> <li>• ftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> <li>• sftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> </ul> |

```
service clear crash-info {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| clear crash-info | Clears all crash files   |
| on <DEVICE-NAME> | Optional. Clears crash files on a specified device. These crash files are core, panic, and AP dump <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service database authentication create-user username <USER-NAME> password <PASSWORD>
```

|   |  |
|---|--|
| database  | Performs database related actions <p><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.</p>  |
| authentication create-user username <USER-NAME> password <PASSWORD> | Creates users having access rights to the database. Execute this command on the database host. However, before creating users, on the database, generate the database keyfile. For more information on generating the keyfile, see <a href="#">database</a> on page 66 (user exec mode). <ul style="list-style-type: none"> <li>• username &lt;USER-NAME&gt; – Configures database username <ul style="list-style-type: none"> <li>• password &lt;PASSWORD&gt; – Configures a password for the username specified above</li> </ul> </li> </ul> <p>In the database-policy ensure that authentication is enabled and username and password is configured. The database-client-policy also should have the same username and password configured. For more information on database-policy and database-client-policy, see <a href="#">database-policy global config</a> on page 291 and <a href="#">database-client-policy global-config</a> on page 288.</p> |

```
service database authentication delete-user username <USER-NAME>
```

|  |  |
|--|--|
| database   | Performs database related actions <p><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.</p>  |
| database authentication delete-user username <USER-NAME> | Deletes the username requires to access rights the captive-portal/NSight database <ul style="list-style-type: none"> <li>• username &lt;USER-NAME&gt; – Deletes the username identified by the &lt;USER-NAME&gt; keyword</li> </ul> <p>Once deleted, the database cannot be accessed using the specified combination of username and password.</p> |

```
service database compact [all|captive-portal|nsight]
```

|                                      |  |
|--------------------------------------|--|
| database                             | Performs database related actions<br><br><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.  |
| compact [all  captive-portal nsight] | Compacts collections within the database. Each database (captive-portal and NSight) contains one or more collection, where each collection is a set of records. Use this command to make a single compact set of all collections within a database. <ul style="list-style-type: none"> <li>all – Compacts collections within all databases (captive-portal and NSight) being maintained</li> <li>captive-portal – Compacts all collections within the captive portal database only</li> <li>nsight – Compacts all collections within the NSight database only</li> </ul> |

```
service database [maintenance-mode|primary-stepdown|remove-all-files|start-shell]
```

|                  |   |
|------------------|---|
| database         | Performs database related actions<br><br><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.   |
| maintenance-mode | Places the database server in the maintenance mode  |
| primary-stepdown | Requests the primary replica-set to step down. For more information on replica-sets and its creation, see <a href="#">database-policy</a> (global config mode).   |
| remove-all-files | Removes all database-server related files (captive-portal and NSight). Use in a scenario where complete removal of all database related files is necessary, such as when downgrading to 5.8.1 or 5.8.0 version. Extreme caution is recommended when using this command. |
| start-shell      | Starts the database shell   |

```
service database replica-set add member [<IP>|<FQDN>] [arbiter|priority <0-255>]
```

|             |   |
|-------------|---|
| database    | Performs database related actions<br><br><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.   |
| replica-set | Adds members to the database replica set. A replica set is a group of devices running the database instances that maintain the same data set. Replica sets provide redundancy and high availability, and are the basis for all production deployments. The replica set can contain a maximum of fifty (50) members, with each member (with the exception of the arbiter) hosting an instance of the database. For more information on creating replica sets, see <a href="#">database-policy</a> (global config mode) . |

|                             |  |
|-----------------------------|--|
| add member [<IP> <FQDN>]    | <p>Adds members to the database replica set</p> <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Identifies the member by its IP address. Specify the member's IP address.</li> <li>• &lt;FQDN&gt; – Identifies the member by its FQDN. Specify the member's FQDN address.</li> </ul> <p><b>Note:</b> Ensure that the identified members have the database instance running prior to being added to the replica set.</p>  |
| [arbiter] priority <0-255>] | <p>After identifying the new member, optionally specify if the member is the arbiter or not. If not the arbiter, specify the member's priority value.</p> <ul style="list-style-type: none"> <li>• arbiter – Identifies the new member as the arbiter. The arbiter does not maintain a data set and is added to the replica set to facilitate the election of the fall-back primary member. It provides that one extra vote required in the election of the primary member.</li> <li>• priority &lt;0-255&gt; – Identifies the new member as not being the arbiter and configures its priority value. <ul style="list-style-type: none"> <li>• &lt;0-255&gt; – Specify the priority value from 0 - 255. Not applicable for the arbiter.</li> </ul> </li> </ul> <p>The priority value determines the member's position within the replica set as primary or secondary. It also helps in electing the fall-back primary member in the eventuality of the current primary member being unreachable.</p> <p>All identified members should have the database instances running prior to being added to the replica set.</p> |

```
service database replica-set delete member [<IP>|<FQDN>]
```

|                             |   |
|-----------------------------|---|
| database                    | <p>Performs database related actions</p> <p><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.</p>  |
| replica-set                 | <p>Allows deletion of members in a database replica set. For each database a single three-member replica-set can be created and maintained. For more information on creating replica sets, see <a href="#">database-policy</a> (global config mode) .</p>   |
| delete member [<IP> <FQDN>] | <p>Deletes members from an existing database replica set</p> <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Identifies the member by its IP address. Specify the member's IP address.</li> <li>• &lt;FQDN&gt; – Identifies the member by its FQDN. Specify the member's FQDN address.</li> </ul> |

```
service database replica-set force-configured-start
```

|                        |  |
|------------------------|--|
| database               | Performs database related actions<br><br><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.  |
| replica-set            | Allows deletion of members in a database replica set. For each database a single three-member replica-set can be created and maintained. For more information on creating replica sets, see <a href="#">database-policy</a> (global config mode) . |
| force-configured-start | Forces the replica-set to move to the configured state   |

```
service database server [restart|start|stop]
```

|                             |  |
|-----------------------------|--|
| database                    | Performs database related actions<br><br><b>Note:</b> This command is supported only on the NX9500, NX9600, and VX9000 platforms.  |
| server [restart start stop] | Performs the following actions on the database server: <ul style="list-style-type: none"> <li>• restart – Restarts the server</li> <li>• start – Starts the server</li> <li>• stop – Stops the server</li> </ul> |

```
service delete sessions <SESSION-COOKIES>
```

|                                   |  |
|-----------------------------------|--|
| delete sessions <SESSION-COOKIES> | Deletes session cookies <ul style="list-style-type: none"> <li>• &lt;SESSION-COOKIES&gt; – Provide a list of cookies to delete.</li> </ul> |
|-----------------------------------|--|

```
service mint [clear [lsp-db|mlcp]|debug-log [flash-and-syslog|flash-only]|
expire [lsp|spf]|flood [csnp|lsp]]
```

|   |   |
|---|---|
| mint                                    | Enables MiNT protocol management (clears LSP database, enables debug logging, enables running silence etc.)   |
| clear [lsp-db mlcp]                     | Clears LSP database and <i>MiNT Link Control Protocol</i> (MLCP) links <ul style="list-style-type: none"> <li>• lsp-db – Clears MiNT <i>Label Switched Path</i> (LSP) database</li> <li>• mlcp – Clears MLCP links</li> </ul> |
| debug-log [flash-and-syslog flash-only] | Enables debug message logging <ul style="list-style-type: none"> <li>• flash-and-syslog – Logs debug messages to the flash and syslog files</li> <li>• flash-only – Logs debug messages to the flash file only</li> </ul>     |
| expire [lsp spf]                        | Forces expiration of LSP and recalculation of <i>Shortest Path First</i> (SPF) <ul style="list-style-type: none"> <li>• lsp – Forces expiration of LSP</li> <li>• spf – Forces recalculation of SPF</li> </ul>                |
| flood [csnp lsp]                        | Floods control packets <ul style="list-style-type: none"> <li>• csnp – Floods our <i>Complete Sequence Number Packets</i> (CSNP)</li> <li>• lsp – Floods our LSP</li> </ul>   |

```
service pm stop {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| pm               | Stops the PM   |
| stops            | Stops the PM from monitoring all daemons   |
| on <DEVICE-NAME> | Optional. Stops the PM on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
service pktcap on [bridge|deny|drop|ext-vlan|rim|router|vpn|wireless]
{ (acl-name <ACL>,count <1-1000000>,direction [any|inbound|outbound],filter,hex,rate
<1-100>,
snap <1-2048>,tcpdump,verbose,write [file|url|tzsp <IP/TZSP-HOSTNAME>]) }
```

|                                  |   |
|----------------------------------|---|
| pktcap on                        | Captures data packets crossing at a specified location <ul style="list-style-type: none"> <li>on - Defines the packet capture location</li> </ul> |
| bridge                           | Captures packets transiting through the Ethernet bridge   |
| deny                             | Captures packets denied by an ACL   |
| drop                             | Captures packets at the drop locations  |
| ext-vlan                         | Captures packets forwarded to or from an extended VLAN  |
| rim                              | Captures packets at the <i>Radio Interface Module</i> (RIM)   |
| router                           | Captures packets transiting through an IP router  |
| vpn                              | Captures packets forwarded to or from a VPN link  |
| wireless                         | Captures packets forwarded to or from a wireless device   |
| acl-name <ACL>                   | Optional. Specify the ACL that matches the ACL name for the 'deny' location   |
| count <1-1000000>                | Optional. Limits the captured packet count. Specify a value from 1 -1000000.  |
| direction [any inbound outbound] | Optional. Changes the packet direction with respect to a device. The direction can be set as any, inbound, or outbound.                           |

|   |   |
|---|---|
| filter [<LINE> arp capwap  cdp dot11  dropreason  dst ether host icmp  igmp ip ipv6  2  3  4  lldp mint net  not port  priority radio src tcp udp  vlan wlan] | <p>Optional. Filters packets based on the option selected (must be used as a last option). The filter options are:</p> <ul style="list-style-type: none"> <li>• &lt;LINE&gt; – Defines user defined packet capture filter</li> <li>• arp – Matches ARP packets</li> <li>• capwap – Matches CAPWAP packets</li> <li>• cdp – Matches CDP packets</li> <li>• dot11 – Matches 802.11 packets</li> <li>• dropreason – Matches packet drop reason</li> <li>• dst – Matches IP destination</li> <li>• ether – Matches Ethernet packets</li> <li>• failed – Matches failed 802.11 transmitted frames</li> <li>• host – Matches host destination</li> <li>• icmp – Matches ICMP packets</li> <li>• icmp6 – Matches ICMPv6 frames</li> <li>• ip – Matches IPV4 packets</li> <li>• ipv6 – Matches IPV6 packets</li> <li>• l2 – Matches L2 header</li> <li>• l3 – Matches L3 header</li> <li>• l4 – Matches L4 header</li> <li>• mint – Matches MiNT packets</li> <li>• lldp – Matches LLDP packets</li> <li>• net – Matches IP in subnet</li> <li>• not – Filters out any packet that matches the filter criteria (For example, if not TCP is used, all tcp packets are filtered out)</li> <li>• port – Matches TCP or UDP port</li> <li>• priority – Matches packet priority</li> <li>• radio – Matches radio</li> <li>• rssi – Matches Received Signal Strength Indication (RSSI) of received radio signals</li> <li>• src – Matches IP source</li> <li>• stp – Matches STP packets</li> <li>• tcp – Matches TCP packets</li> <li>• tcp6 – Matches TCP over IPv6 packets</li> <li>• udp – Matches UDP packets</li> <li>• udp6 – Matches UDP over IPv6 packets</li> <li>• vlan – Matches VLAN</li> <li>• wlan – Matches WLAN</li> </ul> |
| hex   | Optional. Provides binary output of the captured packets  |
| rate <1-100>  | <p>Optional. Specifies the packet capture rate</p> <ul style="list-style-type: none"> <li>• &lt;1-100&gt; – Specify a value from 1 - 100 seconds.</li> </ul>  |
| snap <1-2048>   | <p>Optional. Captures the data length</p> <ul style="list-style-type: none"> <li>• &lt;1-2048&gt; – Specify a value from 1 - 2048 characters.</li> </ul>  |
| tcpdump   | Optional. Decodes tcpdump. The tcpdump analyzes network behavior, performance, and infrastructure. It also analyzes applications that generate or receive traffic.  |

|         |   |
|---------|---|

```

|                |   |
|----------------|---|
| trace          | Traces a process for system calls and signals               |
| <PROCESS-NAME> | Specifies the process name                                  |
| summary        | Optional. Generates summary report of the specified process |

*Syntax (Privilege Exec Mode: NX9500/NX9600/VX9000)*

#### Service Commands - Intro

```
service copy analytics-support [<FILE>|<URL>]
```

*Parameters(Privilege Exec Mode: NX9500/NX9600/VX9000)*

#### Service Commands - Intro

```
service copy analytics-support [<FILE>|<URL>]
```

|                        |  |
|------------------------|--|
| copy analytics-support | Enables copying of analytics information to a specified. Use one of the following options to specify the file:<br><br><b>Note:</b> This information is useful to troubleshoot issues by the Technical Support team.  |
| <FILE>                 | Specify the file name and location using one of the following formats: <ul style="list-style-type: none"> <li>usb1:/path/file</li> <li>usb2:/path/file</li> </ul>  |
| <URL>                  | Specify the location URL to copy file. Both IPv4 and IPv6 formats are supported. <ul style="list-style-type: none"> <li>tftp://&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> <li>ftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> <li>sftp://&lt;user&gt;:&lt;passwd&gt;@&lt;hostname IPv4/IPv6&gt;[:port]/path/file</li> </ul> |

### Usage Guidelines

The NX9500/NX9600 service platforms and VX9000 VM provide granular and robust analytic reporting for a managed network. The data analyzed is collected at intervals specified by the administrator.

To enable data analytics, procure and apply a separate hot spare analytics license at the NOC. The license restricts the number of Access Point streams processed at the NOC or forwarded to partner systems for further processing. The analytics feature can be turned on at select APs by enabling them in configuration. This way the customer can enable analytics on a select set of APs and not the entire system as long as the number of APs on which it is enabled is less than or equal to the total number of AP at the NOC controller.

In an NOC managed network, the analytics engine parses and processes Smart RF events as they are received. The analytics engine parses the new channel and power information from the Smart RF event, as opposed to retrieving the event from the devices themselves. analytics licenses available.

### Syntax (Global Config Mode)

#### Service Commands - Intro

```
service [set|show cli]
service set [command-history <10-300>|upgrade-history <10-100>|reboot-history <10-100>|
virtual-machine-history <10-200>] {on <DEVICE-NAME>}
service show cli
```

### Parameters (Global Config Mode)

#### Service Commands - Intro

```
service set [command-history <10-300>|upgrade-history <10-100>|reboot-history <10-100>|
virtual-machine-history <10-200>] {on <DEVICE-NAME>}
```

|                          |   |
|--------------------------|---|
| set                      | Sets the size of history files  |
| command-history <10-300> | Sets the size of the command history file <ul style="list-style-type: none"> <li>&lt;10-300&gt; - Specify a value from 10 - 300. The default is 200.</li> </ul> |

|                                  |  |
|----------------------------------|--|
| upgrade-history <10-100>         | Sets the size of the upgrade history file <ul style="list-style-type: none"> <li>&lt;10-100&gt; – Specify a value from 10 - 100. The default is 50.</li> </ul>   |
| reboot-history <10-100>          | Sets the size of the reboot history file <ul style="list-style-type: none"> <li>&lt;10-100&gt; – Specify a value from 10 - 100. The default is 50.</li> </ul>  |
| virtual-machine-history <10-200> | Sets the size of the virtual-machine history file <ul style="list-style-type: none"> <li>&lt;10-200&gt; – Specify a value from 10 - 200. The default is 100.</li> </ul> <p>This command is applicable only to the NX9500 and NX9600 series service platforms. Use the <code>no &gt; service &gt; set &gt; virtual-machine-history &gt; {on &lt;DEVICE-NAME&gt;}</code> command to revert the history file size to 100.</p> |
| on <DEVICE-NAME>                 | Optional. Sets the size of history files on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

```
service show cli
```

|          |   |
|----------|---|
| show cli | Displays running system configuration details <ul style="list-style-type: none"> <li>cli – Displays the CLI tree of the current mode</li> </ul> |
|----------|---|

Examples for the `service > wireless > meshpoint` command.

The following example displays meshpoint modules:

```

ROOT1-ap81xx-71174C#service wireless meshpoint z1 mesh_root on ROOT1-ap81xx-71174C
| SUBZONE
| 0    1    2    3    4    5    6    7
-----+-----
ZONE |
| GEN  TX  RX  BEA  TXF
2-LLC | 0    0    0    0    0
| GEN  TX  RX  NBR  LQM  LSA
3-ND  | 0    0    0    0    0    0
| GEN
4-ORL | 0
| GEN  TX  RX  HEL  PRO
5-LQ  | 0    0    0    0    0
| GEN
6-PS  | 0
| GEN  ROOT NBR  REC
7-RS  | 0    0    0    0
| GEN
8-IA  | 0
| GEN  SET  GET
11-MGT | 0    0    0
| GEN  RX  TX  R0   LMST LSUP LKEY KEY
13-LSA | 0    0    0    0    0    0    0    0
| GEN  SCAN TRIG
14-ACS | 0    0    0
| GEN
15-EAP | 0
| GEN
16-L2P | 0

ROOT1-ap81xx-71174C#

```

In the preceding example,

- The meshpoint name is mesh\_root
- The device on which the command is executed is ROOT1-ap81xx-71174C
- The vertical ZONE column represents meshpoint modules. For example, 3-ND presents the Neighbor Discovery module.
- The SUBZONE 0 to 7 represents the available processes for each of the zonal modules.
- Debugging is disabled for all modules for the mesh-root meshpoint. A value of 0 (Zero) represents debugging disabled.

To enable meshpoint module debugging, specify the module number and the process number separated by a period (.). And then specify the debugging level from 0 - 7.

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C 3.2 7
```

In the preceding command,

- The meshpoint module number provided is 3 (ND)
- The process number provided is 2 (RX - Received signals from neighbors)
- The debugging level provided is 7 (highest level - warning)

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
| SUBZONE
| 0 1 2 3 4 5 6 7
-----+-----
ZONE |
2-LLC | GEN TX RX BEA TXF
3-ND | 0 0 0 0 0
| GEN
4-ORL | 0
| GEN TX RX HEL PRO
5-LQ | 0 0 0 0 0
| GEN
6-PS | 0
| GEN ROOT NBR REC
7-RS | 0 0 0 0
| GEN
8-IA | 0
| GEN SET GET
11-MGT | 0 0 0
| GEN RX TX R0 LMST LSUP LKEY KEY
13-LSA | 0 0 0 0 0 0 0 0
| GEN SCAN TRIG
14-ACS | 0 0 0
| GEN
15-EAP | 0
| GEN
16-L2P | 0

ROOT1-ap81xx-71174C#
```

In the preceding example, level 7 debugging has been enabled only for the ND module's received signals. Note that debugging for all other modules and processes are still disabled.

To disable debugging for all modules, specify 0 (zero) in the command. For example:

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C 0
```

To enable debugging for all modules, specify the debugging level number. For example:

```
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C 5
ROOT1-ap81xx-71174C#service wireless meshpoint zl mesh_root on ROOT1-ap81xx-71174C
| SUBZONE
| 0 1 2 3 4 5 6 7
```

```
-----+-----

```

The following example displays IP ACLs to WLAN mapping summary on the 'TechPubs' RF Domain:

```
nx9500-6C8809#service show ip-access-list wlan TechPubs status
Reporting Device: ap7161-99BB7C - success
Reporting Device: ap7532-80C2AC - success
Reporting Device: ap7562-84A224 - success
Reporting Device: nx9500-6C8809 - success
Reporting Device: ap8163-74B45C - success
Total reporting devices: 5
nx9500-6C8809#
```

Consider an RF Domain (name guest-domain) with 3 APs adopted to a controller. The CLI output for the `service > show > ip-access-list` command in this set up varies for different scenarios, as shown in the following examples:

- Scenario 1: Executing the command on a device (access point).

```
AP01#service show ip-access-list wlan status
Reporting Device: AP01 - fail
WLAN: XPO-Guest-PSK
  use ip-access-list in guest_access_inbound : fail
Total reporting devices: 1
AP01#
```

```
AP01#service show ip-access-list wlan status detail
```

```
=====
Reporting Device: AP01
-----
```

```
WLAN: XPO-Guest-PSK
```

```
  use ip-access-list in guest_access_inbound : fail
  use ip-access-list out BC-MC-CONTROL : success
-----
```

```
WLAN: PartnerNet
```

```
  use ip-access-list in default : success
  use ip-access-list out default : success
-----
```

```
Total reporting devices: 1
```

```
AP01#
```

- Scenario 2: IP ACL to WLAN mapping is successful for all APs in a specified RF Domain.

```
SW01#service show ip-access-list wlan status on guest-domain
Reporting Device: AP01 - success
Reporting Device: AP02 - success
Reporting Device: AP03 - success
Total reporting devices: 3
SW01#
```

- Scenario 3: IP ACL has failed in dataplane due to unknown reasons.

```
SW01#service show ip-access-list wlan status on guest-domain
Reporting Device: AP01 - fail
WLAN: XPO-Guest-PSK
  use ip-access-list in guest_access_inbound : fail
Reporting Device: AP02 - success
Reporting Device: AP03 - success
Total reporting devices: 3

## show

Displays specified system component settings. There are a number of ways to invoke the show command.

- When invoked without any arguments, it displays information about the current context. If the current context contains instances, the show command (usually) displays a list of these instances.
- When invoked with the display parameter, it displays information about that component.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show <PARAMETERS>
```

### Parameters

```
show <PARAMETERS>
```

|                   |  |
|-------------------|--|
| show <PARAMETERS> | The show command displays configuration details based on the configuration mode, in which the command is executed, and the parameters passed. For example, when executed in the AAA policy configuration mode, it displays the logged AAA policy's current settings. The example below shows the configuration details that can be viewed in the Priv Executable mode. |
|-------------------|--|

### Examples

```
nx9500-6C8809#show ?
  adoption          Adoption related information
  bluetooth          Bluetooth Configuration/Statistics commands
  bonjour            Bonjour Gateway related commands
  boot              Display boot configuration.
  captive-portal      Captive portal commands
  captive-portal-page-upload Captive portal internal and advanced page upload
  cdp                Cisco Discovery Protocol
  classify-url         Query the category of an URL
  clock              Display system clock
  cluster            Cluster Protocol
  cmp-factory-certs   Display the CMP certificate status
  commands            Show command lists
  context             Information about current context
  critical-resources   Critical Resources
  crypto              Encryption related commands
  database            Database
  debug              Debugging functions
  debugging           Debugging functions
  device-upgrade      Device Upgrade
  dot1x              802.1X
  dpi                Deep Packet Inspection
  equest             Registration EGuest process
  environmental-sensor Display Environmental Sensor Module status
  event-history        Display event history
  event-system-policy Display event system policy
  ex3500              EX3500 device details
  extdev              External device (T5, Ex3500..)
  file                Display filesystem information
  file-sync           File sync between controller and adoptees
  firewall            Wireless Firewall

| wireless            | Wireless commands  |
| wwan                | Display wireless WAN Status  |

nx9500-6C8809#

#### Note

For more information on the show command, see [Show Commands](#) on page 675.

## write

Writes the system running configuration to memory or terminal

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
write [memory|terminal]
```

### Parameters

```
write [memory|terminal]
```

|          |  |
|----------|--|
| memory   | Writes to the <i>non-volatile</i> (NV ) memory |
| terminal | Writes to the terminal                         |

### Examples

```
nx9500-6C8809>write memory  
[OK]  
nx9500-6C8809>
```

# 7 Show Commands

## show-commands

Show commands displays configuration settings and statistical information. Use this command to view the current running configuration as well as the start-up configuration. The show command also displays the current context configuration.

This chapter describes the 'show' CLI commands used in the USER EXEC, PRIV EXEC, and GLOBAL CONFIG modes. Commands entered in either USER EXEC mode or PRIV EXEC mode are referred to as EXEC mode commands. If a user or privilege is not specified, the referenced command can be entered in either mode.

This chapter also describes the 'show' commands in the 'GLOBAL CONFIG' mode. The commands can be entered in all three modes, except commands like file, IP access list statistics, MAC access list statistics, and upgrade statistics, which cannot be entered in the USER EXEC mode.

