Preface

Read the following topics to learn about:

- The meanings of text formats used in this document.
- Where you can find additional information and help.
- How to reach us with questions and comments.

Text Conventions

Unless otherwise noted, information in this document applies to all supported environments for the products in question. Exceptions, like command keywords associated with a specific software version, are identified in the text.

When a feature, function, or operation pertains to a specific hardware product, the product name is used. When features, functions, and operations are the same across an entire product family, such as Extreme Networks switches or SLX routers, the product is referred to as *the switch* or *the router*.

Table 1: Notes and warnings

| Icon | Notice type | Alerts you to... |
|---|-------------|---|
|  | Tip | Helpful tips and notices for using the product |
|  | Note | Useful information or instructions |
|  | Important | Important features or instructions |
|  | Caution | Risk of personal injury, system damage, or loss of data |
|  | Warning | Risk of severe personal injury |

Table 2: Text

| Convention | Description |
|--|---|
| screen displays | This typeface indicates command syntax, or represents information as it is displayed on the screen. |
| The words <i>enter</i> and <i>type</i> | When you see the word <i>enter</i> in this guide, you must type something, and then press the Return or Enter key. Do not press the Return or Enter key when an instruction simply says <i>type</i> . |
| Key names | Key names are written in boldface, for example Ctrl or Esc . If you must press two or more keys simultaneously, the key names are linked with a plus sign (+). Example: Press Ctrl+Alt+Del |
| <i>Words in italicized type</i> | Italics emphasize a point or denote new terms at the place where they are defined in the text. Italics are also used when referring to publication titles. |
| NEW! | New information. In a PDF, this is searchable text. |

Table 3: Command syntax

| Convention | Description |
|------------------------------------|--|
| bold text | Bold text indicates command names, keywords, and command options. |
| <i>italic text</i> | Italic text indicates variable content. |
| [] | Syntax components displayed within square brackets are optional. Default responses to system prompts are enclosed in square brackets. |
| { x y z } | A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options. |
| x y | A vertical bar separates mutually exclusive elements. |
| < > | Nonprinting characters, such as passwords, are enclosed in angle brackets. |
| ... | Repeat the previous element, for example, <i>member [member...]</i> . |
| \ | In command examples, the backslash indicates a “soft” line break. When a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash. |

Help and Support

If you require assistance, contact Extreme Networks using one of the following methods:

Extreme Portal

Search the GTAC (Global Technical Assistance Center) knowledge base; manage support cases and service contracts; download software; and obtain product licensing, training, and certifications.

The Hub

A forum for Extreme Networks customers to connect with one another, answer questions, and share ideas and feedback. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.

Call GTAC

For immediate support: (800) 998 2408 (toll-free in U.S. and Canada) or 1 (408) 579 2800. For the support phone number in your country, visit www.extremenetworks.com/support/contact.

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number, or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any actions already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

Subscribe to Product Announcements

You can subscribe to email notifications for product and software release announcements, Field Notices, and Vulnerability Notices.

1. Go to [The Hub](#).
2. In the list of categories, expand the **Product Announcements** list.
3. Select a product for which you would like to receive notifications.
4. Select **Subscribe**.
5. To select additional products, return to the **Product Announcements** list and repeat steps 3 and 4.

You can modify your product selections or unsubscribe at any time.

Send Feedback

The User Enablement team at Extreme Networks has made every effort to ensure that this document is accurate, complete, and easy to use. We strive to improve our

documentation to help you in your work, so we want to hear from you. We welcome all feedback, but we especially want to know about:

- Content errors, or confusing or conflicting information.
- Improvements that would help you find relevant information.
- Broken links or usability issues.

To send feedback, email us at documentation@extremenetworks.com.

Provide as much detail as possible including the publication title, topic heading, and page number (if applicable), along with your comments and suggestions for improvement.

Open Source Declarations

Some software files have been licensed under certain open source licenses. More information is available at: www.extremenetworks.com/support/policies/open-source-declaration/.

Introduction

Welcome to *Event Management System (EMS) Messages Catalog*. This document provides an alphabetical listing of all log messages found on all Extreme Networks platforms.

Using this Guide

A typical error message on the switch will look similar to the following:

```
1/29/2015 14:36:48.12 <Warn:VRRP.Advert.Ign> MSM-A: Advert for VR on vlan test vrid 1  
ignored: VIP list mismatch
```

To interpret the message, search the guide for the text inside the brackets (< >).

AAA.localAuthen

Description

User to be authenticated using the local authentication database.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Authenticating user %user% locally

Message Parameters

| Name | Type |
|------|-------------|
| user | AccountName |

AAA.usingRadius

Description

User to be authenticated using a RADIUS Server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Authenticate using RADIUS Server

AAA.usingTacacs

Description

User to be authenticated using a TACACS+ Server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Authenticate using TACACS+ Server

AAA.usingLocal

Description

User to be authenticated using the local authentication database.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Authenticate using Local Database

AAA.reqFromPeer

Description

Debug Information: Internal peer id. that authentication request was made from.

Remedy

None. Used for debugging.

Severity

Debug-Summary

Message Text

Handle request from peer %peer%

Message Parameters

| Name | Type |
|------|------|
| peer | uInt |

AAA.sessions

Description

Number of users logged in.

Remedy

None. Used for debugging.

Severity

Debug-Summary

Message Text

Number of users logged in is %sessions%

Message Parameters

| Name | Type |
|----------|------|
| sessions | uInt |

AAA.InitVlanLibFail

Description

Could not connect to VLAN manager.

Remedy

Inspect system logs to determine why VLAN manager is not available.

Severity

Error

Message Text

VLAN Library initialization failed.

AAA.UnInitRAutSvVr

Description

The configured virtual router for a RADIUS authentication server has been removed.

Remedy

Configure the RADIUS authentication client to use another virtual router or restore the previously configured virtual router.

Severity

Warning

Message Text

Uninitialize RADIUS Authentication Server, Vr %vr% has been removed

Message Parameters

| Name | Type |
|------|--------|
| vr | String |

AAA.UnInitRAccSvVr

Description

The configured virtual router for a RADIUS accounting server has been removed.

Remedy

Configure the RADIUS accounting client to use another virtual router or restore the previously configured virtual router.

Severity

Warning

Message Text

Uninitialize RADIUS Accounting Server, Vr %vr% has been removed

Message Parameters

| Name | Type |
|------|--------|
| vr | String |

AAA.InitRAccSvVr

Description

The configured virtual router for a RADIUS accounting server has been added, initializing RADIUS client for that server.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

Intialize RADIUS Accounting Server, Vr %vr% has been added.

Message Parameters

| Name | Type |
|------|--------|
| vr | String |

AAA.InitRAutSvVr

Description

The configured virtual router for a RADIUS authentication server has been added, initializing RADIUS client for that server.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

Intialize RADIUS Authentication Server, Vr %vr% has been added.

Message Parameters

| Name | Type |
|------|--------|
| vr | String |

AAA.authPass

Description

This message indicates that the identified user has successfully been authenticated and the access method through which the user has logged in. The reported access method can be one of "serial", "remote serial", "telnet", "ssh", "http", or "xml". For IP-based access methods, the remote IP address is included. For SummitStack serial connections the slot number is included.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Login passed for user %name% through %source%

Message Parameters

| Name | Type |
|--------|-------------|
| name | AccountName |
| source | String |

AAA.authFail

Description

This message indicates that the identified user has failed an authentication attempt and the access method through which the user attempted to log in. The reported access method can be one of "serial", "remote serial", "telnet", "ssh", "http", or "xml". For IP-based access methods, the remote IP address is included. For SummitStack serial connections the slot number is included.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

Login failed due to invalid username/password for user %name% through %source%

Message Parameters

| Name | Type |
|--------|-------------|
| name | AccountName |
| source | String |

AAA.logout

Description

This message indicates that the identified user has logged out and the access method through which the user had previously logged in. The reported access method can be one of "serial", "remote serial", "telnet", "ssh", "http", or "xml". For IP-based access methods, the remote IP address is included. For SummitStack serial connections the slot number is included.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%administratative% account (%name%) logout from %source%

Message Parameters

| Name | Type |
|------------------|-------------|
| name | AccountName |
| source | String |
| administratative | String |

AAA.ipv6ForceLocal

Description

A user has attempted to access the switch using IPv6. Because the EXOS RADIUS and TACACS+ clients do not support IPv6, the user will be authenticated using the local database.

Remedy

Ensure that users accessing the switch using IPv6 have local database accounts.

Severity

Debug-Summary

Message Text

IPv6 is not supported in RADIUS or TACACS+, using local authentication.

AAA.createAccount

Description

Indicates that a new account has been created in the local user database. Included in the message are the user ID that created the account, the type of the new account (admin or user), and the new account name.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

User '%who%' created %accountType% account for user '%user%' successfully.

Message Parameters

| Name | Type |
|-------------|-------------|
| who | AccountName |
| accountType | String |
| user | AccountName |

AAA.changePass

Description

Indicates that the password was changed for a local database account. Included in the message are the ID of the user making the change and the ID of the account for which the password was changed.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

User '%who%' changed password for user '%user%' successfully.

Message Parameters

| Name | Type |
|------|-------------|
| who | AccountName |
| user | AccountName |

AAA.deleteAccount

Description

Indicates that an account has been deleted from the local database. Included in the message are the ID of the user deleting the account and the user ID which has been deleted.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

User '%who%' deleted account of user '%user%' successfully.

Message Parameters

| Name | Type |
|------|-------------|
| who | AccountName |
| user | AccountName |

AAA.accountMod

Description

Indicates that a local database account has been modified. Included in the message are the ID of the user making the modifications and the account ID that was modified.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

User '%who%' modified %modType% setting for '%user%' user(s).

Message Parameters

| Name | Type |
|---------|-------------|
| who | AccountName |
| modType | String |
| user | AccountName |

AAA.accountLockedOut

Description

Indicates that the user has been locked out.

Remedy

The account can be unlocked by an administrative user.

Severity

Warning

Message Text

Account for user '%user%' locked out!

Message Parameters

| Name | Type |
|------|-------------|
| user | AccountName |

AAA.Trace

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

AAA.LogSsh

Description

This message includes an informational log message from the EXOS ssh server application.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%log%

Message Parameters

| Name | Type |
|------|--------|
| log | String |

AAA.LogSshDebug

Description

This message includes a debug log message from the EXOS ssh server when the ssh debug facility has been enabled.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%log%

Message Parameters

| Name | Type |
|------|--------|
| log | String |

AAA.DecryptMaxStrSizExcd

Description

An invalid encrypted input string is received. Unable to decrypt the received encrypted input string as it is not in the EXOS encrypted string format resulting decrypting string exceeds maximum size.

Remedy

Retry configuration with expected encrypted string format. Encrypted string should be one of the following format "configure radius netlogin primary shared-secret "#<char1>#<char2>.....#<char64>" or "configure radius netlogin primary shared-secret encrypted "<char1><char2>.....<char64>".

Severity

Warning

Message Text

Unable to decrypt the encrypted string. The decrypted string size exceeded the maximum of %size%.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

AAA.CreateEncryptAcct

Description

Indicates that a new encrypted account has been created in the local user database. Included in the message are the user ID that created the account, the type of the new account (admin or user), and the new account name.

Remedy

No action required - Informational message only

Severity

Info

Message Text

User '%who%' created encrypted %accountType% account for user '%user%' successfully.

Message Parameters

| Name | Type |
|-------------|-------------|
| who | AccountName |
| accountType | String |
| user | AccountName |

AAA.ChgAcctPrvlgOK

Description

An administrative session successfully configured the privilege of the account specified to the privilege specified which is different from what it was, and the role of the account is now different. If the account happened to be logged in when this change took place all such sessions will have been forcibly cleared.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Account %account% privilege was successfully changed to %privilege%.

Message Parameters

| Name | Type |
|-----------|-------------|
| account | AccountName |
| privilege | String |

AAA.ChgAcctPrvlgFail

Description

An administrative session failed to configure the privilege of the account specified to the privilege specified.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Changing the privilege of the account %account% to %privilege% has failed.

Message Parameters

| Name | Type |
|-----------|-------------|
| account | AccountName |
| privilege | String |

AAA.ClearSessAcctPrvlgChg

Description

An administrative session configured the account privilege to be different from what it was, and the session(s) logged in with the account were forcibly cleared. This is equivalent to ending the sessions with the "clear session <sessId>" for all such sessions including console sessions.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Cleared %count% session(s) that were logged in with account %account% because its privilege changed.

Message Parameters

| Name | Type |
|---------|-------------|
| account | AccountName |
| count | ulnt |

AAA.EnbIFIPSMODEOK

Description

FIPS mode is enabled in AAA process.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Self-Test passed. FIPS mode enabled.

AAA.EnbIFIPSMODEFail

Description

Unable to properly configure crypto lib with FIPS mode enabled.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with "show tech" output.

Severity

Error

Message Text

Failed to enable FIPS mode: %errString%

Message Parameters

| Name | Type |
|-----------|--------|
| errString | String |

AAA.SendCkptRdyToStby

Description

AAA module is notifying other stack modules of a possible state change.

Remedy

No action required - diagnostic message only

Severity

Debug-Verbose

Message Text

Stack Mode State Change Notification: slot:%slot% MsgId:%msgId% State:%state% status:%status% length:%length%.

Message Parameters

| Name | Type |
|-------|------|
| slot | ulnt |
| msgId | ulnt |
| state | ulnt |

| Name | Type |
|--------|------|
| status | ulnt |
| length | ulnt |

AAA.RecvCkptMsg

Description

AAA module has received a checkpoint message.

Remedy

No action required - diagnostic message only

Severity

Debug-Verbose

Message Text

Stack Mode State Change Notification: peerId:%peerId% MsgId:%msgId%
Length:%length% Flags:%flags%.

Message Parameters

| Name | Type |
|--------|------|
| peerId | ulnt |
| msgId | ulnt |
| length | ulnt |
| flags | ulnt |

AAA.ClearSessAcctDel

Description

An administrative session deleted the account, and the session(s) logged in with the account were forcibly cleared. This is equivalent to ending the sessions with the "clear session <sessId>" for all such sessions including console sessions.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Cleared %count% session(s) that were logged in with account %account% because the account was deleted.

Message Parameters

| Name | Type |
|---------|-------------|
| account | AccountName |
| count | ulnt |

AAA.RADIUS.TLSFail

Description

RADIUS over TLS has failed to establish an SSL connection to the RADIUS server.

Remedy

Resolve the specific cause for the connection failure.

Severity

Error

Message Text

Radius TLS connection(%dstIP%:%tlsPort%) failed: %errString%.

Message Parameters

| Name | Type |
|-----------|--------|
| dstIP | String |
| tlsPort | uInt32 |
| errString | String |

AAA.RADIUS.TLSParmInv

Description

Failure to establish an SSL connection to the RADIUS server due to invalid parameters passed to connection routines.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support.

Severity

Error

Message Text

Radius TLS connection failed due to invalid internal parameters.

AAA.RADIUS.TLSCnctTerm

Description

SSL connection to the RADIUS server is terminated by unconfigure.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

RADIUS TLS connection (%dstIP%:%tlsPort%) terminated.

Message Parameters

| Name | Type |
|---------|--------|
| dstIP | String |
| tlsPort | uInt16 |

AAA.RADIUS.SSLWritFail

Description

SSL_write failed.

Remedy

No action required - dispatch will call SSL_write again.

Severity

Warning

Message Text

SSL Write to the RADIUS server (%dstIP%:%tlsPort%) failed.

Message Parameters

| Name | Type |
|---------|--------|
| dstIP | String |
| tlsPort | uInt16 |

AAA.RADIUS.TLSAddDsptchFail

Description

Could not add the given socket to the dispatcher.

Remedy

Try to replicate this issue and contact technical support with "show tech" output for further assistance.

Severity

Error

Message Text

Failed to add socket %socket% for RADIUS TLS connection (%dstIP%:%tlsPort%) to dispatcher.

Message Parameters

| Name | Type |
|---------|--------|
| socket | sInt |
| dstIP | String |
| tlsPort | uInt16 |

AAA.RADIUS.TLSCnctDrop

Description

SSL connection to the RADIUS server is lost

Remedy

Wait for network connection to resume or fix any problem that has brought down network connection between switch and RADIUS server.

Severity

Notice

Message Text

Radius TLS connection (%dstIP%:%tlsPort%) is lost.

Message Parameters

| Name | Type |
|---------|--------|
| dstIP | String |
| tlsPort | uint16 |

AAA.RADIUS.TLSCrtfctVrfyFail

Description

SSL certificate verification failed.

Remedy

Resolve the specific cause for the connection failure.

Severity

Error

Message Text

RADIUS TLS certificate verification error: %err% (%errString%)

Certificate at depth: %depth%

Issuer: %issuer%

Subject: %subject%

Message Parameters

| Name | Type |
|-----------|--------|
| err | sInt |
| errString | String |
| depth | sInt |
| issuer | String |
| subject | String |

AAA.RADIUS.TLSOCSPStrtFail

Description

Unable to start the OCSP check.

Remedy

Resolve the specific cause for the OCSP failure.

Severity

Error

Message Text

Radius TLS connection (%dstIP%:%tlsPort%) failed: %aaaErrStr% %fncName% returned \"%errStr%\".

Message Parameters

| Name | Type |
|-----------|--------|
| dstIP | String |
| tlsPort | uInt32 |
| fncName | String |
| aaaErrStr | String |
| errStr | String |

AAA.RADIUS.TLSCnctFailUnk

Description

Failure to establish SSL connection to the RADIUS server with unknown reason. SSL library did not return a valid error code. One possible scenario is that server closes socket after receiving hello message from client.

Remedy

In certain rare cases, SSL connect could fail with no error returned. Contact technical support with "show tech" output for further assistance.

Severity

Error

Message Text

Radius TLS connection (%dstIP%:%tlsPort%) failed: %aaaErrStr% %fncName% returned \"%errStr%\".

Message Parameters

| Name | Type |
|-----------|--------|
| dstIP | String |
| tlsPort | uInt16 |
| aaaErrStr | String |

AAA.RADIUS.TLSCnctFail

Description

Failure to establish SSL connection to the RADIUS server.

Remedy

Resolve the specific cause for the connection failure.

Severity

Error

Message Text

Radius TLS connection (%dstIP%:%tlsPort%) failed: %aaaErrStr% %fncName% returned \"%errStr%\".

Message Parameters

| Name | Type |
|-----------|--------|
| dstIP | String |
| tlsPort | uInt16 |
| aaaErrStr | String |
| fncName | String |
| errStr | String |

AAA.RADIUS.TLSStrtRecnct

Description

Automatic periodic SSL reconnection to the RADIUS server has started.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Starting RADIUS TLS reconnection (%dstIP%:%tlsPort%) timer with an initial period of %timerPeriod% seconds.

Message Parameters

| Name | Type |
|-------------|--------|
| dstIP | String |
| tlsPort | ulnt16 |
| timerPeriod | ulnt |

AAA.RADIUS.TLSStrtTimerFail

Description

Failed to start timer for RADIUS TLS connection.

Remedy

Check the memory statistics. Otherwise, reboot the switch.

Severity

Error

Message Text

Failed to start timer for Radius TLS connection (%dstIP%:%tlsPort%).

Message Parameters

| Name | Type |
|---------|--------|
| dstIP | String |
| tlsPort | uInt32 |

AAA.RADIUS.TLSOCSPFail

Description

OCSP Check failed.

Remedy

Resolve the specific cause for the OCSP failure.

Severity

Error

Message Text

Radius TLS connection (%dstIP%:%tlsPort%) failed: %aaaErrStr% at depth %depth%.
%fncName% returned \"%errStr%\".

Message Parameters

| Name | Type |
|-----------|--------|
| dstIP | String |
| tlsPort | uInt32 |
| depth | uInt8 |
| fncName | String |
| errStr | String |
| aaaErrStr | String |

AAA.RADIUS.TLSCnctEstb

Description

TLS connection to the RADIUS server is successfully established.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Radius TLS connection (%dstIP%:%tlsPort%) established.

Message Parameters

| Name | Type |
|---------|--------|
| dstIP | String |
| tlsPort | uint32 |

AAA.RADIUS.sendFailure

Description

The RADIUS client has failed to send a request to the RADIUS serverType ("authentication" or "accounting") server with index (configured index, "primary" or "secondary") on behalf of the user with userName on the indicated port due to a socket layer error.

Remedy

None.

Severity

Error

Message Text

Unable to transmit request to %serverType% server #%serverId% on behalf of %user% (userNameName '%userName%') on port %port%

Message Parameters

| Name | Type |
|------------|-------------|
| serverType | String |
| serverId | String |
| user | AccountName |
| userName | AccountName |
| port | SlotPort |

AAA.RADIUS.reponseTypeErr

Description

A response to a RADIUS request was received containing an unknown or unsupported response type.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

Unsupported type in RADIUS response %typeString%

Message Parameters

| Name | Type |
|------------|--------|
| typeString | String |

AAA.RADIUS.pktIdAllConsumd

Description

There are a limited number of request IDs available per RADIUS connection. When a request is created a request ID is consumed, and cannot be reused until the corresponding response has been received from the RADIUS server or a response timeout has occurred. Once the limited number has been reached, authentication requests will be queued to be serviced later.

Remedy

Verify that the configured RADIUS servers are operational and reachable. Wait for responses from the RADIUS server, or wait until requests time out.

Severity

Warning

Message Text

All request IDs have been consumed

AAA.RADIUS.BadAuthen

Description

Received Bad Authenticator in a response from a RADIUS server.

Remedy

Verify that the shared secret is configured correctly.

Severity

Warning

Message Text

Bad Authenticator in response from RADIUS server %ipAddr%

Message Parameters

| Name | Type |
|--------|------|
| ipAddr | IP |

AAA.RADIUS.sendSuccess

Description

A RADIUS request has been successfully sent to server. The sent packet was of request type ("Access Request", "Accounting Start Request", "Accounting Stop Request", "Accounting Update Request", or "Password Change Request") with the specified packet length, source port of protocol type ("UDP", "TLS") and RADIUS packet id. The request was sent to the configured serverId (configured index, "primary" or "secondary) on behalf of the user with userName authenticated by the agent ("dot1x", "pwa",

"macauthentication", "cep", "radius-snooping", "auto-tracking" or "quarantine") on the indicated port.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%requestType%(packet length %pktLength%, source %proto% port srcPort, id %pktId%) sent to server #%serverId% for user %user%(userName '%userName%') for the %agent% agent on port %port%

Message Parameters

| Name | Type |
|-------------|-------------|
| requestType | String |
| pktLength | ulInt32 |
| srcPort | srcL4port |
| pktId | ulInt8 |
| serverId | String |
| user | AccountName |
| userName | AccountName |
| agent | String |
| port | SlotPort |
| proto | String |

AAA.RADIUS.vsaAttrMismatch

Description

A length mismatch has been detected for a received VSA.

Remedy

None.

Severity

Warning

Message Text

radDecodeVsa: Length mismatch for encapsulated attr %attr%

Message Parameters

| Name | Type |
|------|------|
| attr | ulnt |

AAA.RADIUS.vsaUnknownVend

Description

A RADIUS response has been received with an unknown vendor's specific VSA.

Remedy

Verify the RADIUS server configuration.

Severity

Notice

Message Text

radDecodeVsa: Unknown vendor %vendor% specific attribute %attr%

Message Parameters

| Name | Type |
|--------|--------|
| vendor | String |
| attr | ulnt |

AAA.RADIUS.unknownExtrVsa

Description

A RADIUS response has been received with an unknown Extreme VSA.

Remedy

Verify the RADIUS server configuration.

Severity

Warning

Message Text

radDecodeVsa: Unknown EXTREME VSA %attr%

Message Parameters

| Name | Type |
|------|------|
| attr | ulnt |

AAA.RADIUS.sendCommand

Description

Sending request to RADIUS server for per-command authorization.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Sending command %command% for authentication

Message Parameters

| Name | Type |
|---------|--------|
| command | String |

AAA.RADIUS.PktReadWrite

Description

Received request with readWrite value of 1 (admin) 0 (user).

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ParsePkt: readWrite value %value%

Message Parameters

| Name | Type |
|-------|------|
| value | uint |

AAA.RADIUS.PktAuthEn

Description

Response from RADIUS indicates whether per command authentication has been enabled for the user.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ParsePkt: CLI Auth for %name% is %enbDis%

Message Parameters

| Name | Type |
|--------|-------------|
| name | AccountName |
| enbDis | String |

AAA.RADIUS.PktNetLoginVlan

Description

Received VLAN VSA from RADIUS server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received VLAN VSA %value%

Message Parameters

| Name | Type |
|-------|--------|
| value | String |

AAA.RADIUS.PktNetLoginUrl

Description

Received URL VSA from server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ParsePkt: NetloginUrl %value%

Message Parameters

| Name | Type |
|-------|--------|
| value | String |

AAA.RADIUS.PktNetLoginUrlID

Description

Received URL Descriptions VSA from server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ParsePkt: NetloginUrlDesc %value%

Message Parameters

| Name | Type |
|-------|--------|
| value | String |

AAA.RADIUS.PktNetLoginOnly

Description

Received Net Login Only VSA from server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ParsePkt: NetloginOnly %enbDis%

Message Parameters

| Name | Type |
|--------|--------|
| enbDis | String |

AAA.RADIUS.socketFailure

Description

Could not create socket.

Remedy

None. Internal error.

Severity

Info

Message Text

RADIUS: socket create failed

AAA.RADIUS.bindFailure

Description

Failed to bind.

Remedy

Verify that a valid client IP address was configured.

Severity

Info

Message Text

RADIUS: aaa_radius_bind failed

AAA.RADIUS.PktAttrType

Description

Received request with specified attribute type.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

ParsePkt: attr type %value%

Message Parameters

| Name | Type |
|-------|------|
| value | ulnt |

AAA.RADIUS.PktCliCommand

Description

Received Packet with CLI command.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

CLI command %value%

Message Parameters

| Name | Type |
|-------|--------|
| value | String |

AAA.RADIUS.RadiusEnable

Description

RADIUS has been enabled for the indicated service, which is one of "Switch Management", "Netlogin", or "VM Tracking".

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%set% RADIUS Server Enabled

Message Parameters

| Name | Type |
|------|--------|
| set | String |

AAA.RADIUS.RadiusAccEnable

Description

RADIUS accounting has been enabled for the indicated service, which is one of "Switch Management" or "Netlogin".

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%set% RADIUS Accounting Server Enabled

Message Parameters

| Name | Type |
|------|--------|
| set | String |

AAA.RADIUS.serverFailInit

Description

RADIUS client failed to initialize connection to server.

Remedy

Disable, and setup configuration correctly and enable again.

Severity

Warning

Message Text

Server Failed to Initialize

AAA.RADIUS.threadCreError

Description

Unable to create RADIUS thread.

Remedy

Restart AAA process.

Severity

Warning

Message Text

Pthread RadiusAuthThread creation error %value%

Message Parameters

| Name | Type |
|-------|------|
| value | ulnt |

AAA.RADIUS.noServerResp

Description

The authentication retransmission algorithm has attempted the configured number of retries to the configured and initialized number of servers without receiving a response on behalf of the user with username on the indicated port. The RADIUS software will not retransmit additional requests for this transaction.

Remedy

Verify that all configured RADIUS servers are operational and reachable.

Severity

Warning

Message Text

Attempted the configured number of retries (%retries%) to each of the %numServers% authentication servers without a server response for %user%(username '%userName%') on port %port%.

Message Parameters

| Name | Type |
|------------|-------------|
| retries | ulnt32 |
| numServers | ulnt32 |
| user | AccountName |
| userName | AccountName |
| port | SlotPort |

AAA.RADIUS.RadiusDisable

Description

The RADIUS server set has been disabled, either via netlogin or switch management.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%set% RADIUS Server Disabled

Message Parameters

| Name | Type |
|------|--------|
| set | String |

AAA.RADIUS.serverNotInit

Description

The RADIUS service has been enabled but the server has not been initialized.

Remedy

Ensure that the RADIUS server configuration is correct.

Severity

Error

Message Text

%service% server for %set% is not initialized

Message Parameters

| Name | Type |
|---------|--------|
| service | String |
| set | String |

AAA.RADIUS.resendServAdmin

Description

The Merit RADIUS Authentication server requires that the authentication request service type match the configured (Merit server) service type. When an authentication request is first sent, the service type is set to Login User, if this fails then it's possible that the user is configured as an Administrative User on the Merit server, so we resend the authentication request with the service type set to a Administrative User on the second attempt.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Resend Authen Request with service type set to Admin

AAA.RADIUS.goLocal

Description

System error in sending authentication request, will attempt local authentication.

Remedy

Verify that the RADIUS configuration is correct. Verify that all configured RADIUS servers are operational and reachable.

Severity

Error

Message Text

Failed to send authentication to RADIUS servers, trying local.

AAA.RADIUS.noServResp

Description

No response from the indicated accounting server index (configured index, primary or secondary) has been received after the configured number of retries on behalf of user with username on the indicated port. If additional servers are configured they will be attempted.

Remedy

Verify that the RADIUS accounting configuration is correct. Ensure that the specified accounting RADIUS server is operational and reachable.

Severity

Warning

Message Text

Attempted the configured number of retries (%retries%) to accounting server #serverId% without a server response for user %user%(username '%username%') on port %port%.

Message Parameters

| Name | Type |
|----------|-------------|
| retries | uInt32 |
| serverId | String |
| user | AccountName |
| username | AccountName |
| port | SlotPort |

AAA.RADIUS.bindFailVr

Description

Switch was unable to send a request to the RADIUS server because the RADIUS server could not be reached via the specified Virtual Router.

Remedy

Verify that the specified Virtual Router exists on the switch. If it is not present, create the required Virtual Router or reconfigure to use another.

Severity

Error

Message Text

Switch cannot reach RADIUS server via the configured Virtual Router %vr%.

Message Parameters

| Name | Type |
|------|--------|
| vr | String |

AAA.RADIUS.PktNetLoginVlanTag

Description

Received an Extreme Networks VSA containing VLAN tag.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received VLAN ID VSA %value%

Message Parameters

| Name | Type |
|-------|--------|
| value | sInt32 |

AAA.RADIUS.PktAddAttrType

Description

Add an attribute to accounting request.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Add: attr type %value%

Message Parameters

| Name | Type |
|-------|------|
| value | ulnt |

AAA.RADIUS.LocalNLAAuth

Description

This user was authenticated using the netlogin local user database.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Authenticated NetLogin user %user% locally

Message Parameters

| Name | Type |
|------|-------------|
| user | AccountName |

AAA.RADIUS.Trace

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

%format%

| Name | Type |
|--------|--------|
| format | Printf |

AAA.RADIUS.SecurityProfile

Description

Received Extreme VSA Security Profile

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received Security Profile %value%

Message Parameters

| Name | Type |
|-------|--------|
| value | String |

AAA.RADIUS.noRespForDot1xReq

Description

A response was not received from the RADIUS server for an 802.1x request.

Remedy

Verify that all configured RADIUS servers are operational and reachable.

Severity

Warning

Message Text

No response from RADIUS server %host% for 802.1x request sent from switch.

Message Parameters

| Name | Type |
|------|------|
| host | IP |

AAA.RADIUS.PktNetLoginExtVlan

Description

Received Vlan VSA from server.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received EXT VLAN VSA vlan %value% vlan tagged value %tag%

Message Parameters

| Name | Type |
|-------|--------|
| value | String |
| tag | sInt32 |

AAA.RADIUS.QueueFull

Description

The RADIUS request queue has reached its maximum limit. AAA will not send any more requests to any RADIUS server until the queue goes below its maximum limit.

Remedy

Check the RADIUS statistics on the switch, verify that the RADIUS configuration is correct, and ensure that the configured RADIUS servers are operational and reachable.

Severity

Error

Message Text

RADIUS queue is full, check RADIUS configuration and/ or check RADIUS server.

AAA.RADIUS.n|ExtVlanVSAIgnoreVlans

Description

Received an Extended VLAN VSA from a RADIUS server containing more than 10 VLANs.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

Ignoring extra VLANs in RADIUS Extended VLAN VSA. A maximum of 10 VLANs is supported.

AAA.RADIUS.InvalidTlv

Description

Value in TLV is invalid.

Remedy

No remedy is available.

Severity

Warning

Message Text

Warning: %tlvName% is invalid : %val%

Message Parameters

| Name | Type |
|---------|--------|
| tlvName | String |
| val | uint |

AAA.RADIUS.VMName

Description

Received VSA containing VM name from a RADIUS server.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

VSA VM name %vmName% received from RADIUS server.

Message Parameters

| Name | Type |
|--------|--------|
| vmName | String |

AAA.RADIUS.VMVppName

Description

Received VSA VM Vpp name from RADIUS server.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

VSA VM Vpp name %vppName% received from RADIUS server.

Message Parameters

| Name | Type |
|---------|--------|
| vppName | String |

AAA.RADIUS.VMVlanTag

Description

Received VSA VM Vlan Tag from RADIUS server.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

VSA VM Vlan Tag %vlanTag% received from RADIUS server.

Message Parameters

| Name | Type |
|---------|--------|
| vlanTag | uInt32 |

AAA.RADIUS.VMIpAddr

Description

Received VSA VM IP Address from RADIUS server.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

VSA VM IP Address %ipAddr% received from RADIUS server.

Message Parameters

| Name | Type |
|--------|------|
| ipAddr | IP |

AAA.RADIUS.VMvrName

Description

Received VSA VM Vr name from RADIUS server.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

VSA VM Vr name %vrName% received from RADIUS server.

Message Parameters

| Name | Type |
|--------|--------|
| vrName | String |

AAA.RADIUS.PktLenInv

Description

The packet received by the RADIUS client has an invalid length of 0. The packet indicates that the response sent by the RADIUS server was in response to a request sent on behalf of user and userName on the indicated port.

Remedy

None. This is an invalid RADIUS frame.

Severity

Error

Message Text

Received 0 length packet for %user%(userName %userName%) on port %port%.

Message Parameters

| Name | Type |
|----------|-------------|
| user | AccountName |
| userName | AccountName |
| port | SlotPort |

AAA.RADIUS.RecvPktInv

Description

There is an error in the received RADIUS packet from the serverType ("authentication" or "accounting") server with index (configured index, "primary" or "secondary). The error type can be one of "invalid vsa format", "invalid ms key salt", "invalid ms key", "unknown service type", "invalid login service", "invalid login lat attribute", "multiple eap attributes", "invalid message authenticator", "unsupported termination action", "unsupported attribute", "unsupported RADIUS message type", "eap attribute with no message authenticator", "invalid packet length", "invalid authenticator" or "unknown response type".

Remedy

If the error is related to attribute support confirm that the indicated RADIUS server needs to be sending the indicated attribute value.

Severity

Error

Message Text

Error in received protocol packet from %serverType% server #%serverId%:
%errorType%.

Message Parameters

| Name | Type |
|------------|--------|
| serverType | String |
| serverId | String |
| errorType | String |

AAA.RADIUS.ApiReq

Description

A request("PAP request", "CHAP request", "EAP request", "Challenge Response", "Password Change request", "Accounting Start", "Accounting stop" or "Accounting update" has been received by the RADIUS software on behalf of user with username on the indicated port.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%reqType% for %user%(username '%userName%') on port %port%.

Message Parameters

| Name | Type |
|----------|-------------|
| reqType | String |
| user | AccountName |
| userName | AccountName |
| port | SlotPort |

AAA.RADIUS.RecvRspns

Description

The RADIUS software received a response ("access accept", "Accounting Start Response", "Accounting Stop Response", "Accounting Update Response", "Authentication Challenge Response" or "Authentication Access Reject") with the specified packet length, destination port of protocol type ("UDP", "TLS") and RADIUS packet id. This response was sent by the ("authentication", "accounting) server #(configured index, "primary or "secondary"). This response was matched to a request sent on behalf of user with userName on the indicated port.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%requestType%(packet length %pktLength%, source %proto% port srcPort, id %pktId%) sent to server #%serverId% for user %user%(userName '%userName%') for the %agent% agent on port %port%

Message Parameters

| Name | Type |
|------------|-------------|
| rspType | String |
| pktLength | uInt32 |
| dstPort | dstL4port |
| pktId | uInt8 |
| serverType | String |
| serverId | String |
| user | AccountName |
| userName | AccountName |
| port | SlotPort |
| proto | String |

AAA.RADIUS.SrvrReqTmout

Description

The RADIUS software is no longer waiting for the most recent request sent to the ("authentication" or "accounting") server #(configured index, "primary" or "secondary") on behalf of the user with userName on the indicated port. The timeout for RADIUS requests can be configured on either a per realm or per server basis (configure [radius | radius-accounting] {mgmt-access | netlogin | primary | secondary | <index>} timeout <secs>).

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Timeout for %serverType% server #%serverId% for %user%(userName '%userName%') on port %port%.

Message Parameters

| Name | Type |
|------------|-------------|
| serverType | String |
| serverId | String |
| user | AccountName |
| userName | AccountName |
| port | SlotPort |

AAA.RADIUS.NameLenInv

Description

A username with no length was received by the RADIUS software on behalf of the indicated port.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

0 length username on port %port%.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

AAA.RADIUS.SrvrRtrnAccessVal

Description

The RADIUS server returned these authorization values for the user with userName on the indicated port: Access Level ("Read-Write", "Read-only", "Framed" or "unknown"), Tunnel Type ("none", "vlan" or "unknown"), Tunnel Medium ("none", "802" or "unknown"), Tunnel Group Id (vlan identifier), Session Timeout (session timeout value in seconds) Idle Timeout (idle timeout value in seconds), FilterId (Policy FilterId), VrName (VR to use for dynamically created vlans), and NSI Type/ID (used for Dynamic VxLan). This

message indicates that these attributes and their respective values were returned from the RADIUS server but does not guarantee that the authenticating agent will use them.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Authorization values for %user%(userName '%userName%') on port %port%: Access level - %accessLevel%, Tunnel Type - %tunnelType%, Tunnel Medium - %tunnelMedium%, Tunnel Group Id - %tunnelGroupId%, Session Timeout - %sessionTimeout%, Idle Timeout - %idleTimeout%, FilterId: %filterId%. VrName: %vrName% NsiType: %nsiType% Nsild: %nsiId%

Message Parameters

| Name | Type |
|----------------|-------------|
| user | AccountName |
| userName | AccountName |
| port | SlotPort |
| accessLevel | String |
| tunnelType | String |
| tunnelMedium | String |
| tunnelGroupId | uInt32 |
| sessionTimeout | uInt32 |
| idleTimeout | uInt32 |
| filterId | String |
| vrName | String |
| nsiType | uInt32 |
| nsild | uInt32 |

AAA.RADIUS.SetFIPSMoDeFail

Description

Unable to properly configure crypto lib when FIPS mode enabled.

Remedy

Not Expected, Verify image has not been tampered with, Reboot the device, re-install or update the EXOS image. Did this happen on First or Subsequent reboot after FIPS mode was enabled? Did this happen on a Stacked system? Was any additional config added prior to the last reboot?

Severity

Error

Message Text

Internal Error while attempting to enable FIPS mode in AAA process. Non-compliant Algorithms may be active.

AAA.RADIUS.NLVrName

Description

Received VSA NL Vr name from RADIUS server.

Remedy

No action required - Information message only.

Severity

Debug-Data

Message Text

VSA NL Vr name %vrName% received from RADIUS server.

ACL.BndNetZonePlcy

Description

The network zone identified by the zoneName parameter is being bound to the policy identified by the policyName parameter.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Network zone %zoneName% got bound to policy %policyName%

Message Parameters

| Name | Type |
|------------|--------|
| zoneName | String |
| policyName | String |

ACL.AddNetZoneAttr

Description

The specified attribute is added to the network zone identified by zoneName.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Network zone %zoneName% - Added %attribute% mask %mask%

Message Parameters

| Name | Type |
|-----------|--------|
| zoneName | String |
| attribute | String |
| mask | String |

ACL.DelNetZoneAttr

Description

The specified attribute is removed from the network zone identified by zoneName.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Network zone %zoneName% - Removed %attribute% mask %mask%

Message Parameters

| Name | Type |
|-----------|--------|
| zoneName | String |
| attribute | String |
| mask | String |

ACL.AddNetZonePlcyAttr

Description

The specified attribute is added to the policy, where the entry is derived from the network zone configuration, and the network zone is part of the policy.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Entry %entryName% with %attribute% %attrVal% mask %mask% is added to policy %policyName%. Original entry : %origEntryName% Network zone : %zoneName%

Message Parameters

| Name | Type |
|---------------|--------|
| entryName | String |
| attribute | String |
| attrVal | String |
| mask | String |
| policyName | String |
| origEntryName | String |
| zoneName | String |

ACL.DelNetZonePlcyAttr

Description

The specified attribute removed from the policy, where the entry is derived from the network zone configuration, and the network zone is part of the policy.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Entry %entryName% with %attribute% %attrVal% mask %mask% is removed from policy %policyName%. Original entry : %origEntryName% Network zone : %zoneName%

Message Parameters

| Name | Type |
|---------------|--------|
| entryName | String |
| attribute | String |
| attrVal | String |
| mask | String |
| policyName | String |
| origEntryName | String |
| zoneName | String |

ACL.UnbndNetZonePlcy

Description

The specified policy's last instance has got removed from acl, and hence the policy's link with the network zone is removed.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Network zone %zoneName% got unbound from policy %policyName%

Message Parameters

| Name | Type |
|------------|--------|
| zoneName | String |
| policyName | String |

ACL.ChkPlcyForAppFail

Description

The policy has the match condition specified in the message, which is not supposed to be present. For example, policies applied in egress cannot have "redirect", policies applied from Identity Manager cannot have "source-address", etc... Or, the policy's entry may have both "source-address" and a source-zone which in turn has "source-address".

Remedy

Remove the match condition specified, from the policy, and try again.

Severity

Error

Message Text

Check policy %policyName% for application %appName% failed. Policy has %attrName%.

Message Parameters

| Name | Type |
|------------|--------|
| policyName | String |
| appName | String |
| attrName | String |

ACL.CfgDynACL

Description

The specified dynamic rule from CLI or from a client (like fdb, identity manager, xnv, dot1ag, etc...) is configured on the particular port in the given direction. Direction values would be 0 - Ingress, 1 - Egress.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

Configure %ruleName% in port %portString% VLAN %vlanInst% direction %direction%

Message Parameters

| Name | Type |
|------------|----------|
| ruleName | String |
| portString | SlotPort |
| vlanInst | uInt32 |
| direction | uInt32 |

ACL.UncfgDynACL

Description

The specified rule from CLI or from a client (like fdb, identity manager, xnv, dot1ag, etc...) has been unconfigured from the particular port in the given direction. Direction value would be 0 - Ingress, 1 - Egress.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

Unconfigure rule %ruleName% from port %portString% VLAN %vlanInst% in direction %direction%

Message Parameters

| Name | Type |
|------------|----------|
| ruleName | String |
| portString | SlotPort |
| vlanInst | uInt32 |
| direction | uInt32 |

ACL.RecvCfgReq

Description

Received config request from the client (like fdb, identity manager, xnv, dot1ag, etc...) for the specified rule, of the given type (policy file or a dynamic rule), to get configured in the specified port and VLAN, relative to relName. This specified rule will be prepended or appended to the relative rule, as dictated by ruleAction. If the relative rule is not specified, the current rule will be prepended to the first or appended to the last configured rule on that port and or VLAN, depending upon the value of ruleAction. The ruleAction may have the action as prepend or append. If both the port and VLAN are not specified, then this rule will be applied as wildcard.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Receive request from client %appl% for configuring %ruleType% %ruleName%
%ruleAction% %relName% in port %portNum% VLAN %vlanIfInst% direction
%direction%

Message Parameters

| Name | Type |
|------------|--------|
| appl | String |
| ruleType | String |
| ruleName | String |
| ruleAction | String |
| relName | String |

| Name | Type |
|------------|----------|
| portNum | SlotPort |
| vlanIfInst | uInt32 |
| direction | uInt32 |

ACL.RecvUncfgReq

Description

Received an unconfig request from the client (which could be fdb, identity manager, xnv, dot1ag, etc...) for the specified rule, of the given type (policy file or dynamic rule), to remove from the specified port and/or VLAN.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Received unconfig request from application %appl% for %ruleType% %ruleName% in port %portNumString% VLAN %vlanIfInst% direction %direction%

Message Parameters

| Name | Type |
|---------------|----------|
| appl | String |
| ruleType | String |
| ruleName | String |
| portNumString | SlotPort |
| vlanIfInst | uInt32 |
| direction | uInt32 |

ACL.RecvRspns

Description

Received a response from HAL for configuring/unconfiguring the specified rule, of the given type (policy file or dynamic rule), in the specified port and/or VLAN. The response

status could be a success or a failure. If it is a failure, the variable status will hold the error message, that was sent by HAL.

Remedy

If the response is for a configuration and the status is a failure, then it could be due to incompatible match conditions in the rule, or the hardware slice would have got exhausted. Verify them and correct the rule or the rule priority and try configuring again.

Severity

Debug-Verbose

Message Text

Receive a response from HAL for %configType% of %ruleType% %ruleName% in port %portNumString% VLAN %vlanIfInst%. Status - %status%

Message Parameters

| Name | Type |
|---------------|----------|
| configType | String |
| ruleType | String |
| ruleName | String |
| portNumString | SlotPort |
| vlanIfInst | uInt32 |
| status | String |

ACL.AddReqToPendQue

Description

Added the specified request of the given rule in the pending queue, which will be later passed to HAL for processing. The rules will be added to the pending queue, if there are any outstanding requests, for which ACL is waiting for a response from HAL.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Added %configType% request for rule %ruleName% for port %portString% VLAN %vlanInst% direction%direction%.

Message Parameters

| Name | Type |
|------------|----------|
| configType | String |
| ruleName | String |
| portString | SlotPort |
| vlanInst | uInt32 |
| direction | uInt32 |

ACL.RemReqFmPendQue

Description

Removed the specified request for the given rule from the pending queue. The rules may be either sent to HAL for processing, or removed when an unconfig of the same rule received before the current config message is actually processed. For the second case, the two requests (config and unconfig) will be cancelled out at the software itself, without being informed to HAL.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Removed %configType% request for rule %ruleName% for port %portString% VLAN %vlanIfInst% direction %direction%.

Message Parameters

| Name | Type |
|------------|----------|
| configType | String |
| ruleName | String |
| portString | SlotPort |

| Name | Type |
|------------|--------|
| vlanIfInst | ulnt32 |
| direction | ulnt8 |

ACL.SendClntRspns

Description

Send a response back to the client for the specified request. If the status is success, the response will be sent only if the client has explicitly requested a response. For failure case, the response will be sent by default. Some of the parameter values are listed below. msgType - ADD, DEL, CONFIG, UNCONFIG, etc... appl - fdb, identity manager, xnv, dot1ag, etc... ruleType - policy file or dynamic rule. direction - 0 or 1, where 0 - Ingress and 1 - Egress. status - SUCCESS or FAILURE. Failure could be due to hardware slice full or match criteria incompatibility.

Remedy

If the status shows a failure, the slice usage should be verified, and rules can be given priority in such a way that those with compatible match conditions get placed in the same slice. If failure is due to incompatible rules, check the platform support and correct the match conditions accordingly.

Severity

Debug-Data

Message Text

Send reply for %msgType% to client %appl% for %ruleType% %ruleName% port %portNum% VLAN %vlanIfInst% direction %direction%. Status - %status%

Message Parameters

| Name | Type |
|------------|----------|
| msgType | String |
| appl | String |
| ruleType | String |
| ruleName | String |
| portNum | SlotPort |
| vlanIfInst | String |

| Name | Type |
|-----------|--------|
| direction | uint8 |
| status | String |

ACL.IngrMeterOutActLogEvent

Description

This event occurs because the log action is configured for a meter and the ingress traffic rate has exceeded the rate limit of the meter. The log action is one of the configurable out actions to be taken when the rate limit of the meter is exceeded with the "configure meter <meter-name> committed-rate ... out-actions" command

Remedy

The out-of-profile status may be cleared using the "clear access-list meter <meter-name> out-of-profile" command. A review of the Meter configuration may be warranted.

Severity

Notice

Message Text

Ingress Traffic on port %portString% exceeded the configured rate of meter %MeterName% resulting in change of out-of-profile status to true.

Message Parameters

| Name | Type |
|------------|----------|
| MeterName | String |
| portString | SlotPort |

ACL.IngrMeterOutActDsblPort

Description

This event occurs because the disable-port action is configured for a meter and the ingress traffic rate has exceeded the rate limit of the meter. The disable-port is one of the configurable out actions to be taken when the rate limit of the meter is exceeded with the "configure meter <meter-name> committed-rate ... out-actions" command

Remedy

The out-of-profile status may be cleared using the "clear access-list meter <meter-name> out-of-profile" command. A review of the Meter configuration may be warranted.

Severity

Notice

Message Text

Port %portString% disabled by Ingress meter %MeterName% because the traffic exceeded the configured rate.

Message Parameters

| Name | Type |
|------------|----------|
| MeterName | String |
| portString | SlotPort |

ACL.EgrMeterOutActLogEvent

Description

This event occurs because the log action is configured for a meter and the egress traffic rate has exceeded the rate limit of the meter. The log action is one of the configurable out actions to be taken when the rate limit of the meter is exceeded with the "configure meter <meter-name> committed-rate ... out-actions" command

Remedy

The out-of-profile status may be cleared using the "clear access-list meter <meter-name> out-of-profile" command. A review of the Meter configuration may be warranted.

Severity

Notice

Message Text

Egress Traffic on port %portString% exceeded the configured rate of meter %MeterName% resulting in change of out-of-profile status to true.

Message Parameters

| Name | Type |
|------------|----------|
| MeterName | String |
| portString | SlotPort |

ACL.EgrMeterOutActDsblPort

Description

This event occurs because the disable-port action is configured for a meter and the egress traffic rate has exceeded the rate limit of the meter. The disable-port is one of the configurable out actions to be taken when the rate limit of the meter is exceeded with the "configure meter <meter-name> committed-rate ... out-actions" command

Remedy

The out-of-profile status may be cleared using the "clear access-list meter <meter-name> out-of-profile" command. A review of the Meter configuration may be warranted.

Severity

Notice

Message Text

Port %portString% disabled by Egress meter %MeterName% because the traffic exceeded the configured rate.

Message Parameters

| Name | Type |
|------------|----------|
| MeterName | String |
| portString | SlotPort |

ACL.CLEARFlow.Critical

Description

A serious problem has been detected which is compromising the operation of the system. The system can not function as expected unless it is remedied. The problem may be related to hardware failure or software data corruption.

Remedy

The exact remedy is dependant on the particular situation; but the problem may not be resolved without intervention of some sort.

Severity

Critical

Message Text

| policy_name | String |
| vlan | String |
| port | String |

ACL.Policy.refresh

Description

Policy policy_name has been refreshed successfully.

Remedy

Informational message. No action required.

Severity

Notice

Message Text

Policy %policy_name% has been refreshed.

Message Parameters

| Name | Type |
|-------------|--------|
| policy_name | String |

ACL.Policy.Change

Description

Description of rule that is to change as a result of a refresh. Changes include a new rule, modified rule, moved rule, moved and modified rule, also deleted rule.

Remedy

Informational message. No action required.

Severity

Notice

Message Text

Policy:refresh:%policy_name%: %rule_action% rule %rule_name%.

Message Parameters

| Name | Type |
|-------------|--------|
| policy_name | String |
| rule_action | String |
| rule_name | String |

ACL.Policy.smartRef

Description

Policy is to be incrementally refreshed. A list of changes are sent to the hardware, where the changes are made incrementally implemented. Acl's that are not changed stay in place and are not affected.

Remedy

Informational message. No action required.

Severity

Notice

Message Text

Policy:smart refresh:%policy_name%.

Message Parameters

| Name | Type |
|-------------|--------|
| policy_name | String |

ACL.Policy.hardRefresh

Description

Policy is NOT going to be incrementally refreshed using smart refresh. All acls previously defined in the policy are to be removed in the hardware, and the new refreshed acl entries are to be installed. This could be as a result of the following: 1. Acl manager cannot determine the incremental changes. 2. A hard refresh has been forced via the cli.

Remedy

Informational message. No action required.

Severity

Notice

Message Text

Policy:hard refresh:%policy_name%.

Message Parameters

| Name | Type |
|-------------|--------|
| policy_name | String |

ACL.Policy.TotChanges

Description

| rule | String |
| appl | String |
| vlan | String |
| port | String |
| err | String |

ACL.Policy.InvalidDomain

Description

The domain (vlan) does not exist on the switch.

Remedy

No remedy is available.

Severity

Warning

Message Text

Acl policy %policy% has an invalid domain name %domain% (vlan does not exist) in rule %rule%.

Message Parameters

| Name | Type |
|--------|--------|
| policy | String |
| domain | String |
| rule | String |

ACL.Policy.UnCondPmtCanCauseLoop

Description

A warning message to alert the user about a possible control packet loop condition when applying an ACL with unconditional PERMIT action on EAPS or STP blocked port. This warning is applicable only to Summit and BD8K platforms.

Remedy

Add an explicit match criteria such as 'ethernet-type' to avoid these rules matching EAPS and STP PDUs.

Severity

Notice

Message Text

ACL policy %policy%: An unconditional PERMIT action on an EAPS or STP blocked port can cause a loop.

Message Parameters

| Name | Type |
|--------|--------|
| policy | String |

ACL.Policy.RfrshFail

Description

Refresh of the specified policy in the given port failed, with the reason mentioned. The possible reasons could be 1. Hardware slice getting exhausted. 2. Incompatible match conditions in the specified rule.

Remedy

1. If the hardware is full, check if the total number of rules installed are within the supported limits. If not, reduce the number of rules. If they are already within the limit, try to rearrange the rules, so that rules with like match conditions are grouped together. Then try refreshing again. 2. Check the rule that has been mentioned in the error message and see if the conditions in that rule are compatible. Verify the concepts guide for the possible supported combinations and correct the rule accordingly. Then refresh the policy again.

Severity

Warning

Message Text

Refresh failed for policy %policyName% - %reason%

Message Parameters

| Name | Type |
|------------|--------|
| policyName | String |
| reason | String |

ACL.Policy.SendCfgReq

Description

Send a message to HAL to configure the given policy.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

Send configuration request to HAL for policy %polName%

Message Parameters

| Name | Type |
|---------|--------|
| polName | String |

ACL.Policy.RecvRfrshRspns

Description

Received a response from HAL for refreshing the policy. The status could be a success or a failure. If failure, it could be due to incompatible match conditions in the rule, or the hardware slice got exhausted. The failure would be notified as an error message, through status.

Remedy

If the status is failure, check the reason, and rectify the match conditions, or rearrange the rules, so that alike rules are clubbed together, and try refreshing again.

Severity

Debug-Verbose

Message Text

Received response from HAL for refreshing poicy %policyName%. Status = %status%

Message Parameters

| Name | Type |
|------------|--------|
| policyName | String |
| status | String |

BFD.InitDone

Description

This message gets logged when the BFD process is ready for operations

Remedy

This is an informational message and requires no action.

Severity

Info

Message Text

BFD process is READY

BFD.AllocSockFail

Description

The BFD session failed to open a communication channel with the system to communicate with the outside world.

Remedy

When this happens not packets can be send out, or received from the network. See if restarting the process solves this problem. Under normal circumstances this should not happen, however if it does, please escalate to engineering.

Severity

Error

Message Text

Failed to create socket error: %errormsg%

Message Parameters

| Name | Type |
|----------|--------|
| errormsg | String |

BFD.SetSockFail

Description

The BFD session failed to set option on a communication channel which communicate with the outside world

Remedy

When this happens packets can neither be sent out, nor received from the network. See if restarting the process solves this problem. Under normal circumstances this should not happen, however if it does, please contact Extreme Networks Technical support.

Severity

Error

Message Text

Failed to set socket %option% error: %errormsg%

Message Parameters

| Name | Type |
|----------|--------|
| option | String |
| errormsg | String |

BFD.BndSockFail

Description

The BFD session failed to bind a socket which communicate with the outside world

Remedy

When this happens not packets can be send out, or received from the network. See if restarting the process solves this problem. Under normal circumstances this should not happen, however if it does, please escalate to engineering.

Severity

Error

Message Text

Failed to bind socket error: %errormsg%

Message Parameters

| Name | Type |
|----------|--------|
| errormsg | String |

BFD.CreatThreadFail

Description

Failed to create the specified thread.

Remedy

This should not happen in normal conditions. If this happens, contact Extreme Networks technical support.

Severity

Debug-Summary

Message Text

Failed to create thread %threadName% error code = %error%

Message Parameters

| Name | Type |
|------------|--------|
| threadName | String |
| error | sInt |

BFD.RxPkt

Description

This message is logged every time a BFD control packet is received from the L3 interface.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Received a BFD packet of size %size% bytes on VLAN %tag% slot %slot% port %port% VR %vrId% srcIP %srcIP% destIP %destIP%

Message Parameters

| Name | Type |
|--------|-------------|
| size | uInt16 |
| tag | VLAN |
| vrlId | uInt32 |
| slot | ingressSlot |
| port | ingressPort |
| srcIP | dstSockAddr |
| destIP | dstSockAddr |

BFD.RxPktDump

Description

This message is logged every time a BFD control packet is received from the L3 interface.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Received a BFD packet of size %size% bytes on VLAN %tag% slot %slot% port %port% VR %vrlId% srcIP %srcIP% destIP %destIP%

Message Parameters

| Name | Type |
|--------|-------------|
| size | uInt16 |
| tag | VLAN |
| vrlId | uInt32 |
| slot | ingressSlot |
| port | ingressPort |
| srcIP | dstSockAddr |
| destIP | dstSockAddr |

| Name | Type |
|--------|---------|
| pktBuf | Buf-ptr |
| bufLen | Buf-len |

BFD.RxPktFail

Description

Failed to receive packet of the specified type on the socket.

Remedy

This should not happen in normal conditions. If this happens, contact Extreme Networks technical support.

Severity

Error

Message Text

Failed to receive packet of type %pktType% on an %sockType% socket and returned %rc%
Error: %errmsg%

Message Parameters

| Name | Type |
|----------|--------|
| pktType | String |
| sockType | String |
| rc | sInt |
| errmsg | String |

BFD.RxPktInv

Description

When a BFD PDU is received but does not pass the validation test this event gets logged.

Remedy

Determine which device is generating this BFD PDU, and investigate why it's sending out a malformed BFD PDU.

Severity

Warning

Message Text

Received BFD an invalid packet on VLAN %vlan% Error:%errormsg%

Message Parameters

| Name | Type |
|----------|--------|
| vlan | VLAN |
| errormsg | String |

BFD.RxPktAuthFail

Description

This message will be logged whenever authentication fails for a received Control Packet

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems in BFD.

Severity

Debug-Summary

Message Text

Authentication failed for the Control Packet received on VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BFD.TxPkt

Description

This message is logged every time a BFD control packet is transmitted to the L3 interface.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Transmitted a BFD packet of size %size% bytes on VLAN %vlan% VR %vrId% destIP %destIP%

Message Parameters

| Name | Type |
|--------|-------------|
| size | ulnt |
| vlan | VLAN |
| vrId | sInt |
| destIP | dstSockAddr |

BFD.TxPktDump

Description

This message is logged every time a BFD control packet is transmitted to the L3 interface.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Transmitted a BFD packet of size %size% bytes on VLAN %vlan% VR %vrId% destIP %destIP%

Message Parameters

| Name | Type |
|--------|-------------|
| size | ulnt |
| vlan | VLAN |
| vrId | sInt |
| destIP | dstSockAddr |
| pktBuf | Buf-ptr |
| bufLen | Buf-len |

BFD.TxPktFail

Description

This message is logged every time a BFD control packet transmission fails.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Info

Message Text

Transmission failed for a BFD packet of size %size% bytes on VLAN %vlan% VR %vrId% destIP %destIP% errorMsg:%errMsg%

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |
| vlan | VLAN |
| vrId | sInt |

| Name | Type |
|--------|-------------|
| destIP | dstSockAddr |
| errMsg | String |

BFD.SessnNotFnd

Description

This message will be logged whenever a BFD session is not found for the received Control packet.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems in BFD.

Severity

Debug-Summary

Message Text

Session not found for the Control Packet received on VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BFD.CreatSessn

Description

This message will be logged whenever a BFD session is created.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems in BFD.

Severity

Debug-Summary

Message Text

Session created type:%type% family:%family% destIP:%destIP% vrid:%vrid% ttl:%ttl%

Message Parameters

| Name | Type |
|--------|--------|
| type | sInt |
| family | String |
| destIP | String |
| vrid | sInt |
| ttl | sInt |

BFD.CreatSessnFail

Description

This message is logged when the creation of BFD session fails.

Remedy

Check the destination Ipaddress is reachable from the system by using ping and traceroute diagnostic tools. If maximum limit is reached check the limits number given in the Extreme Networks document.

Severity

Error

Message Text

Failed to create BFD session error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| errmsg | String |

BFD.DelSessn

Description

This message will be logged whenever a BFD session is deleted.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems in BFD.

Severity

Debug-Verbose

Message Text

Session deleted sessionID:%id% type:%type% family:%family% destIP:%destIP%

Message Parameters

| Name | Type |
|--------|--------|
| id | uint32 |
| type | sInt |
| family | String |
| destIP | String |

BFD.FndEgrIfFail

Description

No description is available.

Remedy

Check the destination Ipaddress is reachable from the system by using ping and traceroute diagnostic tools.

Severity

Warning

Message Text

Failed to find egress interface for destination %dstIP% vrid %vrid%

Message Parameters

| Name | Type |
|-------|--------|
| dstIP | String |
| vrid | VRID |

BFD.CreatIfFail

Description

No description is available.

Remedy

No remedy is available.

Severity

Warning

Message Text

Create BFD interface failed on VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BFD.FndIngrIfFail

Description

No description is available.

Remedy

Check BFD is enabled on the ingress interface also check any session is already running. This message will be displayed for the incoming BFD PDU.

Severity

Debug-Data

Message Text

Ingress Interface found fail for destination %dstIP% vrid %vrid%

Message Parameters

| Name | Type |
|-------|--------|
| dstIP | String |
| vrid | VRID |

BFD.StateTransTrace

Description

This message is for debugging problems related to BFD session's Finite State Machine. This is normal and does not indicate a problem.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems that may involve BFD session's FSM.

Severity

Debug-Verbose

Message Text

FSM Current State:[%currstate%] Event:[%event%] NextState:[%nextstate%]

Message Parameters

| Name | Type |
|-----------|--------|
| currstate | String |
| event | String |
| nextstate | String |

BFD.RecvSrvrMsg

Description

This message is for debugging problems related to BFD server message to the clients. This is normal and does not indicate a problem.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems that may involve BFD server message to clients.

Severity

Debug-Verbose

Message Text

Received message from peer:%peerId% clientId:%clientId% msgType:%msgtype%

Message Parameters

| Name | Type |
|----------|--------|
| peerId | uint32 |
| clientId | sInt |
| msgtype | String |

BFD.SendSrvrMsg

Description

This message is for debugging problems related to BFD server message to the clients. This is normal and does not indicate a problem.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems that may involve BFD server message to clients.

Severity

Debug-Verbose

Message Text

Sending %msgtype% to Peer:%peerID% client:%clientID% rc:%retcode%
Params:%param1%, %param2%, %param3%

Message Parameters

| Name | Type |
|----------|--------|
| peerID | ulnt32 |
| clientID | ulnt32 |
| msgtype | String |
| retcode | slnt |
| param1 | ulnt |
| param2 | ulnt |
| param3 | ulnt |

BFD.InitSrvrDone

Description

This message gets logged when the BFD server is ready for operations

Remedy

This is an informational message and requires no action

Severity

Info

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | String |

BFD.InitSrvrFail

Description

Failed to start the BFD server

Remedy

Restart BFD process

Severity

Warning

Message Text

%clntName%:%vrName%: BFD session create for dest IP %dstIPAddr% on interface %ifName% failed with error code %errCode%

Message Parameters

| Name | Type |
|-----------|--------|
| clntName | String |
| vrName | String |
| dstIPAddr | String |
| ifName | VLAN |
| errCode | sInt |

BFD.Client.SessnCreatFailMax

Description

This event occurs whenever receive callback from BFD server indicating that BFD session create request failed with error 'BFD_CLNTSVR_SESSION_EXCEEDS_SYSTEM_LIMIT'. clntName BFD client name vrName VR name dstIPAddr Dest IP address ifName Interface name

Remedy

Detailed BFD session information can be obtained with commands 'show bfd session' and 'debug bfd show session'. The following steps should be taken to resolve the condition caused by attempting to exceed system limit: 1. Unconfig client BFD for this interface. For example, use command 'config ospf vlan VlanName bfd off' for BFD client OSPF. 2. Ensure the total BFD session number won't exceed system limit with the intended configuration. Remove some BFD sessions to make the resource available. 3. Reconfig client BFD for this interface. For example, use command 'config ospf vlan VlanName bfd on' for BFD client OSPF.

Severity

Error

[BFD.HAL.DebugSummary](#)

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or

completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

BFD.HAL.DebugVerbose

Description

A condition has been detected that may interest a developer analyzing some system behavior at a more verbose level than provided by the debug summary information.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

%format%

Message Parameters

| Name | Type |

| format | Printf |

BFD.HAL.DebugData

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

BFD.HAL.ParmNull

Description

An internal function was called with a NULL pointer. This condition is not expected and is indicative of a possible memory corruption due to a software bug that needs engineering attention.

Remedy

Provide technical support information on BFD configuration. Also, check the scalability limit and compare this with the current configuration. "show bfd session" to find number of BFD sessions currently exist in the system. Contact technical support with the following information: - output of "show tech" - output of "debug hal show platform bfd all"

Severity

Error

Message Text

Passing parameters %parmName% is NULL.

Message Parameters

| Name | Type |
|----------|--------|
| parmName | String |

BFD.HAL.RslvNextHop

Description

This event occurs when mac address for the given next hop's ipaddress is resolved by ARP module.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ARP Resolved for nexthop ip %nextHopAddr% mac %macAddr% vrlId %vrId%

Message Parameters

| Name | Type |
|-------------|--------|
| macAddr | MAC |
| nextHopAddr | String |
| vrlId | ulnt |

BFD.HAL.AllocMemFail

Description

Memory for the displayed object could not be allocated which may be due to the system running low on memory. This will result in incorrect operation of the BFD feature.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim memory. "show bfd session" to find number of BFD sessions currently exist in the system. Contact technical support with the following information: - output of "show tech" - output of "debug hal show platform bfd all"

Severity

Error

Message Text

Memory allocation failed when trying to allocate a %obj% structure of size %size%.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |
| size | ulnt |

BFD.HAL.SendSessCreatReq

Description

This event occurs whenever BFD session create request is sent to HAL for a specific dest IP. vrlId VR name dstIPAddr Dest IP address srcIPAddr Src IP address sessionId Session ID

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

BFD session create request sent for src IP %srcIPAddr% dest IP %dstIPAddr% vrlId %vrlId%

Message Parameters

| srcIPAddr | String |
| dstIPAddr | String |
| vrfId | uint |
| sessionId | uint |

BFD.HAL.RecvSessCreatFail

Description

This event occurs whenever BFD session create request failed for a specific dest IP.

