Table of Contents

Abstract

The release notes for ExtremeCloud IQ version 25.2.0.126 provide detailed information on several technical enhancements, new features, and critical fixes introduced in this release for network administrators managing the ExtremeCloud IQ platform. Key technical points include support for advanced device operating systems such as ExtremeXOS/Switch Engine (33.2) and VOSS/Fabric Engine (9.1.0.1), alongside IQ Engine 10.7.5, 10.7.5b, or 10.8.1 for improved network orchestration. Notable new features include LLDP configuration with multicast filters, enhanced ELRP settings for port management, and WPA3-SAE support with Protected Management Frames (PMF) for 6 GHz radios. The AP5020 now supports dynamic packet capture and dual 5 GHz/6 GHz radio modes, improving wireless performance diagnostics. Additionally, new VLAN attributes, real-time RF heat maps, and roaming trail visualization on the client map enhance network management. Addressed issues include performance fixes for AP5020 wired speed display, client session duplication, and syslog hostname configurations. Known issues highlight potential configuration push errors, Wi-Fi 6E support limitations, and unresolved firmware version discrepancies for certain devices. This release is designed for IT professionals and network engineers focused on optimizing and troubleshooting complex wireless deployments.

Table 3: Addressed Issues in 25.2.0.126

Issue ID	Description
CFD-12155 (02991680)	We resolved an issue where Cloud PPSK clients got disconnected 10 minutes after association because IDM accounting cannot handle SSID names with an ampersand (&).
CFD-12486 (03010596)	We resolved an issue where ExtremeCloud IQ did not create a Rate Limit object when configuring a user profile.
CFD-12619 (03010972, 03018118, 03027103, 03038206)	We resolved an issue that prevented making or saving changes to the wifi0 interface at the device level.

CFD-12716 (03022258, 03022258)	We resolved an issue where ExtremeCloud IQ displayed a banner for the CoPilot grace period warning about non-Copilot devices.
CFD-12983 (03041868)	We resolved an issue where ExtremeCloud IQ consumed a license for some switches onboarded as managed locally.
CFD-13000 (03041033)	We resolved an issue where ExtremeCloud IQ unnecessarily generated "no forwarding-engine proxy-arp unicast enable" to AC model AP when the Proxy ARP setting is Legacy (default setting).
CFD-13016 (03039405)	We resolved an issue for AP302W in router mode, where delta push was blocked for all policy updates whether in policy or branch routing.
CFD-13031 (03044377)	We resolved an issue where attempts to export inventory from **Manage** > **Devices** stalled at 5 to 90 percent complete. During the export, admin access to other ExtremeCloud IQ instances was sluggish.
CFD-13126 (03044331)	We resolved an issue in **Planning** where the **Swap Device** dialog did not have paging and was not searchable if the AP device count exceeded 100 devices.

CFD-13193 (03045061)	We resolved an issue where customers in China could not receive SMS messages. We extended the max length of Unicode characters for SMS messages from 70 to 160 to allow for common Chinese characters without splitting the message.

Table 3: Addressed Issues in 25.2.0.126 (continued)

Issue ID	Description
CFD-13198 (03036261)	We resolved a sorting issue in port types where only the visible (per page) data was sorted instead of the entire list.
CFD-13199 (03052607)	We resolved an issue where Elasticsearch could not handle a large amount of data and failed to retrieve the Client 360 data, resulting in an error.

CFD-13448 (03071739, 03071280,03071564, 03072603)	We resolved an issue where APs were stuck on audit mismatch with a Conflict Error preventing delta updates.

Known Issues in 25.2.0.126

The following table lists known product issues. Issues are grouped according to ID prefix and sorted within their group with the most recently logged issue listed first. (Issue IDs are in descending order.)

Table 4: Known Issues in 25.2.0.126

Issue ID	Description
EXOS-37458	When using ExtremeCloud IQ to configure a single port in a VLAN as an LLDP voice port with Med Capabilities and policies and then changing the port type to **access** or **trunk**, the LLDP configuration for Med Capabilities appears on ExtremeXOS/ Switch Engine devices running EXOS 33.2.
XIQ-39282	After successfully onboarding locally managed APs, a misleading **Device Update Failed** message might appear in the **Last Updated** field. This is only a display issue and does not affect any functionality.
XIQ-34912	Clients discovered through node alias or DHCP snooping fingerprint might not immediately appear in the Device 360 Clients table. It can take up to 10 minutes for the new entries to appear in the Device 360 Clients table.
XIQ-34908	When using a stack template with a Link Aggregation Group (LAG), if the LAG has ports from different slots, you must enable Instant Port Profile/Instant Secure Port from the LAG on the template view that contains the master port. This requirement applies to a preexisting Link Aggregation Group in the template, or when creating a new Link Aggregation Group.
XIQ-34846	On wired VOSS and Fabric Engine devices for Cisco Discovery Protocol (CDP), configuration pushed via ExtremeCloud IQ still requires enabling LLDP TX/RX status through device CLI, for a CDP neighbor to establish.
XIQ-34724	Delta configuration push fails for Wifi0 with dual 5G mode when 5G-Low channels are not supported.
XIQ-33709	Some IP VLAN pairs from the Client 360 table and Client pages might be missing if they have multiple IPs learned through Node Alias events.
XIQ-33498	AP5050 AFC 6GHz FCC does not support client mode.