## show-commands

The following table summarizes the show commands:

**Table 33: Show Commands**

| Command  | Description   |
|--|---|
| <a href="#">show</a> on page 678                                       | Displays settings for the specified system component  |
| <a href="#">adoption</a> on page 684                                   | Displays adoption related information   |
| <a href="#">bluetooth</a> on page 687                                  | Displays Bluetooth radio statistics for RF Domain member access points  |
| <a href="#">boot</a> on page 689                                       | Displays a device's boot configuration  |
| <a href="#">bonjour</a> on page 690                                    | Displays the configured Bonjour services available on local and remote sites  |
| <a href="#">captive-portal</a> on page 691                             | Displays WLAN hotspot functions   |
| <a href="#">captive-portal-page-upload (show commands)</a> on page 692 | Displays captive portal Web pages upload related information  |
| <a href="#">cdp</a> on page 694  | Displays a CDP ( <i>Cisco Discovery Protocol</i> ) neighbor table   |
| <a href="#">classify-url</a> on page 695                               | Queries a specified global data center or a pre-configured classification server for the category of a specified URL. |
| <a href="#">clock</a> on page 696                                      | Displays the system clock   |
| <a href="#">cluster</a> on page 696                                    | Displays device-cluster related statistics  |
| <a href="#">cmp-factory-certs</a> on page 697                          | Displays factory installed CMP certificates   |
| <a href="#">commands</a> on page 698                                   | Displays command list   |
| <a href="#">context</a> on page 699                                    | Displays information about the current context  |

**Table 33: Show Commands (continued)**

| Command  | Description  |
|--|--|
| <a href="#">critical-resources</a> on page 699       | Displays critical resources deployed within the managed network and associated statistics  |
| <a href="#">crypto</a> on page 700                   | Displays encryption mode information   |
| <a href="#">database</a> on page 703                 | Displays database-related statistics and status  |
| <a href="#">device-upgrade</a> on page 705           | Displays device firmware upgradation information for devices adopted by a wireless controller or access point  |
| <a href="#">dot1x</a> on page 707                    | Displays dot1x information on interfaces   |
| <a href="#">dpi</a> on page 709                      | Displays statistics for all configured and canned applications   |
| <a href="#">environmental-sensor</a> on page 712     | Displays environmental sensor's historical data (applicable only to AP 8132)   |
| <a href="#">event-history</a> on page 715            | Displays event history   |
| <a href="#">event-system-policy</a> on page 716      | Displays event system policy configuration information   |
| <a href="#">ex3500</a> on page 716                   | Displays EX3500-related statistical data   |
| <a href="#">extdev</a> on page 719                   | Displays external device (T5 or EX3500) configuration error history  |
| <a href="#">fabric-attach</a> on page 719            | Displays the current status of VLAN to I-SID assignments for all ports   |
| <a href="#">file</a> on page 721                     | Displays file system information   |
| <a href="#">file-sync</a> on page 721                | Displays file synchronization settings and status on a controller. The file-sync command syncs trustpoint/wireless-bridge certificate between the staging-controller and its adopted access points |
| <a href="#">firewall</a> on page 723                 | Displays wireless firewall information   |
| <a href="#">global</a> on page 727                   | Displays global information for network devices based on the parameters passed   |
| <a href="#">gps (show command)</a> on page 728       | Displays the geographical coordinates (latitude and longitude) of the device for which the GPS coordinates search process has been triggered   |
| <a href="#">gre</a> on page 729                      | Displays GRE tunnel related information  |
| <a href="#">guest-registration</a> on page 730       | Displays guest registration statistics based on the option and time entered  |
| <a href="#">interface</a> on page 738                | Displays interface status  |
| <a href="#">iot-device-type-imagotag</a> on page 741 | Displays the configuration of ESL communicator on a specified AP or on all APs within an RF Domain.  |
| <a href="#">ip</a> on page 742                       | Displays IP related information  |
| <a href="#">ip-access-list-stats</a> on page 749     | Displays IP access list statistics   |
| <a href="#">ipv6</a> on page 750                     | Displays IPv6 related information  |
| <a href="#">ipv6-access-list</a> on page 754         | Displays IPv6 access list statistics   |
| <a href="#">l2tpv3</a> on page 754                   | Displays L2TPv3 ( <i>Layer 2 Tunnel Protocol Version 3</i> ) information   |
| <a href="#">lacp</a> on page 757                     | Displays LACP ( <i>Link Aggregation Control Protocol</i> ) related information   |
| <a href="#">ldap-agent</a> on page 760               | Displays an LDAP agent's join status (join status to a LDAP server domain)   |

**Table 33: Show Commands (continued)**

| Command   | Description   |
|---|---|
| <a href="#">licenses</a> on page 760              | Displays installed licenses and usage information   |
| <a href="#">lldp</a> on page 762                  | Displays LLDP ( <i>Link Layer Discovery Protocol</i> ) information  |
| <a href="#">logging</a> on page 763               | Displays logging information  |
| <a href="#">mac-access-list-stats</a> on page 764 | Displays MAC access list statistics   |
| <a href="#">mac-address-table</a> on page 765     | Displays MAC address table entries  |
| <a href="#">macauth</a> on page 766               | Displays details of wired ports that have MAC address-based authentication enabled  |
| <a href="#">mac-auth-clients</a> on page 768      | Displays MAC-authenticated clients based on the parameters passed   |
| <a href="#">mint</a> on page 769                  | Displays MiNT protocol configuration commands   |
| <a href="#">ntp</a> on page 772                   | Displays NTP server related information   |
| <a href="#">password-encryption</a> on page 774   | Displays password encryption status   |
| <a href="#">pppoe-client</a> on page 774          | Displays PPPoE ( <i>Point to Point Protocol over Ethernet</i> ) client information  |
| <a href="#">privilege</a> on page 775             | Displays current privilege level information  |
| <a href="#">radius</a> on page 775                | Displays the amount of access time consumed and the access time remaining for all guest users configured on a RADIUS server |
| <a href="#">reload</a> on page 777                | Displays scheduled reload information   |
| <a href="#">rf-domain-manager</a> on page 778     | Displays RF Domain manager selection details  |
| <a href="#">role</a> on page 779                  | Displays role-based firewall information  |
| <a href="#">route-maps</a> on page 779            | Display route map statistics  |
| <a href="#">rtls</a> on page 780                  | Displays RTLS ( <i>Real Time Location Service</i> ) statistics of access points   |
| <a href="#">running-config</a> on page 781        | Displays configuration file contents  |
| <a href="#">session-changes</a> on page 789       | Displays configuration changes made in the current session  |
| <a href="#">session-config</a> on page 790        | Displays configurations made in the current session   |
| <a href="#">sessions</a> on page 791              | Displays a list of currently active open sessions on the device   |
| <a href="#">site-config-diff</a> on page 791      | Displays the difference between site configuration available on NOC and the actual site configuration                       |
| <a href="#">smart-rf</a> on page 792              | Displays Smart RF management statistics   |
| <a href="#">snmpv3 (show command)</a> on page 797 | Displays the SNMPv3 Engine ID   |
| <a href="#">spanning-tree</a> on page 798         | Displays spanning tree information  |
| <a href="#">startup-config</a> on page 800        | Displays complete startup configuration script on the console   |
| <a href="#">t5</a> on page 801                    | Displays adopted T5 controller details. This command is applicable only on the RFS 4000, NX 95XX, NX 96XX, and VX 9000.     |
| <a href="#">terminal</a> on page 809              | Displays terminal configuration parameters  |
| <a href="#">timezone</a> on page 809              | Displays timezone information for the system and managed devices  |
| <a href="#">traffic-shape</a> on page 810         | Displays traffic-shaping related configuration details and statistics   |

**Table 33: Show Commands (continued)**

| Command   | Description   |
|---|---|
| <a href="#">tron (show command)</a> on page 811 | Displays the TRON-capable and TRON-enabled WiNG AP's operating configuration.   |
| <a href="#">upgrade-status</a> on page 812      | Displays image upgrade status   |
| <a href="#">version</a> on page 813             | Displays a device's software and hardware version   |
| <a href="#">vrrp</a> on page 814                | Displays VRRP details   |
| <a href="#">virtual-machine</a> on page 816     | Displays the VM ( <i>virtual-machine</i> ) configuration, logs, and statistics  |
| <a href="#">web-filter</a> on page 843          | Displays pre-configured, in-built Web filter options available. These options are: category (URL category), category-types, filter-level, etc. This command also displays Web filter statistics and status. |
| <a href="#">what</a> on page 845                | Displays details of a specified search phrase   |
| <a href="#">wireless</a> on page 818            | Displays wireless configuration parameters  |
| <a href="#">wwan</a> on page 846                | Displays the wireless WAN status  |

**Note**

The input parameter <HOSTNAME>, wherever used in syntaxes across this chapter, cannot include an underscore (\_) character. In other words, the name of a device cannot contain an underscore.

## show

The show command displays the following information:

- A device's current configuration
- A device's start-up configuration
- A device's current context configuration, such as profiles and policies

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show <PARAMETER>
```

### Parameters

|                   |  |
|-------------------|--|
| show <PARAMETERS> | The show command displays configuration details based on the configuration mode, in which the command is executed, and the parameters passed. For example, when executed in the AAA policy configuration mode, it displays the logged AAA policy's current settings. The examples below show the configuration parameters that can be viewed in the User Executable, Priv Executable, and Global Configurable modes. |
|-------------------|--|

## Examples

The following examples list the show commands in the User Exec, Priv Exec, and Global Config modes:

### Global Config Mode:

|                            |  |
|----------------------------|--|
| <DEVICE>(config)#show ?    |  |
| adoption                   | Adoption related information                     |
| bluetooth                  | Bluetooth Configuration/Statistics commands      |
| bonjour                    | Bonjour Gateway related commands                 |
| boot                       | Display boot configuration.                      |
| captive-portal             | Captive portal commands                          |
| captive-portal-page-upload | Captive portal internal and advanced page upload |
| cdp                        | Cisco Discovery Protocol                         |
| classify-url               | Query the category of an URL                     |
| clock                      | Display system clock                             |
| cluster                    | Cluster Protocol                                 |
| cmp-factory-certs          | Display the CMP certificate status               |
| commands                   | Show command lists                               |
| context                    | Information about current context                |
| critical-resources         | Critical Resources                               |
| crypto                     | Encryption related commands                      |
| database                   | Database   |
| debug                      | Debugging functions                              |
| debugging                  | Debugging functions                              |
| device-upgrade             | Device Upgrade                                   |
| dot1x                      | 802.1X   |
| dpi                        | Deep Packet Inspection                           |
| environmental-sensor       | Display Environmental Sensor Module status       |
| event-history              | Display event history                            |
| event-system-policy        | Display event system policy                      |
| ex3500                     | EX3500 device details                            |
| extdev                     | External device (T5, Ex3500..)                   |
| fabric-attach              | Fabric attach                                    |
| file                       | Display filesystem information                   |
| file-sync                  | File sync between controller and adoptees        |
| firewall                   | Wireless Firewall                                |
| global                     | Global-level information                         |
| gps                        | GPS commands                                     |
| gre                        | Show l2gre tunnel info                           |
| guest-registration         | Guest registration commands                      |
| interface                  | Interface Configuration/Statistics commands      |
| iot-device-type-imagotag   | Iot device type imagotag                         |

nx9500-6C8809#

adoption

Displays adoption related information, and is common to the User Exec, Priv Exec, and Global Config modes.

Use this command to view details of devices adopted by the logged device.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show adoption [config-errors|controllers|history|info|log|offline|pending|status|timeline]
show adoption offline {all|on <DEVICE-NAME>}
show adoption config-errors <DEVICE-NAME>
show adoption log [adoptee|adopter {<MAC>}] {on <DEVICE-NAME>}
show adoption [controllers {include-ipv6}|history|info|pending|status {summary}|timeline]
{on <DEVICE-NAME>}
```

Parameters

```
show adoption offline
```

|          |  |
|----------|--|
| adoption | Displays AP adoption history and status. It also displays configuration errors.  |
| offline  | Displays status of offline devices (unadopted devices)<br><br><b>Note:</b> The <code>show → adoption → offline</code> command displays the following information regarding offline (unadopted) devices: MAC Address, Host-Name, Type, RF-Domain, Time Offline, Connected-To, and Last-Know-IP. |

```
show adoption config-errors <DEVICE-NAME>
```

|                             |  |
|-----------------------------|--|
| adoption                    | Displays AP adoption history and status. It also displays configuration errors.  |
| config-errors <DEVICE-NAME> | Displays configuration errors for a specified adopted device <ul style="list-style-type: none"><li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li></ul> |

```
show adoption log [adoptee|adopter] {on <DEVICE-NAME>}
```

|   |  |
|---|--|
| adoption  | Displays adoption related information. It also displays configuration errors.  |
| log [adoptee adopter {MAC}] {on <DEVICE-NAME>} {on <DEVICE-NAME>} | <p>Displays adoption logs, for the specified device. If no device name is specified, the system displays logs for the logged device.</p> <ul style="list-style-type: none"> <li>adoptee – Displays adoption logs for adoptee devices (APs, wireless controllers, and service platforms). To view logs for a specific adoptee, specify the device's name. If no device name is specified, the system displays logs for the logged device. If the logged device is not an adoptee, the system states that the device is a controller.<br/> <pre>2013-01-19 22:00:13:MLCP_TAG_CLUSTER_MASTER not present and this device is a controller. Ignoring</pre> </li> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays adoptee status and details for the device identified by the &lt;DEVICE-NAME&gt; keyword<br/>           &lt;DEVICE-NAME&gt; – Specify the device's name.</li> <li>adopter – Displays adoption logs for adopter devices (APs, wireless controllers, and service platforms). To view logs for a specified adopter, specify the device's name. If no device name is specified, the system displays logs for the logged device.</li> <li>&lt;MAC&gt; – Optional. Filters adopters by the adoptee device's MAC address. Specify the adoptee device's MAC address. The system displays logs for the device that has adopted the device identified by the &lt;MAC&gt; keyword.<br/>           on &lt;DEVICE-NAME&gt; – Optional. Displays adopter status and details for the device identified by the &lt;DEVICE-NAME&gt; keyword. Specify the adopter device's name.<br/>           &lt;DEVICE-NAME&gt; – Specify the adopter device's name.</li> </ul> <p><b>Note:</b> A wireless controller or service platform cannot be configured as an adoptee and an adopter simultaneously. In other words, an adopted wireless controller or service platform cannot be configured to adopt another device and vice versa.</p> |

```
show adoption [history|controllers {include-ipv6}|info|pending|status {summary}|timeline]
{on <DEVICE-NAME>}
```

|                            |   |
|----------------------------|---|
| adoption                   | Displays AP adoption history and status. It also displays configuration errors.   |
| controllers {include-ipv6} | <p>Displays information about adopted controllers. This is applicable in a Hierarchically managed network, where site controllers are adopted by the NOC controllers.</p> <ul style="list-style-type: none"> <li>include-ipv6 – Optional. Displays the controller's IPv6 address, if assigned, in the output</li> </ul> |
| history                    | Displays the adoption history of the logged device and its adopted access points  |
| info                       | Displays adopted device information   |
| pending                    | Displays information for devices pending adoption   |

|                  |   |
|------------------|---|
| status {summary} | <p>Displays adoption status for the logged device. When executed without using the 'on &lt;DEVICE-NAME&gt;' parameter, this command displays detailed information of all devices adopted by the logged device.</p> <ul style="list-style-type: none"> <li>summary – Optional. Displays a summary of all devices or specific adopted by the logged device.</li> </ul> <p><b>Note:</b> The show → adoption → status command displays the following adopted device status information: Device Name, Version, CFG-Stat, Msgs, Adopted-By, Last-adoption, Up-Time, and IP-Address.</p> |
| timeline         | <p>Displays the logged device's adoption timeline. It also shows the adoption time for the logged device's adopted APs. To view the adoption timeline of a specific device, use the 'on &lt;DEVICE-NAME&gt;' option to specify the device.</p>  |
| on <DEVICE-NAME> | <p>The following keywords are common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays a device's adoption information, based on the parameter passed.</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

## bluetooth

Displays Bluetooth radio statistics for RF Domain member access points. The AP-8432 and AP-8533 model access points utilize a built-in Bluetooth chip for specific Bluetooth functional behaviors in a WiNG managed network. Both these model access points support the *Bluetooth classic* and *Bluetooth low energy* (BLE) technology. These platforms use their Bluetooth classic enabled radio to sense other Bluetooth enabled devices and report device data (MAC address, RSSI and device calls) to an ADSP server for intrusion detection. If the device presence varies in an unexpected manner, ADSP can raise an alarm.

The AP-8432 and AP-8533 model access points support Bluetooth beaconing to emit either iBeacon or Eddystone-URL beacons. The access point's Bluetooth radio sends non-connectable, undirected *low-energy* (LE) advertisement packets periodically. These advertisement packets are short and sent on Bluetooth advertising channels that conform to already-established iBeacon and Eddystone-URL standards.

*Supported in the following platforms:*

- Access Points — AP-8432, AP-8533

### Syntax

```
show bluetooth radio {detail|on}
show bluetooth radio {detail {<DEVICE-NAME> <1-1>|filter bluetooth-radio-mac <BT-RADIO-
MAC>}}
{ (on <DEVICE-OR-DOMAIN-NAME> ) }
```

### Parameters

```
show bluetooth radio {detail {<DEVICE-NAME> <1-1>|filter bluetooth-radio-mac <BT-RADIO-
MAC>}}
{ (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|   |  |
|---|--|
| bluetooth radio                           | Displays Bluetooth radio utilization statistics based on the parameters passed   |
| detail <DEVICE-NAME> <1-1>                | <p>Optional. Displays detailed Bluetooth radio utilization statistics. Optionally, to view detailed information for a specific access point's Bluetooth radio, specify the access point's and the radio's MAC addresses.</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; &lt;1-1&gt; – Optional. Specify the access point's hostname or MAC address. <ul style="list-style-type: none"> <li>• &lt;1-1&gt; – Specify the bluetooth radio interface index number from 1 - 1. As of now only one Bluetooth radio interface is supported. The Interface index number is appended to the AP's hostname or MAC address in the following format: ap8533-06FBE1:B1 OR 74-67-F7-06-FB-E1:B1</li> </ul> </li> </ul> <p>The following information is displayed:</p> <ul style="list-style-type: none"> <li>• access point's hostname as its network identifier</li> <li>• access point's alias. If an alias has been defined for the access point its listed here. The alias value is expressed in the form of <i>&lt;hostname&gt;:B&lt;Bluetooth_radio_number&gt;</i>. If the access point has a administrator assigned hostname, it is used in place of the access point's default hostname.</li> <li>• access point's factory encoded MAC address</li> <li>• access point and bluetooth radio's administrator assigned area of deployment (the AP's geographical location)</li> <li>• bluetooth radio's state (on/off)</li> <li>• bluetooth radio's reason for inactivity (in case the radio is off)</li> <li>• bluetooth radio's factory encoded MAC address serving as this device's hardware identifier on the network</li> <li>• bluetooth radio's functional mode: bt-sensor or le-beacon</li> <li>• bluetooth radio's beacon period</li> <li>• bluetooth radio's beacon type</li> <li>• descriptive text on any error that's preventing the Bluetooth radio from operating</li> </ul> |
| filter bluetooth-radio-mac <BT-RADIO-MAC> | <p>Optional. Specifies additional filters to get table values. Filters data based on the Bluetooth radio's MAC address.</p> <ul style="list-style-type: none"> <li>• &lt;BT-RADIO-MAC&gt; – Specify the Bluetooth radio's MAC address. The system only displays statistics related to the specified Bluetooth radio.</li> </ul>  |
| on <DEVICE-OR-DOMAIN-NAME>                | <p>The following keywords are recursive and common to all of the above.</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays Bluetooth radio statistics on a specified device or RF Domain <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the device or RF Domain. If the device name is explicitly given, the results display data for the specified AP only. If the RF Domain is explicitly given, the results display data for all APs within the specified RF Domain.</li> </ul> </li> </ul> <p>If no device/RF Domain is specified, the results include data for all Bluetooth radios within the controller's RF Domain.</p> <p>If the controller is in the "on rf-domain all" mode, the results include data for all Bluetooth radios for all APs in each domain known to the controller.</p>  |

### Examples

```

## boot

Displays a device's boot configuration. Use this command to view the primary and secondary image details, such as Build Date, Install Date, and Version. This command also displays the current boot and next boot information.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show boot {on <DEVICE-NAME>}
```

### Parameters

```
show boot {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| boot             | Displays primary and secondary image boot configuration details (build date, install date, version, and the image used to boot the current session)   |
| on <DEVICE-NAME> | Optional. Displays a specified device's boot configuration <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> <p><b>Note:</b> Use the <i>on &lt;DEVICE-NAME&gt;</i> option to view a remote device's boot configuration.</p> |

### Examples

## captive-portal

Displays WLAN captive portal information. Use this command to view a configured captive portal's client information.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show captive-portal sessions {include-ipv6|on <DEVICE-OR-DOMAIN-NAME>|statistics}
{ (filter [captive-portal [<CAPTIVE-PORTAL>|not <CAPTIVE-PORTAL>]|ip [<IPv4>|not <IPv4>]|
ipv6 [<IPv6>|not <IPv6>]|state [pending|success|not [pending|success]|vlan [<VLAN-ID>|
not <VLAN-ID>]|wlan [<WLAN-NAME>|not <WLAN-NAME>]]) }
```

### Parameters

```
show captive-portal sessions {include-ipv6|on <DEVICE-OR-DOMAIN-NAME>|statistics}
{ (filter [captive-portal [<CAPTIVE-PORTAL>|not <CAPTIVE-PORTAL>]|ip [<IPv4>|not <IPv4>]|
ipv6 [<IPv6>|not <IPv6>]|state [pending|success|not [pending|success]|vlan [<VLAN-ID>|
not <VLAN-ID>]|wlan [<WLAN-NAME>|not <WLAN-NAME>]]) }
```

|  |   |
|--|---|
| captive-portal sessions                                | Displays active captive portal client session details   |
| include-ipv6   | Optional. Includes IPv6 address (if known) of captive portal clients. By default the system only displays IPv4 addresses. The include-ipv6 parameter includes IPv6 address (if known) of each client.   |
| statistics   | Optional. Displays statistical information regarding client sessions  |
| on <DEVICE-OR-DOMAIN-NAME>                             | Optional. Displays active captive portal session details on a specified device or RF Domain. <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul>   |
| filter   | This parameter is recursive and can be used with any of the above parameters to define additional filters.<br>Optional. Defines additional filters. Use one of the following options: <b>captive-portal</b> , <b>ip</b> , <b>ipv6</b> , <b>state</b> , <b>vlan</b> , or <b>wlan</b> .   |
| captive-portal [<CAPTIVE-PORTAL> not <CAPTIVE-PORTAL>] | Optional. Displays captive portal client and client session information, based on the captive portal name passed <ul style="list-style-type: none"> <li>• &lt;CAPTIVE-PORTAL&gt; – Specify the captive portal name. Displays client details for the specified captive portal.</li> <li>• not &lt;CAPTIVE-PORTAL&gt; – Inverts the match selection. Displays client details for all captive portals other than the specified captive portal.</li> </ul>    |
| ip [<IPv4> not <IPv4>]                                 | Optional. Displays captive portal client/client sessions information, based on the IPv4 address passed <ul style="list-style-type: none"> <li>• &lt;IPv4&gt; – Specify the client's IPv4 address. Displays information of the client identified by the &lt;IPv4&gt; parameter.</li> <li>• not &lt;IPv4&gt; – Inverts the match selection. Displays client details for all clients other than the one identified by the &lt;IPv4&gt; parameter.</li> </ul> |

|  |  |
|--|--|
| ipv6 [<IPv6> not <IPv6>]                       | <p>This filter option is available only for the 'include-ipv6' keyword.</p> <p>Optional. Displays captive portal client/client sessions information, based on the IPv6 address passed</p> <ul style="list-style-type: none"> <li>• &lt;IPv6&gt; – Specify the client's IPv6 address. Displays information of the client identified by the &lt;IPv6&gt; parameter</li> <li>• not &lt;IPv6&gt; – Inverts the match selection. Displays client details for all clients other than the one identified by the &lt;IPv6&gt; parameter.</li> </ul>  |
| state [pending success  not [pending success]] | <p>Optional. Filters clients/client sessions based on the client's authentication state</p> <ul style="list-style-type: none"> <li>• pending – Displays information of clients redirected for authentication</li> <li>• success – Displays information of successfully authenticated clients</li> <li>• not [pending success] – Inverts match selection <ul style="list-style-type: none"> <li>• pending – Displays information of successfully authenticated clients (opposite of pending authentication)</li> <li>• success – Displays information of clients redirected for authentication (opposite of successful authentication)</li> </ul> </li> </ul> |
| vlan [<VLAN-ID>  not <VLAN-ID>]                | <p>Optional. Displays captive portal client/client sessions information based on the VLAN ID passed</p> <ul style="list-style-type: none"> <li>• &lt;VLAN-ID&gt; – Specify the VLAN ID. Displays client details for the specified VLAN.</li> <li>• not &lt;VLAN-ID&gt; – Inverts match selection. Displays client details for all VLANs other than the one identified by the &lt;VLAN-ID&gt; parameter.</li> </ul>   |
| wlan [<WLAN-NAME>  not <WLAN-NAME>]            | <p>Optional. Displays captive portal client/client sessions information based on the WLAN name passed</p> <ul style="list-style-type: none"> <li>• &lt;WLAN-NAME&gt; – Specify the WLAN name. Displays client details for the specified WLAN.</li> <li>• not &lt;WLAN-NAME&gt; – Inverts match selection. Displays client details for all WLANs other than the one identified by the &lt;WLAN-NAME&gt; parameter.</li> </ul>   |

### Examples

## captive-portal-page-upload (show commands)

Displays captive portal page information, such as upload history, upload status, and page file download status

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
show captive-portal-page-upload [history|list-files|load-image-status|status]
show captive-portal-page-upload load-image-status
show captive-portal-page-upload history {on <RF-DOMAIN-NAME>}
show captive-portal-page-upload status {on [<RF-DOMAIN-NAME>|<RF-DOMAIN-MANAGER>]}
show captive-portal-page-upload list-files <CAPTIVE-PORTAL-NAME>
```

## Parameters

```
show captive-portal-page-upload load-image-status
```

|                   |   |
|-------------------|---|
| load-image-status | Displays captive portal advanced page file upload status on the logged device |
|-------------------|---|

```
show captive-portal-page-upload history {on <RF-DOMAIN-NAME>}
```

|                               |   |
|-------------------------------|---|
| history {on <RF-DOMAIN-NAME>} | Displays captive portal page upload history <ul style="list-style-type: none"> <li>on &lt;RF-DOMAIN-NAME&gt; – Optional. Displays captive portal page upload history within a specified RF Domain. Specify the RF Domain name.</li> </ul> |
|-------------------------------|---|

```
show captive-portal-page-upload status {on [<RF-DOMAIN-NAME>|<RF-DOMAIN-MANAGER>]}
```

|  |   |
|--|---|
| status {on [<RF-DOMAIN-NAME> <RF-DOMAIN-MANAGER>]} | Displays captive portal page upload status <ul style="list-style-type: none"> <li>on &lt;RF-DOMAIN-NAME&gt; – Optional. Displays captive portal page upload status within a specified RF Domain. Specify the RF Domain name.</li> <li>on &lt;RF-DOMAIN-MANAGER&gt; – Optional. Displays captive portal page upload status for a specified RF Domain Manager. Specify the RF Domain Manager name.</li> </ul> |
|--|---|

```
show captive-portal-page-upload list-files <CAPTIVE-PORTAL-NAME>
```

|                                  |   |
|----------------------------------|---|
| list-files <CAPTIVE-PORTAL-NAME> | Displays a list of all captive portal Web page files, of a specified captive portal, uploaded (internal and advanced page files) <ul style="list-style-type: none"> <li>&lt;CAPTIVE-PORTAL-NAME&gt; – Specify the captive portal name.</li> </ul> |
|----------------------------------|---|

## Examples

```
nx7500-7F2C13#captive-portal-page-upload CP-BW all
```

| CONTROLLER        | STATUS  | MESSAGE                     |
|-------------------|---------|-----------------------------|
| 84-24-8D-7F-2C-13 | Success | Added 1 APs to upload queue |

```
nx7500-7F2C13#
```

```
nx7500-7F2C13#show captive-portal-page-upload load-file-status
```

```
Download of CP-BW page file is complete
```

```
nx7500-7F2C13#
```

```
nx7500-7F2C13#show captive-portal-page-upload list-files CP-BW

## cdp

Displays the CDP neighbor table

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show cdp [neighbors|report] {detail {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

### Parameters

```
show cdp [neighbors|report] {detail {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

|                           |  |
|---------------------------|--|
| cdp [neighbors report]    | Displays CDP neighbors table or aggregated CDP neighbors table   |
| detail {on <DEVICE-NAME>} | Optional. Displays detailed CDP neighbors table or aggregated CDP neighbors table <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays table details on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |
| on <DEVICE-NAME>          | Optional. Displays table details on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

### Examples

The following example shows detailed CDP neighbors table:

```

nx9500-6C8809#show cdp neighbors detail
-----
Device ID: ap8163-74B45C
Entry address(es):
  IP Address: 192.168.13.26
Platform: AP-8163-66040-WR, Capabilities: Router Switch
Interface: gel, Port ID (outgoing port): gel
Hold Time: 165 sec

advertisement version: 2
Native VLAN: 1
Duplex: full
Version :
5.9.2.0-007D
-----
Device ID: ap7532-80C2AC
Entry address(es):
  IP Address: 192.168.13.28
Platform: AP-7532-67040-WR, Capabilities: Router Switch

```

```
Interface: ge1, Port ID (outgoing port): ge1
Hold Time: 169 sec

--More--
nx9500-6C8809#
```

The following example shows a non-detailed CDP neighbors table:

```
nx9500-6C8809#show cdp neighbors
-----
      Device ID           Platform          Local Interface   Port ID   Duplex
-----
  rfs4000-880DA7    RFS-4010-11110-US    ge2                ge1       full
-----
nx9500-6C8809#
```

classify-url

Displays a specified URL’s category. Use this command to query the category of a specific URL. The query is sent to a configured classification server. This option is available only if a valid URL filter license is available.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show classify-url [<URL-TO-QUERY>|datacenter <URL-TO-QUERY>]
```

Parameters

```
show classify-url [<URL-TO-QUERY>|datacenter <URL-TO-QUERY>]
```

|                           |  |
|---------------------------|--|
| classify-url              | Queries the category of a specified URL  |
| <URL-TO-QUERY>            | Specify the URL to query. The query is sent to the configured classification server.   |
| datacenter <URL-TO-QUERY> | The query is sent to a global classification datacenter <ul style="list-style-type: none"><li>• &lt;URL-TO-QUERY&gt; - Specify the URL to query.</li></ul> |

Examples