Remedy

Session creation could fail in the Hardware if the MAC address of next hop is not resolved. Check show iparp if ipv4 bfd session or show neighbor-discovery for ipv6 session. Please contact tech support if sessions is not able create after multiple attempts. show tech, debug bfd show, debug bfd show client, debug bfd show session, debug hal show platform bfd all, debug bfd show next-hop.

Severity

Warning

Message Text

BFD session create request sent to hardware is failed for session %sessionId%

Message Parameters

| Name | Type |
|-----------|------|
| sessionId | uint |

BFD.HAL.SendSessDelReq

Description

This message will be logged whenever a BFD session is deleted.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems in BFD.

Severity

Debug-Summary

Message Text

Session deleted sessionID:%sessnId% destIP:%destIP% srcIP:%srcIP%

Message Parameters

| Name | Type |
|---------|--------|
| sessnId | uint |
| srcIP | String |
| destIP | String |

BFD.HAL.SendSessUpdtReq

Description

This event occurs whenever BFD session update request is sent to HAL for a specific dest IP. vrlD Vr Id dstIPAddr Dest IP address srcIPAddr Src IP address sessionId SessionID

Remedy

No action required - Notification message only.

Severity

BGP.CfgCnctRetry

Description

When BGP protocol is enabled on more than one Virtual Routers, it is possible that the new TCP connection request for BGP neighbor establishment could fail. There is one BGP process per Virtual router and each process creates one TCP listener socket for BGP port. Linux TCP implementation hashes the new connection to any of the listener socket, if there are more than one socket for the same TCP port. If the connection request is received on a BGP process that do not handle the Virtual Router corresponding to the new connection, then that would be dropped. BGP establishment time could become high with default connection retry timeout of 120 seconds. Reducing the connection retry timer to a lower value would reduce the peer establishment delay.

Remedy

The event will occur when BGP protocol is added to a new Virtual Router. Increase the connection retry timeout value using the **configure bgp neighbor <neighbor> connect-retry <value>** command.

Severity

Notice

Message Text

[VR %vrid%] A connect retry value of 30 seconds is recommended for BGP neighbors, when BGP neighbors are configured on more than one Virtual Router. The default of 120 seconds may result in longer than acceptable peer establishment times.

BGP.Autopeering.EVPNMacMove

Description

RFC1532 specifies that if a MAC moves between a local and remote device N times within an M second interval, a message should alert the user. By default the interval is 180 seconds and the number of moves is 5.

Remedy

This error is cleared when only one route exists for this MAC.

Severity

Warning

Message Text

EVPN Entity %EVPNEntity% has multiple moves of MAC %srcMac% within a single monitoring interval.

Message Parameters

| Name | Type |
|------------|--------|
| EVPNEntity | uInt32 |
| srcMac | srcMAC |

BGP.Autopeering.EVPNStickyMac

Description

There are scenarios in which it is desired to configure some MAC addresses as static so that they are not subjected to MAC moves. In such scenarios, these MAC addresses are advertised with a MAC Mobility extended community where the static flag is set to 1 and the sequence number is set to zero. If a PE receives such advertisements and later learns the same MAC address(es) via local learning, then the PE MUST alert the operator.

Remedy

Remove static MAC if necessary.

Severity

Warning

Message Text

EVPN Entity %EVPNEntity% has detected a sticky mac %srcMAC%.

BGP.DecisnCoord.AllocMemInitSubComp

Description

A memory allocation failed while initializing the Decision Coordinator sub-component of DC-BGP. DC-BGP RIB Manager will fail to initialize.

Remedy

This is typically observed in scaled scenarios close to operating limits. try to reduce number of peers or routes stored. If functionality degrades, try disabling and enabling bgp or restarting the process. If problem persists, contact technical support with the following information: "show tech" and "upload debug". System restart may be required for continued operation.

Severity

Error

Message Text

[VR %p1%] Failed to allocate memory while initializing BGP's Decision Coordinator sub-component

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

BGP.DecisnCoord.AllocMemProcNewRt

Description

A memory allocation failure occurred whilst DC-BGP was processing a new BGP route. Information about the new route has been lost. The session to the BGP peer will be reset.

Remedy

This is typically observed in scaled scenarios close to operating limits. try to reduce number of peers or routes stored. If functionality degrades, try disabling and enabling bgp or restarting the process. If problem persists, contact technical support with the following information: "show tech" and "upload debug". System restart may be required for continued operation.

Severity

Debug-Verbose

Message Text

[VR %p1%] Failed to allocate memory when processing a new BGP route.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

BGP.DecisnCoord.RtFlapDampPnltyNotUpdt

Description

The route flap damping penalty of a BGP route could not be updated because the configured damping parameters have been deleted. The route will not be damped.

Remedy

No action required - Informational message only. May be of interest to operators and developers to trace and debug events

Severity

Info

Message Text

[VR %p1%] Flap damping penalty of the BGP route %p2%/p3% could not be updated \nbecause configured damping parameters have been deleted

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | String |
| p3 | uInt8 |

BGP.DecisnCoord.RtFlapDampPnltyNotClr

Description

The user requested that the route flap damping penalty be cleared from a route, but no penalty is currently held against that route.

Remedy

No action required - Informational message only. May be of interest to operators and developers to trace and debug events

Severity

Info

Message Text

[VR %p1%] User requested clearing of route flap penalty from route %p2%/p3% which has no existing penalty

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | String |
| p3 | uInt8 |

BGP.DecisnCoord.SessFSMInRsltInvAct

Description

An input to the Session FSM has resulted in an invalid action. The session FSM is in an inconsistent state.

Remedy

Gather diagnostics and contact technical support. Restart the session to the BGP peer.

Severity

Error

Message Text

[VR %p1%] Session FSM input caused invalid action: State %p4%, Input %p3%, Action %p2%

Message Parameters

- [BGP.EVPN.MacMoveCleared](#) on page 226
- [BGP.EVPN.MACStickyCleared](#) on page 227

BGP.EVPN.MacMove

Description

RFC 7432 specifies that if a MAC moves between a local and remote device N times within an M second interval, a message should alert the user. By default the interval is 180 seconds and the number of moves is 5. Multiple EVPN routes may temporarily exist for this MAC.

Remedy

This error is cleared when only one route exists for this MAC.

Severity

Warning

Message Text

EVPN Entity %EVPNEntity% has multiple moves of MAC %srcMAC% within a single monitoring interval.

Message Parameters

| Name | Type |
|------------|--------|
| EVPNEntity | uInt32 |
| srcMAC | srcMAC |

BGP.EVPN.MACSticky

Description

RFC 7432 notes that there are scenarios in which it is desired to configure some MAC addresses as static so that they are not subject to MAC moves. In such scenarios, these MAC addresses are advertised with a MAC Mobility extended community where the static flag is set to 1 and the sequence number is set to zero. If a PE receives such advertisements and later learns the same MAC address(es) via local learning, then the PE MUST alert the operator. This notification informs the user that the above condition has been cleared, because either the MAC is no longer sticky or the remote conflicting route has been cleared.

Remedy

Remove static MAC if necessary. "clear fdb <mac-address>"

Severity

Warning

Message Text

EVPN Entity %EVPNEntity% has detected a sticky mac %srcMAC%.

Message Parameters

| Name | Type |
|------------|--------|
| EVPNEntity | uInt32 |
| srcMAC | srcMAC |

BGP.EVPN.MacMoveCleared

Description

RFC 7432 specifies that if a MAC moves between a local and remote device N times within an M second interval, a message should alert the user. By default the interval is 180 seconds and the number of moves is 5. This notification informs the user that the above condition has been cleared, because only one route exists for this MAC.

Remedy

No remedy is needed.

Severity

Warning

Message Text

EVPN Entity %EVPNEntity% cleared multiple moves of MAC %srcMAC%.

Message Parameters

| Name | Type |
|------------|--------|
| EVPNEntity | uInt32 |
| srcMAC | srcMAC |

BGP.EVPN.MACStickyCleared

Description

RFC 7432 notes that there are scenarios in which it is desired to configure some MAC addresses as static so that they are not subject to MAC moves. In such scenarios, these MAC addresses are advertised with a MAC Mobility extended community where the static flag is set to 1 and the sequence number is set to zero. If a PE receives such advertisements and later learns the same MAC address(es) via local learning, then the PE MUST alert the operator. This notification informs the user that the above condition has been cleared, because either the MAC is no longer sticky or the remote conflicting route has been cleared.

Remedy

No remedy is needed.

Severity

Warning

Message Text

EVPN Entity %EVPNEntity% cleared a sticky mac %srcMAC%.

Message Parameters

| Name | Type |
|------------|--------|
| EVPNEntity | uInt32 |

BGP.PolicyMgr.RecvUpdtNonCfdASPathSeg

Description

An update has been received from a non-confederation EBGP peer containing an AS_PATH with the initial segment a confederation segment. The most common cause of this is a peer which has failed to remove the confederation part of the AS_PATH when exporting outside its confederation. If the first segment in the AS_PATH is not of length 0, it is replaced with a segment of type QB_AS_PATH_SEQ containing the Peer's remote AS number. Otherwise the AS_PATH has been corrupted so the route is not added to the Adj-RIB-In.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

An update has been received from a non-confederation peer which contains an AS_PATH with the first segment of a confederation type. VR: %p1% Peer BGP ID: %p2% Peer remote AS number %p3% Initial AS_PATH segment type %p4% Initial AS_PATH segment length %p5%

BGP.RIBAbstract.AllocLocRIBFail

Description

Protocol RIB Abstraction Layer has failed to allocate resources for a Loc-RIB. RIB Manager will fail to initialize and Protocol cannot become operational.

Remedy

Allocate extra resources.

Severity

Error

Message Text

The Protocol RIB Abstraction Layer has failed to allocate resources for a Loc-RIB. VR = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

BGP.RIBAbstract.AllocAdjRIBFail

Description

The Protocol RIB Abstraction Layer has failed to allocate resources for a Adj-RIB-In or Adj-RIB-Out. The BGP session will fail to start. An attempt will be made to restart the session later.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

The Protocol RIB Abstraction Layer has failed to allocate resources for an Adj-RIB-In or Adj-RIB-Out. VR = %p1% Session type = %p2% AFI = %p3% SAFI = %p4%

BGP.RIBAbstract.AllocTrackDampPnltyFail

Description

Protocol RIB Abstraction Layer has failed to allocate resources to track a route flap dampening penalty against a BGP route. A penalty will not be tracked against the withdrawn route. If the route is flapping, then Protocol will attempt to allocate a penalty CB the next time the route is withdrawn.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

The Protocol RIB Abstraction Layer has failed to allocate resources to track a route flap dampening penalty against a BGP route. VR = %p1% Route <AFI, SAFI> = <%p2%, %p3%>; Route prefix length (bits) = %p4% Route prefix = %p5%

Message Parameters

Message Text

A Loc-RIB has been blocked because no AFM is available for the AFI-SAFI. VR: %p1% AFI: %p2% SAFI: %p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uint16 |
| p3 | uint8 |

BGP.RIBAbstract.UnBlkLocRIB

Description

A Loc-RIB has been unblocked. Changes to the Loc-RIB that were postponed while it was blocked will now be advertised to peers.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A Loc-RIB has been unblocked. VR: %p1% AFI: %p2% SAFI: %p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt16 |
| p3 | uInt8 |

BGP.RIBAbstract.AllocRawRecvRt

Description

Protocol RIB Abstraction Layer has failed to allocate resources to store a raw route received from a peer. This can only occur when soft reset with stored routing information is enabled: This optional behavior uses a lot of memory. Information about the new route has been lost. The session to the BGP peer will be reset.

Remedy

Free system resources and retry the session.

Severity

Error

Message Text

The Protocol RIB Abstraction Layer has failed to allocate resources to store a raw received route. VR = %p1% Route <AFI, SAFI> = <%p2%, %p3%>; Route prefix length (bits) = %p4% Route prefix = %p5%

BGP.RtMgr.InitFailObjNotCreat

Description

The BGP RTMgr agent component failed to create an object during initialization. The BGP process will fail to start. The object that could not be created is either the receive thread, the receive thread lock or the data lock.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: "show tech" and "upload debug". System Restart may be required for continued operation.

Severity

Critical

Message Text

BGP initialization failed. Could not create %object%.

Message Parameters

| Name | Type |
|--------|--------|
| object | String |

BGP.RtMgr.MSDPAllocFail

Description

BGP failed to allocate resources to track the BGP route for an MSDP destination.

Remedy

[No action required - Notification message only. MSDP will retry the request.]

Severity

Notice

Message Text

Failed to allocate BGP resources for MSDP destination %destipa%

Message Parameters

| Name | Type |
|---------|-----------|
| destipa | IPAddress |

BGP.RtMgr.AllocFail

Description

The BGP RTMgr agent failed to allocate resources for normal operation. This should be an unusual case - memory state notifications should ensure that the BGP process is disabled before a memory shortage becomes critical.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: "show tech" and "upload debug". Remove any configuration that could contribute to the memory shortage and restart BGP.

Severity

Notice

Message Text

Failed to allocate memory for %object%.

Message Parameters

| Name | Type |
|--------|--------|
| object | String |

BGP.RtMgr.APIFail

Description

This log indicates an unexpected failure of an API call from BGP to another EXOS process. Possible failure of one or more processes in the EXOS system.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: "show tech" and "upload debug". System Restart may be required for continued operation.

Severity

Error

Message Text

Failed: %format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

BGP.RtMgr.LkupRegFail

Description

BGP RTMgr agent failed to find the RTMgr registration details when processing the specified message.

Remedy

[No action required - Notification message only. May be of interest to developers. It is unlikely to indicate a problem if seen when disabling BGP or when support is removed for an address family. If seen frequently during normal operation, it may indicate a problem. Restarting BGP may resolve the problem.

Severity

Notice

Message Text

Lookup failed for BGP registration handling message %msg%; VR ID=%vrid%, role=%role%, afi=%afi%, safi=%safi%.

Message Parameters

| Name | Type |
|------|--------|
| vrid | VRID |
| role | uInt8 |
| afi | uInt16 |
| safi | uInt8 |
| msg | String |

BGP.RtMgr.RtImprtlgnAttr

Description

BGP attributes are used when applying route import policy. In a VRF, the attributes may also be redistributed between the provider facing BGP instance and the CE facing BGP instance. This log indicates that some or all of the attributes have been ignored because they are too large or badly formed.

Remedy

An overlong community list, extended community list or AS path is likely to be the result of BGP policy applied elsewhere in the BGP network, and is therefore a network management issue.

Severity

Warning

Message Text

Overlarge or badly formed attributes have been ignored during route import.

BGP.RtMgr.APICall

Description

This log indicates a call to RtMgr Client Library API.

Remedy

[No action required - Informational message only. May be of interest to developers to trace and debug events in BGP.]

Severity

Debug-Verbose

Message Text

%format%

Message Parameters

| Name | Type |

[VR %vrid%] Added RtMgr notify service to dispatcher: peer-id=%peerid% monitor fd=%fd%

Message Parameters

| Name | Type |
|--------|--------|
| vrid | VRID |
| peerid | uInt32 |
| fd | sInt32 |

BGP.RtMgr.AddNtfySvcToDispFail

Description

Adding rtmgr notify service to dispatcher failed at this time. This is the service over which BGP receives messages from rtmgr.

Remedy

This is a temporary failure. This API call will be retried at a later time until the call succeeds. BGP will cease to function until that time. If this situation persists, please call technical support with the following information from "show tech" and "upload debug". In case of persistent failures, BGP or system restart may be needed for continued operation.

Severity

BGP.VPNMgr.RtTrgtRowRefUncfgVRFRow

Description

A MIB request was received for a BVM VRF route target row which refers to an un-configured VRF row. The MIB request failed.

Remedy

Ensure the VRF is valid, then repeat the request.

Severity

Error

Message Text

A MIB request was received for a BVM VRF route target row which refers to an un-configured VRF row. VRID = %p1% VRF name = %p2% RT index = %p3% RT type = %p4%

Message Parameters

| Name | Type |
|------|---------------|
| p1 | xInt32 |
| p2 | CharByteArray |
| p3 | xInt32 |
| p4 | xInt32 |

BGP.VPNMgr.AddJoinVRFFail

Description

BVM has failed to add a join for a VRF. Route redistribution for this VRF will not be possible.

Remedy

Free resources and try again.

Severity

Error

Message Text

BVM has failed to add a join for a VRF. VRID = %p1% VRF Name = %p2%

Message Parameters

| Name | Type |
|------|---------------|
| p1 | sInt32 |
| p2 | CharByteArray |

BGP.VPNMgr.InstAdvertTunlRsrcFail

Description

A tunnel advertised by I3 could not be installed into BVM due to insufficient resources. This tunnel will not be used for BGP VPN traffic.

Remedy

Free resources. BVM will reattempt the operation shortly.

Severity

Error

Message Text

A tunnel advertised by I3 could not be installed into BVM due to insufficient resources.
VRID = %p1% Tunnel IF index = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | xInt32 |

BGP.VPNMgr.AddTunlFail

Description

TNL manager was unable to allocate memory for a TNL CB. This tunnel will not be used for BGP VPN traffic.

Remedy

Free resources. BVM will reattempt the operation shortly.

Severity

Debug-Summary

Message Text

TNL manager has failed to add a new tunnel. VRID = %p1% Tunnel IF index = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | xInt32 |

BGP.VPNMgr.LblProcStateCflct

Description

The Label Processing FSM is in an inconsistent state. BVM will terminate.

Remedy

Gather diagnostics and contact support personnel.

Severity

Error

Message Text

The Label Processing is in an inconsistent state. VRID = %p1% Input = %p2% Old State = %p3% Action = %p4%

Message Parameters

Debug-Data

Message Text

Received %bytes% bytes BOOTP/DHCP packet on VLAN %vlan%, port %port%, from %fip% sent to %tip% for client with MAC address %ciaddr%.

Message Parameters

| Name | Type |
|-----------|-----------------|
| bytes | ulnt |
| vlan | VLAN |
| fip | srcSockAddr |
| tip | dstSockAddr |
| port | ingressSlotPort |
| ciaddr | MAC |
| buffer | Buf-ptr |
| bufferLen | Buf-len |

BOOTP.ChkLpbkIfFail

Description

This message will be logged when check to see if interface is loopback fails.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Loopback interface check failed. VRID %vrid%, IfIndex %ifindex%, Errno %ErrorNo%

Message Parameters

| Name | Type |
|---------|------|
| vrid | sInt |
| ifindex | sInt |
| ErrorNo | sInt |

BOOTP.RxPktL3VPN

Description

When enabled this message will be logged when Bootp relay packets are received on MPLS Network Interface.

Remedy

No action required. Informational message only.

Severity

Debug-Verbose

Message Text

Received %bytes% bytes BOOTP/DHCP packet on MPLS Network Interface, port %port%, from %fip% sent to %tip% in VRF %vrf% for client with MAC address %ciaddr%.

Message Parameters

| Name | Type |
|-------|-------------|
| bytes | uInt |
| fip | srcSockAddr |

| Name | Type |
|--------|-----------------|
| tip | dstSockAddr |
| port | ingressSlotPort |
| ciaddr | MAC |
| vrf | VRF |

BOOTP.RxPktL3VPNDump

Description

When enabled this message will be logged for every packet received on MPLS network interface.

Remedy

No action required. Informational message only.

Severity

Debug-Data

Message Text

Received %bytes% bytes BOOTP/DHCP packet on MPLS Network Interface, port %port%, from %fip% sent to %tip% in VRF %vrf% for client with MAC address %ciaddr%.

Message Parameters

| Name | Type |
|-----------|-----------------|
| bytes | uInt |
| fip | srcSockAddr |
| tip | dstSockAddr |
| port | ingressSlotPort |
| ciaddr | MAC |
| vrf | VRF |

BOOTP.Client.RxEventVLANInv

Description

An event for a vlan instance occurred, but the VLAN instance does not longer exist.

Remedy

This message is there for debug purposes, and should only be enabled and monitored on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Event number %event% occurred on deleted VLAN interface instance
%vlanIfInstance% with state %status%

Message Parameters

| Name | Type |
|----------------|--------|
| vlanIfInstance | ulnt32 |
| event | ulnt |
| status | ulnt |

BOOTP.Client.RxEvent

Description

This message will show all events processed by the Dhcp Client module.

Remedy

This is for debug purposes and should only be enabled on request of Extreme Networks technical support.

Severity

Debug-Summary

Message Text

Received event %event% on VLAN %vlan%, old status is %oldStatus%, new status is
%newStatus%

Message Parameters

| Name | Type |
|-----------|------|
| vlan | VLAN |
| event | ulnt |
| oldStatus | ulnt |
| newStatus | ulnt |

BOOTP.Client.AllocNetRsrcFail

Description

Can't allocate network resources to received and send DHCP/BOOTP client related packets.

Remedy

If this happens try to disable and enable the vlan that reports this error. If the problem is consistent try restarting netTools and get in touch with Extreme Networks Technical Support.

Severity

Error

Message Text

DHCP/BOOTP Client failed to allocate network resources for vlan %vlan%; %reason%

Message Parameters

| Name | Type |
|--------|--------|
| vlan | VLAN |
| reason | String |

BOOTP.Client.RxReply

Description

This message can be used to trace all incoming BOOTP/DHCP packets for the DHCP Client module.

Remedy

This is for debug purposes and should only be enabled on request of Extreme Networks technical support.

Severity

Debug-Summary

Message Text

Received DHCP/BOOTP reply on vlan instance %vlan%, from %srvIP%, type %opcode%, length %len%.

Message Parameters

| Name | Type |
|--------|--------|
| vlan | ulnt32 |
| opcode | ulnt |
| len | ulnt |
| srvIP | IP |

BOOTP.Client.RxReplyDump

Description

This message can be used to trace all incoming BOOTP/DHCP packets for the DHCP Client module.

Remedy

This is for debug purposes and should only be enabled on request of Extreme Networks technical support.

Severity

Debug-Data

Message Text

Received DHCP/BOOTP reply on vlan instance %vlan%, from %srvIP%, type %opcode%, length %len%.

Message Parameters

| Name | Type |
|---------|---------|
| vlan | ulnt32 |
| opcode | ulnt |
| len | ulnt |
| srvIP | IP |
| buff | Buf-ptr |
| bufflen | Buf-len |

BOOTP.Client.RxBOOTPAddrInv

Description

The specified BOOTP server supplied an invalid IP address to the mentioned VLAN.

Remedy

Check your bootp server to make sure a valid IP address is assigned to the switch.

Severity

Error

Message Text

Received invalid IP address %ip% for VLAN %vlan% from BOOTP server %srcIP%

Message Parameters

| Name | Type |
|-------|-------|
| vlan | VLAN |
| ip | IP |
| srcIP | srcIP |

BOOTP.Client.RxAddrInuse

Description

The specified BOOTP/DHCP server supplied an IP address that's already in use on the network.

Remedy

Check your BOOTP server to make sure the IP address supplied is not used by any other network device. Check the switch it's ARP table to find the current user of the IP address.

Severity

Error

Message Text

Received IP address %ip% for VLAN %vlan% from BOOTP/DHCP server %srvIP% that's already in use by %mac%

Message Parameters

| Name | Type |
|-------|------|
| vlan | VLAN |
| ip | IP |
| srvIP | IP |
| mac | MAC |

BOOTP.Client.AssgnVLANIPAddr

Description

The IP address learned from a BOOTP/DHCP server was assigned to the specified VLAN.

Remedy

This is an informational message.

Severity

Info

Message Text

Learned IP Address %ip% %mask% configured on VLAN %vlan%. Default gateway learned %gw%

Message Parameters

| Name | Type |
|------|-----------|
| vlan | VLAN |
| ip | IP |
| mask | IPmaskval |
| gw | IP |

BOOTP.Client.RemVLANIPAddr

Description

The IP address learned from a DHCP/BOOTP server was removed from the specified VLAN.

Remedy

This happens when the BOOTP/DHCP client gets disabled, or the DHCP lease has expired.

Severity

Info

Message Text

Learned IP Address %ip% removed from VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |
| ip | IP |

BOOTP.Client.SendCkptData

Description

DHCP Client Checkpointing Data was sent from master to backup node

Remedy

NA

Severity

Debug-Summary

Message Text

DHCP Client Checkpointing Data was sent from master to backup node

BOOTP.Client.RecvCkptData

Description

DHCP Client Checkpointing Data was received on backup from master node

Remedy

No remedy is available.

Severity

Debug-Summary

Message Text

DHCP Client Checkpointing Data was received on backup from master node

BOOTP.Client.AutoPrvsnEnbl

Description

Auto-Provision is enabled on the switch and will start in 15 seconds. Kindly do not perform any manual configuration.

Remedy

No action required - Notification message only

Severity

Notice

Message Text

Auto-Provision is enabled on the switch.

BOOTP.Client.AutoPrvsnDone

Description

Auto-Provision completed successfully. The switch will reboot in one minute.

Remedy

No action required - Notification message only

Severity

Info

Message Text

Auto-Provision has completed successfully.

BOOTP.Client.AutoPrvsnTFTPUnrch

Description

Auto-Provision failed due to TFTP server unreachable. The switch will retry after few seconds, Kindly check the DHCP server configuration.

Remedy

Configure DHCP server with correct TFTP IP address.

Severity

Error

Message Text

The TFTP server %tftpip% is unreachable.

Message Parameters

| Name | Type |
|--------|--------|
| tftpip | String |

BOOTP.Client.AutoPrvsnFileNameInv

Description

Auto-Provision failed due to invalid file extension. The switch will retry after few seconds, Kindly check the DHCP server configuration.

Remedy

Configure the DHCP server with correct file name.

Severity

Error

Message Text

An Invalid file name (%file%) was received from TFTP server (%tftpip%).

Message Parameters

| Name | Type |
|--------|--------|
| file | String |
| tftpip | String |

BOOTP.Client.AutoPrvsnReadNVRAMFail

Description

Error while reading Auto-Provision status from NVRAM.

Remedy

This might be because of some hardware/system error try reboot and check if this error persists.

Severity

Critical

Message Text

Failed to read the Auto-Provision configuration information from the NVRAM.

BOOTP.Client.AutoPrvsnWritNVRAMFail

Description

Error while writing Auto-Provision status to NVRAM.

Remedy

This might be because of some hardware/system error try reboot and check if this error persists.

Severity

Critical

Message Text

Failed to write the Auto-Provision configuration information to the NVRAM.

BOOTP.Client.AutoPrvsnOpenFileFail

Description

Auto-Provision suspended due to fatal error. Unable to open the file.

Remedy

Reboot the system and try to do the Auto-Provision again.

Severity

Critical

Message Text

Failed to open the file (%file%).

Message Parameters

| Name | Type |
|------|--------|
| file | String |

BOOTP.Client.AutoPrvsnDHCPUnrch

Description

The DHCP server is not reachable through the virtual router "VR-Default" or "VR-Mgmt".

Remedy

Check the network connectivity.

Severity

Warning

Message Text

The DHCP Server is unreachable through VR %vrName%.

Message Parameters

| Name | Type |
|--------|--------|
| vrName | String |

BOOTP.Client.AutoPrvsnDHCPOpt43Inv

Description

Auto-Provision failed due to invalid option 43 parameters [TFTP Server IP, Config file] received from the DHCP server. The switch will retry after few seconds, Kindly check the DHCP server configuration.

Remedy

Configure the correct option 43 parameters in the DHCP Server.

Severity

Error

Message Text

The DHCP Option 43 parameters received are invalid.

BOOTP.Client.AutoPrvsnFileNotExist

Description

Auto-Provision Failed. Config file does not exist in the TFTP server. The switch will retry after few seconds, Kindly check the DHCP server configuration.

Remedy

Configure the DHCP Server with valid config file.

Severity

Warning

Message Text

The configuration file (%file%) does not exist on the TFTP server (%tftpip%).

Message Parameters

| Name | Type |
|--------|--------|
| file | String |
| tftpip | String |

BOOTP.Client.AutoPrvsnVLANIPAlrdyCfg

Description

Auto Provision is enabled on the "Mgmt"/"Default" VLAN only if no IP address is configured on this VLAN.

Remedy

Unconfigure the IP address on this VLAN, and the switch will try to enable Auto Provision on this VLAN during the next retry.

Severity

Warning

Message Text

Auto Provision is not enabled on VLAN %vlan% because the VLAN IP address is already configured.

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Relay.RxPktOpcodeInv

Description

When enabled this message will be logged for every packet with an invalid BOOTP opcode.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Received BOOTP/DHCP packet with invalid opcode (%op%)

Message Parameters

| Name | Type |
|------|-------|
| op | ulnt8 |

BOOTP.Relay.RxPktSizInv

Description

When enabled this message will be logged for every packet received that is too small to contain a BOOTP/DHCP packet header.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Received BOOTP/DHCP packet is too small to contain a valid header (%size%)

Message Parameters

| Name | Type |
|------|--------|
| size | uint32 |

BOOTP.Relay.FwdReqFailCfgInv

Description

When enabled this message will be logged for every packet received when no valid bootprelay configuration exists.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REQUEST received from %fip% on VLAN %vlan%, as no configuration exists for it

Message Parameters

| Name | Type |
|------|-------------|
| fip | srcSockAddr |
| vlan | VLAN |

BOOTP.Relay.FwdFailIPInv

Description

When enabled this message will be logged for every packet received on a VLAN with no IP address assigned.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REQUEST received on VLAN %vlan%, as the VLAN has no IP address assigned.

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Relay.FwdFailVLANLpbk

Description

When enabled this message will be logged for every packet received on a VLAN where the mentioned relay agent resides on.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Did not forward BOOTP/DHCP REQUEST to relay agent %tip%, as it was on the same VLAN as the sender

Message Parameters

| Name | Type |
|------|-------------|
| tip | dstSockAddr |

BOOTP.Relay.FwdReqOK

Description

When enabled this message will be logged for every BOOTREQUEST packet successfully forwarded.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Forwarded BOOTP/DHCP REQUEST received on VLAN %vlan% from %sip% to %dip%

Message Parameters

| Name | Type |
|------|-------------|
| vlan | VLAN |
| sip | srcSockAddr |
| dip | dstSockAddr |

BOOTP.Relay.FwdReqTxIPFail

Description

When enabled this message will be logged for every packet that failed being forwarded to the specified bootprelay agent.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Could not forward BOOTP/DHCP REQUEST received on VLAN %vlan% from %sip% to %dip%; errno %error%

Message Parameters

| Name | Type |
|-------|-------------|
| vlan | VLAN |
| sip | srcSockAddr |
| dip | dstSockAddr |
| error | sInt |

BOOTP.Relay.FwdReqTxVLANFail

Description

When enabled this message will be logged for every packet that failed being forwarded onto the specified VLAN.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Could not forward BOOTP/DHCP REQUEST received on VLAN %vlan% from %sip% to VLAN %dvlan%; errno %error%

Message Parameters

| Name | Type |
|-------|-------------|
| vlan | VLAN |
| sip | srcSockAddr |
| dvlan | VLAN |
| error | sInt |

BOOTP.Relay.FwdReplyTxOK

Description

When enabled this message will be logged for every BOOTPREPLY packet successfully forwarded.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Forwarded BOOTP/DHCP REPLY received on VLAN %vlan% from %sip% to %dip% on VLAN %dvlan%

Message Parameters

| Name | Type |
|-------|-------------|
| vlan | VLAN |
| sip | srcSockAddr |
| dip | dstSockAddr |
| dvlan | VLAN |

BOOTP.Relay.FwdReplyTxFail

Description

When enabled this message will be logged for every packet that failed being forwarded to the specified bootprelay agent.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Could not forward BOOTP/DHCP REPLY received on VLAN %vlan% from %sip% to %dip% on VLAN %dvlan%; errno %error%

Message Parameters

| Name | Type |
|-------|-------------|
| vlan | VLAN |
| sip | srcSockAddr |
| dip | dstSockAddr |
| dvlan | VLAN |
| error | sInt |

BOOTP.Relay.LkupIfIdxFail

Description

When enabled this message will be logged when a BOOTP/DHCP packet is received but the corresponding VLAN cannot be found.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Cannot locate VLAN based on VRID %vrid% and ifindex %ifindex%

Message Parameters

| Name | Type |
|---------|------|
| vrid | sInt |
| ifindex | sInt |

BOOTP.Relay.FndIfFail

Description

When enabled this message will be logged when a BOOTP/DHCP packet is received but giaddr is not set to be one of our interfaces IP address.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Cannot process BOOTP/DHCP REPLY as giaddr %ip% is not configured on one of our local interfaces

Message Parameters

| Name | Type |
|------|------|
| ip | IP |

BOOTP.Relay.FwdReplyFailCfgInv

Description

When enabled this message will be logged for every packet received when no valid bootprelay configuration exists.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REPLY from VLAN %svlan% to VLAN %dvlan%, as no configuration exists for it.

Message Parameters

| Name | Type |
|-------|------|
| svlan | VLAN |
| dvlan | VLAN |

BOOTP.Relay.IPFwdOffRxVLAN

Description

This message will be logged when a BOOTP/DHCP packet arrives on a VLAN that does not have ipforwarding enabled.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Cannot forward BOOTP/DHCP packet received on VLAN %vlan% as ipforwarding is disabled.

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Relay.IPFwdOffTxVLAN

Description

This message will be logged when a BOOTP/DHCP packet arrives for a destination VLAN that does not have ipforwarding enabled.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Cannot forward BOOTP/DHCP packet as destination VLAN %vlan% has ipforwarding disabled.

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Relay.FwdFailRtInv

Description

When enabled this message will be logged for every packet that needs forwarding to a relay agent that is not reachable through an ipforwarding enabled VLAN.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Did not forward BOOTP/DHCP REQUEST to relay agent %tip%, as ipforwarding is not enabled on VLAN towards destination

Message Parameters

| Name | Type |
|------|-------------|
| tip | dstSockAddr |

BOOTP.Relay.PktReqAct

Description

When enabled this message will be logged for every DHCP option 82 packet that was dropped/kept/replaced.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

The DHCP Request packet with DHCP option 82 is %action%.

Message Parameters

| Name | Type |
|--------|--------|
| action | String |

BOOTP.Relay.PktReplyChkFail

Description

The DHCP Reply packet with option 82 failed while checking. The reason is specified in the error message.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

The DHCP Reply packet with option 82 does not pass checking. Error: %error%

Message Parameters

| Name | Type |
|-------|--------|
| error | String |

BOOTP.Relay.FwdReqDump

Description

When enabled, this message will be logged for every BOOTP/DHCP Request received for forwarding.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Forward %size% bytes BOOTP/DHCP REQUEST received on VLAN %vlan% from %sip% to %dip%.

Message Parameters

| Name | Type |
|-----------|-------------|
| size | ulnt |
| vlan | VLAN |
| sip | srcSockAddr |
| dip | dstSockAddr |
| buffer | Buf-ptr |
| bufferLen | Buf-len |

BOOTP.Relay.FwdReplyDump

Description

When enabled, this message will be logged for every BOOTP/DHCP Reply received for relaying back to the client.

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Forward %size% bytes BOOTP/DHCP REPLY received on VLAN %vlan% from %sip% to %dip% on VLAN %dvlan%.

Message Parameters

| Name | Type |
|-----------|-------------|
| size | ulnt |
| vlan | VLAN |
| sip | srcSockAddr |
| dip | dstSockAddr |
| dvlan | VLAN |
| buffer | Buf-ptr |
| bufferLen | Buf-len |

BOOTP.Relay.UDPFwdVLAN

Description

UDP forwarding is flooding the UDP datagram to a VLAN, as specified in the associated UDP forwarding policy

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

UDP-Fwding: BOOTP/DHCP request packet dport %dest_port% flooded to VLAN
%vlan%

Message Parameters

| Name | Type |
|-----------|--------|
| dest_port | ulnt |
| vlan | String |

BOOTP.Relay.UDPFwdHost

Description

Broadcast UDP datagram is being forwarded to an Host, as specified in the associated UDP forwarding profile

Remedy

This message exists for debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

UDP-Fwding: BOOTP/DHCP request packet dport %dest_port% fwded to %addr%

Message Parameters

| Name | Type |
|-----------|------|
| dest_port | ulnt |
| addr | IP |

BOOTP.Relay.SendCkptData

Description

DHCP Server Checkpointing Data was sent from master to backup node

Remedy

NA

Severity

Debug-Summary

Message Text

DHCP Server Checkpointing Data was sent from master to backup node

BOOTP.Relay.RecvCkptData

Description

DHCP Server Checkpointing Data was received on backup from master node

Remedy

No remedy is available.

Severity

Debug-Summary

Message Text

DHCP Server Checkpointing Data was received on backup from master node

BOOTP.Relay.FwdReqFailDsbIVLAN

Description

BOOTP Relay disabled on this VLAN so, Cannot forward BOOTP/DHCP REQUEST Packets to the Relay Agent.

Remedy

Enable BOOTP Relay on this VLAN.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REQUEST from VLAN %svlan% to VLAN %dvlan%, as BOOTP Relay is disabled for VLAN %dvlan%

Message Parameters

| Name | Type |
|-------|--------|
| svlan | String |
| dvlan | String |

BOOTP.Relay.FwdReplyFailDsbIVLAN

Description

BOOTP Relay disabled on this VLAN so, Cannot forward BOOTP/DHCP REPLY Packets to the client.

Remedy

Enable BOOTP Relay on this VLAN.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REPLY from VLAN %svlan% to VLAN %dvlan%, as BOOTP Relay is disabled for VLAN %dvlan%

Message Parameters

| Name | Type |
|-------|--------|
| svlan | String |
| dvlan | String |

BOOTP.Relay.RxReqDsbIVLAN

Description

BOOTP Relay is disabled on received VLAN hence, dropping the BOOTP/DHCP REQUEST packets.

Remedy

Enable BOOTP Relay on this VLAN.

Severity

Debug-Summary

Message Text

Received BOOTP/DHCP REQUEST on BOOTP Relay disabled VLAN %svlan%

Message Parameters

| Name | Type |
|-------|--------|
| svlan | String |

BOOTP.Relay.RxReplyDsbIVLAN

Description

BOOTP Relay is disabled on received VLAN hence, dropping the BOOTP/DHCP REPLY packets.

Remedy

Enable BOOTP Relay on this VLAN.

Severity

Debug-Summary

Message Text

Received BOOTP/DHCP REPLY on BOOTP Relay disabled VLAN %svlan%

Message Parameters

| Name | Type |
|-------|--------|
| svlan | String |

BOOTP.Relay.GiaddrMaxAtmpt

Description

Sequential Include Secondary mode was enabled for BOOTPRELAY and the DHCP Client did not get a response after multiple attempts with the specified IP address as the gateway address.

Remedy

BOOTPRELAY will automatically move on to the next IP address of the client facing VLAN and use it as the gateway address.

Notice

Message Text

DHCP Client with MAC %mac% has already made %numAttempts% attempts with %giaddr% as gateway address.

Message Parameters

| Name | Type |
|-------------|-------|
| mac | MAC |
| giaddr | IP |
| numAttempts | uInt8 |

BOOTP.Relay.Giaddr

Description

When enabled, this message is logged for every BOOTP/DHCP request that is to be relayed to the server. This message gives information about the gateway address that is being used.

Remedy

This message exists for debug operations. Enable this message only on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

BOOTP/DHCP request received on VLAN %vlan% from Client with MAC %mac% will be forwarded to Server %dip% with %giaddr% as the gateway address.

Message Parameters

| Name | Type |
|--------|-------------|
| vlan | VLAN |
| mac | MAC |
| dip | dstSockAddr |
| giaddr | IP |

BOOTP.Relay.Ipv6AddrNotCfg

Description

This event occurs when a VLAN has no IPv6 address configured either statically or dynamically through DHCPv6.

Remedy

Check if the VLAN configured as DHCPv6 client has a valid static IPv6 address and DHCPv6 client state has entered "Bound" state using the command "show dhcp-client ipv6 state". If not, configure a static ipv6 address using the command "configure vlan <vlanName> ipaddress <ipv6 address/ prefix length>". Also, it is not recommended to enable DHCPv6 client on a bootp relay enabled VLAN. If the event still occurs, contact technical support after gathering relevant information using "show tech-support" CLI command and uploading the debug data out of the switch using "upload debug <ipaddress> vr vr-mgmt" CLI command.

Severity

Warning

Message Text

No IPv6 address configured on VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Relay.RxRelayPktInvPort

Description

This event occurs when a DHCPv6 relay packet is received on a non existing port number after unconfiguring the static ipv6 address of the same VLAN.

Remedy

Check if the VLAN configured as DHCPv6 client has a valid static IPv6 address and DHCPv6 client state has entered "Bound" state using the command "show dhcp-client ipv6 state". If not, configure a static ipv6 address using the command "configure vlan <vlanName> ipaddress <ipv6 address/ prefix length>". Also, it is not recommended to enable DHCPv6 client on a bootp relay enabled VLAN. If the event still occurs, contact technical support after gathering relevant information using "show tech-support" CLI command and uploading the debug data out of the switch using "upload debug <ipaddress> vr vr-mgmt" CLI command.

Severity

Warning

Message Text

DHCPv6 Relay packet for VLAN %vlan% received on invalid port %port%.

Message Parameters

| Name | Type |
|------|-------------|
| vlan | VLAN |
| port | ingressPort |

BOOTP.Relay.FwdReplyRxL3VPNOK

Description

When enabled this message will be logged for every BOOTPREPLY packet received MPLS Network interface successfully forwarded.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

Forwarded BOOTP/DHCP REPLY received on MPLS Network Interface from %sip% to %dip% on VLAN %dvlan%

Message Parameters

| Name | Type |
|-------|-------------|
| sip | srcSockAddr |
| dip | dstSockAddr |
| dvlan | VLAN |

BOOTP.Relay.FwdReplyRxL3VPNFail

Description

When enabled this message will be logged for every packet received on MPLS Network Interface that failed being forwarded to the specified bootprelay agent.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

Could not forward BOOTP/DHCP REPLY received on MPLS Network Interface from %sip% to %dip% on VLAN %dvlan%; errno %error%

Message Parameters

| Name | Type |
|-------|-------------|
| sip | srcSockAddr |
| dip | dstSockAddr |
| dvlan | VLAN |
| error | sInt |

BOOTP.Relay.FwdReplyRxL3VPNDump

Description

When enabled, this message will be logged for every BOOTP/DHCP Reply received on MPLS Network Interface for relaying back to the client.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Forward %size% bytes BOOTP/DHCP REPLY received on MPLS Network Interface from %sip% to %dip% on VLAN %dvlan%.

Message Parameters

| Name | Type |
|-----------|-------------|
| size | ulnt |
| sip | srcSockAddr |
| dip | dstSockAddr |
| dvlan | VLAN |
| buffer | Buf-ptr |
| bufferLen | Buf-len |

BOOTP.Relay.FwdReplyRxL3VPNInvCfg

Description

When enabled this message will be logged for every packet received on MPLS Network Interface when no valid bootprelay configuration exists.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REPLY from MPLS Network Interface to VLAN %dvlan%, as no configuration exists for it.

Message Parameters

| Name | Type |
|-------|------|
| dvlan | VLAN |

BOOTP.Relay.FwdReplyRxL3VPNVLANDsbl

Description

BOOTP Relay disabled on this VLAN so, Cannot forward BOOTP/DHCP REPLY Packets to the client.

Remedy

No action required - Information message only. Enable BOOTP Relay on this VLAN.

Severity

Debug-Summary

Message Text

Cannot forward BOOTP/DHCP REPLY received from MPLS Network Interdace to VLAN %dvlan%, as BOOTP Relay is disabled for VLAN %dvlan%

Message Parameters

| Name | Type |
|-------|------|
| dvlan | VLAN |

BOOTP.Server.AllocSockFail

Description

This message is logged when the DHCP Server was unable to allocate network resources needed.

Remedy

Try to replicate this issue and report it to the Extreme Networks technical support center.

Severity

Error

Message Text

Failed allocating a socket for the DHCP Server on VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Server.RxPktPortInv

Description

This message gets generated when a BOOTP request packet is received for the specified VLAN, but the receiving ports does not have DHCP server functionality enabled.

Remedy

If the specific port needs to support DHCP server functionality, enable it to do so. The command is enable DHCP ports portlist VLAN vlan_name.

Severity

Debug-Summary

Message Text

Received DHCP Request packet for VLAN %vlan% on port %port%, but port not DHCP enabled

Message Parameters

| Name | Type |
|------|-----------------|
| vlan | VLAN |
| port | ingressSlotPort |

BOOTP.Server.RxPktInv

Description

When enabled this message will be logged for every packet received that could not be processed by the server. Possible reasons are; htype and hlen fields are not set correctly (1,6), options portion of the packet is not valid, packet does not contain DHCP magic cookie, or DHCP_MSG_TYPE options does not exist.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

DHCP packet for VLAN %vlan% from %port% does not seem valid for processing

Message Parameters

| Name | Type |
|------|-----------------|
| vlan | VLAN |
| port | ingressSlotPort |

BOOTP.Server.RxPktOpcodeInv

Description

When enabled this message will be logged for every packet with an invalid BOOTP opcode. The DHCP Server only supports the BOOTPREQUEST opcode.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Received DHCP packet with invalid opcode (%op%) on port %port% for VLAN %vlan%

Message Parameters

| Name | Type |
|------|-----------------|
| vlan | VLAN |
| port | ingressSlotPort |
| op | ulnt |

BOOTP.Server.RxPktSizInv

Description

When enabled this message will be logged for every packet received that is too small to contain a DHCP packet header.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Received DHCP packet on port %port% for VLAN %vlan% that is too small to contain a valid header (%size%)

Message Parameters

| Name | Type |
|------|-----------------|
| vlan | VLAN |
| port | ingressSlotPort |
| size | ulnt |

BOOTP.Server.RxPktMsgTypeInv

Description

When enabled this message will be logged for every packet with an invalid DHCP Message Type option. The DHCP Server only accepts DISCOVER, REQUEST, DECLINE, RELEASE and INFORM messages.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Received DHCP packet with invalid message type (%type%) on port %port% for VLAN %vlan%

Message Parameters

| Name | Type |
|------|-----------------|
| vlan | VLAN |
| port | ingressSlotPort |
| type | ulnt |

BOOTP.Server.RxPktGwIPAddrInv

Description

When enabled this message will be logged for every packet which has the gateway IP address filed in. XOS currently only supports leasing for directly connected networks, so not via a BOOTP/DHCP relay agent.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Received DHCP packet with a gateway IP address value of %giaddr% on port %port% for VLAN %vlan%

Message Parameters

| Name | Type |
|--------|-----------------|
| vlan | VLAN |
| port | ingressSlotPort |
| giaddr | IP |

BOOTP.Server.IPAddrNotAvail

Description

There are no free IP addresses in the address pool for this VLAN. The DHCP server will ignore the DHCP DISCOVER message.

Remedy

Check the IP address pool usage, and if needed increase the pool's address range.

Severity

Info

Message Text

There are no free IP addresses in the DHCP address pool for VLAN %vlan%

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Server.CfgAddrRangeInv

Description

The DHCP address range configured for the mentioned VLAN does not match the configured subnet.

Remedy

Make sure the the range configured is on the same network as the VLAN's primary IP address. You can do this with the configure VLAN dhcp-address-range command.

Severity

Error

Message Text

Configured DHCP address range for VLAN %vlan% does not belong to it's subnet

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Server.VLANIPNotCfg

Description

There is no primary IP address configured on the DHCP Server enabled VLAN.

Remedy

The DHCP server functionality requeres that a primary IP address is assigned to the VLAN it's configured for. To do this use the configure VLAN ipaddress x.x.x.x/x command.

Severity

Error

Message Text

VLAN %vlan% does not have a primary IP address configured

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |

BOOTP.Server.TxDHCPPkt

Description

This message gets logged for every message the DHCP server sends out (when enabled).

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Transmitted a %bytes% bytes DHCP message(%msg%) to %dip% on VLAN %vlan%, error code %error%

Message Parameters

| Name | Type |
|-------|------|
| bytes | ulnt |
| vlan | VLAN |
| dip | IP |
| error | sInt |
| msg | ulnt |

BOOTP.Server.TxDHCPPktDump

Description

This message gets logged for every message the DHCP server sends out (when enabled).

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Transmitted a %bytes% bytes DHCP message(%msg%) to %dip% on VLAN %vlan%, error code %error%

Message Parameters

| Name | Type |
|--------|---------|
| bytes | ulnt |
| vlan | VLAN |
| dip | IP |
| error | slnt |
| msg | ulnt |
| buffer | Buf-ptr |
| bufLen | Buf-len |

BOOTP.Server.RxPktMsgTypeDscvr

Description

When enabled this message will be logged for every DHCP packet of message type DISCOVER.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Rx DISCOVER[%vlan%], clid=%clid% [LEN=%clidLen%], reqIP=%reqIP%, offeredIP=%offeredIP%

Message Parameters

| vlan | VLAN |
| clid | MAC |
| clidLen | uInt16 |
| offeredIP | IP |
| serverIP | IP |
| ciaddr | IP |

BOOTP.Server.RxPktMsgTypeInfm

Description

When enabled this message will be logged for every DHCP packet of message type INFORM.

Remedy

This message exists for DHCP Server debug operations. Only enable this message on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Rx INFORM[%vlan%], clid=%clid% [LEN=%clidLen%], ciaddr=%ciaddr%

Message Parameters

| Name | Type |
|---------|--------|
| vlan | VLAN |
| clid | MAC |
| clidLen | uInt16 |
| ciaddr | IP |

BOOTP.Server.IPAddrInUse

Description

This message gets logged when a client detects that the IP address assigned by the DHCP server is already in use.

Remedy

This could happen when the DHCP server is restarted and has no state information about the previous assigned IP addresses or when other devices on the network are using the same IP address, for example when they are configured manually.

Severity

Warning

Message Text

DHCP Client with chaddr %mac% on VLAN %vlan% declined IP address %IP%

Message Parameters

Card.Ipv4Adj.DelAdjLPMAgeFail

Description

An accompanying log message provides further details. An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependent on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

Severity

Warning

Message Text

vrlId %vrId% adj %ipAddr%: Error deleting adjacency. Can't age LPM entry

Message Parameters

| Name | Type |
|--------|------|
| vrlId | VRID |
| ipAddr | IP |

Card.IPV4Adj.DelAdjNHFull

Description

Next Hop table remains full after deleting the specified adjacency. An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependent on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

Severity

Warning

Message Text

vrlId %vrlId% adj %ipAddr%: After deleting adjacency for NH replacement, NH count still %count%.

Message Parameters

Card.IPv4Adj.DelAdjNHRepIFail

Description

An accompanying log message provides further details. An abnormal condition has been detected deleting the specified adjacency when trying to delete an existing adjacency to make room in the Next Hop table. Although this is not interfering with the normal operation of the system, this may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependent on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

Severity

Warning

Message Text

vrlId %vrlId% adj %ipAddr%: Error deleting adjacency for NH replacement. Can't delete from %table% table

Message Parameters

| Name | Type |
|--------|--------|
| vrlId | VRID |
| ipAddr | IP |
| table | String |

Card.Ipv4Adj.NHTbIFull

Description

The hardware Next Hop Table full, and an IPv4 unicast entry could not be added. The Next Hop table is shared by IPv4 and IPv6 unicast host entries. Any IPv4 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast host forwarding entries trigger this condition.

Remedy

The command "show iproute reserved-entries statistics" shows hardware table utilization, including counts of IPv4 and IPv6 unicast hosts. An associated debug-summary severity message "HAL.Ipv4Adj.NHTbIFullEnt" can be enabled to view per-occurrence details including the IP address. In addition, "debug hal show ipv4adj" can be used to determine which IP unicast forwarding entries were not added to hardware. Any entry in this display without the "S" Setup flag is not currently programmed in hardware. Even an entry in this display with the "S" Setup flag may not be currently programmed in hardware on any slots. Use "debug hal show ipv4adj slot N", and again look for the "S" Setup flag.

Severity

Warning

Message Text

IPv4 unicast entry not added. Hardware Next Hop Table full.

Card.Ipv4Adj.L3TbIFull

Description

The attempt to add a local IPv4 unicast host to hardware only fails if the number of existing hosts exceeds the hardware capacity times two. Note that any IPv4 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast local host forwarding entries trigger this condition.

Remedy

The CLI command "show iproute reserved-entries statistics" can be used to display the various IP resources currently in hardware, and the theoretical maximum for each hardware product type. Since the capacity has been exceeded, consider altering the network design, or using a different product type with higher capacity. An associated debug-summary severity message "Card.Ipv4Adj.L3TbIFullEnt" can be enabled to view

per-occurrence details including the IP address. In addition, "debug hal show ipv4adj" and "debug hal show ipv4adj slot N" can be used to determine which IP unicast forwarding entries were not added to hardware. Any entry in this display without the "S" Setup flag is not currently programmed in hardware.

Severity

Warning

Message Text

IPv4 unicast entry not added. Hardware L3 Table full.

Card.Ipv4Adj.L3TblFullEnt

Description

A hash bucket in the L3 table has been exceeded and the specified IPv4 unicast address could not be added to the hardware. The L3 table is shared by IPv4 multicast and IPv4 and IPv6 unicast host entries. IPv4 unicast packets to the specified address will be slowpath forwarded.

Remedy

"debug hal show forwarding distributions" can be used to view hash bucket distributions for the available hashing algorithms. "show forwarding configuration" will display the configured and currently running hash algorithm. In order to change the algorithm, use "configure forwarding hash-algorithm [crc16 | crc32]". A system reboot is required for this command to take effect.

Severity

Debug-Summary

Message Text

vrlId %vrlId% IPv4 unicast entry %ipAddr% not added. Hardware L3 Table full. %msg%

Message Parameters

| Name | Type |
|--------|--------|
| vrlId | VRID |
| ipAddr | IP |
| msg | Printf |

Card.IPv4Adj.RmtHostL3TblFull

Description

The number of IPv4 routes has exceeded the number of routes reserved in "configure iproute reserved-entries <num_routes_needed>", and there is unicast traffic to a remote host whose LPM route is not among the number reserved in hardware. Since this LPM route is not present in hardware, an attempt is made to add the individual remote host to hardware, and the attempt failed. This attempt on the remote host only fails if the number of IPv4 unicast local hosts exceeds the hardware capacity times two. Note that any IPv4 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast remote host forwarding entries trigger this condition.

Remedy

It is possible this condition occurred because too low a value was specified in "configure iproute reserved-entries <num_routes_needed>". The CLI command "show iproute reserved-entries statistics" can be used to display the various IP resources currently in hardware, and the theoretical maximum for each hardware product type. "show iproute summary" can be used to display the routes present in software.

Severity

Warning

Message Text

IPv4 unicast remote host entry not added. Hardware L3 Table full.

Card.IPv4Adj.RmtHostL3TblFullEnt

Description

A hash bucket in the L3 table has been exceeded and the specified IPv4 unicast remote host address could not be added to the hardware. The L3 table is shared by IPv4 multicast and IPv4 and IPv6 unicast host entries. IPv4 unicast packets to the specified address will be slowpath forwarded.

Remedy

"debug hal show forwarding distributions" can be used to view hash bucket distributions for the available hashing algorithms. "show forwarding configuration" will display the configured and currently running hash algorithm. In order to change the algorithm, use "configure forwarding hash-algorithm [crc16 | crc32]". A system reboot is required for this command to take effect.

Card.IPV4FIB.LPMTbIFull

Description

The hardware Longest Prefix Match table has been exceeded and at least one IPv4 unicast route entry could not be added to the hardware. The LPM table is shared by IPv4 and IPv6 route entries. The routes with the longest subnet mask lengths are maintained in the LPM table. Any IPv4 unicast packet to a destination not present in either the L3 host forwarding table or the LPM routing table will be slowpath

forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "Card.IPv4FIB.LPMTblFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv4fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all nodes. Use the "debug hal show ipv4fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag.

Severity

Notice

Message Text

IPv4 route not added to hardware. Hardware LPM Table full.

Card.IPv4FIB.ECMPTblFull

Description

The hardware Equal-Cost Multi-Path table has been exceeded and at least one set of IPv4 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route will remain in the LPM table in hardware. This message will be logged at most 1 time per hour when new sets of IPv4 unicast ECMP routes trigger this condition.

Remedy

An associated debug-summary severity message "Card.IPv4FIB.ECMPTblFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv4fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all nodes. Use the "debug hal show ipv4fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

Severity

Notice

Message Text

IPv4 route can not use sharing on all its gateways. Hardware ECMP Table full. Packets are HW forwarded across a subset of gateways. (Logged at most once per hour.)

Card.IPv4FIB.LPMTblFullEnt

Description

The hardware Longest Prefix Match table has been exceeded and the specified IPv4 unicast route entry could not be added to the hardware. The LPM table is shared by IPv4 and IPv6 route entries. The routes with the longest subnet mask lengths are maintained in the LPM table. Any IPv4 unicast packet to a destination not present in either the L3 host forwarding table or the LPM routing table will be slowpath forwarded.

Card.IPv4FIB.LPMRsvdUsed

Description

The configured # of reserved-entries for the hardware Longest Prefix Match table has been exceeded and at least one IPv4 unicast route entry was not added to the hardware. The LPM table is shared by IPv4 and IPv6 route entries. The routes with the longest subnet mask lengths are maintained in the LPM table. Any IPv4 unicast packet to a destination not present in either the L3 host forwarding table or the LPM routing table will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "Card.IPv4FIB.LPMTblFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv4fib" can be used to determine which IP unicast

route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all nodes. Use the "debug hal show ipv4fib slot N" on a node, and look for the "S" (Setup in hardware) flag.

Severity

Notice

Message Text

IPv4 route not added to hardware. Reached configured # of IP Route reserved-entries. (Logged at most once per hour.)

Card.IPv6Adj.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource on the card.

Remedy

The exact remedy is dependent on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

adj %ip6Addr%: %msg%

Message Parameters

Card.IPv6Adj.NHTblFull

Description

The hardware Next Hop Table full, and an IPv6 unicast entry could not be added. The Next Hop table is shared by IPv4 and IPv6 unicast host entries. Any IPv6 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv6 unicast host forwarding entries trigger this condition.

Remedy

The command "show iproute reserved-entries statistics" shows hardware table utilization, including counts of IPv4 and IPv6 unicast hosts. An associated debug-summary severity message "HAL.IPv6Adj.NHTblFullEnt" can be enabled to view per-occurrence details including the IP address. In addition, "debug hal show ipv6adj" can be used to determine which IP unicast forwarding entries were not added to hardware. Any entry in this display without the "S" Setup flag is not currently programmed in hardware. Even an entry in this display with the "S" Setup flag may not be currently programmed in hardware on any slots. Use "debug hal show ipv6adj slot N", and again look for the "S" Setup flag.

Card.IPv6FIB.LongMskTbIFull

Description

The hardware table used to store IPv6 routes with a mask > 64 bits has been exceeded and at least one IPv6 unicast route entry could not be added to the hardware. Any IPv6 unicast packet to a destination not present in the HW table used for routes with > 64 bit masks may be incorrectly forwarded. This message will be logged at most 1 time per hour when new IPv6 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.LongMskTbIFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag. If IPv6 route compression is not enabled, enabling it will reduce the number of entries in the HW tables for routes with masks > 64 bits.

Severity

Warning

Message Text

IPv6 route with mask > 64 bits not added. Long Mask Hardware Table full. (Logged at most once per hour.)

Card.IPv6FIB.LongMskTbIFullEnt

Description

The hardware table used to store IPv6 routes with > 64 bit masks has been exceeded and the specified IPv6 unicast route entry could not be added to the hardware. The routes with the longest subnet mask lengths are maintained in the HW table. Any IPv6 unicast packet to a destination not present in the HW routing table may be incorrectly forwarded.

Remedy

"debug hal show ipv6fib" can be used to determine which IP unicast route entries with masks > 64 bits were not added to hardware. Any entry in this display without the

"F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag. If IPv6 route compression is not enabled, enabling it will reduce the number of entries in the tables for routes with > 64 bit masks.

Severity

Debug-Summary

Message Text

IPv6 route vrlId %vrlId% destAddr%/%maskLen% nexthop %nexthop% not added. Long Mask Hardware Table full.

Message Parameters

| Name | Type |
|----------|-----------|
| vrlId | uInt32 |
| destAddr | dstIPv6 |
| maskLen | IPmasklen |
| nexthop | IPv6 |

Card.IPv6FIB.LongMskTblNotAvail

Description

The hardware table used to store IPv6 routes with a mask > 64 bits has no available entries. Any IPv6 unicast packet to a destination that would have matched the route that is not present in the HW table may be incorrectly forwarded. This message will be logged at most 1 time per hour when new IPv6 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.LongMskTblFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. The solution to this issue is to reduce the number of customer installed ACLs until there are HW entries available for the IPv6 routes with masks > 64 bits. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently

programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag.

Severity

Warning

Message Text

IPv6 route with > 64 bit mask not added. Hardware Table not available for IPv6 routes with Long Masks.

Card.IPv6FIB.ECMPTbIFull

Description

The hardware Equal-Cost Multi-Path table has been exceeded and at least one set of IPv6 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route will remain in the LPM table in hardware. This message will be logged at most 1 time per hour when new sets of IPv6 unicast ECMP routes trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.ECMPTbIFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

Severity

Notice

Message Text

IPv6 route can not use sharing on all its gateways. Hardware ECMP Table full. Packets are HW forwarded across a subset of gateways. (Logged at most once per hour.)

Card.IPv6FIB.ECMPTbIFullEnt

Description

The hardware Equal-Cost Multi-Path table has been exceeded and the specified route in the set of IPv6 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route in the set will remain in the LPM table in hardware.

Remedy

"debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "S" Setup flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

Age out neighbor %slotPortString% %devId%

Message Parameters

| Name | Type |
|----------------|----------|
| slotPortString | SlotPort |
| devId | String |

CDP.Trace

Description

Using this condition to trace CDP's code. Used for debugging purposes.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%logMsg%

Message Parameters

| Name | Type |
|--------|--------|
| logMsg | Printf |

CDP.DeINbrOK

Description

The neighbor database entry for the cdp node with the specified deviceID has been removed from the CDP database.

Remedy

No action required - Information message only.

Severity

Info

Message Text

Neighbor %devId% removed from port %slotPortString%

Message Parameters

| Name | Type |
|----------------|----------|
| slotPortString | SlotPort |
| devId | String |

CDP.RemMgmtAddrVLANNotExist

Description

The VLAN configured in CDP management-address configuration got deleted. So removing CDP management-address configuration.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Unconfigured Management Address because the VLAN was Deleted

CDP.RemMgmtAddrPrimNotExist

Description

No primary IP addresses exists on the configured VLAN of CDP management-address configuration. So removing CDP management-address configuration.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Unconfigured Management Address because the Primary IP was Removed

CDP.RemMgmtAddrSecNotExist

Description

The configured secondary IP address does not exists on the configured VLAN of CDP management-address configuration. So removing CDP management-address configuration.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Unconfigured Management Address because the Secondary IP was Removed

CFM.InitDone

Description

This message gets logged when the dot1ag module is ready for operations. It will also show the mode is started in. Which is either "Slow Path" mode, where all dot1ag packets are processed slow path, or "HW Support" where ACLs are used to forward certain dot1ag packets.

Remedy

This is an informational message and requires no action.

Severity

Info

Message Text

IEEE 802.1ag module has initialized, and running in %mode% mode.

Message Parameters

| Name | Type |
|------|--------|
| mode | String |

CFM.RxPkt

Description

This message is logged every time a dot1ag packet is received on a port.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Received a %size% bytes cfm packet on port %port%, vlan-tag %tag%.

Message Parameters

| Name | Type |
|------|-----------------|
| port | ingressSlotPort |
| tag | VLAN-tag |
| size | uInt32 |

CFM.RxPktDump

Description

This message is logged every time a dot1ag packet is received on a port. This specific message will also dump the content of the packet.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Received a %size% bytes cfm packet on port %port%, vlan-tag %tag%.

Message Parameters

| Name | Type |
|--------|-----------------|
| port | ingressSlotPort |
| tag | VLAN-tag |
| buffer | Buf-ptr |
| size | Buf-len |

CFM.AllocSockFail

Description

The IEEE 802.1ag application failed to open a communication channel with the system to communicate with the outside world.

Remedy

When this happens not packets can be send out, or received from the network. See if restarting the process solves this problem. Under normal circumstances this should not happen, however if it does, please escalate to engineering.

Severity

Error

Message Text

Failed to allocate global dot1ag packet socket, error: %errormsg%.

Message Parameters

| Name | Type |
|----------|--------|
| errormsg | String |

CFM.RxPktFail

Description

This message will return the error message received by the recvExpkt() function.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support. The error message returned is the Linux socket error, and should clarify the error. If this is not the case, please contact engineering.

Severity

Debug-Summary

Message Text

The recvExpkt() function returned error; %error%

Message Parameters

| Name | Type |
|-------|--------|
| error | String |

CFM.AddIngrFilt

Description

This message gets logged every time an ACL filter is added to a vpiF.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Added Ingres filter type %newFilter%, on port %port%, vlan %vlan%, previous filter %oldFilter%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |
| vlan | VLAN |

| Name | Type |
|-----------|------|
| oldFilter | sInt |
| newFilter | sInt |

CFM.DelIngrFilt

Description

This message gets logged every time an ACL filter gets deleted from a vpiF.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Delete Ingres filter type %filter%, from port %port%, vlan %vlan%

Message Parameters

| Name | Type |
|--------|----------|
| port | SlotPort |
| vlan | VLAN |
| filter | sInt |

CFM.BndIngrFilt

Description

This message gets logged every time an ACL filter needs to be bound to a vpiF.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Bind Ingres filter on port %port%, vlan %vlan%, agVpif %agvpif%, vlanMPCount
%vlanMPCount%

Message Parameters

| Name | Type |
|-------------|----------|
| port | SlotPort |
| vlan | VLAN |
| agvpif | Ptr |
| vlanMPCount | uInt |

CFM.RecvACLClbk

Description

This message logs all call backs received from the ACL Manager.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

aclMsgCallback() returned \"%rcString%\" [%rc%] for command %cmd%

Message Parameters

| Name | Type |
|----------|--------|
| cmd | xInt |
| rc | sInt |
| rcString | String |

CFM.RxPktInv

Description

When a CFM PDU is received but does not pass the validation test this event gets logged.