Table 4: Known Issues in 25.2.0.126 (continued)

Issue ID	Description
XIQ-33103	The **AFC View** on the **Manage Device** page displays *qualified* AFC-governed 6 GHz access points. This feature requires version 10.7.2 or higher. The **AFC View** does not include onboarded devices with a firmware version earlier than the minimum required version. After upgrading to the minimum required version, the **AFC View** displays the qualified access points.
XIQ-32459	The ExtremeCloud IQ deployment API HTTP Success status code changed from 200 to 202.
XIQ-31639	The IoT heat map is always shown, regardless of whether an IoT profile is configured on the AP. There is no status for IoT radios in the API.
XIQ-31601	A perimeter added or modified from the **Planning** page does not sync with the **Realtime** maps page.
XIQ-31433	The **Cloud Service** component of iBeacon is temporarily disabled. This service will be available in a future release.
XIQ-26907	A delta configuration push error might occur when configuring the port Forwarding Rule for Client Mode. **Workaround:** Push a complete configuration update.
XIQ-21339	ExtremeCloud IQ does not display the error when aggregation is enabled with a rate-limit configuration.
XIQ-20909	When configuring 6GHz radio for a country that does not support it, the configuration push to the AP3000 fails. **Workaround:** Revert to 2.4 GHz.
XIQ-19977	The MCast rate configured in an AP template does not take effect when sCLI is presented.
XIQ-19509	Access points go offline when pushed to minimum speed and half duplex transmission mode for eth0, and then they reboot. After the reboot, the configuration reverts back to minimum speed with full duplex.
XIQ-19498	When the AP5010 eth0 interface is operating with maximum speed, changing the transmission type causes ExtremeCloud IQ to also generate a delta CLI for speed.
XIQ-19379	When you initiate a "release to the cloud" from the controller, for an AP3000 that was onboarded as locally managed, the system deletes the AP from ExtremeCloud IQ Controller but not from ExtremeCloud IQ.
XIQ-19368	The user interface overrides Supplemental CLI. If you add an sCLI object and there is a code conflict with the GUI, the GUI has priority. To give the sCLI priority, place the sCLI code at the bottom of the command structure in the audit.
XIQ-19320	The Wi-Fi Interface Transmission power does not update in the **Managed Device** page after a bulk edit.

Table 4: Known Issues in 25.2.0.126 (continued)

Issue ID	Description
XIQ-12503	Network 360 shows `Unknown Error` when **All Access Points Applications** is selected and the user selects both ExtremeWireless WiNG and IQ Engine devices. **Workaround**: Clear selected ExtremeWireless WiNG devices.
XIQ-5700	Client Trial showed only the currently connected AP when the client roamed to a different AP from the onboarded ExtremeCloud IQ Controller.
CFD-11529 (02957942)	API response data is unclear.
CFD-10699 (02906999)	Universal Access Points failed to complete the WiNG-OS conversion, even after a successful CAPWAP and STUN binding.
CFD-8946 (02710778, 02748750)	License descriptions are automatically cleared when the Activated status is updated.
CFD-7360 (02498292)	For Wing-AP sites, contrary to present implementation, customers expect to see APs offline when ExtremeCloud IQ / nsight policy is not used for that site.
APC-41057	Legend labels on the SR2200/2300 switch stack graph sometimes disappear when attempting to download or print the graph. **Workaround**: Download one graph at a time, and open the downloaded file before choosing to download again. **Note:** The SVG option is the most stable format; PNG, JPG, and PDF have spacing issues on the legend section.
APC-21456	In rare cases, ExtremeCloud IQ does not upload some IGMP sub-commands successfully. **Note:** SR2200/2300 only. **Workaround**: Use the **Supplemental CLI** to upload commands when necessary. To use the supplemental CLI tool, go to **Global Settings** > **VIQ Management**, and set the **Supplemental CLI** slider to **ON**.