```
nx9500-6C8809#show classify-url www.google.com
Categories: search-engines-portals,
Custom Categories:
nx9500-6C8809#

nx9500-6C8809#show classify-url www.ndtv.com
Categories: news,
Custom Categories: list1,
nx9500-6C8809#
```

## clock

Displays system clock on the logged device or on a specified device

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show clock {on <DEVICE-NAME>}
```

### Parameters

```
show clock {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| clock            | Displays a system's clock  |
| on <DEVICE-NAME> | Optional. Displays system clock on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

### Examples

```
ap8432-070235>show clock
2018-01-09 02:34:22 UTC
ap8432-070235>
```

## cluster

Displays cluster information (cluster configuration parameters, members, status, etc.)

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show cluster [configuration|history|members|status]
show cluster [configuration|history {on <DEVICE-NAME>}|members {detail}|status]
```

### Parameters

```
show cluster [configuration|history {on <DEVICE-NAME>}|members {detail}|status]
```

|                          |  |
|--------------------------|--|
| cluster                  | Displays cluster information   |
| configuration            | Displays cluster configuration details   |
| history on <DEVICE-NAME> | Displays cluster history status <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Optional. Specify the controller or access point name. If the device name is not specified, the system displays all cluster history.</li> </ul> |

|                  |  |
|------------------|--|
| members {detail} | Displays cluster members configured on the logged device <ul style="list-style-type: none"> <li>detail – Optional. Displays detailed information of known cluster members</li> </ul> |
| status           | Displays cluster status  |

### Examples

```
nx9500-6C8809(config)#show cluster configuration
```

```
Cluster Configuration Information
```

```
Name                : SiteConRFS6k
Configured Mode      : Active
Master Priority       : 128
Force configured state : Disabled
Force configured state delay : 5 minutes
Handle STP           : Disabled
Radius Counter DB Sync Time : 5 minutes
```

```
nx9500-6C8809(config)#
```

```
nx9500-6C8809(config)#show cluster members detail
```

```
-----
-----

nx9500-6C8809(config)#
```

## cmp-factory-certs

Displays factory installed CMP certificates

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show cmp-factory-certs {all}
```

### Parameters

```
show cmp-factory-certs {all}
```

|                         |   |
|-------------------------|---|
| cmp-factory-certs {all} | Displays factory installed CMP certificates on the logged device. Optionally use the 'all' keyword to view certificate details. |
|-------------------------|---|

### Examples

```
nx9500-6C8809>show cmp-factory-certs
No CMP factory certificate exist
nx9500-6C8809>
```

## commands

Displays commands available for the current mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show commands
```

### Parameters

None

### Examples

```
v(config)#show commands
help
help search WORD (|detailed|only-show|skip-show|skip-no)
show commands
show adoption log adoptee(|on DEVICE-NAME)
show adoption log adopter (|mac AA-BB-CC-DD-EE-FF) (|on DEVICE-NAME)

```

context

Displays the current context details

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
show context {include-factory|session-config {include-factory}}
```

*Parameters*

```
show context {include-factory|session-config {include-factory}}
```

|                                |  |
|--------------------------------|--|
| include-factory                | Optional. Includes factory defaults  |
| session-config include-factory | Optional. Displays running system information in the current context <ul style="list-style-type: none"><li>• include-factory - Optional. Includes factory defaults</li></ul> |

*Examples*

```
nx9500-6C8809>show context

critical-resources

Displays critical resource information. Critical resources are resources vital to the network.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show critical-resources {on <DEVICE-NAME>}
```

### Parameters

```
show critical-resources {on <DEVICE-NAME>}
```

|                    |  |
|--------------------|--|
| critical-resources | Displays critical resources information  |
| on <DEVICE-NAME>   | Optional. Displays critical resource information on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```
rfs4000-229D58(config)#show critical-resources
-----
CRITICAL RESOURCE IP          VLAN          PING-MODE          STATE

-----
rfs4000-229D58(config)#
```

## crypto

Displays encryption mode information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show crypto [cmp|ike|ipsec|key|pki]
show crypto cmp request status
show crypto ike sa {detail|on|peer|version}
show crypto ike sa {detail|peer <IP>} {on <DEVICE-NAME>}
show crypto ike sa {version [1|2]} {peer <IP>} {(on <DEVICE-NAME>)}
show crypto ipsec sa {detail|on|peer}
show crypto ipsec sa {detail} {on <DEVICE-NAME>}
show crypto ipsec sa {peer <IP>} {detail} {(on <DEVICE-NAME>)}
show crypto key rsa {on|public-key-detail}
show crypto key rsa {public-key-detail} {(on <DEVICE-NAME>)}
show crypto pki trustpoints {<TRUSTPOINT-NAME>|all|on}
show crypto pki trustpoints {<TRUSTPOINT-NAME>|all} {(on <DEVICE-NAME>)}
```

### Parameters

```
show crypto cmp request status
```

|                           |   |
|---------------------------|---|
| crypto cmp request status | Displays current status of in-progress <i>certificate management protocol</i> (CMP) requests<br>For more information, see <a href="#">Crypto-CMP Policy</a> on page 1864. |
|---------------------------|---|

```
show crypto ike sa {detail|peer <IP>} {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| crypto ike sa    | Displays <i>Internet Key Exchange</i> (IKE) SA ( <i>security association</i> ) statistics  |
| detail           | Displays detailed IKE SA statistics  |
| peer <IP>        | Optional. Displays IKE SA statistics for a specified peer <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Specify the peer's IP address in the A.B.C.D format</li> </ul>                             |
| on <DEVICE-NAME> | Optional. Displays IKE SA statistics on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show crypto ike sa {version [1|2]} {peer <IP>} {(on <DEVICE-NAME>)}
```

|                  |  |
|------------------|--|
| crypto ike sa    | Displays IKE SA details  |
| version [1 2]    | Optional. Displays IKE SA version statistics <ul style="list-style-type: none"> <li>• 1 – Displays IKEv1 statistics</li> <li>• 2 – Displays IKEv2 statistics</li> </ul>  |
| peer <IP>        | Optional. Displays IKE SA version statistics for a specified peer <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Specify the peer's IP address in the A.B.C.D format</li> </ul>   |
| on <DEVICE-NAME> | The following keyword is recursive and common to the 'peer ip' parameter: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays IKE SA statistics on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul> |

```
show crypto ipsec sa {detail} {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| crypto ipsec sa  | Displays <i>Internet Protocol Security</i> (IPSec) SA statistics. The IPSec encryption authenticates and encrypts each IP packet in a communication session  |
| detail           | Optional. Displays detailed IPSec SA statistics  |
| on <DEVICE-NAME> | Optional. Displays IPSec SAs on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show crypto ipsec sa {peer <IP>} {detail} {(on <DEVICE-NAME>)}
```

|                  |  |
|------------------|--|
| crypto ipsec sa  | Displays IPsec SA statistics. The IPsec encryption authenticates and encrypts each IP packet in a communication session  |
| peer <IP> detail | Optional. Displays IPsec SA statistics for a specified peer <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Specify the peer's IP address in the A.B.C.D format.</li> <li>• detail – Displays detailed IPsec SA statistics for the specified peer</li> </ul>         |
| on <DEVICE-NAME> | The following keyword is recursive: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays IPsec SAs on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show crypto key rsa {public-key-detail} {(on <DEVICE-NAME>) }
```

|                   |   |
|-------------------|---|
| crypto key rsa    | Displays RSA public keys  |
| public-key-detail | Optional. Displays public key in the <i>Privacy-Enhanced Mail</i> (PEM) format  |
| on <DEVICE-NAME>  | The following keyword is recursive: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays public key on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show crypto pki trustpoints {<TRUSTPOINT-NAME>|all} {(on <DEVICE-NAME>) }
```

|                   |  |
|-------------------|--|
| crypto pki        | Displays PKI related information   |
| trustpoints       | Displays WLAN trustpoints<br>This command displays all trustpoints including CMP-generated trustpoints.  |
| <TRUSTPOINT-NAME> | Optional. Displays a specified trustpoint details. Specify the trustpoint name.  |
| all               | Optional. Displays details of all trustpoints  |
| on <DEVICE-NAME>  | The following keyword is recursive and common to the 'trustpoint-name' and 'all' parameters: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays trustpoints configured on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

## database

Displays database-related statistics and status

*Supported in the following platforms:*

- Service Platforms — NX 95XX, NX 96XX, VX 9000

### Syntax

```
show database [backup-status|keyfile|restore-status|statistics|status|users]
{on <DEVICE-NAME>}
```

### Parameters

```
show database [backup-status|keyfile|restore-status|statistics|status|users]
{on <DEVICE-NAME>}
```

|               |   |
|---------------|---|
| database      | Displays all configured database-related statistics and status  |
| backup-status | Displays the last database backup status  |
| keyfile       | Displays the keyfiles generated on the database host to enable authenticated database access  |
| back-restore  | Displays the last database restore status   |
| statistics    | Displays database-related statistics, such as name of the database (NSight or captive portal), data size, storage size, free disk space available, etc. |

|                  |   |
|------------------|---|
| status           | Displays database status, such as online time.  |
| users            | Displays database users created. These are the users that can access the databases.   |
| on <DEVICE-NAME> | Optional. Displays database-related information on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

## device-upgrade

Displays firmware upgradation information for devices adopted by a wireless controller or access point

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show device-upgrade [history|load-image-status|status|versions]
show device-upgrade [history {on <DOMAIN-NAME>}|load-image-status|
versions {on <DEVICE-OR-DOMAIN-NAME>}]
show device-upgrade status {on [<DOMAIN-NAME>|rf-domain-manager]|
summary {on <DOMAIN-NAME>}}
```

### Parameters

```
show device-upgrade [history {on <DOMAIN-NAME>}|load-image-status|
versions {on <DEVICE-OR-DOMAIN-NAME>}]
```

|                                       |  |
|---------------------------------------|--|
| device-upgrade                        | Displays firmware upgrade information based on the parameters passed   |
| history {on <DOMAIN-NAME>}            | Displays firmware upgrade history <ul style="list-style-type: none"> <li>• on &lt;DOMAIN-NAME&gt; – Optional. Displays upgrade history for all devices within a specified RF Domain. Specify the RF Domain name.</li> </ul>  |
| load-image-status                     | Displays firmware image loading status. The output displays the <DEVICE> image loading status in percentage.<br>For example,<br><pre>#show device-upgrade load-image-status Download of ap81xx firmware file is 47 percent complete</pre>  |
| versions {on <DEVICE-OR-DOMAIN-NAME>} | Displays firmware image versions <ul style="list-style-type: none"> <li>• on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays firmware image versions loaded on specified device or RF Domain.</li> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the AP, wireless controller, service platform, or RF Domain name.</li> </ul> |

```
show device-upgrade status {on [<DOMAIN-NAME>|rf-domain-manager]|
summary {on <DOMAIN-NAME>}}
```

|                |  |
|----------------|--|
| device-upgrade | Displays firmware upgrade information based on the parameters passed |
| status         | Displays in-progress device upgrade status                           |

|                                       |  |
|---------------------------------------|--|
| on [<DOMAIN-NAME>  rf-domain-manager] | <p>Optional. Displays in progress upgrade status of all devices within a specified RF Domain, or all devices upgraded by the RF Domain manager. Use this option to view upgrade status of multiple devices.</p> <ul style="list-style-type: none"> <li>• &lt;DOMAIN-NAME&gt; - Specify the RF Domain name.</li> <li>• rf-domain-manager - Select to view devices upgraded by the RF Domain manager.</li> </ul> |
| summary {on <DOMAIN-NAME>}            | <p>Displays a summary of in-progress upgrade processes</p> <ul style="list-style-type: none"> <li>• on &lt;DOMAIN-NAME&gt; - Optional. Displays in-progress upgrade processes within a specified RF Domain</li> <li>• &lt;DOMAIN-NAME&gt; - Specify the RF Domain name.</li> </ul>   |

## dot1x

Displays dot1x information on interfaces. Dot1x (or 802.1x) is an IEEE standard for network authentication. Devices supporting dot1x allow the automatic provision and connection to the wireless network without launching a Web browser at login. When within range of a dot1x network, a device automatically connects and authenticates without needing to manually login.

However, dot1x-enabled devices can be configured either as:

- supplicants only – Devices seeking network access
- authenticators only – Devices authenticating the supplicants, or
- supplicants as well authenticators

### Note

Dot.1x supplicant configuration is supported on the following platforms:

- Access Points – AP 6522, AP 6562, AP 7161, AP 7502, AP-7522, AP 7532, AP 7562, AP-8163, AP-8432, AP-8533
- Wireless Controllers – RFS 4000
- Service Platforms – NX 5500, NX 75XX

### Note

Dot.1x authenticator configuration is supported on the following platforms:

- Access Points – AP 6522, AP 7161, AP 7161, AP 7502, AP-8163
- Wireless Controllers – RFS 4000
- Service Platforms – NX 5500, NX 75XX

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show dot1x {all|interface|on}
show dot1x {all {on <DEVICE-NAME>}|on <DEVICE-NAME>}
show dot1x {interface [<INTERFACE-NAME>|ge <1-4>|port-channel <1-2>]} {on <DEVICE-NAME>}
```

### Parameters

```
show dot1x {all {on <DEVICE-NAME>}|on <DEVICE-NAME>}
```

|                              |   |
|------------------------------|---|
| dot1x all {on <DEVICE-NAME>} | Optional. Displays dot1x information for all interfaces <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays dot1x information for all interfaces on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |
| dot1x {on <DEVICE-NAME>}     | Optional. Displays dot1x information for interfaces on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of AP, wireless controller, or service platform.</li> </ul>   |

```
show dot1x {interface [<INTERFACE-NAME>|ge <1-4>|port-channel <1-2>]} {on <DEVICE-NAME>}
```

|                    |  |
|--------------------|--|
| dot1x interface    | Optional. Displays dot1x information for a specified interface or interface type   |
| <INTERFACE-NAME>   | Displays dot1x information for the layer 2 (Ethernet port) interface specified by the <INTERFACE-NAME> parameter   |
| ge <1-4>           | Displays dot1x for a specified GigabitEthernet interface <ul style="list-style-type: none"> <li>&lt;1-4&gt; – Select the interface index from 1 - 4.</li> </ul>  |
| port-channel <1-2> | Displays dot1x for a specified port channel interface <ul style="list-style-type: none"> <li>&lt;1-2&gt; – Select the interface index from 1 - 2.</li> </ul>   |
| on <DEVICE-NAME>   | The following keywords are common to all of the above parameters: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays dot1x interface information on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of AP, wireless controller, or service platform.</li> </ul> |

### Examples

```

```

## dpi

Displays *Deep Packet Inspection* (DPI) statistics for all configured and canned applications. DPI is an advanced packet analysis technique, which analyzes packet and packet content headers to determine the nature of network traffic. When DPI is enabled, packets of all flows are subjected to DPI to get accurate results. DPI identifies applications (such as, Netflix, Twitter, Facebook, etc.) and also extracts metadata (such as, host name, server name, TCP-RTT, etc.) for further use by the WiNG firewall.

### Note

The `show > dpi` command returns results only if executed on a device that supports DPI and has DPI logging enabled. DPI logging can be enabled either on the device or on the profile applied to the device. For more information, see [dpi](#) on page 983 (profile config mode).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show dpi [app|per-purview-category|purview-app-category|purview-application|
purview-application-policy]
show dpi app [stats|wireless-clients|wlan]
show dpi app stats [<APPLICATION-NAME>|all] {on <DEVICE-OR-DOMAIN-NAME>}
show dpi app wireless-clients stats <MAC> {on <DEVICE-OR-DOMAIN-NAME>}
show dpi app wlan stats [<WLAN-NAME>|all] on <RF-DOMAIN-NAME>
show dpi per-purview-category stats <PURVIEW-APP-CATEGORY-NAME>
[bytes-in|bytes-out|total-bytes] {on <DEVICE-OR-DOMAIN-NAME>}
show dpi purview-application brief
show dpi purview-application-policy stats <PURVIEW-APP-POLICY-NAME>
{on <DEVICE-NAME>}
```

### Parameters

```
show dpi app wireless-clients stats <MAC> {<DEVICE-OR-DOMAIN-NAME>}
```

|   |   |
|---|---|
| <code>dpi app wireless-clients &lt;MAC&gt;</code> | <p>Displays application-usage statistics for all wireless clients or a specified wireless client</p> <ul style="list-style-type: none"> <li>• <code>&lt;MAC&gt;</code> – Displays application usage stats for a specified wireless client. To view applications used by a specific wireless client, specify the client's MAC address.</li> </ul> <p><b>Note:</b> If no MAC address is specified, application usage stats is displayed for all wireless clients within the network (i.e., all RF Domains)</p>  |
| <code>on &lt;DEVICE-OR-DOMAIN-NAME&gt;</code>     | <p>Optional. Displays application-usage stats for wireless clients associated with a specified device or within a specified RF Domain</p> <ul style="list-style-type: none"> <li>• <code>&lt;DEVICE-OR-DOMAIN-NAME&gt;</code> – Specify the name of the access point, wireless controller, service platform, or RF Domain.</li> </ul> <p><b>Note:</b> If you specify an access point name, the application usage stats for wireless clients associated with the specified AP is displayed. In case of an RF Domain, application usage stats for all wireless clients associated with APs within the specified RF Domain is displayed.</p> |

```
show dpi app stats [<APPLICATION-NAME>|all] {on <DEVICE-OR-DOMAIN-NAME>}
```

|   |  |
|---|--|
| <code>dpi app stats</code>                    | <p>Displays statistics for an application or application category</p> <ul style="list-style-type: none"> <li>• <code>app</code> – Displays statistics for a specified application or all applications</li> </ul> <p><b>Note:</b> The applications are the RF Domain member allowed applications whose data (bytes) are passing through the WiNG 7.X.X managed network.</p> |
| <code>[&lt;APPLICATION-NAME&gt; all]</code>   | <p>This parameter is common to the 'app' and 'app-category' keywords.</p> <ul style="list-style-type: none"> <li>• <code>&lt;APPLICATION-NAME&gt;</code> – Displays statistics for a specified application</li> <li>• <code>all</code> – Displays statistics for all applications</li> </ul>   |
| <code>on &lt;DEVICE-OR-DOMAIN-NAME&gt;</code> | <p>Optional. Displays statistical data on a specified device or RF Domain</p> <ul style="list-style-type: none"> <li>• <code>&lt;DEVICE-OR-DOMAIN-NAME&gt;</code> – Specify the name of the access point, wireless controller, service platform, or RF Domain.</li> </ul>  |

```
show dpi app wlan stats [<WLAN-NAME>|all] on <RF-DOMAIN-NAME>
```

|   |   |
|---|---|
| <code>dpi app wlan stats [&lt;WLAN-NAME&gt; all]</code> | <p>Displays application-usage statistics for all wireless clients associating with a specified network or all networks</p> <ul style="list-style-type: none"> <li>• <code>&lt;WLAN-NAME&gt;</code> – Displays application usage stats for a specified wireless network.</li> <li>• <code>all</code> – Displays application usage stats for all wireless networks configured within the system.</li> </ul> |
| <code>on &lt;RF-DOMAIN-NAME&gt;</code>                  | <p>Optional. Displays application-usage stats for wireless clients within a specified RF Domain</p> <ul style="list-style-type: none"> <li>• <code>&lt;RF-DOMAIN-NAME&gt;</code> – Specify the name of the RF Domain.</li> </ul>  |

```
show dpi purview-application-policy stats <PURVIEW-APP-POLICY-NAME>
{on <DEVICE-NAME>}
```

|                                      |  |
|--------------------------------------|--|
| dpi purview-application-policy stats | Displays statistics for an existing Purview application policy   |
| <PURVIEW-APP-POLICY-NAME>            | Displays statistics for a specified Purview application-policy. Specify the policy name.   |
| on <DEVICE-OR-DOMAIN-NAME>           | Optional. Displays Purview application-policy related statistical data on a specified device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the access point, wireless controller, service platform, or RF Domain.</li> </ul> |

```
show dpi purview-application brief
```

|                               |   |
|-------------------------------|---|
| dpi purview-application brief | Displays a brief summary of purview-applications their status and configuration |
|-------------------------------|---|

```
show dpi per-purview-category stats <PURVIEW-APP-CATEGORY-NAME>
[bytes-in|bytes-out|total-bytes] {on <DEVICE-OR-DOMAIN-NAME>}
```

|                                   |  |
|-----------------------------------|--|
| dpi per-purview-category stats    | Displays statistics for the top ten applications based on the application category and the Sort ID specified. The Sort ID options are: bytes-in, bytes-out or total-bytes.   |
| <PURVIEW-APP-CATEGORY-NAME>       | Specify the Purview application category name. The system displays statistics for the top ten applications in this category.   |
| [bytes-in bytes-out  total-bytes] | Filters and displays statistical data for the top ten utilized applications in respect to the following: <ul style="list-style-type: none"> <li>bytes-in – Displays total data bytes uploaded through the controller managed network. If this application data is not aligned with application utilization expectations, consider allowing or denying additional applications and categories or adjusting their precedence (priority).</li> <li>bytes-out – Displays total data bytes downloaded through the controller managed network. If this application data is not aligned with application utilization expectations, consider allowing or denying additional applications and categories or adjusting their precedence (priority).</li> <li>total-bytes – Displays total data bytes (uploaded and downloaded) through the controller managed network. These are only the administrator allowed applications approved for proliferation within the managed network.</li> </ul> |
| on <DEVICE-OR-DOMAIN-NAME>        | Optional. Displays statistical data on a specified device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the access point, wireless controller, service platform, or RF Domain.</li> </ul>  |

## environmental-sensor

Displays environmental sensor's recorded data. The environmental sensor has to be enabled and configured in order to collect data related to humidity, light, motion, and temperature.

### Note

The environmental sensor is supported only on an AP 8132. When executed on any controller (other than an AP 8132), the `show > environmental-sensor > <parameters>` command displays environmental-sensor details for adopted AP 8132s (if any).

*Supported in the following platforms:*

- AP 8132

### Syntax

```

show environmental-sensor [history|humidity|light|motion|summary|temperature|
version]
show environmental-sensor history {<1-HOUR>|<20-MINUTE>|<24-HOUR>}
show environmental-sensor [humidity|light|motion|summary|temperature|version]

```

### Parameters

```

show environmental-sensor history {<1-HOUR>|<20-MINUTE>|<24-HOUR>}

```

|                              |  |
|------------------------------|--|
| environmental-sensor history | Displays environmental sensor history once in every hour, 20 minutes, or 24 hours<br>History includes the humidity, light, motion, and temperature data recorded by the sensor at specified time interval. |
| 1 hour                       | Optional. Displays environmental sensor history once in every 1 (one) hour   |
| 20-minute                    | Optional. Displays environmental sensor history once in every 20 minutes   |
| 24-hour                      | Optional. Displays environmental sensor history once in every 24 hours   |

```
show environmental-sensor [humidity|light|motion|summary|temperature|version]
```

|                      |   |
|----------------------|---|
| environmental-sensor | Displays environmental sensor's recorded data, based on the parameters passed. The system displays the specified recorded data.<br>The environmental sensor records data at the following intervals: 20 minutes, 1 hour, and 24 hours |
| humidity             | Displays the minimum, average, and maximum humidity recorded  |
| light                | Displays the minimum, average, and maximum light recorded   |
| motion               | Displays the minimum, average, and maximum motion recorded  |
| temperature          | Displays the minimum, average, and maximum temperature recorded   |
| version              | Displays the hardware and firmware versions   |
| summary              | Displays a summary of the data recorded at following intervals:   |

## event-history

Displays event history report

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show event-history {on <DEVICE-OR-DOMAIN-NAME>}
```

### Parameters

```
show event-history {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| event-history              | Displays event history report   |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Displays event history report on a device or RF Domain <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

### Examples

```

## event-system-policy

Displays detailed event system configuration

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
show event-system-policy [config|detail] <EVENT-SYSTEM-POLICY-NAME>
```

*Parameters*

```
show event-system-policy [config|detail] <EVENT-SYSTEM-POLICY-NAME>
```

|                             |  |
|-----------------------------|--|
| event-system-policy         | Displays event system policy configuration             |
| config                      | Displays configuration for a specified policy          |
| detail                      | Displays detailed configuration for a specified policy |
| <EVENT-SYSTEM- POLICY-NAME> | Specify the event system policy name.                  |

*Examples*

```
nx9500-6C8809(config)#show event-system-policy config testpolicy
-----
MODULE          EVENT          SYSLOG    SNMP    FORWARD    EMAIL
-----
aaa      radius-discon-msg    on        on       on          default
-----
nx9500-6C8809(config)#
```

## ex3500

Displays EX3500-related statistical data

*Supported in the following platforms:*

- Service Platforms — NX 75XX, NX 95XX, NX 96XX

*Syntax*

```
show ex3500 [dir|interfaces|system|upgrade|version|whichboot]
show ex3500 dir {boot-rom|config|on|opcode} {<FILE-NAME>}
{on <EX3500-DEVICE-NAME>}
show ex3500 interfaces counters [ether-like stats|ethernet <1-1> <1-52>|
ext-if-table stats|if-table stats|portUtil stats|rmon stats]
{on <EX3500-DEVICE-NAME>}
show ex3500 [system|upgrade|version|whichboot]
{on <EX3500-DEVICE-NAME>}
```

## Parameters

```
show ex3500 dir {boot-rom|config|on|opcode} {<FILE-NAME>}
{on <EX3500-DEVICE-NAME>}
```

|                         |   |
|-------------------------|---|
| ex3500 dir              | Displays EX3500 directory information based on the option selected. The options are: boot-rom, config, opcode<br><br><b>Note:</b> If none of the specified options is selected, all EX3500 system-related information is displayed. |
| boot-rom                | Optional. Displays only the Boot-ROM information  |
| config                  | Optional. Displays only the configuration file  |
| opcode                  | Optional. Displays only the run-time operation code   |
| <FILE-NAME>             | Displays the contents of a specified file identified by the <FILE-NAME> keyword. This is the name of configuration file or code image.  |
| on <EX3500-DEVICE-NAME> | Optional. Executes the command on a specified EX3500 device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the device's name.</li> </ul>  |

```
show ex3500 interfaces counters [ether-like stats|ethernet <1-1> <1-52>|
ext-if-table stats|if-table stats|portUtil stats|rmon stats]
{on <EX3500-DEVICE-NAME>}
```

|                            |   |
|----------------------------|---|
| ex3500 interfaces counters | Displays EX3500 interface counters based on the option selected. The options are: <b>ether-like</b> , <b>ethernet</b> , <b>ext-if-table</b> , <b>if-table</b> , <b>portUtil</b> , <b>rmon</b>   |
| ether-like stats           | Displays <i>Managed Information Base</i> (MIB) object statistics for Ethernet-like interfaces   |
| ethernet <1-1> <1-52>      | Displays the Ethernet port statistics based on the unit identifier and port number selected <ul style="list-style-type: none"> <li>&lt;1-1&gt; - Specify the EX3500 unit's identifier from 1 - 1.</li> <li>&lt;1-52&gt; - Specify the port number from 1 - 52. This range varies for the EX3524 (1-28) and EX3548 (1-52) devices.</li> </ul> <b>Note:</b> This option displays the following for the selected Ethernet interface: extended interface table stats, interface table stats, port utilization information, and remote monitoring stats. |
| ext-if-table stats         | Displays only the extended interface table statistics   |
| if-table stats             | Displays only the interface table statistics  |
| portUtil stats             | Displays only the port utilization information  |
| rmon stats                 | Displays only <i>remote monitoring</i> (RMon) statistics  |
| on <EX3500-DEVICE-NAME>    | Optional. Executes the command on a specified EX3500 device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the device's name.</li> </ul>  |

```
show ex3500 [system|upgrade|version|whichboot] {on <EX3500-DEVICE-NAME>}
```

|                         |  |
|-------------------------|--|
| ex3500                  | Displays the following information for a specified EX3500 device or all EX3500 devices in the managed network  |
| system                  | Displays EX3500 system information, such as device description, OID string, up time, name, location, contact, MAC address, etc. Some of these information (example, system name) are configurable items, and if not configured are left blank. |
| upgrade                 | Displays the opcode upgrade configuration settings   |
| version                 | Displays hardware and software version information for a EX3500 system   |
| whichboot               | Displays boot information  |
| on <EX3500-DEVICE-NAME> | Optional. Executes the command on a specified EX3500 device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the device's name.</li> </ul>   |