Remedy

Determine which device is generating this CFM PDU, and investigate why it's sending out a malformed CFM PDU.

Severity

Notice

Message Text

Received invalid cfm on port %port%, VLAN \"%vlan%\"; %error%

Message Parameters

| Name | Type |
|-------|-----------------|
| port | ingressSlotPort |
| vlan | VLAN |
| error | String |

CFM.RxPktCflct

Description

This event gets logged when a CFM PDU gets processed by the CPU, but not active configuration is present.

Remedy

This is not a faulty condition, but it indicates that no valid configuration is present, and a CFM PDU for the specific vpiF has come to the CPU. This can happen for example with broadcast/multicast packets as a copy will be send to the CPU. Unicast CFM PDUs (not send to the switch MAC address) should not end up at the CPU, if this happens an ACL might not be programmed correctly. This is not true in a i386 environment, as all packets end up at the CPU.

Severity

Debug-Verbose

Message Text

Received cfm packet on port %port%, VLAN \"%vlan%\", which conflicts with user configuration

Message Parameters

| Name | Type |
|------|-----------------|
| port | ingressSlotPort |
| vlan | VLAN |

CFM.TxPkt

Description

This message is logged every time a dot1ag packet is transmitted on a set of ports. Note that mgmt is displayed if the port entry is not valid, this happens when the number of outgoing ports is less than 7

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

Transmitted %size% bytes cfm packet on vlan \"%vlan%\", and %ports% ports; %p1%, %p2%, %p3%, %p4%, %p5%, %p6%, %p7%

Message Parameters

| Name | Type |
|-------|----------------|
| vlan | VLAN |
| size | uInt32 |
| ports | uInt |
| p1 | egressSlotPort |

| Name | Type |
|------|----------------|
| p2 | egressSlotPort |
| p3 | egressSlotPort |
| p4 | egressSlotPort |
| p5 | egressSlotPort |
| p6 | egressSlotPort |
| p7 | egressSlotPort |

CFM.TxPktDump

Description

This message is logged every time a dot1ag packet is transmitted on a set of ports.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Data

Message Text

Transmitted %size% bytes cfm packet on vlan \"%vlan%\", and %ports% ports

Message Parameters

| Name | Type |
|--------|---------|
| vlan | VLAN |
| ports | ulnt |
| buffer | Buf-ptr |
| size | Buf-len |

CFM.TxPktFail

Description

This message is logged every time a dot1ag packet could not be transmitted. The error code returned is the standard Linux errno value. Note that mgmt is displayed if the port entry is not valid, this happens when the number of outgoing ports is less than 6

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Summary

Message Text

Transmitted %size% bytes cfm packet failed on vlan \"%vlan%\", and %ports% ports; %p1%, %p2%, %p3%, %p4%, %p5%, %p6%, error %error%

Message Parameters

| Name | Type |
|-------|----------------|
| vlan | VLAN |
| size | ulnt |
| ports | ulnt |
| p1 | egressSlotPort |
| p2 | egressSlotPort |
| p3 | egressSlotPort |
| p4 | egressSlotPort |
| p5 | egressSlotPort |
| p6 | egressSlotPort |
| error | slnt |

CFM.TxPktOvrfl

Description

This message is logged every time a dot1ag packet could not be transmitted due to a buffer overflow.

Remedy

When packets with a unicast destination need to be send they are tempereraly stored while waiting for a FDB lookup. The numbers of packets being buffered is limited, to not allow huge memory consumption. If this message gets logged often the network layout needs to be analyzed. This so the hard coded buffer limit can be adjusted.

Severity

Debug-Summary

Message Text

Cfm packet Tx failed for %mac% on vlan \"%vlan%\" due to buffer overflow.

Message Parameters

| Name | Type |
|------|------|
| vlan | VLAN |
| mac | MAC |

CFM.CCIEventOcc

Description

This message is logs all event related to the CCI state machine for debugging purposes.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

[%port%/vlan%/type%/level%]CCI event \"%event%\", state \"%state%\",
CCMenable=%enable%, CCIwhile=%cciwhile%

Message Parameters

| Name | Type |
|----------|--------|
| port | xInt32 |
| vlan | uInt32 |
| event | String |
| state | String |
| enable | String |
| cciwhile | uInt32 |

| Name | Type |
|-------|--------|
| type | uInt32 |
| level | uInt32 |

CFM.rMEPEventOcc

Description

This message is logs all event related to the rMEP state machine for debugging purposes.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

```
[%port%/%vlan%/%type%/%level%/%mepid%/%mac%]rMEP event \"%event%\", state \"%state%\", nCCMRx=%ccmrecv%, rmMepwhile=%rmepwhile%
```

Message Parameters

| Name | Type |
|-----------|--------|
| port | xInt32 |
| vlan | uInt32 |
| type | uInt32 |
| level | uInt32 |
| mepid | uInt16 |
| mac | MAC |
| event | String |
| state | String |
| ccmrecv | String |
| rmepwhile | uInt32 |

CFM.MEPIDMACChg

Description

This message gets logged when the MAC address associated with a remote MEP changes.

Remedy

This could happen if more than one MEP is configured with the same MEPID (duplicate MEPID in a single domain), or when a switch is replaced.

Severity

Notice

Message Text

MAC address for remote MEP changed from %old% to %new% on %type%, domain \"%domain%\", ma \"%ma%\", port %port%

Message Parameters

| Name | Type |
|--------|----------|
| old | MAC |
| new | MAC |
| type | String |
| domain | String |
| ma | String |
| port | SlotPort |

CFM.SameMEPIDRx

Description

This message gets logged when the MP's own MEP-ID was detected on an incoming CCM CFM.

Remedy

This can happen either due to a loop in the network, or when another MP in the same domain is using the same MEP-ID. Make sure the configured MEP-ID is unique inside the configured domain.

Severity

Notice

Message Text

Received CCM from %mac% with our MEP-ID on %type%, domain \"%domain%\", ma \"%ma%\", port %port%

Message Parameters

| Name | Type |
|--------|----------|
| mac | MAC |
| type | String |
| domain | String |
| ma | String |
| port | SlotPort |

CFM.rMEPExp

Description

When a learned End-Point expires this message is logged.

Remedy

This can either happen when the end-point is no longer present in the system, or when the path to this end-point is down.

Severity

Warning

Message Text

Remote End-Point %mepid%/mac% expired on %type%, domain \"%domain%\", ma \"%ma%\", port %port%

Message Parameters

| port | xInt32 |
| vlan | uInt32 |
| type | uInt32 |
| level | uInt32 |
| event | String |
| state | String |
| enable | String |
| ltiwhile | uInt32 |
| recvdLTR | String |

CFM.LBIEventOcc

Description

This message is logs all event related to the LBI state machine for debugging purposes.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

```
[%port%/%vlan%/%type%/%level%]LBI event \"%event%\", state \"%state%\",
LBIactive=%enable%, LBIwhile=%lbiwhile%, LBMsToSend=%lbms%
```

Message Parameters

| Name | Type |
|----------|--------|
| port | xInt32 |
| vlan | uInt32 |
| type | uInt32 |
| level | uInt32 |
| event | String |
| state | String |
| enable | String |
| lbiwhile | uInt32 |
| lbms | uInt32 |

CFM.RxPktUnk

Description

This event gets logged when a CFM PDU gets processed by the CPU, but should have been forwarded by hardware due to a higher MD Level than configured on the VLAN/Port combination.

Remedy

This should not happen, as hardware will forward CFM PDU with a multicast destination higher than the VLAN/Ports MD level in hardware. This could be a hardware problem, but it can also happen due to a CLI change in the configured MD level. If this is due to the MD Level change it should only happen during the time the Switch is processing the changes required for this MD Level change.

Severity

Notice

Message Text

Received cfm packet on port %port%, VLAN \"%vlan%\" for a MD Level higher than the configured one

Message Parameters

| Name | Type |
|------|-----------------|
| port | ingressSlotPort |
| vlan | VLAN |

CFM.rMEPErrEventOcc

Description

This message is logs all event related to the RMEP Error state machine for debugging purposes.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Technical Support.

Severity

Debug-Verbose

Message Text

```

CFM.HwOAM.RecvClrFault

Description

This event will occur when any of the faults like CCM_TIMEOUT or XCON or ERROR_CCM or REMOT_CCM are cleared. It indicates that CFM is back to normal operation when no other errors are present.

Remedy

No action required - Informational message only

Severity

Info

Message Text

Received \"%type%\" mepid %mepid% domain \"%domain%\" assoc \"%assoc%\" vlan \"%vlanName%\" port %port% fault \"%error%\" clear from HwaOAM

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| mepid | uInt16 |
| domain | String |

| Name | Type |
|----------|----------|
| assoc | String |
| vlanName | String |
| port | SlotPort |
| error | String |

CFM.HwOAM.FwdEventNtfn

Description

Dot1ag acts as a pass through client here and forwards events like RMEP expiry/detect, LMEP XCON error/clear, CCM_ERROR error/clear, REMOTE_CCM error/clear etc to the client whenever HwOAM notifies them.

Remedy

In all these cases, either the RMEP entry is removed if it is dynamically learnt or the Inactive flag is set in case of static RMEP which can be observed in "show cfm detail"

Severity

Notice

Message Text

Forwarding \"%type%\" mepId %mepid% domain \"%domain%\" assoc \"%assoc%\" vlan %vlanId% port %port% event %event% to the client

Message Parameters

|--------|----------|
| type | String |
| mepid | uInt16 |
| domain | String |
| assoc | String |
| vlanId | uInt16 |
| port | SlotPort |
| event | String |

CFM.HwOAM.SendLMEPReq

Description

Dot1ag sends an Local MEP create/update/delete request to HwOAM with the required parameters whenever user/client configures an Local MEP.

Remedy

No action required - Informational message only

Severity

Debug-Data

Message Text

Sending %reqType% request, maid \"%maid%\" level %level% mep %mepid% vlan %vlanId% port %port% CCMInterval %interval% mepFlags %flags% RMEPs %numRmeps% to HwOAM

Message Parameters

| Name | Type |
|----------|----------|
| reqType | String |
| maid | String |
| level | uInt8 |
| mepid | uInt16 |
| vlanId | uInt16 |
| port | SlotPort |
| interval | uInt16 |
| flags | uInt8 |
| numRmeps | uInt16 |

CFM.HwOAM.SendRMEPReq

Description

Dot1ag sends an Remote MEP create/update/delete request to HwOAM with the required parameters whenever user/client configures an Remote MEP

Remedy

No action required - Informational message only

Severity

Debug-Data

Message Text

Sending %reqType%, maid \"%maid%\" level %level% mep %mepid% vlan %vlanId%
CCMInterval %interval% ports %numPorts% to HwOAM

Message Parameters

|----------|--------|
| reqType | String |
| maid | String |
| level | uInt8 |
| mepid | uInt16 |
| vlanId | uInt16 |
| interval | uInt8 |
| numPorts | uInt16 |

CFM.HwOAM.RecvMEPFault

Description

Dot1ag receives this event, whenever a fault namely CCM_TIMEOUT or XCON or ERROR_CCM or REMOT_CCM occurs on a MEP of type "LMEP" or "RMEP".

Remedy

If the fault is for a Remote MEP, the Inactive flag is set which can be observed in "show cfm detail". If the fault is for a Local MEP, "show cfm" displays the respective error.

Severity

Notice

CFM.Server.RecvLMEPReq

Description

Clients like ERPS sends a Local MEP create/update/delete request to dot1ag with the required parameters.

Remedy

No action required - Informational message only

Severity

Debug-Data

Message Text

Received %reqType% request, domain \"%domain%\" assoc \"%assoc%\" level %level% \\
%mepType%\" MEP %mepid% port %port% CCMInterval %interval% from the client

Message Parameters

| Name | Type |
|----------|----------|
| reqType | String |
| domain | String |
| assoc | String |
| level | uInt8 |
| mepType | String |
| mepid | uInt16 |
| port | SlotPort |
| interval | uInt32 |

CFM.Server.RecvRMEPReq

Description

Clients like ERPS sends a Remote MEP create/update/delete request to dot1ag with the required parameters.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Received %reqType% request, domain \"%domain%\" assoc \"%assoc%\" level %level%
LMEPs %noLmeps% from the client

Message Parameters

| Name | Type |
|---------|--------|
| reqType | String |
| domain | String |
| assoc | String |
| level | uInt8 |
| mepid | uInt16 |
| noLmeps | uInt16 |

CFM.Server.SendMEPReply

Description

dotlag indicates to the client whether a Local/Remote MEP create/update/delete request is succeeded or failed.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Sending \"%reqType%\" reply for \"%mepType%\" MEP, with exit code %code%

Message Parameters

| Name | Type |
|---------|--------|
| reqType | String |
| mepType | String |
| code | sInt32 |

CFM.Server.SendEventNtfn

Description

This event will occur upon conditions like RMEP expiry/detect, LMEP XCON error/clear, CCM_ERROR error/clear, REMOTE_CCM error/clear etc and dotlag notifies them to the registered clients. In all these cases, either the RMEP entry is removed if it is dynamically learnt or the Inactive flag is set in case of static RMEP which can be observed in "show cfm detail".

Remedy

No action required - Informational message only. Dotlag registered clients actually respond to this event and take necessary action.

Severity

Notice

Message Text

```
dotlag Sending \"%mepType%\" Event, LMEP %lmepid% RMEP %rmepid% RMEPUp

| mepType | String |
| lmepid | uInt16 |
| rmepid | uInt16 |
| rmepUp | uInt8 |
| callback | uInt8 |

CFM.Server.NtfyGrpStatusDown

Description

Dotlag informs its clients when the CFM group goes down. "show cfm groups" displays the group status, "show cfm" displays the associated Local MEP Faulting State and respective error, "show cfm detail" displays associated RemoteMEP(s) state(s) Inactive.

Remedy

No action required - Informational message only. Clients take necessary action.

Severity

Notice

Message Text

```
Notifying the clients with Group \"%name%\", associated to Local MEP %mepid%, Status
Down
```

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| mepid | uInt16 |

CFM.Server.NtfyGrpStatusUp

Description

Dotlag informs its clients when the CFM group goes up. "show cfm groups" displays the group status, "show cfm" displays the associated Local MEP Faulting State set to 'No', "show cfm detail" displays associated RemoteMEP(s) state(s) Active

Remedy

No action required - Informational message only. Clients take necessary action.

Severity

Notice

Message Text

Notifying the clients with Group \"%name%\", associated to Local MEP %mepid%, Status Up

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| mepid | uInt16 |

CFM.Server.RecvRegGrpReq

Description

Dotlag received a Group registration Request from a client. Check if client is registered or not using "show cfm groups".

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

Received Group \"%name%\" registration request from client \"%client%\"

Message Parameters

cli.logLocalCmd

Description

User has issued the command locally (serial or internal clearflow execution).

Remedy

This log is informational and records the CLI commands the local user has been issuing. No remedy is required.

Severity

Info

Message Text

`%type% %user%:%command%`

Message Parameters

| Name | Type |
|---------|-------------|
| type | String |
| user | AccountName |
| command | String |

cli.logRemoteCmd

Description

User from the remote IP address has issued the logged CLI command.

Remedy

This log is informational and records the CLI commands the remote user has been issuing. No remedy is required.

Severity

Info

Message Text

%ipaddr% (%type%) %user%: %command%

Message Parameters

| Name | Type |
|---------|-------------|
| ipaddr | String |
| type | String |
| user | AccountName |
| command | String |

cli.clearflowExecError

Description

Clearflow CLI commands issued from _src_ are not executed successfully completely.

Remedy

Manually apply the specific clearflow CLI to the EXOS device. No remedy is required.

Severity

Error

Message Text

%src% CLI execution error: %error%.

Message Parameters

| Name | Type |
|-------|--------|
| src | String |
| error | String |

cli.cliOutError

Description

CLI.OUT reached its max size.

Remedy

Reset CLI.OUT to use again. No remedy is required.

Severity

Error

Message Text

%error%.

Message Parameters

| Name | Type |
|-------|--------|
| error | String |

cli.TermScriptTmout

Description

The script execution was aborted as it exceeded the timeout value. To see the output of default.xsf and autoexec.xsf, please use the CLI command "show script output [default | autoexec]". The line number where the script aborted is displayed on the session.

Remedy

If this is unexpected, either reduce the length of the script or increase the timeout value using the CLI command "configure script timeout <time>".

Severity

Warning

Message Text

Aborting the loading of %filename% as it exceeded %timeout% seconds.

Message Parameters

| Name | Type |
|----------|--------|
| filename | String |
| timeout | ulnt |

cli.OpenJournalFail

Description

The attempt to open a new journal file of the name filename indicated by failed due to the reason provided.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with "show tech" output.

Severity

Warning

Message Text

Failed to open the journal file, %filename% , %reason%

Message Parameters

| Name | Type |
|----------|--------|
| filename | String |
| reason | String |

cli.RenameJournalFail

Description

The attempt to rename the journal file from current name to the saved name failed.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with "show tech" output.

Severity

Warning

Message Text

Failed to rename journal file from %current% to %saved%

Message Parameters

| Name | Type |
|---------|--------|
| current | String |
| saved | String |

cli.CmdNotPmt

Description

User does not have permission to execute this command.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

User %user%: This user does not have permissions for this command: %command%

Message Parameters

| Name | Type |
|---------|-------------|
| user | AccountName |
| command | String |

| reason | String |
| data | String |

cm.syncErr

Description

Failed to synchronize configuration file.

Remedy

Configuration file (/config) synchronization is not successful. Perform a explicit "synchronize" command to synchronize the two MSM.

Severity

Error

Message Text

Failed to synchronize %fileName%: %reason%.

Message Parameters

| Name | Type |
|----------|--------|
| fileName | String |
| reason | String |

cm.chkpErr

Description

Configuration checkpoint operation failed because of the indicated reason.

Remedy

Configuration checkpoint operation failed, the backup MSM might not operate correctly. Restart the backup MSM.

Severity

Error

Message Text

Failed to checkpoint configuration: %reason%.

Message Parameters

| Name | Type |
|--------|--------|
| reason | String |

cm.loadErr

Description

Configuration load failed because of the indicated reason.

Remedy

Configuration load is not successful and the configuration might not be restored 100%. User could manually examine which configuration has failed to load and perform the corresponding CLI command to restore them.

Severity

Error

Message Text

Failed to load configuration: %reason%.

Message Parameters

| Name | Type |
|--------|--------|
| reason | String |

cm.configSyncErr

Description

Configuration file synchronization failed. The backup MSM might not have the complete configuration files on primary.

Remedy

Please synchronize the two MSMs using "synchronize" command.

Severity

Error

Message Text

Failed to synchronize configuration files, system may not operate correctly.

cm.configNotInSync

Description

Configuration files in the two nodes config partition (/config on Mariner) are different. System will perform auto configuration file synchronization and push the files on primary to backup node.

Remedy

No action needs to be taken. This is to inform the user that the two MSM has different configuration file contents under the config file partition. System will perform the auto config file synchronization when this message is logged.

Severity

Warning

Message Text

Backup node has different configuration files than primary node. Auto configuration file synchronization will be performed.

cm.extCFNoSpace

Description

There is no more space left in external memory card.

Remedy

Upgrade to a larger external memory card or delete some files from the external memory card. Use 'ls /mem' to see the list of files and 'rm /mem/<filename>' to delete a file from the external memory card).

Severity

Warning

Message Text

External memory card is full, please remove unused files to free up storage space immediately.\n

cm.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by by rejecting the request or performing some default action.

Severity

Warning

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.Notice

Description

A normal but significant condition has been detected, which signals that the system is functioning as expected. The condition is somewhat uncommon, but it is not necessarily unusual or unexpected.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Notice

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.UseCfg

Description

A previous-saved configuration is selected.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Configuration file %fileName% is selected.

Message Parameters

| Name | Type |
|----------|--------|
| fileName | String |

cm.CLILog

Description

Logging of CLI configuration commands to the Syslog server is enabled or disabled.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

CLI configuration logging is %enable%.

Message Parameters

| Name | Type |
|--------|--------|
| enable | String |

cm.Info

Description

A normal but potentially interesting condition has been detected, which signals that the system is functioning as expected and simply provides potentially detailed information or confirmation in that regard. The circumstance is common and not unusual or unexpected in any way.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.CmdCnclUser

Description

Command was cancelled as user replied 'No' to the prompt.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

The command \"%command%\" was cancelled by user \"%user%\".

Message Parameters

| Name | Type |
|---------|-------------|
| command | String |
| user | AccountName |

cm.CmdRejctSysRcvryStat

Description

The system enters recovery state when any process crashes and would not process any commands.

Remedy

Retry the command once EPM recovers and restarts the crashed process; process states can be observed with 'show process' command.

Severity

Error

Message Text

The command \"%command%\" was rejected because the system is in recovery state.

Message Parameters

| Name | Type |
|---------|--------|
| command | String |

cm.CmdRejctSysCkptCfg

Description

The system cannot process any commands during the configuration checkpoint procedure.

Remedy

Retry the command once the configuration checkpoint procedure is complete.

Severity

Error

Message Text

The command \"%command%\" was rejected because the system is checkpointing the configuration.

Message Parameters

| Name | Type |
|---------|--------|
| command | String |

cm.CmdRejctSysLoadCfg

Description

The system cannot process any commands during the configuration load as part of the boot-up process

Remedy

Retry the command once the configuration load procedure is complete. Clients' state can be verified using the command 'debug cfgmgr show clients'

Severity

Error

Message Text

The command \"%command%\" was rejected because the system is loading the configuration.

Message Parameters

| Name | Type |
|---------|--------|
| command | String |

cm.CmdRejctSysSaveCfg

Description

The system cannot process configuration modifying commands during the configuration save.

Remedy

Retry the command once the configuration save procedure is complete. If the issue persists, contact technical support and provide the outputs of 'show switch', 'show log'.

Severity

Error

Message Text

The command \"%command%\" was rejected because the system is saving the configuration.

Message Parameters

| Name | Type |
|---------|--------|
| command | String |

cm.CmdRejctNonPrim

Description

The command can be executed only on the primary node.

Remedy

telnet/ssh into the primary node to execute this command.

Severity

Error

Message Text

The command `\"%command%"` was rejected because it was entered on a non-primary node.

Message Parameters

| Name | Type |
|---------|--------|
| command | String |

cm.CmdRejctFileNameInv

Description

The user input - %name% doesn't meet the required format specifications.

Remedy

Retry the command with proper input format.

Severity

Error

Message Text

The command `\"%command%"` was rejected because the file name is invalid with error: %msg%.

Message Parameters

| Name | Type |
|---------|--------|
| command | String |
| msg | String |
| name | String |

cm.SaveCfgFailDirFull

Description

The configuration directory partition memory is full and does not have space for a new configuration file.

Remedy

Please delete old configuration, process crash core files and retry the command.

Severity

Error

Message Text

save configuration failed because the directory is full.

cm.SaveCfgRejctNoFileName

Description

Save configuration command with no file name specified was rejected.

Remedy

Please issue the command with a file name to which the configuration needs to be written.

Severity

Error

Message Text

The command 'save configuration' was rejected because no file name was specified.

cm.SaveCfgFailWaitSetCmplt

Description

Configuration save failed due to timeout while waiting for previous commands to complete. Backend modules could still be servicing previous requests.

Remedy

The system is overloaded with user command requests, retry the command after some time. If the issue persists, contact technical support and provide outputs of 'show switch', 'show log', 'debug cfgmgr show clients'.

Severity

Error

Message Text

Save configuration failed waiting for set operations to complete.

cm.SaveCfgFail

Description

Configuration save failed due to timeout while waiting for backend modules response. Backend modules could be still be servicing previous command requests.

Remedy

This is an internal condition related to software. Check abnormal processor utilization of any process using 'show process'. Retry the command after some time. If the issue persists, contact technical support and provide outputs of 'show switch', 'show log', 'debug cfgmgr show clients'.

Severity

Error

Message Text

Save configuration failed due to %n% unresponsive application(%apps%).

Message Parameters

| Name | Type |
|------|--------|
| n | ulnt |
| apps | String |

cm.SaveCfgWritFailErr

Description

Configuration file write error occurred.

Remedy

Failed to write configuration. The configuration directory(/usr/local/cfg) is most likely full, remove some configuration/policy files from the partition and re-save the configuration.

Severity

Error

Message Text

Save configuration failed to write to the file with an error (%errStr%).

Message Parameters

| Name | Type |
|--------|--------|
| errStr | String |

cm.SaveCfgDone

Description

Configuration save to file was successful.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Save configuration by \"%user%\" was successfully completed.

Message Parameters

| Name | Type |
|------|-------------|
| user | AccountName |

cm.SaveCfgCkptBkupFail

Description

Checkpointing of configuration to the backup system failed. Two probable causes:
 - Checkpoint stopped due to node failover - Time out due to non-responsive applications.

Remedy

- Check the status of the slots in the stack with 'show slots'. - 'show process' could identify any non-responsive applications. Try restarting the application. Use 'synchronize' command to synchronize the master and the backup node. If the problem persists, contact technical support with outputs of 'show tech-support' and 'debug cfgmgr show clients'.

Severity

Error

Message Text

%err%

Message Parameters

| Name | Type |
|------|--------|
| err | String |

cm.SaveCfgFailAsyncErr

Description

Configuration save failed as the command could not be added to asynchronous queue.

Remedy

Problem internal to the configuration manager and requires switch restart. If the issue persists, contact technical support with output of 'show tech-support'.

Severity

Error

Message Text

Save configuration failed due to an asynchronous queueing error.

cm.SaveCfgAuto

Description

Periodic save of configuration has been enabled or disabled

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Save configuration automatically has been %state% by user \"%user%\".

Message Parameters

| Name | Type |
|-------|-------------|
| state | String |
| user | AccountName |

cm.SaveCfgRejctArgInv

Description

Command to save configuration with invalid arguments was rejected.

Remedy

Re-issue the command with proper arguments.

Severity

Error

Message Text

Save configuration was rejected because the arguments were invalid.

cm.SaveCfgCkptStbyFail

Description

Error during checkpointing configuration files from master to standby nodes. Two probable timeout causes: - Master slot could not complete compressing configuration directory - Unresponsive standby slots

Remedy

Check for abnormal process utilization on slots using 'show process'. Check slot status using 'show slots' Use 'synchronize' to synchronize the slot with the master node.

Severity

Error

Message Text

%err%

Message Parameters

| Name | Type |
|------|--------|
| err | String |

cm.SaveCfgCkptStbyOK

Description

Copying of configuration files to standby during the configuration save was successful.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Configuration files checkpoint to standby was successful.

cm.SaveCfgCkptBkupOK

Description

Checkpointing configuration to backup during configuration save was successful

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Configuration checkpoint to backup was successful.

cm.SetGlobCfgDirtyFlag

Description

Global configuration cache held by Configuration Manager was marked dirty on request by the %client% client.

Remedy

A user issued 'save configuration' command or the periodic auto-save feature, if enabled, will reset the global configuration dirty flag.

Severity

Info

Message Text

Global configuration was marked dirty by %client% client.

Message Parameters

| Name | Type |
|--------|--------|
| client | String |

cm.ExtStorIns

Description

An additional external memory storage was inserted to the switch and will be used in case the other external memory storage is removed.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

External memory storage was inserted into the USB port of the switch

cm.ExtStorRem

Description

Additional external memory storage was removed from the switch.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

External memory storage was removed from the USB port of the switch

cm.ExtStorUnMntCoreDumpInv

Description

Any core dump generation will fail as the core dump target, external memory storage, was removed.

Remedy

Re-insert the external memory storage or configure the core dump to internal-memory.

Severity

Error

Message Text

External memory storage was removed with core dump destination configured to the it.

cm.AddLogFileDsptchFail

Description

This event will result in loss of logging some of the events.

Remedy

To ensure logging of all events, please reboot the switch.

Severity

Warning

Message Text

Adding log file \"%file%\" to dispatcher failed.

Message Parameters

| Name | Type |
|------|--------|
| file | String |

cm.ExtStorMnt

Description

External memory storage can now be accessed at /usr/local/ext.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

External memory storage was mounted on to the switch

cm.ExtStorUnMnt

Description

External memory storage was unmounted and will no longer be accessible.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

External memory storage was unmounted from the switch

cm.ExtStorMntFail

Description

External memory storage mounting failed and will not be accessible.

Remedy

Reinsert the memory card on switch.

Severity

Warning

Message Text

External memory storage mounting failed

cm.ExtStorUnMntFail

Description

Probable cause for failure of unmounting could be an active access of the external memory storage from another session.

Remedy

Retry the 'eject memorycard' command.

Severity

Warning

Message Text

External memory storage unmounting failed

cm.CreatLogFileFail

Description

This event could result in loss of logging some of the events.

Remedy

To ensure logging of all events, please reboot the switch.

Severity

Warning

Message Text

Failed to create log file \"`%name%`\": `%error%`

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| error | String |

cm.ExtStorPrimCoreDumplnv

Description

Any core dump generation will fail as the core dump target, external memory storage, does not exist.

Remedy

Insert an external memory storage or configure the core dump to internal-memory.

Severity

Error

Message Text

Non-existence of external memory storage on new master will result in core dump loss

cm.ExtStorUnmtTmpBusy

Description

External memory storage is briefly in use by EXOS and cannot be ejected at this moment.

Remedy

Repeat the eject attempt again in a few minutes.

Severity

Info

Message Text

External memory storage busy, try again later

cm.file Messages

- [cm.file.lineTooBig](#) on page 646
- [cm.file.readErr](#) on page 647
- [cm.file.writeErr](#) on page 647
- [cm.file.invalidFmt](#) on page 648
- [cm.file.openErr](#) on page 648
- [cm.file.platformErr](#) on page 649
- [cm.file.configCorrupt](#) on page 650
- [cm.file.fileNameErr](#) on page 650

cm.file.lineTooBig

Description

Cannot handle a single line of configuration that exceeds the specified bytes.

Remedy

Delete this configuration from the configuration file.

Severity

Error

Message Text

Configuration data is too big (exceeds %bytes% bytes)

Message Parameters

| Name | Type |
|-------|--------|
| bytes | uint32 |

cm.file.readErr

Description

File read error occurred.

Remedy

Configuration file is not read successfully (either corrupted or does not exist). Do a ls command and see whether it exists. If exist, then the file might be corrupted or not supported. The configuration is not restored and factory default configuration is used to boot the MSM. Save configuration to the given file again to make sure it can be loaded successfully next time.

Severity

Error

Message Text

Failed to read from \"%name%\" (error = %error%)

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| error | uint32 |

cm.file.writeErr

Description

File write error occurred.

Remedy

Failed to write configuration. The /config partition is most likely full, remove some configuration/policy files from the partition and re-save the configuration.

Severity

Error

Message Text

Failed to write to file \"`%name%`\": `%error%`

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| error | String |

cm.file.invalidFmt

Description

Invalid configuration file format detected in the specified configuration file.

Remedy

The configuration file is corrupted, re-save the configuration file.

Severity

Error

Message Text

Invalid configuration file \"`%name%`\" (`v%version%`) format detected at line `%line%`

Message Parameters

| Name | Type |
|---------|--------|
| name | String |
| version | uInt32 |
| line | uInt32 |

cm.file.openErr

Description

File open failed because of the specified reason.

Remedy

Make sure the file exists in /config (ls). If not, then fetch in the configuration file or save a configuration with the file name. The MSM will be booted with factory default configuration in this case.

Severity

Critical

Message Text

Failed to open file \"%name%\": %error%

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| error | String |

cm.file.platformErr

Description

The configuration file that's being loaded is not generated from the hardware platform.

Remedy

The configuration file used is generated from another platform. Would be safest to unconfigure switch all, remove the configuration file, and then either apply a different configuration file or just reboot the MSM with default configuration.

Severity

Warning

Message Text

Applying configuration file generated from \"%savedPlatform%\" on
\"%currentPlatform%\"

Message Parameters

| Name | Type |
|-----------------|--------|
| savedPlatform | String |
| currentPlatform | String |

cm.file.configCorrupt

Description

This event occurs if we detect a corrupt configuration delivered from the JFFS2 filesystem. This manifests as a block of 1024 bytes of 'zeros' at the beginning of the file resulting in no processing of the configuration (they system will come up with a default configuration)

Remedy

Bootrom recovery to completely repartition/reinstall the system or RMA.

Severity

Critical

Message Text

Failed to process configuration file \"%name%\" due to filesystem corruption

Message Parameters

| Name | Type |
|------|--------|
| name | String |

cm.file.fileNameErr

Description

This event occurs if we are unable to read the configuration file name.

Remedy

Configuration file is not read successfully (either corrupted or does not exist). Do a ls command and see whether it exists. If exist, then the file might be corrupted. The configuration is not restored and factory default configuration is used to boot the MSM.

Severity

Critical

Message Text

Failed to read configuration file name

cm.sys Messages

- [cm.sys.ApplCfgObjOptUnsuprt](#) on page 658

cm.sys.oom

Description

System is running out of memory.

Remedy

Shut down some applications that consume large amount of memory or reboot the MSM.

Severity

Critical

Message Text

Failed to allocate %bytes% bytes memory

Message Parameters

| Name | Type |
|-------|--------|
| bytes | uInt32 |

cm.sys.state

Description

CM state change, first is the MSM node state, then the internal CM state, last is the redundancy event input.

Remedy

Internal debug log, please ignore.

Severity

Debug-Summary

Message Text

CM State [%nodeState%] [%state%] [%event%]

Message Parameters

| Name | Type |
|-----------|--------|
| nodeState | String |
| state | String |
| event | String |

cm.sys.msgErr

Description

Error decoding/encoding/sending the specified message from/to the remote peer.

Remedy

Communication between application peer failed due to error when decoding/encoding/sending the message. If it persists, an application restart or switch reboot maybe required to correct the problem and contact technical support, providing outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Error %action% %msg%: Length %length% Peer %peer% (%name%)

Message Parameters

| Name | Type |
|--------|--------|
| action | String |
| msg | String |
| length | sInt32 |
| peer | uInt32 |
| name | String |

cm.sys.msgDrop

Description

Dropped an unknown or unexpected message.

Remedy

No action required - this is an information log message.

Severity

Info

Message Text

Dropped %msg%: Length %length% Peer %peer% (%name%)

Message Parameters

| Name | Type |
|--------|--------|
| msg | String |
| length | sInt32 |
| peer | uInt32 |
| name | String |

cm.sys.msgOkay

Description

Successfully sent/processed message to/from peer.

Remedy

Internal debug log, please ignore.

Severity

Debug-Data

Message Text

%action% %msg%: Length %length% Peer %peer% (%name%)

Message Parameters

| Name | Type |
|--------|--------|
| action | String |
| msg | String |
| length | uInt32 |
| peer | uInt32 |
| name | String |

cm.sys.asyncExec

Description

The object execution is asynchronous.

Remedy

This is debug log message, no remedy needs to be taken.

Severity

Debug-Data

Message Text

Asynchronous execution for object \"%object%\".

Message Parameters

| Name | Type |
|--------|--------|
| object | String |

cm.sys.LoadApplCfgObjFail

Description

Error while loading the application's configuration object.

Remedy

Manually issue the command to apply the configuration.

Severity

Error

Message Text

\ "%appl%" application failed to load \ "%obj%" configuration object: %msg%

Message Parameters

| Name | Type |
|------|--------|
| appl | String |
| obj | String |
| msg | String |

cm.sys.SaveApplCfgObjFail

Description

Error while saving the application's configuration object.

Remedy

The configuration is not saved completely. Please retry the configuration save with 'save configuration' command.

Severity

Error

Message Text

\"%appl%" application failed to save \"%obj%" configuration object: %msg%

Message Parameters

| Name | Type |
|------|--------|
| appl | String |
| obj | String |
| msg | String |

cm.sys.ApplCfgObjUnsuprt

Description

Applications will fail to load configuration objects of unsupported features when a configuration file generated with a different EXOS version is used to configure the switch. This may occur during an EXOS upgrade or downgrade. Saving configuration in the current version of EXOS will create a new configuration file without the configuration objects related to unsupported features. Please be sure to have a backup of the old configuration file to be able to revert to the previous version of EXOS, when required.

Remedy

Saving configuration with the 'save configuration' command and rebooting with the new configuration file as the selected configuration file will no longer result in this event.

Severity

Warning

Message Text

The \"%appl%" application \"%obj%" configuration object is not supported.

Message Parameters

| Name | Type |
|------|--------|
| appl | String |
| obj | String |

cm.sys.ApplCfgObjOptUnsuprt

Description

Applications will load configuration objects without the unsupported option when a configuration file generated with a different EXOS version is used to configure the switch. This may occur during an EXOS upgrade or downgrade. Saving configuration in the current version of EXOS will create a new configuration file without the unsupported options of the configuration objects. Please be sure to have a backup of the old configuration file to be able to revert to the previous version of EXOS, when required.

Remedy

Saving configuration with the 'save configuration' command and rebooting with the new configuration file as the selected configuration file will no longer result in this event.

Severity

Notice

Message Text

The \"%appl%\" application \"%obj%\" configuration object \"%member%\" option is not supported.

Message Parameters

| Name | Type |
|--------|--------|
| appl | String |
| obj | String |
| member | String |

cm.VSM.InitClntFail

Description

Initialization of CM with VSM module has failed. In such a case, CM's MLAG mode functionality will not function. ErrCode : Meaning 2 : Invalid invoke of function with an empty parameter 3 : Memory allocation failed 10 : IPML Initialization Error

Remedy

This is a rare condition which may be related to software. Check abnormal memory utilization of any process using 'show memory' and scale down configuration related to it. If it persists, a reboot may be required to correct the problem and contact technical support, providing outputs of 'show switch', 'show log', and 'debug ems show trace vsm ipml'.

Severity

Error

Message Text

Configuration manager initialization with VSM module failed, VSM returned value of %err%

Message Parameters

| Name | Type |
|------|------|
| err | sInt |

cm.VSM.CreatISC

Description

This is a debug message indicating that an ISC is being created.

Remedy

No action required -- Information message only.

Severity

Debug-Summary

Message Text

Create ISC for index %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.DelISC

Description

This is a debug message indicating that an ISC is being deleted.

Remedy

No action required -- Information message only.

Severity

Debug-Summary

Message Text

Deleting ISC for index %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.AllocBufFail

Description

Allocation of checkpoint buffer has failed. In such a case, CM's MLAG mode functionality will not function properly.

Remedy

This is an internal condition related to software. Check abnormal memory utilization of any process using 'show memory'. You may need to scale down the configuration related to it.

Severity

Error

Message Text

Unable to allocate IPML buffer used to checkpoint messages.

cm.VSM.AllocAppDataFail

Description

Allocation of application specific data buffer has failed for the specified ISC (Inter Switch Connection connecting to an MLAG peer). In such a case, CM's MLAG mode functionality will not function properly.

Remedy

This is an internal condition related to software. Check abnormal memory utilization of any process using 'show memory'. You may need to scale down the configuration related to it.

Severity

Error

Message Text

Unable to allocate ISC-specific global information for ISC %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.PktLenExcdMax

Description

Error processing the specified message from the remote peer as it exceeds the maximum allowed packet size. Message type: %msgType% Message length: %len% Message from peer ID: %peer%

Remedy

This is a rare condition which may be related to software, contact technical support and provide outputs of 'show switch', 'show log', and 'debug ems show trace vsm ipml'

Severity

Error

Message Text

Packet length exceeds maximum with length of %len%, received from peer(ID %peer%) with message type of %msgType%

Message Parameters

| Name | Type |
|---------|--------|
| msgType | String |
| len | sInt32 |
| peer | uInt16 |

cm.VSM.RegDropAllocFail

Description

Failed to forward the checkpoint request from peer due to memory allocation failure.

Remedy

This is an internal condition related to software. Check abnormal memory utilization of any process using 'show memory'. You may need to scale down the configuration related to it. If it persists, a reboot may be required to correct the problem and contact technical support, providing outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Request dropped due to memory allocation failure(Message Type: %msgType%)

Message Parameters

| Name | Type |
|---------|--------|
| msgType | String |

cm.VSM.NtfyMLAGStateChg

Description

This is a debug message indicating that parameters relating to an MLAG have changed.

Remedy

No action required -- Information message only.

Severity

Debug-Data

Message Text

MLAG state change notification for index %mlag%, ISC %isc%, remote port state %state%

Message Parameters

| Name | Type |
|-------|--------|
| mlag | uInt16 |
| isc | uInt16 |
| state | sInt |

cm.VSM.DropReplySeqNumMismatch

Description

Configuration reply to the application was dropped. Reason provided : Meaning "sequence number mismatch" : Local client is processing a request with different sequence number 1. If Current # > Received # sequence number, then probable cause would be connection issue. 2. If Received # > Current # sequence number, then internal condition related to software. "no outstanding request" : Local client does not have any request pending.

Remedy

This is a rare condition which may be related to software, and may require a reboot to correct the problem. If it persists, contact technical support and provide outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Dropped (%msgType%) reply to request number %seqNum% handled by client %client% due to %reason%.

Message Parameters

| Name | Type |
|---------|--------|
| seqNum | uint32 |
| client | String |
| reason | String |
| msgType | String |

cm.VSM.DebugVerbose

Description

A condition has been detected that may interest a developer analyzing some system behavior at a more verbose level than provided by the debug summary information.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.VSM.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.VSM.DebugData

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

cm.VSM.IgnCkptMsg

Description

This is a debug message which indicates that a checkpoint message of unknown type is not being processed.

Remedy

No action required -- Information message only.

Severity

Debug-Verbose

Message Text

Ignore Checkpoint msg, invalid type %type% on ISC %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |
| type | uInt16 |

cm.VSM.CkptMsgNull

Description

Checkpoint message could not be processed as the message pointer is null.

Remedy

This is a rare condition which may be related to software, and may require a reboot of the switch to correct the problem. If it persists, contact technical support and provide outputs of 'show switch', 'show log'.

Severity

Error

Message Text

The checkpoint message pointer is from ISC %isc%, and is NULL

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.AllocCkptMsgFail

Description

This message indicates that an attempt to allocate a buffer to hold the checkpoint message has failed.

Remedy

This is an internal condition related to software. Check abnormal memory utilization of any process using 'show memory'. You may need to scale down the configuration related to it.

Severity

Error

Message Text

Failed to allocate checkpoint message buffer for ISC %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.AppDataNotFnd

Description

This message indicates that the client ISC application has not been found. In such a case, CM's MLAG mode functionality will not function properly.

Remedy

This is a rare condition which may be related to software, and may require a reboot of the switch to correct the problem. If it persists, contact technical support and provide outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Client ISC application data not found %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.AppDataFnd

Description

A possible memory leak, as Client ISC application data found before initializing for ISC index %isc%

Remedy

No action required -- Information message only.

Severity

Debug-Data

Message Text

Client ISC application data present when initialtizing %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.TxChkptMsg

Description

This is a debug message which indicates a checkpoint message has been transmitted to an MLAG peer.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Tx checkpoint message %len% bytes on ISC %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |
| len | uInt16 |

cm.VSM.RxCkptMsg

Description

This is a debug message which indicates a checkpoint message has been received from an MLAG peer.

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

Rx checkpoint message %len% bytes on ISC %isc%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |
| len | uInt16 |

cm.VSM.SetAppDataFail

Description

Setting application-specific data for the ISC had failed. In such a case, CM's MLAG mode functionality will not function properly.

Remedy

This is a rare condition which may be related to software, and may require a reboot of the switch to correct the problem. If it persists, contact technical support and provide outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Unable to set application-specific data for ISC %isc%, Error = %err%

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |
| err | sInt |

cm.VSM.CkptSendFail

Description

Sending checkpoint messages to VSM clients has failed. In such a case, CM's MLAG mode functionality will not function properly.

Remedy

This is a rare condition which may be related to software, and may require a reboot of the switch to correct the problem. If it persists, contact technical support and provide outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Failed to send checkpoint messages to VSM clients. ISC ID map %peerIscIdxMap%,
Return Code = %rc%, Length = %len%

Message Parameters

| Name | Type |
|---------------|--------|
| peerIscIdxMap | uInt16 |
| rc | sInt32 |
| len | uInt32 |

cm.VSM.CkptMsgLenZero

Description

Checkpoint message could not be processed as message length is zero.

Remedy

This is a rare condition which may be related to software, and may require a reboot of the peer switch to correct the problem. If it persists, contact technical support and provide outputs of 'show switch', 'show log'.

Severity

Error

Message Text

Checkpoint message length from ISC peer ID %isc% is Zero.

Message Parameters

| Name | Type |
|------|--------|
| isc | uInt16 |

cm.VSM.NoPeerUp

Description

Sending checkpoint messages to VSM clients over ISC connections has failed as no VSM clients are active. In such a case, CM's MLAG mode functionality will not function properly.

Remedy

Check the state of ISC connections

Severity

Error

Message Text

Failed to send checkpoint message of %msgType% type with length %len% to VSM clients, as no client is active

Message Parameters

| Name | Type |
|---------|--------|
| msgType | String |
| len | sInt32 |

cm.VSM.ReplyDropCIntErr

Description

Configuration reply to the application was dropped, as %client% application is not running at the time. %seqNum% is a sequence number that is assigned to every request that the configuration manager receives. %msgType% is the message to the request with sequence number - %seqNum% that was associated with the %client% application.

Remedy

The application is most likely not running at the time (either crashed or not started). Either restart the application or reboot the switch.

Severity

Error

Message Text

Response(%msgType%) to request number(%seqNum%) handled by client (%client%) dropped, as %client% not running

Message Parameters

| Name | Type |
|---------|--------|
| seqNum | uint32 |
| client | String |
| msgType | String |

DHCPV6.Client.AllocMemFail

Description

This event occurs when memory allocation failure happens for DHCPv6 client.

Remedy

This is a rare internal condition needing technical assistance. Restart the DHCPv6 client process using the CLI command "restart process nettools". If the event still occurs, contact technical support after gathering relevant information using "show tech-support" CLI command and uploading the debug data out of the switch using "upload debug <ipaddress> vr vr-mgmt" CLI command.

Severity

Error

Message Text

Failed allocating memory for DHCPv6 Client.

DHCPV6.Client.DfltOptLkupFail

Description

This event occurs when the DHCPv6 client default option lookup is failed during default parameter request assembly.

Remedy

This is a rare internal condition needing technical assistance. Restart the DHCPv6 client process using the CLI command "restart process nettools". If the event still

occurs, contact technical support after gathering relevant information using "show tech-support" CLI command and uploading the debug data out of the switch using "upload debug <ipaddress> vr vr-mgmt" CLI command.

Severity

Error

Message Text

Default Option Lookup failed for option code %code% during default parameter request assembly for DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | ulnt |

DHCPV6.Client.CIntIdOptMiss

Description

This message will be logged when CLIENTID option lookup failed and the definition is missing.

Remedy

Make sure CLIENTID is configured correctly otherwise configure it using the CLI command "configure dhcp ipv6 client identifier-type [link-layer | link-layer-plus-time | vendor-specific]"

Severity

Warning

Message Text

Lookup for CLIENTID option with option code %code% failed and definition is missing for DHCPv6 client.

Message Parameters

| Name | Type |
|------|------|
| code | ulnt |

DHCPV6.Client.ElapsedTimeOptMiss

Description

This event occurs when Elapsed time option lookup is failed and the definition is missing.

Remedy

Make sure Elapsed time option is configured correctly at the server end.

Severity

Warning

Message Text

Lookup for Elapsed time option with option code %code% failed and definition is missing for DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | ulnt |

DHCPV6.Client.IdAssocNonTmpOptMiss

Description

This event occurs when Identity Association Non-temporary option is missing for DHCPv6 Client.

Remedy

Make sure Identity Association Non-temporary option is configured correctly at the server end.

Severity

Warning

Message Text

Identity Association Non-temporary option with option code %code% is missing for DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | ulnt |

DHCPV6.Client.IdAssocAddrOptMiss

Description

This event occurs when Identity Association Address option is missing for DHCPv6 Client.

Remedy

Make sure Identity Association Address option is configured correctly at the server end.

Severity

Warning

Message Text

Identity Association Address option with option code %code% is missing for DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | ulnt |

DHCPV6.Client.OptReqOptMiss

Description

This event occurs when Option Request Option is missing.

Remedy

Make sure Option Request Option is configured correctly at the server end.

Severity

Warning

Message Text

Option Request Option with option code %code% is missing for DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | uint |

DHCPV6.Client.InvSrvrId

Description

This event occurs when a DHCPv6 Response without a server identifier is received.

Remedy

Make sure SERVER Identifier is configured correctly at the server end.

Severity

Error

Message Text

DHCPv6 Response without a server identifier option code %code% is received by DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | uint |

DHCPV6.Client.InvClntId

Description

This event occurs when DHCPv6 response without a client identifier is received.

Remedy

Make sure CLIENT Identifier is configured correctly at the client end otherwise configure it using the CLI command "configure dhcp ipv6 client identifier-type [link-layer {plus-time} | vendor-specific]"

Severity

Error

Message Text

DHCPv6 Response without a client identifier option with option code %code% is received by DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | uint |

DHCPV6.Client.LocClntIdMiss

Description

This event occurs when Local Client Identifier is missing for DHCPv6 Client.

Remedy

Configure a valid Local Client Identifier for the DHCPv6 Client using the CLI command "configure dhcp ipv6 client identifier-type [link-layer | link-layer-plus-time | vendor-specific]"

Severity

Error

Message Text

Local Client Identifier option with option code %code% is missing for DHCPv6 Client.

Message Parameters

| Name | Type |
|------|------|
| code | uint |

DHCPV6.Client.CIntIdMismatch

Description

This event occurs when there is mismatch between Local Client Identifier and incoming DHCPv6 packet Client Identifier from server.

Remedy

Configure a valid Local Client Identifier for DHCPv6 Client that matches the incoming DHCPv6 packet client identifier using the CLI command "configure dhcp ipv6 client identifier-type [link-layer | link-layer-plus-time | vendor-specific]"

Severity

Error

Message Text

Mismatch between Local Client Identifier %clientId% and incoming DHCPv6 packet Client Identifier from Server %serverId%.

Message Parameters

| Name | Type |
|----------|--------|
| serverId | String |
| clientId | String |

DHCPV6.Client.RecvInvIPv6Addr

Description

This event occurs when the DHCPv6 client receives a invalid IPv6 address from DHCPv6 server.

Remedy

Check your DHCP server to make sure the IP address supplied is not used by any other network device. Check the switch's ARP table to find the current user of the IP address.

Severity

Error

Message Text

Received Invalid IPv6 Address %ipv6Address% of length %bytes% bytes from DHCPv6 server.

Message Parameters

| Name | Type |
|-------------|--------|
| ipv6Address | String |
| bytes | ulnt32 |

DHCPV6.Client.DHCPv6SndPktFail

Description

This event occurs when the DHCPv6 Client could not send DHCPv6 packets of correct size.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information : Check whether "show dhcp-client state ipv6" CLI output shows State field as "Stopped State". Also check "show vlan <vlanName>" CLI output to see whether link-local address of the vlan had been unconfigured.

Severity

Error

Message Text

DHCPv6 Client Failed to send DHCPv6 packets of size %size% bytes.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

DHCPV6.Client.RecvInvDHCPv6PfxOpt

Description

This event occurs when DHCPv6 Client receives an Invalid DHCPv6 preference option of length greater than 1 byte.

Remedy

Make sure DHCPv6 server sends a DHCPv6 packet with correct preference value option.

Severity

Error

Message Text

Invalid DHCPv6 preference option of length %bytes% bytes received by DHCPv6 Client.

Message Parameters

| Name | Type |
|-------|--------|
| bytes | uInt32 |

DHCPV6.Client.ActvLeaseNotExist

Description

This event occurs when a DHCPv6 Client is unable to enter Bound state as there is no existing Active Lease Period.

Remedy

When Active Lease expires , the Client should restart the DHCP process to obtain a new valid IP address.

Severity

Error

Message Text

DHCPv6 Client Unable to enter bound state as Active Lease doesn't exist.

DHCPV6.Relay.AddDlgtPfx

Description

This event occurs whenever DHCPv6 Relay module detects that a IPv6 Prefix is being delegated.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

IPv6 Prefix %prefix% is being delegated via vlan %vlanName% gateway %gateway% for %validTime% seconds.

Message Parameters

| Name | Type |
|---------|--------|
| prefix | String |
| gateway | IPv6 |

| Name | Type |
|-----------|--------|
| vlanName | String |
| validTime | uInt32 |

DHCPV6.Relay.RenewDlgtPfx

Description

This event occurs whenever DHCPv6 Relay module detects that a IPv6 Prefix is being renewed.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

IPv6 Prefix %prefix% is being renewed via vlan %vlanName% gateway %gateway% for %validTime% seconds.

Message Parameters

| Name | Type |
|-----------|--------|
| prefix | String |
| gateway | IPv6 |
| vlanName | String |
| validTime | uInt32 |

DHCPV6.Relay.DelDlgtPfx

Description

This event occurs whenever DHCPv6 Relay module deletes a snooped IPv6 Delegated Prefix.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Snooped IPv6 Prefix %prefix% is deleted on vlan %vlanName% gateway %gateway%.

Message Parameters

| Name | Type |
|----------|--------|
| prefix | String |
| gateway | IPv6 |
| vlanName | String |

DHCPV6.Relay.AddRtDlgtPfx

Description

This event occurs whenever DHCPv6 Relay module snoops an IPv6 Delegated Prefix and installs a route successfully to reach the IPv6 Prefix.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Route added successfully for IPv6 Prefix %prefix% with gateway %gateway% on vlan %vlanName%

Message Parameters

| Name | Type |
|----------|--------|
| prefix | String |
| gateway | IPv6 |
| vlanName | String |

DHCPV6.Relay.AddRtDlgtPfxFail

Description

This event occurs whenever DHCPv6 Relay module snoops an IPv6 Delegated Prefix but fails to install a route to reach the IPv6 Prefix.

Remedy

Check the VLAN's configuration.

Severity

Error

Message Text

Failed to add route for IPv6 Prefix %prefix% with gateway %gateway% on vlan %vlanName%

Message Parameters

| Name | Type |
|----------|--------|
| prefix | String |
| gateway | IPv6 |
| vlanName | String |

DHCPV6.Relay.DelRtDlgtPfx

Description

This event occurs whenever DHCPv6 Relay module deleted an IPv6 Delegated Prefix and also deletes the corresponding route for the IPv6 Prefix.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Route deleted for IPv6 Prefix %prefix% with gateway %gateway% on vlan %vlanName%

Message Parameters

| Name | Type |
|----------|--------|
| prefix | String |
| gateway | IPv6 |
| vlanName | String |

DHCPV6.Relay.RtLkupDlgtPfxGwFail

Description

This event occurs whenever DHCPV6 Relay module snoops an IPv6 Delegated Prefix but a route lookup for the gateway fails.

Remedy

Check the reachability and route configuration to reach the gateway.

Severity

Error

Message Text

Route lookup failed for gateway %gateway% for IPv6 Prefix %prefix% on vlan %vlanName%

Message Parameters

| Name | Type |
|----------|--------|
| prefix | String |
| gateway | IPv6 |
| vlanName | String |

DM.Critical

Description

A serious problem has been detected which is compromising the operation of the system. The system can not function as expected unless it is remedied. The problem may be related to hardware failure or software data corruption.

Remedy

The exact remedy is dependant on the particular situation; but the problem may not be resolved without intervention of some sort.

Severity

Critical

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

DM.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

DM.DsblSlotShutDown

Description

The system recovery mode for the slot is configured to shutdown and it has finished initializing after rebooting. It will be held in this state for trouble-shooting purposes until the system recovery level has been cleared.

Remedy

The system recovery level has been configured to shutdown this and possibly other slots when an error is detected or otherwise it or another card fails. Information regarding the failure triggering this situation should be collected from "show tech", "show log", "show slot detail", and other pertinent information displays. Once the appropriate information has been gathered, the slot(s) can be enabled to continue to operational state again by issuing the "clear sys-recovery-level" command.

Severity

Warning

Message Text

Disabling %SlotName% which is marked for shutdown. To re-enable it, use 'clear sys-recovery-level'.

Message Parameters

| Name | Type |
|----------|--------|
| SlotName | String |

DM.DtectRebootLoop

Description

Reboot loop protection has been enabled with the "debug devmgr configure reboot-loop-protection" command, and a reboot loop has been correspondingly detected and prevented. This feature can only be enabled by the specified command if debug-mode is enabled, and should only be enabled by technical support personnel for the sake of troubleshooting the problem causing the situation to occur.

Remedy

Because this event will only occur under the supervision of technical support personnel having enabled reboot loop protection, it is expected that appropriate information will be collected to determine why the slot might have entered a state of continuously rebooting.

Severity

Warning

Message Text

Preventing %SlotName% from continuously rebooting by the reboot loop protection feature.

Message Parameters

| Name | Type |
|----------|--------|
| SlotName | String |

DM.InitIPMLSrvrFail

Description

The IPML subsystem was unable to initialize the IPML TCP server connection for the specified service. This situation is most likely caused by a problem internal to either DM itself or the IPML library, and is unlikely to have been caused by the user. There may be a lack of IPML resources sufficient to set up the server connection, or DM may have passed corrupt information. Regardless of the cause, DM will not operate properly and will likely terminate itself; and because DM is integral to the operation of the system, it is likely that the system will automatically reboot itself.

Remedy

Note the information provided in the log message (i.e. callback address and TCP port number) as indications of the data supplied by DM to IPML. Because of the severity of this problem and the likelihood that much of the system may not be operational, capturing all messages appearing on the console is important in determining what has gone wrong. If it's possible to login then the information from "show tech" and "show memory" will be helpful.

Severity

Critical

Message Text

Initialization of the IPML TCP connection for the %service% service the on port %tcpport% failed.

Message Parameters

| Name | Type |
|---------|--------|
| service | String |
| tcpport | uInt16 |

DM.InitIPMLCIntFail

Description

The IPML subsystem was unable to initialize the IPML client connection for the specified service. This situation is most likely caused by a problem internal to either DM itself or the IPML library, and is unlikely to have been caused by the user. There may be a lack of IPML resources sufficient to set up the client connection, or DM may have passed corrupt information. Regardless of the cause, the application will not operate properly and will likely terminate itself; and depending on the integral nature of the application to the operation of the system, it is possible that the system will automatically reboot itself.

Remedy

Note the information provided in the log message (i.e. the name of the service). Depending on the application involved and the severity of this problem, it may be that some of the system may not be operational, so capturing all messages appearing on the console is important in determining what has gone wrong. The information from "show tech" and "show memory" will be helpful in determining why this failure has occurred.

Severity

Critical

Message Text

Initialization of the client IPML TCP connection for the %service% service failed.

Message Parameters

| Name | Type |
|---------|--------|
| service | String |

DM.AllocMemFail

Description

There was not sufficient memory available to allocate the object(s) specified. This situation is most likely caused by a problem internal to DM itself or the memory management subsystem, and is unlikely to have been caused by the user.

Remedy

Note the information provided in the log message (i.e. the name of the object being allocated). The information from "show tech" and "show memory" will be helpful in determining why this failure has occurred.

Severity

Critical

Message Text

Allocation of memory needed for the %object% failed.

Message Parameters

| Name | Type |
|--------|--------|
| object | String |

DM.InPwrUsageChg

Description

This event is controlled by the CLI command 'configure power monitor poll-interval <seconds> change-action ...!'. This event is logged only if change-action is explicitly configured to 'log' or 'log-and-trap'.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Input Power Usage %changed% from %lastInputPowerUsage%W to
%currentInputPowerUsage%W

Message Parameters

| Name | Type |
|------------------------|--------|
| changed | String |
| lastInputPowerUsage | uInt32 |
| currentInputPowerUsage | uInt32 |

DM.InPwrUsageStrt

Description

This event is controlled by the CLI command 'configure power monitor poll-interval [off | <seconds>] change-action ...!'. This event is logged only if poll-interval is explicitly configured in seconds.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Input Power Usage at start is %powerUsage%W

Message Parameters

| Name | Type |
|------------|--------|
| powerUsage | uInt32 |

DM.SensorAlarmDtect

Description

SENSOR State Alarm has been detected. port: List port number and slot if in stack.
 sensorName values: Temperature Sensor VCC Voltage Sensor TX Bias Current Sensor TX Power Sensor RX Power Sensor Unknown Sensor RX Power Channel 1 Sensor RX Power Channel 2 Sensor RX Power Channel 3 Sensor RX Power Channel 4 Sensor TX Bias Current Channel 1 Sensor TX Bias Current Channel 2 Sensor TX Bias Current Channel 3 Sensor TX Bias Current Channel 4 Sensor
 sensorState values: unkown low alarm low warning normal high warning high alarm
 sensorValue: Value of sensor.

Remedy

Check the port transceiver statistics. Monitor issue, until a Normal State Alarm log message is received. If a Normal State is not received check the cable or connection.

Severity

Notice

Message Text

DM.Card.Critical

Description

A serious problem has been detected which is compromising the operation of the system. The system can not function as expected unless it is remedied. The problem may be related to hardware failure or software data corruption.

Remedy

The exact remedy is dependant on the particular situation; but the problem may not be resolved without intervention of some sort.

Severity

Critical

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

DM.Card.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

%format%

Message Parameters

| Name | Type |

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ISC id %iscIdx% has been created.

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | ulnt16 |

DNSCache.Analytics.DelISC

Description

This event occurs when ISC Delete callback has been called.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ISC id %iscIdx% has been deleted.

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | uInt16 |

DNSSCache.Analytics.RecvISCLinkUp

Description

This event occurs when MLAG node received ISC link up message.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received link up message for ISC id %iscIdx%.

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | uInt16 |

DNSCache.Analytics.RecvISCLinkDown

Description

This event occurs when MLAG node received ISC link down message.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received link down message for ISC id %iscIdx%.

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | uInt16 |

DNSCache.Analytics.ISCNormTimeFctr

Description

This event occurs when MLAG node calculates normalization time factor based on timestamp received from peer node.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Normalization time factor of ISC id %iscIdx% is %factor%

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | uInt16 |
| factor | sInt64 |

DNSCache.Analytics.CkptReqISC

Description

This event occurs when MLAG node is requesting analytics statistics to other MLAG node.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Checkpoint request for DNS analytics statistics after timestamp %timeStamp% sent through ISC id %iscIdx%.

Message Parameters

| Name | Type |
|-----------|--------|
| iscIdx | uInt16 |
| timeStamp | uInt64 |

DNSCache.Analytics.RecvCkptReqISC

Description

This event occurs when MLAG node receives checkpoint request from peer.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received checkpoint request from ISC id %iscIdx% to share DNS analytics statistics after timestamp %timeStamp%

Message Parameters

| Name | Type |
|-----------|--------|
| iscIdx | uInt16 |
| timeStamp | uInt64 |

DNSCache.Analytics.IgnCkptMsgISCUnkOwner

Description

This message indicates that the received checkpoint message is being ignored since the owner field in the packet header is not valid.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Ignore checkpoint message from ISC id %iscIdx%, invalid owner role = %role%

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | uInt16 |
| role | uInt8 |

DNSCache.Analytics.IgnCkptMsgISCUnkVer

Description

This message indicates that the received checkpoint message is being ignored since the version is not compatible with the running version.

Remedy

Ensure the EXOS versions on the M-LAG peers are compatible. One of the M-LAG may require an upgrade to a more recent version of EXOS.

Severity

Debug-Summary

Message Text

Ignore checkpoint message from ISC id %iscIdx%, unknown version %rxVer%, supported version %ver%.

Message Parameters

| Name | Type |
|--------|--------|
| iscIdx | uInt16 |
| rxVer | uInt16 |
| ver | uInt16 |

DOSProt.DuplACLDtect

Description

This event is triggered when an required ACL is already present. If this occurs the remaining time for the existing ACL will reset to the configured value.

Remedy

This is an informational message and no action is required.

Severity

Info

Message Text

Duplicate ACL detected, extending time of ACL %ac1name%

Message Parameters

| Name | Type |
|---------|--------|
| aclname | String |

DOSProt.AddACLOK

Description

This event is triggered when a DOS Protect ACL needs to be added. It also reports the parameters used to create the ACL

Remedy

This is an informational message and no action is required.

Severity

Info

Message Text

Added an ACL to port %port%, srcIP %sip% to destIP %dip%, protocol %prot%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |
| sip | srcIP |
| dip | dstIP |
| prot | String |

DOSProt.DelACLOK

Description

This event is triggered when a DOS Protect ACL is deleted. It also reports the parameters of the deleted ACL

Remedy

This is an informational message and no action is required.

Severity

Info

Message Text

Removed ACL from port %port%, srcIP %sip% to destIP %dip%, protocol %prot%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |
| sip | srcIP |
| dip | dstIP |
| prot | String |

DOSProt.PtrnNotFnd

Description

This event is logged when no traffic pattern could be found. DOS Protect tries to match patterns based on the source and destination IP addresses.

Remedy

This is an informational message and no action is required.

Severity

Info

Message Text

No traffic pattern found

DOSProt.DebugSummary

Description

This is debug message used for product development only.

Remedy

This is debug message used for product development only, and should not appear in a customer environment, unless logging is setup incorrectly. On special request

from Extreme Networks Technical Support this message might be enabled gather advanced debug information. (Technical Support would only enable this on request from engineering, due to the lo level content).

DOSProt.InitIPMLFail

Description

The DOS Protection application could not open a communication instance used for communicating with the directory services.

Remedy

This problem will cause the DOS Protection application to fail at startup. If this happens again after a reboot, get in touch with Extreme Networks Technical Support (Who will need to get in touch with Engineering).

Severity

Error

Message Text

Could not create IPML client service for Directory Service

DOSProt.SetDOSDevFail

Description

The DOS Protection application could not setup the kernel DOS device driver correctly.

Remedy

This problem will cause the DOS Protection application to fail at startup. If this happens again after a reboot, get in touch with Extreme Networks Technical Support (Who will need to get in touch with Engineering).

Severity

Error

Message Text

Could not set dos device fd %dev% to O_NONBLOCK

Message Parameters

| Name | Type |
|------|------|
| dev | sInt |

DOSProt.StartLibFail

Description

The DOS Protection application could not register the required libraries to startup the application.

Remedy

This problem might cause the DOS Protection application to fail at startup. If this happens again after a reboot, get in touch with Extreme Networks Technical Support (Who will need to get in touch with Engineering) to determine the cause.

Severity

Error

Message Text

Failed starting library group %group%: %error%

Message Parameters

| Name | Type |
|-------|--------|
| group | Char |
| error | String |

DOSProt.UnExpDevErr

Description

The DOS Protection application received end of file while accessing the /dev/dos device.

Remedy

The /dev/dos device should never return end of file, and this event needs to be escalated to Extreme Networks Technical Support (who need to escalate this to Engineering for further research). If available with details on how to replicate this event.

Severity

Error

Message Text

Unexpected end-of-file communicating with /dev/dos

DOSProt.Init

Description

This event gets generated when all resources for DOS Protection are successfully allocated, and the application is ready.

Remedy

This is an informational message and no action is required.

Severity

Info

Message Text

DOS protect application started successfully

DOSProt.PktCntExcd

Description

This message gets logged when the packet count exceeds the configured notify-threshold value.

Remedy

This is an informational message and no action is required.

Severity

Info

Message Text

Notify-threshold for %s% packet count of %d% reached

Message Parameters

| Name | Type |
|------|--------|
| s | String |
| d | ulnt |

DOSProt.CreateACLFail

Description

This event is triggered when the maximum number of ACLs DOS Protect can add is reached.

Remedy

DOS Protect is only allowed to create the reported number of ACLs. If for some reason DOS Protect needs more ACLs it wise to inspect the network and try to stop the ongoing DOS threads.

Severity

Warning

Message Text

No more ACLs available, max of %d% reached

Message Parameters

| Name | Type |
|------|------|
| d | ulnt |

DOSProt.ReadBktSizeInv

Description

This event is triggered when information received from the DOS Protect kernel module does not match the information expected by the DOS Protect application.

Remedy

This could happen if the version of the kernel module is not in line with the version of the DOS Protect application. As we currently only support full system upgrade this should not be a problem. If this problem is not solved by a system reboot (re-initialization of the kernel), get in touch with the Extreme Networks Technical Support organization (who will need to get in touch with Engineering after replication).

Severity

Warning

Message Text

Read size %rc% not equal to %strct% size %size%

Message Parameters

| Name | Type |
|-------|--------|
| rc | ulnt |
| size | ulnt |
| strct | String |

DOSProt.RecvNotifyInv

Description

This event is triggered when information received from the DOS Protect kernel module does not match the information expected by the DOS Protect application.

Remedy

This could happen if the version of the kernel module is not in line with the version of the DOS Protect application. As we currently only support full system upgrade this should not be a problem. If this problem is not solved by a system reboot (re-initialization of the kernel), get in touch with the Extreme Networks Technical Support organization (who will need to get in touch with Engineering after replication).

| info | Printf |

EAPS.RxNetTxFail

Description

Getting an error when receiving from NetTx.

Remedy

The error number given by errno should give a clue to what may be causing the problem between NetTx and EAPS.

Severity

Warning

Message Text

Error when receiving from NetTx (errno = %tmp_errno%)

Message Parameters

| Name | Type |
|-----------|------|
| tmp_errno | ulnt |

EAPS.RxEEPVerInv

Description

EAPS PDU being dropped because the EEP Version is not supported. The version should be 1.

Remedy

The sending system could be running an incompatible version of EEP running on this system. Please check build information on both systems.

Severity

Warning

Message Text

%slotPort%, %vlan% - Invalid EEP Version (%EEPVer%)

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |
| vlan | VLAN |
| EEPVer | ulnt |

EAPS.RxEEPLenInv

Description

EAPS PDU being dropped because the EEP Length is greater than the length of the packet.

Remedy

If the length in EEP header is greater than that of the entire packet length, it could be due to a programming error while setting the EEP length. Or if the EEP length itself is ok, then the packet may have been truncated. May have to capture the packet using a sniffer for further analysis.

Severity

Warning

Message Text

%slotPort%, %vlan% - EEP Length (%EEPLen%) greater than packet length (%packetLen%)

Message Parameters

| Name | Type |
|-----------|----------|
| slotPort | SlotPort |
| vlan | VLAN |
| EEPLen | ulnt |
| packetLen | ulnt |

EAPS.RxPktLenInv

Description

EAPS PDU being dropped because the packet length is less than the length of the header.

Remedy

Please capture the packet using a sniffer for further analysis.

Severity

Debug-Summary

Message Text

%slotPort%, %vlan% - Packet Length (%packetLen%) less than header size (%headerSize%)

Message Parameters

| Name | Type |
|------------|----------|
| slotPort | SlotPort |
| vlan | VLAN |
| packetLen | ulnt |
| headerSize | ulnt |

EAPS.Rx8021QtagInv

Description

EAPS PDU being dropped because the vlanTypeLength field in the ethernet header does not match the default ethernet value for 8021Q Tag.

Remedy

Possible programming error or misconfiguration of VMANs, QinQ, Mac-In-Mac. Check if an ACL may have modified the vlanTypeLength field.

Severity

Warning

Message Text

%slotPort%, %vlan% - VlanTypeLength (%vlanTypeLen%) not equal to default Ethernet value (%defaultEthVal%)

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |
| vlan | VLAN |

| Name | Type |
|---------------|------|
| vlanTypeLen | ulnt |
| defaultEthVal | ulnt |

EAPS.RxSNAPInv

Description

EAPS PDU being dropped because the SNAP value is invalid.

Remedy

Possible programming error. May have to capture packet using sniffer, and comparing with packet data at sending stations egress port. If sending station's packet itself has an incorrect SNAP Id, then most likely programming error while packet being created. If the sending station's packet data differs from this packet, it would need further troubleshooting to isolate where in the network the SNAP field is getting modified.

Severity

Warning

Message Text

%slotPort%, %vlan% - SNAP (%snap%) is invalid. Correct value is (%defaultSnap%)

Message Parameters

| Name | Type |
|-------------|----------|
| slotPort | SlotPort |
| vlan | VLAN |
| snap | xInt32 |
| defaultSnap | xInt32 |

EAPS.RxOUIInv

Description

EAPS PDU being dropped because the OUI value is invalid.

Remedy

Possible programming error. May have to capture packet using sniffer, and comparing with packet data at sending stations egress port. If sending station's packet itself has incorrect OUI, then most likely programming error while packet being created. If the sending station's packet data differs from this packet, it would need further troubleshooting to isolate where in the network the OUI fields are getting modified.

Severity

Warning

Message Text

%slotPort%, %vlan% - OUI (%oui0% : %oui1% : %oui2%) is invalid. Correct OUI is 00:E0:2B

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |
| vlan | VLAN |
| oui0 | xInt8 |
| oui1 | xInt8 |
| oui2 | xInt8 |

EAPS.RxEEPChecksumInv

Description

EAPS PDU being dropped because the EEP checksum is invalid.

Remedy

This could be due to errors in packet memory. Other possible cause could be programming error on transmitting system.

Severity

Warning

Message Text

%slotPort%, %vlan% - Invalid EEP Checksum

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |
| vlan | VLAN |

EAPS.TxNetTxFail

Description

Getting an error when sending to NetTx.

Remedy

The error number given by return value should give a clue to what may be causing the problem between NetTx and EAPS.

Severity

Warning

Message Text

Error when sending to NetTx (Return value = %retval%)

Message Parameters

| Name | Type |
|--------|------|
| retval | sInt |

EAPS.RxDmnInv

Description

This message is displayed when an EAPS PDU has been received on a control vlan which is not associated with any EAPS domain. The PDU will be dropped.

Remedy

If this is a rare occurrence, then it should be okay. This could be due to a PDU already sent out on the network, while at the same time the domain on this switch got disabled. If this is happening continuously, then it needs to be determined why the PDU is being sent to EAPS process, but cannot find an EAPS domain corresponding to the control vlan Id.

Severity

Debug-Summary

Message Text

Received PDU %pduType% on port %slotPort%. No EAPS domain for this Control vlan (vlanId = %vlanId%)

Message Parameters

| Name | Type |
|----------|----------|
| pduType | String |
| slotPort | SlotPort |
| vlanId | uint |

EAPS.RxLifInv

Description

This message is displayed when an EAPS PDU has been received on port for which its LIF (logical interface) cannot be found. The PDU will be dropped.

Remedy

Most likely this could be due to a timing related issue where the LIFs are still being formed.

Severity

Debug-Summary

Message Text

EAPSD %eapsd% - Received PDU %pduType% on port %slotPort%. Invalid LIF.

Message Parameters

| Name | Type |
|----------|-------------|
| eapsd | EAPS-domain |
| slotPort | SlotPort |
| pduType | String |

EAPS.RxLifDown

Description

This message is displayed when an EAPS PDU has been received on port for which its LIF is Down. PDUs will be discarded.

Remedy

Most likely this could be due to a timing related issue where the PDUs were already received in its queue. But, by the time their turn came to be processed, the ingress port was in Down state. In this situation, these PDUs will be discarded.

Severity

Debug-Summary

Message Text

EAPSD %eapsd% - Received PDU %pduType% on port %slotPort% which whose link state is Down.

Message Parameters

| Name | Type |
|----------|-------------|
| eapsd | EAPS-domain |
| slotPort | SlotPort |
| pduType | String |

EAPS.RxPduAll

Description

This message is displayed whenever any EAPS PDU is received.

Remedy

Should be used only while gathering verbose logs.

Severity

Debug-Verbose

Message Text

EAPSD %eapsd% - Received PDU %pduType% on port %slotPort%

Message Parameters

| Name | Type |
|----------|-------------|
| eapsd | EAPS-domain |
| slotPort | SlotPort |
| pduType | String |

EAPS.RxAnotherMaster

Description

There are multiple masters on the same EAPS domain. This is due to a configuration error.

Remedy

There can be only 1 EAPS domain configured to be the Master on an EAPS domain corresponding to a control vlan. Configure all other nodes in that domain to Transit mode.

Severity

Warning

Message Text

EAPSD %eapsD% - Received %pduType% from another Master (%mac%) on the same domain.

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxUnconfiguredPort

Description

Received a PDU on a port which is not configured as a ring port on this EAPS domain. The PDU is dropped.

Remedy

This could be either due to a misconfiguration of EAPS ring-ports, or could be due to incorrect cabling while connecting to neighboring switches. Can check connectivity using EDP.

Severity

Warning

Message Text

EAPSD %eapsD% - Received %pduType% on port %slotPort% which is not configured for this domain.

Message Parameters

| Name | Type |
|----------|-------------|
| eapsD | EAPS-domain |
| slotPort | SlotPort |
| pduType | String |

EAPS.RxHlthPduPriPort

Description

Received Health PDU on the Primary port. EAPS PDUs should never be received on its Primary Port. The PDU is dropped.

Remedy

The most likely cause for this would be the Primary port is configured to be a load-shared trunk on this end, but it is not configured for load-sharing on its neighboring switch. Check configuration, and cabling on Primary port.

Severity

Warning

Message Text

EAPSD %eapsD% - Received %pduType% on port %slotPort% which is the Primary port.

Message Parameters

| Name | Type |
|----------|-------------|
| eapsD | EAPS-domain |
| slotPort | SlotPort |
| pduType | String |

EAPS.RxPduHealth

Description

This message is displayed when an EAPS Health PDU is received.

Remedy

Use for trouble-shooting.

Severity

Debug-Verbose

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduLinkDown

Description

This message is displayed when an EAPS LinkDown PDU is received.

Remedy

When a link goes down on a Transit switch, this PDU is received. Remedy is to restore the failed link.

Severity

Info

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduRingDnFlush

Description

This message is displayed when an EAPS RingDownFlushFDB PDU is received.

Remedy

When the ring has a failure, the Master sends the RingDownFlushFDB message. Remedy is to restore the fault in the ring.

Severity

Info

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduRingDnFlushDbg

Description

This message is displayed when an EAPS RingDownFlushFDB PDU is received.

Remedy

This message will be logged on a Master node only when debug summary is enabled. Remedy is to restore the fault in the ring.

Severity

Debug-Verbose

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduRingUpFlush

Description

This message is displayed when an EAPS RingUpFlushFDB PDU is received.

Remedy

The Master sends this message when the ring has been restored. No further action is needed.

Severity

Info

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduRingUpFlushDbg

Description

This message is displayed when an EAPS RingUpFlushFDB PDU is received.

Remedy

This is only logged if debug summary is enabled. The Master sends this message when the ring has been restored. No further action is needed.

Severity

Debug-Verbose

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduFlushFdb

Description

This message is displayed when an EAPS FlushFDB PDU is received. This message is typically sent EAPS Shared-ports is flushing the FDBs in its segments.

Remedy

This is only logged if debug summary is enabled.

Severity

Debug-Summary

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduSuspndPrefwdTmr

Description

This message is displayed when an EAPS Suspend-Preforward-Timer PDU is received. This PDU is sent by chassis based switches running ExtremeWare code when doing an MSM failover.

Remedy

No remedy action needed.

Severity

Info

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduSuspndPrefwdTmrDbg

Description

This message is displayed when an EAPS Suspend-Preforward-Timer PDU is received. This PDU is sent by chassis based switches running ExtremeWare code when doing an MSM failover.

Remedy

This is a debug message on a Master node. Enable only for troubleshooting with a mixed environment where there are ExtremeWare chassis switches with EXOS switches, and running MSM failover on the ExtremeWare switch.

Severity

Debug-Verbose

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduQueryLinkStatus

Description

This message is displayed when an EAPS QueryLinkStatus PDU is received

Remedy

This PDU is typically sent when a Fail timer expires. Check network topology if there is a legitimate failure in the network which is causing the fail timer to expire, or is it due to PDUs not being received in its allotted time. If it is the later, it could be due to misconfiguration of control vlan in the network, or congestion of control traffic in the network or within this switch. Could also be due to CPU being busy. In rare situations it could be a switch in the network with a hardware problem where control PDUs have stopped being forwarded.

Severity

Debug-Summary

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduLinkUp

Description

This message is displayed when an EAPS LinkUp PDU is received. When a link is restored on a Transit switch, it sends out a LinkUp PDU.

Remedy

This PDU is usually used for debugging purposes. On a Master node, usually, soon after receiving this PDU, it should change its state from Failed to Complete. If the Master does not change its state to Complete within a few seconds, it may need troubleshooting.

Severity

Info

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduLinkUpDbg

Description

This message is displayed when an EAPS LinkUp PDU is received. When a link is restored on a Transit switch, it sends out a LinkUp PDU.

Remedy

This message is set to debug-verbose severity on a Transit node. No need to log it unless trying to troubleshoot a situation where a Master is not receiving LinkUp PDUs, and we want to determine if intermediate Transit switches see it or not.

Severity

Debug-Verbose

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPduUnknown

Description

This message is displayed when an EAPS PDU is received which is unknown.

Remedy

Unknown PDUs may be a result of the sending switch running an updated version of EAPS, and sending PDUs that this switch is not recognizing. Please refer to the user guide to see if there could be a compatibility issue, or if this is expected behavior.

Severity

Debug-Summary

Message Text

EAPSD %eapsD% - Received %pduType% (MAC = %mac%)

Message Parameters

| Name | Type |
|---------|-------------|
| eapsD | EAPS-domain |
| pduType | String |
| mac | MAC |

EAPS.RxPktVlanInv

Description

Could not find a vlan interface corresponding to incoming vlan. Drop the packet.

Remedy

This could be due to a timing situation where the packet came in just before vlan got deleted. If its a rare occurrence, this is not a problem, as its a timing related issue, where a packet came into the CPU just before the vlan interface got removed. If this is occurring constantly, it would need further investigation. Start by capturing the packet and determining the Vlan Id. Show all vlans and see if a vlan exists corresponding to the vlan Id. Provide the results of this initial analysis to engineering.

Severity

Debug-Summary

Message Text

EAPS packet received on port %slotport% on an invalid vlan instance %vlanInstance%.

Message Parameters

- [EdgeAuto.DebugSummary](#) on page 847

EdgeAuto.ParmNull

Description

An internal function was called with a NULL pointer. This condition is not expected and is indicative of a possible memory corruption due to a software bug that needs engineering attention.

Remedy

Provide technical support information on the switch configuration using the 'show tech-support' command. Also, check the scalability limit in the user documentation and compare it with the current configuration using 'show configuration detail' command.

Severity

Critical

Message Text

Argument %arg% is NULL

Message Parameters

| Name | Type |
|------|--------|
| arg | String |

EdgeAuto.ParmInv

Description

An internal function was called with an invalid value. This condition is not expected and is indicative of a possible memory corruption due to a software bug that needs engineering attention.

Remedy

Provide technical support information on the switch configuration using the 'show tech-support' command. Also, check the scalability limit in the user documentation and compare it with the current configuration using 'show configuration detail' command.

Severity

Critical

Message Text

Argument %arg% has an invalid value %val%

Message Parameters

| Name | Type |
|------|--------|
| arg | String |
| val | uInt32 |

EdgeAuto.AllocMemFail

Description

Memory for the displayed object could not be allocated which may be due to the system running low on memory. This will result in incorrect operations.

Remedy

Check the scalability limit in the user documentation and compare it with the current configuration using 'show configuration detail' command. Once sufficient system

memory is reclaimed, it is recommended that edgeAuto process be restarted using 'restart process edgeauto' command for internal state to be fully rebuilt.

Severity

Error

Message Text

Memory allocation failed when trying to allocate a %obj% structure of size %size%.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |
| size | uInt32 |

EdgeAuto.ParseMsgFail

Description

Edge Automation was not able to successfully parse an internal message. This condition is not expected and is indicative of a possible memory corruption due to a software bug that needs engineering attention.

Remedy

Provide technical support information on the switch configuration using the 'show tech-support' command.

Severity

Critical

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

EdgeAuto.ConnDBFail

Description

Edge Automation was not able to connect to the database configured in netDbMgr. This can happen due to one or more of these conditions - DNS resolution failure, route lookup failure, a network connectivity issue, remote host being down, the remote database not accepting connections, authentication failure, improper communication of database state between netDbMgr and edgeauto.

Remedy

Check if the database is configured correctly on netDbMgr. Check the output of 'show automation edge database' and 'show database' to see if the database state is consistent across both these outputs. If the database states are inconsistent, disconnect edgeauto from database using the 'configure automation edge disconnect

database' command and reconnect edgeauto to the database using 'configure automation edge connect database' command. If the issue persists, try restarting netDbMgr and edgeauto.

Severity

Error

EDP.CreatPortFail

Description

The system is short of memory resources and might hinder in the working of EDP.

Remedy

Contact Extreme

Severity

Error

Message Text

Cannot create EDP port instance for port %slot%:%port% due to lack of memory

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.SendTimerFail

Description

The timer functionality needed to send out packets on the port regularly could not be created and hence packets cant be sent out this port.

Remedy

The system might be short of resources. Contact Extreme.

Severity

Warning

Message Text

Cannot send out packets on port %slot%:%port% due to inability to create send timer.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.PrcFrameFail

Description

An EDP packet received could not be processed due to the specified reason.

Remedy

Packet receive errors may be due to hardware errors or some other unexpected internal conditions.

Severity

Error

Message Text

Packet received on port %slot%:%port% could not be processed, %reason%

Message Parameters

| Name | Type |
|--------|--------|
| slot | Slot |
| port | Port |
| reason | Printf |

EDP.CreatPortOK

Description

The EDP port instance for the specified port has been created.

Remedy

This is for informational debug purposes only.

Severity

Debug-Summary

Message Text

Port instance %slot%:%port% has been created

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.PortTimerFail

Description

The EDP port instance was created but the timer to send out the EDP PDUs on this port failed.

Remedy

Disable EDP on this port and enable EDP again. If this message continues to appear, the system might be short of resources. Contact Extreme.

Severity

Error

Message Text

Created port %slot%:%port%, but unable to send out EDP PDUs on this port due to failure in creating send timer.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.RemPort

Description

The EDP port instance for the specified port is being removed.

Remedy

This message is solely for informational debug purposes only

Severity

Debug-Summary

Message Text

Removing EDP port instance for port %slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.NoEdpPort

Description

EDP packet has been received on a port which does not have a EDP instance. The packet will be dropped. This condition should never occur.

Remedy

Disable the port and enable it back. Contact extreme.

Severity

Error

Message Text

packet received on a port (%slot%:%port%) with no EDP instance.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.SendSwitchPDU

Description

Sending switch information packets out the specified port.

Remedy

This message is for informational debug purposes only.

Severity

Debug-Summary

Message Text

Sending switch information packets out port %slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.CfgAdvInterval

Description

The EDP advertisement interval has been changed by the user to the specified value.

Remedy

This message is for informational debug purposes only.

Severity

Info

Message Text

EDP advertisement interval has been set to %interval% seconds.

Message Parameters

| Name | Type |
|----------|--------|
| interval | uInt32 |

EDP.CfgTimeout

Description

The EDP neighbor and VLAN information hold timer (timeout) has been changed by the user to the specified value.

Remedy

This message is for informational/debug purposes only.

Severity

Info

Message Text

The EDP neighbor and VLAN timeout has been set to %timeout% seconds.

Message Parameters

| Name | Type |
|---------|--------|
| timeout | uInt32 |

EDP.EnableEdp

Description

The user has enabled EDP on the specified port.

Remedy

This message is for informational debug purposes only.

Severity

Info

Message Text

EDP is enabled by the user on the port %slot%:%port%.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.DisableEdp

Description

The user has disabled EDP on the port specified.

Remedy

This message is for informational debug purposes only.

Severity

Info

Message Text

EDP has been disabled by the user on the port %slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

EDP.AddNbrPortFail

Description

The port information from the neighbor specified by the deviceId was not copied because of lack of system resources as specified in the message.

Remedy

The system is running out of resources.

Severity

Error

Message Text

Failed to copy port information from neighbor %deviceId1%:%deviceId2%:%deviceId% on port %slot%:%port%, %reason%

EDP.PortVLANIdCfgMismatch

Description

One or more untagged ports are members of VLANs where the local and remote VLAN IDs are different. While not necessarily incorrect, this is known to be a common mis-configuration. The "show edp port all vlan-id mismatch untagged" command can be used to see which port(s) caused this event. This event will only be generated once for this node until a reboot or failover occurs.

Remedy

Correct the port/VLAN/VLAN ID configuration. If the configuration with different VLAN IDs is intentional, this event can be ignored or permanently hidden using the "configure log filter <filter>; add exclude event EDP.PortVLANIdCfgMismatch" command.

Severity

Warning

Message Text

One or more untagged ports has been determined to have a VLAN configuration mismatch. Use the "\show edp port all vlan-id mismatch untagged\" command to see detailed information.

| state | sInt |

EDP.VSM.GetLocMLAGPortInstcFail

Description

This message indicates that an attempt to get the port instance value for an MLAG from VSM has failed.

Remedy

This is a rare condition which may be related to software, and may require a reboot to correct the problem.

Severity

Error

Message Text

Unable to get local port instance for MLAG %mlag%, Error = %err%

Message Parameters

| Name | Type |
|------|--------|
| mlag | uInt16 |
| err | sInt |

EDP.VSM.MLAGPortInstcInv

Description

This message indicates that the port instance value for the specified MLAG is invalid.

Remedy

This is a rare condition which may be related to software, and may require a reboot to correct the problem.

Severity

Error

Message Text

Invalid port instance for MLAG %mlag%

Message Parameters

| Name | Type |
|------|--------|
| mlag | uInt16 |

EDP.VSM.GetLocMLAGPortStateFail

Description

This message indicates that an attempt to get the local MLAG port state from VSM has failed.

Remedy

This is a rare condition which may be related to software, and may require a reboot to correct the problem.

Severity

Error

Message Text

Unable to get local port state for MLAG %mlag%, Error = %err%

Message Parameters

| Name | Type |
|------|--------|
| mlag | uInt16 |
| err | sInt |

EDP.VSM.IgnCkptMsgUnkOwner

Description

This message indicates that the received checkpoint message is being ignored since the owner field in the packet header is not valid.

Remedy

Ensure the EXOS versions on the M-LAG peers are compatible. One of the M-LAG may require an upgrade to a more recent version of EXOS.

Severity

Debug-Data

Message Text

Ignore checkpoint message, invalid owner role = %role%

Message Parameters

Message Parameters

| Name | Type |
|----------|----------|
| port | SlotPort |
| oldState | String |
| newState | String |

elsm.upTimerExp

Description

The UP timer expired for a particular port. This indicates that the port DID NOT receive a HELLO in the configured time interval. Port will now transition to DOWN or DOWN-STUCK state. The port will be put into the blocked state and the applications will be notified to take corrective action.

Remedy

This indicates a problem with the peer or with the link. Check if the link is okay and whether the peer on the other end is responsive. If the link is good, the other switch may be have problems, or may have had ELSM misconfigured on it.

Severity

Debug-Summary

Message Text

UP Timer Expired for port %port%.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

elsm.downTimerExp

Description

The DOWN timer is started if a port in the DOWN state receives a Hello PDU. The port will transition from DOWN to DOWN-WAIT and start the DOWN timer. When the DOWN timer expires, ELSM checks to see how many HELLOs it has received. If the number of HELLOs received exceeds the DOWN threshold value, the port transitions from DOWN-WAIT to UP. This helps alleviate flapping between UP and DOWN states.

Remedy

No action is required. If the DOWN Timer is started and expires frequently it indicates a problem dropping HELLO PDUs. i.e. We see HELLOs, but the frequency of HELLOs is sporadic. Check to make sure there are no broadcast storms or other forms of congestion on the link. Check for anything that could prevent a regular reception of HELLO PDUs from the peer.

Severity

Debug-Summary

Message Text

DOWN Timer expired for port %port%.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

elsm.linkUpRecv

Description

ELSM received a Link-Up message from VLAN Mgr indicating a physical link-up was detected.

Remedy

No action is required. The ELSM state machine should continue to operate, and at some point unblock the port. Even the link-up is detected, ELSM will wait for reception of HELLOs before unblocking the port. When ELSM unblocks the port, the apps will be notified of the link-up and take appropriate action.

Severity

Debug-Summary

Message Text

%func% - Link-UP msg on port %port% received from VLAN Mgr.

Message Parameters

| Name | Type |
|------|----------|
| func | String |
| port | SlotPort |

elsm.linkDownRecv

Description

ELSM received a Link-Down message from VLAN Mgr indicating a physical link-Down was detected.

Remedy

No action is required. The ELSM state machine should continue to operate, and at some point block the port. Even if the link-down is detected, ELSM will wait until its state machine times out on reception of HELLOs (which it will because the link is physically

down_. When ELSM blocks the port, the apps will be notified of the link-down and take appropriate action.

Severity

Debug-Summary

Message Text

%func% - Link-DOWN msg on port %port% received from VLAN Mgr.

Message Parameters

| Name | Type |
|------|----------|
| func | String |
| port | SlotPort |

elsm.pifCreated

Description

Vlan Mgr has notified us that a PIF or physically port has been created. ELSM will create an ElsmPortNode for this PIF with default values. Each PIF in the system should have a corresponding ElsmPortNode in the ELSM process.

Remedy

No action required.

Severity

Debug-Summary

Message Text

PIF for port %port% Created

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

elsm.pifDeleted

Description

Vlan Mgr has notified us that a PIF or physically port has been deleted. ELSM will delete the corresponding ElsmPortNode for this PIF.

Remedy

No action required.

Severity

Debug-Summary

Message Text

PIF for port %port% Deleted.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

elsm.holdThreshExceeded

Description

Number of HELLO PDUs received in DOWN-WAIT state exceeded the HoldThreshold so that it's okay to transition to UP state.

Remedy

Informational

Severity

Info

Message Text

Port %port% Hold Threshold of %holdThresh% exceeded.

Message Parameters

| Name | Type |
|------------|----------|
| port | SlotPort |
| holdThresh | uInt |

elsm.holdThreshNotMet

Description

ELSM did not received enough HELLO PDUs after the first one to transition out of DOWN-WAIT. Port will now go back to DOWN state.

Remedy

Check peer to see if it is reachable. Check to make sure there's no congestion or flooding on the line. ELSM saw a HELLO, bud

Severity

Info

Message Text

Port %port% - Hold Threshold NOT reached. Needed %holdThresh%, but only saw %count% HELLOs.

Message Parameters

| Name | Type |
|------------|----------|
| port | SlotPort |
| holdThresh | uInt |
| count | uInt |

elsm.stickyThreshExceeded

Description

When the sticky threshold is exceeded it means we've transitioned from UP to DOWN too many times. The port will now go into the DOWN-STUCK state and wait for user intervention. This prevents a port from flapping from UP to DOWN.

Remedy

A user can either enable auto-restart mode on this port, or manually do a clear auto-restart to transition the port into DOWN state. If neither of these are done, the port will remain in the DOWN-STUCK and blocked state until an AdminUP/DOWN or ELSM disable/enable is performed.

Severity

Notice

Message Text

Port %port% - Sticky Threshold Exceeded of %stickyThresh%.

Message Parameters

| Name | Type |
|--------------|----------|
| port | SlotPort |
| stickyThresh | ulnt |

elsm.unknownPDURecv

Description

ELSM received an unknown or unrecognized PDU. This should never occur, but if it does, we simply drop the PDU. Receiving a large number of these messages is indicative of a problem at the lower layers.

Remedy

Check that the peer is running a compatible version of ELSM.

Severity

Warning

Message Text

Unknown PDU received on port %port%. %typeInfo%

Message Parameters

| Name | Type |
|----------|----------|
| port | SlotPort |
| typeInfo | Printf |

elsm.invalidEventRecv

Description

The state machine received an event that it normally should never receive. We just ignore the event, but this could be indicative of a problem with the state machine implementation for a scenario we did not account for.

Remedy

No action required.

Severity

Warning

Message Text

Port %port% - Received unsupported event %event% for state %state%.

Message Parameters

| Name | Type |
|-------|----------|
| port | SlotPort |
| state | String |
| event | String |

elsm.portInfoNotAlloc

Description

When a port is enabled we allocate memory for portInfo. If we encounter an elsmPortNode that is enabled, but no portInfo allocated, it may indicate a memory leak or memory corruption problem.

Remedy

No action required.

Severity

Warning

Message Text

Port %port% - Port Info was never allocated when enabled.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

elsm.portNodeNotFound

Description

There should be an elsmPortNode created for each PIF or port created in the system. If we search for a particular port and can't find the elsmPortNode in the ELSM Btree, but a PIF exists, then something went wrong. Either we inadvertently deleted the node, or we missed the PIF creation message.

Remedy

Report this immediately.

Severity

Error

Message Text

Port %port% - Port Node not found.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

elsm.memAllocFailed

Description

We tried to allocate memory either for a elsmPortNode or for elsmPort and failed. We either ran out of memory, or serious memory corruption occurred. In either case, we are in serious trouble.

Remedy

Restart system. Call TAC

Severity

Error

Message Text

%func% - Port %port% - failed to allocate memory.

EPM.dep_check

Description

Run-time Process dependency check failed, Process will not be started

Remedy

Check running version of pre-requisite processes and compare with epmdprc dependency configuration file

Severity

Error

Message Text

process %name% dependencies check failed

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.proc_exist

Description

Do not start process, it is already exist

Remedy

no remedy, this is effect of process restart

Severity

Error

Message Text

process %name% pid %pid% exists - send signal

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |

EPM.first

Description

No processes configured in epmrc config file

Remedy

Edit epmrc configuration file, add necessary application to run system

Severity

Error

Message Text

Empty PCB list

EPM.next

Description

Done either with initial portion of start-up or user demanded start sequence

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

No more processes to start

EPM.next_start

Description

Start Process.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

start process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.state

Description

Process is not in init state

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Process %name% process ID %pid% is not in init state %state%

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| pid | ulnt |
| state | ulnt |

EPM.fork

Description

EPM failed to create process. error number description:EAGAIN (11), ENOMEM (12) Not enough resources to create new process

Remedy

Restart the system

Severity

Error

Message Text

Failed to fork %name% with error %status%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| status | ulnt |

EPM.crash_rate

Description

Process exceeded pre-configured or default crash rate and will not be restarted.

Remedy

change crash rate option in epmmc configuration file. Then invoke "run update" CLI command.

Severity

Error

Message Text

Process %name% exceeded pre-configured or default crash rate

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.proc_conn_lost

Description

Connection with Process is broken

Remedy

appropriate recovery policy will be invoked automatically

Severity

Error

Message Text

Connection lost with process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.timer

Description

Received HELLO message from the process for process monitoring function

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Process timers for process %name% ID %pid% timeout count %tmcount%

Message Parameters

| Name | Type |
|---------|--------|
| name | String |
| pid | ulnt |
| tmcount | ulnt |

EPM.init_ipml_cl

Description

Can not allocate resources for EPM to receive messages from other processes

Remedy

Most likely another instance of EPM is running, restart node

Severity

Error

Message Text

Failed to create IPML client service

EPM.init_ds_reg

Description

Can not register with Directory Services to obtain port number for inter-process communication.

Remedy

reboot node

Severity

Error

Message Text

Registration with Directory services failed with error %status%

Message Parameters

| Name | Type |
|--------|------|
| status | ulnt |

EPM.init_ipml_ser

Description

Can not allocate resources for EPM to receive messages from other processes

Remedy

Most likely another instance of EPM is running, restart node

Severity

Error

Message Text

Failed to create IPML Server service

EPM.pkt_err

Description

Not enough resources in the system

Remedy

restart node

Severity

Error

Message Text

Can not allocate packet

EPM.proc_restart

Description

Restart process. For restart option look at epmmc configuration file

Remedy

expected behavior

Severity

Notice

Message Text

Restart process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.rlimit_stack

Description

Invalid stack size for process is specified in epmmc configuration file

Remedy

Modify epmmc configuration file stack option

Severity

Error

Message Text

Can not start process with specified stack size %size% bytes

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| size | ulnt |

EPM.rlimit_data

Description

Invalid data size for process is specified in epmmc configuration file

Remedy

Modify epmmc configuration file data option

Severity

Error

Message Text

Can not start process with specified data size %size% bytes

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| size | ulnt |

EPM.rlimit_cputime

Description

Invalid cpu time for process is specified in epmmc configuration file

Remedy

Modify epmmc configuration file cputime option

Severity

Error

Message Text

Can not start process %name% with defined CPU time limit %time% seconds

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| time | ulnt |

EPM.rlimit_core

Description

Invalid core file size for process is specified in epmmc configuration file

Remedy

Modify epmmc configuration file core option

Severity

Error

Message Text

Can not start process %name% with defined core file size %size% bytes

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| size | ulnt |

EPM.exec

Description

Can not execute process, errors are: 13 /* Permission denied */ 7 /* Arg list too long */ 1 /* Operation not permitted */ 8 /* Exec format error */ 14 /* Bad address */ 36 /* File name

too long */ 2 /* No such file or directory */ 20 /* Not a directory */ 12 /* Out of memory */
26 /* Text file busy */ 40 /* Too many symbolic links encountered */

Remedy

restart node

Severity

Error

Message Text

Can not execute process %name% with error %status%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| status | sInt |

EPM.proc_kill

Description

forcefull termination of the process was executed

Remedy

Recovery option will be taken automatically.

Severity

Warning

Message Text

Process %name% ID %pid% killed

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |

EPM.proc_dead

Description

No description is available.

Remedy

recovery mode will be invoked automatically

Severity

Warning

Message Text

Process %name% ID %pid% has been asked to shutdown but did not exit normally

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |

EPM.proc_cantstart

Description

No description is available.

Remedy

most likely there is an exception or error in the process. Patch release to substitute process binary is recommended

Severity

Warning

Message Text

Process %name% ID %pid% can not be started successfully multiple times

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |

EPM.proc_abort

Description

Process failed to adhere to monitoring algorithms. Process may be dysfunctional. Recovery option will be taken immediatly

Remedy

Recovery option will be taken automatically.

Severity

Warning

Message Text

Process %name% ID %pid% does not respond, abort it

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |

EPM.epmrc

Description

corrupted or non-existed configuration file

Remedy

upgrade to new software

Severity

Error

Message Text

Failed to read epmrc configuration file with error %ret%

Message Parameters

| Name | Type |
|------|------|
| ret | ulnt |

EPM.epmdprc

Description

corrupted or non-existed configuration file

Remedy

upgrade to new software

Severity

Warning

Message Text

Failed to read epmdprc configuration file with error %ret%

Message Parameters

| Name | Type |
|------|------|
| ret | ulnt |

EPM.clisub

Description

No description is available.

Remedy

cli master died, recovery will be taken automatically

Severity

Error

Message Text

CLI subagent initialization failed!

EPM.orsub

Description

No description is available.

Remedy

No remedy is available.

Severity

Error

Message Text

Failed to initialize object router subagent!

EPM.all_shutdown

Description

part of the reboot switch/msm/node process

Remedy

expected behavior

Severity

Warning

Message Text

Shutting down all processes

EPM.proc_dir

Description

pseudo-filesystem is not available

Remedy

reboot node

Severity

Error

Message Text

cannot open directory (/proc)

EPM.hello_rate

Description

Process sends HELLO messages more often then expected.

Remedy

no remedy

Severity

Debug-Summary

Message Text

Received hellos from process %name% %helloCount% more often then expected
%historyHelloCount%

Message Parameters

| Name | Type |
|-------------------|--------|
| name | String |
| historyHelloCount | ulnt |
| helloCount | ulnt |

EPM.oom

Description

Not enough available memory

Remedy

restart node

Severity

Error

Message Text

Can not allocate memory

EPM.work_q

Description

No description is available.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Work event %event%

Message Parameters

| Name | Type |
|-------|------|
| event | ulnt |

EPM.start

Description

EXOS software starts

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Notice

Message Text

EPM Started

EPM.memzone

Description

System Memory monitoring alert

Remedy

no remedy

Severity

Warning

Message Text

Process %name% transferred to %zone% memory monitoring zone from %prev_zone% zone. System Memory usage zone is %syszone%. Statiscis: green zone %green% yellow %yellow% orange %orange% red %red%

Message Parameters

| Name | Type |
|-----------|--------|
| name | String |
| zone | String |
| prev_zone | String |

| Name | Type |
|---------|--------|
| syszone | String |
| green | ulnt |
| yellow | ulnt |
| orange | ulnt |
| red | ulnt |

EPM.oomkill

Description

Process used more memory then limit specified in epmrc configuration file

Remedy

Recovery policy will be executed automatically

Severity

Warning

Message Text

Excessive memory usage, terminate process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.wd_warm_reset

Description

Change to watchdog warm reset mode.

Remedy

info message

Severity

Notice

Message Text

Changing to watchdog warm reset mode

EPM.likely_slept

Description

Due to resource limitation most like EPM was not running for period of time. After recognizing the issue EPM will back off its process timers to process all HELLO messages instead of terminating processes

Remedy

self-reconciled situation

Severity

Warning

Message Text

EPM was likely not running for %secs% seconds. Will take adjusting actions

Message Parameters

| Name | Type |
|------|------|
| secs | uint |

EPM.reboot

Description

reboot of the switch/MSM/node

Remedy

expected behavior

Severity

Warning

Message Text

User %user%: Rebooting with reason %reason%

Message Parameters

| Name | Type |
|--------|-------------|
| reason | String |
| user | AccountName |

EPM.trial_days_till_expired

Description

No description is available.

Remedy

notification, no remedy

Severity

Warning

Message Text

%days% left until trial license expiration

Message Parameters

| Name | Type |
|------|------|
| days | ulnt |

EPM.trial_expired

Description

No description is available.

Remedy

notification, no remedy

Severity

Critical

Message Text

Trial License expired !!!

EPM.license_trial_enabled

Description

No description is available.

Remedy

notification, no remedy

Severity

Warning

Message Text

Trial License (%days%) is enabled by user %user%

Message Parameters

| Name | Type |
|------|--------|
| days | uint |
| user | String |

EPM.License.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

EPM.license_insuff_sw

Description

No description is available.

Remedy

upgrade to the higher level license

Severity

Debug-Summary

Message Text

Insufficient license:Process %name% configured license level %level% current license level %c11%

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| level | ulnt |
| c11 | ulnt |

EPM.license_insuff_hw

Description

No description is available.

Remedy

current card type does not support running of this process. Ask customer to upgrade the MSM to the higher level (e.g. from MSM-1 to MSM-1XL)

Severity

Warning

Message Text

Insufficient License: process %name% to run on card type %type% running on %mytype%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| type | String |
| mytype | String |

EPM.license_update

Description

No description is available.

Remedy

notification, no remedy

Severity

Debug-Summary

Message Text

Send license update %feature% to process %name%

Message Parameters

| Name | Type |
|---------|--------|
| name | String |
| feature | String |

EPM.install_status

Description

No description is available.

Remedy

notification, no remedy

Severity

Notice

Message Text

User %user%: Image installation finished with status %status%%reason%

Message Parameters

| Name | Type |

| reason | String |
| user | AccountName |

EPM.download_status

Description

No description is available.

Remedy

notification, no remedy

Severity

Notice

Message Text

Download of image finished with status %status%%reason%

Message Parameters

| Name | Type |
|--------|--------|
| status | String |
| reason | String |

EPM.cpu

Description

No description is available.

Remedy

termination(shutdown) of the process or reboot of the node may be needed if process consumes 99% CPU for a long period of time.

Severity

Warning

Message Text

CPU utilization monitor: process %name% consumes %cpu% %% CPU

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| cpu | ulnt |

EPM.reboot_info

Description

reboot of the switch/MSM/node

Remedy

expected behavior

Severity

Notice

Message Text

Rebooting with reason %reason%

Message Parameters

| Name | Type |
|--------|--------|
| reason | String |

EPM.wdg_enable

Description

No description is available.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

Message Text

Watchdog enabled

EPM.wdg_disable

Description

No description is available.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

Message Text

Watchdog disabled

EPM.SendRegPrim

Description

Sending a Peer Registration message via IPML to the Primary EPM server.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Sending registration to EPM with slot %slot% chassis %chassis%

Message Parameters

| Name | Type |
|---------|------|
| slot | ulnt |
| chassis | ulnt |

EPM.Trace

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

EPM.system_stable

Description

Change to watchdog warm reset mode

Remedy

No remedy is available.

Severity

Notice

Message Text

System is stable. Change to warm reset mode

EPM.hitless_status

Description

No description is available.

Remedy

notification, no remedy

Severity

Notice

Message Text

Checked for hitless upgrade finished with status %status%%reason%

Message Parameters

| Name | Type |
|--------|--------|
| status | String |
| reason | String |

EPM.license_clear

Description

User has issued clear license-info command to clear license information in EEPROM.

Remedy

No remedy.

Severity

Warning

Message Text

License information has been cleared in EEPROM.

EPM.dirty_config

Description

The system configuration is dirty (the running system configuration is different from the last saved configuration), so the process cannot be re-started since it will not be able to load back the un-saved running system configuration when it re-starts.

Remedy

Process re-start cannot work currently if the system configuration is not saved. Will require a box reboot to get the process running again.

Severity

Error

Message Text

Process %name% cannot be re-started because the system configuration was not saved.

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.scheduled_reboot

Description

User has scheduled the next reboot as shown on show switch's Next Reboot field.

Remedy

expected behavior

| cpu | ulnt |

EPM.UnexpctRebootDtect

Description

System Rebooting after Power Shutdown or System Crash.

Remedy

notification, no remedy

Severity

Warning

Message Text

Booting after System Failure.

EPM.license_EEPROM_error

Description

License Manager attempted to read license info from EEPROM but encountered an error returned by the well known info library.

Remedy

This problem may be due to damage or corruption of the EEPROM and should be reported. Switch is now using the default switch license level.

Severity

Error

Message Text

License Manager failed to read license info from EEPROM (error code = %error_code%)

Message Parameters

| Name | Type |
|------------|------|
| error_code | sInt |

EPM.EXOSImgExpDate

Description

This message warns the user that this EXOS image is for temporary use only.

Remedy

Be prepared to get a new version of EXOS image from Extreme Networks when this EXOS image expires.

Severity

Warning

Message Text

This EXOS image is for temporary use and will expire on %expiration_date%

Message Parameters

| Name | Type |
|-----------------|--------|
| expiration_date | String |

EPM.EXOSImgExp

Description

This message alarms the user that this EXOS image has expired.

Remedy

It is time for the user to contact Extreme Networks for a new EXOS image.

Severity

Critical

Message Text

This EXOS image has expired. A reboot will occur in one hour.

EPM.EXOSRebootImgExp

Description

This reboot was intended to stop the user from using an expired EXOS image.

Remedy

The user should install a new EXOS image to replace the current expired EXOS image.

Severity

Critical

Message Text

Rebooting EXOS because this EXOS image has already expired.

EPM.SSHLcnsNotEnbl

Description

The security module will not be started because it requires an SSH License, which is not enabled on the switch. The user must enable the SSH license on the switch in order to use security features such as SSH2, SSL, SCP, SFTP and AES for SNMPv3, that are packaged as part of ssh.xmod.

Remedy

The license key is tied to the switch serial number that you register through the web portal. For a standalone switch, this is the system serial number; for a modular switch, it is the chassis serial number; and for a SummitStack configuration, it is the serial number of the Stack Master switch. The "show version" command displays serial numbers. If the user already has an SSH license key we can enable it using the "enable license {software} <key>" command. If the user has a consolidated license file (which has the license key of all the registered switches), we can enable it using the following 2 steps: a) Use the "tftp get" command to copy the license file to the switch; b) Use the "enable license file <file-name>" command to enable the license.

Severity

Notice

Message Text

Security module will not be started because SSH License is not enabled.

EPM.EnblFPLcns

Description

No description is available.

|--------|--------|
| format | Printf |

EPM.ISSU.RollUpgrdStrt

Description

A rolling reboot has been started. One-by-one, each standby slot will be rebooted, followed by the backup slot. A failover will then be performed to complete the rolling reboot. If a new software version has been installed, when the rolling reboot is completed, all slots will be running the new software.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

A rolling reboot has been started. The current software version is %curVersion%. After the rolling reboot is finished, the running software version will be %nextVersion%.

Message Parameters

| Name | Type |
|-------------|--------|
| curVersion | String |
| nextVersion | String |

EPM.ISSU.RollUpgrdSlotReboot

Description

During a rolling reboot, each standby slot, followed by the backup slot, is rebooted one-by-one. This event indicates that the specified slot is about to be rebooted.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

%role% slot %slot% will be rebooted as part of the rolling reboot process.

Message Parameters

| Name | Type |
|------|--------|
| role | String |
| slot | Slot |

EPM.ISSU.RollUpgrdSlotRebootOK

Description

During a rolling reboot, each standby slot, followed by the backup slot, is rebooted one-by-one. This event indicates that the specified slot has finished rebooting.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

Slot %slot% was successfully rebooted as part of the rolling reboot process.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

EPM.ISSU.RollUpgrdDone

Description

All non-primary slots have been rebooted so the primary slot is the only one left to reboot. To reboot the primary slot, a failover will be performed resulting in the current

primary slot being rebooted and thus completing the last step of the rolling upgrade process. Unless there is a failure, this will be the last event generated from the rolling reboot.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

All non-primary slots have been rebooted. To finish the rolling reboot process, a failover will be performed.

EPM.ISSU.RollUpgrdCncl

Description

The rolling reboot was canceled due to the specified reason. The system will most likely be left in a state that requires manual intervention to correct.

Remedy

If the rolling reboot was part of an In-Service Upgrade, the system is likely left in a state where some slots are running the upgraded software, and some are not. This condition must be fixed manually. Once the problem that caused the rolling reboot to be canceled is corrected, each standby slot that has not already been rebooted should be manually rebooted. Be sure each standby slot is back up and operational before rebooting the next slot. Once all standby slots have been rebooted and come back in-service, manually reboot the backup slot and ensure that it comes back In-Sync. The last step to perform a failover.

Severity

Error

Message Text

The rolling reboot was canceled due to an error: %reason%

Message Parameters

| Name | Type |
|--------|--------|
| reason | String |

EPM.ISSU.RollUpgrdSkipCompat

Description

Compatibility checks ensure that an In-Service Upgrade is not performed between releases which are known to be incompatible; however, there may be circumstances where it is desirable to ignore compatibility checks and upgrade anyway. This event is generated to indicate that the rolling reboot is being run without performing compatibility checks.

Remedy

No action required - Informational message only.

Severity

Warning

Message Text

A rolling reboot has been started with compatibility checks disabled.

EPM.Msg.timer_thread

Description

The process manager (EPM) expects to receive a hello messages (i.e. a 'heartbeat') from each thread of every running process on a regular basis. After a sufficient amount of time (as indicated by the time periods) has elapsed since the last hello message was received from a particular thread, EPM assumes that the process is in an unresponsive state which will adversely affect the performance of the system and that terminating it will avert the situation. The occurrence of this event is sometimes is indicative of a software issue in the targeted process.

Remedy

All of the output from "show log" should be examined for the occurrence of other events that may be relevant and lead up to the occurrence of this event. If this behavior is repeatable, then capturing the output from "show process" may be helpful. Also, running the "top" command may help isolate the occurrence of the issue in order to correlate it with other process activity. The configuration relative to the targeted application process may be particularly relevant to the issue.

Severity

Error

Message Text

Because the %name% (%threadId%) thread of process %pid%, has not responded within %count% periods of %delay% seconds, the process will be terminated.

Register new thread ID %tid% for process %name% pid %pid%

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |
| tid | ulnt |

EPM.Msg.thread_dereg

Description

part of the process monitoring algorithm

Remedy

None

Severity

Debug-Summary

Message Text

Deregister thread %tid% from the process %name% ID %pid%

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |
| tid | ulnt |

EPM.Msg.proc_ths_dereg

Description

part of the process monitoring algorithm. All threads will be deregistered when process is terminated

Remedy

None

Severity

Debug-Summary

Message Text

Deregister all threads for process %name% ID %pid%

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| pid | ulnt |

EPM.Msg.proc_unknown

Description

Unknown process; will not be monitored

Remedy

add process name to epmr configuration file

Severity

Notice

Message Text

Unknown Process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.th_reg_delay

Description

part of the process monitoring algorithm

Remedy

None

Severity

Debug-Summary

Message Text

Thread ID %tid% register delay %delay%

Message Parameters

| Name | Type |
|-------|------|
| tid | ulnt |
| delay | ulnt |

EPM.Msg.proc_reg

Description

part of the process monitoring algorithm

Remedy

None

Severity

Debug-Summary

Message Text

Register process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_kill

Description

User requested forceful termination of the process

Remedy

to restart process run cli command "run update"

Severity

Notice

Message Text

Requested to kill process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_shutdown

Description

User requested graceful termination of the process

Remedy

to restart process run cli command "run update"

Severity

Notice

Message Text

Requested process %name% shutdown

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_start

Description

User requested process start

Remedy

if process is already started, terminate first

Severity

Notice

Message Text

Requested process %name% start

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_exist

Description

can not start process that already exists

Remedy

if process is already started, terminate first

Severity

Error

Message Text

Process %name% already exists

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_hello

Description

part of the process monitoring algorithm.

Remedy

None

Severity

Debug-Summary

Message Text

Received hello from %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_thello

Description

part of the process monitoring algorithm.

Remedy

None

Severity

Debug-Summary

Message Text

Receive hello from process %name% thread ID %tid% delay %delay%

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| tid | xInt |
| delay | uInt |

EPM.Msg.hello_rate

Description

part of the process monitoring algorithm.Process sends hello too often. Message is logged, no action will be taken

Remedy

None

Severity

Info

Message Text

Process %name% sends hello too often, expected once in %delay% secs

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| delay | uInt |

EPM.Msg.proc_hello_ack

Description

part of the process monitoring algorithm.

Remedy

None

Severity

Debug-Summary

Message Text

Received Hello Ack from process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.proc_nomon

Description

part of the process monitoring algorithm.

Remedy

to monitor process edit epmrc configuration file

Severity

Debug-Summary

Message Text

Process %name% is not monitored

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.state_change

Description

Send state change to all processes

Remedy

None

Severity

Info

Message Text

Broadcast state change (%state%) to every known process

Message Parameters

| Name | Type |
|-------|------|
| state | ulnt |

EPM.Msg.send_failed

Description

Transmit of the packet failed

Remedy

reboot node

Severity

Error

Message Text

Send failed to process %name% connection ID %peerId% with error %bytes%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| peerId | ulnt |
| bytes | slnt |

EPM.Msg.update

Description

Requested update of the epmmc configuration file into the memory. All processes that are not running will be started automatically

Remedy

None

Severity

Notice

Message Text

Requested update of the epmmc configuration file into the memory

EPM.Msg.pkt_no_src

Description

Invalid packet, will not be processed

Remedy

None

Severity

Error

Message Text

Packet does not have source process name

EPM.Msg.pkt_valid

Description

Valid packet

Remedy

None

Severity

Debug-Summary

Message Text

Received packet type %tag% from process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| tag | xInt |

EPM.Msg.pkt_no_msg

Description

Invalid packet, will not be processed

Remedy

reboot node

Severity

Error

Message Text

Received packet from process %name% - no message tag

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Msg.pkt_oom

Description

out of memory

Remedy

reboot node

Severity

Error

Message Text

Can not allocate packet

EPM.Msg.command

Description

Received command from user

Remedy

None

Severity

Debug-Summary

Message Text

Received command %tag% for process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |
| tag | xInt |

EPM.Msg.thread_hello

Description

part of the process monitoring algorithm

Remedy

None

Severity

Debug-Summary

Message Text

Received hello from process %pname% thread name %tname% ID %tid%

Message Parameters

| Name | Type |
|-------|--------|
| pname | String |
| tname | String |
| tid | ulnt |

EPM.Msg.proc_report

Description

Process reported problem to EPM

Remedy

if problem is severe EPM will reboot node

Severity

Warning

Message Text

EPM: process %srcName% reported problem in process %dstName% - %reason%

Message Parameters

| Name | Type |
|---------|--------|
| srcName | String |
| dstName | String |
| reason | String |

EPM.Msg.likely_slept

Description

Due to resource limitation EPM might be not running for some time. It will need to backup its timers to process all pending hellos to avoid unnecessary process termination

Remedy

decrease load on switch

Severity

Warning

Message Text

EPM was likely not running for %secs% seconds. Will take adjust actions

Message Parameters

| Name | Type |
|------|------|
| secs | ulnt |

EPM.Upgrade Messages

- [EPM.Upgrade.DnldImg](#) on page 1204

EPM.Upgrade.DnldImg

Description

Downloading the specified filename image from the specified hostname at the specified IP address

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

User %user%: Download image from hostname %hostname% ip address %ipaddress% file name %filename% VR %vrname%

Message Parameters

| Name | Type |
|-----------|--------|
| hostname | String |
| ipaddress | String |

| Name | Type |
|----------|-------------|
| filename | String |
| vrname | String |
| user | AccountName |

EPM.Upgrade.DnldImgExtMem

Description

Downloading the specified filename image from the specified file in the external memory card

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

User %user%: Download image from file name %filename%

Message Parameters

| Name | Type |
|----------|-------------|
| filename | String |
| user | AccountName |

EPM.Upgrade.Fail

Description

Upgrade procedure failed.

Remedy

Two partitions are available for image storage. Try using the partition alternate to the one on which the upgrade failed. Exact remedy depends on the specific error.

Severity

Error

Message Text

Upgrade failed, %error%

Message Parameters

| Name | Type |
|-------|--------|
| error | String |

EPM.Upgrade.State

Description

Reporting status of upgrade

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Warning

Message Text

Upgrade status %status%

Message Parameters

| Name | Type |
|--------|--------|
| status | String |

EPM.Upgrade.NVRAMFail

Description

The specified NVRAM operation was not successful.

Remedy

change MSM

Severity

Error

Message Text

Upgrade NVRAM %action% of boot info failed with error %error%

Message Parameters

| Name | Type |
|--------|--------|
| action | String |
| error | sInt |

EPM.Upgrade.GetFile

Description

TFTP Get is being invoked to download the named file.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Getting %filename% using TFTP.

Message Parameters

| Name | Type |
|----------|--------|
| filename | String |

EPM.Upgrade.RegUnk

Description

The upgrade manager library request code value (UML_REQUEST_*) is not handled by a select case in the callback function.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Unknown request (%request%) from installer.

Message Parameters

| Name | Type |
|---------|------|
| request | ulnt |

EPM.Upgrade.Strt

Description

Image upgrade has started. Internal upgrade timer has started to make sure upgrade finishes within a pre-defined time period.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

User %user%: Image upgrade has started.

Message Parameters

| Name | Type |
|------|-------------|
| user | AccountName |

EPM.UploadEngr Messages

[EPM.UploadEngr.Command](#) on page 1210

[EPM.UploadEngr.Fail](#) on page 1210

EPM.UploadEngr.Command

Description

Upload Engineering to the specified hostname or ipaddress.

Remedy

This is an notification only. No remedy is needed

Severity

Notice

Message Text

Upload Engineering to hostname %hostname% ip address %ipaddress% VR %vrname%

Message Parameters

| Name | Type |
|-----------|--------|
| hostname | String |
| ipaddress | String |
| vrname | String |

EPM.UploadEngr.Fail

Description

An error was been detected that caused upload engineering to fail.

Remedy

The exact remedy is dependent on the particular situation; but the problem may be resolved by trying with the correct hostname or ipaddress associated the correct VR name.

Severity

Error

Message Text

Upload Engineering failed. %reason%

Message Parameters

| Name | Type |
|--------|--------|
| reason | String |

EPM.Version Messages

- [EPM.Version.vers_uptomax](#) on page 1218

EPM.Version.oom

Description

Not enough resources

Remedy

Reboot the node

Severity

Error

Message Text

Can not allocate memory

EPM.Version.vers_scan

Description

reads version of process

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Version is %major%.%minor%.%patch%.%build%

Message Parameters

| Name | Type |
|-------|------|
| major | ulnt |
| minor | ulnt |
| patch | ulnt |
| build | ulnt |

EPM.Version.vers_weight

Description

determines version weight

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Version Weight is %value%

Message Parameters

| Name | Type |
|-------|------|
| value | ulnt |

EPM.Version.dep_file_err

Description

Can not open dependency file

Remedy

install new, valid package

Severity

Warning

Message Text

Can not open file %fname%

Message Parameters

| Name | Type |
|-------|--------|
| fname | String |

EPM.Version.dep_load

Description

Using dependency file for dependency checking

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Notice

Message Text

Loading dependencies from the %fname%

Message Parameters

| Name | Type |
|-------|--------|
| fname | String |

EPM.Version.proc_unknwn

Description

Unknown process in the dependency file.

Remedy

Process names should match with processes in epmmc configuration file

Severity

Error

Message Text

Unknown process %name%

Message Parameters

| Name | Type |
|------|--------|
| name | String |

EPM.Version.vers_check_dep

Description

Creation of process dependency graph

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Summary

Message Text

Process %name% depends on process %prereq%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| prereq | String |

EPM.Version.vers_chckstate

Description

process state check failed

Remedy

Restart the process

Severity

Warning

Message Text

Process %name% is not in running state, current state %state%

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| state | ulnt |

EPM.Version.vers_exact

Description

dependency check success

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

Message Text

Found exact version of prerequisite process %prereq% for process %name%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| prereq | String |

EPM.Version.vers_range

Description

dependency check success

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

Message Text

Process %name% matches range of versions of prerequisite process %prereq%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| prereq | String |

EPM.Version.vers_minplus

Description

dependency check success

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

Message Text

Process %name% matches minimum plus version of prerequisite process %prereq%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| prereq | String |

EPM.Version.vers_uptomax

Description

dependency check success

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

Message Text

Process %name% matches up to maximum version of prerequisite process %prereq%

Message Parameters

| Name | Type |
|--------|--------|
| name | String |
| prereq | String |

ERPS.DebugSummary

Description

ERPS Debug message displayed when user wishes to view basic debug information.

Remedy

No action required - Informational message only

Severity

Debug-Summary

Message Text

%logMsg%

Message Parameters

| Name | Type |
|--------|--------|
| logMsg | Printf |

ERPS.RxPkt

Description

Event occurs when a packet received, from an external ERPS source, on the specified port is enqueued in the CRU buffer

Remedy

No action required - Informational message only

Severity

Debug-Data

Message Text

Incoming packet from port %slotport% with data %ptr% and length of %len% bytes

Message Parameters

| Name | Type |
|----------|-----------------|
| slotport | ingressSlotPort |
| ptr | Buf-ptr |
| len | Buf-len |

ERPS.PortState

Description

Request sent to change the port state to the VLAN manager. The port state is now set to the new state.

Remedy

No action required - Notification message only

Severity

Debug-Data

Message Text

Port %slot%:%port% VLAN %vlanId% %context% oldState 0x%oldState% newState
0x%newState%

Message Parameters

| Name | Type |
|----------|----------|
| slot | uInt32 |
| port | uInt32 |
| vlanId | VLAN-tag |
| context | String |
| oldState | xInt32 |
| newState | xInt32 |

ERPS.SendMsgVLANMgrOK

Description

Successfully sent message to the VLAN manager on having the port states set correctly for the given VLAN port interfaces.

Remedy

No action required - Notification message only

Severity

Debug-Data

Message Text

%context% count=%counter%

Message Parameters

| Name | Type |
|---------|--------|
| context | String |
| counter | uInt32 |

ERPS.SendMsgFDBFloodOK

Description

Flood message sent successfully to the FDB manager to flood traffic on the ring ports.

Remedy

No action required - Notification message only

Severity

Debug-Data

Message Text

%context% #Ports %num%

Message Parameters

| Name | Type |
|---------|--------|
| context | String |
| num | uInt32 |

ERPS.SendMsgFDBFlushOK

Description

Message sent to the FDB manager to flush the VLAN port interfaces for the ring port

Remedy

No action required - Notification message only

Severity

Debug-Data

Message Text

%context% Port %slot%:%port% #VLANs %num%

Message Parameters

| Name | Type |
|---------|--------|
| context | String |
| slot | uInt32 |
| port | uInt32 |
| num | uInt32 |

ERPS.AllocDataVLANFail

Description

Malloc for adding a data VLAN to the ERPS ring failed

Remedy

Collect data using the 'show memory' and 'show process erps' CLI commands. Collect memory statistics before reporting it to technical support. Reduce the scaling limits.

Severity

Error

Message Text

Memory allocation for Data VLAN %vlan% failed

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |

ERPS.AllocCRUBufFail

Description

Could not enqueue message PDUs as the memory allocation of CRU buffer failed.

Remedy

Collect data from the 'show memory' and 'show process erps' CLI commands. Check the memory usage of the system before and after issuing a 'disable erps' command. Restart/reboot of the switch may be necessary. If the problem persists, then this is an

unexpected internal condition needing technical assistance. Contact technical support with the information obtained

Severity

Error

Message Text

Memory allocation for CRU buffer failed for ring: %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.InitModFail

Description

Event occurs as the ERPS protocol stack failed to be initialized

Remedy

Collect data from 'show process erps' CLI command. Check to see if the process is in ready state. If the problem persists, this is an unexpected internal condition needing technical assistance. Contact technical support with the information obtained

Severity

Critical

Message Text

Initializing ERPS protocol module unsuccessful

ERPS.PreAllocFailNoAckIndx

Description

Could not pre-allocate memory to to set up the data for Acks coming from VLAN manager. Memory is allocated corresponding to indices. The condition fails as there were no unoccupied ack indices available.

Remedy

Collect data from the 'show memory' and 'show process' CLI commands. Check the memory usage of the system and check if the process is in ready state and then contact technical support

Severity

Critical

Message Text

Pre-allocation of memory to set up acknowledgement data failed because index was not available

ERPS.AllocRingFail

Description

Malloc failed while adding sub-ring to the main ring

Remedy

Delete one or more sub-rings from the main-ring. Collect data from the 'show memory' and 'show process erps' CLI commands. Check the memory usage of the system

Severity

Error

Message Text

Memory allocation failed for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.AllocAsyncCntxtFail

Description

Malloc failed while trying to allocate the Async context needed for setting the port states

Remedy

Collect data from the 'show memory' and 'show process' CLI commands. Check the memory usage of the system and then contact technical support

Severity

Error

Message Text

Memory allocation failed while trying to set the port interface state

ERPS.AllocFDBInfoFail

Description

Memory could not be allocated to send a message to FDB manager to flush the VLAN port interfaces for the ring port

Remedy

Collect data from the 'show memory' and 'show process' CLI commands. Check the memory usage of the system and then reboot

Severity

Error

Message Text

Memory allocation for FDB info failed

ERPS.AllocVLANMsgFail

Description

Message could not be created to be sent to VLAN to set port states

Remedy

Collect data from the 'show memory' and 'show process' CLI commands. Check the memory usage of the system and then reboot

Severity

Error

Message Text

VLAN message creation failed. System out of memory

ERPS.DelSubRingFail

Description

Invalid sub-ring found for the main-ring

Remedy

Collect output from 'show erps' and 'show erps <ring>' CLI. 'disable erps <ring>'. Check if the ring to be added is a sub-ring and the ring to which the sub-ring needs to be added is configured as main ring. Use valid ring names

Severity

Error

Message Text

Deleting sub-ring %sring% from main ring %ring% failed

Message Parameters

| Name | Type |
|-------|--------|
| sring | String |
| ring | String |

ERPS.UnregVLANMgrNullParm

Description

Call back from VLAN manager to de-register failed due to null value of the ring pointer as input

Remedy

Collect output from 'show erps' CLI and check the validity of the ring. Use a valid ring and if the problem persists, it would be a software fault. Contact technical support

Severity

Error

Message Text

De-registration from VLAN manager failed

ERPS.RegVLANMgrNullParm

Description

Callback received from VLAN manager to register failed due to null value of ring pointer as input

Remedy

Collect output from 'show erps' CLI and check validity of the ring and the VLAN. Check validity of the ring and ring parameters using 'show erps ˚'. If the problem persists, then this is an unexpected internal condition needing technical assistance.

Severity

Error

Message Text

Registration with VLAN manager failed. Invalid input

ERPS.RegVLANPortFail

Description

Could not register VLAN port interface with VLAN manager when a hardware call to create a ring is received. As a result, port blocking/unblocking function into EXOS is not called.

Remedy

Collect output from 'show erps ˚' CLI and check validity of the port and VLAN instance configured on the ring. use 'show port &port;' CLI to obtain port statistics. Use a valid port configured on a valid VLAN

Severity

Error

Message Text

VLAN Manager failed to register VLAN port interface for VLAN %vlan% and port %slot%:%port%

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| slot | uInt32 |
| port | uInt32 |

ERPS.RegProtolFail

Description

Could not register protocol interface with VLAN manager on the VLAN port interface when a call back is received from VLAN.

Remedy

'show process erps' and check if the process is in ready state. Collect output from 'show erps' command and validate the ring port and VLAN information for the specific ring. If problem persists issue a 'disable erps' and then 'enable erps'.

Severity

Error

Message Text

VLAN Manager failed to register protocol for port %slot%:%port%

Message Parameters

| Name | Type |
|------|--------|
| port | uInt32 |
| slot | uInt32 |

ERPS.UnregVLANPortByHwldFail

Description

Could not deregister VLAN port interface from VLAN manager when a ring delete message is received in the hardware. During a ring delete, all the VLAN port interfaces associated with the ring need to be de-registered from the VLAN manager

Remedy

Using 'show process erps' check the status of the protocol. Collect output from 'show erps &ring>' command and validate the ring port and VLAN information.