## extdev

Displays external device (T5 or EX3500) configuration error history

*Supported in the following platforms:*

- Wireless Controllers — RFS 4000
- Service Platforms — NX 95XX, NX 96XX

### Syntax

```
show extdev error history {on <T5/EX3500-DEVICE-NAME>}
```

### Parameters

```
show extdev error history {on <T5/EX3500-DEVICE-NAME>}
```

|                            |   |
|----------------------------|---|
| extdev error history       | Displays external device error history. This command is applicable only to the external devices T5, and EX3500 series switches. Use this command to view configuration error history for all or a specified external device adopted and managed by a WiNG NX series service platform. |
| on <T5/EX3500-DEVICE-NAME> | Optional. Displays configuration error history on a specified T5 or EX3500 device <ul style="list-style-type: none"> <li>• &lt;T5/EX3500-DEVICE-NAME&gt; - Specify the name of the device.</li> </ul>   |

### Examples

```

nx9500-6C8809#show extdev error history on t5-ED5EAC
%% No History for this device
nx9500-6C8809#

```

## fabric-attach

Displays the current status of FA (*Fabric Attach*) VLAN to I-SID (*Individual Service Identifier*) assignments for all ports.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show fabric-attach assignments {on <DEVICE-NAME>}
```

### Parameters

```
show fabric-attach assignments {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| fabric-attach    | Displays the status of VLAN to I-SID mappings, if configured, on the Ethernet ports of an FA Client. The status displays as: <ul style="list-style-type: none"> <li>• active – If the VLAN to I-SID mapping is accepted by the FA Server and applied to the VLAN traffic from the client.</li> <li>• pending – If the VLAN to I-SID mapping acceptance is not achieved (i.e, pending acceptance)</li> </ul> |
| on <DEVICE-NAME> | Optional. Displays VLAN to I-SID mappings on a specified FA client. If executing this command on a controller, you may, optionally, specify the device for which the FA VLAN to I-SID assignments is to be displayed. <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>                                       |

### Example

The Following example shows the fabric-attach VLAN to ISID assignment configured on the ap510-13403B access point:

```
nx9600-7F3B2C#
ap510 94-9B-2C-13-40-38
use profile default-ap510
use rf-domain default
hostname ap510-13403B
interface gel
switchport mode trunk
switchport trunk fabric-attach vlan 110 isid 10180110
switchport trunk native vlan 110
switchport trunk native tagged
switchport trunk allowed vlan 110
interface vlan110
ip address dhcp
ip dhcp client request options all
nx9600-7F3B2C#
```

The following example shows the fabric-attach assignment status for the ap7532-000100 access point:

```
nx9600-7F3B2C#show fabric-attach assignments on ap505-13403B

Assignment status for port : gel
VLAN      ISID      STATUS
----      ----      -
110      10180110  Accepted

nx9600-7F3B2C#
```

## file

Displays file system information

### Note

This command is not available in the USER EXEC mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show file [information <FILE>|systems]
```

### Parameters

```
show file [information <FILE>|systems]
```

|                    |   |
|--------------------|---|
| information <FILE> | Displays file information <ul style="list-style-type: none"> <li>• &lt;FILE&gt; - Specify the file name.</li> </ul> |
| systems            | Lists all file systems present in the system  |

### Examples

```
ap8432-070235#show file systems
File Systems:

      Size(Mb)      Free(Mb)  Use%   Type  Prefix
          64          62      3   flash nvram:
          84          81      2   flash flash:
          137         82     40      -  vmsdb:
ap8432-070235#
nx9500-6C8809#show file information startup-config
nvram:startup-config:
  type is configuration file
nx9500-6C8809#
```

## file-sync

Displays file synchronization settings and status on a controller. The `file-sync` command syncs wireless-bridge certificate and trustpoint between the staging-controller and its adopted access points. The `show > file-sync` command displays information related to this process.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
show file-sync [configuration|history|load-file-status|status]
{on <DEVICE-OR-DOMAIN-NAME>}
```

## Parameters

```
show file-sync [configuration|history|load-file-status|status]
{on <DEVICE-OR-DOMAIN-NAME>}
```

|                             |   |
|-----------------------------|---|
| file-sync                   | Displays the following file-synchronization (trustpoint and wireless-bridge certificate) related information: configuration, history, load-file-status, and status  |
| configuration               | <p>Displays the following file-synchronization configuration details:</p> <ul style="list-style-type: none"> <li>automatic file-syncing enabled or disabled. The default setting is disabled.</li> </ul> <p>The X.509 certificate needs synchronization only if the access point's radio2 is configured to use EAP-TLS authentication. In which case PKCS#12 certificate needs to be pushed on AP adoption. To enable automatic file syncing, in the controller's device/profile configuration mode, execute the <code>file-sync &gt; auto</code> command. For more information, see <a href="#">file-sync</a> on page 996 (profile config mode).</p> <ul style="list-style-type: none"> <li>Number of access points to which the certificate can be simultaneously uploaded. The default is 10.</li> </ul> <p>To modify the number of simultaneous uploads, in the controller's device/profile configuration mode, execute the <code>file-sync &gt; count &lt;1-20&gt;</code> command. For more information, see <a href="#">file-sync</a> on page 996 (profile config mode).</p> <ul style="list-style-type: none"> <li>Scheduled certificate upload, if any, details, such time and date of upload.</li> </ul> <p>To schedule certificate upload, use the <code>file-sync &gt; wireless-certificate</code> command. For more information, see <a href="#">file-sync</a> on page 996 (profile config mode).</p> |
| history                     | Displays file synchronization history. Use this option to view statistical data relating to wireless-bridge certificate synchronization between staging controller and its access points. When executed, a list of all certificate transfers made to the APs is displayed, with the latest transfer listed at the top.  |
| load-file-status            | Displays the status of the file upload to the controller. Use this command to view the status of a in-progress certificate upload. For more information on initiating a PKCS#12 certificate upload, see <a href="#">file-sync</a> on page 996 (profile config mode).  |
| status                      | Displays status of the file synchronization between the controller and its adopted access point.  |
| on <DEVICE-OR-DOMAIN- NAME> | <p>Optional. Displays file synchronization settings and status on a specified device or RF Domain</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN- NAME&gt; – Specify the name of the controller, service platform, or RF Domain.</li> </ul>  |

## Examples

```

  Simultaneous Upload Count : 10
ap505-13403B#

```

## firewall

Displays wireless firewall information, such as *Dynamic Host Configuration Protocol* (DHCP) snoop table entries, denial of service statistics, active session summaries, etc.

### Note

This command is not available in the USER EXEC mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```

show firewall [dhcp|flows|neighbors]
show firewall dhcp snoop-table {on <DEVICE-NAME>}
show firewall flows {filter|management|on|stats|wireless-client}
show firewall flows {filter} {(dir|dst port <1-65535>|ether|flow-type|icmp|
icmpv6|igmp|ip|ipv6|max-idle|min-bytes|min-idle|min-pkts|not|port|src|tcp|udp)}
show firewall flows {management {on <DEVICE-NAME>}}|stats {on <DEVICE-NAME>}}|
wireless-client <MAC>|on <DEVICE-NAME>}
show firewall neighbors snoop-table {on <DEVICE-NAME>}

```

## Parameters

```

show firewall dhcp snoop-table {on <DEVICE-NAME>}

```

|   |   |
|---|---|
| firewall dhcp snoop-table {on<br><DEVICE-NAME>} | <p>Displays DHCP snoop table entries</p> <ul style="list-style-type: none"> <li>snoop-table – Displays DHCP snoop table entries</li> </ul> <p>DHCP snooping acts as a firewall between non-trusted hosts and the DHCP server. Snoop table entries contain MAC address, IP address, lease time, binding type, and interface information of non-trusted interfaces.</p> |
| on <DEVICE-NAME>                                | <p>The following keyword is common to the 'DHCP snoop table' and 'DoS stats' parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays snoop table entries, or DoS stats on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>               |

```
show firewall flows {filter} { (dir|dst|ether|flow-type|icmp|icmpv6|igmp|ip|
ipv6|max-idle|min-bytes|min-idle|min-pkts|not|port|src|tcp|udp) }
```

|   |  |
|---|--|
| firewall flows  | Notifies a session has been established  |
| filter  | Optional. Defines additional firewall flow filter parameters   |
| dir [wired-wired  wired-wireless <br>wireless-wired  wireless-wireless] | <p>Optional. Matches the packet flow direction</p> <ul style="list-style-type: none"> <li>wired-wired – Wired to wired flows</li> <li>wired-wireless – Wired to wireless flows</li> <li>wireless-wired – Wireless to wired flows</li> <li>wireless-wireless – Wireless to wireless flows</li> </ul>  |
| dst port <1-65535>  | <p>Optional. Matches the destination port with the specified port</p> <ul style="list-style-type: none"> <li>port &lt;1-65535&gt; – Specifies the destination port number from 1 - 65535</li> </ul>  |
| ether [dst <MAC>  host <MAC> <br>src <MAC>  vlan <1-4094>]              | <p>Optional. Displays Ethernet filter options</p> <ul style="list-style-type: none"> <li>dst &lt;MAC&gt; – Matches only the destination MAC address</li> <li>host &lt;MAC&gt; – Matches flows containing the specified MAC address</li> <li>src &lt;MAC&gt; – Matches only the source MAC address</li> <li>vlan &lt;1-4094&gt; – Matches the VLAN number of the traffic with the specified value. Specify a value from 1- 4094.</li> </ul> |
| flow-type [bridged natted routed <br>wired wireless]                    | <p>Optional. Matches the traffic flow type</p> <ul style="list-style-type: none"> <li>bridged – Bridged flows</li> <li>natted – Natted flows</li> <li>routed – Routed flows</li> <li>wired – Flows belonging to wired hosts</li> <li>wireless – Flows containing a mobile unit</li> </ul>  |
| icmp {code type}  | <p>Optional. Matches flows with the specified <i>Internet Control Message Protocol</i> (ICMP) version 4 code and type</p> <ul style="list-style-type: none"> <li>code – Matches flows with the specified ICMPv4 code</li> <li>type – Matches flows with the specified ICMPv4 type</li> </ul>   |
| icmpv6 {code type}  | <p>Optional. Matches flows with the specified ICMP version 6 code and type</p> <ul style="list-style-type: none"> <li>code – Optional. Matches flows with the specified ICMPv6 code</li> <li>type – Optional. Matches flows with the specified ICMPv6 type</li> </ul>  |
| igmp  | Optional. Matches <i>Internet Group Management Protocol</i> (IGMP) flows   |

|   |   |
|---|---|
| ip [dst <IP>  host <IP>  proto <0-254>  src <IP>]         | Optional. Filters firewall flows based on the IPv4 parameters passed <ul style="list-style-type: none"> <li>dst &lt;IP&gt; – Matches destination IP address</li> <li>host &lt;IP&gt; – Matches flows containing IPv4 address</li> <li>proto &lt;0-254&gt; – Matches the IPv4 protocol number with the specified number</li> <li>src &lt;IPv4&gt; – Matches source IP address</li> </ul>         |
| ipv6 [dst <IPv6>  host <IPv6>  proto <0-254>  src <IPv6>] | Optional. Filters firewall flows based on the IPv6 parameters passed <ul style="list-style-type: none"> <li>dst &lt;IPv6&gt; – Matches destination IPv6 address</li> <li>host &lt;IPv6&gt; – Matches flows containing IPv6 address</li> <li>proto &lt;0-254&gt; – Matches the IPv6 protocol number with the specified number</li> <li>src &lt;IPv6&gt; – Matches source IPv6 address</li> </ul> |
| max-idle <1-4294967295>                                   | Optional. Filters firewall flows idle for at least the specified duration. Specify a max-idle value from 1 - 4294967295 bytes.  |
| min-bytes <1-4294967295>                                  | Optional. Filters firewall flows with at least the specified number of bytes. Specify a min-bytes value from 1 - 4294967295 bytes.  |
| min-idle <1-4294967295>                                   | Optional. Filters firewall flows idle for at least the specified duration. Specify a min-idle value from 1 - 4294967295 bytes.  |
| min-pkts <1-4294967295>                                   | Optional. Filters firewall flows with at least the given number of packets. Specify a min-bytes value from 1 - 4294967295 bytes.  |
| not   | Optional. Negates the filter expression selected  |
| port <1-65535>  | Optional. Matches either the source or destination port. Specify a port from 1 - 65535.   |
| src <1-65535>   | Optional. Matches only the source port with the specified port. Specify a port from 1 - 65535.  |
| tcp   | Optional. Matches TCP flows   |
| udp   | Optional. Matches UDP flows   |

```
show firewall flows {management {on <DEVICE-NAME>}}|stats {on <DEVICE-NAME>}}|
wireless-client <MAC>|on <DEVICE-NAME>}
```

|                               |  |
|-------------------------------|--|
| firewall flows                | Notifies a session has been established  |
| management {on <DEVICE-NAME>} | Optional. Displays management traffic firewall flows <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays firewall flows on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul> |
| stats {on <DEVICE-NAME>}      | Optional. Displays active session summary <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays active session summary on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul>    |

|                       |   |

global

Displays global information for network devices based on the parameters passed

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show global [device-list|domain]
show global device-list {filter {offline|online|rf-domain}}
show global device-list {filter {offline|online}}
show global device-list {filter rf-domain [<DOMAIN-NAME>|not <DOMAIN-NAME>]}
show global domain managers
```

Parameters

```
show global device-list {filter {offline|online}}
```

|                        |  |
|------------------------|--|
| global device -list    | Displays global information for all network devices. Use the following keywords to specify additional filters: <b>offline</b> , <b>online</b> , and <b>rf-domain</b> .   |
| filter{offline online} | Optional. Specifies additional filters <ul style="list-style-type: none"><li>• offline – Optional. Displays global information for offline devices only</li><li>• online – Optional. Displays global information for online devices only</li></ul> |

```
show global device-list {filter rf-domain [<DOMAIN-NAME>|not <DOMAIN-NAME>]}
```

|  |   |
|--|---|
| global device -list                                    | Displays global information for all network devices. Use the following keywords to specify additional filters: <b>offline</b> , <b>online</b> , and <b>rf-domain</b> .  |
| filter rf-domain [<DOMAIN-NAME> <br>not <DOMAIN-NAME>] | Optional. Specifies additional filters <ul style="list-style-type: none"> <li>rf-domain – Optional. Displays global information for all devices in a specified RF Domain</li> <li>&lt;DOMAIN-NAME&gt; – Optional. Displays information for all devices within the domain identified by the &lt;DOMAIN-NAME&gt; keyword</li> <li>not &lt;DOMAIN-NAME&gt; – Optional. Displays information for all devices in domains not matching the &lt;DOMAIN-NAME&gt; keyword</li> </ul> |

```
show global domain managers
```

|                        |   |
|------------------------|---|
| global domain managers | Displays global information for all RF Domains managers in the network. |
|------------------------|---|

### Examples

### gps (show command)

Displays the geographical coordinates (latitude and longitude) of the device for which the GPS coordinates search process has been triggered. The system displays the last recorded GPS coordinates of the device.

This feature is supported only on AP7662, which has a built-in, GPS hardware that starts and stops the GPS coordinates search process. To view the GPS coordinates of an AP7622, initiate GPS coordinates search and then execute the 'show > gps' command.

#### Note

For more information on starting and stopping the GPS coordinate search process, see [#unique\\_622](#).

*Supported in the following platforms:*

- AP 7622

#### Syntax

```
show gps coordinates {on <DEVICE-NAME>}
```

#### Parameters

```
show gps coordinates {on <DEVICE-NAME>}
```

|                      |   |
|----------------------|---|
| show gps coordinates | Displays the GPS coordinates of a device  |
|                      | <b>Note:</b><br>The command displays the last recorded GPS coordinates of the device.   |
| on <DEVICE-NAME>     | Optional. Specifies the name of the AP whose GPS coordinates are to be displayed. Use this option if executing the command on the controller or virtual controller to which the AP is adopted.        |
|                      | <b>Note:</b><br>If you do not specify a device name, the system initiates the search on the logged device. And if the logged device is not an AP7662 model access point, an error message returns. If |

#### Examples

```
ap7662-8BDE4D#show gps coordinates
GPS Search is in progress.
Last location recorded at UTC time : Mon Apr 23 22:10:54 2018 : Latitude : 13.036N
Longitude : 77.3827E
ap7662-8BDE4D#
```

## gre

Displays layer 2 *Generic Routing Encapsulation* (GRE) tunnel traffic flow information

GRE is one of the available tunneling mechanisms which uses IP as the transport protocol and can be used for carrying many different passenger protocols. The tunnels behave as virtual point-to-point links that have two endpoints identified by the tunnel source and tunnel destination addresses at each endpoint.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

*Syntax*

```
show gre info {detail} {(on <DEVICE-NAME>)}
```

*Parameters*

```
show gre info {detail} {(on <DEVICE-NAME>)}
```

|                  |   |
|------------------|---|
| gre info         | Displays GRE tunnel related information and stats.  |
| detail           | Optional. Displays GRE tunnel information in detail, such as tunnel state, tunnel's remote-end peer device's IP address, session ID of an operational tunnel, total number of packets received and transmitted through the tunnel, and the number of dropped packets during tunneled exchanges between access point and a peer at the remote end of the tunnel. |
| on <DEVICE-NAME> | Optional. Executes the command on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the access point, controller, or service platform.</li> </ul>   |

*Examples*

```
nx9500-6C8809#show gre info
Gre Tunnel info:
  Tunnel info not found
nx9500-6C8809#
```

## guest-registration

Displays information on the performance of clients using guest access permissions to obtain network resources within the WiNG network. The reporting timeline can be adjusted as needed, as can the RF Domain(s) and WLAN(s) used to filter and report guest client statistics.

*Supported in the following platforms:*

- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

## Syntax

```
show guest-registration [age-range|backup-snapshots|browsers|client|devices|
gender|loyalty-app-status|notification-status|os|social|user-trends|visitors]
{on <DEVICE-NAME>}

show guest-registration backup-snapshots

show guest-registration [age-range|browsers|devices|gender|os|user-trends|
visitors] time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all]
{(rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>)}

show guest-registration client [email|mac|member|mobile|name|time]

show guest-registration client [email <EMAIL-ADDRESS>|mac <MAC>|
member <MEMBER-ID>|mobile <MOBILE-NUMBER>|name <NAME>]

show guest-registration client time [1-Hour|10-Mins|15-Mins|2-Mins|30-Mins|
30-Secs|5-Mins] {(rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>)}

show guest-registration loyalty-app-status time [1-Day|1-Month|1-Week|2-Hours|
30-Mins|5-Hours|all] {(rfdomain <RF-DOMAIN-NAME>|wlan <WLAN-NAME>)}

show guest-registration notification-status

show guest-registration social time [1-Day|1-Month|1-Week|2-Hours|30-Mins|
5-Hours|all] {(facebook|rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>|google)}
```

## Parameters

```
show guest-registration backup-snapshots
```

|                    |   |
|--------------------|---|
| guest-registration | Displays guest registration statistics based on the parameters passed   |
| backup-snapshots   | Displays a list of periodically backed up snapshots of the database. By default, the system maintains a snapshot of the database on a daily basis.  |
|                    | <b>Note:</b> Use the <code>service &gt; guest-registration &gt; backup [delete restore]</code> command to delete these snapshots and to restore deleted snapshots. For more information, see <a href="#">service</a> on page 621 (common commands). |

```
show guest-registration [age-range|browsers|devices|gender|os|user-trends|visitors]
time [1-Day|1-Month|1-Week|2-Hours|30-Mins|5-Hours|all] {(rfdomain <DOMAIN-NAME>|
wlan <WLAN-NAME>)}
```

|                    |   |
|--------------------|---|
| guest-registration | Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN. |
| age-range          | Displays the age ranges of logged guest users for a selected time period  |
| browser            | Displays the browsers used by guest users logged in within a selected time period   |
| devices            | Displays the device types used by guest users logged in within a selected time period   |
| gender             | Displays the gender of guest users logged in within a selected time period  |
| os                 | Displays the <i>operating system</i> (OS) of devices logged in within a selected time period  |
| user-trends        | Displays guest user login trends for a selected time period. It displays statistical data, such as number of new users, number of return users, and total of number users.  |

|   |   |
|---|---|
| visitors  | Displays type of visitors logged in within a selected time period   |
| time [1-Day 1-Month 1-Week 2-Hours 30-Mins 5-Hours all] | <p>Displays guest registration statistics, for a specified time period. The stats displayed depends on the option selected in the previous step. Specify the time period using one of the following options:</p> <ul style="list-style-type: none"> <li>1-Day – Displays previous day's statistics</li> <li>1-Month – Displays previous month's statistics</li> <li>1-Week – Displays previous week's statistics</li> <li>2-Hours – Displays last 2 hours statistics</li> <li>30-Mins – Displays last 30 minutes statistics</li> <li>5-Hours – Displays last 5 hours statistics</li> <li>all – Displays statistics from the day the database was created</li> </ul> |
| [rfdomain <DOMAIN-NAME> wlan <WLAN-NAME>]               | <p>Use the following options as additional filters:</p> <ul style="list-style-type: none"> <li>rfdomain &lt;DOMAIN-NAME&gt; – Optional. Displays guest registration statistics for a specified RF Domain. <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> </li> <li>wlan &lt;WLAN-NAME&gt; – Optional. Displays guest registration statistics for a specified WLAN. <ul style="list-style-type: none"> <li>&lt;WLAN-NAME&gt; – Specify the WLAN name.</li> </ul> </li> </ul>  |

```
show guest-registration client [email <EMAIL-ADDRESS>|mac <MAC>|member <MEMBER-ID>|
mobile <MOBILE-NUMBER>|name <NAME>]
```

|                        |   |
|------------------------|---|
| guest-registration     | Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN.             |
| client                 | Displays statistical data for a specific client. Use the e-mail, mac, member, mobile, name to provide a match criteria.   |
| email <EMAIL-ADDRESS>  | <p>Displays statistical data for the client with e-mail address matching the &lt;EMAIL-ADDRESS&gt; parameter</p> <ul style="list-style-type: none"> <li>&lt;EMAIL-ADDRESS&gt; – Specify the client's e-mail address.</li> </ul> |
| mac <MAC>              | <p>Displays statistical data for the client with MAC address matching the &lt;MAC&gt; parameter</p> <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Specify the client's MAC address</li> </ul>                            |
| member <MEMBER-ID>     | <p>Displays statistical data for the client with member ID matching the &lt;MEMBER-ID&gt; parameter</p> <ul style="list-style-type: none"> <li>&lt;MEMBER-ID&gt; – Specify the client's member ID.</li> </ul>                   |
| mobile <MOBILE-NUMBER> | <p>Displays statistical data for the client with mobile number matching the &lt;MOBILE-NUMBER&gt; parameter</p> <ul style="list-style-type: none"> <li>&lt;MOBILE-NUMBER&gt; – Specify the client's mobile number.</li> </ul>   |
| name <NAME>            | <p>Displays statistical data for the client with name matching the &lt;NAME&gt; parameter</p> <ul style="list-style-type: none"> <li>&lt;MOBILE-NUMBER&gt; – Specify the client's name.</li> </ul>                              |

```
show guest-registration client time [1-Hour|10-Mins|15-Mins|2-Mins|30-Mins|30-Secs|5-
Mins]
{ (rfdomain <DOMAIN-NAME>|wlan <WLAN-NAME>)}
```

|   |   |
|---|---|
| guest-registration                                      | Displays guest registration statistics based on the parameters and time entered. Optionally, use the 'rfdomain' and/or 'wlan' keywords to view guest registration statistics for a specified RF Domain and/or WLAN.   |
| client  | Displays statistical data for all clients logged in within a specified time period  |
| time [1-Day 1-Month 1-Week 2-Hours 30-Mins 5-Hours all] | Use one of the following options to specify the time period <ul style="list-style-type: none"> <li>1-Day – Displays previous day's statistics</li> <li>1-Month – Displays previous month's statistics</li> <li>1-Week – Displays previous week's statistics</li> <li>2-Hours – Displays last 2 hours statistics</li> <li>30-Mins – Displays last 30 minutes statistics</li> <li>5-Hours – Displays last 5 hours statistics</li> <li>all – Displays statistics from the day the database was created</li> </ul>            |
| [rfdomain <DOMAIN-NAME> wlan <WLAN-NAME>]               | Use the following options as additional filters: <ul style="list-style-type: none"> <li>rfdomain &lt;DOMAIN-NAME&gt; – Optional. Displays guest registration statistics for a specified RF Domain. <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> </li> <li>wlan &lt;WLAN-NAME&gt; – Optional. Displays guest registration statistics for a specified WLAN. <ul style="list-style-type: none"> <li>&lt;WLAN-NAME&gt; – Specify the WLAN name.</li> </ul> </li> </ul> |

## interface

Displays configured system interfaces and their status

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

show interface {<INTERFACE-NAME>|brief|counters|ge|me1|port-channel|pppoe1|switchport|
vlan|wwan1}

show interface {<INTERFACE-NAME>|brief|counters|ge <1-4>|me1|port-channel <1-2>|
pppoe1|switchport|vlan <1-4094>|wwan1} {on <DEVICE-NAME>}

```

### Parameters

```

show interface {<INTERFACE-NAME>|brief|counters|ge <1-4>|me1|port-channel <1-2>|
pppoe1|switchport|vlan <1-4094>|wwan1} {on <DEVICE-NAME>}

```

|                    |  |
|--------------------|--|
| interfaces         | Optional. Displays system interface status based on the parameters passed  |
| <INTERFACE-NAME>   | Optional. Displays status of the interface specified by the <INTERFACE-NAME> parameter. Specify the interface name.  |
| brief              | Optional. Displays a brief summary of the interface status and configuration   |
| counters           | Optional. Displays interface Tx or Rx counters   |
| ge <1-4>           | Optional. Displays Gigabit Ethernet interface status and configuration <ul style="list-style-type: none"> <li>&lt;1-4&gt; – Select the Gigabit Ethernet interface index from 1 - 4.</li> </ul>   |
| me1                | Optional. Displays Fast Ethernet interface status and configuration  |
| port-channel <1-2> | Optional. Displays port channel interface status and configuration <ul style="list-style-type: none"> <li>&lt;1-2&gt; – Specify the port channel index from 1 - 2.</li> </ul>  |
| pppoe1             | Optional. Displays PPP over Ethernet interface status and configuration  |
| switch port        | Optional. Displays layer 2 interface status  |
| vlan <1-4094>      | Optional. Displays VLAN interface status and configuration <ul style="list-style-type: none"> <li>&lt;1-4094&gt; – Specify the <i>Switch Virtual Interface</i> (SVI) VLAN ID from 1 - 4094.</li> </ul>   |
| wwan1              | Optional. Displays Wireless WAN interface status, configuration, and counters  |
| on <DEVICE-NAME>   | The following keywords are common to all of the above interfaces: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays interface related information on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

## iot-device-type-imagotag

Displays the configuration of ESL communicator on a specified AP or on all APs within an RF Domain.

*Supported in the following platforms:*

- Access Points — AP-8432
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
show iot-device-type-imagotag status {on <DEVICE-OR-DOMAIN-NAME>}
```