Severity

Error

Message Text

Failed to de-register VLAN port interfaces from VLAN manager for the ring port with index %portIdx% VLAN Id %vlanId% ring %ring%

Message Parameters

| Name | Type |
|---------|--------|
| portIdx | ulnt32 |
| vlanId | ulnt32 |
| ring | String |

ERPS.UnregProtolfFail

Description

Could not de-register protocol from VLAN manager on the VLAN port interface when a call back is received.

Remedy

'show process erps' to check the status of the protocol. Validate the ports associated with the ring using 'show erps' command

Severity

Error

Message Text

VLAN Manager failed to register protocol for port %slot%:%port%

Message Parameters

| Name | Type |
|------|--------|
| port | ulnt32 |
| slot | ulnt32 |

ERPS.SetVLANPortStateParmInv

Description

Could not set the VLAN port interface state to either block or unblock as the VLAN port interface was NULL.

Remedy

Check validity of the port and VLAN instance configured on the ring using the 'show erps' command

Severity

Error

Message Text

Invalid input while setting VLAN-port interface state %vpif%

Message Parameters

| Name | Type |
|------|--------|
| vpif | ulnt32 |

ERPS.SetVLANPortStateFail

Description

Event occurs when an update to VLAN in ring fails. The VLAN port interface states based on ring states are not set.

Remedy

Collect information from 'show memory' command. Validate the switch for enough memory. The problem may be caused due to an error sending IPML messages; reboot switch in that case.

Severity

Error

Message Text

Error while setting VLAN-port state VLAN %vlan% port %port%:%slot%

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| port | uInt32 |
| slot | uInt32 |

ERPS.EnblModFail

Description

The ERPS module could not be enabled while the protocol stack was being initialized. The protocol stack received a create event for the ERPS module, which returned a failure. The module was not put into the ACTIVE state.

Remedy

Check the amount of memory being used using 'show memory'. Check the corresponding protocol and the state of the protocol using 'show process erps' command

Severity

Critical

Message Text

Enabling ERPS module failed

ERPS.EnblSysCtrlFail

Description

Enabling the protocol stack system control status failed. The protocol is in shutdown mode. ERPS module does not function as a result.

Remedy

Collect information from 'show process' command. Note the amount of memory being used using 'show memory' command and report to technical support.

Severity

Critical

Message Text

ERPS_START system control failed

ERPS.PortNotFnd

Description

Event occurs when VLAN manager API to find port interface index using the slot:port returned a failure.

Remedy

Check ring ports using 'show erps <ring>' and 'show port statistics' command. Specify a valid port

Severity

Error

Message Text

Failed to find port interface for port %slot%:%port%

Message Parameters

| Name | Type |
|------|--------|
| slot | uInt32 |
| port | uInt32 |

ERPS.DataVLANNotFnd

Description

Event occurs when data VLAN is not configured for the ring.

Remedy

Configure a valid VLAN as the data VLAN for the ring. If data VLAN already present, delete the VLAN from the ring and add it again

Severity

Error

Message Text

Failed to find data VLAN for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.AddFDBFiltFailInvVLAN

Description

Not able to successfully enter the FDB entry for an invalid VLAN. FDB filter action failed for the control VLAN

Remedy

Collect information from show erps and 'show erps <ring>' and 'show fdb <vlan>' command and validate the VLAN entry

Severity

Error

Message Text

FDB entry failed due to invalid VLAN. error status %status% VLAN %vlan%

Message Parameters

| Name | Type |
|--------|--------|
| vlan | String |
| status | uint32 |

ERPS.SetPortCfgFail

Description

Port not configured as an ERPS ring port because IPML message could not be sent to VLAN manager

Remedy

'show port <port>' is used to validate the port. The event may be caused due to memory not allocated or IPML message failure sending to VLAN manager.

Severity

Error

Message Text

Setting the port %port% as an ERPS ring port failed.

Message Parameters

| Name | Type |
|------|--------|
| port | uint32 |

ERPS.AddCtrlVLANFiltFail

Description

Received error when trying to add the MAC filter and FDB entry to the control VLAN. The RAPS PDU dstMAC filter could not be added to HW

Remedy

Check the VLAN parameters configured on the ring using 'show erps <ring>' and 'show vlan <vlan>' commands

Severity

Error

Message Text

Error adding control VLAN %vlan% destination MAC filter

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |

ERPS.DeIcTrIVLANFiltFail

Description

Received an error deleting the MAC filter and FDB entry associated with the control VLAN. RAPS PDU dstMAC filter could not be deleted from HW

Remedy

Check the VLAN parameters configured on the ring using 'show erps ˚' and 'show vlan &vlan;' commands

Severity

Error

Message Text

Error deleting control VLAN %vlan% destination MAC filter

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |

ERPS.SendPortStateMsgFail

Description

VLAN manager failed to set the port state. Message not sent to VLAN manager to set port interface states contained for the VLAN

Remedy

Check ingress and egress port states using 'show port' and 'show port statistics' commands. Check the associated link state to be UP.

Severity

Error

Message Text

Could not send vpst state msg to VLAN manager for vlanId %vlanId%, port %slot%:%port%

Message Parameters

| Name | Type |
|--------|--------|
| vlanId | uInt32 |
| slot | uInt16 |
| port | uInt16 |

ERPS.PortNotFndByIndx

Description

Port interface not found using port indices. VLAN port interface states not set correctly

Remedy

Validate info using 'show vlan <vlan>' command and check the ports added to the VLAN

Severity

Error

Message Text

Ring port interface not found for the corresponding port index %portindex%

Message Parameters

| Name | Type |
|-----------|--------|
| portindex | uInt32 |

ERPS.RecvNullFlushInfo

Description

Flush information NULL. FDB flush operation not performed for the ring.

Remedy

Check the interconnected nodes neighboring nodes in the ring to be functional. Use 'show erps <ring>' command

Severity

Error

Message Text

Null Flush information received for ring context %context%

Message Parameters

| Name | Type |
|---------|--------|
| context | uInt32 |

ERPS.RingParmNull

Description

The ring pointer passed to the function is NULL. Ring information could not be accessed.

Remedy

Use 'show erps' command to get a list of rings configured. Use a valid ring. See if the number of rings configured does not exceed the permissible limit. If the problem persists, then this is an unexpected internal condition needing technical assistance. Contact technical support with the information obtained

Severity

Error

Message Text

Ring Parameter Null.

ERPS.AttachRingCntxtFail

Description

Ring context not attached. The hardware ring configuration, as a result, fails

Remedy

Check the ring that is being passed using 'show erps <ring>' command. Validate the ring. If problem occurs again, report to technical support as a software fault.

Severity

Error

Message Text

Failed to attach the ring context. Null ring pointer for ring Id %ringId% context%context%

Message Parameters

| Name | Type |
|---------|--------|
| ringId | uInt32 |
| context | uInt32 |

ERPS.PortNotFndByPortInstc

Description

VLAN manager function returned a NULL port interface for port instance

Remedy

Check if the port Id is valid. Use 'show erps <ring>' and 'show port <port>' to validate the port configured

Severity

Error

Message Text

Port interface not found for port instance %instance%

Message Parameters

| Name | Type |
|----------|--------|
| instance | uInt32 |

ERPS.VLANIfNotFnd

Description

VLAN manager API call returned a failure on searching for a VLAN interface corresponding to the VLAN instance

Remedy

collect output from 'show erps' and 'show vlan detail' and report it to the network admin

Severity

Error

Message Text

VLAN interface not found for VLAN instance %VLANIns%

Message Parameters

| Name | Type |
|---------|--------|
| VLANIns | ulnt32 |

ERPS.VLANPortIfNull

Description

Request to change port state not successful as ERPS ring port was not part of member VLAN.

Remedy

Use commands 'show VLAN <vlan>,' 'show port <port>,' and 'show erps' to validate the VLAN and port being used. Ring port should be added to each ERPS VLAN

Severity

Warning

Message Text

Ring port %port% of ring %ring% not found on VLAN %vlan%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |
| port | String |
| vlan | String |

ERPS.PortStateInv

Description

ERPS module not notified about a link state change

Remedy

Check status of the port interface if it is LINKUP or LINKDOWN using 'show port <port>' command

Severity

Error

Message Text

Invalid port status %portStatus% for port %port%

Message Parameters

| Name | Type |
|------------|--------|
| port | String |
| portStatus | uint32 |

ERPS.SetVLANTagFail

Description

Received a call back from VLAN manager to change the tag of a VLAN. The operation was unsuccessful.

Remedy

Check the status of the VLAN using 'show vlan <vlan>' command. Use a valid tag.

Severity

Error

Message Text

Could not set the tag for VLAN %vlan%

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |

ERPS.CreatNETTxSockFail

Description

Creation of the socket used for interfacing to netTx failed.

Remedy

Using show port statistics command, ensure that the ports are in the correct state. Check memory usage using 'show memory' before switch reboot

Severity

Error

Message Text

Failed to create raw socket for netTx. return code %code%

Message Parameters

| Name | Type |
|------|--------|
| code | uInt32 |

ERPS.UpdtVLANPortStateFail

Description

ERPS module not notified about a VLAN port interface change

Remedy

Check ring parameters using 'show erps <ring>' and the VLAN parameters using 'show vlan <vlan>' commands

Severity

Error

Message Text

Data VLAN %vlan% ports' states not updated for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| ring | String |

ERPS.UncfgRingPortFail

Description

The port is not part of an ERPS ring any more. Message sent to VLAN manager to indicate that the port is not part of an ERPS ring, failed.

Remedy

Check port parameters validity using 'show port <port>' command

Severity

Error

Message Text

Unconfiguring ring port %port% failed

Message Parameters

| Name | Type |
|------|--------|
| port | ulnt32 |

ERPS.NtfyMcastMgrFail

Description

MC manager module not notified about a port state change to flush multi-cast cache and send IGMP query

Remedy

Check the VLAN and ring port parameters using 'show erps <ring>'; command

Severity

Error

Message Text

Multicast manager could not be notified for context %context%

Message Parameters

| Name | Type |
|---------|--------|
| context | uInt32 |

ERPS.SetPortFailNullCntxt

Description

The ring context could not be found

Remedy

Check the ring value using show erps command before rebooting switch

Severity

Error

Message Text

Could not set port state. Ring null context received for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.UpdtVLANFailNullCntxt

Description

The ring context could not be found

Remedy

Check the ring parameters and VLAN using 'show erps <ring>' before rebooting switch

Severity

Error

Message Text

Could not set VLAN %vlan% port interface state. Ring null context received for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| vlan | uInt32 |
| ring | uInt32 |

ERPS.UnblkPortByVLANIdFail

Description

The port could not be located on the VLAN for the given port index

Remedy

Use command 'show vlan <vlan>' and 'show port <port>' and show erps to validate the VLAN and port parameters. Make sure a valid port and VLAN is used.

Severity

Error

Message Text

Could not set VLAN Id %vlan% port %port% state to Unblock

Message Parameters

| Name | Type |
|------|--------|
| port | uInt32 |
| vlan | uInt32 |

ERPS.BlkPortByVLANIdFail

Description

The port could not be located on the VLAN for the given port index

Remedy

Use command 'show vlan <vlan>,' and 'show port <port>,' and 'show erps' to validate the VLAN and port parameters. Make sure a valid port and VLAN is used.

Severity

Error

Message Text

Could not set VLAN Id %vlan% port %port% state to block

Message Parameters

| Name | Type |
|------|--------|
| port | uInt32 |
| vlan | uInt32 |

ERPS.UnblkPortByGrpIdFail

Description

The port could not be located on the VLAN for the given port index

Remedy

Check VLAN using 'show vlan <vlan>' and the port statistics using 'show port <port>'

Severity

Error

Message Text

Could not set VLANs (part of group %grp%) port %port% state to Unblock

Message Parameters

| Name | Type |
|------|--------|
| port | uInt32 |
| grp | uInt32 |

ERPS.BlkPortByGrpIdFail

Description

The port could not be located on the VLAN for the given port index

Remedy

Use command 'show vlan <vlan>' and 'show port <port>' and show erps to validate the VLAN and port parameters. Make sure a valid port and VLAN is used.

Severity

Error

Message Text

Could not set VLANs (part of group %grp%) port %port% state to block

Message Parameters

| Name | Type |
|------|--------|
| port | uInt32 |
| grp | uInt32 |

ERPS.CreatRingFail

Description

Ring could not be created because of low memory or maximum number of ring instances reached

Remedy

Check the number of ring instances created using 'show erps' command. Delete one or more ring instances. Also use 'show memory' command to see if the system has enough memory to allocate.

Severity

Error

Message Text

Ring %ring% could not be created

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.RingNotFnd

Description

The binary tree search returned a null on search by ring name

Remedy

Search for a valid ring instance. 'show erps' command lists the valid rings configured on the switch

Severity

Error

Message Text

Ring %ring% could not be found

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.MaxNumRingInstcExcd

Description

Maximum number of ring instances exceeded. Ring not created.

Remedy

Delete one or more ring instances. 'show erps' displays the number of ring instances configured on the switch

Severity

Error

Message Text

Ring instance %ringIns% exceeds the maximum number permissible

Message Parameters

| Name | Type |
|---------|--------|
| ringIns | uint32 |

ERPS.MEPInstcNotFnd

Description

Received null MEP instance for MEP id. MEP id did not match the MEP id of the east, west or virtual channel MEP

Remedy

Check the MEP Id configured for the ring using 'show erps <ring>'. 'show cfm <domain>' lists the CFM parameters configured for that domain. Configure valid CFM parameters for the ring

Severity

Error

Message Text

MEP instance not found for mep ID %mep% ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| mep | uInt32 |
| ring | String |

ERPS.AddSubRingFailMaxExcd

Description

Maximum number of sub ring instances added to the ring, can not add more

Remedy

Delete one or more sub-ring instances attached to the ring

Severity

Error

Message Text

Maximum number of sub-rings exceeded for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.MEPObjNotFnd

Description

No MEP object found corresponding to a port on the ring. MEP not configured for the ring

Remedy

Use 'show erps <ring>' and 'show cfm <domain>' commands. Check ring CFM parameters, port values and control VLAN. Configure CFM parameters for the ring containing valid ring ports.

Severity

Warning

Message Text

No MEP object exists for ring: %ring% in-port: %slot%:%port% vlanInst: %vlanInst%

Message Parameters

| Name | Type |
|----------|--------|
| ring | String |
| slot | uInt32 |
| port | uInt32 |
| vlanInst | uInt32 |

ERPS.SendRingPortCfgFail

Description

Port is not configured as part of any ERPS ring. The info could not be sent to the VLAN Mgr

Remedy

Check the ring port statistics using the 'show port <port>' and 'show port <port>' statistics commands. Check VLAN port interface states

Severity

Warning

Message Text

Could not send message to VLAN manager to inform port with index %index% config change for ring %ring%

Message Parameters

| Name | Type |
|-------|--------|
| index | ulnt32 |
| ring | String |

ERPS.SendVLANMgrMsgFail

Description

Message was not sent for the VLAN group to change port states

Remedy

Check VLAN port interface states. Collect output from 'show port <port>' and 'show vlan <vlan>' commands and report it to technical support

Severity

Warning

Message Text

Could not send message to VLAN manager for #vlans %num%

Message Parameters

| Name | Type |
|------|--------|
| num | ulnt32 |

ERPS.DelCtrlVLANFail

Description

Control VLAN can not be deleted when ring is in ACTIVE state

Remedy

Disable ring to delete VLAN. Check ring status using 'show erps <ring>' command.

Severity

Warning

Message Text

Delete control VLAN for ring %ring% VLAN:%vlan%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |
| vlan | String |

ERPS.AddDataVLANFail

Description

Data VLAN can not be deleted as the registration with VLAN manager failed.

Remedy

'show erps <ring>' 'show vlan <vlan>' Check validity of ring parameters and VLAN parameters.

Severity

Warning

Message Text

Add data VLAN %vlan% to ring %ring% failed

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| ring | String |

ERPS.IncrsTxBufSizNETTxFail

Description

Failed to increase the netTx transmit buffer size to IM.

Remedy

Check memory usage using 'show memory' command before switch reboot

Severity

Warning

Message Text

Transmit buffer size increase for netTx failed. return code %sockId%

Message Parameters

| Name | Type |
|--------|--------|
| sockId | uInt32 |

ERPS.IncrsRxBufSizNETTxFail

Description

Failed to increase the netTx receive buffer size to IM.

Remedy

Check memory usage using 'show memory' command before switch reboot

Severity

Warning

Message Text

Receive buffer size increase for netTx failed. return code %sockId%

Message Parameters

| Name | Type |
|--------|--------|
| sockId | uInt32 |

ERPS.RecvPktFailSockRxTmout

Description

Failed receive the packet and therefore connection to the netTx services to get BPDUs to/from kernel failed.

Remedy

Use 'show port <port> statistics' and 'show erps <ring> statistics' commands to determine the cause of the time out. Collect the data before reporting to the network admin

Severity

Warning

Message Text

Failed to receive a packet due to a socket connection time out. return code: %sockId%

Message Parameters

| Name | Type |
|--------|--------|
| sockId | uInt32 |

ERPS.NoAckRingPortFail

Description

Could not set up the data for acks coming from VLAN manager. Could not set the port in the unblocked state

Remedy

Check the previous states of the port and the port index values

Severity

Warning

Message Text

Acknowledgement not setup for ports belonging to ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.SetPortStateNoGrpIdAck

Description

Ack not set up, hence the VLAN ports state not set correctly.

Remedy

Check the previous VLAN port interface states and the port index values

Severity

Warning

Message Text

Acknowledgement not setup for VLAN group Id %grp% having #vlans: %numvlan% for the west port for ring %ring%

Message Parameters

| Name | Type |
|---------|--------|
| grp | uInt32 |
| numvlan | uInt32 |
| ring | String |

ERPS.SetRingPortStateFail

Description

Port states could not be set correctly

Remedy

Check the ring parameters using show erps and 'show erps <ring>' commands. Validate the VLAN configuration on the ring.

Severity

Warning

Message Text

Ring port state not set action %action% port %port%

Message Parameters

| Name | Type |
|--------|--------|
| port | uInt32 |
| action | uInt32 |

ERPS.RingIdGrpIdMismatch

Description

Port states could not be set correctly due to a ring Id and group Id mismatch

Remedy

use 'show erps' command to determine a valid ring being used. This is a software defect. Contact the technical support

Severity

Warning

Message Text

Ring Id %ringId% does not match VLAN group Id %grpId%

Message Parameters

| Name | Type |
|--------|--------|
| ringId | uInt32 |
| grpId | uInt32 |

ERPS.CtrlVLANNotFnd

Description

Control VLAN has not been configured for the ring. Event occurs during configuration of MEP as it could not be configured for the ring.

Remedy

Configure a valid VLAN as control VLAN for the ring

Severity

Warning

Message Text

Control VLAN not found for ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| ring | String |

ERPS.UnregVLANPortIfFail

Description

While deleting the data VLAN from the ring, the VLAN port interface could not be de-registered from VLAN manager

Remedy

Check the VLAN port interface. Use 'show vlan <vlan>' commands

Severity

Warning

Message Text

De-Registering VLAN %vlan% port %slot%:%port% failed

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| slot | uInt32 |
| port | uInt32 |

ERPS.DeIDataVLANFail

Description

Event occurs when a failure is encountered while data VLAN is deleted from the ring.

Remedy

Check the VLANs associated with the ring and the VLAN/ring parameters using 'show vlan <vlan>' and 'show erps <ring>' parameters

Severity

Warning

Message Text

Unable to delete data VLAN %vlan% from ring %ring%

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| ring | String |

ERPS.VLANApplInfoNotNull

Description

Could not malloc application specific data information for the VLAN

Remedy

Check the VLAN information using the 'show vlan <vlan>' detail command

Severity

Warning

Message Text

The VLAN %vlan% information specific to the ring was not NULL

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |

ERPS.LrnRmtMEP

Description

A new remote MEP is learnt by the MEP. This may result due to a new MEP being configured in the ring or one of the neighboring MEP going down

Remedy

No action required - Informational message only.

Severity

Notice

Message Text

MEP Id %mepId% sees %rmepnum% remote MEPS on port. Remote MEP id %rmepId% learned.

Message Parameters

| Name | Type |
|---------|--------|
| mepId | uInt32 |
| rmepnum | uInt32 |
| rmepId | uInt32 |

ERPS.RmtMEPCntUndfl

Description

The neighboring remote MEP is down. The remote MEP count reached below zero, hence the event occurs and the count is reverted to zero until a new remote MEP is learnt

Remedy

No action required - Informational message only.

Severity

Notice

Message Text

MEP Id %mepId% remote MEP count %rmepnum% decremented, setting remote MEP count to zero.

Message Parameters

| Name | Type |
|---------|--------|
| mepId | uInt32 |
| rmepnum | uInt32 |

ERPS.CreatCFMMEPAIIOK

Description

MEP created successfully for the ring

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Success acknowledgement for all MEP creation

ERPS.DeICFMMEPAIIOK

Description

CFM unconfigured for ring

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Success acknowledgement for all MEP deletion

ERPS.CreatCFMAssocAckOK

Description

Maintenance associated created successfully for CFM

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Acknowledgement for CFM association creation

ERPS.CreatCFMDomainAckOK

Description

Maintenance domain created successfully for the ERPS ring

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Acknowledgement for CFM domain creation

ERPS.SendMEPInfo

Description

MEP info sent successfully

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

ERPS.AddSubRing

Description

Successfully added a sub-ring to the main ring at the inter connected nodes

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Sub-ring %sring% added to the main ring %ring%

Message Parameters

| Name | Type |
|-------|--------|
| sring | String |
| ring | String |

ERPS.RecvCFMSrvrAckInfo

Description

Received an ACK from the CFM server during connection establishment

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Acknowledgement received from CFM server after handling a client configuration request. opcode %opcode% ack status %status% MEP Id %mep%

Message Parameters

| Name | Type |
|--------|--------|
| opcode | uInt32 |
| status | uInt32 |
| mep | uInt32 |

ERPS.UpdtRingPortOK

Description

Successfully updated the ring port status upon receiving an ACK from VLAN manager to place a port in block/forward state

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Ring port status updated context %context% ring %ring% portIndex %portIdx%, Update: %updt%

Message Parameters

| Name | Type |
|---------|--------|
| context | uInt32 |
| ring | String |
| portIdx | uInt32 |
| updt | uInt16 |

ERPS.InitReadWritLockFail

Description

Initializing the thread failed. Device manager not connected as a result

Remedy

The message is displayed because the thread started to initialize services failed. Check if ERPS process is in the ready state using 'show process' command. This is an unexpected internal condition needing technical assistance.

Severity

Critical

Message Text

ERPS cannot initialize the rwlock

ERPS.EnableFail

Description

The ERPS ring could not be enabled. The specific reason will be included in the log message.

Remedy

The reason identified in the log will describe, in sufficient detail, why the ring could not be enabled. Please correct the error condition, and then, issue the CLI command "enable ring [ring-name]" again.

Severity

Error

Message Text

Failed to enable ring %ring% during load config. %reason%

Message Parameters

| Name | Type |
|--------|--------|
| ring | String |
| reason | String |

ERPS.DebugVerbose

Description

ERPS Debug message displayed when user wishes to view verbose debug information.

Remedy

No action required - Informational message only

Severity

Debug-Verbose

Message Text

%logMsg%

Message Parameters

| Name | Type |
|--------|--------|
| logMsg | Printf |

ERPS.AddMEPFailMaxExcd

Description

Maximum number of Maintenance End Points added for this platform, can not add more. Since the MEP is tied to a ring, the ring must be disabled if the MEP cannot be installed.

Remedy

Delete one or more rings, or delete one or more Maintenance End Points so another can be added.

Severity

Error

Message Text

Maximum number of Maintenance End Points exceeded for this platform when adding MEP ID %mep%. Disabling ring %ring%

Message Parameters

| Name | Type |
|------|---------|
| ring | String |
| mep | ulInt32 |

ERPS.RingStateChg

Description

The ring state changed from old state to new state due to some topology change in the ring. The ring states can be one of "Idle", "Pending", "Protection", "Manual-Switch", "Forced-Switch", "Disabled".

Remedy

No action required - Informational message only

Severity

Info

Message Text

ERPS ring %ring% state changed from old state %oldState% to new state %newState%

Message Parameters

| Name | Type |
|----------|--------|
| ring | String |
| oldState | String |
| newState | String |

ERPS.ShutdownBegin

Description

User has initiated graceful process shutdown for ERPS.

Remedy

No action required - Informational message only

Severity

Info

Message Text

ERPS process shutting down started

ERPS.ShutdownEnd

Description

User has initiated graceful process shutdown for ERPS. The shutdown action is completed.

Remedy

No action required - Informational message only

Severity

Info

Message Text

ERPS process shut down completed

ERPS.DebugTrace

Description

ERPS Debug message displayed when user wishes to view basic debug information.

Remedy

No action required - Informational message only

Severity

Debug-Verbose

Message Text

%logMsg%

Message Parameters

| Name | Type |
|--------|--------|
| logMsg | Printf |

ERPS.TxPkt

Description

Event occurs when a packet sent, from an external ERPS source, on the specified port is enqueued in the CRU buffer

Remedy

No action required - Informational message only

Severity

Debug-Data

Message Text

Outgoing packet from port %slotport% with data %ptr% and length of %len% bytes

Message Parameters

| Name | Type |
|----------|-----------------|
| slotport | ingressSlotPort |
| ptr | Buf-ptr |
| len | Buf-len |

- [ESRP.State.UnexpectedEvent](#) on page 1305
- [ESRP.State.TimerMismatch](#) on page 1306

ESRP.State.ToMstr

Description

The switch transitioned from the specified ESRP state to Master on the specified VLAN.

Remedy

The prior Master switch has either been timed out or it lost an ESRP election. If the links between the ESRP switches are still intact and operating, consult the prior Master's log for indications of an election loss. For instance, a port went down or was disabled, or a gateway IP ping failed (if ping tracking is enabled). Note that this condition may also occur if ESRP was disabled on the specified vlan.

Severity

Warning

Message Text

```
%oldState%--&gt;MASTER : domain=%domainName% [%reason%] : [version =  
%protVersion%]
```

Message Parameters

| Name | Type |
|-------------|--------|
| oldState | String |
| domainName | String |
| reason | String |
| protVersion | String |

ESRP.State.ToSlave

Description

This switch transitioned from the specified ESRP state to Slave on the specified VLAN.

Remedy

This condition is not used for Master to Slave transitions. Transitions to Standby are a normal operation during initialization or configuration. It may also occur if a master reelection took place and two switches transitioned to Premaster. One will switch back to Slave.

Severity

Warning

Message Text

```
%oldState%--&gt;SLAVE : domain=%domainName% [%reason%]: [version =

```

Message Parameters

| Name | Type |
|-------------|--------|
| oldState | String |
| domainName | String |
| reason | String |
| protVersion | String |

ESRP.State.ToNtrl

Description

This switch transitioned from the specified ESRP state to Neutral on the specified VLAN.

Remedy

Transitions to Neutral are normal during initialization and configuration.

Severity

Warning

Message Text

```
%oldState%--&gt;NEUTRAL : domain=%domainName% [%reason%] : [version =
%protVersion%]
```

Message Parameters

| Name | Type |
|-------------|--------|
| oldState | String |
| domainName | String |
| reason | String |
| protVersion | String |

ESRP.State.ToPremstr

Description

This switch transitioned from the specified ESRP state to Premaster on the specified VLAN.

Remedy

The prior Master has either been timed out or it lost an ESRP election. As a result, this switch is verifying that networks condition are correct for it to become the new Master. If the links between the ESRP switches are still intact and operating, consult the prior Master's log for indications of an election loss. For instance, a port went down or was disabled, or a gateway IP ping failed (if ping tracking is enabled).

Severity

Warning

Message Text

```
%oldState%--&gt;PREMASTER : domain=%domainName% [%reason%] : [version =

EtherOAM.ReadSockFail

Description

Warning message when there was a socket read failure.

Remedy

Although this shouldn't happen, it is not critical. If this error comes continuously, check system logs for any system initialization errors

Severity

Warning

Message Text

Failed to receive an Ethernet OAM PDU because a read of socket %sockId% failed with error code %errorCode%.

Message Parameters

| Name | Type |
|-----------|--------|
| sockId | ulnt |
| errorCode | xInt16 |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.AllocSockFail

Description

Ethernet OAM application failed to open a communication channel with the system to communicate with the outside world.

Remedy

When this happens packets can't be send out, or received from the network. See if restarting the process solves this problem. Under normal circumstances this should not happen, however if it does, please escalate to engineering.

Severity

Error

Message Text

Failed to allocate global OAM packet socket, error: %errmsg%.Return Code : %retCode%

Message Parameters

| Name | Type |
|---------|--------|
| errmsg | String |
| retCode | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.InitTimerFail

Description

Ethernet OAM application failed to initialize timers. This should not occur unless otherwise there is a systemwide problem and all application attempt to interface with timer module fails.

Remedy

When this happens, any timer based events/functionalities may not work as expected. See if restarting the process solves this problem. Under normal circumstances this should not happen, however if it does, please escalate to engineering.

Severity

Error

Message Text

Failed to initialize Ethernet OAM timers

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.BindFiltFail

Description

Ethernet OAM application failed to bind/unbind to/from netTx Filter. This should never occur, but if it does, we simply drop the request for adding key to netTx for packet reception.

Remedy

Check whether system boot messages (log) doesn't throw any system level initialization errors

Severity

Warning

Message Text

%actionType% netTx filter failed for VLAN %vlanName% for Ethernet OAM socket ID %sockId%

Message Parameters

| Name | Type |
|------------|--------|
| actionType | String |
| vlanName | String |
| sockId | uint |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.DebugSummary

Description

DebugSummary messages show only the important debug messages related to Ethernet OAM

Remedy

This is for Debugging purposes only

Severity

Debug-Summary

Message Text

%reason%

Message Parameters

| Name | Type |
|--------|--------|

EtherOAM.InitOK

Description

Debug messages when Ethernet OAM is being initialized.

Remedy

This is for Debugging purposes only

Severity

Debug-Summary

Message Text

%reason%

Message Parameters

| Name | Type |
|--------|--------|
| reason | Printf |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.RxEvent

Description

To track received events (like port events,VLAN events,LinkFault Info) from HAL,VLAN Module and by PDU from peer

Remedy

This is for informational purposes only

Severity

Info

Message Text

Received %event% event for port %slotport% with EventType [%eventType%]

Message Parameters

| Name | Type |
|-----------|-----------------|
| event | String |
| slotport | ingressSlotPort |
| eventType | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.TxEvent

Description

To track transmitted events (like enable/disable OAM,LinkFault Info) to HAL,VLAN Module and by PDU to peer

Remedy

This is for informational purposes only

Severity

Info

Message Text

Transmitting %event% event from port %slotport% with Eventtype [%eventType%]

Message Parameters

| Name | Type |
|-----------|----------------|
| event | String |
| slotport | egressSlotPort |
| eventType | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.CfgPortOK

Description

This is to track port related configuration

Remedy

This is for debugging purposes only

Severity

Debug-Summary

Message Text

%cfgPortDetail%

Message Parameters

| Name | Type |
|---------------|--------|
| cfgPortDetail | Printf |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.CfgPortFail

Description

Indicates failure in port configuration. This might be because of enabling link fault management on copper/combo ports or half duplex ports or on ports with auto negotiation off

Remedy

Check whether the port is full duplex ports with auto negotiation off and has support for link fault management.

Severity

Error

Message Text

```
%portCfgFailDetail% %port%
```

Message Parameters

| Name | Type |
|-------------------|--------|
| portCfgFailDetail | String |
| port | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.CfgSysFail

Description

Debug messages when Ethernet OAM system is configured.

Remedy

This is for debugging purposes only

Severity

Debug-Summary

Message Text

`%sysCfgFailDetail%`

Message Parameters

| Name | Type |
|------------------|--------|
| sysCfgFailDetail | Printf |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.Timer

Description

Log of timer being started, restarted or stopped (with reason).

Remedy

This is for debugging purposes only

Severity

Debug-Summary

Message Text

`%timerType% Timer %action% for port %slotPort% [%reason%]`

Message Parameters

| Name | Type |
|-----------|----------|
| timerType | String |
| action | String |
| slotPort | SlotPort |
| reason | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.AllocMemFail

Description

We tried to allocate memory either for a ethernet OAM Port Node/for neighbor record/for sending message to VLAN and failed. We either ran out of memory, or serious memory corruption occurred. In either case, we are in serious trouble.

Remedy

Please get output of "show cpu-monitoring", "show memory" and "show tech" command and contact TAC. If "ls internal" shows any output, please use "upload debug" command and get debug files.No user remedy available other than system restart.

Severity

Error

Message Text

Port %port% - failed to allocate memory.

Message Parameters

| Name | Type |
|------|--------|
| port | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.FndPortFail

Description

This error indicates,search for a particular port failed. This could be because of invalid input port index or memory corruption

Remedy

Report this immediately to check memory corruption (if any) or Restart the system

Severity

Error

Message Text

Port %port% - Port Node not found.

Message Parameters

| Name | Type |
|------|--------|
| port | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.FndVLANFail

Description

Any event from a VLAN will pass the VLAN name as an index to find the VLAN object. This error indicates it is not possible to find the VLAN object from the input index VLAN. This should not occur because VLAN objects are maintained by the VLAN module (client) and an invalid VLAN is filtered in the VLAN module itself.

Remedy

Check that the specified VLAN is present (valid VLAN) in the system. Whether present or not, there is a possibility of memory corruption in the VLAN module/message exchange. No user remedy is available other than dot1ag process/system restart.

Severity

Error

Message Text

Not able to find vlan %vlanName%

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.BlkPort

Description

Ethernet OAM will block all traffic on the port except for OAM PDUs.

Remedy

Check the physical link connectivity and quality

Severity

Notice

Message Text

Blocking traffic on port %port%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

Applicable Platforms

- Summit family switches

- I386 virtual machine switch simulator

EtherOAM.UnblkPort

Description

Ethernet OAM will unblock all traffic on the port. If another protocol is registered, the port state of that protocol will be used to default the port. If no other protocol is registered, Ethernet OAM sets the port to the default forwarding state.

Remedy

This is for Informational purposes only

Severity

Notice

Message Text

Unblocking traffic on port %port%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.VLANOperFail

Description

Indicates error while registering,deregistering OAM with VLAN or while controlling blocking state of Ethernet OAM PDUs slow path forwarding.

Remedy

This can happen if registraion with VLAN protocol failed during initialization;Check Protocol ID is valid and check System boot log messages for any system wide failure.Restart the process to solve this error

Severity

Error

Message Text

Protocol ID : %protoId% : Failed to %actionStr% Virtual Port Interface state for port %portStr%

Message Parameters

| Name | Type |
|-----------|--------|
| protold | uint |
| actionStr | String |
| portStr | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.RxPDUUnk

Description

Ethernet OAM received an unknown or unrecognized PDU. This should never occur, but if it does, we simply drop the PDU. Receiving a large number of these messages is indicative of a problem at the lower layers.

Remedy

Check that the peer is running a compatible version of Ethernet OAM.

Severity

Warning

Message Text

Unknown PDU received on port %port%. %typeInfo%

Message Parameters

| Name | Type |
|----------|----------|
| port | SlotPort |
| typeInfo | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

EtherOAM.InitPortOK

Description

Indicates Ethernet OAM port creation got success

Remedy

This is for informational purposes only

Severity

Debug-Verbose

Message Text

Ethernet OAM Port create success for port %slotPort%

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

exsshd.RejctConnAccessDeny

Description

SSH connection from the specified source is rejected by policy manager or access-list. This connection will not be permitted.

Remedy

Check the policy file or access-list associated with the application.

Severity

Warning

Message Text

SSH connection from source %address% has been denied by access-list %rule%.
Rejecting connection.

Message Parameters

| Name | Type |
|---------|--------|
| address | String |
| rule | String |

exsshd.DebugVerbose

Description

A condition has been detected that may interest a developer analyzing some system behavior at a more verbose level than provided by the debug summary information.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Verbose

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

exsshd.DebugData

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Data

| format | Printf |

exsshd.EnblFIPSMODEOK

Description

FIPS mode is enabled in EXSSHD process.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Self-Test passed. FIPS mode enabled.

exsshd.EnblFIPSMODEFail

Description

Unable to properly configure crypto lib with FIPS mode enabled.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with "show tech" output.

Severity

Error

Message Text

Failed to enable FIPS mode: %errString%

Message Parameters

| Name | Type |
|-----------|--------|
| errString | String |

exsshd.KeyAuthFail

Description

SSH Public key based authentication failed either due to invalid key or key not associated with the user id.

Remedy

Check whether the key is transferred to switch or Check whether the key has been configured to particular user id. Use show sshd2 user-key.

Severity

Warning

Message Text

Key authentication failed for user %user% from %ip%. Key invalid/not configured to the user.

Message Parameters

| Name | Type |
|------|-------------|
| user | AccountName |
| ip | String |

exsshd.BndAccntKey

Description

The account has been associated to the SSH public key. Account can perform successful SSH authentication using this key.

Remedy

Informational message. No Remedy.

Severity

Notice

Message Text

Bind user %account% to SSH public key %key% of SHA256 fingerprint %fingerprint% successfully

Message Parameters

| Name | Type |
|-------------|-------------|
| account | AccountName |
| key | String |
| fingerprint | String |

exsshd.UnbndAccntKey

Description

Association of the account to SSH public key has been removed. Account can not perform successful SSH authentication using this key, hereafter.

Remedy

Informational message. No remedy.

Severity

Notice

Message Text

Unbind user %account% to SSH public key %key% of SHA256 fingerprint %fingerprint% successfully

Message Parameters

| Name | Type |
|-------------|-------------|
| account | AccountName |
| key | String |
| fingerprint | String |

exsshd.CfgKeyExchgAlgWeak

Description

These key exchange algorithms are considered to be weaker (OpenSSH 7.5 and above) and are disabled by default. They are included in EXOS for backward compatibility.

Remedy

For added security, configure higher bits DH group as minimum key exchange algorithm.

Severity

Notice

Message Text

The configured key exchange algorithm(s), %algString%, is/are weaker than what is recommended.

Message Parameters

| Name | Type |
|-----------|--------|
| algString | String |

exsshd.CfgPubKeyAlgWeak

Description

These public key algorithms are considered to be weaker (OpenSSH 7.5 and above) and are disabled by default. They are included in EXOS for backward compatibility.

Remedy

For added security, disable weaker public key algorithms.

Severity

Notice

Message Text

The configured public key algorithm(s), %algString%, is/are weaker than what is recommended.

Message Parameters

| Name | Type |
|-----------|--------|
| algString | String |

exsshd.CfgCipherWeak

Description

These ciphers are considered to be weaker (OpenSSH 7.5 and above) and are disabled by default. They are included in EXOS for backward compatibility.

Remedy

For added security, disable weaker ciphers.

Severity

Notice

Message Text

The configured cipher(s), %algString%, is/are weaker than what is recommended.

Message Parameters

| Name | Type |
|-----------|--------|
| algString | String |

exsshd.CfgMsgAuthCodeWeak

Description

These message authentication codes are considered to be weaker (OpenSSH 7.5 and above) and are disabled by default. They are included in EXOS for backward compatibility.

Remedy

For added security, disable weaker message authentication codes.

Severity

Notice

Message Text

The configured message authentication code(s), %algString%, is/are weaker than what is recommended.

Message Parameters

| Name | Type |
|-----------|--------|
| algString | String |

exsshd.CfgHostKeyAlgWeak

Description

These host key algorithms are considered to be weaker (OpenSSH 7.5 and above) and are disabled by default. They are included in EXOS for backward compatibility.

Remedy

Recommend to generate new ssh host key. That would be of type RSA which is stronger.

Severity

Notice

Message Text

The configured host key algorithm(s), %algString%, is/are weaker than what is recommended.

Message Parameters

| Name | Type |
|-----------|--------|
| algString | String |

ExtLibA.BFD.InitLibFail

Description

BFD creation failed because a required software library failed to initialize. This may be due to lack of memory. BFD creation failed. BFD failed to initialize.

Remedy

Retry BFD initialization. Investigate whether there was a shortage of memory on this system and, if so, make some more memory available.

Severity

Error

Message Text

BFD creation failed because a required library failed to initialize. BFD entity index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |

ExtLibA.BFD.InitRsrcFail

Description

BFD failed to initialize due to lack of memory. BFD creation failed. BFD failed to initialize.

Remedy

Retry BFD initialization. Investigate the shortage of memory on this system. Make more memory available on this system.

Severity

Error

Message Text

BFD failed to initialize due to lack of memory. BFD entity index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |

ExtLibA.BFD.InitOK

Description

BFD stub initialized OK. Creation successful.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

The BFD Stub has initialized successfully. BFD entity index = %p1% Process Id = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | uInt32 |

ExtLibA.BFD.DstryOK

Description

BFD stub destroyed. Stub destroyed successful.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

The BFD Stub has been destroyed. BFD entity index = %p1% Process Id = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | uInt32 |

ExtLibA.BFD.BFDIJoinEst

Description

A control plane component has successfully established a BFDI join with the BFD stub.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A control plane component has established a BFDI join with the BFD stub. BFD entity index = %p1% Restart supported = %p2%(%p3%) Control plane entity type = %p4% Control plane entity index = %p5% Control plane component process ID = %p6%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |

| p3 | uInt8 |
| p4 | xInt32 |
| p5 | sInt32 |
| p6 | uInt32 |

ExtLibA.BFD.BFDIJoinTerm

Description

A control plane component has terminated a BFDI join with the BFD stub.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A control plane component has terminated a BFDI join with the BFD stub. BFD entity index = %p1% Control plane entity type = %p2% Control plane entity index = %p3% Control plane component process ID = %p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | xInt32 |
| p3 | sInt32 |
| p4 | uInt32 |

ExtLibA.BFD.BFDIJoinFailOvr

Description

A BFDI join to a control plane component has failed over. If restart is supported for this join the BFD stub will maintain the current BFD sessions until the failover timer fires. If restart is supported for this join the backup instance of the control plane component can reestablish the BFDI join and resynchronize with BFD sessions with which it was attached.

Remedy

Determine which control plane component has failed by using the indicated process id and investigate.

Severity

Warning

Message Text

A BFDI join to a control plane component has failed over. BFD entity index = %p1%
Control plane entity type = %p2% Control plane entity index = %p3% Control plane
component process ID = %p4%

ExtLibA.BFD.MntnSessStateRstrtJoin

Description

Session state has been preserved following a BFDI join to a control plane component going. BFD will continue to maintain the sessions belonging to this join on a timer. If the timer pops, any sessions that have not been re-added by the master will be terminated.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Session state has been temporarily preserved for restart processing. BFD entity index = %p1% Control plane entity type = %p2% Control plane entity index = %p3% Control plane component process ID = %p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | xInt32 |
| p3 | sInt32 |
| p4 | uInt32 |

ExtLibA.BFD.SessRcvryFmRstrtJoinOK

Description

A BFD session has been recovered from a restarting join.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A BFD application session has been recovered from a restarting join. BFD entity index = %p1% Session Index = %p2% Interface index = %p3% Address Type = %p4%(%p5%) Peer Address = %p6% Local Address = %p7% Control plane entity type = %p8% Control plane entity index = %p9% Control plane component process ID = %p10%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | sInt32 |
| p2 | uInt32 |
| p3 | uInt32 |
| p4 | String |
| p5 | uInt8 |

| p10 | uInt32 |

ExtLibA.BFD.SendClntRegReqFail

Description

Failed to send register request from a control plane component to BFD server. Possible error codes: -5 BFD_CLNTSVR_RESOURCE_UNAVAIL, -106 BFD_CLNTSVR_CONNECTION_ERROR, -107 BFD_CLNTSVR_COMMUNICATION_ERROR. The register request was rejected.

Remedy

Investigate based on the error return code.

Severity

Error

Message Text

A control plane component failed to send register request to BFD server. BFD entity index=%p1%, VR ID=%p2%, Client ID=%p3%, Error code=%p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | sInt32 |
| p3 | sInt32 |
| p4 | sInt |

ExtLibA.BFD.EnqueueCIntRegReq

Description

A control plane component register request to BFD server was delayed until the connection to BFD server was ready. The register request was delayed.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A control plane component register request to BFD server was delayed. BFD entity index=%p1%, VR ID=%p2%, Client ID=%p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | sInt32 |
| p3 | sInt32 |

ExtLibA.BFD.SendClntUnregReqFail

Description

A control plane component failed to send unregister request to BFD server. Possible error codes: -5 BFD_CLNTSVR_RESOURCE_UNAVAIL, -106 BFD_CLNTSVR_CONNECTION_ERROR, -107 BFD_CLNTSVR_COMMUNICATION_ERROR, -108 BFD_CLNTSVR_NUM_SESSIONS_NOT_ZERO. The unregister request was rejected.

Remedy

Investigate based on the error return code.

Severity

Error

Message Text

A control plane component failed to send unregister request to BFD server. BFD entity index=%p1%, VR ID=%p2%, Client ID=%p3%, Error code=%p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | sInt32 |
| p3 | sInt32 |
| p4 | sInt |

ExtLibA.BFD.EnqueueClntUnregReq

Description

A control plane component unregister request to BFD server was delayed until all associated BFD application sessions were deleted. The register request was delayed.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A control plane component unregister request to BFD server was delayed. BFD entity index=%p1%, VR ID=%p2%, Client ID=%p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |
| p2 | sInt32 |
| p3 | sInt32 |

ExtLibA.BFD.SendSessCreatReqFail

Description

Failed to send a BFD session create request to BFD server on behave of a control plane component. Possible error codes: -5 BFD_CLNTSVR_RESOURCE_UNAVAIL, -102 BFD_CLNTSVR_CLIENTID_DOES_NOT_EXIST, -106 BFD_CLNTSVR_CONNECTION_ERROR, -107 BFD_CLNTSVR_COMMUNICATION_ERROR. The request was rejected.

Remedy

Investigate based on the error return code.

Severity

Error

Message Text

Failed to send a BFD session create request to BFD server. BFD entity index=%p1%, VR ID=%p2%, Client ID=%p3%, Interface index=%p4%, Address Type=%p5%(%p6%), Peer Address=%p7%, Error code=%p8%

ExtLibA.EntityMgr.IntFSMErr

Description

This is an internal logic error within System Manager. System Manager terminates.

Remedy

Internal error - contact support with details of the problem.

Severity

Error

Message Text

FSM error. Action = %p1% Event = %p2% State = %p3%

Message Parameters

| Name | Type |
|------|-------|
| p1 | uInt8 |
| p2 | uInt8 |
| p3 | uInt8 |

ExtLibA.EntityMgr.SysInitRsrcFail

Description

System Manager has failed to initialize because resources were not available. System Manager terminates.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to initialize because resources were unavailable.

ExtLibA.EntityMgr.ProcEntityFSMIn

Description

System Manager processed an Entity FSM input.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Entity FSM input. Entity type = %p1% Entity index = %p2% Action = %p3% Event = %p4% Old state = %p5% New state = %p6%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | xInt32 |
| p2 | HexByteArray |
| p3 | uInt8 |
| p4 | uInt8 |
| p5 | uInt8 |
| p6 | uInt8 |

ExtLibA.EntityMgr.ProcInstcFSMIn

Description

System Manager processed an Instance FSM input.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Instance FSM input. Instance index = %p1% Action = %p2% Event = %p3% Old state = %p4%
New state = %p5%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt8 |
| p3 | uInt8 |
| p4 | uInt8 |
| p5 | uInt8 |

ExtLibA.EntityMgr.ProcJoinFSMIn

Description

System Manager processed a Join FSM input.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Join FSM input. Master entity type = %p1% Master entity index = %p2% Slave entity type =
%p3% Slave entity index = %p4% Action = %p5% Event = %p6% Old state = %p7% New state =
%p8%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | xInt32 |
| p2 | HexByteArray |
| p3 | xInt32 |
| p4 | HexByteArray |
| p5 | uInt8 |
| p6 | uInt8 |
| p7 | uInt8 |
| p8 | uInt8 |

ExtLibA.EntityMgr.RegNewEntityType

Description

A new entity type was registered with System Manager.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

New entity type registered with System Manager. Entity type = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.EntityMgr.IncrMaxNumFSMIn

Description

The maximum number of FSM inputs that can exist within System Manager at any one time was increased.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Increased maximum number of FSM inputs. Number of FSM inputs = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.EntityMgr.IncrMaxNumFSMInFail

Description

A resource failure occurred when System Manager attempted to increase the number of FSM inputs available to it. The current operation fails (this is an attempt to increase the number of instances or joins).

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Failed to increase maximum number of FSM inputs. Number of FSM inputs = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.EntityMgr.DropIPSFmUnkInstc

Description

System Manager dropped an ATG_FT_* message from an instance because it was not aware that the instance existed. This is a normal occurrence if an System Manager is informed of an instance abend before processing messages on the queue from the instance to System Manager.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Dropped IPS from unknown instance. IPS type = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.EntityMgr.DropIPSForUnkJoin

Description

System Manager dropped an ATG_FT_* message from an instance because it was not aware that the join that the message related to existed. This is a normal occurrence if System Manager receives a message from an old instance when it is already aware of a new replacement instance.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Dropped IPS for an unknown join. IPS type = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.EntityMgr.GetIPSBufFail

Description

System Manager failed to get an IPS buffer because resources were not available. System Manager fails the operation.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to get an IPS buffer.

ExtLibA.EntityMgr.RepLocOperFail

Description

A location replication operation failed. The location may be disrupted if System Manager fails over.

Remedy

Investigate the cause of the replication failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

A location replication operation failed. Replication action = %p1% Replication return code = %p2% Location index = %p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt8 |
| p2 | uInt8 |
| p3 | uInt32 |

ExtLibA.EntityMgr.EntityRepOperFail

Description

An entity replication operation failed. The entity may be disrupted if System Manager fails over.

Remedy

Investigate the cause of the replication failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

An entity replication operation failed. Replication action = %p1% Replication return code = %p2% Entity type = %p3% Entity index = %p4%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | uInt8 |
| p2 | uInt8 |
| p3 | xInt32 |
| p4 | HexByteArray |

ExtLibA.EntityMgr.InstcRepOperFail

Description

An instance replication operation failed. The instance may be disrupted if System Manager fails over.

Remedy

Investigate the cause of the replication failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

An instance replication operation failed. Replication action = %p1% Replication return code = %p2% Entity type = %p3% Entity index = %p4% Instance index = %p5%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | uInt8 |
| p2 | uInt8 |
| p3 | xInt32 |
| p4 | HexByteArray |
| p5 | xInt32 |

ExtLibA.EntityMgr.JoinRepOperFail

Description

A join replication operation failed. The join may be lost if System Manager fails over.

Remedy

Investigate the cause of the replication failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

A join replication operation failed. Replication action = %p1% Replication return code = %p2% Master entity type = %p3% Master entity index = %p4% Slave entity type = %p5% Slave entity index = %p6%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | uInt8 |
| p2 | uInt8 |
| p3 | xInt32 |
| p4 | HexByteArray |
| p5 | xInt32 |
| p6 | HexByteArray |

ExtLibA.EntityMgr.RecvNegStopRspns

Description

A negative ATG_FT_STOP_PRIMARY response was received by System Manager. This is a normal occurrence and indicates that the instance does not support returning from primary to backup.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

Negative ATG_FT_STOP_PRIMARY response received. Instance index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.EntityMgr.CreatLocCBFail

Description

System Manager failed to create a location control block because resources were not available. System Manager fails the creation of the new location.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create a location control block.

ExtLibA.EntityMgr.CreatEntityTypeCBFail

Description

System Manager failed to create an entity type control block because resources were not available. System Manager fails the creation of the new entity type.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create an entity type control block.

ExtLibA.EntityMgr.CreatInstcCBFail

Description

System Manager failed to create an instance control block because resources were not available. System Manager fails the creation of the new instance.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create an instance control block.

ExtLibA.EntityMgr.CreatEntityCBFail

Description

System Manager failed to create an entity control block because resources were not available. System Manager fails the creation of the new entity.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create an entity control block.

ExtLibA.EntityMgr.CreatJoinCBFail

Description

System Manager failed to create a join control block because resources were not available. System Manager fails the creation of the new join.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create a join control block.

ExtLibA.EntityMgr.MIBStubAbend

Description

The MIB Stub has abended. System Manager abends.

Remedy

Investigate the cause of the MIB Stub abending.

Severity

Error

Message Text

MIB Stub has abended.

ExtLibA.EntityMgr.InstcAbend

Description

An instance has abended. If this instance was a primary and there are no backup instances that can take over, then the entity has failed.

Remedy

No remedy is available.

Severity

Info

Message Text

An instance has abended. Entity type = %p1% Entity index = %p2% Instance index = %p3%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | xInt32 |
| p2 | HexByteArray |
| p3 | xInt32 |

ExtLibA.EntityMgr.DelJoin

Description

A join has been deleted.

Remedy

No remedy is available.

Severity

Info

Message Text

A join has been deleted. Master entity type = %p1% Master entity index = %p2% Slave entity type = %p3% Slave entity index = %p4%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | xInt32 |
| p2 | HexByteArray |
| p3 | xInt32 |
| p4 | HexByteArray |

ExtLibA.EntityMgr.CreatJoin

Description

A join has been created.

Remedy

No remedy is available.

Severity

Info

Message Text

A join has been created. Master entity type = %p1% Master entity index = %p2% Slave entity type = %p3% Slave entity index = %p4%

Message Parameters

ExtLibA.EntityMgr.CreatMIBStubFail

Description

System Manager failed to create the MIB Stub. System Manager abends.

Remedy

Investigate the cause of the failure.

Severity

Error

Message Text

System Manager failed to create the MIB Stub.

ExtLibA.EntityMgr.CreatIfCBFail

Description

System Manager failed to create an interface control block because resources were not available. System Manager fails to be created.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create an interface control block.

ExtLibA.EntityMgr.RegNewIfID

Description

A new interface ID was registered with System Manager.

Remedy

No remedy is available.

Severity

Debug-Verbose

Message Text

New interface ID registered with System Manager. Interface ID = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |

ExtLibA.EntityMgr.CreatImplmCBFail

Description

System Manager failed to create an interface implementation control block because resources were not available. Implementation registration fails.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create an implementation control block.

ExtLibA.EntityMgr.CreatProdCBFail

Description

System Manager failed to create a product control block because resources were not available. Product specific SM component registration fails.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create a product control block.

ExtLibA.EntityMgr.CreatRtCBFail

Description

System Manager failed to create a route control block because resources were not available. Buffer route registration fails.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create a route control block.

ExtLibA.EntityMgr.CreatRtSrcCBFail

Description

System Manager failed to create a route source control block because resources were not available. Buffer route registration fails.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create a route source control block.

ExtLibA.EntityMgr.CreatRtTrgtCBFail

Description

System Manager failed to create a route target control block because resources were not available. Buffer route registration fails.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager failed to create a route target control block.

ExtLibA.EntityMgr.DtectIfRtLoop

Description

System Manager detected a loop while traversing the buffer route definitions to build the buffer size table. Buffer sizes calculations aborted.

Remedy

Contact support.

Severity

Error

Message Text

System Manager detected an interface route loop while processing Interface ID = %p1%
Master setting = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | sInt8 |

ExtLibA.EntityMgr.DtectUnexpctDrctTransRt

Description

System Manager detected too many inbound/outbound transitions while traversing the buffer route definitions to build the buffer size table. Buffer sizes calculations aborted.

Remedy

Contact support.

Severity

Error

Message Text

System Manager detected unexpected direction transition in route Source Interface ID = %p1% Source Master setting = %p2% Target Interface ID = %p3% Target Master setting = %p4% Current direction = %p5% Route direction = %p6%

Message Parameters

| Name | Type |

| p2 | sInt8 |
| p3 | xInt32 |
| p4 | sInt8 |
| p5 | xInt |
| p6 | xInt |

ExtLibA.EntityMgr.InitCompFail

Description

System Manager could not initialize the specified SM-XXX component.

Remedy

No remedy is available.

Severity

Error

Message Text

System Manager failed to initialize SM-XXX component Product name = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | String |

ExtLibA.EntityMgr.RegOwnMIBFail

Description

System Manager failed to register one of its MIBs. System Manager terminates.

Remedy

Internal error - contact support with details of the problem.

Severity

Error

Message Text

System Manager failed to register one of its MIBs Family ID = %p1% Return code = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | sInt32 |

ExtLibA.EntityMgr.CfgLocExcdGrpMax

Description

A MIB request attempted to put a location into a location group that already contains the maximum allowed number of locations. In systems that are FT capable the maximum number of locations in a location group is 2; in systems that are not FT capable the maximum number of locations in a location group is 1. The MIB request is rejected.

Remedy

Deactivate one of the other locations and remove it from the location group then retry the MIB request.

Severity

Error

Message Text

Attempt to configure too many locations in a location group. Family ID = %p1% Family Name = %p2% Field ID = %p3% Field Name = %p4% Location Group Index = %p5% Maximum number of locations = %p6%

|------|--------|
| p1 | uInt32 |

ExtLibA.EntityMgr.RecvHwStatFailMsg

Description

System Manager received an ATG_HM_HARDWARE_STATUS_IND message reporting a hardware location failure. All software running on the failed hardware location fails over to a backup locations if possible.

Remedy

Investigate any Hardware Manager problems.

Severity

Error

Message Text

Hardware location failed. Hardware location = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.EntityMgr.MultiEntityRegSameType

Description

Multiple entities attempted to register the same entity type with System Manager during System Manager initialization. Each entity must register using a unique entity type. Use of the same entity type by multiple entities is likely to be the result of an

incorrect entity implementation or an inconsistent build. System Manager loads the first entity but not the second entity. Even so, the existence of the second entity may cause further problems.

Remedy

Investigate the entity implementations and build to remove the entity type clash.

Severity

Error

Message Text

Multiple entities attempted to register the same entity type. Entity type = %p1% First entity name = %p2% Second entity name = %p3%

Message Parameters

| Name | Type |
|------|---------------|
| p1 | xInt32 |
| p2 | CharByteArray |
| p3 | CharByteArray |

ExtLibA.EntityMgr.BecPrimFailRsrcUnavail

Description

A System Manager instance has failed to become primary System Manager instance because resources were not available. The System Manager instance remains a backup instance.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

System Manager instance failed to become primary because resources were unavailable.

ExtLibA.EntityMgr.RecvStatFailLocMsg

Description

System Manager received an ATG_HM_LOCATION_STATUS_IND or ATG_HM_HARDWARE_STATUS_IND message reporting failure of the N-BASE location that it is running on. System Manager abends.

Remedy

Investigate any Hardware Manager problems.

Severity

Error

Message Text

Local N-BASE location failed. Location index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | ulnt32 |

ExtLibA.EntityMgr.PrimInstcAbend

Description

The primary System Manager instance has abended. The backup System Manager instance takes over as primary.

Remedy

Investigate the cause of the primary System Manager abending.

Severity

Warning

ExtLibA.IfInfolf.InitFailRsrcUnavail

Description

Interface Information stub has failed to initialize because resources were not available. Interface Information stub terminates.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to initialize because resources were not available. LSR Index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt32 |

ExtLibA.IfInfolf.TermAbnorm

Description

Interface Information stub has terminated abnormally. Data forwarding ceases.

Remedy

Contact support.

Severity

Error

Message Text

Interface Information stub terminated abnormally. LSR Index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.ActvOK

Description

Interface Information stub activated successfully.

Remedy

No remedy is available.

Severity

Info

Message Text

Interface Information stub activated successfully. LSR Index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.GetNetIfInfoRsrcUnavail

Description

Interface Information stub failed to allocate resources needed to get network interface information. The Interface Information stub reports inaccurate information about network interfaces and internetwork addresses on the Interface Information Interface.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to get network interface information because resources were not available. LSR Index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.ProcReqSendRtSockFail

Description

A request sent on a routing socket failed. The Interface Information Interface request that initiated the routing request fails.

Remedy

Investigate the routing request failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

failed to process an Interface Information Interface request because a request sent on a routing socket failed. LSR Index = %p1% Routing message type = %p2% Errno = %p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | sInt |
| p3 | sInt |

ExtLibA.IfInfolf.ProcRtMsgRecvRtSockFail

Description

A recv() system call on a routing socket failed. Possible loss of Interface Information Interface requests or indications.

Remedy

Investigate the recv() failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to process a routing message because a recv() call on a routing socket failed. LSR Index = %p1% Recv errno = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | sInt |

ExtLibA.IfInfolf.AllocJoinRsrcFail

Description

Interface Information stub failed to allocate resources for an Interface Information Interface join. The Interface Information Interface join is rejected.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to allocate resources for an Interface Information Interface join. LSR Index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.AllocNetIfRsrcFail

Description

Interface Information stub failed to allocate resources for a network interface. The Interface Information stub reports inaccurate information about network interfaces and internetwork addresses on the Interface Information Interface.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to allocate resources for a network interface. LSR Index = %p1% Interface index = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | sInt32 |

ExtLibA.IfInfolf.AllocNetAddrRsrcFail

Description

Interface Information stub failed to allocate resources for an internetwork address assigned to a network interface. The Interface Information stub reports inaccurate information about internetwork addresses on the Interface Information Interface.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to allocate resources for an internetwork address. LSR Index = %p1% Interface index = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | sInt32 |

ExtLibA.IfInfolf.InitFailSockReqFail

Description

Interface Information stub has failed to initialize because the initial socket() request failed. Interface Information stub terminates.

Remedy

Investigate the socket failure. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to initialize because the initial socket() request failed.
LSR Index = %p1% Errno = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt32 |

ExtLibA.IfInfolf.AllocTEParmFail

Description

Interface Information stub failed to allocate resources for traffic engineering parameters assigned to an internetwork address/interface. The Interface Information stub reports inaccurate information about traffic engineering parameters on the Interface Information Interface.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to allocate resources for traffic engineering parameters. LSR Index = %p1% Interface index = %p2% network address = %p3%

Message Parameters

| Name | Type |

| p1 | uInt32 |
| p2 | sInt32 |
| p3 | DecByteArray |

ExtLibA.IfInfolf.CmpstTEBndllfUnk

Description

The user of the sample Resource Manager Interface (RMI) provided by the I3 has requested Component Link Selection to be performed for a composite bundle interface that is not stored in the I3 database. The RMI will fail the Component Link Selection.

Remedy

Wait until the system has caught up with any configuration changes and retry the query.

Severity

Error

Message Text

Unknown Composite TE bundle Interface Instance = %p1% Interface index = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | xInt32 |

ExtLibA.IfInfolf.AllocRepReqRsrcFail

Description

Backup I3 stub could not allocate resources required for a replication request. The replication request does not take place on the backup. The state on the backup remains as it was before the replication request was made. For config replication, the state on the primary also remains as it was before the replication was made. For all other replication requests, the state on the primary is updated when the replication request is made, and is not restored to its original state in the case of failure.

Remedy

Investigate resource shortage.

Severity

Warning

Message Text

Resource shortage when replicating control block type %p1%.

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.IfInfolf.GetAdaptAddrFail

Description

The API call getAdaptersAddresses failed. The I3 stub will only process IPv4 information.

Remedy

Investigate the cause of failure.

Severity

Error

Message Text

GetAdaptersAddresses API call failed Windows error code: %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.AllocIfProgJoinRsrcFail

Description

Interface Information stub failed to allocate resources for an Interface Programming Interface join. The Interface Programming Interface join is rejected.

Remedy

Investigate the resource shortage. If this does not solve the problem, contact support.

Severity

Error

Message Text

Interface Information stub failed to allocate resources for an Interface Programming Interface join. LSR Index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.CompLinkIDUnk

Description

The user of the sample Resource Manager Interface (RMI) provided by the I3 has requested that Component Link Selection returns an interface that does not exist. The RMI will fail the Component Link Selection.

Remedy

Retry the query without specifying the component link to use.

Severity

Warning

Message Text

Unknown component link ID. Instance = %p1% Component data link ID = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | xInt32 |

ExtLibA.IfInfolf.CompLinkBndIfIDIncrct

Description

The user of the sample Resource Manager Interface (RMI) provided by the I3 has requested that Component Link Selection returns a component link whose owning bundle interface ID does not match the bundle interface ID specified by the RMI user. The RMI will fail the Component Link Selection.

Remedy

Retry the query without specifying the component link to use.

Severity

Warning

Message Text

Incorrect component link bundle IF ID specified. Instance = %p1% Component data link ID = %p2% Expected bundle IF ID = %p3% Actual bundle IF ID = %p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |

ExtLibA.IfInfolf.CompLinkRqrQosNotPrvd

Description

The user of the sample Resource Manager Interface (RMI) provided by the I3 has requested that Component Link Selection returns a component link whose QoS does not satisfy the QoS requirements of the request. The RMI will fail the Component Link Selection.

Remedy

Retry the query without specifying the component link to use.

Severity

Warning

Message Text

Requested component link does not provide required QoS. Instance = %p1%
Component data link ID = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | xInt32 |

ExtLibA.IfInfolf.SendEmulAddrDstryFail

Description

The emulated I3 stub has failed to get a buffer to notify a user that an emulated address has been destroyed. The I3 user will not receive an indication that the address has been destroyed.

Remedy

No remedy is available.

Severity

Error

Message Text

Failed to send emulated address destruction indication to I3 user. Instance = %p1% User PID = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt32 |

ExtLibA.IfInfolf.RtrnNetIfInfoFail

Description

The IP library failed to return interface information due to an error. The Interface Information stub will not report any interface information. On some OSs this may also mean there is no address information reported.

Remedy

Investigate the reason for the IP library failure.

Severity

Error

Message Text

IP library failed to return network interface information. IP library return code = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.IfInfolf.AllocVIfRtInfoMemFail

Description

The I3 stub has failed to allocate memory to store virtual interface route information. The owning interface remains present with no route information, until a later successful attempt is made to store route information.

Remedy

Investigate memory shortage. Reconfigure the virtual interface.

Severity

Warning

Message Text

Interface Information Stub %p1% failed to allocate memory for virtual interface route information. Interface egress %p2%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | uInt32 |
| p2 | VarFmtByteArray |

ExtLibA.RtMgr.InitOK

Description

RTMgr stub has initialized successfully. Other protocol components can now communicate with the Extreme Route Manager Library by joining to the RTMgr stub.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

RTMgr stub instance %p1% has initialized successfully (PID = %p2%).

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt32 |

ExtLibA.RtMgr.Dstry

Description

RTMgr stub has been destroyed. Other protocol components can no longer communicate with Extreme Route Manager Library.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

RTMgr stub instance %p1% has been destroyed (PID was %p2%).

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt32 |

ExtLibA.RtMgr.InitMIBFail

Description

A MIB initialization call failed. RTMgr stub fails to initialize.

Remedy

Check earlier errors to see what the problem is.

Severity

Error

Message Text

A RTMgr stub MIB initialization call failed.

ExtLibA.RtMgr.InitHAFLibFail

Description

A HAF initialization call failed, possibly due to failure to allocate memory. RTMgr stub fails to initialize.

Remedy

Free some memory, for example by stopping other applications, and try again.

Severity

Error

Message Text

A HAF initialization call made from RTMgr stub has failed (RC = %p1%)

Message Parameters

| Name | Type |
|------|-------|
| p1 | uInt8 |

ExtLibA.RtMgr.InitMIBAllocFail

Description

A MIB initialization call failed, due to failure to allocate memory. RTMgr stub fails to initialize.

Remedy

Free some memory, for example by stopping other applications, and try again.

Severity

Error

Message Text

A RTMgr stub MIB initialization call failed due to memory allocation failure.

ExtLibA.RtMgr.IfaceIfVPNMgrRegFail

Description

The interface information interface (I3) join with VPN Manager has failed. VPN manager will no longer receive information about tunnel interfaces.

Remedy

Check whether VPN manager has exited without unregistering.

Severity

Warning

Message Text

RTMgr stub I3 join to VPN manager (PID = %p1%) has failed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.IfaceIfVPNMgrRegNotFnd

Description

The slave join to VPN Manager has gone. Either VPN manager deleted the join, or the join failed (in which case there has already been a "join failed" log. VPN Manager will no longer receive indications of tunnel interfaces.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

RTMgr stub I3 join to VPN Manager (PID = %p1%) has gone.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.RecvTunIf

Description

A new tunnel interface has been sent from RTMgr agent across the inter-thread interface. VPN manager will be notified of a new interface to use for routing.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

New tunnel interface with index %p1% for address %p2% received from RTMgr

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | xInt32 |
| p2 | VarFmtByteArray |

ExtLibA.RtMgr.RecvTunIfDel

Description

A tunnel interface has been withdrawn by RTMgr agent. VPN manager will be notified of a interface deletion.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Tunnel interface with index %p1% for address %p2% deleted

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | xInt32 |
| p2 | VarFmtByteArray |

ExtLibA.RtMgr.IfaceIfVPNMgrReg

Description

An instance of VPN manager has registered across the I3 interface. The I3 join is now active. VPN manager will be notified of tunnel interfaces.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

VPN manager (PID = %p1%) successfully registered on I3 interface

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.IfaceIfVPNMgrSendFail

Description

An IPS has been dropped because it did not correlate to an I3 join partner. VPN manager will not receive a response to the IPS.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Unable to send I3 response from RTMgr stub to VPN manager (PID = %p1%) because join has gone

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.TunIfAllocFail

Description

Unable to allocate memory for a tunnel interface received from the RTMgr agent. The tunnel will not be used for VPN traffic and VPN routes from the remote PE router will not be added to a VRF.

Remedy

Free some memory, for example by stopping other applications, and try again.

Severity

Warning

Message Text

Unable to allocate memory to store tunnel interface for %p1% with index %p2%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | VarFmtByteArray |
| p2 | xInt32 |

ExtLibA.RtMgr.LblIfVPNMgrRegFail

Description

The Label Database interface (LDBI) join with an instance of VPN manager has failed. VPN manager will no longer receive information about VPN labels.

Remedy

Check whether VPN manager has exited without unregistering.

Severity

Warning

Message Text

RTMgr stub LDBI join to VPN manager (PID = %p1%) has failed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.LblIfVPNMgrRegNotFnd

Description

The slave join to an instance of VPN Manager has gone. Either VPN manager deleted the join, or the join failed (in which case there has already been a "join failed" log. VPN manager will no longer receive VPN labels.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

RTMgr stub LDBI join to VPN manager (PID = %p1%) has gone.

Message Parameters

| Name | Type |
|------|--------|
| p1 | ulnt32 |

ExtLibA.RtMgr.LblIfVPNMgrSendFail

Description

An instance of VPN manager has registered across the LDBI interface. The LDBI join is now active. VPN manager will be notified about L3VPN labels.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

VPN manager (PID = %p1%) successfully registered on LDBI interface

Message Parameters

| Name | Type |
|------|--------|
| p1 | ulnt32 |

ExtLibA.RtMgr.RecvVPNLabel

Description

A new VPN label has been received by RTMgr across the IT. The label will be used for VPNs on the specified VR.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Received new label for VR id %p1% - %p2%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | uInt32 |
| p2 | HexByteArray |

ExtLibA.RtMgr.RecvVPNLabelDel

Description

A VPN label has been withdrawn by RTMgr across the IT. The label will no longer be used for VPNs on the specified VR.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Deleted label for VR id %p1% - %p2%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | uInt32 |
| p2 | HexByteArray |

ExtLibA.RtMgr.VPNLabelAllocFail

Description

Failed to allocate memory to store a VPN label received across the IT. Routes in the VRF will not be advertised to remote PE routers.

Remedy

Free some memory, for example by stopping other applications, and try again.

Severity

Warning

Message Text

Failed to allocate memory for label on VR id %p1% - %p2%

Message Parameters

| Name | Type |
|------|--------------|
| p1 | uint32 |
| p2 | HexByteArray |

ExtLibA.RtMgr.RtProgIfRegFail

Description

The Route programming interface (RPI) join with a Routing Protocol Manager has failed. RPM routes will not be added to the routing table and the RPM will not receive redistributed routes.

Remedy

Check whether the RPM has exited without unregistering.

Severity

Warning

Message Text

RTMgr stub RPI join to RPM (PID = %p1%) has failed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uint32 |

ExtLibA.RtMgr.RtProglfRegGone

Description

The slave join to a Routing Protocol Manager has gone. Either the RPM deleted the join, or the join failed (in which case there has already been a "join failed" log. The RPM will no longer receive redistributed routes. RPM routes will not be added to the routing table.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

RTMgr stub RPI join to RPM (PID = %p1%) has gone.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.RtProglfRegAllocFail

Description

Failed to allocate memory required for an RPI join with an RPM. The join with the RPM will not be added.

Remedy

Free some memory, for example by stopping other applications, and try again.

Severity

Warning

Message Text

Failed to allocate memory for RPI join: client ID %p1% %p2% %p3% %p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt32 |
| p3 | uInt16 |
| p4 | uInt8 |

ExtLibA.RtMgr.RtProgIfProcRespFail

Description

An IPS has been dropped because it did not correlate to an RPI join partner. The RPM will not receive a response to the IPS.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Unable to send RPI response from RTMgr stub to RPM (PID = %p1%) because join has gone

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.RtProgIfSendFail

Description

An IT message has been dropped because it did not correlate to an RPI join partner. The route will not be forwarded to the RPM.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Unable to process IT message because there is no RPI join partner for client ID %p1%
%p2% %p3% %p4%

Message Parameters

| p1 | uInt32 |
| p2 | xInt32 |
| p3 | uInt32 |

ExtLibA.RtMgr.ActvRtIfBGPRRegFail

Description

The Active Routes interface (ARI) join with BGP has failed or been refused. A failed join means that BGP will not receive active routing information from the RTMgr stub.

Remedy

Check whether BGP has exited without unregistering.

Severity

Warning

Message Text

ARI join to BGP (PID = %p1%) has failed or been refused (action = %p2%).

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt8 |

ExtLibA.RtMgr.ActvRtIfBGPRRegNotFound

Description

The master ARI join to BGP has gone. Either the RTMgr stub deleted the join, or the join failed (in which case there has already been a "join failed" log. BGP will no longer receive active routes indications.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

ARI join to BGP (PID = %p1%) on VR %p2% has gone.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt32 |

ExtLibA.RtMgr.BGPRegFail

Description

RTMgr stub failed to add a join to an instance of BGP. RTMgr stub cannot communicate with this instance of BGP, but continues to communicate with any other instances of BGP with which it has already established a join.

Remedy

Investigate the cause of the failure and possibly restart the BGP instance.

Severity

Warning

Message Text

RTMgr stub failed to create a join to a BGP instance (VR = %p1%).

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.ActvRtIfBGPReg

Description

A successful register response was received for an ARI join to a BGP instance. The ARI join will become active.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

ARI join to BGP (PID = %p1%) on VR %p2% has been registered successfully.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt32 |

ExtLibA.RtMgr.ActvRtIfBGPUnreg

Description

RTMgr stub has unregistered its join to a BGP instance. The ARI join will become inactive.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

RTMgr stub has unregistered ARI join to BGP (PID = %p1%) on VR %p2%.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt32 |

ExtLibA.RtMgr.RejActvRtIfMsgFmOldBGP

Description

RTMgr stub dropped an IPS which appeared to come from an old instance of BGP. BGP will not receive a response to the IPS.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

RTMgr stub dropped an ARI packet from an old instance of BGP (PID = %p1%).

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.RtMgr.ActvRtIfBGPSendFail

Description

An IT message has been dropped because it did not correlate to an instance of BGP with an active ARI join. The active route indication or IPS response will not be forwarded to BGP.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Unable to send IT message because there is no ARI join with BGP for VR ID %p1%, address family %p2%, subtype %p3%

Message Parameters

| Name | Type |

No action required - Notification message only.

Severity

Notice

Message Text

Failed to free resources associated with a socket that failed to open.

ExtLibA.Socket.RecvSockHndlInv

Description

Received invalid socket handle.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Received invalid socket handle.

ExtLibA.Socket.CloseSockFail

Description

Failed to close a socket.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to close a socket.

ExtLibA.Socket.ProcIPSSockOK

Description

Socket signal processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket signal processed.

ExtLibA.Socket.ProcRegOK

Description

Socket register processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket register processed.

ExtLibA.Socket.ProcUnregOK

Description

Socket unregister processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket unregister processed.

ExtLibA.Socket.InitHAFLibFail

Description

Failed to initialize HAF library.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to initialize the HAF library.

ExtLibA.Socket.RegHAFLibFail

Description

Failed to register with the HAF library.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to register with the HAF library.

ExtLibA.Socket.DtectInitSockLibErr

Description

Error while registering with sockets library.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Error found while initializing sockets library. WSA error = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.DtectUninitSockLibErr

Description

Error while unregistering with sockets library.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Error found while uninitialized sockets library. WSA error = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.CreatSockHndIFail

Description

Failed to create a socket handle.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to create a handle to a socket.

ExtLibA.Socket.GetBufPoolFail

Description

Failed to get a buffer pool.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get a buffer pool.

ExtLibA.Socket.ProcCloseOK

Description

Socket close processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket close processed.

ExtLibA.Socket.OpenSockFail

Description

Can't open a socket.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to open a socket. Sockets error code = %p1% Application handle = %p2% Socket type = %p3% Socket family = %p4% Socket protocol = %p5%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | uInt32 |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | xInt32 |

ExtLibA.Socket.SetSockOptFail

Description

Failed to set a socket option.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to set an option on a socket. Socket option = %p1% Sockets error code = %p2% Socket ID = %p3% Application handle = %p4% Stub socket handle = %p5% Socket type = %p6% Socket family = %p7% Socket protocol = %p8%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt |
| p2 | sInt |
| p3 | sInt |
| p4 | uInt32 |

| Name | Type |
|------|--------|
| p5 | uInt32 |
| p6 | xInt32 |
| p7 | xInt32 |
| p8 | xInt32 |

ExtLibA.Socket.BndSockFail

Description

Failed to bind to a socket.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Socket bind failed. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.Socket.CnctSockFail

Description

Failed to connect the socket

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Socket connect failed. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.Socket.AcptCnctSockFail

Description

A sockets error occurred while attempting to accept an incoming connection.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Sockets error on attempting to accept an incoming connection. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.CnctIntRsrcUnavail

Description

Failed to register the socket as an N-BASE work source.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

An internal resource shortage caused an incoming connection to fail. Socket ID = %p1%
 Socket type = %p2% Socket family = %p3% Socket protocol = %p4% Application handle =
 %p5% Stub socket handle = %p6%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | uInt32 |
| p6 | uInt32 |

ExtLibA.Socket.LstnSockFail

Description

Failed to start listening on a socket.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Attempt to commence listening on a socket failed. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.Socket.DtectSockLayErr

Description

General sockets error.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

General sockets layer error detected. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.Socket.JoinMcastGrpFail

Description

Multicast group join error.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to join Multicast group. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.LeaveMcastGrpFail

Description

Multicast group leave error.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to leave Multicast group. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.Socket.GetIfNameFail

Description

Failed to look up interface using if_indextoname.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get interface name. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.GetIfAddrFail

Description

Failed to look up interface address using ioctl(SIOCGIFADDR).

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get interface IP address. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.GetIfAddrMapTblFail

Description

Failed to get interface address mapping table.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get interface address mapping table. Windows error code = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.Socket.FndIfInMapTblFail

Description

Failed to find interface in mapping table.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to find interface in mapping table.

ExtLibA.Socket.AllocMapTblMemFail

Description

Failed to allocate memory for mapping table.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to allocate memory for mapping table.

ExtLibA.Socket.LoadIPHelpDynLibFail

Description

Failed to load IP helper dll.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to load IP helper dll.

ExtLibA.Socket.GetProcAddrFail

Description

Failed to get IP address mapping function.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get IP address mapping function.

ExtLibA.Socket.GetIfNameIfIdxFail

Description

Failed to look up interface name using ifIndexTpIfp().

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get interface name for interface index %p1%.

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.Socket.GetIPAddrIfIndxFail

Description

Failed to get interface IP address.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get IP address for interface index %p1%. Return code = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | sInt |

ExtLibA.Socket.GetSubnetMskIfIdxFail

Description

Failed to get interface subnet mask.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get subnet mask for interface index %p1%. Return code = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | sInt |

ExtLibA.Socket.GetMatchSockFail

Description

Failed to get a matching socket for an incoming buffer.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get a matching socket for socket ID %p1%.

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.AllocInetSetCfgSigFail

Description

Failed to allocate an InetSetConfig signal for the MUX hook.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to allocate an InetSetConfig signal for the MUX hook. Sock ID %p1%.

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.SetIPFwdHookFail

Description

Failed to set the IP forwarding hook.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to set the IP forwarding hook, status %p1%.

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.GetIfCfgFail

Description

Failed to look up interface configuration using ioctl(SIOCGIFCONF).

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get interface configuration. SIOCGIFCONF = %p1% Sockets error code = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | sInt |

ExtLibA.Socket.SetTCPMD5OptFailParmInv

Description

Failed to set TCP MD5 password option because of invalid password length or remote address type.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to set TCP MD5 password option because of invalid parameter. Password length = %p1% Remote address type = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | ulnt32 |
| p2 | ulnt8 |

ExtLibA.Socket.SetTCPMD5OptFail

Description

Failed to set TCP MD5 password option because of sockets error,

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to set TCP MD5 password option. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.WritSockFail

Description

OS error when trying to write to socket.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket write error. Sockets error code = %p1% Socket ID = %p2% Socket type = %p3%
 Socket family = %p4% Socket protocol = %p5% Application handle = %p6% Stub socket
 handle = %p7% Src IP addr = %p8% Dest IP addr = %p9%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | sInt |
| p2 | sInt |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | xInt32 |
| p6 | uInt32 |
| p7 | uInt32 |
| p8 | VarFmtByteArray |
| p9 | VarFmtByteArray |

ExtLibA.Socket.TLSCnctFail

Description

A TLS connection attempt failed.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

A TLS connection attempt failed: Socket: %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | ulnt |

ExtLibA.Socket.UseTLSErrorNonTCPSock

Description

Attempted to use TLS on a non-TCP socket.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Attempted to use TLS on a non-TCP socket: Socket: %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | ulnt |

ExtLibA.Socket.SetPktInfoSockOptFail

Description

Failed to set IP_PKTINFO or IPV6_PKTINFO socket option.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to set IP_PKTINFO or IPV6_PKTINFO socket option. Sockets stub may be unable to determine incoming interface for data arriving on this socket. Sockets error code = %p1% Socket ID = %p2% Socket type = %p3% Socket family = %p4% Socket protocol = %p5% Application handle = %p6% Stub socket handle = %p7%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | sInt |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | xInt32 |
| p6 | uInt32 |
| p7 | uInt32 |

ExtLibA.Socket.GetIfSubnetMskFail

Description

Failed to look up interface subnet mask using ioctl(SIOCGIFNETMASK).

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get interface subnet mask. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.CruptPktByteDump

Description

The Test socket stub has corrupted a packet.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Corrupted Packet. Byte dump of packet before corruption = %p1%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | HexPktByteArray |

ExtLibA.Socket.GetPktInfoFail

Description

Failed to get packet information. Note: If the traced error number, %2, is 0 then the IP stack did not provide the required ancillary data.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to get packet information using IP_PKTINFO or IPV6_RECVPKTINFO. Socket = %p1% recvmsg error code (or 0 if none) = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt32 |

ExtLibA.Socket.InIfIdxInv

Description

Incoming interface index of packet is invalid.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Invalid incoming interface index = %p1%.

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.Socket.TCPCnctNew

Description

TCP connection.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

New TCP connection. Local address type = %p1% Local IP address = %p2% Local port = %p3% Remote address type = %p4% Remote IP address = %p5% Remote port = %p6%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | xInt8 |
| p2 | VarFmtByteArray |
| p3 | uInt16 |
| p4 | xInt8 |
| p5 | VarFmtByteArray |
| p6 | uInt16 |

ExtLibA.Socket.BldIncrctForSys

Description

The build of the Sockets Stub being run is incorrect for this version of the Windows Operating System.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

The build of the Sockets Stub being run is incorrect for this version of the Windows Operating System. Win 2000 Build ? = %p1% Win 2000 OS (or above) ? = %p2% OS Platform Id = %p3% OS Major Version number = %p4% OS Minor Version number = %p5%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | sInt |
| p3 | uInt32 |
| p4 | uInt32 |
| p5 | uInt32 |

ExtLibA.Socket.ReadFailWaitDataBufPost

Description

Couldn't read data from a socket because buffer post is outstanding.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

The sockets stub couldn't read available data from a socket (fd %p1%) because it is waiting for a data buffer to be posted for this socket.

Message Parameters

| Name | Type |
|------|------|
| p1 | uInt |

ExtLibA.Socket.AllocReadDataBufFail

Description

Couldn't allocate a buffer to read data from a socket.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Couldn't allocate a buffer to read available data from a socket (fd %p1%). The data will be read when the N-BASE posts a buffer to the sockets stub.

Message Parameters

| Name | Type |
|------|------|
| p1 | uInt |

ExtLibA.Socket.ReadFail

Description

Socket read call failed.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Warning

Message Text

Socket read call failed. Socket ID = %p1% read/recv() call rc = %p2% errno/GetLastError() = %p3% Socket type = %p4% Socket family = %p5% Socket protocol = %p6% Application handle = %p7% Stub socket handle = %p8%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt |
| p2 | sInt |
| p3 | sInt |
| p4 | xInt32 |
| p5 | xInt32 |

| Name | Type |
|------|--------|
| p6 | xInt32 |
| p7 | uInt32 |
| p8 | uInt32 |

ExtLibA.Socket.GetCnctLocAddrInfoFail

Description

Failed to get local information for incoming connection on BGP listen socket. The connection will fail as we cannot tell which instance of BGP should receive the connection.

Remedy

Determine why the GETSOCKNAME call failed and retry.

Severity

Warning

Message Text

Failed to get local address information for incoming connection Remote address type = %p1% Remote IP address = %p2% Remote port = %p3%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | xInt8 |
| p2 | VarFmtByteArray |
| p3 | uInt16 |

ExtLibA.Socket.IgnCnctNoBGPInstcLstn

Description

No BGP instance is listening on this VR so the stub will ignore the incoming connection.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Ignoring incoming connection on VR %p1%, no BGP instance listening

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.Socket.IgnCnctBGPInstcBndTo

Description

The BGP instance listening on this VR requested to bind to a particular address. Rejected an incoming connection on the VR that had a different destination address.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Ignoring incoming connection on VR %p1% for address %p2%, BGP instance bound to %p3%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | sInt |
| p2 | VarFmtByteArray |
| p3 | VarFmtByteArray |

ExtLibA.Socket.RecvErrOnBGPLstnSock

Description

An error has been received on a BGP listen socket. The socket will be closed and the stub will attempt to open a new listen socket. If this fails, the stub will retry on a timer. No incoming connection requests will be processed until a new listen socket is opened.

Remedy

A new socket should eventually be opened so no action is required.

Severity

Warning

Message Text

Error %p1% received on BGP listen socket %p2% for family %p3%. The socket will be closed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | uInt |
| p3 | xInt32 |

ExtLibA.Socket.ReopenBGPLstnSock

Description

Successfully reopened a BGP listen socket that was closed due to an error. Incoming connection attempts will now be received.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Re-opened BGP listen socket for address type %p1%.

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.Socket.AllocMD5SetMemFail

Description

Failed to allocate memory to store an MD5 password socket option for the BGP listen socket. If the listen socket is reopened, this socket option will not be set.

Remedy

Resolve the low memory condition. Toggling the peer configuration in BGP will cause BGP to attempt to set the socket option again.

Severity

Warning

Message Text

Unable to allocate memory for MD5 password set for BGP instance %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.Socket.RcvPktNoVLAN

Description

Vlan associated with receive data no longer supports protocol

Remedy

This is an internal condition needing technical assistance. Contact technical support with the output of "show tech".

Severity

Error

Message Text

Vlan associated with receive data no longer supports protocol. Interface Name = %p1%
Interface index = %p2% Socket ID = %p3% Socket family = %p4% Socket protocol = %p5%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt32 |
| p3 | sInt |
| p4 | xInt32 |
| p5 | xInt32 |

ExtLibA.SockLib.InitFail

Description

Sockets Interface failed to initialize correctly.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

The Sockets interface failed to initialize correctly.

ExtLibA.SockLib.InitIfIdxFail

Description

Failed to initialize for explicit ifIndex.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to initialize for explicit ifIndex. Socket ID = %p1% Socket type = %p2% Socket family = %p3% Socket protocol = %p4% Stub socket handle = %p5% Application socket handle = %p6% IF index = %p7%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | uInt32 |
| p6 | uInt32 |
| p7 | uInt32 |

ExtLibA.SockLib.RecvSockHndllnv

Description

Received invalid socket handle.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Received invalid socket handle. Socket handle = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | xInt |

ExtLibA.SockLib.CloseSockFail

Description

Failed to clean up/close a socket.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to clean up or close a socket. Error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.SockLib.ProcIPSSockOK

Description

Socket signal processed.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Socket signal processed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |

| Name | Type |
|------|-----------------|
| p5 | uInt32 |
| p6 | uInt32 |
| p7 | VarFmtByteArray |
| p8 | uInt16 |
| p9 | VarFmtByteArray |
| p10 | uInt16 |

ExtLibA.SockLib.ProcRegOK

Description

Socket register processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket register processed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | xInt8 |

ExtLibA.SockLib.ProcUnregOK

Description

Socket unregister processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket unregister processed.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | xInt8 |

ExtLibA.SockLib.InitHAFLibFail

Description

Failed to initialize HAF library.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to initialize the HAF library. Error code = %p1% Socket index = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt8 |
| p2 | uInt32 |

ExtLibA.SockLib.RegHAFLibFail

Description

Failed to register with the HAF library.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to register with the HAF library. Socket index = %p1%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.SockLib.CreatSockHndlFail

Description

Failed to create a socket handle.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to create a handle to a socket. Application socket handle = %p1% Socket type = %p2% Socket family = %p3% Socket protocol = %p4%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |

ExtLibA.SockLib.GetBufPoolFail

Description

Failed to get a buffer pool.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to get a buffer pool. Socket ID = %p1% Application socket handle = %p2% Stub socket handle = %p3% Socket type = %p4% Socket family = %p5% Socket protocol = %p6% Local inet address = %p7% Local port = %p8% Remote inet address = %p9% Remote port = %p10%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | sInt |
| p2 | uInt32 |
| p3 | uInt32 |
| p4 | xInt32 |
| p5 | xInt32 |
| p6 | xInt32 |
| p7 | VarFmtByteArray |
| p8 | uInt16 |

| Name | Type |
|------|-----------------|
| p9 | VarFmtByteArray |
| p10 | uInt16 |

ExtLibA.SockLib.ProcCloseOK

Description

Socket close processed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Socket close processed.

ExtLibA.SockLib.OpenSockFail

Description

Can't open a socket.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to open a socket. Sockets error code = %p1% Application handle = %p2% Socket type = %p3% Socket family = %p4% Socket protocol = %p5%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | uInt32 |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | xInt32 |

ExtLibA.SockLib.SetSockOptFail

Description

Failed to set a socket option.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to set an option on a socket. Socket option = %p1% Sockets error code = %p2%
 Socket ID = %p3% Application handle = %p4% Stub socket handle = %p5% Socket type =
 %p6% Socket family = %p7% Socket protocol = %p8%

Message Parameters

| Name | Type |

Warning

Message Text

Corrupted Packet. Byte dump of packet before corruption = %p1%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | HexPktByteArray |

ExtLibA.SockLib.GetPktInfoFail

Description

Failed to get packet information. Note: If the traced error number, %2, is 0 then the IP stack did not provide the required ancillary data.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to get packet information using IP_PKTINFO or IPV6_PKTINFO. Socket = %p1%
recvmsg error code (or 0 if none) = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | uInt32 |

ExtLibA.SockLib.InIfIdxInv

Description

Incoming interface index of packet is invalid.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Invalid incoming interface index = %p1% Socket ID = %p2% Socket type = %p3% Socket family = %p4% Socket protocol = %p5% Application handle = %p6% Stub socket handle = %p7%

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |
| p2 | sInt |
| p3 | xInt32 |
| p4 | xInt32 |
| p5 | xInt32 |
| p6 | uInt32 |
| p7 | uInt32 |

ExtLibA.SockLib.TCPCnctNew

Description

TCP or SCTP connection.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

New TCP or SCTP connection. Socket ID = %p1% Local address type = %p2% Local IP address = %p3% Local port = %p4% Remote address type = %p5% Remote IP address = %p6% Remote port = %p7%

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | sInt |
| p2 | xInt8 |
| p3 | VarFmtByteArray |
| p4 | uInt16 |
| p5 | xInt8 |
| p6 | VarFmtByteArray |
| p7 | uInt16 |

ExtLibA.SockLib.BldIncrctForSys

Description

The build of the Sockets Stub being run is incorrect for this version of the Windows Operating System.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

The build of the Sockets Stub being run is incorrect for this version of the Windows Operating System. Win 2000 Build ? = %p1% Win 2000 OS (or above) ? = %p2% OS Platform Id = %p3% OS Major Version number = %p4% OS Minor Version number = %p5%

Message Parameters

ExtLibA.SockLib.CreatHndIFail

Description

Failed to create a handle for a linked IPv4 socket

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Failed to create a linked IPv4 socket handle when creating a socket pair. Linked IPv6 socket = %p1% Linked socket type = %p2% Linked socket family = %p3% Linked socket handle = %p4% Application handle = %p5%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | uInt32 |
| p5 | uInt32 |

ExtLibA.SockLib.OpenSCTPSockFail

Description

The socket stub user attempted to open an SCTP socket, but SCTP support is not available. SCTP is only available on patched Linux kernels and is indicated by the presence of the file /usr/include/netinet/sctp.h The SCK stub will not be able to use the SCTP transport protocol.

Remedy

Install the necessary kernel patch to support SCTP and rebuild the socket stub on a machine with the patched kernel.

Severity

Warning

Message Text

Failed to open an SCTP socket - the OS does not support SCTP

ExtLibA.SockLib.WritSCTPSockFail

Description

OS error while trying to write to an SCTP socket.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

SCTP Socket write error. Sockets error code = %p1% Socket ID = %p2% Stream number = %p3%

Message Parameters

| Name | Type |
|------|--------|
| p1 | sInt |
| p2 | sInt |
| p3 | uInt16 |

ExtLibA.SockLib.ReadSCTPSockFail

Description

OS error while trying to read from an SCTP socket.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

SCTP Socket read error. Sockets error code = %p1% Socket ID = %p2%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |
| p2 | sInt |

ExtLibA.SockLib.ReadSCTPSockDataIncmplt

Description

Incomplete data message read from an SCTP socket.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Incomplete data message read from an SCTP socket. Socket ID = %p1% Stream number = %p2% Received flags = %p3%

Message Parameters

| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |

ExtLibA.SockLib.ShutdownSockFail

Description

Failed to shutdown a socket.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to shutdown sending or receiving on a socket. Sockets error code = %p1% Socket ID = %p2% Direction = %p3%

Message Parameters

| Name | Type |
|------|-------|
| p1 | sInt |
| p2 | sInt |
| p3 | xInt8 |

ExtLibA.SockLib.IPv6McastRtSockNotSuprt

Description

IPv6 multicast routing socket functionality is not available in this instance of the sockets stub. Multicast routing sockets will not be available.

Remedy

Confirm that the sockets stub has been built with support for IPv6 multicast routing socket functionality available. On Linux this involves patching the kernel.

Severity

Warning

Message Text

Sockets stub has not been built on a system with support for IPv6 multicast routing socket functionality.

ExtLibA.SockLib.OpenRTNETLINKSockFail

Description

Failed to open an RTNETLINK socket on Linux. Stub will not be able to query the OS for interface addresses.

Remedy

Confirm support for RTNETLINK sockets is enabled.

Severity

Error

Message Text

Failed to open an RTNETLINK socket. Unable to get interface addresses. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.SockLib.BndRTNETLINKSockFail

Description

Failed to bind an RTNETLINK socket on Linux. Stub will not be able to query the OS for interface addresses.

Remedy

Confirm support for RTNETLINK sockets is enabled.

Severity

Error

Message Text

Failed to bind an RTNETLINK socket. Unable to get interface addresses. Sockets error code = %p1%

Message Parameters

| Name | Type |
|------|------|
| p1 | sInt |

ExtLibA.SockLib.AllocBndIfFail

Description

The sockets stub was unable to allocate memory to create a bind entry for an interface. The MUX bind will not succeed and the required hook will not be inserted. This will break explicit interface functionality in the stub.

Remedy

Resolve the low memory condition.

Severity

Error

Message Text

Failed to allocate memory while attempting to bind a packet hook to interface index %p1%. Explicit IF functionality will not work on this interface.

Message Parameters

| Name | Type |
|------|--------|
| p1 | xInt32 |

ExtLibA.SockLib.ReadSockEmpty

Description

We have made multiple read calls, and there is nothing on the socket. This can happen in certain race conditions, and is not regarded as an error.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Socket read call failed as there was nothing to read on the socket. Socket ID = %p1%
 Socket type = %p2% Socket family = %p3% Socket protocol = %p4% Application handle =
 %p5% Stub socket handle = %p6%

Message Parameters

| p6 | ulnt32 |

ExtLibA.SockLib.DropKernNtfInvData

Description

A kernel notification was received containing invalid or corrupted data. The notification was dropped.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

A kernel notification containing invalid data purportedly from virtual i/f %p1% has been dropped.

Message Parameters

| Name | Type |
|------|--------|
| p1 | ulnt32 |

ExtLibA.SockLib.DropKernNtfnVlfDsbl

Description

A kernel notification was received relating to an interface which is not enabled. The notification was dropped.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

A kernel notification was received relating to virtual i/f %p1%, which is not enabled

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.SockLib.McastFwdEntInvlfIndx

Description

A multicast forwarding entry was received with an invalid interface index - at least one interface does not exist or has not been enabled. The forwarding entry was not programmed.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Could not program a multicast forwarding entry for (%p1%,%p2%): invalid i/f index %p3%.

Message Parameters

| Name | Type |
|------|-----------------|
| p1 | VarFmtByteArray |
| p2 | VarFmtByteArray |
| p3 | uInt32 |

ExtLibA.SockLib.RecvPkt

Description

A packet has been received by the socket.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Packet received by socket. Socket ID = %p1% Socket type = %p2% Socket family = %p3%

| p1 | uInt32 |
| p2 | xInt32 |
| p3 | xInt32 |
| p4 | xInt32 |

ExtLibA.SockLib.FndIPv4AddrOnIfFail

Description

Failed to find an IPv4 address on an interface. All-multicast mode will not be enabled on the interface.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Did not find IPv4 address on i/f %p1%. Cannot enable all-multicast mode.

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |

ExtLibA.SockLib.RejctSockOpenReq

Description

The MPF stub has tried to open more than one socket with the ATG_SCK_XSO_MRT_MPF option or multiple instances of the MPF stub have set the option. The requested multicast socket will not be available.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Error

Message Text

Request to open socket rejected - report error Diagnostic information for support:
Multiple processes have attempted to set the ATG_SCK_XSO_MRT_MPF option
Requesting process ID = %p1% Existing process ID = %p2%

Message Parameters

| Name | Type |
|------|--------|
| p1 | uInt32 |
| p2 | uInt32 |

ExtLibA.SockLib.IfIndxMapFail

Description

Failed to map a system-wide interface index to an interface index that is locally unique. The mapping is required to find an interface index that a socket is supposed to be bound to. If a locally unique interface index is not found then the socket stub is not able to perform this binding.

Remedy

This is an internal socket library issue. Please try the following: check protocol and interface configuration, restart the protocol, reboot the system. If the event still occurs then contact technical support with the output of "show tech".

Severity

Warning

Message Text

Failed to map system-wide i/f index %p1% to a locally unique one.

Message Parameters

No Remedy. This is debug information

Severity

Debug-Data

Message Text

Completed Flush for port %port%.

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |

FDB.DtectMACCflctStaticMAC

Description

When a static MAC entry is configured and then the same MAC is learned on a different port, The switch logs the source MAC address, the received port number, and the VLAN name learned for the duplicate MAC. This event occurs when the static-mac-move configuration is enabled in a switch.

Remedy

Check the pre-existing static MAC entry information on the switch and verify that the static MAC entry is configured with the right port information. If the static MAC is configured for the correct port, this event might indicate MAC movement from one port to the other port. This event might also indicate a network security attack using bogus packets with the same MAC address dynamically learned on the additional port.

Severity

Notice

Message Text

MAC Learning packet with source MAC %mac% is detected on port %port% and VLAN %vlan% which conflicts the pre-existing static MAC entry

Message Parameters

| Name | Type |
|------|--------|
| mac | srcMAC |
| port | String |
| vlan | VLAN |

FDB.MACMove

Description

GTP.RxPkt

Description

Debug log to dump out transmit packet contents

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

GTP Rx Packet %port% %ptr% %len%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |
| ptr | Buf-ptr |
| len | Buf-len |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

GTP.TxPkt

Description

Debug log to dump out transmit packet contents

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

GTP Tx Packet %port% %ptr% %len%

Message Parameters

| Name | Type |
|------|----------|
| port | SlotPort |
| ptr | Buf-ptr |
| len | Buf-len |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

GPTP.ChgPortState

Description

This event will occur when the role of the port changes to Disabled, Slave, Master or Passive state.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Port %port% role changed to %state% state.

Message Parameters

| Name | Type |
|-------|----------|
| port | SlotPort |
| state | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

GPTP.AnncRxTmout

Description

This event will occur when an announce message is not received at a port within the announce receipt time interval i.e., when `currentTime >= announceReceiptTimeoutTime`.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Announce message receive timeout for port %port%. Announce timeout interval = %AnncTmoutSec%sec %AnncTmoutNsec%nsec : Announce message receive time = %AnncRxTimeSec%sec %AnncRxTimeNsec%nsec.

Message Parameters

| Name | Type |
|----------------|----------|
| port | SlotPort |
| AnncTmoutSec | ulnt64 |
| AnncTmoutNsec | ulnt |
| AnncRxTimeSec | ulnt64 |
| AnncRxTimeNsec | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

GTP.SyncRxTmout

Description

This event will occur when an sync message is not received at a port within the sync receipt time interval. i.e., when `currentTime >= syncReceiptTimeoutTime`.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Sync message receive timeout for port %port%. Sync timeout interval = %SyncTmoutSec%sec %SyncTmoutNsec%nsec : Sync message receive time = %SyncRxTimeSec%sec %SyncRxTimeNsec%.

Message Parameters

| Name | Type |
|----------------|----------|
| port | SlotPort |
| SyncTmoutSec | ulInt64 |
| SyncTmoutNsec | ulInt |
| SyncRxTimeSec | ulInt64 |
| SyncRxTimeNsec | ulInt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

GTP.DscrdRxPTPPckt

Description

This event will occur when the received PTP packet is discarded at a port due to any of the following conditions: - The received announce message is not qualified. - A Follow_Up message corresponding to a received Sync message is not received, denoted by a transition of the condition (currentTime >= followUpReceiptTimeoutTime). - A Pdelay_Resp message corresponding to a transmitted Pdelay_Req message is not received, denoted by a transition from the WAITING_FOR_PDELAY_RESP state to the RESET state of the MDPdelayReq state machine. - A Pdelay_Resp_Follow_Up message corresponding to a transmitted Pdelay_Req message is not received, denoted by a transition from the WAITING_FOR_PDELAY_RESP_FOLLOW_UP state to the RESET state of the MDPdelayReq state machine.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

GTP message received on port %port% is discarded because: %reason%.

Message Parameters

| Name | Type |

| thisClock | String |

GTP.asCapable.InvRateRatio

Description

The condition occurred where an Invalid neighbor Rate Ratio was detected. The neighborRateRatio is calculated in the WAITING_FOR_PDELAY_INTERVAL_TIMER state by calling computeNeighborPropDelay(). The MDPdelayReq state machine is currently in the WAITING_FOR_PDELAY_INTERVAL_TIMER state. See figure 11-8 of the IEEE 802.1AS-2011 spec.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

asCapable is %asCapable% => 0, port = %port%: Invalid neighborRateRatio:
WAITING_FOR_PDELAY_INTERVAL_TIMER state

Message Parameters

| Name | Type |
|-----------|----------|
| asCapable | ulnt |
| port | SlotPort |

GTP.asCapable.NegPdlay

Description

The condition occurs when a negative Pdelay was calculated. A bad measurement could be the cause. This condition should not persist. If 3 bad measurements are detected consecutively, then a bad value will be substituted and will cause the port to become not asCapable. The MDPdelayReq state machine is in the WAITING_FOR_PDELAY_INTERVAL_TIMER state.

Remedy

If the negative Pdelay measurements persists, then latency offset values configured on chip need to be re-evaluated. It could also be the connected device is sending invalid time stamps causing a negative pdelay value. If this condition persists, try using longer cables to see if the negative Pdelay measurements continue.

Severity

Warning

Message Text

GTP.asCapable.PortNotAsCapable

Description

This event will occur when a GTP port is not in asCapable state due to any of the below reasons: - MDPdelayReq state machine enters the INITIAL_SEND_PDELAY_REQ state. - Pdelay exceeds the time interval and the lost responses exceeds the limit. - Mismatch in Clock ID of the received pdelay Response message. - Mismatch in the port number of the received pdelay response message. - Mismatch in the sequence Id of the pdelay Response message and the transmitted Sequence Id. - Invalid neighbor Rate Ratio. - MDPdelay state machine enters the RESET state. - Did not receive Pdelay Response Followup in time. - Measured Pdelay Exceeded the Pdelay Threshold.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Port %port% is set to not asCapable because %reason%.

Message Parameters

| Name | Type |
|--------|----------|
| port | SlotPort |
| reason | String |

GTP.asCapable.PortNotAsCapableDetail

Description

This event will occur when a GTP port is not in asCapable state and also provides some information along with the reason(which could be any of the below mentioned events) of the state change. - Pdelay exceeds the time interval and the lost responses exceeds the limit. - Mismatch in Clock ID of the received pdelay Response message. - Mismatch in the port number of the received pdelay response message. - Mismatch in the sequence Id of the pdelay Response message and the transmitted Sequence Id. - MDPdelay state machine enters the RESET state. - Did not receive Pdelay Response Followup in time. - Measured Pdelay Exceeded the Pdelay Threshold.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Port %port% is set to not asCapable because %reason%.

Message Parameters

| Name | Type |
|--------|----------|
| port | SlotPort |
| reason | Printf |

GTP.asCapable.PortAsCapableTrans

Description

This event will occur when there is a transition in the state of the GTP port between asCapable and Not asCapable states, which could be due to any of the below reasons:

- MDPdelayReq state machine enters the INITIAL_SEND_PDELAY_REQ state.
- Pdelay exceeds the time interval and the lost responses exceeds the limit.
- Mismatch in Clock ID of the received pdelay Response message.
- Mismatch in the port number of the received pdelay response message.
- Mismatch in the sequence Id of the pdelay Response message and the transmitted Sequence Id.
- Invalid neighbor Rate Ratio.
- MDPdelay state machine enters the RESET state.
- Did not receive Pdelay Response Followup in time.
- Measured Pdelay Exceeded the Pdelay Threshold.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Port %port% transitioned from %oldState% to %newState% %reason%.

Message Parameters

| Name | Type |
|----------|----------|
| port | SlotPort |
| oldState | String |
| newState | String |
| reason | String |

HAL.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

HAL.BFD.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.BFD.DebugVerbose

Description

A condition has been detected that may interest a developer analyzing some system behavior at a more verbose level than provided by the debug summary information.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

HAL.BFD.CreatFiltFail

Description

A filter creation attempt has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Warning

Message Text

Filter creation failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.CreatSessReq

Description

This event occurs whenever BFD session create request is sent to HAL for a specific srcIP, dest IP, VR name and sessionID. vrName VR name srcIPAddr Source IP address dstIPAddr Dest IP address sessionID sessionID

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

BFD session create request sent for dest IP %dstIPAddr% srcIP %srcIPAddr% vrName %vrName% with sessionID %sessionID%

Message Parameters

| Name | Type |
|-----------|--------|
| srcIPAddr | String |
| dstIPAddr | String |
| vrName | String |