### Parameters

```
show iot-device-type-imagotag status {on <DEVICE-OR-DOMAIN-NAME>}
```

|                                 |  |
|---------------------------------|--|
| iot-device-type-imagotag status | Displays Imagotags ESL communicator configuration at device or domain level  |
| on <DEVICE-NAME>                | Optional. Displays configuration on a specified device or RF Domain <ul style="list-style-type: none"> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; - Specify the name of the AP or RF Domain.</li> </ul> |

### Example

## ip

Displays IP related information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
show ip [arp|bgp|ddns|default-gateways|dhcp|dhcp-vendor-options|domain-name|
extcommunity-list|igmp|interface|name-server|nat|ospf|route|routing]
show ip arp {<VLAN-NAME>} {(on <DEVICE-NAME>)}
show ip bgp {<IP>|<IP/M>|community|community-list|filter-list|neighbors|
on|paths|prefix-list|regex|route-map|state|summary}
show ip ddns bindings {on <DEVICE-NAME>}
show ip dhcp [binding|networks|status]
show ip dhcp binding {manual} {(on <DEVICE-NAME>)}
show ip dhcp [networks|status] {on <DEVICE-NAME>}
show ip [default-gateways|dhcp-vendor-options|domain-name|name-server|routing]
{on <DEVICE-NAME>}
show ip extcommunity-list [<1-500>|<NAME>]
show ip igmp snooping [mrouter|querier|vlan]
show ip igmp snooping [mrouter|querier] vlan <1-4095> {on <DEVICE-NAME>}
show ip igmp snooping vlan <1-4095> {<IP>} {(on <DEVICE-NAME>)}
show ip interface {<INTERFACE-NAME>|brief|on}
show ip interface {<INTERFACE-NAME>|brief} {(on <DEVICE-NAME>)}
show ip nat translations verbose {on <DEVICE-NAME>}
show ip route {<INTERFACE-NAME>|ge|me1|on|port-channel|pppoe1|vlan|wwan1}
show ip route {<INTERFACE-NAME>|ge <1-4>|me1|port-channel <1-2>|vlan <1-4094>|
pppoe1|wwan1} {(on <DEVICE-NAME>)}
show ip ospf {border-router|interface|neighbor|on|route|state}
show ip ospf {border-router|neighbor|route|on|state} {on <DEVICE-NAME>}
show ip ospf {interface} {vlan|on}
show ip ospf {interface} {vlan <1-4094>} {(on <DEVICE-NAME>)}

```

### Note

The `show > ip > ospf` command is also available under the 'profile' and 'device' modes.

## Parameters

```
show ip arp {<VLAN-NAME>} {(on <DEVICE-NAME>)}

```

|                  |   |
|------------------|---|
| ip arp           | Displays <i>Address Resolution Protocol</i> (ARP) mappings  |
| <VLAN-NAME>      | Optional. Displays ARP mapping on a specified VLAN. Specify the VLAN name.  |
| on <DEVICE-NAME> | <p>The following keyword is recursive and common to the 'vlan-name' parameter:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. Displays ARP configuration details on a specified device</li> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip bgp {<IP>|<IP/M>|community|community-list|filter-list|neighbors|on|
paths|prefix-list|regex|route-map|state|summary}

```

|                                |   |
|--------------------------------|---|
| ip bgp                         | Displays BGP routing table statistics based on the match criteria specified here. Routes matching the specified criteria are filtered. Use available options to filter the information displayed.<br>This command is applicable to the RFS 4000, NX 95XX, and NX 96XX model devices.  |
| <IP>                           | Optional. Filters routes matching the specified IP address  |
| <IP/M>                         | Optional. Filters routes matching the specified network   |
| community                      | Optional. Filters routes based on the community attribute specified. The options are: <ul style="list-style-type: none"> <li>• AA:NN – Filters routes based on the community number (AA: is the autonomous system number (ASN), NN: is the community number within the specified ASN)</li> <li>• local-as – Filters routes carrying the local-as attribute (these routes are not sent outside the local AS)</li> <li>• no-advertise – Filters routes carrying the no-advertise attribute (these routes are not advertised to any peers)</li> <li>• no-export – Filters routes carrying no-export attribute (these routes are not exported to next AS)</li> </ul>  |
| community-list                 | Optional. Displays routes that are members of communities included in the specified BGP community-list <ul style="list-style-type: none"> <li>• &lt;1-500&gt; – Specify the community-list number.</li> <li>• &lt;WORD&gt; – Specify the community-list name.</li> </ul>  |
| filter-list                    | Optional. Filters routes having AS-path matching the specified AS-path access list. Specify the AS-path ACL name.   |
| neighbors                      | Optional. Displays BGP neighbor details. Specify the IP address, to view a specific neighbor details. Use one of the following options to filter information: <ul style="list-style-type: none"> <li>• advertised-routes – Displays route information for routes advertised to the selected neighbor device</li> <li>• received-routes – Displays route information for routes received from the selected neighbor device</li> <li>• routes – Displays the route information for routes learned from the selected neighbor device</li> </ul> <p>If no neighbor IP address is specified, the system displays all neighbor-related routes on the logged device.</p> |
| on <DEVICE-NAME>               | Optional. Displays BGP routing table statistics on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |
| paths                          | Optional. Displays BGP path details   |
| prefix-list <PREFIX-LIST-NAME> | Optional. Displays routes conforming to the specified prefix-list <ul style="list-style-type: none"> <li>• &lt;PREFIX-LIST-NAME&gt; – Specify the prefix list name.</li> </ul>  |

|                            |  |
|----------------------------|--|
| regex <LINE>               | Optional. Displays routes matching the specified AS path regular expression <ul style="list-style-type: none"> <li>&lt;LINE&gt; – Specify the regular expression.</li> </ul> |
| route-map <ROUTE-MAP-NAME> | Optional. Displays routes matching the specified route map <ul style="list-style-type: none"> <li>&lt;ROUTE-MAP-NAME&gt; – Specify the route map name.</li> </ul>            |

```
show ip ddns bindings {on <DEVICE-NAME>}
```

|                             |  |
|-----------------------------|--|
| ip ddns                     | Displays <i>Dynamic Domain Name Server</i> (DDNS) configuration details  |
| bindings {on <DEVICE-NAME>} | Displays DDNS address bindings <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays address bindings on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip dhcp [networks|status] {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| ip dhcp          | Displays the DHCP server configuration details   |
| networks         | Displays DHCP server network details   |
| status           | Displays DHCP server status  |
| on <DEVICE-NAME> | The following keyword is common to all of the above parameters: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays server status and network details on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip dhcp binding {manual} {(on <DEVICE-NAME>)}
```

|                  |   |
|------------------|---|
| ip dhcp          | Displays the DHCP server configuration details  |
| bindings         | Displays DHCP address bindings  |
| manual           | Displays static DHCP address bindings   |
| on <DEVICE-NAME> | The following keyword is recursive and common to the 'manual' parameter: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays DHCP address bindings on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip extcommunity-list [<1-500>|<NAME>]
```

|                                       |  |
|---------------------------------------|--|
| ip extcommunity-list [<1-500> <NAME>] | Displays the specified extended community list details <ul style="list-style-type: none"> <li>&lt;1-500&gt; – Specify the extended community number from 1 - 500.</li> <li>&lt;NAME&gt; – Specify the extended community name.</li> </ul> <p>This command is applicable to the RFS 4000, NX 95XX, and NX 96XX model devices.</p> |
|---------------------------------------|--|

```
show ip [default-gateways|dhcp-vendor-options|domain-name|name-server|routing]
{on <DEVICE-NAME>}
```

|                        |   |
|------------------------|---|
| ip default-gateways    | Displays all learnt default gateways  |
| ip dhcp-vendor-options | Displays DHCP 43 parameters received from the DHCP server. This output includes the interface from which the option was learned.  |
| ip domain-name         | Displays the DNS default domain   |
| ip name-server         | Displays the DNS name server details  |
| ip routing             | Displays routing status   |
| on <DEVICE-NAME>       | <p>The following keywords are common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays IP related information, based on the parameters passed, on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip igmp snooping [mrouter|querier] vlan <1-4095> {on <DEVICE-NAME>}
```

|                                  |   |
|----------------------------------|---|
| ip igmp snooping                 | Displays the IGMP snooping configuration  |
| mrouter                          | Displays the IGMP snooping multicast router (mrouter) configuration   |
| querier                          | Displays the IGMP snooping multicast querier configuration  |
| vlan <1-4095> {on <DEVICE-NAME>} | <p>Displays the IGMP snooping multicast router configuration for a VLAN</p> <ul style="list-style-type: none"> <li>&lt;1-4095&gt; – Specify the VLAN ID from 1 - 4095.</li> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays the IGMP snooping mrouter configuration on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip igmp snooping vlan <1-4095> {<IP>} {(on <DEVICE-NAME>)}
```

|                  |  |
|------------------|--|
| ip igmp snooping | Displays the IGMP snooping configuration   |
| vlan <1-4095>    | <p>Displays the VLAN IGMP snooping configuration</p> <ul style="list-style-type: none"> <li>&lt;1-4095&gt; – Specify the VLAN ID from 1 - 4095.</li> </ul>   |
| <IP>             | Optional. Specifies the multicast group IP address   |
| on <DEVICE-NAME> | <p>The following keyword is recursive and common to the 'ip' parameter:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays configuration details on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip interface {<INTERFACE-NAME>|brief} {(on <DEVICE-NAME>)}
```

|                  |  |
|------------------|--|
| ip interface     | Displays an administrative and operational status of all layer 3 interfaces or a specified layer 3 interface |
| <INTERFACE-NAME> | Displays a specified interface status. Specify the interface name.   |

|                  |   |
|------------------|---|
| brief            | Displays a brief summary of all interface status and configuration  |
| on <DEVICE-NAME> | <p>The following keyword is recursive and common to the 'interface-name' and 'brief' parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays interface status and summary, based on the parameters passed, on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip nat translations verbose {on <DEVICE-NAME>}
```

|                     |   |
|---------------------|---|
| ip nat translations | Displays <i>Network Address Translation</i> (NAT) translations  |
| verbose             | <p>Displays detailed NAT translations</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays NAT translations on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip route {<INTERFACE-NAME>|ge <1-4>|me1|port-channel <1-2>|vlan <1-4094>|pppoe1|
wwan1}
{ (on <DEVICE-NAME>) }
```

|                    |  |
|--------------------|--|
| ip route           | <p>Displays route table details. The route tables use flags to distinguish between routes. The different flags are:</p> <ul style="list-style-type: none"> <li>C – Connected</li> <li>G – Gateway</li> <li>O – OSPF route</li> <li>S – Static route</li> </ul> <p><b>Note:</b> Flags 'S' and 'O' identify static learned routes and dynamic learned routes respectively.</p> |
| <INTERFACE-NAME>   | Optional. Displays route table details for a specified interface. Specify the interface name   |
| ge <1-4>           | <p>Displays GigabitEthernet interface route table details</p> <ul style="list-style-type: none"> <li>&lt;1-4&gt; – Specify the GigabitEthernet interface index from 1 - 4.</li> </ul>  |
| me1                | Displays FastEthernet interface route table details  |
| port-channel <1-2> | Displays port channel interface route table details. Specify the port channel index from 1 - 2.  |
| vlan <1-4095>      | Displays VLAN interface route table details. Select the VLAN interface ID from 1 - 4094.   |
| pppoe1             | Displays PPPoE interface route table details   |

|                  |  |
|------------------|--|
| wwan1            | Displays Wireless WAN route table details  |
| on <DEVICE-NAME> | <p>The following keywords are recursive and common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Displays route table details, based on the parameters passed, on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ip ospf {border-router|interface|neighbor|route|on|state} {on <DEVICE-NAME>}
```

|  |  |
|--|--|
| ip ospf  | Displays overall OSPF information  |
| border-router                                    | Optional. Displays details of all the border routers connected   |
| interface {on  vlan <1-4094>} {on <DEVICE-NAME>} | <p>Optional. Displays details of all the interfaces with OSPF enabled</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays specified device details</li> <li>vlan &lt;1-4094&gt; – Displays VLAN interface details <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul> |
| neighbor   | Optional. Displays an OSPF neighbors list  |
| route  | Optional. Displays OFPS routes information   |
| state  | Optional. Displays an OSPF process state   |
| on <DEVICE-NAME>                                 | <p>The following keywords are recursive and common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays overall OSPF information, based on the parameters passed, on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>                                      |

### Examples

```
nx9500-6C8809(config)#show ip arp
```

| IP            | MAC               | INTERFACE | TYPE    |
|---------------|-------------------|-----------|---------|
| 192.168.13.10 | 00-02-B3-28-D1-55 | vlan1     | dynamic |
| 192.168.13.13 | B4-C7-99-6C-88-09 | vlan1     | dynamic |
| 192.168.13.2  | 00-0F-8F-19-BA-4C | vlan1     | dynamic |

```
nx9500-6C8809(config)#
```

```
nx9500-6C8809(config)#show ip interface brief
```

| INTERFACE | IP-ADDRESS/MASK  | TYPE    | STATUS | PROTOCOL |
|-----------|------------------|---------|--------|----------|
| me1       | unassigned       | n/a     | UP     | down     |
| vlan1     | 192.168.13.24/24 | primary | UP     | up       |

```
nx9500-6C8809(config)#
```

```
nx9500-6C8809(config)#show ip route
```

| DESTINATION     | GATEWAY      | FLAGS | INTERFACE | METRIC | DISTANCE |
|-----------------|--------------|-------|-----------|--------|----------|
| default         | 192.168.13.2 | S     | vlan1     | 0      | 1        |
| 192.168.13.0/24 | 0.0.0.0      | C     | vlan1     | 0      | 0        |

```

Gateway: N - Normalized Gateway Address
nx9500-6C8809(config)#
nx9500-6C8809(config)#show ip routing on rfs6000-81742D
IP routing is enabled.
nx9500-6C8809(config)#
nx9500-6C8809(config)#show ip dhcp status
State of DHCP server: not-running
nx9500-6C8809(config)#
nx9500-6C8809(config)#show ip ospf state
Maximum number of OSPF routes allowed: 9216
Number of OSPF routes received: 0
Ignore-count allowed: 5, current ignore-count: 0
Ignore-time 60 seconds, reset-time 360 seconds
Current OSPF process state: Running
nx9500-6C8809(config)#

```

## ip-access-list-stats

Displays IP access list statistics

### Note

This command is not available in the USER EXEC Mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

show ip-access-list-stats {<IP-ACCESS-LIST-NAME>|detail|on}
show ip-access-list stats {<IP-ACCESS-LIST-NAME>|detail <IP-ACCESS-LIST-NAME>}
{ (on <DEVICE-NAME>)}

```

### Parameters

```

show ip-access-list stats {<IP-ACCESS-LIST-NAME>|detail <IP-ACCESS-LIST-NAME>}
{ (on <DEVICE-NAME>)}

```

|                               |   |
|-------------------------------|---|
| ip-access-list-stats          | Displays IP access list statistics  |
| <IP-ACCESS-LIST-NAME>         | Optional. Displays statistics for a specified IP access list. Specify the IP access list name.  |
| detail <IP-ACCESS -LIST-NAME> | Optional. Displays detailed statistics for a specified IP access list. Specify the IP access list name.   |
| on <DEVICE-NAME>              | The following keyword is recursive and common to the 'IP-ACCESS-LIST-NAME' parameter: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays all or a specified IP access list statistics on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```

nx9500-6C8809(config)#show ip-access-list stats
IP Access-list: # Restrict Management ACL #
  permit tcp any any eq ftp rule-precedence 1          Hitcount: 0
  permit tcp any any eq www rule-precedence 2          Hitcount: 4
  permit tcp any any eq ssh rule-precedence 3          Hitcount: 448
  permit tcp any any eq https rule-precedence 4        Hitcount: 0
  permit udp any any eq snmp rule-precedence 5          Hitcount: 0
  permit tcp any any eq telnet rule-precedence 6        Hitcount: 4
nx9500-6C8809(config)#

```

The following example displays the 'auto-tunnel-acl' IP ACL configuration:

```

nx9500-6C8809(config)#ip access-list auto-tunnel-acl
nx9500-6C8809(config-ip-acl-auto-tunnel-acl)#show context
ip access-list auto-tunnel-acl
  permit ip host 200.200.200.99 30.30.30.1/24 rule-precedence 2
  permit ip host 200.200.200.99 any rule-precedence 3
nx9500-6C8809(config-ip-acl-auto-tunnel-acl)#

```

The following example displays the statistics for the 'auto-tunnel-acl' ACL:

```

nx9500-6C8809#show ip-access-list stats
IP Access-list: auto-tunnel-acl
  permit ip host 200.200.200.99 30.30.30.1/24 rule-precedence 2          Hitcount: 0
  permit ip host 200.200.200.99 any rule-precedence 3                    Hitcount: 0
nx9500-6C8809#

```

## ipv6

Displays IPv6 related information and statistical data

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
show ipv6 [default-gateways|delegated-prefix|dhcp|hop-limit|interface|mld|
name-server|neighbors|route]
show ipv6 [default-gateways|delegated-prefix|hop-limit|name-server]
{on <DEVICE-NAME>}
show ipv6 dhcp [client received-options|relay status|status]
{on <DEVICE-NAME>}
show ipv6 interface {<IF-NAME>|brief} {(on <DEVICE-NAME>)}
show ipv6 mld snooping [mrouter vlan <1-4095>|querier vlan <1-4095>|vlan <1-4095>]
{on <DEVICE-NAME>}
show ipv6 neighbors <VLAN-NAME> {(on <DEVICE-NAME>)}
show ipv6 route {<IF-NAME>|ge <1-X>|me1|port-channel <1-2>|pppoe1|serial <1-4>|
t1e1 <1-4> <1-1>|up|vlan <1-4095>|wan1|xge} {(on <DEVICE-NAME>)}
```

## Parameters

```
show ipv6 [default-gateways|delegated-prefix|hop-limit|name-server]
{on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| ipv6             | Displays IPv6 related information and statistical data   |
| default-gateways | Displays all learnt default gateways   |
| delegated-prefix | Displays prefix delegation information   |
| hop-limit        | Displays the configured IPv6 hop count value   |
| name-server      | Displays DNS name servers  |
| on <DEVICE-NAME> | This parameter is common to all of the above keywords. <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays the specified information on a device (access point, wireless controller, or service platform)</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ipv6 dhcp [client received-options|relay status|status] {on <DEVICE-NAME>}
```

|                         |  |
|-------------------------|--|
| ipv6                    | Displays IPv6 related information and statistical data   |
| dhcp                    | Displays DHCPv6 related information  |
| client received-options | Displays DHCP options received from clients  |
| relay status            | Displays the DHCPv6 relay agent's running status   |
| status                  | Displays the DHCPv6 stateless server daemon's status. In case the DHCPv6 server is up and running, it also displays interface names.   |
| on <DEVICE-NAME>        | This parameter is common to all of the above keywords. <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays the specified information on a device (access point, wireless controller, or service platform)</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ipv6 interface {<IF-NAME>|brief} {(on <DEVICE-NAME>)}
```

|                             |  |
|-----------------------------|--|
| ipv6                        | Displays IPv6 related information and statistical data   |
| interface {<IF-NAME> brief} | Displays IPv6 status and configuration on a specified interface related information <ul style="list-style-type: none"> <li>• &lt;IF-NAME&gt; – Optional. Specify the interface name.</li> <li>• brief – Optional. Displays a brief summary of IPv6 status and configuration on the specified interface</li> </ul>  |
| on <DEVICE-NAME>            | This parameter is common to all of the above keywords. <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays the specified information on a device (access point, wireless controller, or service platform)</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ipv6 mld snooping [mrouter vlan <1-4095>|querier vlan <1-4095>|vlan <1-4095>]
{on <DEVICE-NAME>}
```

|                       |  |
|-----------------------|--|
| ipv6                  | Displays IPv6 related information and statistical data   |
| mld snooping          | Displays <i>Multicast Listener Discovery Protocol</i> (MLD) snooping related information   |
| mrouter vlan <1-4095> | Displays IPv6 multicast router information on the specified VLAN   |
| querier vlan <1-4095> | Displays IPv6 multicast querier information on the specified VLAN  |
| vlan <1-4095>         | Displays MLD snooping related information on the specified VLAN  |
| on <DEVICE-NAME>      | This parameter is common to all of the above keywords. <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays the specified information on a device (access point, wireless controller, or service platform)</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show ipv6 neighbors <VLAN-NAME> { (on <DEVICE-NAME> ) }
```

|                       |  |

```

## ipv6-access-list

Displays IPv6 access list related information and statistics

### Note

This command is not available in the USER EXEC Mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show ipv6-access-list stats <IPv6-ACCESS-LIST-NAME> { (on <DEVICE-NAME>) }
```

### Parameters

```
show ipv6-access-list stats <IPv6-ACCESS-LIST-NAME> { (on <DEVICE-NAME>) }
```

|                         |   |
|-------------------------|---|
| ipv6-access-list stats  | Displays IPv6 access list related information and statistics  |
| <IPv6-ACCESS-LIST-NAME> | Optional. Displays statistics for a specified IPv6 access list. Specify the IPv6 access list name.<br>If IPv6 ACL name is not provided, the system displays statistics for all ACLs configured and applied.                             |
| on <DEVICE-NAME>        | Optional. Displays all or a specified IPv6 access list statistics on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```
nx9500-6C8809#show ipv6-access-list stats
IPv6 Access-list: test
  deny ipv6 any any rule-precedence 20      Hitcount: 4
nx9500-6C8809#
```

## l2tpv3

Displays a L2TPv3 session information

### Note

This command is not available in the USER EXEC mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show l2tpv3 {on|statistics|tunnel|tunnel-summary}
show l2tpv3 {on <DEVICE-NAME>}
show l2tpv3 statistics {on <DEVICE-NAME>}}
show l2tpv3 {tunnel <L2TPv3-TUNNEL-NAME>} {session <L2TPv3-SESSION-NAME>} {on <DEVICE-NAME>}}
show l2tpv3 {tunnel-summary} {down|on|up}
show l2tpv3 {tunnel-summary} {on <DEVICE-NAME>}
show l2tpv3 {tunnel-summary} {down|up} {on <DEVICE-NAME>}
```

Parameters

```
show l2tpv3 {on <DEVICE-NAME>}
```

|                           |  |
|---------------------------|--|
| l2tpv3 {on <DEVICE-NAME>} | Displays L2TPv3 tunnel and session details or summary <ul style="list-style-type: none"><li>on &lt;DEVICE-NAME&gt; - Optional. Displays L2TPv3 information on a specified device</li><li>&lt;DEVICE-NAME&gt; - Specify the name of AP, wireless controller, or service platform.</li></ul> |
|---------------------------|--|

```
show l2tpv3 statistics {on <DEVICE-NAME>}}
```

|                        |   |
|------------------------|---|
| show l2tpv3 statistics | Displays L2TPv3 Tunnel and session statistics. It displays the information, such as the number of packets transmitted and received, the rate of transmission, number of packets dropped, etc.   |
| on <DEVICE-NAME>       | Optional. Executes the command on a specified device <ul style="list-style-type: none"><li>&lt;DEVICE-NAME&gt; - Specify the name of the access point, wireless controller, or service platform.</li></ul> <p><b>Note:</b><br/>If you do not specify a device name, the system executes the command on the logged device.</p> |

```
show l2tpv3 {tunnel <L2TPv3-TUNNEL-NAME>} {session <L2TPv3-SESSION-NAME>} {(on <DEVICE-NAME>) }
```

|                              |   |
|------------------------------|---|
| l2tpv3                       | Displays L2TPv3 tunnel and session details or summary   |
| tunnel <L2TPv3-TUNNEL- NAME> | Optional. Displays a specified L2TPv3 tunnel information <ul style="list-style-type: none"><li>&lt;L2TPv3-TUNNEL-NAME&gt; - Specify the L2TPv3 tunnel name.</li></ul> |

|                                |  |
|--------------------------------|--|
| session <L2TPv3-SESSION- NAME> | Optional. Displays a specified L2TPv3 tunnel session information <ul style="list-style-type: none"> <li>&lt;L2TPv3-SESSION-NAME&gt; – Specify the session name.</li> </ul>   |
| on <DEVICE-NAME>               | The following keyword is recursive and common to the 'session <L2TPv3-SESSION-NAME>' parameter. <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays a L2TPv3 tunnel and session details, based on the parameters passed, on a specified device.</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of AP, wireless controller, or service platform.</li> </ul> |

```
show l2tpv3 {tunnel-summary} {on <DEVICE-NAME>}
```

|                                   |   |
|-----------------------------------|---|
| l2tpv3                            | Displays L2TPv3 tunnel and session details or summary<br><br><b>Note:</b> For an L2TPv3 tunnel over Auto IPsec, the tunnel status is displayed as: Established (secured by ipsec)   |
| tunnel-summary {on <DEVICE-NAME>} | Optional. Displays L2TPv3 tunnel summary <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays L2TPv3 tunnel summary on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of AP, wireless controller, or service platform.</li> </ul> |

```
show l2tpv3 {tunnel-summary} {down|up} {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| l2tpv3           | Displays L2TPv3 tunnel and session details or summary   |
| tunnel-summary   | Optional. Displays L2TPv3 tunnel summary, based on the parameters passed  |
| down             | Optional. Displays un-established tunnels summary   |
| up               | Optional. Displays established tunnels summary  |
| on <DEVICE-NAME> | The following keyword is common to the 'down' and 'up' parameters: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays summary, for un-established or established tunnels, on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of AP, wireless controller, or service platform.</li> </ul> |

### Examples

```

## lACP

Displays *Link Aggregation Control Protocol* (LACP) related information

### Note

For more information on enabling dynamic LACP, see [lACP](#) on page 1027 (profile - inf - ge - config mode), [lACP-channel-group](#) on page 1028 (profile - inf - ge - config mode), and [lACP](#) on page 1283 (device config mode).

*Supported in the following platforms:*

- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX

### Syntax

```

show lACP [<1-4>|counters|details|sys-id]
show lACP <1-4> ([counters|details])
show lACP sys-id

```

### Parameters

```

show lACP <1-4> ([counters|details])

```

|                 |  |
|-----------------|--|
| show lacp <1-4> | Shows the LACP related information for a specified port-channel or all port-channels using LACP <ul style="list-style-type: none"> <li>&lt;1-4&gt; – Select the port-channel index number from 1 - 4. Note, LACP is supported only on the NX 5500, NX 75XX, NX 95XX, NX 96XX model service platforms.</li> </ul> <p>If the port-channel index number is not specified, the system displays LACP counters and details for all port-channels configured on the device.</p> |
| counters        | Shows LACP counters for LACP-enabled port-channels. When passed without the <1-4> keyword, the system displays LACP counters for all configured port-channels. However, if the port-channel index number is specified, the system displays LACP counters only for the specified port-channel.  |
| details         | Shows details for LACP-enabled port-channels. When passed without the <1-4> keyword, the system displays LACP details for all configured port-channels. However, if the port-channel index number is specified, the system displays LACP details only for the specified port-channel.  |

```
show lacp sys-id
```

|                  |  |
|------------------|--|
| show lacp sys-id | Shows the LACP related information for all LACP-enabled port-channels <ul style="list-style-type: none"> <li>sys-id – Shows the LACP system identifier and priority. This is the identifier assigned to the LACP peers (devices).</li> </ul> |
|------------------|--|

## ldap-agent

Displays an LDAP agent's join status (join status to a LDAP server domain). Use this command When LDAP is specified the external resource (as opposed to local RADIUS resources) to validate PEAP-MS-CHAP v2 authentication requests, user credentials, and password information needs to be made available locally to successfully connect to the external LDAP server. Up to two LDAP Agents (primary and secondary external resources) can be defined as external resources for PEAP-MS-CHAP v2 authentication requests.