| sessionID | uint |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.CreatSessReqFail

Description

This event occurs whenever BFD session create request failed for a specific srcIP,dest IP, vrName and sessionID in HAL.

Remedy

Session creation could fail in the Hardware if the MAC address of next hop is not resolved. Check show iparp if ipv4 bfd session or show neighbor-discovery for ipv6 session. Please contact tech support if sessions is not able create after multiple attempts. show tech, debug hal show platform bfd all, debug bfd show session, debug bfd show nexthop.

Severity

Warning

Message Text

BFD session create request for dest IP %destIPAddr% src IP %srcIPAddr% VRName %vrName% with %sessionID% failed.

Message Parameters

| Name | Type |
|------------|--------|
| srcIPAddr | String |
| destIPAddr | String |
| vrName | String |
| sessionID | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.QualPktResFail

Description

An attempt to qualify the packet resolution for BFD has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Packet Resolution %pktRes% qualification failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|--------|------|
| pktRes | ulnt |
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.AllocMemFail

Description

A memory allocation required for BFD operation has failed. The BFD feature may have unexpected behavior.

Remedy

If the box has run out of memory due to features enabled by the user, turn off some features to free additional memory and try the BFD configuration again.

Severity

Error

Message Text

Memory allocation failed

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.FndAuthIndxFail

Description

This message indicates the hardware abstraction layer could not find the free authentication table index for the given simple password by th BFD application.

Remedy

Retrying the operation may remedy the symptom. Otherwise, this is an internal condition that requires engineering assistance. Please call technical support. debug hal show platform bfd all

Severity

Error

Message Text

Could not find free auth index for the given simple password %passwd% length %len%

Message Parameters

| Name | Type |
|--------|--------|
| passwd | String |
| len | uint8 |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.ParmNull

Description

An internal function was called with a NULL pointer. This condition is not expected and is indicative of a possible memory corruption due to a software bug that needs engineering attention.

Remedy

This is a rare internal condition, restart process/reboot system may be required. If condition is not resolved by reboot system, please contact technical support with the following information: show tech.

Severity

Error

Message Text

Passing parameters %parmName% is NULL.

Message Parameters

| Name | Type |
|----------|--------|
| parmName | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.AddFiltActFail

Description

An attempt to add the bfd packet mapping to cosq filter action has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Add filter action operation failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.InstlFiltFail

Description

An attempt to install bfd packet mapping to cosq filter has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Filter install failed on slot %slot%, unit %unit% return code %rv% error message %errMsg%

Message Parameters

| Name | Type |
|--------|--------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |
| errMsg | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.SetSimpPwdTblFail

Description

An attempt to program the simple password with the specified index has failed. The specified return code value is provided by the low level driver which has only internal significance

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech" - output of "debug hal show platform bfd all"

Severity

Error

Message Text

Setting given password %passwd% length %length% table with index %authIndex% failed
error message %errMsg%

Message Parameters

| Name | Type |
|-----------|--------|
| authIndex | uint32 |
| passwd | String |
| length | uint |
| errMsg | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.GetEndptTblFail

Description

Getting endpoint info for the specified index has failed. Either hardware is not responding or the specified index is not present in the hardware table. This error could happen if the endpoint software and hardware table goes out of sync.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech" - output of "debug hal show platform bfd all"

Severity

Warning

Message Text

Getting session info for %epIndex% from endpoint table failed on %unit% with error
code %rv% error message %errMsg%

Message Parameters

| Name | Type |
|---------|--------|
| unit | uInt32 |
| epIndex | uInt16 |
| rv | uInt16 |
| errMsg | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.BFD.RecvRmtDiagNtfy

Description

This event occurs when local session received the Diagnostic code changes from the remote endpoint.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Received Remote diag for session %sessionId% from remote %remoteId% diag code %diagcode%

Message Parameters

| Name | Type |
|-----------|--------|
| sessionId | uInt32 |
| remoteld | uInt32 |
| diagcode | uInt32 |

Applicable Platforms

- Summit family switches

- I386 virtual machine switch simulator

HAL.BFD.GetHwInfoFail

Description

No description is available.

Remedy

Retrying the operation may remedy the symptom. Otherwise, this is an internal condition that requires engineering assistance. Please call technical support. debug hal show platform bfd all

Severity

Error

HAL.Card.Critical

Description

A serious problem has been detected which is compromising the operation of the system. The system can not function as expected unless it is remedied. The problem may be related to hardware failure or software data corruption.

Remedy

The exact remedy is dependant on the particular situation; but the problem may not be resolved without intervention of some sort.

Severity

Critical

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.Card.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.Card.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

Severity

Warning

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.Card.Notice

Description

A normal but significant condition has been detected, which signals that the system is functioning as expected. The condition is somewhat uncommon, but it is not necessarily unusual or unexpected.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Notice

Message Text

HAL.Card.Info

Description

A normal but potentially interesting condition has been detected, which signals that the system is functioning as expected and simply provides potentially detailed information or confirmation in that regard. The circumstance is common and not unusual or unexpected in any way.

Remedy

There is no remedy because there is no problem to be resolved.

| format | Printf |

HAL.Card.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

There is no remedy because there is no problem to be resolved.

HAL.Card.VersionWarning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the condition may be resolved by retrying the operation when the resource becomes available.

Severity

Warning

Message Text

A request to get the version code of the IO card in slot %slotNum% with assigned ip address of %slotIp% failed - returning a completion code of %return_code%.

Message Parameters

| Name | Type |
|-------------|--------------|
| return_code | sInt |
| slotNum | uInt32 |
| slotIp | srcIPAddress |

HAL.Card.MasterVersionFailed

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the condition may be resolved by retrying the operation when the resource becomes available.

Severity

Warning

Message Text

A request to get the version code of the management module in slot %slotNum% with assigned ip address of %slotIp% failed - returning a completion code of %return_code%.

Message Parameters

| Name | Type |
|-------------|--------------|
| return_code | sInt |
| slotNum | uInt32 |
| slotIp | srcIPAddress |

HAL.Card.SetTimeFailed

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the condition may be resolved by retrying the operation when the resource becomes available.

Severity

Warning

Message Text

A request to set the time for the IO card in slot %slotNum% with assigned ip address of %slotIp% failed - returning a completion code of %return_code%.

Message Parameters

| Name | Type |
|-------------|--------------|
| return_code | sInt |
| slotNum | uInt32 |
| slotIp | srcIPAddress |

HAL.Card.PowerStateError

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

A request to power %stateChange% slot %slotNum% failed - returning a completion code of %return_code%.

Message Parameters

| Name | Type |
|-------------|--------|
| return_code | sInt |
| slotNum | uInt32 |
| stateChange | String |

HAL.Card.EnblStorAndFwdMode

Description

Store-and-forward mode (default) is activated on the specified slot. Packet transmission will not begin until packets are received in full.

Remedy

This is just a debug message with no remedy.

Severity

Debug-Summary

Message Text

Store-and-forward mode activated for slot %slot%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

HAL.Card.EnblCutThruMode

Description

Cut-through mode is activated on the specified slot. Packet transmission may begin prior to packets being received in full to reduce forwarding latency.

Remedy

This is just a debug message with no remedy.

Severity

Debug-Summary

Message Text

Cut-through mode activated for slot %slot%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

HAL.Card.ExtTblMismatch

Description

The configured external lookup tables setting is not applied. The switch is operating with the current external lookup tables setting as reported in show forwarding configuration. This will occur if the external lookup tables setting was modified and the switch was rebooted without saving the configuration or a new configuration file was loaded with a different external lookup tables setting.

Remedy

Reboot the switch to re-apply the configured setting which will become the current setting. Or modify the setting, save and reboot to apply a new setting.

Severity

Warning

Message Text

The external lookup tables current setting for the %slotName% does not match the configured setting. For the configured setting to take effect, save configuration and reboot the %slotName%.

Message Parameters

| Name | Type |
|----------|--------|
| slotName | String |

HAL.Card.ExtTblClbrtDataInv

Description

The external-table hardware interface calibration data is invalid or missing for this Summit switch or BD8K interface card. This hardware interface is calibrated when the switch or card is manufactured. Without this data, the external table cannot be used reliably for L2, L3 or ACL lookups.

Remedy

Re-calibrate the switch or card from EXOS. This can be done with the following command: debug hal run external-table calibration. This command will cause a re-calibration of the external-table hardware interface for the switch or card. This process will take 15-30 minutes and will involve a reboot. Please do not disconnect power during this process.

Severity

Error

Message Text

%slotName% has invalid or missing external-table calibration data.

Message Parameters

| Name | Type |
|----------|--------|
| slotName | String |

HAL.Card.RcmndInstlFWUpdt

Description

Recommend Installing FirmWare Update: Every EXOS release comes with updated firmware that is well tested, however as the firmware update needs to be done manually in-field scenarios may come up where EXOS may be latest, but the firmware may be old.

Remedy

Running a firmware upgrade with the CLI command 'install firmware' should resolve the situation.

Severity

Notice

Message Text

Version mismatch for %blockcode% on %slotname% , currently(%current_ver%) but expected(%expected_ver%)

Message Parameters

| Name | Type |
|--------------|--------|
| blockcode | String |
| slotname | String |
| current_ver | String |
| expected_ver | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Card.DtectHWVerUnsuprtFWUpdt

Description

Detected Hardware Version Unsupported for Firmware Update: EXOS, either automatically or manually will check the current system if its running on updated firmware. If for some reason it is unable to do so, we need to log that the firmware check itself failed. This can only happen if new hardware (IOM/XFM ...etc) is being tested and EXOS is unable to identify the hardware.

Remedy

As new hardware has been introduced, its details, such as 800K number, card-type ... etc will need to be added to the "firmware check" table so EXOS will detect it properly in future scans. Please consult the relevant EXOS-firmware engineer to make the needed changes. If this event is seen in-field, it means that the client is running OUTDATED exos and is HIGHLY recommended to upgrade the system.

Severity

Error

Message Text

Did NOT recognize device %blockcode% on %slotname%!! 800K_number=|%number%|
version=|%blockversion%| cardtype=|%cardtype%|

Message Parameters

| Name | Type |
|--------------|--------|
| blockcode | String |
| slotname | String |
| number | String |
| blockversion | String |
| cardtype | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Card.PortPartMismatch

Description

The configured port partitioning does not match the current port partitioning applied when the switch was initialized. The switch is operating with the current port partitioning setting as reported in show ports information detail. This will occur if the port configuration for a slot was modified when the switch was not present in the stack, a new switch replaced the previously configured one, or a new configuration file was loaded with a different configured port partitioning for the slot. The system has automatically stored the configured port partitioning in the node but the switch needs to be rebooted for it to take effect.

Remedy

Reboot the switch to apply the configured setting which will then become the current setting. Or modify the setting, save and reboot to apply a new setting.

Severity

Warning

Message Text

The current port partitioning for %slotName% does not match the configured setting.

Message Parameters

| Name | Type |
|----------|--------|
| slotName | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Card.IOCardWrongForMode

Description

The type of I/O card in the specified I/O slot cannot be used with the named Fabric Mode.

Remedy

Either remove the I/O card from the switch, disable it, or upgrade the fabric modules.

Severity

Warning

Message Text

The %cardTypeStr% card in %slotName% is not usable in Fabric Mode %fabModeStr%. Please disable the slot, remove the %cardTypeStr% card, or upgrade the fabric modules.

Message Parameters

| Name | Type |
|-------------|--------|
| cardTypeStr | String |
| slotName | String |
| fabModeStr | String |

Applicable Platforms

- BlackDiamond X8 series switches

HAL.Card.FMWrongForMode

Description

The BDX series switch operates with only one type of fabric module at a time. This message occurred because there were at least two types of fabric modules inserted and enabled. The first fabric module to be powered on determines the fabric mode. Afterwards, attempts to power on fabric modules of a different type result in failure to bring up those fabric modules.

Remedy

Examine the output of the "show slot" command to see your available fabric modules. Decide which type of fabric module you want to use. Then either disable all fabric slots that contain an undesired fabric module, or physically remove the undesired fabric modules. The system will then recover using the desired fabric mode.

Severity

Warning

Message Text

The %cardTypeStr% card in %slotName% is not compatible with the current Fabric Mode %fabModeStr%. Please disable or remove all fabric modules that are not compatible with the desired fabric mode.

Message Parameters

| Name | Type |
|-------------|--------|
| cardTypeStr | String |
| slotName | String |
| fabModeStr | String |

Applicable Platforms

- BlackDiamond X8 series switches

HAL.Card.NoFM

Description

Either there are no Fabric Modules installed in the switch, or all installed Fabric Modules are present in disabled slots.

Remedy

Either enable fabric slots that contain Fabric Modules and are disabled, or install Fabric Modules of like type.

Severity

Error

Message Text

No Fabric Modules are available. All I/O cards will remain in a Failed state until fabric modules are installed and enabled.

Applicable Platforms

- BlackDiamond X8 series switches

HAL.Card.IntTblMisMatch

Description

The configured internal lookup tables setting is not applied. The switch is operating with the current internal lookup tables setting as reported in show forwarding configuration. This will occur if the internal lookup tables setting was modified and the switch was rebooted without saving the configuration or a new configuration file was loaded with a different internal lookup tables setting.

Remedy

Reboot the switch to re-apply the configured setting which will become the current setting. Or modify the setting, save and reboot to apply a new setting.

Severity

Warning

Message Text

The internal lookup tables current setting for the %slotName% does not match the configured setting. For the configured setting to take effect, save configuration and reboot the %slotName%.

Message Parameters

| Name | Type |
|----------|--------|
| slotName | String |

HAL.Card.DiagXmodMiss

Description

This event message recommends that the diagnostics xmod be used to install the diagnostics image so that switch diagnostics can be run in the future. As of 15.6.1, the diagnostics image is packaged as an xmod that can be installed with the base xos package in order to install or update the diagnostics image.

Remedy

No action required -- Informational message only.

Severity

Info

Message Text

The diagnostics image is not installed on %switchOrSlot%. Please download and install the diagnostics xmod in order to run diagnostics.

Message Parameters

| Name | Type |
|--------------|--------|
| switchOrSlot | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Card.HwTblUtilDebug

Description

This is for debugging collection of hardware table utilization statistics for sFlow.

Remedy

No action required - Informational message only

Severity

Debug-Verbose

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.Card.HwTblThrshldExcd

Description

The ASIC hardware table utilization has exceeded 90 percent for the above resource. This may cause switch performance degradation.

Remedy

Resources may be freed by unconfiguring certain features, depending on the affected hardware table. Route compression can be used to reduce Route table usage.

Severity

Warning

Message Text

The utilization of %tableName% hardware table on slot %slot% has exceeded 90%%

Message Parameters

| Name | Type |
|-----------|--------|
| tableName | String |
| slot | Slot |

HAL.Card.L2L3HwTblThrshldExcd

Description

The ASIC hardware table utilization has exceeded 90 percent for the above resource. This may cause switch performance degradation.

Remedy

Resources may be freed by unconfiguring certain features, depending on the affected hardware table. Hardware upgrade or network segregation may be needed. Disabling IGMP snooping on VLANs where it is not required, will reduce multicast entries in the L3 table.

Severity

Notice

Message Text

The utilization of %tableName% hardware table on slot %slot% has exceeded 90%%

Message Parameters

| Name | Type |
|-----------|--------|
| tableName | String |
| slot | Slot |

HAL.Card.ACLSliceTblFull

Description

The ASIC ACL Slice hardware table utilization has reached 100 percent. This may cause ACL installation failures for features that leverage ACL hardware.

Remedy

ACL Slice table usage can be reduced by unconfiguring some policy and ingress/egress ACL filters.

Severity

Warning

Message Text

The utilization of %tableName% hardware table on slot %slot% has reached 100%.
(Logged at most once per hour.)

Message Parameters

| Name | Type |
|-----------|--------|
| tableName | String |
| slot | Slot |

HAL.Card.ACLSliceTblUtilBelow

Description

The ASIC ACL Slice hardware table utilization has decreased below 80 percent.

Remedy

No action required - Informational message only

Severity

Notice

Message Text

The utilization of %tableName% hardware table on slot %slot% has decreased below %percent%%. (Logged at most once per hour.)

Message Parameters

| Name | Type |
|-----------|--------|
| tableName | String |
| slot | Slot |
| percent | ulnt |

HAL.Card.ACLEntryTblUtilAbove

Description

The ASIC ACL hardware table utilization has exceeded 90 percent for the above resource. This may cause ACL installation failures for features that leverage ACL hardware.

Remedy

ACL table usage can be reduced by unconfiguring some ingress/egress ACL filters.

Severity

Notice

Message Text

The utilization of %tableName% hardware table on slot %slot% has exceeded %percent% %%. (Logged at most once per hour.)

Message Parameters

| Name | Type |
|-----------|--------|
| tableName | String |
| slot | Slot |
| percent | ulnt |

HAL.Conduit.InsCtrlBlkFail

Description

A failure occurred when a system component attempted to add a conduit event resource to an internal message database. The sending internal application is notified. It may retry the request after waiting for the resource shortage to clear up.

Remedy

The system is low on memory resources. The configuration should be reduced in scale or complexity in order for the system to continue operating correctly.

Severity

Error

Message Text

A request to insert event information to a message queue for slots %slotInfo% and pipe ID %pipeId% and conduit ID %conduitNum% failed.

Message Parameters

| Name | Type |
|------------|--------|
| slotInfo | String |
| pipeId | String |
| conduitNum | ulnt |

HAL.Conduit.RemCtrlBlkFail

Description

An attempt to remove the resource for a conduit event failed. The resource was not found in the database. The system will continue managing and processing resources for other events.

Remedy

This is possibly the result of internal data corruption or a software programming error. Report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to remove resources associated with a conduit message for slot %slotId% conduit type %conduitType% failed - resources could not be found.

Message Parameters

| Name | Type |
|-------------|--------|
| slotId | ulnt |
| conduitType | String |

HAL.Conduit.MsgSizInv

Description

A problem has been detected which is interfering with the normal operation of the system. An invalid event message size has been detected during the conduit message verification process. The sending application is informed of the error - it may attempt the transmission again after some corrective action.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

A conduit event message size of %size% is invalid - conduit type %conduitType% and conduit ID %conduitId%.

Message Parameters

| Name | Type |
|-------------|------|
| size | ulnt |
| conduitType | ulnt |
| conduitId | ulnt |

HAL.Conduit.AllocMsgCtrlBlkFail

Description

An attempt to allocate resources to manage the processing of a reply to a transmitted conduit message failed. This may be the result of a network event that is affecting the system CPU utilization.

Remedy

The system is low on memory resources. The configuration should be reduced in scale or complexity in order for the system to continue operating correctly.

Severity

Error

Message Text

An attempt to allocate callback resources associated with a conduit message for slot %slotNum%, conduit type %conduitType%, pipe %pipe%, and conduit # %conduitNum% failed.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNum | ulnt |
| conduitType | String |
| pipe | String |
| conduitNum | ulnt |

HAL.Conduit.SendMsgFail

Description

An attempt to send a conduit event message to all slots failed. The underlying system socket has failed and is closed as part of the recovery.

Remedy

Switch will restart the IO slot that caused this error. If the slot is not restarted, disable the slot and enable it again.

Severity

Warning

Message Text

A conduit event transmission failed for slot %slotNum%, conduit type %conduitType%, file descriptor %fd%, event flags %evntFlags% and event seq. # %seqNo%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNum | ulnt |
| conduitType | String |
| fd | ulnt |
| evntFlags | ulnt8 |
| seqNo | ulnt16 |

HAL.Conduit.SendStateFail

Description

The system is not functioning as expected. A maximum number of events is currently pending. The system cannot send any more. This almost certainly indicates a IO slot is not responding to the requests sent by Management module.

Remedy

This is possibly the result of some software/hardware malfunction at the IO. Restart the IO module by disabling followed by enabling the slot. Additionally, Report the problem to your switch support contact.

Severity

Error

Message Text

A bad conduit send state detected while processing a message for slot %slotNum%, event size %evntSize%, event group seq. # %grpSeqNo% and event seq. # %seqNo%.

Message Parameters

| Name | Type |
|----------|--------|
| slotNum | uInt |
| grpSeqNo | uInt16 |
| evntSize | uInt16 |
| seqNo | uInt16 |

HAL.Conduit.RecvMsgFail

Description

The component receiving responses for the sent conduit events for other internal components failed. The error code in the log message should provide more details about the type of failure. Following are the some of the reasons for failure. 1. IO Component closing the connection due to non availability of system resource. 2. Crash/Failure at the IO. 3. Periodic keepalive messages not received at IO.

Remedy

This is possibly the result of some malfunction at the IO. Restart the IO module by disabling followed by enabling the slot. Or Report the problem to your switch support contact.

Severity

Warning

Message Text

A failure occurred while receiving a response to a conduit send message for slot %slotNum%, error code %rc%, conduit type %cndtType%, and file descriptor %fileDescr%.

Message Parameters

| Name | Type |
|-----------|--------|
| slotNum | ulnt |
| cndtType | String |
| fileDescr | slnt |
| rc | slnt |

HAL.Conduit.AllocMsgCtrlFail

Description

A conduit event message component failed to allocate a needed resource to manage the transmission and response for an internal switch message. The system is not functioning as expected.

Remedy

This is possibly the result of memory leak at the Management module. Report the problem to your switch support contact.

Severity

Error

Message Text

A request to allocate conduit add event information failed for slot %slotNo%, conduit type %cndtType%, conduit ID # %conduitIdNo%, and event seq. # %seqNo%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| cndtType | String |
| conduitIdNo | ulnt16 |
| seqNo | ulnt16 |

HAL.Conduit.OpenPipeFail

Description

A create pipe request failure can be a result of the process having too many open files, or the failure could be due to the system having too many open files.

Remedy

No remedy is available.

Severity

Error

Message Text

A request to create an intra-process communication conduit failed with error code of %retcode%.

Message Parameters

| Name | Type |
|---------|------|
| retcode | sInt |

HAL.Conduit.WkupThreadFail

Description

An attempt to wake up the main HAL thread by writing into an operating system pipe failed. Lookup the errno definition for a more specific cause.

Remedy

Restart the switch, or run MM failover. Report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to wake-up a process thread failed because of a system write error - errno # %errnoNum%(%errnoStr%), return code %retcode% and file descriptor %pipeFD%.

Message Parameters

| Name | Type |
|----------|--------|
| retcode | sInt |
| errnoNum | sInt |
| errnoStr | String |
| pipeFD | uInt |

HAL.Conduit.SetSockVRIdFail

Description

A component on the management module failed to set the backplane virtual router ID (VRID) on an IP connection socket during I/O blade initialization. Look up the errno definition for a more specific cause.

Remedy

Restart the switch or run MM failover, and report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to set vrid %vridNo% on an IP socket with file descriptor %sockfd% failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoNum | slnt |
| errnoStr | String |
| vridNo | ulnt |

HAL.Conduit.SetSockRcvBufFail

Description

A component on the management module failed to setsockopt() the receive buffer size (SO_RCVBUF) on an IP connection socket during I/O blade initialization. Look up the errno definition for a more specific cause.

Remedy

Disable and enable the slot. Report the problem to the switch support contact.

Severity

Error

Message Text

An attempt to set the receive buffer size of %rcvSize% on an IP socket with file descriptor %sockfd% failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoNum | ulnt |
| errnoStr | String |
| rcvSize | ulnt |

HAL.Conduit.SetSockNoDelay

Description

A component on the management module failed to setsockopt() the TCP send without delay (TCP_NODELAY) option on an IP connection socket during I/O blade initialization. Lookup the errno definition for a more specific cause.

Remedy

Disable and enable the slot. If the problem persists, report the problem to the switch support contact.

Severity

Error

Message Text

An attempt to set the send-with-no-delay option (%noDelayVal%) on an IP socket with file descriptor %sockfd% failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoNum | ulnt |
| errnoStr | String |
| noDelayVal | ulnt |

HAL.Conduit.OpenSockFail

Description

A component on the management module failed to open an IP connection socket during I/O blade initialization. Look up the errno definition for a more specific cause.

Remedy

Initialization of the I/O blade will fail. Disable and enable the slot. Report the problem to the switch support contact.

Severity

Error

Message Text

An attempt to open on an IP socket failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %cndtType%.

Message Parameters

| Name | Type |
|----------|--------|
| errnoNum | ulnt |
| errnoStr | String |
| slotNo | ulnt |
| cndtType | String |

HAL.Conduit.AllocMsgFail

Description

The management module failed to allocate a resource to send a unicast conduit message to an I/O blade.

Remedy

This is possibly the result of memory leak at the Management module. Report the problem to your switch support contact.

Severity

Error

Message Text

A request to allocate resource for a unicast conduit message failed for slot %slotNum%, conduit type %cndtType%, event size %evntSize%, event group seq. # %grpSeqNo% and event seq. # %seqNo%.

Message Parameters

| Name | Type |
|----------|--------|
| slotNum | ulnt |
| cndtType | String |

| Name | Type |
|----------|--------|
| evntSize | ulnt16 |
| seqNo | ulnt16 |
| grpSeqNo | ulnt16 |

HAL.Conduit.GetSockFlagFail

Description

A component on the management module failed to get the flags for a file descriptor during I/O blade initialization. Look up the errno definition for a more specific cause.

Remedy

Restart the IO module by disabling and enabling the slot. Or Report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to get the flags for file descriptor %sockfd% failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoNum | slnt |
| errnoStr | String |

HAL.Conduit.SetNonBlkFlagFail

Description

A component on the management module failed to set the non blocking flag (O_NONBLOCK) option for an IP connection socket during I/O blade initialization. Look up the errno definition for a more specific cause.

Remedy

Restart the IO module by disabling followed by enabling the slot. Or Report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to set the non-blocking flag for file descriptor %sockfd% failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%, and flags %setflags% .

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | uint |
| conduitType | String |
| sockfd | sInt |
| errnoNum | sInt |
| errnoStr | String |
| setflags | uint |

HAL.Conduit.SetKeepalive

Description

A component received a failing return code when it attempted to use setsockopt() to enable and set options for the TCP keepAlive function. Look up the errno definition for a more specific cause.

Remedy

I/O blade will remain functional, with default settings. With default settings, I/O blade will not be reset even if I/O blade does not send Keepalive to Management Module or vice versa. Report the problem to the switch support contact.

Severity

Error

Message Text

An attempt to set the TCP keepalive for %optStr% on an IP socket with file descriptor %sockfd% failed returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | uint |
| conduitType | String |
| sockfd | sInt |
| errnoNum | uint |
| errnoStr | String |
| optStr | String |

HAL.Conduit.CnctSockFail

Description

A component received a failing return code when it attempted to establish a TCP connection to an I/O blade. Look up the errno definition for a more specific cause.

Remedy

Disable and enable the slot. If the problem persists, report to Extreme switch support contact.

Severity

Error

Message Text

A connect() request failed for ip %slotIp% and file descriptor %sockfd% returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | uint |
| conduitType | String |
| sockfd | sInt |

| Name | Type |
|----------|--------------|
| errnoNum | ulnt |
| errnoStr | String |
| slotIp | srcIPAddress |

HAL.Conduit.SlctSockFail

Description

A component received a failing return code from a select() invocation. Look up the errno definition for a more specific cause. The internal application may retry the request if the condition can be corrected.

Remedy

Restart the IO module by disabling followed by enabling the slot. Or Report the problem to your switch support contact.

Severity

Error

Message Text

A select() failed for file descriptor %sockfd% returning errno %errnoNum%(%errnoStr%) for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoNum | ulnt |
| errnoStr | String |

HAL.Conduit.CnctRetryExcd

Description

A component on the management module exceeded the maximum number of retries allowed for a socket to establish and connect.

Remedy

Disable and Enable the slot. If the problem persists, report to Extreme Switch support contact.

Severity

Error

Message Text

The maximum connect retries of %retryCnt% was exhausted for socket %sockfd% on slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| retryCnt | ulnt |

HAL.Conduit.ConnDeadSlot

Description

A component on the management module has abandoned an attempt to establish an IP connection because the targeted slot is dead or not present.

Remedy

Remove and ReInsert the I/O blade. If the problem persists, report to Extreme Switch support contact.

Severity

Error

Message Text

An attempt to make an IP connection, from slot %slotNo% and conduit type %conduitType%, is abandon because the slot is dead.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |

HAL.Conduit.GetSockOptFail

Description

A component using the `getsockopt()` function, with the `SO_ERROR` option, to check the health of a socket connection received a failing return code from the invocation. Look up the `errno` definition for a more specific cause.

Remedy

Remove and ReInsert the I/O blade. If the problem persists, report to Extreme Switch support contact.

Severity

Error

Message Text

A `getsockopt()` request discovered an error on a connection using file descriptor `%sockfd%` returning `errno %errnoNum%(%errnoStr%)` for slot `%slotNo%` and conduit Type `%conduitType%`.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoNum | ulnt |
| errnoStr | String |

HAL.Conduit.SockNotRdy

Description

This indicates that the socket component at IO is not ready to process the connection request from Management Module. Look up the errno definition for a more specific cause. The internal application will retry the request.

Remedy

Restart the IO module by disabling followed by enabling the slot. Or Report the problem to your switch support contact.

Severity

Warning

Message Text

A connection using file descriptor %sockfd%, port %port%, and retries %retryNum% is not ready - returning errno %errnoStr% for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| sockfd | slnt |
| errnoStr | String |
| port | ulnt |
| retryNum | ulnt |

HAL.Conduit.CnctSockExist

Description

A component received a failing return code from a connect() invocation indicating that the socket connection already established. Look up the errno definition for a more specific cause.

Remedy

Restart the IO module by disabling followed by enabling the slot. Or Report the problem to your switch support contact.

Severity

Error

Message Text

A connect() request failed because the socket connection already exists - returning errno %errnoStr% for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | uint |
| conduitType | String |
| errnoStr | String |

HAL.Conduit.SockFlagRstor

Description

A component using the fcntl() function failed while attempting to restore the socket option flags. Look up the errno definition for a more specific cause.

Remedy

Restart the IO module by disabling followed by enabling the slot. Or Report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to restore the socket flags using fcntl() failed for file descriptor %sockfd% returning errno %errnoStr% for slot %slotNo% and conduit Type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | uint |
| conduitType | String |
| sockfd | sInt |
| errnoStr | String |

HAL.Conduit.SockCtrlBlkCflct

Description

A management module component, which processes events sent to and received from the I/O blades, has detected a mismatch between the socket file descriptor in the conduit event database and the socket file descriptor saved in the blade database for the current event. One of the databases may be corrupted. The internal application may retry the initial request that is associated with the event.

Remedy

No remedy is available.

Severity

Error

Message Text

Conduit event processing detected a mismatch between event file descriptor %eventFd% and blade database file descriptor %bladeFd% for slot %slotNo% and Tcp port %tcpPort% - EventID:%evtId%.

Message Parameters

| Name | Type |
|---------|--------|
| slotNo | ulnt |
| tcpPort | ulnt |
| eventFd | slnt |
| bladeFd | slnt |
| evtId | String |

HAL.Conduit.RecvSockClose

Description

A management module component, processing received events from the I/O blades, has detected a problem with the conduit event socket file descriptor. Look up the error code for more details about this condition. The device manager component at MM will restart the I/O slot, if configured to do so on failure.

Remedy

No remedy is available.

Severity

Warning

Message Text

A conduit receive event detected a socket error for file descriptor %eventSck% was detected for slot %slotNo% and Tcp port %tcpPort% - returning errno # %errorNo% (%errStr%) - EventID:%entId%.

Message Parameters

| Name | Type |
|----------|--------|
| slotNo | uint |
| tcpPort | uint |
| eventSck | sint |
| errorNo | sint |
| errStr | String |
| entId | String |

HAL.Conduit.RecvSockInv

Description

A management module component, processing received events from the I/O blades, has detected an invalid socket file descriptor. This is possibly due to a software programming error. The device manager component at MM will restart IO slot if configured to do so.

Remedy

No remedy is available.

Severity

Error

Message Text

A conduit receive event detected a bad file descriptor of %eventSck% for slot %slotNo% and Tcp port %tcpPort% - EventID:%entId%.

Message Parameters

| Name | Type |
|----------|--------|
| slotNo | ulnt |
| tcpPort | ulnt |
| eventSck | slnt |
| entId | String |

HAL.Conduit.RegClbkSockInv

Description

A management module component, initializing IP connections to I/O blades or processing a request to reconfigure the number of executing threads, has detected an invalid socket file descriptor. The conduit connection database may be corrupted.

Remedy

This is possibly the result of internal data corruption or a software programming error. Report the problem to your switch support contact.

Severity

Error

Message Text

An attempt to add an invalid file descriptor %connFd% to a conduit database was detected for slot %slotNo% and conduit type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| connFd | slnt |

HAL.Conduit.UnregClbkSockInv

Description

A management module component, disabling IP connections to I/O blades, has detected an invalid socket file descriptor. The conduit connection database may be corrupted, or an internal application may have issued more than one request to close the connected socket.

Remedy

No remedy is available.

Severity

Error

Message Text

An attempt to delete invalid file descriptor %connFd% from a conduit database was detected for slot %slotNo% and conduit type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| connFd | slnt |

HAL.Conduit.InitArgInv

Description

A switch module component, creating and initializing system I/O communication conduits between management modules and I/O blades, has detected an invalid range for one of the API's parameters. An internal application invocation may have settings that are beyond the allowable range.

Remedy

No remedy is available.

Severity

Error

Message Text

System I/O conduit initialization for %textType% has detected %reason% for: slot # %slotNo%; pipe # %pipeNum%; first conduit # %firstCond%; total # of conduits %totalCond%.

Message Parameters

| Name | Type |
|-----------|--------|
| slotNo | ulnt |
| pipeNum | ulnt |
| firstCond | ulnt |
| totalCond | ulnt |
| textType | String |
| reason | String |

HAL.Conduit.AllocCtrlBlkFail

Description

A switch module component, creating and initializing system I/O communication conduits between management modules and I/O blades, received a failing return code from a resource allocation request.

Remedy

No remedy is available.

Severity

Error

Message Text

An allocate request for %size% failed during conduit initialization for slot # %slotNo% and conduit type %conduitType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slotNo | ulnt |
| conduitType | String |
| size | ulnt |

HAL.Conduit.SendMsgCtrlNull

Description

A component that manages transmitting requests from internal management module applications to IO cards aborted an event transmission because the event control data was not provided in the request. This is possibly a result of internal data corruption or a software error.

Remedy

No remedy is available.

Severity

Error

Message Text

A request to send a message to an IO card failed - sending slot %slotNo%, conduit type %cndt%, call arg1 %app1%, call arg2 %app2%, and callback info %callBk%.

Message Parameters

| Name | Type |
|--------|--------|
| slotNo | ulnt |
| cndt | String |
| app1 | ulnt |
| app2 | ulnt |
| callBk | ulnt |

HAL.Conduit.MsgCtrlNotInUse

Description

A component that manages transmitting requests from internal management module applications to IO cards detected that the current an event resource is not marked as in use and is invalid for this request. This is possibly a result of internal data corruption or a software error.

Remedy

No remedy is available.

Severity

Error

Message Text

A request, to send a message to an IO card, references an invalid resource %event% - sending slot %slotNo%, conduit type %cndt%, callback info. %callBk%.

Message Parameters

| Name | Type |
|--------|--------|
| slotNo | ulnt |
| cndt | String |
| event | ulnt |
| callBk | ulnt |

HAL.Conduit.SlotNumInv

Description

A component that manages transmitting requests from internal management module applications to IO cards has detected a slot number that is not within the valid range for this configuration.

Remedy

This is possibly the result of internal data corruption or a software programming error. Report the problem to your switch support contact.

Severity

Error

Message Text

A request to send a message to an IO card contained an invalid slot # %slotNo% - other valid message parameters include conduit type %cndt%, call arg1 %app1%, call arg2 %app2%.

Message Parameters

| Name | Type |
|--------|--------|
| slotNo | ulnt |
| cndt | String |
| app1 | ulnt |
| app2 | ulnt |

HAL.Conduit.SlotNotCnct

Description

A component that manages transmitting requests from internal management module applications to IO cards has detected that a valid TCP connection to the slot for a given slot type is not established.

Remedy

This is possibly a result of insufficient system resources. The internal component will retry the request. If the problem persists, then try reducing the number of features that you have enabled on your system.

Severity

Error

Message Text

A request to send a message to an IO card was rejected because a valid connection does not exist for slot # %slotNo%, conduit type %cndt%, and socket %sock% - other message parameters call arg1 %app1%, call arg2 %app2%.

Message Parameters

| Name | Type |
|--------|--------|
| slotNo | ulnt |
| cndt | String |
| sock | slnt |
| app1 | ulnt |
| app2 | ulnt |

HAL.Conduit.SendSeqNumOvrfl

Description

A component that manages transmitting requests from internal management module applications to IO cards has detected that the request sequence number has wrapped. This condition indicates that thousands of events are pending transmission, and this almost certainly indicates a hardware failure.

Remedy

Report the issue to your switch support contact.

Severity

Error

Message Text

A request to send a message to an IO card was rejected because the maximum # of outstanding requests has been exceeded - sequence # %seqNo% seq. Ack. # %seqAck% , blade # %blade%, pipe # %pipe% and conduit # %condNum%.

Message Parameters

| Name | Type |
|---------|--------|
| seqNo | uInt16 |
| seqAck | uInt16 |
| blade | uInt |
| pipe | String |
| condNum | uInt |

HAL.Conduit.StateSeqNumOvrfl

Description

A component that manages transmitting requests from internal management module applications to IO cards has detected that the request sequence number has wrapped. In this condition, message sending is disabled and acknowledgements are not being received. This almost certainly indicates a hardware failure.

Remedy

Report the issue to your switch support contact.

Severity

Error

Message Text

A request to send a message to an IO card was rejected because the transmit queue is full - sequence # %seqNo% seq. Ack. # %seqAck% , blade # %blade%, pipe # %pipe% and conduit # %condNum%.

Message Parameters

| Name | Type |
|---------|--------|
| seqNo | uInt16 |
| seqAck | uInt16 |
| blade | uInt |
| pipe | String |
| condNum | uInt |

HAL.Conduit.FndCtrlBlkFail

Description

A component that manages transmitting requests from internal management module applications to IO cards has detected an invalid transport state. The slot number or the pipe ID is not valid, or an internal communication control block could not be verified.

Remedy

This is possibly a result of internal data corruption or software programming error. Report the problem to your switch support contact.

Severity

Error

Message Text

A request to send a message to an IO card contained an invalid slot # %slotNo% or pipe ID %pipe% - other valid message parameters include conduit type %cndt%, and conduit ID # %cndtNum%.

Message Parameters

| Name | Type |
|---------|--------|
| slotNo | ulnt |
| cndt | String |
| pipe | String |
| cndtNum | ulnt |

HAL.Conduit.SendReqFail

Description

An attempt to send a conduit event message to an IO blade failed. The underlying system socket has failed and is closed as part of the recovery.

Remedy

This may be a result of low system resources, and may be resolved by reducing the number of features that are configured on the switch. Otherwise, report the problem to your switch support contact.

Severity

Error

Message Text

A conduit event transmission failed for slot %slotNum%, conduit type %cndtType%, socket %fd%, errno %err%(%errStr%).

Message Parameters

| Name | Type |
|----------|--------|
| slotNum | ulnt |
| cndtType | String |
| fd | ulnt |
| err | ulnt |
| errStr | String |

HAL.Conduit.RecvMsgNoRegClbk

Description

A internal component was unable to process received socket traffic from an I/O blade because a conduit resource was not registered.

Remedy

This may be a result of low system resources, and may be resolved by reducing the number of features that are configured on the switch. Otherwise, report the problem to your switch support contact.

Severity

Error

Message Text

No registered pipe handler found for a received event notification for slot %slotNum%, conduit type %cndtType%, and pipe %pipeNo%.

Message Parameters

| Name | Type |
|----------|--------|
| slotNum | ulnt |
| cndtType | String |
| pipeNo | String |

HAL.Conduit.RecvMsgRtrnCodeDtct

Description

A system component attempting to process a received response from an I/O blade detected a conduit API failure.

Remedy

This may be a result of low system resources, and may be resolved by reducing the number of features that are configured on the switch. Otherwise, report the problem to your switch support contact.

Severity

Debug-Summary

Message Text

A conduit failure was detected posting return code %retcode% for slot %failSlot% while processing event response for slots %slotInfo%, pipe ID %pipeId% and conduit ID %conduitNum%.

Message Parameters

| Name | Type |
|------------|--------|
| slotInfo | String |
| pipeId | String |
| conduitNum | ulnt |
| retcode | String |
| failSlot | ulnt |

HAL.Conduit.RecvMsgSizExcd

Description

A system component attempting to process a received response from an I/O blade detected an invalid event buffer size.

Remedy

This could be due to a software defect in Management module. Gather "show tech" details and report the problem to the switch support contact.

Severity

Error

Message Text

An invalid event buffer size of %size% was detected while processing received conduit messages for slots %slotInfo%.

Message Parameters

| Name | Type |
|----------|--------|
| slotInfo | String |
| size | ulnt |

HAL.Conduit.RecvMsgClbkNotFnd

Description

A internal component was unable to process received socket traffic from an I/O blade because a conduit callback resource was not found.

Remedy

Report the problem to your switch support contact.

Severity

Debug-Summary

Message Text

No callback resource found for a received event response from %slot% for pipe %pipeNo%, conduit num %num%, group flag %grpFlag%, sequence no %seq%, group seq. %gseq%, mmStime %MMS%, mmRtime %MMR%, ioRtime %IOR%, and ioStime %IOS%.

Message Parameters

| Name | Type |
|---------|--------|
| slot | ulnt |
| pipeNo | String |
| num | ulnt |
| grpFlag | ulnt |
| seq | ulnt |
| gseq | ulnt |
| MMS | ulnt |
| MMR | ulnt |
| IOR | ulnt |
| IOS | ulnt |

HAL.Conduit.RecvMsgStateFail

Description

A system component attempting to process a received response from an I/O blade detected a return code indicating that I/O component failed to process a conduit message.

Remedy

Report the problem to your switch support contact.

Severity

Error

Message Text

A response from IO blade slot %slotNo% indicates that %errTxt% for slots %slotInfo% and pipe ID %pipe% , conduit ID %cndtNum%.

Message Parameters

| Name | Type |
|----------|--------|
| slotInfo | String |
| pipe | String |
| cndtNum | ulnt |
| slotNo | ulnt |
| errTxt | String |

HAL.Conduit.PollWaitFail

Description

A system component waiting for an I/O event on an epoll file descriptor failed. Look up the errno value for more details.

Remedy

Report the problem to your switch support contact.

Severity

Error

Message Text

An invocation of `epoll_wait()` fail with return code %retcode% and errno %errNum% (%errStr%).

Message Parameters

| Name | Type |
|---------|--------|
| retcode | ulnt |
| errNum | ulnt |
| errStr | String |

HAL.Conduit.PollWaitSlotNotReg

Description

A system component attempting to process a received response from an I/O blade detected that no slots were registered with the current thread. This is probably a software programming error or a result of data corruption of internal control blocks.

Remedy

Reboot the switch and report the problem to your switch support contact.

Severity

Error

Message Text

Received data on a file descriptor %fd%, but no slots were added to the thread - sock type %sockT%, slot start %slotStrt%, slot end %slotEnd%.

Message Parameters

| Name | Type |
|----------|------|
| sockT | ulnt |
| fd | ulnt |
| slotStrt | ulnt |
| slotEnd | ulnt |

HAL.Conduit.InitAlrdyDone

Description

The management component is trying to initialize the conduit module again, resulting in an error.

Remedy

This is possibly a result of internal data corruption or software programming error. Report the problem to your switch support contact.

Severity

Error

Message Text

Conduit Module already Initialized %numInit%

Message Parameters

| Name | Type |
|---------|------|
| numInit | ulnt |

HAL.Conduit.RecvSlotErrMsg

Description

A problem has been detected which is interfering with the normal operation of the system. A system component running at I/O blade reported this error while attempting to process a request, from Management module.

Remedy

The exact remedy is dependant on the particular situation. This maybe a result of low system resources, and maybe resolved by reducing the amount of features that are configured on the switch. Otherwise, report the problem to your switch support contact.

Severity

Debug-Summary

Message Text

A failure was detected in slot %slot% while processing event on pipe %pipeId% conduit ID %conduitNum% with return code %retcode%. App data %appData%

Message Parameters

| Name | Type |
|------------|--------|
| slot | ulnt |
| pipeId | String |
| conduitNum | ulnt |
| retcode | String |
| appData | ulnt |

HAL.Device.Error

Description

A problem has been detected which is interfering with the normal operation of the system device. The system is not functioning as expected. The problem may be related to the failure to access a device hardware.

Remedy

The exact remedy is dependent on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

| format | Printf |

HAL.Device.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system device, may signal that the system device in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependent on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

HAL.Fabric.Critical

Description

The Switch Fabric Module on the specified system has logged a message of severity as Critical. This event is due to a problem that should not happen during normal operation. Many different messages and causes map to this one EMS event. The system cannot function as expected unless it is remedied. The problem may be related to Memory allocation failure or Invalid Fabric Access Processor id, Invalid Multicast group identification number during high availability check pointing message reception etc.

Remedy

A possible remedy will be is to use the "show memory" and "show log" commands to monitor the system status. you can either change the system configuration or free up the system memory by ending processes which are currently not needed if memory allocation failed. you can either reset the active MM card is possible option. If the problem persists, please try failover or rebooting the switch.

HAL.Fabric.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

HAL.Fabric.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

HAL.FDB.L2SlotTblFull

Description

At least 1 MAC FDB entry could not be added on the specified slot because the hardware table is full. The hardware table is organized as a hash table so it is possible that there is still room for other MAC FDB entries that hash to different hash bucket locations. This message will be logged at most 1 time per hour per slot while new FDB forwarding entries trigger this condition.

Remedy

An associated debug-summary level message "HAL.FDB.L2SlotTblFullEnt" can be enabled to view per-occurrence details including MAC address and vlan information. In addition, "debug hal show fdb" can be used to determine which FDB entries were not added to hardware.

Severity

Warning

Message Text

FDB entry not added on slot %slot%. Hardware hash table has at least one full hash bucket. Other buckets may still have free space for other entries.

Message Parameters

| Name | Type |
|------|------|
| slot | sInt |

HAL.FDB.L2SlotTblFullEnt

Description

The specified MAC FDB entry was not added to a specific slot because the hardware table is full. This message will be logged for every MAC FDB entry that cannot be added due to this condition.

Remedy

The command "debug hal show fdb" can be used to determine which FDB entries were not added to hardware.

Severity

Debug-Summary

Message Text

FDB entry (%MACAddress% vlan %vlanId%) not added to slot %slot%. Hardware hash bucket for this MAC entry is full. Other buckets may still have free space for other entries.

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slot | slot |

HAL.FDB.L2GlobTbIFull

Description

At least 1 Permanent MAC FDB entry could not be added globally because the hardware table is full. The hardware table is organized as a hash table so it is possible that there is still room for other MAC FDB entries that hash to different hash bucket locations. This message will be logged at most 1 time per hour per slot while new FDB forwarding entries trigger this condition.

Remedy

An associated debug-summary level message "HAL.FDB.L2GlobTbIFullEnt" can be enabled to view per-occurrence details including MAC address and vlan information. In addition, "debug hal show fdb" can be used to determine which FDB entries were not added to hardware.

Severity

Warning

Message Text

Permanent FDB entry not added. Hardware Table full.

HAL.FDB.L2GlobTbIFullEnt

Description

The specified MAC FDB entry was not added globally because the hardware table is full. This message will be logged for every permanent MAC FDB entry that cannot be added due to this condition.

Remedy

The command "debug hal show fdb" can be used to determine which FDB entries were not added to hardware.

Severity

Debug-Summary

Message Text

Permanent FDB entry (%MACAddress% vlan %vlanId%) not added. Hardware Table full.

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |

HAL.FDB.MacVlanAddFail

Description

The specified MAC-based Vlan entry was not added. This will cause any untagged packets received using this MAC address as the source to not be assigned to the correct Vlan and be dropped or mishandled. The errorMsg field gives additional information from the low-level software layer on why the failure occurred.

Remedy

Changing the forwarding hash-algorithm will change the way this hardware resource is programmed. Generally, crc32 performs better table utilization than crc16 but that is not always true for a given MAC address set. Since this resource is shared by a block of ports, the user can connect fewer ports to each block to help mitigate this condition.

Severity

Warning

Message Text

MAC-based VLAN entry %MACAddress% vlan %vlanId% addition to port %slotPort% failed, %errorMsg%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | SlotPort |
| errorMsg | String |

HAL.FDB.RecvDupMAC

Description

This MAC address has already been added by the upper application layer via FDB. We are also now learning this in hardware, which means we may have overwritten the previous entry.

Remedy

This is not a problem and is used by software to track duplicate notifications during topology changes.

Severity

Debug-Summary

Message Text

Dynamic entry being received for MAC %MACAddress% vlan %vlanId% to port %slotPort% that has been already been added. Old handle %halFdbHandle%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |

| Name | Type |
|--------------|---------|
| slotPort | ulInt32 |
| halFdbHandle | ulInt32 |

HAL.FDB.DeleteDynMAC

Description

There was an error in the HAL common infrastructure layer when notifying the delete of this Dynamic MAC entry.

Remedy

Execute the "clear fdb" command for this MAC, to clean up the entry in software if hardware does not have this entry. To see the hardware entry execute "show fb hardware <MAC> <vlan> slot all".

Severity

Error

Message Text

Error while notifying HAL upper layer to delete this Dynamic entry MAC %MACAddress% vlan %vlanId% to port %slotPort%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | ulInt32 |

HAL.FDB.DeIMACLkupFail

Description

This node was not found in Platform software Btree when a delete dynamic MAC entry message was received.

Remedy

No action needed.

Severity

Notice

Message Text

Node not found in Platform software Btree when delete dynamic MAC entry message received. MAC %MACAddress% vlan %vlanId% to port %slotPort%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |

HAL.FDB.AddMACEntFail

Description

This Dynamic MAC entry could not be added to the software Database.

Remedy

Enter the "clear fdb" command for this MAC, and relearn it in hardware by sending the MAC again. If the condition still persists, report it to the administrator so he/she can check the memory resources.

Severity

Error

Message Text

Error while adding a node to the software Btree in Dynamic Add MAC path. MAC %MACAddress% vlan %vlanId% to port %slotPort%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |

HAL.FDB.AddDynMAC

Description

This Dynamic MAC address learned in hardware could not be updated in the upper HAL common layer, as well as in the FDB Mgr application. The database in hardware and software is out of sync.

Remedy

Execute "clear fdb" to clear the entry in hardware, but it can be relearned if it is a continuous stream.

Severity

Error

Message Text

Error while notifying HAL upper layer to add this Dynamic entry MAC %MACAddress% vlan %vlanId% to port %slotPort%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |

HAL.FDB.LkupTxMIFail

Description

The txmi(Transmit Modification Index) for the given port and VMAN was not found.

Remedy

Delete and create the VMAN again.

Severity

Warning

Message Text

Error while getting Txmi for port %slotPort%, vlan %vlanId%, MAC %MACAddress% during %context%

Message Parameters

| Name | Type |
|------------|----------|
| slotPort | uInt32 |
| vlanId | VLAN-tag |
| MACAddress | MAC |
| context | String |

HAL.FDB.PackSlotMsgFail

Description

This message could not be packaged to be sent over the conduit infrastructure between the MM and the I/O blade. This could be due to backlog of messages between the MM and the I/O slots.

Remedy

Replay any config that may be failing or reset the I/O slot. If the MM is running low on resources, it may need to be rebooted.

Severity

Error

Message Text

Error while packing data to be sent over conduit to I/O. Context: %context%

Message Parameters

| Name | Type |
|---------|--------|
| context | String |

HAL.FDB.AllocMemFail

Description

Memory is not allocated for this pointer.

Remedy

Memory resources may be running low. If not, this may need investigation on memory corruption. Report the problem if it doesn't go away after memory has been released.

Severity

Error

Message Text

No memory allocated for %dataPtr% in %context%

Message Parameters

| Name | Type |
|---------|--------|
| dataPtr | String |
| context | String |

HAL.FDB.AllocSlotMsgFail

Description

Memory is not allocated for sending over the conduit.

Remedy

Memory resources may be running low. If not, check for memory corruption. Report the problem if it doesn't go away after memory has been released.

Severity

Error

Message Text

No memory allocated for conduit numEntries %entries% in %context%

Message Parameters

| Name | Type |
|---------|--------|
| entries | uInt32 |
| context | String |

HAL.FDB.SendSlotMsgFail

Description

This message indicates MM was not able to send data over the TCP conduit to I/O.

Remedy

Check the health of the I/O and whether it can be pinged from the MM. If it cannot be reached or messaged to, I/O is backed up, and an I/O reset may be needed.

Severity

Error

Message Text

Error while sending data over the conduit to the I/O blades. Context %context%.

Message Parameters

| Name | Type |
|---------|--------|
| context | String |

HAL.FDB.ParmNull

Description

The parameters passed to this function should be non-NULL. This is a internal software indication that the Pioneer FDB software was incorrectly invoked.

Remedy

Report the problem to the software team and if FDB learning is affected perform a "clear fdb".

Severity

Debug-Summary

Message Text

Calling function sent a NULL parameter %param% in %context% which is incorrect.

Message Parameters

| Name | Type |
|---------|--------|
| param | String |
| context | String |

HAL.FDB.VLANIfNull

Description

VlanIf is not expected to be NULL, but it is at this point.

Remedy

Retry the failing scenario or config or re-create the VLAN.

Severity

Debug-Summary

Message Text

VlanIf pointer got is NULL in %context%.

Message Parameters

| Name | Type |
|---------|--------|
| context | String |

HAL.FDB.MACDup

Description

This node/entry is not expected to be present, causing the code not to execute as expected.

Remedy

Delete the affected MAC entry and retry.

Severity

Error

Message Text

This MAC %MACAddress% vlan %vlanId% on port %slotPort% is already present when it is not expected in %context%.

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| context | String |

HAL.FDB.HwVLANIfNull

Description

VlanIf is not expected to be NULL, but it is at this point.

Remedy

Retry the failing scenario or config, or re-create the VLAN.

Severity

Debug-Summary

Message Text

Hardware VlanIf pointer got is NULL in %context%.

Message Parameters

| Name | Type |
|---------|--------|
| context | String |

HAL.FDB.LkupPortFail

Description

This port was not found in the pif Database which is the internal software database of all the ports in the system.

Remedy

No action needed.

Severity

Debug-Summary

Message Text

Unknown port %slotPort% got while in %context%.

Message Parameters

| Name | Type |
|----------|--------|
| slotPort | uint32 |
| context | String |

HAL.FDB.DeIMACEntFail

Description

Error while deleting software node from Btree. Hardware and software could be out of sync.

Remedy

Execute the "clear fdb" command for the MAC and relearn.

Severity

Debug-Verbose

Message Text

Could not delete software btree node for MAC %MACAddress%, vlan %vlanId%, port %slotPort% during %context%. Hardware and software could be out of sync.

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |

| Name | Type |
|----------|---------|
| slotPort | ulInt32 |
| context | String |

HAL.FDB.SlotDown

Description

Nothing cannot execute on a card that is currently being reported as down.

Remedy

Wait for awhile, and if the error persists, reset the slot.

Severity

Notice

Message Text

The slot %slot% is not alive during %context%.

Message Parameters

| Name | Type |
|---------|---------|
| slot | ulInt32 |
| context | String |

HAL.FDB.ParmInv

Description

Invalid Parameter %param%=%value% passed in %context%. This message is a software indication that an invalid call was made to the Pioneer FDB software.

Remedy

This is a debug message. If learning is affected, do a "clear fdb".

Severity

Debug-Summary

Message Text

Parameter %param% has invalid value %value% in %context%

Message Parameters

| Name | Type |
|---------|--------|
| param | String |
| value | uInt32 |
| context | String |

HAL.FDB.SendAsyncSlotMsgFail

Description

There was a failure when sending an Asynchronous conduit message from the Platform FDB code to I/O.

Remedy

No action needed.

Severity

Debug-Data

Message Text

An Async Conduit message failed in %context%.

Message Parameters

| Name | Type |
|---------|--------|
| context | String |

HAL.FDB.InsMACEntFail

Description

Inserting this node into the software Btree(Database) failed. Hardware and software database will be out of sync.

Remedy

Execute the "clear fdb" command for the MAC if these errors persist.

Severity

Error

Message Text

Inserting the node MAC %MACAddress% vlan %vlanId% port %slotPort% to the Btree
%btree% failed in %context%

Message Parameters

| Name | Type |
|------------|----------|
| MACAddress | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| btree | String |
| context | String |

HAL.FDB.GetPortInfoFailed

Description

HAL needs to get detailed port information before it can add the static FDB entry for the port. However, something went wrong and it failed to get the port information.

Remedy

Remove the port from the vlan and readd it. If this still fails, delete and re-add the vlan.

Severity

Error

Message Text

Getting port info has failed while adding static FDB entry for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.FDB.GetVLANInfoFailed

Description

HAL needs to get detailed VLAN information before it can add the static FDB entry for the VLAN. However, something went wrong and it failed to get the VLAN information.

Remedy

Delete the vlan and add the vlan again. If this fails, reboot the box.

Severity

Error

Message Text

Getting VLAN info has failed while adding static FDB entry for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.FDB.AddOutrMACFail

Description

This tunnel could not be added in hardware table.

Remedy

Execute "clear fdb" and retry the scenario again. If the problem persists, report it to the administrator so he/she can check the memory resources.

Severity

Error

Message Text

Error while creating tunnel for Outer MAC %MAC% vlan %vlanId% port %slotPort%.

Message Parameters

| Name | Type |
|----------|----------|
| MAC | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |

HAL.FDB.UpdtOutrMACFail

Description

This tunnel could not be updated with the specified parameters.

Remedy

Delete the tunnel with a "clear fdb" command and retry the scenario. If error still persists report to the administrator with all the logs.

Severity

Error

Message Text

Error while updating MAC %MAC%, vlan %vlanId%, port %slotPort%, tunnel %tunnelId%.

Message Parameters

| Name | Type |
|----------|----------|
| MAC | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| tunnelId | uInt32 |

HAL.FDB.StrtDelOutrMACFail

Description

Delete for the specified tunnel could not be initiated.

Remedy

Check if the tunnel still exists. If it does and is a dynamic entry, then check whether the I/O or MM is busy. If the above is an issue, please notify the administrator with exact detail of the config, the tunnel parameters viz. MAC, vlan-tag, port that is having the problem.

Severity

Warning

Message Text

Error while initiating delete for Outer MAC %MAC%, vlan %vlanId%, port %slotPort%, tunnel %tunnelId%.

Message Parameters

| Name | Type |
|----------|----------|
| MAC | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| tunnelId | uInt32 |

HAL.FDB.CmplDelOutrMACFail

Description

Delete for the specified tunnel could not be completed.

Remedy

Check if the tunnel still exists. If it does and is a dynamic entry, then check whether the I/O or MM is busy. If the above is an issue, please notify the administrator with exact detail of the config, the tunnel parameters viz. MAC, vlan-tag, port that is having the problem.

Severity

Warning

Message Text

Error while completing delete of Outer MAC %MAC%, vlan %vlanId%, port %slotPort%, tunnel %tunnelId%.

Message Parameters

| Name | Type |
|----------|----------|
| MAC | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| tunnelId | uInt32 |

HAL.FDB.AddOutrMACDelEntFail

Description

The addition of this Tunnel entry to the Outer MAC delete software database failed.

Remedy

Check the memory resources and see if they are full. If not execute a "clear fdb". If that does not help for this specific entry please notify the administrator with the details of the tunnel viz. Outer MAC, vlan-tag, port.

Severity

Warning

Message Text

Error while adding Outer MAC %MAC%, vlan %vlanId%, port %slotPort%, tunnel %tunnelId% to the delete list in the software database.

Message Parameters

| Name | Type |
|----------|----------|
| MAC | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| tunnelId | uInt32 |

HAL.FDB.RfrshOutrMACFail

Description

This tunnel could not be refreshed in hardware table.

Remedy

Execute "clear fdb" and retry the scenario again. If the problem persists, report it to the administrator with details of the MAC, vlan-tag and port.

Severity

Warning

Message Text

Error while refreshing tunnel for Outer MAC %MAC% vlan %vlanId% port %slotPort% tunnel %tunnelId%.

Message Parameters

| Name | Type |
|----------|----------|
| MAC | MAC |
| vlanId | VLAN-tag |
| slotPort | uInt32 |
| tunnelId | uInt32 |

HAL.FDB.GetOutrMACInfoFail

Description

The paramters of what comprises this tunnel could not be obtained in software.

Remedy

This is a debug message.

Severity

Debug-Summary

Message Text

Error while obtaining tunnel information in software for the tunnel %tunnelId%.

Message Parameters

| Name | Type |
|----------|--------|
| tunnelId | uInt32 |

HAL.FDB.GetInnrMACInfoFail

Description

The paramters of what comprises this tunnel could not be obtained in software.

Remedy

This is a debug message.

Severity

Debug-Summary

Message Text

Error while obtaining Inner MAC information in software for the tunnel %tunnelId%.

Message Parameters

| Name | Type |
|----------|--------|
| tunnelId | uInt32 |

HAL.FDB.APIFail

Description

This API call failed.

Remedy

This is a debug message.

Severity

Debug-Summary

Message Text

Error while calling API %API%, parameters: %param1% %param2% %param3%.

Message Parameters

| Name | Type |
|--------|--------|
| API | String |
| param1 | ulnt |
| param2 | ulnt |
| param3 | String |

HAL.FDB.MsgQueHigh

Description

The IPML internal message queue from FDBMgr to HAL is getting large which will result in hardware programming delays. HAL has automatically taken action to reduce the L2 learning rate and set a software learn rate limit. To view the IPML message queue information, use "debug msgsrv show msgqueues".

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

IPML msgQ from FDBMgr to HAL exceeded high-water mark

HAL.FDB.MsgQueLow

Description

The IPML internal message queue from FDBMgr to HAL has decreased back to normal levels. Hardware programming delays should no longer be present. This message will only be seen after HAL.FDB.MsgQueHigh has previously been triggered. HAL has automatically removed L2 learning rate limits associated with HAL.FDB.MsgQueHigh. To view the IPML message queue information, use "debug msgsrv show msgqueues".

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

IPML msgQ from FDBMgr to HAL has decreased back to normal levels

HAL.FDB.ExcssMACMove

Description

Hardware FDB learn notification indicates that the number of mac moves on given slot is high. This will make HAL busy, spending more time on FDB learn notification processing. HAL has automatically taken action to reduce the L2 learning rate for a short period".

Remedy

No action required. But there may be a loop in the network; and if the network does have a physical loop, it is suggested that a loop prevention protocol like STP be configured.

Severity

Info

Message Text

Excessive MAC move notification from hardware encountered on slot %slot%.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

HAL.IPv4ACL.PbrIpCfg

Description

Policy Based Routing will not take effect until there is an arp entry for the IP address specified in the redirect option. This arp entry cannot exist unless there is an IP address configured on this switch on the same subnet. Once the IP address is configured and the arp entry is known, Policy Based Routing will start automatically.

Remedy

Ensure that the completed configuration includes an IP address on the same subnet as the IP specified in the redirect action.

Severity

Info

Message Text

There is no IP address configured on the switch that is on the same subnet as the IP address %ipaddr% specified in the redirect option.

Message Parameters

| Name | Type |
|--------|------|
| ipaddr | IP |

HAL.IPv4ACL.InitSlotFail

Description

The Management module failed to initialize conduits for sending and receiving ACL related messages to I/O slots. With this error, ACL feature cannot be used.

Remedy

System should be rebooted to use ACL feature.

Severity

Error

Message Text

An action to create conduits with IO slots failed with error %rc%

Message Parameters

| Name | Type |
|------|------|
| rc | ulnt |

HAL.IPv4ACL.AllocSlotMsgFail

Description

Cannot send ACL configuration to one or more IO slots as Management module failed to allocate a conduit message.

Remedy

Redo the configuration after sometime

Severity

Warning

Message Text

An operation to allocate conduit event of length %len% failed

Message Parameters

| Name | Type |
|------|------|
| len | ulnt |

HAL.IPv4ACL.SendSlotCfgMsgFail

Description

An operation to send ACL configuration to IO slot failed.

Remedy

Disable and re-enable the slot and try again.

Severity

Warning

Message Text

An operation to send ACL configuration %num% to one or more slots failed with error %str%

Message Parameters

| Name | Type |

| dir | ulnt |

HAL.IPv4ACL.SyncSlotTmout

Description

PBR rules are installed asynchronously to card state machine. If I/O card becomes Operational before PBR rules are installed in the hardware, there can be traffic loss. So I/O Card state machine waits for maximum of 12 minutes for the rules to be installed in hardware before moving to the next state. This message indicates that I/O card state machine waited for 12 minutes and is moving to the next state. This can lead to traffic loss on those streams for which PBR rules are not yet installed.

Remedy

Though it is very unlikely but if this message is logged, there can be traffic loss on those streams for which PBR rules are not yet installed. If there is a traffic loss, it will stop after the PBR rules are installed in hardware. If customer experiences traffic loss, reduce the number of PBR ACLs used by the customer.

Severity

Warning

Message Text

ACL Sync timed out, card state machine for slot %slot% continues

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |

HAL.IPv4Adj.L3TbIFull

Description

The attempt to add a local IPv4 unicast host to hardware only fails if the number of existing hosts exceeds the hardware capacity times two. Note that any IPv4 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast local host forwarding entries trigger this condition.

Remedy

The CLI command "show iproute reserved-entries statistics" can be used to display the various IP resources currently in hardware, and the theoretical maximum for each hardware product type. Since the capacity has been exceeded, consider altering the network design, or using a different product type with higher capacity. An associated debug-summary severity message "HAL.IPv4Adj.L3TbIFullEnt" can be enabled to view per-occurrence details including the IP address. In addition, "debug hal show ipv4adj" and "debug hal show ipv4adj slot N" can be used to determine which IP unicast forwarding entries were not added to hardware. Any entry in this display without the "S" Setup flag is not currently programmed in hardware.

Severity

Warning

Message Text

IPv4 unicast entry not added. Hardware L3 Table full.

HAL.IPv4Adj.RmtHostL3TbIFull

Description

The number of IPv4 routes has exceeded the number of routes reserved in "configure iproute reserved-entries <num_routes_needed>", and there is unicast traffic to a remote host whose LPM route is not among the number reserved in hardware. Since this LPM route is not present in hardware, an attempt is made to add the individual remote host to hardware, and the attempt failed. This attempt on the remote host only

fails if the number of IPv4 unicast local hosts exceeds the hardware capacity times two. Note that any IPv4 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast remote host forwarding entries trigger this condition.

Remedy

It is possible this condition occurred because too low a value was specified in "configure iproute reserved-entries <num_routes_needed>". The CLI command "show iproute reserved-entries statistics" can be used to display the various IP resources currently in hardware, and the theoretical maximum for each hardware product type. "show iproute summary" can be used to display the routes present in software.

Severity

Warning

Message Text

IPv4 unicast remote host entry not added. Hardware L3 Table full.

HAL.IPv4Adj.NHTbIFull

Description

The hardware Next Hop Table full, and an IPv4 unicast entry could not be added. The Next Hop table is shared by IPv4 and IPv6 unicast host entries. Any IPv4 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast host forwarding entries trigger this condition.

Remedy

The command "show iproute reserved-entries statistics" shows hardware table utilization, including counts of IPv4 and IPv6 unicast hosts. An associated debug-summary severity message "HAL.IPv4Adj.NHTbIFullEnt" can be enabled to view per-occurrence details including the IP address. In addition, "debug hal show ipv4adj" can be used to determine which IP unicast forwarding entries were not added to hardware. Any entry in this display without the "S" Setup flag is not currently programmed in hardware. Even an entry in this display with the "S" Setup flag may not be currently programmed in hardware on any BD8800 "e"-series I/O modules. Use the "debug hal show ipv4adj slot N" on such a module, and again look for the "S" Setup flag.

Severity

Warning

Message Text

IPv4 unicast entry not added. Hardware Next Hop Table full.

HAL.IPv4Adj.MapSlotUnitFail

Description

The mapping of local slot/unit to global unit failed. It could happen during add/delete/update/validate/invalidate. Please refer to the error message to see when the failure occurred. This should never happen during normal operation.

Remedy

Indicates an unexpected error in the code. Please contact Customer Service to report this error.

HAL.IPv4FIB.LPMTbIFull

Description

The hardware Longest Prefix Match table has been exceeded and at least one IPv4 unicast route entry could not be added to the hardware. The LPM table is shared

by IPv4 and IPv6 route entries. The routes with the longest subnet mask lengths are maintained in the LPM table. Any IPv4 unicast packet to a destination not present in either the L3 host forwarding table or the LPM routing table will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv4 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv4FIB.LPMTbIFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv4fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv4fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag.

Severity

Info

Message Text

IPv4 route not added to hardware. Hardware LPM Table full.

HAL.IPv4FIB.ECMPTbIFull

Description

The hardware Equal-Cost Multi-Path table has been exceeded and at least one set of IPv4 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route will remain in the LPM table in hardware. This message will be logged at most 1 time per hour when new sets of IPv4 unicast ECMP routes trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv4FIB.ECMPTbIFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv4fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv4fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

Severity

Info

Message Text

IPv4 ECMP route not added. Hardware ECMP Table full.

HAL.IPv4FIB.ECMPTbIFullEntNoVR

Description

The hardware Equal-Cost Multi-Path table has been exceeded and the specified route in the set of IPv4 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route in the set will remain in the LPM table in hardware.

Remedy

"debug hal show ipv4fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "S" Setup flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv4fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

| destAddr | IP |
| maskLen | IPmasklen |
| nexthop | IP |
| msg | String |

HAL.IPv4FIB.uRPFECMPTbIFull

Description

The hardware uRPF Equal-Cost Multi-Path next hop group table has been exceeded and at least one next hop could not be added to the hardware. When this occurs the uRPF lookups for the specific ECMP next hop group member will not pass, causing packets to be dropped.

Remedy

This happens due to the maximum number of entries being exceeded. Verify in the routing table the number of next hop entries do not exceed the maximum number of uRPF next hops supported.

Severity

Debug-Summary

Message Text

uRPF IPv4 ECMP next hop entry %nh% for VLAN %vl% not added, hardware uRPF ECMP next hop table full.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.IPv4FIB.LPMTbIFullEnt

Description

The hardware Longest Prefix Match table has been exceeded and the specified IPv4 unicast route entry could not be added to the hardware. The LPM table is shared by IPv4 and IPv6 route entries. The routes with the longest subnet mask lengths are maintained in the LPM table. Any IPv4 unicast packet to a destination not present in either the L3 host forwarding table or the LPM routing table will be slowpath forwarded.

Remedy

"debug hal show ipv4fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv4fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag.

HAL.IPv4FIB.LPMTblAlrdyEmpty

Description

During deletion of routes, the number of routes in LPM table should have been greater than zero. An abnormal condition has been detected which may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

Indicates an unexpected error in the code. Please contact Customer Service to report this error.

Severity

Warning

Message Text

Number of IPv4 routes in LPM table is already 0.

HAL.IPv4FIB.StrtIPFDBMode

Description

This event indicates IP FDB mode has started for some hardware that is present and enabled in the system. For increased hardware forwarding, when the number of IPv4 routes exceeds a threshold (e.g. 25,000), all slots without an External LPM Table automatically transition from using LPM routing to forwarding of individual remote hosts. This latter mode is also known as IP Forwarding Database (IP FDB) Mode. Slots without an External LPM Table operating in IP FDB Mode will be indicated with a "d" flag in the output of "show iproute reserved-entries statistics", indicating that only "direct" routes are installed. The statistics output will also show the number of IPv4 Remote hosts. Note that hardware with an External LPM Table continues using LPM routing mode. Stopping IP FDB Mode occurs only when both of the following are true: (1) The number of IPv4 routes is less or equal to the threshold, and (2) No hardware without External LPM Table is present and enabled in the system. Stopping IP FDB Mode is indicated by event HAL.IPv4FIB.StopIPFDBMode.

Remedy

No remedy is necessary since slots can continue in IP FDB mode. Consider upgrading to hardware that has an External LPM Table to continue operating in LPM routing mode when more than this many IPv4 routes are present.

Severity

Notice

Message Text

Number of IPv4 routes exceeds %routeThreshold%, and some HW has changed from LPM to IP FDB Mode.

Message Parameters

| Name | Type |
|----------------|------|
| routeThreshold | ulnt |

HAL.IPv4FIB.StopIPFDBMode

Description

This event indicates IP FDB mode has stopped, and all hardware is using LPM routing. Refer to event HAL.IPv4FIB.StrtIPFDBMode for further information. Stopping IP FDB Mode occurs only when both of the following are true: (1) The number of IPv4 routes is less or equal to the threshold, and (2) No hardware without External LPM Table is present and enabled in the system.

Remedy

No remedy is necessary since this is normal.

Severity

Notice

Message Text

Number of IPv4 routes is below %routeThreshold% and no active HW requires IP FDB Mode.

Message Parameters

| Name | Type |
|----------------|------|
| routeThreshold | uInt |

HAL.Ipv4Mc.L3TbIFull

Description

A hash bucket in the L3 table has been exceeded and at least one IPv4 multicast (S,G) forwarding entry could not be added to the hardware. The L3 table is shared by IPv4 multicast and IPv4 unicast host entries. Any (S,G) multicast streams without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour while new (S,G) forwarding entries trigger this condition.

Remedy

"debug hal show forwarding distributions" can be used to view hash bucket distributions for the available hashing algorithms. "show forwarding configuration" will display the configured and currently running hash algorithm. In order to change the algorithm, use "configure forwarding hash-algorithm [crc16 | crc32]". A system reboot is required for this command to take effect. An associated debug-summary level message "HAL.Ipv4Mc.L3TbIFullEnt" can be enabled to view per-occurrence details including (S,G) and vlan information. In addition, "debug hal show ipv4mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Error

Message Text

IPv4 multicast entry not added. Hardware L3 Table full.

HAL.IPv4Mc.GrpTblFull

Description

The IPv4 multicast group table has been exceeded and at least one multicast forwarding entry was not added in hardware. Any (S,G) multicast streams without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour while new (S,G) forwarding entries trigger this condition.

Remedy

An associated debug-summary level message "HAL.IPv4Mc.GrpTblFullEnt" can be enabled to view per-occurrence details including (S,G) and vlan information. In addition, "debug hal show ipv4mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Error

Message Text

IPv4 multicast entry not added. Hardware Group Table full.

HAL.IPv4Mc.GrpScale

Description

The IPv4 multicast group table has been exceeded and at least one multicast forwarding entry was not added in hardware. This system has cards which have varying IPv4 multicast scaling limits and the system limit has been reduced to that of the lowest limit.

Remedy

Removing cards with lower IPv4 multicast scaling limits can increase the system limit. In addition, "debug hal show ipv4mc" can be used to determine which (S,G) forwarding

entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Info

Message Text

IPv4 multicast scaling reduced to the lowest supported limit of the currently present cards.

HAL.Ipv4Mc.FwdModeChg

Description

The IPv4 multicast forwarding mode has been changed which indicates that all subsequent hardware forwarding entries will use the new mode. As part of this change all IP multicast cache entries will have been flushed.

Remedy

This is an informational message with no remedy.

Severity

Info

Message Text

The IPv4 multicast forwarding mode changed to %newMode%.

Message Parameters

| Name | Type |

HAL.Ipv4Mc.PndingChkptSnd

Description

Pending IPMC checkpoint operations were sent to the backup.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

%numPending% IPMC checkpoint operations sent to the backup

Message Parameters

| Name | Type |
|------------|--------|
| numPending | uInt32 |

HAL.Ipv4Mc.ChkptIPMC

Description

The IP multicast FDB entry has been checkpointed to the backup node.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

Checkpoint IPMC entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanInstance%)

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanInstance | VLAN-tag |

HAL.IPv4Mc.DelL2Port

Description

A layer-2 port has been removed from the IP multicast entry in hardware.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC %IPMCGroupIndex%) -> Del L2 %slot%:%port%

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| IPMCGroupIndex | uInt32 |
| slot | uInt32 |
| port | uInt32 |

HAL.Ipv4Mc.AddL2Port

Description

A layer-2 port has been added to the IP multicast entry in hardware.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC %IPMCGroupIndex%) -> Add L2 %slot%:%port%

Message Parameters

| port | uInt32 |
| IPMCGroupIndex | uInt32 |

HAL.IPv4Mc.SlotSyncBegin

Description

A newly inserted or rebooted card has begun IP multicast forwarding database synchronization.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

Begin IP multicast synchronization to slot %slot%

Message Parameters

| Name | Type |
|------|--------|
| slot | uInt32 |

HAL.IPv4Mc.SlotSyncEnd

Description

A newly inserted or rebooted card has finished IP multicast forwarding database synchronization.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

End IP multicast synchronization to slot %slot%

Message Parameters

| Name | Type |
|------|--------|
| slot | uInt32 |

HAL.IPv4Mc.BkupSync

Description

The master node is synchronizing the IP multicast database to the backup node.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

Bulk IP multicast synchronization to backup node

HAL.IPv4Mc.FailovrSync

Description

Post MSM failover IP multicast synchronization in progress.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

Post failover IP multicast synchronization

HAL.Ipv4Mc.CleanupSlot

Description

Cleanup any IP multicast data structures associated with the specified slot. This slot is coming down.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

Cleanup slot %slot% for IP multicast

Message Parameters

| Name | Type |
|------|--------|
| slot | uInt32 |

HAL.Ipv4Mc.AddVlan

Description

Handle vlan membership addition within the IP multicast module.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

IP multicast processing port %slot%:%port% addition to vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| slot | uInt32 |
| port | uInt32 |
| vlanId | VLAN-tag |

HAL.IPv4Mc.DelVlan

Description

Handle vlan membership deletion within the IP multicast module.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

IP multicast processing port %slot%:%port% deletion from vlan %vlanId%

Message Parameters

| Name | Type |

| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanInstance | uInt32 |
| IPMCGroupIndex | uInt32 |

HAL.Ipv4Mc.CompressModeChg

Description

The IP multicast group table compression feature configuration changed as is reflected by the newMode specification.

Remedy

This is an informational message with no remedy.

Severity

Info

Message Text

The IPv4 multicast compression mode changed to %newMode%.

Message Parameters

| Name | Type |
|---------|--------|
| newMode | String |

HAL.IPv4Mc.SuggestCompress

Description

This message is displayed one-time per system boot when HAL.IPv4Mc.GrpTblFull is hit and IP multicast compression is disabled as a hint to the user that this feature may improve or alleviate the current scaling limitation.

Remedy

This is an informational message with no remedy.

Severity

Info

Message Text

IP multicast group compression may improve IP multicast group table scaling when multiple IPMC forwarding entries have common egress lists.

HAL.IPv4Mc.UnsuprtdChkpt

Description

This message indicates that an unsupported IP multicast checkpoint message has been received on the backup node. This can happen when 2 different software versions are communicating which each support a different checkpoint message version. An example of this is EXOS 12.1 (or earlier) and EXOS 12.2 (or later).

Remedy

This is an informational message with no remedy.

Severity

Error

Message Text

Received unsupported IPv4Mc checkpoint message version %versionNumber%

Message Parameters

| Name | Type |
|---------------|--------|
| versionNumber | uInt32 |

HAL.Ipv4Mc.AddFMIngrPortFail

Description

The Fabric Manager failed to add Ingress port for an IPMC group. The system is not functioning as expected. The problem may be related to the failure to allocate an internal resource.

Remedy

Indicates an unexpected error in the code. Please contact Customer Service to report this error.

Severity

| vlanId | uInt32 |

HAL.Ipv4Mc.L2McTblFull

Description