### Note

This command is not available in USER EXECUTABLE ,mode

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show ldap-agent join-status {on <DEVICE-NAME>}
```

### Parameters

|                  |   |
|------------------|---|
| ldap-agent       | Displays LDAP agent related configuration   |
| join-status      | Displays if the LDAP agent has successfully joined a LDAP server's domain   |
| on <DEVICE-NAME> | Optional. Displays if the LDAP agent has successfully joined a specified LDAP server's domain. <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the device running the LDAP server (access point, wireless controller, or service platform).</li> </ul> |

### Examples

```
nx9500-6C8809#show ldap-agent join-status
Primary LDAP Server's agent join-status : Joined domain TEST.

Secondary LDAP Server's agent join-status : Not Configured
nx9500-6C8809#
```

## licenses

Displays installed licenses and usage information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show licenses {borrowed|lent}
```

## Parameters

```
show licenses {borrowed|lent}
```

|                          |   |
|--------------------------|---|
| licenses {borrowed lent} | Displays installed licenses and usage information   |
|                          | <ul style="list-style-type: none"> <li>• borrowed – Optional. Displays information on licenses borrowed</li> <li>• lent – Optional. Displays information on licenses lent.</li> </ul> |

## Usage Guidelines

The WiNG HM network defines a three-tier structure, consisting of multiple wireless sites managed by a single NOC controller. The NOC and the site controllers constitute the first and second tiers of the hierarchy respectively. The site controllers in turn adopt and manage access points that form the third tier of the hierarchy. The site controllers may or may not be grouped to form clusters.

At the time of adoption, access points and adaptive access points are provided license by the adopting controller. These license packs can be installed on both the NOC and site controllers. When a AP/AAP is adopted by a controller, the controller pushes a license on to the device. At this point the various possible scenarios are:

- AP/AAP license packs installed on the NOC controller only. The NOC controller provides the site controllers with the AP licenses, ensuring that per platform limits are not exceeded.
- AP/AAP license packs installed on the NOC and site controllers. The site controller uses its installed licenses and, in case of a shortage, the site controller borrows additional licenses from the NOC. If the NoC controller is unable to allocate sufficient licenses, the site controller unadopts some of the AP/AAPs.
- AP/AAP license packs installed on one controller within a cluster. The site controller shares its installed and borrowed licenses with other cluster controllers.

## Examples

```
rfs4000-229D58#show licenses
Serial Number : 9184521800027

Device Licenses:
  AP-LICENSE
    String      : DEFAULT-6AP-LICENSE
    Value       : 6

## lldp

Displays *Link Layer Discovery Protocol* (LLDP) related information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

show lldp [neighbors|report]
show lldp neighbors {on <DEVICE-NAME>}
show lldp report {detail|on}
show lldp report {detail} {(on <DEVICE-OR-DOMAIN-NAME>)}

```

### Parameters

```
show lldp neighbors {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| lldp             | Displays L2TPv3 neighbors table or aggregated LLDP neighbors table  |
| neighbors        | Displays LLDP neighbors table   |
| on <DEVICE-NAME> | Optional. Displays L2TPv3 neighbors table on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show lldp report {detail} {(on <DEVICE-OR-DOMAIN-NAME>) }
```

|                            |  |
|----------------------------|--|
| lldp                       | Displays L2TPv3 neighbors table or aggregated LLDP neighbors table   |
| report detail              | Displays aggregated LLDP neighbors table <ul style="list-style-type: none"> <li>detail – Optional. Displays detailed aggregated LLDP neighbors table</li> </ul> <p><b>Note:</b> If the 'on' keyword is used without the 'detail' keyword, the system displays LLDP neighbors table summary on the specified device or RF Domain.</p>                                       |
| on <DEVICE-OR-DOMAIN-NAME> | The following keyword is recursive and common to the 'report detail' parameter: <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Displays aggregated LLDP neighbors table on a specified device or RF Domain</li> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

### Examples

```
nx9500-6C8809#show lldp neighbors
-----
Chassis ID: 00-18-71-D0-0B-00
System Name: TechPubs-ProCurve-Switch
Platform: ProCurve J8697A Switch 5406z1, revision K.12.1X, ROM K.11.03 (/sw/code/build/btm(sw_espl))
Capabilities: Bridge Router
Enabled Capabilities: Bridge
Local Interface: ge1, Port ID(Port Description) (outgoing port): 5(A5)
TTL: 113 sec
Management Addresses: 192.168.13.40
nx9500-6C8809#
```

## logging

Displays the network's activity log

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show logging {on <DEVICE-NAME>}
```

### Parameters

```
show logging {on <DEVICE-NAME>}
```

|                            |   |
|----------------------------|---|
| logging {on <DEVICE-NAME>} | Displays logging information on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Optional. Specify the name of the AP or wireless controller.</li> </ul> |
|----------------------------|---|

### Examples

```
NOC-NX9500#show logging

Logging module: enabled
  Aggregation time: disabled
  Console logging: level debugging
  Monitor logging: disabled
  Buffered logging: level warnings
  Syslog logging: level warnings
    Facility: local7

Log Buffer (2096166 bytes):

## mac-access-list-stats

Displays MAC access list related statistics

#### Note

This command is not present in USER EXEC mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show mac-access-list-stats {<MAC-ACCESS-LIST-NAME>|on}
show mac-access-list-stats {<MAC-ACCESS-LIST-NAME>} {(on <DEVICE-NAME>) }
```

### Parameters

```
show mac-access-list-stats {<MAC-ACCESS-LIST-NAME>} {(on <DEVICE-NAME>) }
```

|                       |   |
|-----------------------|---|
| mac-access-list-stats | Displays MAC access list statistics   |
| <MAC-ACCESS-LIST>     | Optional. Displays statistics for a specified MAC access list. Specify the MAC access list name.<br><br><b>Note:</b> The system displays all configured ACL statistics if no ACL name is specified.                                     |
| on <DEVICE-NAME>      | Optional. Displays all or a specified MAC access list statistics on a specified device<br><ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```
nx9500-6C8809#show mac-access-list stats scalemacacl | i 311
  permit D0-67-E5-3F-C0-00 FF-FF-FF-FF-F0-00 host 00-1E-EC-F2-0A-76 rule-precedence 311
Hitcount: 0   Hardware Hitcount: 0
nx9500-6C8809#
```

## mac-address-table

Displays MAC address table entries

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show mac-address-table {on <DEVICE-NAME>}
```

### Parameters

```
show mac-address-table {on <DEVICE-NAME>}
```

|                   |   |
|-------------------|---|
| mac-address-table | Displays MAC address table entries  |
| on <DEVICE-NAME>  | Optional. Displays MAC address table entries on a specified device<br><ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```
NOC-NX9500#show mac-address-table
```

macauth

Displays details of wired ports that have MAC address authentication enabled.

Use this command to view MAC authentication configuration and authentication state. The command displays the current authentication state of the wired host, the authorization state of the Ge1 port, and the wired hosts' MAC address. The port status displays as Authorized if the wired host has successfully authenticated and Not Authorized if the wired host has not authenticated or has failed MAC authentication.

For more information on enabling MAC address authentication on a wired port, see [mac-auth](#) on page 1200 (profile-config-mode).

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show mac-auth {all|interface|on}
show mac-auth {all|interface [<INTERFACE-NAME>|ge <1-5>|port-channel <1-3>|
t1e1 <1-4>|up <1-2>|xge <1-4>]} { (on <DEVICE-NAME>)} 
```

Parameters

```
show mac-auth {all|interface [<INTERFACE-NAME>|ge <1-5>|port-channel <1-3>|
t1e1 <1-4>|up <1-2>|xge <1-4>]} { (on <DEVICE-NAME>)} 
```

|         |  |
|---------|--|
| macauth | Displays MAC authentication related information for all interfaces or a specified interface                          |
| all     | <ul style="list-style-type: none"><li>• Displays MAC authentication related information for all interfaces</li></ul> |

|  |   |
|--|---|
| interface [<INTERFACE-NAME> <br>ge <1-5>  port-channel <1-3>  tle1<br><1-4> up <1-2>  xge <1-4>] | <p>Optional. Displays MAC authentication related information for a specified interface. Specify the interface using one of the following options:</p> <ul style="list-style-type: none"> <li>• &lt;INTERFACE-NAME&gt; - Selects the interface identified by the &lt;INTERFACE-NAME&gt; keyword</li> <li>• ge &lt;1-5&gt; - Selects the GigabitEthernet interface identified by the index number</li> <li>• port-channel &lt;1-3&gt; - Selects the port channel interface identified by the index number</li> <li>• tle1 &lt;1-4&gt; - Selects the layer 2 interface (Ethernet port)</li> <li>• up &lt;1-2&gt; - Selects the WAN Ethernet interface identified by the index number</li> <li>• xge &lt;1-4&gt; - Selects the TenGigabitEthernet interface identified by the index number</li> </ul> |
| on <DEVICE-NAME>   | <p>The following keywords are common to the 'all' and 'interface' parameters:</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; - Optional. Displays MAC authentication related information on a specified device</li> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> <p><b>Note:</b> When the 'on' keyword is used exclusively, without the 'all' and 'interface' options, the system displays MAC authentication related information for interfaces configured on the specified device.</p>   |

### Examples

```
rfs4000-229D58(config)#show mac-auth all
AAA-Policy is none

Mac Auth info for interface GE1
-----
Mac Auth Enabled
Mac Auth Not Authorized

Mac Auth info for interface GE2

Mac Auth Disabled
Mac Auth Not Authorized

Mac Auth info for interface GE4
-----
Mac Auth Disabled
Mac Auth Authorized

Mac Auth info for interface GE5
-----
Mac Auth Disabled
Mac Auth Not Authorized

Mac Auth info for interface UP1
-----
Mac Auth Disabled
Mac Auth Not Authorized
rfs4000-229D58(config)#
```

## mac-auth-clients

Displays MAC authenticated clients

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show mac-auth-clients [all|interface]
show mac-auth-clients all {on <DEVICE-NAME>}
show mac-auth-clients interface {<INF-NAME>|ge <1-X>|port-channel <1-2>|
xge <1-4>}
```

### Parameters

```
show mac-auth-clients all {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| mac-auth-clients | Displays MAC authenticated clients based on the parameters passed. The options are: all and interface.  |
| all              | Displays MAC authenticated clients for all interfaces   |
| on <DEVICE-NAME> | Optional. Displays MAC authenticated clients for all interfaces on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show mac-auth-clients interface {<INF-NAME>|ge <1-X>|port-channel <1-2>|
xge <1-4>}
```

|   |  |
|---|--|
| mac-auth-clients  | Displays MAC authenticated clients based on the parameters passed. The options are: all and interface.   |
| interface [<INF-NAME>  ge <1-X>  port-channel <1-2>  xge <1-4>] | Displays MAC authenticated clients for the specified interface. Select the interface type from the following options: <ul style="list-style-type: none"> <li>• &lt;INF-NAME&gt; – Optional. Displays MAC authenticated clients for the interface identified by the &lt;INF-NAME&gt; keyword. Specify the layer 2 (ethernet port) interface name.</li> <li>• ge &lt;1-X&gt; – Optional. Displays MAC authenticated clients for the selected GigabitEthernet interface. Specify the GE interface index from 1 - X. This will vary for different device types.</li> <li>• port-channel &lt;1-2&gt; – Optional. Displays MAC authenticated clients for the selected port channel interface. Specify the port channel interface index from 1 - 2.</li> <li>• xge &lt;1-4&gt; – Optional. Displays MAC authenticated clients for the selected TenGigabitEthernet interface. Specify the interface index from 1 - 4.</li> </ul> |
| on <DEVICE-NAME>  | Optional. Displays MAC authenticated clients for the specified interface on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

### Examples

```
rfs4000-229D58(config-device-B4-C7-99-22-9D-58)#show mac-auth-clients interface ge 1
-----
MAC                STATE              INTERFACE
-----
Total number of MACs displayed: 0
rfs4000-229D58(config-device-B4-C7-99-22-9D-58)#
```

## mint

Displays MiNT protocol related statistics and configuration

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show mint [config|dis|id|info|known-adopters|links|lsp|lsp-db|mlcp|neighbors|route|
stats|tunnel-controller|tunneled-vlans]
show mint [config|id|info|known-adopters|route|stats|tunneled-vlans]
{on <DEVICE-NAME>}
show mint [dis|links|neighbors|tunnel-controller] {details} {(on <DEVICE-NAME>)}
show mint lsp
show mint lsp-db {details <MINT-ADDRESS>} {(on <DEVICE-NAME>)}
show mint mlcp {history} {(on <DEVICE-NAME>)}
```

### Parameters

```
show mint [config|id|info|known-adopters|route|stats|tunneled-vlans]
{on <DEVICE-NAME>}
```

|                |   |
|----------------|---|
| mint           | Displays MiNT protocol information based on the parameters passed |
| config         | Displays MiNT configuration                                       |
| id             | Displays local MiNT ID  |
| info           | Displays MiNT status  |
| known-adopters | Displays known, possible, or reachable adopters                   |
| route          | Displays MiNT route table details                                 |
| stats          | Displays MiNT related statistics                                  |

|                  |   |
|------------------|---|
| tunneled-vlans   | Displays MiNT tunneled VLAN details   |
| on <DEVICE-NAME> | <p>The following keywords are common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays MiNT protocol details on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show mint [dis|links|neighbors|tunnel-controller] {details} {(on <DEVICE-NAME>) }
```

|                              |   |
|------------------------------|---|
| mint                         | Displays MiNT protocol information based on the parameters passed   |
| dis                          | Displays MiNT network <i>Designated Intermediate Systems</i> (DISes) and <i>Ethernet Virtualization Interconnects</i> (EVISes)  |
| links                        | Displays MiNT networking link details   |
| neighbors                    | Displays adjacent MiNT peer details   |
| tunnel-controller            | Displays details of MiNT VLAN network tunnel wireless controllers for extended VLAN load balancing  |
| details {(on <DEVICE-NAME>)} | <p>The following keywords are common to the 'dis', 'links', 'neighbors', and 'tunnel-controller' parameters:</p> <ul style="list-style-type: none"> <li>details – Optional. Displays detailed MiNT information <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. This is a recursive parameter, which displays MiNT information on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul> |

```
show mint lsp
```

|      |   |
|------|---|
| mint | Displays MiNT protocol information based on the parameters passed |
| lsp  | Displays this router's MiNT <i>Label Switched Paths</i> (LSPs)    |

```
show mint lsp-db {details <MINT-ADDRESS>} {(on <DEVICE-NAME>) }
```

|                        |   |
|------------------------|---|
| mint                   | Displays MiNT protocol information based on the parameters passed   |

## ntp

Displays *Network Time Protocol* (NTP) information. NTP enables clock synchronization within a network.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

show ntp [associations|status]
show ntp [associations {detail|on}|status {on <DEVICE-NAME>}]

```

### Parameters

```

show ntp [associations {detail|on}|status {on <DEVICE-NAME>}]

```

|                               |  |
|-------------------------------|--|
| ntp associations {detail on}  | <p>Displays existing NTP associations. The interaction between the controller or service platform and a SNTP server constitutes an association. SNTP associations are of two kinds:</p> <ul style="list-style-type: none"> <li>• peer associations - where a controller or service platform synchronizes to another system or allows another system to synchronize to it, or</li> <li>• - server associations - where only the controller or service platform synchronizes to the SNTP resource, not the other way around.</li> </ul> <p>Specify the following parameters to view NTP association details:</p> <ul style="list-style-type: none"> <li>• detail – Optional. Displays detailed NTP associations <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays NTP associations on a specified device<br/> &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> </li> </ul> <p><b>Note:</b> If the 'on' keyword is used without the 'detail' keyword, the system displays a summary of existing NTP associations on the specified device or RF Domain.</p> |
| ntp status {on <DEVICE-NAME>} | <p>Displays the performance (status) information relative to the NTP association status. Use this command to view the access point, controller, or service platform's current NTP resource.</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays NTP association status on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform</li> </ul> </li> </ul>   |

### Examples

password-encryption

Displays password encryption status (enabled/disabled)

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show password-encryption status
```

Parameters

```
show password-encryption status
```

|                            |  |
|----------------------------|--|
| password-encryption status | Displays password encryption status (enabled/disabled) |
|----------------------------|--|

Examples

```
nx9500-6C8809(config)#show password-encryption status
Password encryption is enabled
nx9500-6C8809(config)#
```

pppoe-client

Displays PPPoE client information. Use this command to view PPPoE statistics derived from access to high-speed data and broadband networks. PPPoE uses standard encryption, authentication, and compression methods as specified by the PPPoE protocol. PPPoE enables point-to-points connection to an ISP over existing Ethernet interface.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show pppoe-client [configuration|status] {on <DEVICE-NAME>}
```

Parameters

```
show pppoe-client [configuration|status] {on <DEVICE-NAME>}
```

|               |  |
|---------------|--|
| pppoe-client  | Displays PPPoE client information (configuration and status) |
| configuration | Displays detailed PPPoE client configuration                 |

|                  |   |
|------------------|---|
| status           | Displays detailed PPPoE client status   |
| on <DEVICE-NAME> | <p>The following keywords are common to 'configuration' and 'status' parameters:</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays detailed PPPoE client status or configuration on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```

nx9500-6C8809#show pppoe-client configuration
  PPPoE Client Configuration:
+-----+
| Mode       : Disabled
| Service Name :
| Auth Type  : pap
| Username   :
| Password   : fJx5O+5duPjaOaPuXmtLDQAAAAmvgEXcQ1+eUK4ByHK4aRi
| Idle Time  : 600
| Keepalive  : Disabled
| Local n/w  : vlan1
| Static IP   : __wing_internal_not_set__
| MTU        : 1492
+-----+

nx9500-6C8809#

```

## privilege

Displays the logged-in user's privilege level

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show privilege
```

### Parameters

None

### Examples

```

nx9500-6C8809(config)#show privilege
Current user privilege: superuser
nx9500-6C8809(config)#

```

## radius

Displays the amount of access time consumed and the amount of access time remaining for all guest users configured on a RADIUS server

Every captive portal guest user can access the captive portal for a specified duration. This results in following three scenarios:

- Scenario 1: Access duration not specified (in this case the default of 1440 minutes is applied)
- Scenario 2: Access duration is specified and is greater than 0
- Scenario 3: Access duration is specified and equals to 0 (in this case the guest user has unlimited access)

In all the three scenarios the access time consumed is the duration for which the guest user has logged.

But the access time remaining varies. It is calculated as follows:

- Scenarios 1 & 2 - It is the lesser of the following two values: difference between the configured access duration and the time consumed AND the time until user account expiration.
- Scenario 3 - It is the time until user account expiration.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show radius [guest-users|server]
show radius guest-users {brief|<GUEST-USER-NAME>}
show radius server
```

### Parameters

```
show radius guest-users {brief|<GUEST-USER-NAME>}
```

radius guest-users {brief|<GUEST-USER-NAME>}

Displays RADIUS server's guest user's access details: total time for which the user has logged in, and the amount of access time remaining.

- brief - Displays the total number of guest users provided RADIUS access
- <GUEST-USER-NAME> - Optional. Provide the name of the guest user (whose access details are to be viewed). If no name is provided, the system displays details of all guest users who have successfully logged in at least once.

Use this command in the captive-portal context to view time and data statistics for guest user(s) having bandwidth-based or time-based vouchers configured. In such a scenario, the system displays the following information: data configured, data remaining, configured and current bandwidths (for both downlink and uplink), time configured, and time remaining.

If bandwidth-based voucher is not applicable to a guest user, the data configured and data remaining values are displayed as 'unlimited'. The bandwidth columns are blank. If time-based voucher is not applicable to a guest user, the only value displayed is the time remaining (which is the time till the expiration of the guest user's account).

**Note:** For more information on configuring bandwidth-based and time-based vouchers, see [user](#) on page 1594 (radius user policy config mode).

```
show radius server
```

|               |   |
|---------------|---|
| radius server | Displays RADIUS server related statistical data |
|---------------|---|

### Examples

```
rfs4000-229D58#show radius guest-users
      TIME (min:sec)
      USED      REMAINING  GUEST USER
      0:00      9:00      time9
      0:00      5:00      time5
      0:00      15:00     time15
      0:00      305416:35  notime
      2:31      7:29      time10
rfs4000-229D58#
```

The following example shows a RADIUS user pool with guest users having bandwidth-based, time-based, bandwidth and time based, and no bandwidth or time based vouchers:

```
rfs4000-229D58(config-captive-portal-wdws)#show context
radius-user-pool-policy wdws
  user time_and_data password 0 both group wdws guest expiry-time 12:00 expiry-date
12/31/2015 access-duration 8000 data-limit 500 committed-downlink 3000 committed-
uplink 2000 reduced-downlink 1000 reduce4
  user neither password 0 nine group wdws guest expiry-time 12:00 expiry-date 12/31/2015
  user data_only password 0 data group wdws guest expiry-time 12:00 expiry-date 12/31/2015
data-limit 125 committed-downlink 1000 committed-uplink 800 reduced-downlink 500
reduced-uplink 400
rfs4000-229D58(config-captive-portal-wdws)#
```

The following example shows the captive portal access details for the above mentioned RADIUS user pool users:

```
rfs4000-229D58(config-captive-portal-wdws)#show radius guest-users
      TIME (DD:HH:MM:SS)      DATA (kilobytes)
BANDWIDTH (kbps)
GUEST USER      CONFIGURED  REMAINING  CONFIGURED  REMAINING  CFGD DN  CURR
DN  CFGD UP  CURR UP
time_and_data  5:13:20:00  5:12:00:50  512000      433727      3000
0      2000      0
neither      till expiry  221:19:44:54  unlimited  unlimited
data_only      till expiry  221:19:44:54  128000      127587      1000
0      800      0
time_only      3:11:20:00  3:11:19:47  unlimited  unlimited
Current time: 17:15:07
rfs4000-229D58(config-captive-portal-wdws)#
```

## reload

Displays scheduled reload information for a specific device

### Note

This command is not present in the USER EXEC mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show reload {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

```
show reload {on <DEVICE-OR-DOMAIN-NAME>}
```

|                                     |   |
|-------------------------------------|---|
| reload {on <DEVICE-OR-DOMAIN-NAME>} | Displays scheduled reload information for a specified device <ul style="list-style-type: none"><li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays configuration on a specified device</li><li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li></ul> |
|-------------------------------------|---|

Examples

```
nx9500-6C8809(config)#show reload
No reload is scheduled.
nx9500-6C8809(config)#
```

rf-domain-manager

Displays RF Domain manager selection details

Supported in the following platforms:

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

Syntax

```
show rf-domain-manager {on <DEVICE-OR-DOMAIN-NAME>}
```

Parameters

```
show rf-domain-manager {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| rf-domain-manager          | Displays RF Domain manager selection details  |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Displays RF Domain manager selection details on a specified device or domain <ul style="list-style-type: none"><li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – specify the name of the AP, wireless controller, service platform, or RF Domain.</li></ul> |

Examples

```
nx9500-6C8809#show rf-domain-manager
RF Domain TechPubs
RF Domain Manager:
  ID: 19.6C.88.09
Controller Managed
Device under query:
  Priority: 220
  Has IP MiNT links
  Has wired MiNT links
nx9500-6C8809#
```

## role

Displays role based firewall information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show role [ldap-stats|wireless-clients]
show role [ldap-stats|wireless-clients] {on <DEVICE-NAME>}
```

### Parameters

```
show role [ldap-stats|wireless-clients] {on <DEVICE-NAME>}
```

|                       |   |
|-----------------------|---|
| role ldap-stats       | Displays LDAP server status and statistics  |
| role wireless-clients | Displays clients associated with roles  |
| on <DEVICE-NAME>      | <p>The following parameters are common to the 'ldap-stats' and 'wireless-clients' keywords:</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; - Optional. Displays clients associated with roles on a specified device</li> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, and service platform.</li> </ul> |

### Examples

```
nx9500-6C8809(config)#show role wireless-clients
No ROLE statistics found.
nx9500-6C8809(config)#
```

## route-maps

Displays route map statistics for defined routes

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show route-maps {on <DEVICE-NAME>}
```

### Parameters

```
show route-maps {on <DEVICE-NAME>}
```

|                  |   |
|------------------|---|
| route-maps       | Displays configured route map statistics for all defined routes<br>For more information on route maps, see <a href="#">route-map</a> on page 1768.  |
| on <DEVICE-NAME> | Optional. Displays route map statistics on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```
nx9500-6C8809(config)#show route-maps
nx9500-6C8809(config)#
```

## rtls

Displays *Real Time Location Service* (RTLS) statistics for Access Points contributing locationing information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show rtls [aer scout|ekahau|omnitrail] {<MAC/HOSTNAME>} { (on <DEVICE-OR-DOMAIN-NAME> ) }
```

### Parameters

```
show rtls [aer scout|ekahau|omnitrail] {<MAC/HOSTNAME>} { (on <DEVICE-OR-DOMAIN-NAME> ) }
```

|                            |   |
|----------------------------|---|
| rtls                       | Displays Access Point RTLS statistics   |
| aer scout                  | Displays Access Point Aer scout statistics  |
| ekahau                     | Displays Access Point Ekahau statistics   |

## running-config

Displays configuration files (where all configured MAC and IP access lists are applied to an interface)

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```

show running-config {aaa-policy|application|application-group|application-policy|
association-acl-policy|auto-provisioning-policy|captive-portal-policy|device|database-
client-policy|

show running-config url-list <URL-LIST-NAME> {include-factory}

```

### Parameters

```

show running-config {flag-unwritten-changes}

```

running-config flag-unwritten-changes

Flags unsaved changes in the `show > running-config` command output. Optionally use the `flag-unwritten-changes` keyword to view changes that have been committed but not saved in the startup configuration. When used, all unsaved changes are marked with a “===” marker, as shown in the following `show > running-config > flag-unwritten-changes` output:

```
nx9500-6C8809(config)#show running-config flag-unwritten-changes
!
! Configuration of NX9500 version 7.1.0.0-114D
!
!

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show sessions all {on <DEVICE-NAME>}
```

### Parameters

```
show sessions all {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| sessions         | Displays CLI sessions initiated on a device  |
| all              | Displays all sessions including internal   |
| on <DEVICE-NAME> | Optional. This is a recurring keyword and is common to the 'all' parameter. Displays CLI sessions on a specified device. <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

### Examples

```

nx9500-6C8809#show sessions
INDEX  COOKIE  NAME      START TIME      FROM           ROLE
1      2       snmp      2018-02-02 08:39:28  127.0.0.1      superuser
2      3       snmp2     2018-02-02 08:39:28  127.0.0.1      superuser
3      53      admin     2018-02-09 14:43:19  134.141.244.24  superuser
nx9500-6C8809#

```

## site-config-diff

Displays the difference in site configuration available on the NOC and a site.

The WiNG HM network defines a three-tier structure, consisting of multiple wireless sites managed by a single NOC controller. The NOC controller constitutes the first and the site controllers constitute the second tier of the hierarchy. The site controllers may or may not be grouped to form clusters. The site controllers in turn adopt and manage Access Points that form the third tier of the hierarchy.

NOC controllers possess default site configuration details. Overrides applied at the site level result in a mismatch of configuration at the site and the default site configuration available on the NOC controller. Use this command to view this difference.

*Supported in the following platforms:*

- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

#### Note

This command returns an output only when executed on a NOC controller.

### Syntax

```
show site-config-diff <SITE-NAME>
```

### Parameters

```
show site-config-diff <SITE-NAME>
```

|                              |  |
|------------------------------|--|
| site-config-diff <SITE-NAME> | Displays the configuration difference for the specified site                                   |
|                              | <ul style="list-style-type: none"> <li>• &lt;SITE-NAME&gt; - Specify the site name.</li> </ul> |

### Examples

```
nx9500-6C8809#show site-config-diff 5C-0E-8B-18-06-F4
---- Config diff for switch 5C-0E-8B-18-06-F4 ----
rfs4000 5C-0E-8B-18-06-F4
interface pppoe1
  no shutdown
nx9500-6C8809#
```

## smart-rf

Displays *Self-Monitoring At Run Time RF* (Smart RF) statistical history to assess adjustments made to device configurations to compensate for detected coverage holes or device failures

When invoked by an administrator, Smart RF instructs access point radios to change to a specific channel and begin beaconing using the maximum available transmit power. Within a well-planned deployment, any RF Domain member access point radio should be reachable by at least one other radio. Smart RF records signals received from its neighbors as well as signals from external, un-managed radios. AP-to-AP distance is recorded in terms of signal attenuation. The information from external radios is used during channel assignment to minimize interference.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

## Syntax

```
show smart-rf [ap|channel-distribution|history|history-timeline|interfering-ap|
interfering-neighbors|radio|select-shutdown]
show smart-rf ap {<MAC>|<DEVICE-NAME>} [activity|energy|neighbors] on <DOMAIN-NAME>}
show smart-rf ap {<MAC>|<DEVICE-NAME>} {on <DOMAIN-NAME>}
show smart-rf ap (activity|energy|neighbors) [<MAC>|<DEVICE-NAME>] {(on <DOMAIN-NAME>)}
show smart-rf [channel-distribution|history|history-timeline] {on <DOMAIN-NAME>}
show smart-rf radio {<MAC>|activity|all-11a|all-11bgn|channel|energy|neighbors|
on <DOMAIN-NAME>}
show smart-rf radio {<MAC>|all-11a|all-11bgn|energy <MAC>} {on <DOMAIN-NAME>}
show smart-rf radio {activity|neighbors} {<MAC>|all-11a|all-11bgn}
{on <DOMAIN-NAME>}
show smart-rf interfering-ap {<MAC>|<DEVICE-NAME>} on <DOMAIN-NAME>}
show smart-rf interfering-neighbors {<MAC>|<DEVICE-NAME>} on <DOMAIN-NAME>}
threshold <50-100>}
show smart-rf select-shutdown {AP-MAC|AP-DEVICE-NAME|on <RF-DOMAIN-NAME>}
```

## Parameters

```
show smart-rf ap {<MAC>|<DEVICE-NAME>} {on <DOMAIN-NAME>}
```

|                  |   |
|------------------|---|
| smart-rf         | Displays Smart RF related information   |
| ap               | Displays access point related Smart RF information  |
| <MAC>            | Optional. Uses MAC addresses to identify access points. Displays all access points, if no MAC address is specified.   |
| <DEVICE-NAME>    | Optional. Uses an administrator defined name to identify an access point  |
| on <DOMAIN-NAME> | Optional. Displays access point details on a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; - Specify the domain name.</li> </ul> |

```
show smart-rf ap (activity|energy|neighbors) [<MAC>|<DEVICE-NAME>]
{(on <DOMAIN-NAME>) }
```

|          |  |
|----------|--|
| smart-rf | Displays Smart RF related information    |
| ap       | Displays AP related Smart RF information |

|                        |   |
|------------------------|---|
| activity               | <p>Optional. Displays Smart RF activity related information<br/>Use this option to view the following:</p> <ul style="list-style-type: none"> <li>Time-period – Lists the frequency Smart RF activity is trended for the RF Domain. Trending periods include the current hour, last 24 hours, or the last seven days. Comparing Smart RF adjustments versus the last seven days enables an administrator to assess whether periods of interference and poor performance were relegated to just specific periods.</li> <li>Power changes – Displays the number of Smart RF initiated power level changes needed for RF Domain member devices during each of the three trending periods. Determine whether power compensations were relegated to known device outages or if compensations were consistent over the course of a day or week.</li> <li>Channel changes – Lists the number of Smart RF initiated channel changes needed for RF Domain member devices during each of the three trending periods. Determine if channel adjustments were relegated to known device count increases or decreases over the course of a day or week.</li> <li>Coverage changes – Displays the number of Smart RF initiated coverage changes needed for RF Domain member devices during each of the three trending periods. Determine if coverage changes were relegated to known device failures or known periods of interference over the course of a day or week.</li> </ul> |
| energy                 | <p>Optional. Displays AP energy for a specified AP or all APs<br/>Use this option to view an RF Domain member access point's operating channels, noise level and neighbor count. This information helps assess whether Smart RF neighbor recovery is needed in respect to poorly performing access points.</p>  |
| neighbors              | <p>Optional. Displays AP neighbors<br/>Use this option to view attributes of neighbor radio resources available for Smart RF radio compensations for other RF Domain member device radios.</p>  |
| {<MAC>  <DEVICE-NAME>} | <p>The following keywords are common to all of the above parameters:</p> <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Displays all of the above mentioned information for a specified AP, identified by its MAC address. Specify the AP's MAC address.</li> <li>&lt;DEVICE-NAME&gt; – Displays all of the above mentioned information for a specified AP, identified by its hostname. Specify the AP's hostname.</li> </ul>   |
| on <DOMAIN-NAME>       | <p>Optional. Displays Access Point details on a specified RF Domain.</p> <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the domain name.</li> </ul>   |

```
show smart-rf [channel-distribution|history|history-timeline] {on <DOMAIN-NAME>}
```

|                      |   |
|----------------------|---|
| smart-rf             | Displays Smart RF related information   |
| channel-distribution | Displays Smart RF channel distribution information. This provides an overview of how RF Domain member devices are utilizing different channels to optimally support connect devices and avoid congestion and interference with neighboring devices. Assess whether the channel spectrum is being effectively utilized and whether channel changes are warranted to improve RF Domain member device performance. |
| history              | Displays Smart RF calibration history. Use this option to view description and types of Smart RF events impacting RF Domain member devices.   |

|                  |   |
|------------------|---|
| history-timeline | Displays extended Smart RF calibration history on an hourly or daily timeline. Use this option to view the time stamp when Smart RF status was updated on behalf of a Smart RF adjustment within the selected RF Domain.  |
| on <DOMAIN-NAME> | This parameter is common to all of above smart RF options: <ul style="list-style-type: none"> <li>on &lt;DOMAIN-NAME&gt; – Optional. Displays Smart RF configuration, based on the parameters passed, on a specified RF Domain</li> <li>on &lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> |

```
show smart-rf radio {<MAC>|all-11a|all-11bgn|energy <MAC>} {on <DOMAIN-NAME>}
```

|                  |  |
|------------------|--|
| smart-rf         | Displays Smart RF related information  |
| radio            | Displays radio related commands  |
| <MAC>            | Optional. Displays details of a specified radio. Specify the radio's MAC address in the AA-BB-CC-DD-EE-FF format.  |
| all-11a          | Optional. Displays all 11a radios currently in the configuration   |
| all-11bgn        | Optional. Displays all 11bg radios currently in the configuration  |
| energy {<MAC>}   | Optional. Displays radio energy<br>Specify the MAC address of the radio <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Optional. Specify the radio's MAC address in the AA-BB-CC-DD-EE-FF format.</li> </ul> <p>Use this option to view an RF Domain member access point radio's operating channel, noise level and neighbor count. This information helps assess whether Smart RF neighbor recovery is needed in respect to poorly performing radios.</p> |
| on <DOMAIN-NAME> | The following keyword is common to all of the above parameters: <ul style="list-style-type: none"> <li>on &lt;DOMAIN-NAME&gt; – Optional. Displays radio details on a specified RF Domain</li> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul>  |

```
show smart-rf radio {activity|neighbors} {<MAC>|all-11a|all-11bgn} {on <DOMAIN-NAME>}
```

|                  |  |
|------------------|--|
| smart-rf         | Displays Smart RF related information  |
| radio            | Displays radio related commands  |
| activity         | Optional. Displays changes related to radio power, number of radio channels, or coverage holes. Use additional filters to view specific details.                                 |
| <MAC>            | Optional. Displays radio activity for a specified radio <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Specify the radio's MAC address.</li> </ul>                         |
| all-11a          | Optional. Displays radio activity of all 11a radios in the configuration   |
| all-11bgn        | Optional. Displays radio activity of all 11bg radios in the configuration  |
| on <DOMAIN-NAME> | Optional. Displays radio activity of all radios within a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul> |

```
show smart-rf interfering-ap {<MAC>|<DEVICE-NAME>} on <DOMAIN-NAME>}
```

|                  |  |
|------------------|--|
| smart-rf         | Displays Smart RF related information  |
| interfering-ap   | Displays interfering access points (requiring potential isolation) information   |
| <MAC>            | Optional. Displays information of a specified interfering access point <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Specify the Access Point's MAC address.</li> </ul> <b>Note:</b> Considers all APs if this parameter is omitted |
| <DEVICE-NAME>    | Optional. Displays interfering Access Point information on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the device name.</li> </ul> <b>Note:</b> Considers all APs if this parameter is omitted |
| on <DOMAIN-NAME> | Optional. Displays all interfering Access Point information within a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul>   |

```
show smart-rf interfering-neighbors {<MAC>|<DEVICE-NAME>|on <DOMAIN-NAME>|
threshold <50-100>}
```

|                    |   |
|--------------------|---|
| smart-rf           | Displays Smart RF related information   |
| interfering-ap     | Displays interfering neighboring Access Point information   |
| <MAC>              | Optional. Displays interfering neighboring Access Point information <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Specify the Access Point's MAC address.</li> </ul> <b>Note:</b> Considers all APs if this parameter is omitted   |
| <DEVICE-NAME>      | Optional. Displays all interfering neighboring Access Point information on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the device name.</li> </ul> <b>Note:</b> Considers all APs if this parameter is omitted  |
| threshold <50-100> | Optional. Specifies the maximum attenuation threshold of interfering neighbors <ul style="list-style-type: none"> <li>&lt;50-100&gt; – Specify a value from 50 -100 dB.</li> </ul> <p>Attenuation is a measure of the reduction of signal strength during transmission. Attenuation is the opposite of amplification, and is normal when a signal is sent from one point to another. If the signal attenuates too much, it becomes unintelligible. Attenuation is measured in decibels.</p> |
| on <DOMAIN-NAME>   | Optional. Displays radio activity of all radios within a specified RF Domain <ul style="list-style-type: none"> <li>&lt;DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul>  |

```
show smart-rf select-shutdown {<AP-MAC>|<AP-DEVICE-NAME>|on <RF-DOMAIN-NAME>}
```

|                     |  |
|---------------------|--|
| smart-rf            | Displays Smart RF related information  |
| select-shutdown     | Displays 2.4 GHz APs shutdown to maintain <i>co-channel interference</i> (CCI) levels within specified limits. Note, this information is displayed only if select-shutdown is enabled in the smart-rf policy context. For more information, see <a href="#">select-shutdown</a> on page 1663.            |
| <AP-MAC>            | Optional. Displays if a specified AP, identified by its MAC address, was shutdown as part of the select-shutdown feature. <ul style="list-style-type: none"> <li>&lt;AP-MAC&gt; – Specify the access point's MAC address.</li> </ul> <p><b>Note:</b> Considers all APs if this parameter is omitted.</p> |
| <AP-DEVICE-NAME>    | Optional. Displays if a specified AP, identified by its device name, was shutdown as part of the select-shutdown feature. <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the AP's device name.</li> </ul> <p><b>Note:</b> Considers all APs if this parameter is omitted.</p>      |
| on <RF-DOMAIN-NAME> | Optional. Displays APs, within a specified RF Domain, that were shutdown as part of the select-shutdown feature. <ul style="list-style-type: none"> <li>&lt;RF-DOMAIN-NAME&gt; – Specify the RF Domain name.</li> </ul>  |

### Examples

## snmpv3 (show command)

Displays the SNMPv3 engineID

*Supported in the following platforms:*

- Access Points — AP 6522, AP 6562, AP 7161, AP 7502, AP 7532, AP 7562, AP 7602, AP-7612, AP 7622, AP7632, AP7662, AP-8163, AP-8432, AP-8533
- Wireless Controllers — RFS 4000
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
show snmpv3 engineID
```

### Parameters

```
show snmpv3 engineID
```

|                      |                              |
|----------------------|------------------------------|
| show snmpv3 engineID | displays the SNMPv3 engineID |
|----------------------|------------------------------|

### Examples

```
NOC-NX9500>show snmpv3 engineID
SNMPv3 EngineID: 8000018480e3a66a6699599451
NOC-NX9500>
```

## spanning-tree

Displays spanning tree utilization information

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show spanning-tree mst {configuration|detail|instance|on}
show spanning-tree mst {configuration} {(on <DEVICE-NAME>)}
show spanning-tree mst {detail} {interface|on}
show spanning-tree mst {detail} interface {<INTERFACE-NAME>|ge <1-4>|me1|
port-channel <1-2>|pppoe1|vlan <1-4094>|wwan1} {(on <DEVICE-NAME>)}
show spanning-tree mst {instance <1-15>} {interface <INTERFACE-NAME>}
{(on <DEVICE-NAME>)}
```

### Parameters

```
show spanning-tree mst {configuration} {(on <DEVICE-NAME>)}
```

|                                  |  |
|----------------------------------|--|
| spanning-tree                    | Displays spanning tree utilization information   |
| mst                              | Displays <i>Multiple Spanning Tree</i> (MST) related information   |
| configuration {on <DEVICE-NAME>} | Optional. Displays MST configuration <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays MST configuration on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP,wireless controller, or service platform.</li> </ul> |

```
show spanning-tree mst {detail} interface {<INTERFACE-NAME>|ge <1-4>|me1|
port-channel <1-2>|pppoe1|vlan <1-4094>|wwan1} {(on <DEVICE-NAME>)}
```

|               |   |
|---------------|---|
| spanning-tree | Displays spanning tree information  |
| mst           | Displays MST configuration  |
| detail        | Optional. Displays detailed MST configuration, based on the parameters passed |

|  |  |
|--|--|
| interface [<INTERFACE>  age <1-4> <br>me1  port-channel <1-2>  pppoe1 <br>vlan <1-4094> wwan1] | Displays detailed MST configuration for a specified interface <ul style="list-style-type: none"> <li>• &lt;INTERFACE&gt; - Displays detailed MST configuration for a specified interface. Specify the interface name.</li> <li>• age &lt;1-4&gt; - Displays GigabitEthernet interface MST configuration             <ul style="list-style-type: none"> <li>• &lt;1-4&gt; - Select the GigabitEthernet interface index from 1 - 4.</li> </ul> </li> <li>• me1 - Displays FastEthernet interface MST configuration</li> <li>• port-channel - Displays port channel interface MST configuration             <ul style="list-style-type: none"> <li>• &lt;1-2&gt; - Select the port channel interface index from 1 - 2.</li> </ul> </li> <li>• pppoe1 - Displays PPP over Ethernet interface MST configuration</li> <li>• vlan - Displays VLAN interface MST configuration             <ul style="list-style-type: none"> <li>• &lt;1-4094&gt; - Select the SVI VLAN ID from 1 - 4094.</li> </ul> </li> <li>• wwan1 - Displays Wireless WAN interface MST configuration</li> </ul> |
| on <DEVICE-NAME>   | The following keyword is common to all interfaces:<br>Optional. Displays detailed MST configuration on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul>  |

```
show spanning-tree mst {instance <1-15>} {interface <INTERFACE-NAME>}
{ (on <DEVICE-NAME>)} 
```

|                            |   |
|----------------------------|---|
| spanning-tree              | Displays spanning tree information  |
| mst                        | Displays MST configuration. Use additional filters to view specific details.  |
| instance <1-15>            | Optional. Displays information for a particular MST instance <ul style="list-style-type: none"> <li>• &lt;1-15&gt; - Specify the instance ID from 1 - 15.</li> </ul>  |
| interface <INTERFACE-NAME> | Optional. Displays MST configuration for a specific interface instance. The options are: <ul style="list-style-type: none"> <li>• &lt;INTERFACE-NAME&gt; - Displays MST configuration for a specified interface. Specify the interface name.</li> </ul> |
| on <DEVICE-NAME>           | Optional. Displays MST configuration on a specified device <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul>  |

## t5

Displays adopted T5 controller statistics

### Note

This command is applicable only on WiNG controllers with adopted and managed T5 controllers.

*Supported in the following platforms:*

- Wireless Controllers — RFS 4000
- Service Platforms — NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
show t5 [boot|clock|cpe|interface|mac|system|temperature|uptime|version|
wireless] {on <T5-DEVICE-NAME>}
show t5 [boot|clock|system|temperature|uptime|version]
{on <T5-DEVICE-NAME>}
show t5 cpe [address|boot|ether port status|led|reset|system|uptime|version]
{on <T5-DEVICE-NAME>}
show t5 interface [dsl|fe|ge|radio]
show t5 interface [dsl|fe|ge] [counter|description|errors|status|utilization]
{on <T5-DEVICE-NAME>}
show t5 interface dsl custom [avg|dses|dsses|peak|uses|usses]
{on <T5-DEVICE-NAME>}
show t5 interface radio [stats|status|wlan-map]
{on <T5-DEVICE-NAME>}
show t5 mac table [filter name [dsl<1-24>|ge <1-2>|vlan <1-4094>|wlan <1-24>]
{on <T5-DEVICE-NAME>}
show t5 wireless [client|wlan]
show t5 wireless client {filter name [association-status|authentication-status|
bss|mac-address|retry-percentage|rssi-value]} {on <T5-DEVICE-NAME>}
show t5 wireless wlan counters [qos|rate|size]
{on <T5-DEVICE-NAME>}
```

### Parameters

```
show t5 [boot|clock|system|temperature|uptime|version]
{on <T5-DEVICE-NAME>}
```

|             |  |
|-------------|--|
| t5          | Displays adopted T5 controller statistics  |
| boot        | Displays the T5 device's boot details. Use this option to view the primary and secondary image files available to use for booting up.  |
| clock       | Displays the T5 controller's system time, as reported from the controller itself or its remote NTP time resource                       |
| system      | Displays T5 controller's system information, which includes the T5 controller's hostname, MAC address, RF Domain, system clock, uptime |
| temperature | Displays T5 controller's current temperature   |

|                     |   |
|---------------------|---|
| uptime              | Displays the T5 controller's uptime (the time it has been actively deployed and operational)  |
| version             | Displays the T5 controller's primary and secondary firmware images  |
| on <T5-DEVICE-NAME> | Optional. Executes the command on a specified T5 device <ul style="list-style-type: none"> <li>&lt;T5-DEVICE-NAME&gt; – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.</li> </ul> |

```
show t5 cpe [address|boot|ether port status|led|reset|system|uptime|version]
{on <T5-DEVICE-NAME>}
```

|                     |   |
|---------------------|---|
| t5                  | Displays adopted T5 controller statistics   |
| cpe                 | Displays the T5 controller managed <i>Customer Premises Equipment</i> (CPE) statistics based on the parameters passed. Use this command to verify each CPE address credentials and whether currently disconnected or ready for radio coverage area support. |
| address             | Displays each linked CPE's current IP address used as its network identifier  |
| boot                | Displays the primary and secondary firmware versions available to each CPE, along with status of the most recent upgrade operation details  |
| ether port status   | Displays Ethernet port status   |
| led                 | Displays whether the CPEs currently have their LEDs enabled or disabled. In places like hospitals, its not uncommon for access points to be operational, but their LEDs off as to not disturb patients.   |
| reset               | Displays the number times a CPE has been reset  |
| system              | Displays device hardware and SKU information for each CPE. Use this information to assess whether a controller is managing the correct CPE devices out of the total number of CPEs available.   |
| uptime              | Displays the time each CPE device has been actively deployed and operational  |
| version             | Displays the application and boot versions utilized by the CPE devices  |
| on <T5-DEVICE-NAME> | Optional. Executes the command on a specified T5 device <ul style="list-style-type: none"> <li>&lt;T5-DEVICE-NAME&gt; – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.</li> </ul>                       |

```
show t5 interface [dsl|fe|ge] [counter|description|errors|status|utilization]
{on <T5-DEVICE-NAME>}
```

|           |  |
|-----------|--|
| t5        | Displays adopted T5 controller statistics                                |
| interface | Displays T5 interface-related statistics based on the interface selected |

|  |   |
|--|---|
| <p>[dsl fe ge radio] [counter description  errors status  utilization]</p> | <p>Select the interface type. The options are: <b>dsl</b>, <b>fe</b>, and <b>ge</b>.</p> <ul style="list-style-type: none"> <li>• dsl – Displays <i>Digital Subscriber Line</i> (DSL) interface related information</li> <li>• fe – Displays <i>Fast Ethernet</i> (FE) interface related information</li> <li>• ge – Displays <i>Gigabit Ethernet</i> (GE) interface related information</li> </ul> <p>The system displays the following information for the DSL, GE, and FE ports:</p> <ul style="list-style-type: none"> <li>• counter – Displays the following: <ul style="list-style-type: none"> <li>• Number of octets (bytes) received and transmitted on this port</li> <li>• Number of data packets received and transmitted on this port</li> <li>• Number of flow control (layer 2) packets received and transmitted on this port</li> </ul> </li> <li>• description – Displays the following: <ul style="list-style-type: none"> <li>• The selected port's name</li> <li>• The numeric index assignable to each port</li> <li>• The 64 character maximum, unique, administrator-assigned description to each port</li> </ul> </li> <li>• errors – Displays the following DSL interface related errors: <ul style="list-style-type: none"> <li>• The name of the DSL utilized by each T5 controller connected CPE device</li> <li>• The number of FECs detected in the downstream direction. <i>Forward Error Correction</i> (FEC) or channel coding is used for controlling errors over unreliable or noisy communication channels.</li> <li>• The number of CPE DSL coding violations (badly coded packets) detected in the downstream direction.</li> <li>• The number of FECs detected in the upstream direction.</li> <li>• The number of CPE DSL coding violations (badly coded packets) detected in the upstream direction.</li> </ul> </li> <li>• status – Displays the following: <ul style="list-style-type: none"> <li>• The selected port's name</li> <li>• Whether the port is currently up or down as a T5 controller transmit and receive resource</li> <li>• The port's current speed in MB</li> <li>• Whether pause packet utilization is currently off or on for the selected port</li> <li>• Whether each listed port is enabled or disabled by the administrator</li> </ul> </li> <li>• utilization – Displays the following: <ul style="list-style-type: none"> <li>• The selected port's name</li> <li>• The port's receive and transmit data rates (in Kbps)</li> <li>• The packet per second port receive and transmit rates (p/s)</li> <li>• Each port's receive and transmit direction utilization as a percentage of the total transmit bandwidth available.</li> </ul> </li> </ul> |
| <p>on &lt;T5-DEVICE-NAME&gt;</p>   | <p>Optional. Executes the command on a specified T5 device</p> <ul style="list-style-type: none"> <li>• &lt;T5-DEVICE-NAME&gt; – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.</li> </ul>  |

```
show t5 interface dsl custom [avg|dses|dsses|peak|uses|usses]
{on <T5-DEVICE-NAME>}
```

|   |   |
|---|---|
| t5                                      | Displays adopted T5 controller statistics   |
| interface                               | Displays T5 interface-related statistics based on the interface selected  |
| dsl                                     | <p>Selects A T5 controller's DSL interface.</p> <p>A T5 controller uses the operating system to manage its connected radio devices, as opposed to the WiNG operating used by RFS controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the operating system. These CPEs use a DSL as their high speed Internet access mechanism using the CPE's physical wallplate connection and phone jack.</p>  |
| custom [avg dses dsses peak uses usses] | <p>Displays following custom CPE DSL data:</p> <ul style="list-style-type: none"> <li>• avg – Each DSL's average response time in microseconds</li> <li>• dses – The number of seconds downstream DSL transmissions were negatively impacted by code violations.</li> <li>• dsses – The number of seconds downstream DSL transmissions were severely negatively impacted by code violations.</li> <li>• peak – Each DSL's maximum (best to date since the screen was refreshed) response time in microseconds.</li> <li>• uses – The number of seconds upstream DSL transmissions were negatively impacted by code violations.</li> <li>• usses – The number of seconds upstream DLS transmissions were severely negatively impacted by code violations.</li> </ul> |
| on <T5-DEVICE-NAME>                     | <p>Optional. Executes the command on a specified T5 device</p> <ul style="list-style-type: none"> <li>• &lt;T5-DEVICE-NAME&gt; – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.</li> </ul>  |

```
show t5 interface radio [stats|status|wlam-map] {on <T5-DEVICE-NAME>}
```

|           |  |
|-----------|--|
| t5        | Displays adopted T5 controller statistics                                |
| interface | Displays T5 interface-related statistics based on the interface selected |

radio [stats|status| wlan-map]

Displays following radio interface related information:

- stats – Displays T5 radio interface statistics. A T5 controller uses the operating system to manage its connected radio devices, as opposed to the WiNG operating used by RFS controllers and NX service platforms. However, a T5 controller, once enabled as a supported external device, can provide data to WiNG to assist in a T5's management within a WiNG supported subnet populated by both types of devices. The CPEs are the T5 controller managed radio devices using the operating system. Use this option to view the following:
  - name – The administrator assigned name of each listed CPE radio as its unique identifier
  - Rx (Kbps) – The listed CPE radio's receive data rate (in Kbps). Use this information to assess RF activity versus other T5 managed CPE radios in the same radio coverage area.
  - Rx Octets – The number of octets (bytes) received with no errors by the listed T5 controller managed CPE radio.
  - Rx Packets – The number of data packets received for the listed T5 managed CPE radio since this screen was last refreshed.
  - Tx (Kbps) – The listed CPE radio's transmit data rate (in Kbps). Use this information to assess RF activity versus other T5 managed CPE radios in the same radio coverage area.
  - Tx Octets – Displays the number of octets (bytes) transmitted with no errors by the listed T5 controller managed CPE radio.
  - Tx Packets – The number of data packets transmitted from the listed T5 managed CPE radio since this screen was last refreshed.
- status – Displays T5 radio interface status information
  - name – The administrator assigned name of each listed CPE radio as its unique identifier.
  - Operational status – The radio interface's operational status (enabled/disabled).
  - mac – The T5 radio interface's MAC address.
  - transmit power – The T5 radio interface's transmit power.
  - Channel – The T5 radio interface's channel of operation.
- wlan-map – Displays WLAN map membership data for T5 controller managed CPE radio devices. Use this option to view the following:
  - name – The administrator assigned name of each listed CPE radio as its unique identifier.
  - status – Whether a CPE radio is currently enabled or disabled as a radio resource for the WLAN(s) the CPE radio has been mapped to.
  - wlan-radio-mapping – The managed WLAN(s) each listed radio has been mapped to.

on <T5-DEVICE-NAME>

Optional. Executes the command on a specified T5 device

- <T5-DEVICE-NAME> – Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.

```
show t5 mac table [filter name [dsl<1-24>|ge <1-2>|vlan <1-4094>|wlan <1-24>]
{on <T5-DEVICE-NAME>}
```

|  |   |
|--|---|
| t5   | Displays adopted T5 controller statistics   |
| mac table [dsl<1-24> ge <1-2>  vlan <1-4094>  wlan <1-24>] | <p>Displays T5 MAC address table. The T5 MAC table displays a dynamic list of MAC addresses learned by the T5 controller over its ethernet interfaces. Use this information to identify devices and the interfaces on which they can be found.</p> <p>Use the following additional filters to filter on the basis of the VLAN or DSL interface:</p> <ul style="list-style-type: none"> <li>• dsl &lt;1-24&gt; - Filters information on the basis of the selected DSL port</li> <li>• ge &lt;1-2&gt; - Filters information on the basis of the selected GE port</li> <li>• vlan &lt;1-4094&gt; - Filters information on the basis of the selected VLAN port</li> <li>• wlan &lt;1-24&gt; - Filters on the basis of the selected CPE</li> </ul> |
| on <T5-DEVICE-NAME>  | <p>Optional. Executes the command on a specified T5 device</p> <ul style="list-style-type: none"> <li>• &lt;T5-DEVICE-NAME&gt; - Specify the T5 device's hostname. An error message is displayed if no T5 device name is specified.</li> </ul>  |

```
show t5 wireless client {filter name [association-status|authentication-status|bss|

### Parameters

None

### Examples

```
nx9500-6C8809(config)#show terminal
Terminal Type: xterm
Length: 24      Width: 200
nx9500-6C8809(config)#
```

## timezone

Displays a device's timezone

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show timezone
```

### Parameters

None

### Examples

```
nx9500-6C8809(config)#show timezone
Timezone is America/Los_Angeles
nx9500-6C8809(config)#
```

## traffic-shape

Displays traffic-shaping related configuration details and statistics. Traffic shaping regulates network data transfers to ensure a specific performance level. Traffic shaping delays the flow of packets defined as less important than prioritized traffic streams. Traffic shaping enables traffic control out an interface to match its flow to the speed of a remote target's interface and ensure traffic conforms applied policies. Traffic can be shaped to meet downstream requirements and eliminate network congestion when data rates are in conflict.

Apply traffic shaping to specific applications to apply application categories. When application and ACL rules are conflicting, ACL rules take precedence for the traffic shaping class. Using traffic shaping, an application takes precedence over an application category.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show traffic-shape [priority-map|statistics {class <1-4>}|status] {on <DEVICE-NAME>}
```

### Parameters

```
show traffic-shape [priority-map|statistics {class <1-4>}|status] {on <DEVICE-NAME>}
```

|                        |   |
|------------------------|---|
| traffic-shape          | Displays traffic-shaping related configuration details and statistics   |
| priority-map           | Displays the traffic shaper queue priority. There are 8 queues (0 - 7), and traffic is queued in each based on incoming packets 802.1p markings.  |
| statistics class <1-4> | Displays traffic-shaping related statistics for all traffic shaper classes or for a selected class <ul style="list-style-type: none"> <li>class &lt;1-4&gt; – Optional. Specify the traffic class from 1 - 4. The system displays traffic shaping statistics for the selected class. If not selected, the system statistics for all classes.</li> </ul> |
| status                 | Displays the controller or service platform's traffic shaping status (whether running or not)   |
| on <DEVICE-NAME>       | Optional. Displays traffic-shaping related configuration details and statistics on a specified device <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul>   |

### Examples

```
ap7532-DEB9B0#show traffic-shape priority-map
```

```
-----
DOT1P-PRIORITY    TX-SHAPER-PRIORITY
-----
0                  2
1                  0
2                  1
3                  3
4                  4
5                  5
```

```

## tron (show command)

Displays the TRON-capable and TRON-enabled, WiNG AP's operating configuration.

### Note

This command is applicable on TRON-capable, WiNG APs and controllers. And, the controller should have the TRON license applied, and TRON-capable and enabled AP(s) adopted to it.

*Supported in the following platforms*

- Access Points — AP-8533
- Service Platforms — NX 5500, NX 75XX, NX 95XX, NX 96XX, VX 9000

### Syntax

```
show tron operating-config {on <DEVICE-NAME>}
```

### Parameters

```
show tron operating-config {on <DEVICE-NAME>}
```

|                            |   |
|----------------------------|---|
| show tron operating-config | Displays the operating configuration parameters   |
| on <DEVICE-NAME>           | Optional. Executes the command on a specified AP, controller, or service platform   |
|                            | Following are the error outputs of this command:  |
|                            | <ul style="list-style-type: none"> <li>% Error: Not available under current working mode</li> </ul>   |
|                            | <p><b>Note:</b></p> <p>You will get this message, if the device (AP or controller) on which you have executed the command does not have TRON up and running, or does not support the TRON feature.</p>  |
|                            | <ul style="list-style-type: none"> <li>TRON Operating Configuration: (none)</li> </ul>  |
|                            | <p><b>Note:</b></p> <p>You will get this message, when the FedEx backend server has not yet pushed the operating configuration to the WiNGAP. For more information on configuring TRON parameters, see <a href="#">tron</a> on page 1164.</p> |

### Examples

```
NOC-NX9500#show tron operating-config on ap8533-070154
TRON Operating Configuration:
  Device_Master_Type:           0x00 (Fixed)

NOC-NX9500#
```

## upgrade-status

Displays the last image upgrade status

### Note

This command is not available in the USER EXEC Mode.

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533

- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show upgrade-status {detail|on}
show upgrade-status {detail} {(on <DEVICE-NAME>) }
```

### Parameters

```
show upgrade-status {detail} {(on <DEVICE-NAME>) }
```

|                  |   |
|------------------|---|
| upgrade-status   | Displays last image upgrade status and log  |
| detail           | Optional. Displays last image upgrade status in detail  |
| on <DEVICE-NAME> | <p>The following keyword is recursive and common to the 'detail' parameter:</p> <ul style="list-style-type: none"> <li>• on &lt;DEVICE-NAME&gt; – Optional. Displays last image upgrade status on a specified device</li> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> <p><b>Note:</b> If the 'on' keyword is used without the 'detail' keyword, the system displays a summary of upgrade status and log on the specified device.</p> |

### Examples

```
nx9500-6C8809#show upgrade-status
Last Image Upgrade Status :In_Progress(17 percent completed)
Last Image Upgrade Time   : 2017-02-11 12:26:29

## version

Displays a device's software and hardware version

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show version {on <DEVICE-NAME>}
```

### Parameters

```
show version {on <DEVICE-NAME>}
```

|                                   |   |
|-----------------------------------|---|
| version {on<br><DEVICE-<br>NAME>} | <p>Displays software and hardware versions on all devices or a specified device</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays software and hardware versions on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |
|-----------------------------------|---|

### Examples

```

## vrrp

Displays *Virtual Router Redundancy Protocol* (VRRP) protocol details

*Supported in the following platforms:*

- Access Points — AP505i, AP510i/e, AP560i/h, AP7522, AP7532, AP7562, AP7612, AP7632, AP7662, AP8432, AP8533
- Service Platforms — NX5500, NX7500, NX9500, NX9600, VX9000

### Syntax

```
show vrrp [brief|details|error-stats|stats]
show vrrp [brief|details|stats] {<1-255>} {(on <DEVICE-NAME>)}
show vrrp error-stats {on <DEVICE-NAME>}
```

## Parameters

```
show vrrp [brief|details|stats] {<1-255>} { (on <DEVICE-NAME>) }
```

|                  |   |
|------------------|---|
| vrrp             | Displays VRRP related statistics in brief or in detail depending on the option selected   |
| brief            | Displays virtual router information in brief  |
| details          | Displays virtual router information in detail   |
| stats            | Displays virtual router statistics  |
| <1-255>          | The following keyword is common to all of the above parameters: <ul style="list-style-type: none"> <li>&lt;1-255&gt; - Optional. Displays information for a specified Virtual Router. Specify the router's ID from 1 -255.</li> </ul>   |
| on <DEVICE-NAME> | The following keyword is recursive and common to the '<1-255>' parameter: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. Displays specified router information on a specified device</li> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show vrrp error-stats {on <DEVICE-NAME>}
```

|                                |   |
|--------------------------------|---|
| vrrp                           | Displays VRRP related statistics in brief or in detail depending on the option selected   |
| error-stats {on <DEVICE-NAME>} | Displays global error statistics <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; - Optional. Displays global error statistics on a specified device</li> <li>&lt;DEVICE-NAME&gt; - Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

## Examples

```
nx9500-6C8809(config)#show vrrp error-stats
Last protocol error reason: none
IP TTL errors: 0
Version mismatch: 0
Packet Length error: 0
Checksum error: 0
Invalid virtual router id: 0
Authentication mismatch: 0
Invalid packet type: 0
nx9500-6C8809(config)#
nx9500-6C8809(config)#show vrrp details
VRRP Group 1:
  version 2
  interface none
  configured priority 1
  advertisement interval 1 sec
  preempt enable, preempt-delay 0
  virtual mac address 00-00-5E-00-01-01
  sync group disable
nx9500-6C8809(config)#
```

## virtual-machine

Displays the *virtual-machine* (VM) configuration, logs, and statistics

*Supported in the following platforms:*

- Service Platforms — NX 95XX, NX 96XX

### Syntax

```
show virtual-machine [configuration|debugging|export|statistics]
show virtual-machine [configuration|statistics] {<VM-NAME>|team-urc|team-rls|
team-vowlan} {(on <DEVICE-NAME>)}
show virtual-machine debugging {level|on}
show virtual-machine debugging {level [debug|error|info|warning]} {on <DEVICE-NAME>}
show virtual-machine export <VM-NAME> {on <DEVICE-NAME>}
show virtual-machine [configuration|statistics] {<VM-NAME>|adsp|team-cmt}
```

### Parameters

```
show virtual-machine [configuration|statistics] {<VM-NAME>|team-urc|team-rls|
team-vowlan} {(on <DEVICE-NAME>)}
```

|   |   |
|---|---|
| virtual-machine                             | Displays the following VM-related information: configuration or statistics  |
| configuration                               | Displays detailed VM configuration  |
| statistics                                  | Displays VM statistics  |
| [<VM-NAME>  team-urc team-rls  team-vowlan] | <p>The following keywords are common to the 'configuration' and 'statistics' parameters:</p> <ul style="list-style-type: none"> <li>• VM-NAME&gt; – Optional. Displays VM configuration or statistics for the virtual machine identified by the &lt;VM-NAME&gt; keyword. Specify the VM name.</li> <li>• team-urc – Optional. Displays TEAM-URC (IP-PBX) VM configuration/statistics</li> <li>• team-rls – Optional. Displays TEAM-RLS (Radio Link Server) VM configuration/statistics&lt;</li> <li>• team-vowlan – Optional. Displays TEAM-VoWLAN (Voice over WLAN) VM configuration/statistics</li> </ul> |
| on <DEVICE-NAME>                            | <p>Specifies the name of the device on which the command is executed</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; – Specify the name of the service platform.</li> </ul>  |

```
show virtual-machine [configuration|statistics] {<VM-NAME>|adsp|team-cmt}
{(on <DEVICE-NAME>)}
```

|                 |  |
|-----------------|--|
| virtual-machine | Displays the following VM-related information: configuration or statistics |
| configuration   | Displays detailed VM configuration   |
| statistics      | Displays VM statistics   |

|                            |   |
|----------------------------|---|
| [<VM-NAME> adsp] team-cmt] | <p>The following keywords are common to the 'configuration' and 'statistics' parameters:</p> <ul style="list-style-type: none"> <li>• VM-NAME&gt; - Optional. Displays VM configuration or statistics for the virtual machine identified by the &lt;VM-NAME&gt; keyword. Specify the VM name.</li> <li>• adsp - Optional. Displays <i>Air-Defense Services Platform</i> (ADSP) VM configuration/statistics</li> <li>• team-cmt - Optional. Displays TEAM-CMT VM configuration/statistics</li> </ul> |
| on <DEVICE-NAME>           | <p>Specifies the name of the device on which the command is executed</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the service platform.</li> </ul>  |

```
show virtual-machine debugging {level[debug|error|info|warning]}
{on <DEVICE-NAME>}
```

|                                   |   |
|-----------------------------------|---|
| virtual-machine                   | Displays the following VM-related information: configuration or statistics  |
| debugging                         | Displays VM debugging logs  |
| level [debug  error info warning] | <p>Optional. Displays VM debugging logs based on the level selected. The available options are:</p> <ul style="list-style-type: none"> <li>• debug - Displays VM logs of level debug and above</li> <li>• error - Displays VM logs of level error</li> <li>• info - Displays VM logs of level Info and above</li> <li>• warning - Displays logs of level warning and above</li> </ul> |
| on <DEVICE-NAME>                  | <p>Specifies the name of the device on which the command is executed</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the service platform.</li> </ul>  |

```
show virtual-machine export <VM-NAME> {on <DEVICE-NAME>}
```

|                  |  |
|------------------|--|
| virtual-machine  | Displays the following VM-related information: configuration or statistics   |
| export           | Displays VM configuration export related information   |
| <VM-NAME>]       | <p>Displays VM configuration export related information for the virtual machine identified by the &lt;VM-NAME&gt; keyword. Specify the VM name. The NX 95XX and NX 96XX series service platforms will display ADSP and TEAM-CMT VM configuration export information.</p> |
| on <DEVICE-NAME> | <p>Specifies the name of the device on which the command is executed</p> <ul style="list-style-type: none"> <li>• &lt;DEVICE-NAME&gt; - Specify the name of the service platform.</li> </ul>   |

### Examples

```
nx9500-6C874D#show virtual-machine statistics
```

```
-----

## Parameters

```
show wireless ap {configured}
```

|            |  |
|------------|--|
| wireless   | Displays wireless configuration parameters   |
| ap         | Displays managed access point information  |
| configured | Optional. Displays configured AP information, such as name, MAC address, profile, RF Domain and adoption status. |

```
show wireless ap {detail} {<MAC/HOST-NAME>} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

|          |  |
|----------|--|
| wireless | Displays wireless configuration parameters |
| ap       | Displays managed access point information  |

|                             |  |
|-----------------------------|--|
| detail <MAC/HOST-NAME>      | Optional. Displays detailed information for all APs or a specified AP <ul style="list-style-type: none"> <li>&lt;MAC/HOST-NAME&gt; – Optional. Displays information for a specified AP. Specify the AP's MAC address.</li> </ul>   |
| on <DEVICE-OR-DOMAIN-NAME>} | The following keyword is recursive and common to the 'detail <MAC/HOST-NAME>' parameters: <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays information on a specified device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> </li> </ul> |

```
show wireless ap {load-balancing} {client-capability|events|neighbors} {(on <DEVICE-NAME>)}
```

|   |  |
|---|--|
| wireless  | Displays wireless configuration parameters   |
| ap  | Displays managed access point information  |
| load-balancing {client-capability events neighbors} | Optional. Displays load balancing status. Use additional filters to view specific details. <ul style="list-style-type: none"> <li>client-capability – Optional. Displays client band capability</li> <li>events – Optional. Displays client events</li> <li>neighbors – Optional. Displays neighboring clients</li> </ul>  |
| on <DEVICE-NAME>                                    | The following keyword is recursive and common to the 'client-capability', 'events', and 'neighbors' parameters: <ul style="list-style-type: none"> <li>on &lt;DEVICE-NAME&gt; – Optional. Displays load balancing information, based on the parameters passed, on a specified device</li> <li>&lt;DEVICE-NAME&gt; – Specify the name of the AP, wireless controller, or service platform.</li> </ul> |

```
show wireless bridge {candidate-ap} {<MAC/HOSTNAME> {<1-3>}} {(filter radio-mac <RADIO-MAC>)}
{(on <DEVICE-OR-DOMAIN-NAME>) }
```

|                      |   |
|----------------------|---|
| wireless             | Displays wireless configuration statistics  |
| bridge candidate-ap  | Optional. Displays information about the candidate infrastructure access points as well as the infrastructure access point that the client-bridge radio has selected. <p><b>Note:</b> When enabled, the client-bridge radio scans its defined channels to locate the best candidate access point servicing the infrastructure WLAN.</p>   |
| <MAC/HOSTNAME> <1-3> | Optional. Specify the client-bridge access point's hostname or MAC address. Optionally append the radio interface's number to form client-bridge in the form of AA-BB-CC-DD-EE-FF:RX or HOSTNAME:RX. <ul style="list-style-type: none"> <li>&lt;1-3&gt; – Optional. Radio interface index if not specified as part of mesh ID.</li> </ul> |

|                              |  |
|------------------------------|--|
| filter radio-mac <RADIO-MAC> | <p>This is a recursive parameter and common to all of the above options.</p> <ul style="list-style-type: none"> <li>filter radio-mac – Optional. Provides additional filters to specifically identify the radio by its MAC address</li> <li>&lt;RADIO-MAC&gt; – Specify the radio's MAC address.</li> </ul>  |
| on <DEVICE-OR-DOMAIN-NAME>   | <p>This is a recursive parameter and common to all of the above options.</p> <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Executes the command on a specified device or devices within a specified RF Domain</li> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the AP, controller, service platform, or RF Domain name.</li> </ul> |

```
show wireless bridge {certificate} status {on <DEVICE-NAME>}
```

|                           |  |
|---------------------------|--|
| wireless                  | Displays wireless configuration statistics   |
| bridge certificate status | Optional. Displays all client bridges in configuration and the status of their PKCS#12 certificates  |
| on <DEVICE-NAME>          | <p>Optional. Executes the command on a specified device</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; – Specify the AP, controller, service platform name.</li> </ul> |

```
show wireless bridge {config}
```

|               |  |
|---------------|--|
| wireless      | Displays wireless configuration statistics   |
| bridge config | <p>Optional. Displays all client bridges in configuration</p> <p>The output displays the configured client-bridges' hostname, MAC address, profile, RF Domain, SSID, band, encryption, authentication, and EAP username.</p> |

```
show wireless bridge {hosts} {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |   |
|----------------------------|---|
| wireless                   | Displays wireless configuration statistics  |
| bridge hosts               | <p>Optional. Displays the client bridge host information</p> <p>The output displays the configured client-bridges' host's MAC Address, bridge MAC address, IPv4 address, bridging status, and activity.</p> <p><b>Note:</b> The HOST MAC column displays real MAC addresses of wired hosts, while the BRIDGE MAC column displays the translated MAC addresses. The BRIDGE MAC column is based on the radio 2 base MAC address and increments by 1 for each wired host connected to the client bridges Ge1 port.</p> |
| on <DEVICE-OR-DOMAIN-NAME> | <p>Optional. Executes the command on a specified device or devices within a specified RF Domain.</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Specify the AP, controller, service platform, or Domain name.</li> </ul>  |

```
show wireless bridge {statistics} {rf|traffic} {(on <DEVICE-OR-DOMAIN-NAME>)}
```

|                   |   |
|-------------------|---|
| wireless          | Displays wireless configuration statistics              |
| bridge statistics | Optional. Displays the client-bridge related statistics |

|                            |   |
|----------------------------|---|
| rf                         | Optional. Displays the client-bridge related RF statistics<br>The output displays the signal, noise, SNR, TX/RX rates, retries, and errors.   |
| traffic                    | Optional. Displays the client-bridge related traffic statistics<br>The output displays TX/RX bytes, TX/RX packets, TX/RX bits/second, and dropped packets.  |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Executes the command on a specified device or devices within a specified RF Domain <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Specify the AP, controller, service platform, or Domain name.</li> </ul> |

```
show wireless client {association-history <MAC>} {on <DEVICE-OR-DOMAIN-NAME>}
```

|                            |  |
|----------------------------|--|
| wireless                   | Displays wireless configuration parameters   |
| client                     | Displays client information based on the parameters passed   |
| association-history <MAC>  | Optional. Displays association history for a specified client <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Specify the MAC address of the client.</li> </ul>   |
| on <DEVICE-OR-DOMAIN-NAME> | Optional. Displays association history on a specified device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
show wireless client {detail <MAC>} {(on <DEVICE-OR-DOMAIN-NAME>) }
```

|                            |  |
|----------------------------|--|
| wireless                   | Displays wireless configuration parameters   |
| client                     | Displays client information based on the parameters passed   |
| detail <MAC>               | Optional. Displays detailed wireless client(s) information <ul style="list-style-type: none"> <li>&lt;MAC&gt; – Optional. Displays detailed information for a specified wireless client. Specify the MAC address of the client.</li> </ul>   |
| on <DEVICE-OR-DOMAIN-NAME> | The following keyword is recursive and common to the 'detail <MAC>' parameter: <ul style="list-style-type: none"> <li>on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays detailed information on a specified device or RF Domain</li> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
show wireless client {filter ip [<IP>|not <IP>]} {on <DEVICE-OR-DOMAIN-NAME>}
```

|          |  |
|----------|--|
| wireless | Displays wireless configuration parameters                 |
| client   | Displays client information based on the parameters passed |

|                            |  |
|----------------------------|--|
| filter IP [<IP> not <IP>]  | Optional. Uses IP addresses to filter wireless clients <ul style="list-style-type: none"> <li>• &lt;IP&gt; – Selects clients with IP address matching the &lt;IP&gt; parameter</li> <li>• not &lt;IP&gt; – Inverts the match selection</li> </ul>  |
| on <DEVICE-OR-DOMAIN-NAME> | The following keyword is common to the 'IP' and 'not IP' parameters: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays selected wireless client information on a specified device or RF Domain</li> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
show wireless client {filter} {state [data-ready|not [data-ready|roaming]|roaming]} {on <DEVICE-OR-DOMAIN-NAME>}
```

|   |   |
|---|---|
| wireless  | Displays wireless configuration parameters  |
| client  | Displays client information based on the parameters passed  |
| filter state [data-ready  not [data-ready  roaming]] roaming] | Optional. Filters clients based on their state <ul style="list-style-type: none"> <li>• data-ready – Selects wireless clients in the data-ready state</li> <li>• not [data-ready roaming] – Inverts match selection. Selects wireless clients neither ready nor roaming</li> <li>• Roaming – Selects roaming clients</li> </ul>   |
| on <DEVICE-OR-DOMAIN-NAME>                                    | The following keyword is common to the 'ready', 'not', and 'roaming' parameters: <ul style="list-style-type: none"> <li>• on &lt;DEVICE-OR-DOMAIN-NAME&gt; – Optional. Displays selected client details on a specified device or RF Domain</li> <li>• &lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the name of the AP, wireless controller, service platform, or RF Domain.</li> </ul> |

```
show wireless client {filter} {wlan [<WLAN-NAME>|not <WLAN-NAME>]} {on <DEVICE-OR-DOMAIN-NAME>}
```

|  |  |
|--|--|
| wireless                                   | Displays wireless configuration parameters   |
| client                                     | Displays client information based on the parameters passed   |
| filter wlan [<WLAN-NAME>  not <WLAN-NAME>] | Optional. Filters clients on a specified WLAN <ul style="list-style-type: none"> <li>• &lt;WLAN-NAME&gt; – Specify the WLAN name.</li> <li>• not &lt;WLAN-NAME&gt; – Inverts the match selection</li> </ul>  |

Displays wireless client information based on the IPv6 address passed <ul style="list-style-type: none"> <li>&lt;IPv6&gt; – Displays information of the client identified by the &lt;IPv6&gt; parameter</li> <li>not &lt;IPv6&gt; – Inverts the match selection</li> </ul>  |
| filter state [data-ready not [data-ready roaming]] roaming] | Optional. Filters wireless client information based on their state <ul style="list-style-type: none"> <li>data-ready – Displays information of wireless clients in the data-ready state</li> <li>not [data-ready roaming] – Inverts match selection. Displays information of wireless clients neither ready nor roaming</li> <li>Roaming – Displays information of roaming clients</li> </ul>     |
| wlan [<WLAN-NAME>  not <WLAN-NAME>]                         | Optional. Displays wireless client information based on the WLAN name passed <ul style="list-style-type: none"> <li>&lt;WLAN-NAME&gt; – Specify the WLAN name.</li> <li>not &lt;WLAN-NAME&gt; – Inverts match selection</li> </ul>  |

```
show wireless coverage-hole-incidents {detail} {filter [ap <MAC/HOSTNAME>|
client-mac <MAC>]|summary} {(on <DOMAIN-NAME>)}
```

|                         |   |
|-------------------------|---|
| wireless                | Displays wireless configuration parameters. Use this option to view coverage-hole related incidents encountered by wireless clients and reported to associated access points. |
| coverage-hole-incidents | Displays coverage-hole related statistics   |

|  |  |
|--|--|
| detail filters [ap <MAC/<br>HOSTNAME>  client-mac <MAC>] | <p>Optional. Displays detailed coverage-hole related statistics</p> <ul style="list-style-type: none"> <li>filters – Optional. Displays detailed coverage-hole related statistics on a per access point or wireless-client basis</li> <li>ap &lt;MAC/HOSTNAME&gt; – Displays detailed coverage-hole related statistics for a specified access point<br/>           &lt;MAC/HOSTNAME&gt; – Specify the access point's device name or MAC address.</li> <li>client-mac &lt;MAC&gt; – Displays detailed coverage-hole related statistics encountered by a specified wireless client<br/>           &lt;MAC&gt; – Specify the wireless client's MAC address</li> </ul> <p><b>Note:</b> If the command is executed without any parameters being included, the system displays all coverage-hole related statistics.</p> |
| summary  | Optional. Displays a summary of coverage-hole related statistics   |
| on <DOMAIN-NAME>   | <p>This parameter is recursive and is common to the 'detail' and 'summary' keywords:</p> <ul style="list-style-type: none"> <li>on &lt;DOMAIN-NAME&gt; – Optional. Displays detailed or summary coverage-hole related statistics on a specified RF Domain</li> <li>&lt;DOMAIN-NAME&gt; – Specify the domain name.</li> </ul>   |

```
show wireless location-server {on <AP-NAME>}
```

|   |  |
|---|--|
| show wireless location-server on<br><AP-NAME> | <p>Displays location server connection status on a specified access point</p> <ul style="list-style-type: none"> <li>&lt;DEVICE-NAME&gt; - Specify the AP name.</li> </ul> |
|---|--|

```
show wireless meshpoint {config} {filter [device <DEVICE-NAME>|rf-domain <DOMAIN-NAME>]}
```

|   |   |
|---|---|
| wireless  | Displays wireless configuration parameters.   |
| meshpoint   | <p>Displays meshpoint related information. Use this option to view detailed statistics on each Mesh-capable client available within controller's adopted access point's radio coverage area.</p> <p>A mesh network is where one where each node is able to communicate with other nodes and maintain more than one path to the other mesh nodes within the mesh network. A mesh network provides robust, reliable and redundant connectivity to all the members of the mesh network. When one member of the mesh network becomes unavailable, the other mesh nodes are still able to communicate with one another either directly or indirectly through intermediate nodes.</p> |
| config  | Optional. Displays all meshpoint configuration  |
| filters [device <DEVICE-NAME>  rf-domain <DOMAIN-NAME>] | <p>Optional. |                            |   |
|----------------------------|---|
| wireless mint              | Displays radio MiNT-mesh related statistics   |
| links                      | Displays MiNT-mesh links related information. MiNT Links are automatically created between controllers and access points during adoption using MLCP (MiNT Link Creation Protocol). They can also be manually created between a controller and access point (or) between access points. MiNT links are manually created between controllers while configuring a cluster. Level 2 (or) remote MiNT links are controller aware links, and requires IP network for communication. This level 2 MiNT links at access points are intended for remote adaptive AP deployment and management from NOC. With Level2 MiNT links, access points are only aware of the controllers and not about other access points. Level 2 MiNT links also provide partitioning, between access points deployed at various remote sites. |
| on <DEVICE-OR-DOMAIN-NAME> | Displays MiNT-mesh links on a specific device or RF Domain <ul style="list-style-type: none"> <li>&lt;DEVICE-OR-DOMAIN-NAME&gt; – Specify the access point, controller, or RF Domain name.</li> </ul>   |

```