The Layer 2 multicast table has been exceeded and at least one multicast forwarding entry was not added in hardware. Any (Mac,Vlan) multicast streams without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour while new (Mac,Vlan) forwarding entries trigger this condition.

Remedy

An associated debug-summary level message "HAL.Ipv4Mc.L2McTblFullEnt" can be enabled to view per-occurrence details including (Mac,Vlan) information. In addition, "debug hal show ipv4mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Error

Message Text

IPv4 Layer 2 multicast entry not added. Hardware Layer 2 Multicast Table full.

HAL.IPv4Mc.L2McTbIFullEnt

Description

The Layer 2 Multicast table has been exceeded and the specified Layer 2 multicast (Mac,Vlan) forwarding entry was not added in hardware. This (Mac,Vlan) multicast stream will be slowpath forwarded.

Remedy

The remedy is to reduce the Layer 2 multicast (Mac,Vlan) entries required by this system.

Severity

Debug-Summary

Message Text

Layer 2 multicast entry (%vrId%, %mcastMacAddress%,vlan %vlanId%) not added.
Hardware Layer 2 Multicast Table full.

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| mcastMacAddress | MAC |
| vlanId | VLAN-tag |

HAL.IPv4Mc.L2McScale

Description

The Layer 2 multicast table has been exceeded and at least one multicast forwarding entry was not added in hardware. This system has cards which have varying Layer 2 multicast scaling limits and the system limit has been reduced to that of the lowest limit.

Remedy

Removing cards with lower Layer 2 multicast scaling limits can increase the system limit. In addition, "debug hal show ipv4mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Info

Message Text

Layer 2 multicast scaling reduced to the lowest supported limit of the currently present cards.

HAL.IPv4Mc.SuggestL2McCompress

Description

This message is displayed one-time per system boot when HAL.IPv4Mc.L2McTbIFull is hit and multicast compression is disabled as a hint to the user that this feature may improve or alleviate the current scaling limitation.

Remedy

This is an informational message with no remedy.

Severity

Info

Message Text

Layer 2 multicast compression may improve Layer 2 multicast table scaling when multiple IPMC forwarding entries have common egress lists.

HAL.IPv4Mc.L3McVPLAGMove

Description

A layer-3 IPMC multicast entry has been modified to take another LAG member port. In VPEX topologies, if the IPMC listener is on an extended port LAG, the h/w is programmed with one member port of the LAG. When that member port goes down, the entry is moved to another member port.

Remedy

This is an informational debug message so there is no remedy.

Severity

HAL.Ipv6Adj.NHTbIFull

Description

The hardware Next Hop Table full, and an IPv6 unicast entry could not be added. The Next Hop table is shared by IPv4 and IPv6 unicast host entries. Any IPv6 unicast packet without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv6 unicast host forwarding entries trigger this condition.

Remedy

The command "show iproute reserved-entries statistics" shows hardware table utilization, including counts of IPv4 and IPv6 unicast hosts. An associated debug-summary severity message "HAL.Ipv6Adj.NHTbIFullEnt" can be enabled to view per-occurrence details including the IP address. In addition, "debug hal show ipv6adj" can be used to determine which IP unicast forwarding entries were not added to hardware. Any entry in this display without the "S" Setup flag is not currently programmed in hardware. Even an entry in this display with the "S" Setup flag may not be currently programmed in hardware on any BD8800 "e"-series I/O modules. Use the "debug hal show ipv6adj slot N" on such a module, and again look for the "S" Setup flag.

Severity

Warning

Message Text

IPv6 unicast entry not added. Hardware Next Hop Table full.

HAL.Ipv6Adj.MapSlotUnitFail

Description

The mapping of local slot/unit to global unit failed. It could happen during add/delete/update/validate/invalidate. Please refer to the error message to see when the failure occurred. The system is not functioning as expected.

Remedy

HAL.IPv6FIB.LPMTbIFull

Description

The hardware Longest Prefix Match table has been exceeded and at least one IPv6 unicast route entry could not be added to the hardware. The routes with the longest subnet mask lengths are maintained in the LPM table. Any IPv6 unicast packet to a destination not present in the LPM routing table will be slowpath forwarded. This message will be logged at most 1 time per hour when new IPv6 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.LPMTbIFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F"

(Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag.

Severity

Notice

Message Text

IPv6 route not added to hardware. Hardware LPM Table full.

HAL.IPv6FIB.LongMskTblFull

Description

The hardware table used to store IPv6 routes with a mask > 64 bits has been exceeded and at least one IPv6 unicast route entry could not be added to the hardware. Any IPv6 unicast packet to a destination not present in the HW table used for routes with > 64 bit masks may be incorrectly forwarded. This message will be logged at most 1 time per hour when new IPv6 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.LongMskTblFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag. If IPv6 route compression is not enabled, enabling it will reduce the number of entries in the HW tables for routes with masks > 64 bits.

Severity

Warning

Message Text

IPv6 route with mask > 64 bits not added. Long Mask Hardware Table full. (Logged at most once per hour.)

HAL.Ipv6FIB.LongMskTblFullEnt

Description

The hardware table used to store IPv6 routes with > 64 bit masks has been exceeded and the specified IPv6 unicast route entry could not be added to the hardware. The routes with the longest subnet mask lengths are maintained in the HW table. Any IPv6 unicast packet to a destination not present in the HW routing table may be incorrectly forwarded.

Remedy

"debug hal show ipv6fib" can be used to determine which IP unicast route entries with masks > 64 bits were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag. If IPv6 route compression is not enabled, enabling it will reduce the number of entries in the tables for routes with > 64 bit masks.

Severity

Debug-Summary

Message Text

IPv6 route vrid %vrid% destAddr%/%maskLen% nexthop %nexthop% not added. Long Mask Hardware Table full.

Message Parameters

| Name | Type |
|----------|-----------|
| vrid | uInt32 |
| destAddr | dstIPv6 |
| maskLen | IPmasklen |
| nexthop | IPv6 |

HAL.Ipv6FIB.LongMskTblNotAvail

Description

The hardware table used to store IPv6 routes with a mask > 64 bits has no available entries. Any IPv6 unicast packet to a destination that would have matched the route that is not present in the HW table may be incorrectly forwarded. This message will

be logged at most 1 time per hour when new IPv6 unicast route entries trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.LongMskTblFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. The solution to this issue is to reduce the number of customer installed ACLs until there are HW entries available for the IPv6 routes with masks > 64 bits. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all BD8800 I/O modules or SummitStack nodes. Use the "debug hal show ipv6fib slot N" on such a module or node, and look for the "S" (Setup in hardware) flag.

Severity

Warning

Message Text

IPv6 route with > 64 bit mask not added. Hardware Table not available for IPv6 routes with Long Masks.

HAL.IPv6FIB.LongMskUsrVRNoSuprt

Description

The hardware table used to store IPv6 routes with > 64 bit masks does not support routes associated with user virtual routers. Any IPv6 unicast packet to a destination not present in the HW routing table may be incorrectly forwarded.

Remedy

If IPv6 routes with masks > 64 bits are required on user virtual routers, choose a BD8800 I/O module that supports this function.

Severity

Warning

Message Text

Installing IPv6 routes w/ mask > 64 bits with a user virtual router is not supported on G24Xc,G48Xc,G48Tc,10G4Xc,10G8Xc,S-G8Xc, S-10G1Xc and S-10G2Xc. These routes are not installed.

HAL.IPv6FIB.ECMPTbIFull

Description

The hardware Equal-Cost Multi-Path table has been exceeded and at least one set of IPv6 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route will remain in the LPM table in hardware. This message will be logged at most 1 time per hour when new sets of IPv6 unicast ECMP routes trigger this condition.

Remedy

An associated debug-summary severity message "HAL.IPv6FIB.ECMPTbIFullEnt" can be enabled to view per-occurrence details including the subnet and next hop IP address. In addition, "debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "F" (Forwarded to hardware) flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

Severity

Info

Message Text

IPv6 ECMP route not added. Hardware ECMP Table full.

HAL.IPv6FIB.ECMPTbIFullEnt

Description

The hardware Equal-Cost Multi-Path table has been exceeded and the specified route in the set of IPv6 unicast ECMP routes could not be added to the hardware. When this occurs, a single, non-ECMP route in the set will remain in the LPM table in hardware.

Remedy

"debug hal show ipv6fib" can be used to determine which IP unicast route entries were not added to hardware as ECMP routes. Any entry in this display without the "S" Setup

flag is not currently programmed in hardware. The "M" Multipath flag indicates the route is ECMP. Even an entry in this display with the "F" (Forwarded to hardware) flag may not be currently programmed in hardware on all slots. Use the "debug hal show ipv6fib slot N" on a module or node, and look for the "S" (Setup in hardware) flag and "M" Multipath flags.

| Name | Type |
|--------|--------|
| format | Printf |

HAL.Ipv6Mc.L3TbIFull

Description

A hash bucket in the L3 table has been exceeded and at least one IPv6 multicast (S,G) forwarding entry could not be added to the hardware. The L3 table is shared by IPv4/v6 multicast and IPv4/v6 unicast host entries. Any (S,G) multicast streams without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour while new (S,G) forwarding entries trigger this condition.

Remedy

"debug hal show forwarding distributions" can be used to view hash bucket distributions for the available hashing algorithms. "show forwarding configuration" will display the configured and currently running hash algorithm. In order to change the algorithm, use "configure forwarding hash-algorithm [crc16 | crc32]". A system reboot is required for this command to take effect. An associated debug-summary level message "HAL.Ipv4Mc.L3TbIFullEnt" can be enabled to view per-occurrence details including (S,G) and vlan information. In addition, "debug hal show ipv4mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Error

Message Text

IPv6 multicast entry not added. Hardware L3 Table full.

HAL.IPv6Mc.GrpTblFull

Description

The IPv6 multicast group table has been exceeded and at least one multicast forwarding entry was not added in hardware. Any (S,G) multicast streams without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour while new (S,G) forwarding entries trigger this condition.

Remedy

An associated debug-summary level message "HAL.IPv6Mc.GrpTblFullEnt" can be enabled to view per-occurrence details including (S,G) and vlan information. In addition, "debug hal show ipv6mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Error

Message Text

IPv6 multicast entry not added. Hardware Group Table full.

HAL.IPv6Mc.GrpScale

Description

The IPv6 multicast group table has been exceeded and at least one multicast forwarding entry was not added in hardware. This system has cards which have varying IPv6 multicast scaling limits and the system limit has been reduced to that of the lowest limit.

Remedy

Removing cards with lower IPv6 multicast scaling limits can increase the system limit. In addition, "debug hal show ipv6mc" can be used to determine which (S,G) forwarding

entries were not added to hardware. Any entry in this display with "IPMC -1" is not currently programmed in hardware.

Severity

Info

Message Text

IPv6 multicast scaling reduced to the lowest supported limit of the currently present cards.

HAL.Ipv6Mc.FwdModeChg

Description

The IPv6 multicast forwarding mode has been changed which indicates that all subsequent hardware forwarding entries will use the new mode. As part of this change all IP multicast cache entries will have been flushed.

Remedy

This is an informational message with no remedy.

Severity

Info

Message Text

The IPv6 multicast forwarding mode changed to %newMode%.

Message Parameters

| Name | Type |
|---------|--------|
| newMode | String |

HAL.Ipv6Mc.CopyIPMCEntry

Description

A port subscription or port leave operation has caused this IP multicast FDB entry to split from a previously used common IP multicast group table entry. As a result, this message indicates that the specified IP multicast group table entry has been copied and will be used by this entry moving forward.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%) -> Copy
IPMC %oldIPMCGroupIndex% to %newIPMCGroupIndex%

Message Parameters

| Name | Type |
|-------------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| oldIPMCGroupIndex | uInt32 |
| newIPMCGroupIndex | uInt32 |

HAL.IPV6Mc.DelIPMCGroupOnly

Description

A port subscription or port leave operation has caused this IP multicast FDB entry to join a different IP multicast group table entry. As a result, this message indicates that the specified IP multicast group table entry has been deleted from hardware but the IP multicast FDB entry (source IP address, group IP address, vlan) remains programmed.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC
%IPMCGroupIndex%) -> Delete IPMC only

Message Parameters

| Name | Type |
|-----------------|----------|
| vrid | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| IPMCGroupIndex | uInt32 |

HAL.IPv6Mc.SetIPMCEntry

Description

A port subscription or port leave operation has caused this IP multicast FDB entry to join a different IP multicast group table entry. As a result, this message indicates that the specified IP multicast entry will start using the new IP multicast group table entry specified.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrid%,vlan %vlanId%,IPMC %oldIPMCGroupIndex%) -> Set IPMC %newIPMCGroupIndex%

Message Parameters

| Name | Type |
|-------------------|----------|
| vrid | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| oldIPMCGroupIndex | uInt32 |
| newIPMCGroupIndex | uInt32 |

HAL.IPv6Mc.DelIPMCEntry

Description

The specific IP multicast FDB entry has been deleted from hardware.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC
%IPMCGroupIndex%) -> Delete

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| IPMCGroupIndex | uInt32 |

HAL.IPv6Mc.AddIPMCEntry

Description

The specific IP multicast FDB entry has been added to hardware.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Summary

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC %IPMCGroupIndex%) -> Add

Message Parameters

|-----------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| IPMCGroupIndex | uInt32 |

HAL.Ipv6Mc.AddIngrPort

Description

The specified port was added as ingress for the IP multicast group to be used for switch fabric management.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

%fabricMgr%: add ingress port %slot%:%port% for IPMC %IPMCGroupIndex%

Message Parameters

| Name | Type |
|----------------|--------|
| fabricMgr | String |
| slot | uInt32 |
| port | uInt32 |
| IPMCGroupIndex | uInt32 |

HAL.IPv6Mc.AddEgrPort

Description

The specified port was added as egress for the IP multicast group to be used for switch fabric management.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

%fabricMgr%: add egress port %slot%:%port% for IPMC %IPMCGroupIndex%

Message Parameters

| Name | Type |
|----------------|--------|
| fabricMgr | String |
| slot | uInt32 |
| port | uInt32 |
| IPMCGroupIndex | uInt32 |

HAL.IPv6Mc.SlotSnd

Description

A batch of IPMC operations was sent to the specified slot number.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

%numBatch% batched IPMC operations send to slot %slot%

Message Parameters

| Name | Type |
|----------|--------|
| numBatch | uInt32 |
| slot | uInt32 |

HAL.Ipv6Mc.PndingChkptSnd

Description

Pending IPMC checkpoint operations were sent to the backup.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

%numPending% IPMC checkpoint operations sent to the backup

Message Parameters

| Name | Type |
|------------|--------|
| numPending | uInt32 |

HAL.Ipv6Mc.ChkptIPMC

Description

The IP multicast FDB entry has been checkpointed to the backup node.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Data

Message Text

Checkpoint IPMC entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanInstance%)

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanInstance | VLAN-tag |

HAL.IPv6Mc.DelL2Port

Description

A layer-2 port has been removed from the IP multicast entry in hardware.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC %IPMCGroupIndex%) -> Del L2 %slot%:%port%

Message Parameters

| Index | uInt32 |
| vrId | VRID |
| sourceIpAddr | IPAddrN |
| groupIpAddr | IPAddrN |
| vlanId | VLAN-tag |

HAL.IPv6Mc.L2McTblFull

Description

The Layer 2 multicast table has been exceeded and at least one multicast forwarding entry was not added in hardware. Any (Mac,Vlan) multicast streams without an associated hardware forwarding entry will be slowpath forwarded. This message will be logged at most 1 time per hour while new (Mac,Vlan) forwarding entries trigger this condition.

Remedy

An associated debug-summary level message "HAL.IPv6Mc.L2McTblFullEnt" can be enabled to view per-occurrence details including (Mac,Vlan) information. In addition, "debug hal show ipv6mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "L2MC -1" is not currently programmed in hardware.

Severity

Error

Message Text

Layer 2 multicast entry not added. Hardware Layer 2 Multicast Table full.

HAL.Ipv6Mc.L2McTbIFullEnt

Description

The Layer 2 Multicast table has been exceeded and the specified Layer 2 multicast (Mac,Vlan) forwarding entry was not added in hardware. This (Mac,Vlan) multicast stream will be slowpath forwarded.

Remedy

The remedy is to reduce the Layer 2 multicast (Mac,Vlan) entries required by this system.

Severity

Debug-Summary

Message Text

Layer 2 multicast entry (%vrId%, %mcastMacAddress%,vlan %vlanId%) not added.
Hardware Layer 2 Multicast Table full.

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| mcastMacAddress | MAC |
| vlanId | VLAN-tag |

HAL.Ipv6Mc.L2McScale

Description

The Layer 2 multicast table has been exceeded and at least one multicast forwarding entry was not added in hardware. This system has cards which have varying Layer 2 multicast scaling limits and the system limit has been reduced to that of the lowest limit.

Remedy

Removing cards with lower Layer 2 multicast scaling limits can increase the system limit. In addition, "debug hal show ipv6mc" can be used to determine which (S,G) forwarding entries were not added to hardware. Any entry in this display with "L2MC -1" is not currently programmed in hardware.

Severity

Info

Message Text

Layer 2 multicast scaling reduced to the lowest supported limit of the currently present cards.

HAL.Ipv6Mc.SuggestL2McCompress

Description

This message is displayed one-time per system boot when HAL.Ipv6Mc.L2McTbIFull is hit and multicast compression is disabled as a hint to the user that this feature may improve or alleviate the current scaling limitation.

Remedy

This is an informational message with no remedy.

Severity

Info

Message Text

Layer 2 multicast compression may improve Layer 2 multicast table scaling when multiple L2MC forwarding entries have common egress lists.

HAL.Ipv6Mc.L3McVPLAGMove

Description

A layer-3 IPMC multicast entry has been modified to take another LAG member port. In VPEX topologies, if the IPMC listener is on an extended port LAG, the h/w is programmed with one member port of the LAG. When that member port goes down, the entry is moved to another member port.

Remedy

This is an informational debug message so there is no remedy.

Severity

Debug-Verbose

Message Text

HW entry (%sourceIpAddress%,%groupIpAddress%,vr %vrId%,vlan %vlanId%,IPMC
%IPMCGroupIndex%) -> Add L3 p,v=%slot%:%port%,%egressVlanId%

Message Parameters

| Name | Type |
|-----------------|----------|
| vrId | VRID |
| sourceIpAddress | IPAddrN |
| groupIpAddress | IPAddrN |
| vlanId | VLAN-tag |
| IPMCGroupIndex | uInt32 |
| slot | uInt32 |
| port | uInt32 |
| egressVlanId | VLAN-tag |

HAL.LAG.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.LAG.DebugVerbose

Description

A condition has been detected that may interest a developer analyzing some system behavior at a more verbose level than provided by the debug summary information.

Remedy

No action required - Informational message only.

Severity

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.LAG.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependent on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.LAG.AllocStrucFail

Description

Allocating memory for an internal data structure for a link aggregation group failed.

Remedy

This usually happens when the system is running out memory. Run "show memory" command to further debug this problem. The problem may be resolved by deleting some configurations, retrying the operation or reboot.

Severity

Error

Message Text

Failed to allocate %dataName% for link aggregation group %masterSlotPort%

Message Parameters

| Name | Type |
|----------------|----------|
| dataName | String |
| masterSlotPort | SlotPort |

HAL.LAG.CfgHashFail

Description

Configuring the hash algorithm for a link aggregation group failed on a chip of a card.

Remedy

This problem is usually due to a failure of accessing a hardware register. The hardware may be in a bad state. The error message gives the detail of the failure. The problem usually can be resolved by retrying the operation or power-cycling the switch or the card in the slot.

Severity

Error

Message Text

Failed to configure the hash algorithm for link aggregation group %masterSlotPort% on slot %slot% unit %unit%: %errMsg%

Message Parameters

| Name | Type |
|----------------|----------|
| masterSlotPort | SlotPort |
| slot | Slot |
| unit | sInt32 |
| errMsg | String |

HAL.LAG.CfgFail

Description

Configuring a link aggregation group failed in hardware on a chip of a card.

Remedy

This problem is usually due to a failure of accessing a hardware register. The hardware may be in a bad state. The error message gives the detail of the failure. The problem usually can be resolved by retrying the operation or power-cycling the switch or the card in the slot.

Severity

Error

Message Text

Failed to configure link aggregation group %masterSlotPort% on slot %slot% unit %unit%: %errMsg%

Message Parameters

| Name | Type |

| masterSlotPort | SlotPort |
| slot | Slot |

| Name | Type |
|--------|--------|
| unit | sInt32 |
| errMsg | String |

HAL.LAG.CfgNoUcastHashFail

Description

Configuring the link aggregation group's hash algorithm for non-unicast packets failed in hardware on a chip of a card.

Remedy

This problem is usually due to a failure of accessing a hardware register. The hardware may be in a bad state. The error message gives the detail of the failure. The problem usually can be resolved by retrying the operation or power-cycling the switch or the card in the slot.

Severity

Error

Message Text

Failed to configure hash algorithm for non-unicast packets for link aggregation groups on slot %slot% unit %unit%: %errMsg%

Message Parameters

| Name | Type |
|--------|--------|
| slot | Slot |
| unit | sInt32 |
| errMsg | String |

HAL.LAG.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpected circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

| attemptedOperation | Printf |

Applicable Platforms

- Summit family switches

HAL.MACsec.PortInstNotFnd

Description

An internal function was called for a MACsec port that does not exist. This is an internal error.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Warning

Message Text

Could not find MACsec instance on port %slotPort%

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches

HAL.MACsec.PortAllocMemFail

Description

Memory for the displayed object could not be allocated. The system is not functioning as expected. MACsec cannot be enabled on this port. Possible object types: pib_macsec_data_s.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim memory.

Severity

Critical

Message Text

Memory allocation failed when trying to allocate a %obj% structure for port %slotPort%.

Message Parameters

| Name | Type |
|----------|----------|
| obj | String |
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches

HAL.MACsec.HwCompatFail

Description

This is an unexpected condition involving the MACsec hardware.

Remedy

This is an unexpected condition that requires technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Warning

Message Text

The MACsec hardware on this device does not support the required features: %errMsg%

Message Parameters

| Name | Type |
|--------|--------|
| errMsg | Printf |

Applicable Platforms

- Summit family switches

HAL.MACsec.SaveAndRebootRqr

Description

A configuration load enabled MACsec hardware mode on the specified port. This changes will not take effect until after 'save configuration' and 'reboot' commands are executed.

Remedy

Check MACsec hardware mode status using 'show macsec' command before save and reboot

Severity

Error

Message Text

Save and reboot required for configured MACsec hardware mode to take effect on port %slotPort%

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches

HAL.MACsec.RebootRqr

Description

A configuration load enabled MACsec hardware mode on the specified port. This changes will not take effect until after 'reboot' command is executed.

Remedy

Check MACsec hardware mode status using 'show macsec' command before reboot

Severity

Error

Message Text

Reboot required for configured MACsec hardware mode to take effect on port
%slotPort%

HAL.Mirror.UpdtTrunkVLANFiltFail

Description

Added/deleted port from trunk on mirroring VLAN, but was unable to update mirroring filter. Error occurred when trying to send a message to I/O.

Remedy

Try to unconfigure the mirroring filter and reconfigure it.

Severity

Error

Message Text

Failed to update mirroring filter for port %slot%:%port% that was added/deleted from a trunk on a VLAN-based mirroring filter.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.UpdtVLANFiltFail

Description

Added/deleted port from an existing VLAN-based filter, but was unable to update mirroring filter. Error occurred when trying to send a message to I/O.

Remedy

Try to unconfigure the mirroring filter and reconfigure it.

Severity

Error

Message Text

Failed to update mirroring filter for port %slot%:%port% that was added/deleted from a mirroring VLAN.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.CfgVLANPortFiltFail

Description

Added/deleted virtual port mirroring filter. Error occurred when trying to send a message to I/O.

Remedy

Try to unconfigure the mirroring filter and reconfigure it.

Severity

Error

Message Text

Failed to configure mirroring filter for VLAN %vlanId% port %slot%:%port%.

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |
| slot | Slot |
| port | Port |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.InitCndtFail

Description

When trying to initialize mirroring conduits for the MM, the initialization process for adding range for mirroring pipe failed.

Remedy

Try to disable mirroring and re-enable it.

Severity

Error

Message Text

Failed in management module conduit initialization with error %error%.

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.CndtEventNull

Description

The response handler for sending conduit message for mirroring returned a null conduit event.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Conduit response handler returned null conduit event.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.MirTypeUnk

Description

No such enable/disable mirroring type available when sending this conduit message.

Remedy

Try to disable mirroring and re-enable it.

Severity

Error

Message Text

Wrong enable/disable mirroring type %type%.

Message Parameters

| Name | Type |
|------|------|
| type | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.MirInfoInv

Description

Before allocating memory to send conduit message, there was no information in data structure for enabling/disabling mirroring.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Sending conduit message to enable/disable mirroring failed because information for this was not available.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.SendAsyncMsgFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Error

Message Text

Sending asynchronous conduit message failed with slotmask %slotmask% return code %error%.

Message Parameters

| Name | Type |
|----------|--------|
| slotmask | sInt |
| error | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.SendVLANPortMsgFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Error

Message Text

Sending asynchronous conduit message for configuring virtual port filter failed.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.AllocVLANPortMsgFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Failed to allocate size %size% when sending conduit message for configuring virtual port mirroring filter.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.AllocVLANMsgFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Failed to allocate size %size% when sending conduit message for configuring VLAN mirroring filter.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.AllocPortMsgFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Failed to allocate size %size% when sending conduit message for configuring port mirroring filter.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.AllocEnblMsgFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Failed to allocate size %size% when sending conduit message for enable/disable mirroring.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.AllocVLANDisbIFail

Description

When trying to send asynchronous conduit message for mirroring, HAL conduit did not return OK.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Failed to allocate size %size% when sending conduit message for disable learning on remote VLAN.

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndMirToPortFail

Description

Was not able to acquire slot and port information and logical port interface given the monitor port instance.

Remedy

Try a different monitor port.

Severity

Debug-Data

Message Text

Unable to obtain monitor port interface information.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndVLANFail

Description

Was not able to acquire VLAN interface information given the VLAN instance when trying to add/delete a mirroring filter.

Remedy

Try to unconfigure the mirroring filter and reconfigure it.

Severity

Debug-Data

Message Text

Failed to get VLAN interface information when adding/deleting filter for mirroring.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndMirVLANFail

Description

Unable to configure mirroring VLAN for mirroring because can't get VLAN interface.

Remedy

Try to disable mirroring and enable one-to-many mirroring.

Severity

Debug-Data

Message Text

Unable to obtain VLAN interface for mirroring VLAN.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.MirVLANHWDataNull

Description

Was not able to acquire hardware VLAN interface information given the name of the internal mirroring VLAN for one-to-many mirroring.

Remedy

Try to disable mirroring and enable one-to-many mirroring.

Severity

Debug-Data

Message Text

Hardware VLAN information for mirroring VLAN %vlanName% is null.

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndPortFail

Description

Was not able to acquire port information given port instance.

Remedy

Try to disable mirroring and enable mirroring.

Severity

Debug-Data

Message Text

Failed to get port interface information.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndPortSendMsgFail

Description

Was not able to acquire port interface information when sending message to I/O.

Remedy

Try to disable mirroring and enable mirroring.

Severity

Debug-Data

Message Text

Failed to get port interface information when sending port configuration message for mirroring.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndVLANPortFail

Description

Was not able to acquire virtual port information given VLAN and port instances.

Remedy

Try to disable mirroring and enable mirroring.

Severity

Debug-Data

Message Text

Failed to get (VLAN, port) interface information.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.FndVLANPortSendMsgFail

Description

Was not able to acquire virtual port information when sending conduit message to I/O for configuring virtual port mirror filter.

Remedy

Try to unconfigure the mirroring filter and reconfigure it.

Severity

Debug-Data

Message Text

Failed to get (VLAN, port) interface information sending virtual port configuration message for mirroring..

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.TrunkHWDDataNull

Description

Was not able to acquire hardware-based trunk data pointer for this port.

Remedy

Try to disable mirroring and re-enable it.

Severity

Debug-Data

Message Text

Hardware-based trunk information for port %slot%:%port% is null.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Mirror.RmtIPGwAvail

Description

This event occurs when a mirror-to-remote-IP destination, or a gateway to reach it, becomes resolved. Following this event, mirrored traffic is transmitted from the resolved port, or ports in the case of a load share group.

Remedy

No action required - Notification of a gateway reachability change only

Severity

Notice

Message Text

%vr%: Destination gateway %gwIPAddr% is resolved to %str% port %slotPort% to mirror-to-remote-IP %rmtIP%

Message Parameters

| Name | Type |
|----------|----------|
| rmtIP | IPv4 |
| vr | String |
| gwIPAddr | IPv4 |
| str | String |
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches

HAL.Mirror.RmtIPGwUnk

Description

This event occurs when a reachability is lost to a mirror-to-remote-IP destination or a gateway to reach it. Following this event, the mirrored traffic will stop until one of the gateways becomes reachable.

Remedy

No action required - Notification of a gateway reachability change only

Severity

Notice

Message Text

%vr%: Destination gateway is unknown to mirror-to-remote-IP %rmtIP%

Message Parameters

| Name | Type |
|-------|--------|
| rmtIP | IPv4 |
| vr | String |

Applicable Platforms

- Summit family switches

HAL.Mirror.RmtIPGwUnsuprt

Description

This event occurs when a mirror-to-remote-IP destination, or a gateway to reach it, becomes resolved to an unsupported gateway. When an unsupported gateway resides on a load sharing group, its master port is provided. Traffic is not mirrored until a supported gateway is reachable.

Remedy

No action required - Notification message only

Severity

Error

Message Text

`%vr%: Destination gateway %gwIPAddr% resolved to%str% port %slotPort% is unsupported to mirror-to-remote-IP %rmtIP%`

Message Parameters

| Name | Type |
|----------|----------|
| vr | String |
| gwIPAddr | IPv4 |
| str | String |
| slotPort | SlotPort |
| rmtIP | IPv4 |

HAL.MPLS.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

| format | Printf |

HAL.MPLS.ProcMsgVerInv

Description

An unsupported version number was used when constructing or processing a message used for communication with the I/O Modules.

Remedy

This may be a symptom of version incompatibility between the MM and one or more of the I/O Modules. Ensure the software versions are compatible. The I/O Module may require a reboot (disable/enable).

Severity

Critical

Message Text

Message version %version% unsupported.

Message Parameters

| Name | Type |
|---------|------|
| version | ulnt |

HAL.MPLS.InitCndtFail

Description

MPLS initialization of conduits for MM-I/O Module communication could not be completed. MPLS will not function properly as a result.

Remedy

Insufficient memory may be the issue. If not, the error code supplied in the message may be helpful in debugging. Please provide the error code along with "show tech" to Technical Support.

Severity

Critical

Message Text

Conduit initialization failed due to error %errCode%

Message Parameters

| Name | Type |
|---------|------|
| errCode | ulnt |

HAL.MPLS.AllocMsgFail

Description

The specified MPLS message type could not be constructed and sent to one or more I/O Modules due to an allocation failure.

Remedy

The system is low on memory resources. The configuration should be reduced in scale or complexity in order for the system to continue operating correctly.

Severity

Critical

Message Text

Could not allocate a message of type %msgId%

Message Parameters

| Name | Type |
|-------|------|
| msgId | ulnt |

HAL.MPLS.SendAsyncMsgFail

Description

A message could not be sent to one or more I/O Modules asynchronously. The error code is included in the message. An MPLS operation could not be completed as a result. The system may be low on resources or busy.

Remedy

If the problem persists, please provide "show tech" and the text of the log message to Technical Support.

Severity

Critical

Message Text

Asynchronous message send failed with error %errCode%

Message Parameters

| Name | Type |
|---------|------|
| errCode | ulnt |

HAL.MPLS.SendMsgFail

Description

A message could not be sent to one or more I/O Modules. The error code is included in the message. An MPLS operation could not be completed as a result. The system may be low on resources or busy.

Remedy

If the problem persists, please provide "show tech" and the text of the log message to Technical Support.

Severity

Critical

Message Text

Message send failed with error %errCode%

Message Parameters

| Name | Type |
|---------|------|
| errCode | ulnt |

HAL.MPLS.PIFNotSuprt

Description

A supported port type was specified in an MPLS operation.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Port type %PIFType% unsupported

Message Parameters

| Name | Type |
|---------|------|
| PIFType | uInt |

HAL.MPLS.NHLFEParmNull

Description

An MPLS function was called with a NULL NHLFE parameter.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Null NHLFE argument

HAL.MPLS.NHLFENbrNull

Description

An MPLS function was called for an NHLFE with a NULL neighbor pointer.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Null neighbor pointer in NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | ulnt |

HAL.MPLS.PWFIBNextHopNull

Description

A pseudowire NHLFE has a NULL FIB nexthop pointer.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Null FIB-NextHop in NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | ulnt |

HAL.MPLS.PWNHLFEFIBNextHopInv

Description

A pseudowire NHLFE FIB nexthop is assigned an invalid FIB nexthop type.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid FIB-NextHop type %nhType% in NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhType | uint |
| nhlfeInst | uint |

HAL.MPLS.FIBNextHopPWNull

Description

A pseudowire FIB nexthop has a NULL pseudowire pointer.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Null pseudowire in FIB-nexthop for NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | uint |

HAL.MPLS.FIBNextHopNotSuprt

Description

An unsupported FIB-NextHop type was specified in an MPLS operation.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Unsupported FIB-NextHop type %nhType% for NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhType | ulnt |
| nhlfeInst | ulnt |

HAL.MPLS.LblCntNotSuprt

Description

An MPLS operation could not be carried out due to an unsupported label count.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Unsupported label count %lblCount% in NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| lblCount | ulnt |
| nhlfeInst | ulnt |

HAL.MPLS.FIBNextHopInv

Description

An MPLS operation could not be completed due to an invalid FIB nexthop type.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid FIB-nexthop type %nhType% specified for NHLFE

Message Parameters

| Name | Type |
|--------|------|
| nhType | ulnt |

HAL.MPLS.FIBNextHopNHLFENull

Description

An MPLS operation could not be completed due to a null NHLFE pointer in a FIB nexthop.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Null NHLFE pointer in FIB-nexthop

HAL.MPLS.ILMVLANNotFnd

Description

A VLAN associated with an ILM label could not be found.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

VLAN inst %vlanInst% not found for ILM label %lbl%

Message Parameters

| Name | Type |
|----------|------|
| vlanInst | uInt |
| lbl | xInt |

HAL.MPLS.ILMPWNNotFnd

Description

A pseudowire associated with an ILM label could not be found.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Pseudo Wire not found for ILM label %lbl%

Message Parameters

| Name | Type |
|------|------|
| lbl | xInt |

HAL.MPLS.ILMNextHopInv

Description

An MPLS operation could not be completed due to an invalid nexthop type in an ILM label.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid nexthop type %nhType% in ILM label %lbl%

Message Parameters

| Name | Type |
|--------|------|
| nhType | uInt |
| lbl | xInt |

HAL.MPLS.ILMNHLFENotFnd

Description

An NHLFE associated with an ILM label could not be found.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

NHLFE %nhlfeInst% not found for ILM label %lbl%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | uInt |
| lbl | xInt |

HAL.MPLS.AllocILMFIBNextHopFail

Description

Memory allocation failed for an EXOS internal data structure, FIB next hop associated to the specified NHLFE.

Remedy

The system is low on memory resources. Reduce the configuration including the number of VLANs, ports assigned to VLANs, or MPLS labels.

Severity

Critical

Message Text

No memory for ILM label %lbl% NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| lbl | ulnt |
| nhlfeInst | xInt |

HAL.MPLS.ILMFIBNextHopInv

Description

An MPLS operation could not be completed due to an invalid nexthop type in an ILM label.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid FIB-nexthop type %nhType% for ILM

Message Parameters

| Name | Type |
|--------|------|
| nhType | ulnt |

HAL.MPLS.PWNHLFENotFnd

Description

An NHLFE associated with a pseudowire could not be found.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

NHLFE %nhlfeInst% not found for Pseudo Wire %pwInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | ulnt |
| pwInst | xInt |

HAL.MPLS.AllocPWFIBNextHopFail

Description

Memory allocation failed for an EXOS internal data structure for a FIB next hop associated to the specified NHLFE.

Remedy

The system is low on memory resources. Reduce the configuration including the number of VLANs, ports assigned to VLANs, MPLS labels and PW.

Severity

Critical

Message Text

No memory for Pseudo Wire %pwInst% NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| pwInst | xInt |
| nhlfeInst | uInt |

HAL.MPLS.PWVLANNotFnd

Description

A VLAN associated with a pseudowire could not be found.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

VLAN inst %vlanInst% not found for Pseudo Wire %pwInst%

Message Parameters

| Name | Type |
|----------|------|
| vlanInst | uInt |
| pwInst | xInt |

HAL.MPLS.AllocOutLbIIndxFail

Description

An Outgoing Label Table entry could not be allocated for a pseudowire. The pseudowire could not be created as a result.

Remedy

The system is low on resources. Reduce the configuration.

Severity

Critical

Message Text

No Outgoing Label Table entry available for Pseudo Wire %pwInst%

Message Parameters

| Name | Type |
|--------|------|
| pwInst | ulnt |

HAL.MPLS.AllocOutVCIndxFail

Description

An outgoing VC Table entry could not be allocated for a pseudowire. The pseudowire could not be created as a result.

Remedy

The system is low on resources. Reduce the configuration.

Severity

Critical

Message Text

No Outgoing VC Table entry available for Pseudo Wire %pwInst%

Message Parameters

| Name | Type |
|--------|------|
| pwInst | ulnt |

HAL.MPLS.PWDup

Description

The specified pseudowire could not be inserted into a tree. This occurs when the key for this object is already present in the tree.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Tree insertion failed for Pseudo Wire %pwInst%

Message Parameters

| Name | Type |
|--------|------|
| pwInst | xInt |

HAL.MPLS.PWOutLbIDup

Description

The specified pseudo wire's outgoing label index could not be inserted into a tree. This occurs when the key for this object is already present in the tree.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Tree insertion failed for Pseudo Wire %pwInst% OLI %oli%

Message Parameters

| Name | Type |
|--------|------|
| pwInst | xInt |
| oli | uInt |

HAL.MPLS.AllocPWFail

Description

[Memory allocation failed for an EXOS internal data structure for pseudowire.

Remedy

The system is low on memory resources. Reduce the configuration including the number of VLANs, ports assigned to VLANs, MPLS labels and PW.

Severity

Critical

Message Text

No memory for Pseudo Wire %pwInst%

Message Parameters

| Name | Type |
|--------|------|
| pwInst | xInt |

HAL.MPLS.IPv4NbrDup

Description

An IPv4 neighbor could not be inserted into a tree. This occurs when the key for this object is already present in the tree.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Tree insertion failed for IPv4 neighbor

HAL.MPLS.IPv6NbrDup

Description

An IPv6 neighbor could not be inserted into a tree. This occurs when the key for this object is already present in the tree.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Tree insertion failed for IPv6 neighbor

HAL.MPLS.NextHopAddrInv

Description

An operation could not be completed due to an invalid nexthop address type.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid nexthop addr type %addrType% in NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| addrType | ulnt |
| nhlfeInst | ulnt |

HAL.MPLS.NHLFEFIBNextHopInv

Description

An operation could not be completed due to an invalid NHLFE nexthop type.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid nexthop type %nhType% for NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhType | ulnt |
| nhlfeInst | ulnt |

HAL.MPLS.NHLFEDup

Description

The specified NHLFE could not be inserted into a tree. This occurs when the key for this object is already present in the tree.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Tree insertion failed for NHLFE%nhlfeInst%

Message Parameters

| Name | Type |
|----------|------|
| nhlfInst | ulnt |

HAL.MPLS.ILMDup

Description

The specified ILM label could not be inserted into a tree. This occurs when the key for this object is already present in the tree.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Tree insertion failed for ILM %ilmInst% label %lbl%

Message Parameters

| Name | Type |
|---------|------|
| ilmInst | ulnt |
| lbl | xInt |

HAL.MPLS.ReplILMToNHNotSuprt

Description

The specified ILM could not be updated with a given next hop because either the next hop is not specified in the CLI or the given nexthop type is unsupported.

Remedy

[This is a rare case and may happen due to memory corruption. Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

The type %nhType% of a new next hop is not supported for the specified ILM, label %lbl% because the new next hop does not allow swap.

Message Parameters

| Name | Type |
|--------|------|
| nhType | uInt |
| lbl | xInt |

HAL.MPLS.ReplILMFromNHNotSuprt

Description

The specified ILM could not be updated with a new next hop because the currently associated next hop type is unsupported.

Remedy

This is a rare case and may happen due to memory corruption. Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

The type %nhType% of the existing next hop is not supported for the specified ILM, label %lbl% because the new next hop does not allow swap.

Message Parameters

| Name | Type |
|--------|------|
| nhType | uInt |
| lbl | xInt |

HAL.MPLS.AllocL2EncapFail

Description

A table entry for the specified MPLS neighbor could not be created.

Remedy

The system is low on memory resources. Reduce the configuration.

Severity

Error

Message Text

No L2 Encapsulation Table entry for MPLS neighbor %mplsNbr%

Message Parameters

| Name | Type |
|---------|--------|
| mplsNbr | String |

HAL.MPLS.AllocOutLbfFail

Description

A table entry for the specified NHLFE could not be created.

Remedy

The system is low on memory resources. Reduce the configuration.

Severity

Error

Message Text

No Outgoing Label Table entry for NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | ulnt |

HAL.MPLS.AllocNHLFEFail

Description

The specified NHLFE could not be created.

Remedy

The system is low on memory resources. Reduce the configuration.

Severity

Error

Message Text

No memory for NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | ulnt |

HAL.MPLS.AllocILMFail

Description

The specified ILM label could not be created.

Remedy

The system is low on memory resources. Reduce the configuration.

Severity

Error

Message Text

No memory for ILM label %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|------|
| nhlfeInst | xInt |

HAL.MPLS.ILMExist

Description

An MPLS ILM add operation could not be completed because the ILM label already exists.

Remedy

Gather "show tech" output and contact technical support.

Severity

Error

Message Text

ILM %ilmInst% already exists with label %lbl% nexthop type %nhType% (new label %newLbl% with nexthop type %newNhType%)

Message Parameters

| Name | Type |
|-----------|--------|
| ilmInst | uInt |
| lbl | xInt |
| nhType | String |
| newLbl | xInt |
| newNhType | String |

HAL.MPLS.ClrTCAMStatsFail

Description

A TCAM hardware operation failed. The specified TCAM entry's statistics could not be cleared as a result.

Remedy

Try rebooting the associated I/O module. If the problem persists, run diags on the I/O module. If that passes, gather "show tech" output and contact technical support.

Severity

Error

Message Text

TCAM write entry %index% failed (card num %cardno%), ILM %ilmInst%

Message Parameters

| Name | Type |
|---------|------|
| index | xInt |
| cardno | xInt |
| ilmInst | uInt |

HAL.MPLS.RslvTCAMHndIFail

Description

A TCAM handle could not be resolved to an index. As a result, a subsequent TCAM operation could not be carried out.

Remedy

Try rebooting the associated I/O module. If the problem persists, run diags on the I/O module. If that passes, gather "show tech" output and contact technical support.

Severity

Error

Message Text

Failed to resolve TCAM handle %tcamHndl%

Message Parameters

| Name | Type |
|----------|------|
| tcamHndl | xInt |

HAL.MPLS.ILMParamInv

Description

An MPLS function was called with a NULL NHLFE parameter.

Remedy

Gather "show tech" output and contact technical support.

Severity

Error

Message Text

Invalid ILM in array (index %index% instance %ilmInst%)

Message Parameters

| Name | Type |
|---------|------|
| index | uInt |
| ilmInst | uInt |

HAL.MPLS.ILMNotFnd

Description

An ILM entry for the specified ILM could not be found.

Remedy

Gather "show tech" output and contact technical support.

Severity

Error

Message Text

ILM not found for ILM %ilmInst%

Message Parameters

| Name | Type |
|---------|------|
| ilmInst | xInt |

HAL.MPLS.AllocILMStatsMsgFail

Description

A message for ILM stats could not be allocated.

Remedy

The system is low on memory resources. Reduce the configuration.

Severity

Error

Message Text

Failed to allocate buffer size %bufSize%, ILM entries %ilmCount%

Message Parameters

| Name | Type |
|----------|------|
| bufSize | xInt |
| ilmCount | xInt |

HAL.MPLS.ILMTblEmpty

Description

An ILM retrieval operation exited early since there are no ILM entries in the table.

Remedy

No action is needed. This is an informational message only.

Severity

Info

Message Text

No ILM entries found, ILM count %ilmCount%

Message Parameters

| Name | Type |
|----------|------|
| ilmCount | ulnt |

HAL.MPLS.PWFIBNextHopInv

Description

A pseudowire NHLFE FIB nexthop is assigned an invalid FIB nexthop type.

Remedy

Gather "show tech" output and contact technical support.

Severity

Critical

Message Text

Invalid FIB-NextHop type %nhType%

Message Parameters

| Name | Type |
|--------|------|
| nhType | ulnt |

HAL.MPLS.AllocIPv4NextHopFail

Description

An IPv4 Next Hop entry could not be allocated for an NHLFE. The NHLFE will not function correctly as a result.

Remedy

The system is low on resources. Reduce the configuration.

Severity

Error

Message Text

No IPv4 Next Hop entry available for NHLFE %nhlfeInst%

Message Parameters

| Name | Type |
|-----------|--------|
| nhlfeInst | uInt32 |

HAL.Msg.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

HAL.Msg.Notice

Description

A normal but significant condition has been detected, which signals that the system is functioning as expected. The condition is somewhat uncommon, but it is not necessarily unusual or unexpected.

Remedy

There is no remedy because there is no problem to be resolved.

HAL.Msg.Info

Description

A normal but potentially interesting condition has been detected, which signals that the system is functioning as expected and simply provides potentially detailed information or confirmation in that regard. The circumstance is common and not unusual or unexpected in any way.

Remedy

There is no remedy because there is no problem to be resolved.

HAL.Msg.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

There is no remedy because there is no problem to be resolved.

HAL.NAT.AllocMemFail

Description

Memory for the displayed object could not be allocated. This may be due to the system running low on memory. This will result in incorrect programming of hardware tables and will impact network address translation.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim memory.

Severity

Error

Message Text

Memory allocation failed when trying to allocate a %obj% structure.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |

HAL.NAT.SetHwCfgFail

Description

The specified error was encountered while programming the hardware. This can result in incorrect programming of hardware tables and impact network address translation.

Remedy

This is an internal condition needing technical assistance. Contact technical support with the following information: NAT configuration, "show tech-support" and "show log" output.

Severity

Error

Message Text

Set %objDescr% for %obj% %objVal% on Slot %slot% failed (%errStr%).

Message Parameters

HAL.NetClock.ClockModHwMiss

Description

A feature such as SyncE or a command such as configure network-clock has requested a function that requires clock module hardware, but the clock module is not installed.

Remedy

Power down the switch to install a clock module. Reboot and retry the operation. You can replace an E4G-200 clock module without powering down the router; however, you must reboot the router to initialize the newly installed clock module.

Severity

Error

Message Text

Clock module hardware is missing. Needed to configure network-clock for features such as SyncE.

HAL.OAM.InitHwCFMFail

Description

This message is generated when an attempt to initialize hardware accelerated CFM fails on a particular slot. This can happen if the slot does not support the feature, if the connection to the kernel failed, or if some other failure prevented the kernel from handling the request.

Remedy

Verify that the system is properly configured and running the correct software load. This message is generated at a point that "should never happen", so if it does, other log messages should indicate other failures and this one is just a symptom of some

other failure. You can also verify the HAL OAM database with the command: debug hal show platform hwa-oam all

Severity

Error

Message Text

Failure attempting to initialize Hardware Accelerated CFM.

HAL.OAM.EnbHwCFMFail

Description

This message is generated when an attempt to enable hardware accelerated CFM fails on a particular slot. This can happen if the slot does not support the feature, if the connection to the kernel failed, or if some other failure prevented the kernel from handling the request.

Remedy

Verify that the system is properly configured and running the correct software load. This message is generated at a point that "should never happen", so if it does, other log messages should indicate other failures and this one is just a symptom of some other failure. You can also verify the HAL OAM database with the command: debug hal show platform hwa-oam all

Severity

Error

Message Text

Failure attempting to enable Hardware Accelerated CFM.

HAL.OAM.CreatHwMAFail

Description

This message is generated when an attempt to create a maintenance association (MA) in hardware fails because the MA database is full and no more MAs can be created.

Remedy

Delete unneeded maintenance associations to make room for the ones that are needed. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to create maintenance association in Hardware Accelerated CFM.

HAL.OAM.UpdtHwMAFail

Description

This message is generated when an attempt to update a maintenance association fails because no entry can be found in the database with the given MAID, level, and VLAN.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure updating the maintenance association because it cannot be found in the database.

HAL.OAM.DelHwMAFail

Description

This message is generated when an attempt to delete a maintenance association fails because no entry can be found in the database with the given MAID, level, and VLAN

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to delete a maintenance association from the HWAOAM database.

HAL.OAM.UpdtHwMDFail

Description

This message is generated when an attempt to update a maintenance domain fails because no entry can be found in the database with the level and VLAN.

Remedy

Verify the correct parameters are specified on the command line. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure updating the maintenance domain because it cannot be found in the database.

HAL.OAM.DelHwMDFail

Description

This message is generated when an attempt to delete a maintenance domain fails because no entry can be found in the database with the level and VLAN.

Remedy

Verify the correct parameters are specified on the command line. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure deleting the maintenance domain because it cannot be found in the database.

HAL.OAM.CreatHwMEPFail

Description

This message is generated when an attempt to create a maintenance endpoint (MEP) in hardware fails because either the appropriate MEP database (LMEP or RMEP) is full and no more MEPs can be created or the maintenance association for this MEP could be located in the maintenance association database.

Remedy

Delete unneeded maintenance endpoints to make room for the ones that are needed or verify the correct parameters for the MA and MEP are specified. These include the MAID (include the type used originally), level, VLAN id, MEP id, MEP type, and port number. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to create maintenance endpoint in Hardware Accelerated CFM:
 T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | ulnt |
| vlanid | ulnt |
| mepid | ulnt |
| portid | ulnt32 |

HAL.OAM.UpdtHwMEPFail

Description

This message is generated when an attempt to update a maintenance domain fails because no entry can be found in the database with the given MAID, level, VLAN id, MEP id, and port.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to update maintenance endpoint in Hardware Accelerated CFM:
 T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | uint |
| vlanid | uint |
| mepid | uint |
| portid | uint32 |

HAL.OAM.DelHwMEPFail

Description

This message is generated when an attempt to delete a maintenance domain fails because no entry can be found in the database with the given MAID, level, VLAN id, MEP id, and port.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to delete maintenance endpoint in Hardware Accelerated CFM:
T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | ulnt |
| vlanid | ulnt |
| mepid | ulnt |
| portid | ulnt32 |

HAL.OAM.SuspHwMEPFail

Description

This message is generated when an attempt to suspend a maintenance endpoint fails because no entry can be found in the database with the given MAID, level, VLAN id, MEP id, and port.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to suspend maintenance endpoint in Hardware Accelerated CFM:
T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | ulnt |
| vlanid | ulnt |
| mepid | ulnt |
| portid | ulnt32 |

HAL.OAM.ResumeHwMEPFail

Description

This message is generated when an attempt to resume a suspended a maintenance endpoint fails because no entry can be found in the database with the given MAID, level, VLAN id, MEP id, and port.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: debug hal show platform hwa-oam all

Severity

Error

Message Text

Failure attempting to resume a suspended maintenance endpoint in Hardware Accelerated CFM: T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | ulnt |
| vlanid | ulnt |

| Name | Type |
|--------|--------|
| mepid | ulnt |
| portid | ulnt32 |

HAL.OAM.RegClientFail

Description

This error occurs when a client application attempt to register as an event client with HWAQAM fails for any reason.

Remedy

This message only results from an unexpected error condition (i.e. it shouldn't happen). To help the developers solve the problem the user should provide the HAL.OAM EMS log messages and the output from the following command `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Internal failure attempting to register peer client to HWAQAM, id=%peerid%.

Message Parameters

| Name | Type |
|--------|------|
| peerid | ulnt |

HAL.OAM.QueryHwMAFaultsFail

Description

This message is generated when an attempt to query the fault indicators for a maintenance association fails because a matching entry cannot be found in the databsae.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to query maintenance association faults in Hardware Accelerated CFM: L=%level% V=%vlanid%

Message Parameters

| Name | Type |
|--------|------|
| level | ulnt |
| vlanid | ulnt |

HAL.OAM.ClearHwMAFaultsFail

Description

This message is generated when an attempt to clear the fault indicators for a maintenance association fails because a matching entry cannot be found in the database.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: debug hal show platform hwa-oam all

Severity

Error

Message Text

Failure attempting to clear maintenance association faults in Hardware Accelerated CFM: L=%level% V=%vlanid%

Message Parameters

| Name | Type |
|--------|------|
| level | ulnt |
| vlanid | ulnt |

HAL.OAM.QueryMEPFaultsFail

Description

This message is generated when an attempt to query a maintenance endpoint fault indicators fails because no entry can be found in the database with the given MAID, level, VLAN id, MEP id, and port.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to query the maintenance endpoint faults in Hardware Accelerated CFM: T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | ulnt |
| vlanid | ulnt |
| mepid | ulnt |
| portid | ulnt32 |

HAL.OAM.ClearMEPFaultsFail

Description

This message is generated when an attempt to clear the maintenance endpoint fault indicators fails because no entry can be found in the database with the given MAID, level, VLAN id, MEP id, and port.

Remedy

Verify the correct parameters are specified on the command line. Note the MAID must match on the type originally used. You can also verify the HAL OAM database with the command: `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to clear the maintenance endpoint faults in Hardware Accelerated CFM: T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

| Name | Type |
|--------|--------|
| type | String |
| level | uInt |
| vlanid | uInt |
| mepid | uInt |
| portid | uInt32 |

HAL.OAM.CmmtHwMAFail

Description

This message is generated when an attempt to commit a maintenance association creation, update, or deletion in hardware fails for any reason.

Remedy

This message only results from an unexpected error condition (i.e. it shouldn't happen). To help the developers solve the problem the user should provide the HAL.OAM EMS log messages and the output from the following command `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to commit maintenance association creation changes in Hardware Accelerated CFM: L=%level% V=%vlanid%

Message Parameters

| Name | Type |
|--------|------|
| level | ulnt |
| vlanid | ulnt |

HAL.OAM.CmmtHwMEPFail

Description

This message is generated when an attempt to commit a maintenance endpoint creation, update, or deletion in hardware fails for any reason.

Remedy

This message only results from an unexpected error condition (i.e. it shouldn't happen). To help the developers solve the problem the user should provide the HAL.OAM EMS log messages and the output from the following command `debug hal show platform hwa-oam all`

Severity

Error

Message Text

Failure attempting to commit the maintenance endpoint changes in Hardware Accelerated CFM: T=%type% L=%level% V=%vlanid% I=%mepid% P=%portid%

Message Parameters

HAL.Optics.ReadFileDupName

Description

When reading yaml table and adding to internal database, an existing entry with identical name has been detected.

Remedy

Most likely caused by duplicate entry name in the trans.yaml table. Extract copy of the trans.yaml file from the device that reported this error.

Severity

Warning

Message Text

Multiple entries for %name% exist in the trans.yaml file

Message Parameters

| Name | Type |
|------|--------|
| name | String |

HAL.Optics.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason of some underlying system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%logMsg%

Message Parameters

| Name | Type |
|--------|--------|
| logMsg | Printf |

HAL.Optics.ReadFileDupDesc

Description

When reading yaml table and adding to internal database, an entry with different name but identical part number and vendor id has been detected.

Remedy

Most likely caused by two or more entries in trans.yaml file with the same part number and vendor id. Extract copy of the trans.yaml file from the device that reported this error.

Severity

Warning

Message Text

An entry with part number %partNumber% vendor %vendor% already exists for %name% in trans.yaml file

Message Parameters

| Name | Type |
|------------|--------|
| partNumber | String |
| vendor | String |
| name | String |

HAL.Optics.DelEntFail

Description

An entry from optics database was attempted to be deleted but was not found.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: - Output of "debug hal show optic-info eeprom" cli command - Output of "show port transceiver information detail" cli command - Output of "show tech" cli command - Copy of the trans.yaml file from the device. This problem may be resolved by a reboot.

Severity

Error

Message Text

Entry with part number %partNumber% vendor %vendor% for %name% was attempted to be removed but was not found

Message Parameters

| Name | Type |
|------------|--------|
| partNumber | String |
| vendor | String |
| name | String |

HAL.Optics.CreatThreadFail

Description

Creation of the optics thread failed. Most probable cause is an out of memory condition.

Remedy

Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by deleting some configurations, followed by a reboot.

Severity

Error

Message Text

Failed to start Optics XMOD

HAL.Optics.CreatWatchLibFail

Description

Creation of a Library Watch Group failed. Most probable cause is an out of memory condition.

Remedy

Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by deleting some configurations, followed by a reboot.

Severity

Error

Message Text

Failed to create resource %resource% used for monitoring device status

Message Parameters

| Name | Type |
|----------|--------|
| resource | String |

HAL.Optics.StrtWatchLibFail

Description

Start of a Library Watch Group failed.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Failed to start resource %resource% used for monitoring device status

Message Parameters

| Name | Type |
|----------|--------|
| resource | String |

HAL.Optics.RecvWatchLibUnkStatus

Description

A Library Watch Group received an unknown status.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Resource %resource% used for monitoring device status received unknown status %status%

Message Parameters

| Name | Type |
|----------|--------|
| resource | String |
| status | ulnt |

HAL.Optics.RecvUnkMsg

Description

An unknown message from the Device Manager or Configuration Manager was received.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

An unknown message %msgId% was received from %sender%

Message Parameters

| Name | Type |
|--------|--------|
| msgId | ulnt |
| sender | String |

HAL.Optics.LoadFileFail

Description

Failure to load trans.yaml file is likely caused by no trans.yaml file being present, or no trans.yaml file presence in the manifest.yaml file.

Remedy

Verify the manifest.yaml and trans.yaml file exist, and if they do, extract them.

Severity

Error

Message Text

The trans.yaml config file failed to be loaded

HAL.Optics.CreatTimerFail

Description

Unable to crate timer to re-register with Directory Service.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

A timer required for the Optics XMOD to function correctly failed to be created

HAL.Optics.InitIPMLCIntFail

Description

call to ipmlInitServerClient failed.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Creation of a client required for reception of messages for Optics XMOD failed.

HAL.Optics.AddDsptchSrvrFail

Description

Call to dispatchAddServer failed.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Registration for receipt of messages required for Optics XMOD to function correctly failed.

HAL.Optics.RecvMsgUnkIPML

Description

An unknown IPML message was received.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Unknown interprocess message %msgId% was received

Message Parameters

| Name | Type |
|-------|------|
| msgId | ulnt |

HAL.Optics.RecvIPMLPeerCtrlMsgUnk

Description

An unknown message to IPML Peer Control was received.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Unknown interprocess peer control message %msgId% was received

Message Parameters

| Name | Type |
|-------|------|
| msgId | ulnt |

HAL.Optics.SendIPMLPktTooBig

Description

A message that was too big attempted to be sent via IPML.

Remedy

This is a rare internal condition. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

Attempting to send message %cmd% of size %size% was to big for that message.

Message Parameters

| Name | Type |
|------|------|
| cmd | ulnt |
| size | ulnt |

HAL.Optics.AllocIPMLPktFail

Description

An IPML packet allocation has failed. Most probable cause is an out of memory condition.

Remedy

Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by deleting some configurations, followed by a reboot.

Severity

Error

Message Text

When sending an interprocess message an, attempt to allocate memory to the message failed

HAL.Optics.SendIPMLFail

Description

IPML has failed to send a message.

Remedy

This is rare condition needing technical assistance. Contact technical support with the following information: - Output of "show tech" cli command The problem may be resolved by a reboot.

Severity

Error

Message Text

An attempt to send interprocess message %msgId% has failed.

Message Parameters

| Name | Type |

HAL.PBB.DebugData

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Data

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.PBB.ParmNull

Description

An internal function was called with a NULL pointer. This condition is not expected and the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

Provide Extreme the configuration, number of MACs and host IPs, and the "show log" output. Also, check the scalability limit and compare this with the current configurations.

Severity

Debug-Verbose

Message Text

Function %func% was called with a Null pointer %arg%

Message Parameters

| Name | Type |
|------|--------|
| func | String |
| arg | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.SendAsyncMsgFail

Description

A conduit message could not be sent to one or more I/O Modules asynchronously. An PBB operation could not be completed as a result. The system may be low on resources or busy.

Remedy

Undo and redo the configuration after the current activities complete including IOB reboot or the backup MM reboot. If the problem persists, contact Extreme customer support with the output of "show tech".

Severity

Debug-Summary

Message Text

Asynchronous message send to %slot% failed for action %action% due to error %ret%

Message Parameters

| Name | Type |
|--------|--------|
| slot | uInt32 |
| action | String |
| ret | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AllocMemFail

Description

Memory for the displayed object could not be allocated. This may be due to the system running low on memory. This will result in incorrect programming of hardware tables and will impact forwarding of PBB conformant traffic.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim memory.

Severity

Critical

Message Text

Memory allocation failed when trying to allocate a %obj% structure.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AllocCndtMsgFail

Description

The specified type of the message could not be allocated because the message pool is empty.

Remedy

Undo and redo the configuration after the current activities complete including IOB reboot which consumes a large number of conduit messages.

Severity

Debug-Summary

Message Text

Failed to allocate event buffer for message %info%.

Message Parameters

| Name | Type |
|------|--------|
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AllocCkptMsgFail

Description

The checkpointing message for I-SID could not be allocated because the system is low on memory. This will result in the I-SID database on the standby MM not being in sync with that on the active MM. This condition will not impact PBB operation until after a failover of the currently active MM.

Remedy

Check the scalability limit and compare this with the current configurations.

Severity

Error

Message Text

Failed to allocate checkpoint message of %size% bytes for %action%

Message Parameters

| Name | Type |
|--------|--------|
| size | uint32 |
| action | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.ProcCkptMsgFail

Description

The checkpointing message for I-SID cannot be processed in the active or the standby MM. This will result in the I-SID database on the standby MM not being in sync with that on the active MM. This condition will not impact PBB operation until after a failover of the currently active MM.

Remedy

Check if check-pointing is enabled. Also, undo and redo the configuration when both MMs are in sync.

Severity

Debug-Summary

Message Text

Failed to %action% for PSI of %psiName% with error %ret%

Message Parameters

| Name | Type |
|---------|--------|
| action | String |
| psiName | String |
| ret | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.CkptTrace

Description

This message is for debugging problems related to active-standby MM Module checkpointing for I-SID. This does not indicate a problem.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems that may involve active-standby MM checkpointing

Severity

Debug-Verbose

Message Text

%oper% with action %action% with a %num% entries of %obj% in the message.

Message Parameters

| Name | Type |
|--------|--------|
| oper | String |
| action | String |
| num | uInt32 |
| obj | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.ParmInv

Description

The given parameter has an invalid value in the given context. "show log" may give more data to debug why the parameter has the invalid value.

Remedy

This message aids debugging and thus there is no remedy to remove only this condition.

Severity

Debug-Summary

Message Text

Variable %arg% has an invalid value %val% in %info%

Message Parameters

| Name | Type |
|------|--------|
| arg | String |
| val | ulnt32 |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.SendCndtMsgFail

Description

MM failed to send a conduit message to IOB. This may affect the PBB configuration because the IOB is not in sync with MM.

Remedy

Check if all the IOBs in the slot are operational. Undo and redo the configuration to push the configuration to the operational IOBs.

Severity

Debug-Summary

Message Text

Fail to send conduit message to %mesgType% to %slot% in %info%

Message Parameters

| Name | Type |
|----------|--------|
| mesgType | String |
| slot | Slot |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.Exit

Description

This message shows the code path to help debugging. This message does not indicate any problems.

Remedy

There is no remedy as this message is added for debugging.

Severity

Debug-Data

Message Text

Complete %action% for %obj% in %info%.

Message Parameters

| Name | Type |
|--------|--------|
| action | String |
| obj | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.APIFail

Description

The message shows the API function of the given module that returns an error. The message only provides the information for the debugging of the problem in configuration.

Remedy

There is no remedy as this message is being displayed for debugging. This log message is intended to help debug problems that may VLAN library or PSI library.

Severity

Debug-Data

Message Text

Failed to %action% in %module% API for %obj% in %info%.

Message Parameters

| Name | Type |
|--------|--------|
| action | String |
| module | String |
| obj | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AddSVLANPSIFail

Description

The message indicates the failure in adding a Customer VLAN to the flooding group of the VLAN or the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-added or re-deleted to/from the flooding group of I-SID or VLAN.

Severity

Debug-Summary

Message Text

Failed to add CNP ports in I-SID %isidName% to VLAN %vlanName% when %info%.

Message Parameters

| Name | Type |
|----------|--------|
| isidName | String |
| vlanName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.RemSVLANPSIFail

Description

The message indicates the failure in adding a Customer VLAN to the flooding group of the VLAN or the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-added or re-deleted to/from the flooding group of I-SID or VLAN.

Severity

Debug-Summary

Message Text

Failed to remove CNP ports from VLAN %vlanName% for I-SID %isidName% when %info%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |
| isidName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AddSVLANToISIDPSIFail

Description

The message indicates the failure in adding a Customer VLAN to the flooding group of the VLAN or the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-added or re-deleted to/from the flooding group of I-SID or VLAN.

Severity

Debug-Summary

Message Text

Failed to add CNP ports of VLAN %vlanName% to the PSI of I-SID %isidName% when %info%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |
| isidName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AddBVLANToISIDPSIFail

Description

The message indicates the failure in adding a Provider VLAN to the flooding group of the VLAN or the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-added to the flooding group of I-SID or VLAN.

Severity

Debug-Summary

Message Text

Failed to add PNP ports of VLAN %vlanName% to the PSI of I-SID %isidName% when %info%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |
| isidName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.RemSVLANFromISIDPSIFail

Description

The message indicates the failure in removing a Customer VLAN from the flooding group of the VLAN or the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-deleted from the flooding group of I-SID or VLAN.

Severity

Debug-Summary

Message Text

Failed to remove CNP ports in VLAN %vlanName% from PSI of I-SID %isidName% when %info%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |
| isidName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.RemBVLANFromISIDPSIFail

Description

The message indicates the failure in removing a Provider VLAN from the flooding group of the VLAN or the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-deleted from the flooding group of I-SID or VLAN.

Severity

Debug-Summary

Message Text

Failed to remove PNP ports in VLAN %vlanName% from PSI of I-SID %isidName% when %info%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanName | String |
| isidName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.UpdtPSIFail

Description

The message indicates the failure in programming the IOB as a VLAN is added or removed to/from the I-SID. Lower the severity to narrow the cause of failures. The cause could be in the status change of IOB, the PSI library or the low on memory in the system.

Remedy

Retry the configuration so that the IOB can get the new Flood group index.

Severity

Debug-Summary

Message Text

Failed to update the PSI of VLAN, %vlanName% to the PSI of %ownerName% when %info%.

Message Parameters

| Name | Type |
|-----------|--------|
| vlanName | String |
| ownerName | String |
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.UpdtPortEncTblFail

Description

The message indicates the failure in creating or removing an entry in the PortEncoding table in IOB. Lower the severity to narrow the cause of failures. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system.

Remedy

Retry the configuration so that the entry is re-created or removed in the PortEncoding table in X11 associated to the given slot and port.

Severity

Debug-Data

Message Text

Failed to update portEncoding table for port %slot%:%port% in %vlanName% associated to %isidName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |
| isidName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AddCNPToPSIFail

Description

The message indicates the failure in adding a Customer Network port to the flood group of I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-added to the flood group of I-SID.

Severity

Debug-Summary

Message Text

Failed to add a port %slot%:%port% in VLAN %vlanName% to I-SID %isidName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |
| isidName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.AddPNPToPSIFail

Description

The message indicates the failure in adding a Provider Networ port to the flood group of I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-added to/from the flood group of the I-SID.

Severity

Debug-Summary

Message Text

Failed to add a port %slot%:%port% in VLAN %vlanName% associated to I-SID %isidName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |
| isidName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.RemCNPFromPSIFail

Description

The message indicates the failure in removing a Customer Network port from the flood group of I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system.

Remedy

Retry the configuration so that the ports are deleted from the flood group of the I-SID.

Severity

Debug-Summary

Message Text

Failed to add a port %slot%:%port% in VLAN %vlanName% associated to I-SID %isidName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |
| isidName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.RemPNPFromPSIFail

Description

The message indicates the failure in removing a Provider Networ port from the flood group of I-SID. Lower the severity to narrow the cause of failures. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system.

Remedy

Retry the configuration so that the ports are re-deleted from flood group of the I-SID.

Severity

Debug-Summary

Message Text

Failed to add a port %slot%:%port% in VLAN %vlanName% associated to I-SID %isidName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |
| isidName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.OpenCndtFail

Description

This message indicates that the conduit library fails to process the request from the PBB management module to create a conduit pipe and to register the message types.

Remedy

MM needs to be rebooted because the HAL process cannot be restarted. Before rebooting the system, decrease the log severity of the conduit module to gather more information when the error persists.

Severity

Error

Message Text

Failed to open a conduit pipe due to %ret%.

Message Parameters

| Name | Type |
|------|--------|
| ret | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.EnbIFail

Description

This message indicates that the PBB functions are not enabled on the ports added to the given VLAN. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system.

Remedy

Retry the configuration so that the ports are added to the I-SID flood group and the IOB is programmed correctly.

Severity

Error

Message Text

Failed to enable 802.1ah functionalities on the port %slot%:%port% in VLAN %vlanName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.DsbIFail

Description

This message indicates that the PBB functions are not disabled on the ports removed from the given VLAN. The cause could be in the PSI library, the conduit pipe to the given slot, or the low on memory in the system. The side effect is that the port behaves as if it is still associated to the I-SID.

Remedy

Retry the configuration so that the ports are added to the I-SID flood group and the IOB is programmed correctly.

Severity

Error

Message Text

Failed to disable 802.1ah functionalities on the port %slot%:%port% in VLAN %vlanName%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.SyncI SIDPSIFail

Description

This message indicates that the MM fails to send down all the I-SID configuration to IOB in the given slot.

Remedy

Examine the output of "show log" to see if dot1ah or conduit module raised any errors. If no errors are found, reboot the IOB in the given slot. Before rebooting the IOB, decrease the log severity of the Dot1ah and Conduit module to gather more information when the error persists.

Severity

Error

Message Text

Failed to synchronize the PSIs of I-SIDs to IO-`%slot%` for 802.1ah.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.MaxTunIRch

Description

Create of PBB Tunnel failed as the number of PBB tunnels has reached the maximum supported limit. Please refer to EXOS documentation on supported limits on PBB tunnels for this release. Due to this limit being reached, learning of inner MAC entries for traffic that is received on the displayed BVLAN instance, encapsulated by the 802.1ah BEB whose MAC address is displayed will be impacted. Learning of new inner MACs encapsulated by other BEBs is unaffected.

Remedy

Clearing FDB on 802.1ah B-VLANs using `clear fdb <bvlan_name>`; may free up of unused PBB tunnels. If the problem persists, contact Extreme customer support.

Severity

Warning

Message Text

%info% Create Failed - Number of PBB tunnels exceeds supported limit

Message Parameters

| Name | Type |
|------|--------|
| info | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.PBB.MaxBMACRch

Description

Create of PBB Tunnel failed as the number of Backbone Edge Bridge (BEB) BMACs has reached the maximum supported limit. Please refer to EXOS documentation on supported limits on PBB tunnels for this release. Due to this limit being reached, learning of inner MAC entries for traffic that is encapsulated by the 802.1ah BEB whose MAC address is displayed will be impacted. Learning of new inner MACs encapsulated by other BEBs is unaffected.

Remedy

Clearing FDB on 802.1ah B-VLANs using `clear fdb <bvlan_name>`; may free up of unused BEB BMACs. If the problem persists, contact Extreme customer support.

HAL.PBB.AllocTunlMsgFail

Description

The specified PBB Tunnel message could not be constructed and sent to one or more I/O Modules due to event buffer allocation failure. This will result in incorrect programming of hardware tables and will impact forwarding of IEEE 802.1ah conformant traffic.

Remedy

The system is low on memory resources. The configuration should be reduced in scale or complexity in order for the system to continue operating correctly.

Severity

Critical

Message Text

Failed to allocate event buffer for message %info%

Message Parameters

HAL.PBB.AllocTunlCkptMsgFail

Description

The specified PBB Tunnel checkpointing message could not be constructed and sent to the standby MM due to event buffer allocation failure. This will result in the PBB Tunnel database on the standby MM not being in sync with that on the active MM. This condition will not impact PBB operation until after a failover of the currently active MM.

Remedy

The system is low on memory resources. The configuration should be reduced in scale or complexity in order for the system to continue operating correctly. Once the configuration is scaled down and memory has been reclaimed, reboot of the standby MM will fix the problem

Severity

Error

Message Text

Failed to allocate checkpoint message with %entries% entries for %action%

Message Parameters

HAL.Phy.FuncFail

Description

A function call to a hardware PHY device failed. This problem is usually due to a failure of accessing a hardware register. The hardware may be in a bad state. The error message gives the detail of the failure.

Remedy

The problem usually can be resolved by retrying the operation or power-cycling the switch or the card in the slot.

Severity

Error

Message Text

The call to %funcName% failed for phyId %phyId% retVal %rv%

Message Parameters

| Name | Type |
|----------|--------|
| funcName | String |
| phyId | uint |
| rv | sInt |

HAL.Phy.MACsecFuncFail

Description

A function call to a hardware PHY device failed. This problem is usually due to a failure of accessing a hardware register. The hardware may be in a bad state. The error message gives the detail of the failure.

Remedy

The problem usually can be resolved by retrying the operation or power-cycling the switch or the card in the slot.

Severity

Error

Message Text

The call to %funcName% for the %macsecSide% side of MACsec Phy Id %phyId% failed with the return value of %rv%

Message Parameters

| Name | Type |
|------------|--------|
| funcName | String |
| macsecSide | String |
| phyId | ulnt |
| rv | slnt |

HAL.Phy.AllocMemFail

Description

Allocating memory for an internal data structure for communication to the PHY failed. This usually happens when the system is running out of memory.

Remedy

Run "show memory" command to further debug this problem. The problem may be resolved by deleting some configurations, retrying the operation or reboot.

Severity

Error

Message Text

Failure to allocate memory for object %object% for phyId %phyId%

Message Parameters

| Name | Type |
|--------|--------|
| object | String |
| phyId | ulnt |

HAL.Phy.PhyInfoNotFound

Description

This condition signifies that an operation was directed to be performed on a PHY device and the information to talk to that device was not found. This typically means that the PHY had not registered with the driver at the time of the call.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Unable to find PHY info for phyId %phyId%

HAL.PoE.GetResetStatusFail

Description

Querying FPGA/CPLD for the current reset status of PoE failed.

Remedy

Hardware may not be responding or in a bad state. Power-cycling the switch may resolve the issue.

Severity

Error

Message Text

Failed to get PoE reset status.

HAL.PoE.HwRmnInReset

Description

PoE hardware did not take PoE out of reset at boot time for fast PoE, perpetual PoE or both.

Remedy

This is a rare error condition. Power cycling the switch may resolve the issue.

Severity

Error

Message Text

PoE hardware is not out of reset for %name% PoE at boot time.

Message Parameters

| Name | Type |
|------|--------|
| name | Printf |

HAL.PoE.AllocFastCfgMemFail

Description

Allocating memory for saving fast PoE configurations failed at HAL initialization time.

Remedy

Switch is running out system memory at boot time. Reducing the configurations in the configuration file may resolve the issue.

Severity

Error

Message Text

Failed to allocate memory for fast PoE configurations.

HAL.PoE.GetPwrMgmtCfgFail

Description

Querying power management configurations from PoE hardware at boot time failed. PoE will be reset by software.

Remedy

The hardware is not up and running properly. Software will reset PoE hardware, which may resolve the issue.

Severity

Error

Message Text

Failed to get PoE power management config, PoE may not be up yet.

HAL.PoE.GetHwFastCfgFail

Description

Querying running configurations from PoE hardware for fast PoE at boot time failed. PoE will be reset by software. PoE will be reset by software.

Remedy

The hardware is not up and running properly. Software will reset PoE hardware, which may resolve the issue.

Severity

Error

Message Text

Failed to query hardware for fast PoE configurations.

HAL.PoE.HwFastCfgMiss

Description

The well-known info object, FAST_POE_ENABLE_INFO_OBJ, indicates fast PoE is enabled. But the PoE hardware is not running with configurations saved for fast PoE at boot time.

Remedy

This error indicates fast PoE is in an inconsistent state, which may be caused by a failure of saving fast PoE configurations to hardware in the last boot. CLI command, "save configuration", will resolve the issue.

Severity

Warning

Message Text

Warning Fast PoE is enabled but configurations are not found in hardware. Saving configuration will resolve this inconsistency.

HAL.PoE.HwFastEnblMismatch

Description

The fast PoE enable state found in the well-known info object, FAST_POE_ENABLE_INFO_OBJ, at boot time does not match the configuration file.

Remedy

This error usually occurs when user selects a different configuration file, e.g. "use configuration xyz", in the last reboot. This also could happen in the next boot when perpetual PoE is enabled and user changed fast PoE enable state and rebooted the switch without saving the configuration. The new configuration file has a different fast PoE enable setting from the one saved to the hardware. CLI command, "save configuration", will resolve the issue.

Severity

Warning

Message Text

Fast PoE is %enableState% in hardware but not in configuration file. Saving configuration will resolve this inconsistency.

Message Parameters

| Name | Type |
|-------------|--------|
| enableState | Printf |

HAL.PoE.HwFastCfgMismatch

Description

The PoE running configurations queried from hardware at boot time do not match the configurations loaded from the configuration

Remedy

This error usually occurs when user selects a different configuration file, e.g. "use configuration xyz", in the last reboot. This also could happen in the next boot when perpetual PoE is enabled and user changed fast PoE enable state and rebooted the switch without saving the configuration. The new configuration file has a different fast PoE enable setting from the one saved to the hardware. CLI command, "save configuration", will resolve the issue.

Severity

Warning

Message Text

Fast PoE configurations found in hardware at boot time do not match configuration file. Saving configuration will resolve this inconsistency.

HAL.PoE.PurgOldHwFastCfg

Description

The well-known info object, FAST_POE_ENABLE_INFO_OBJ, indicates fast PoE is disabled. The switch also has perpetual PoE disabled. But the configurations queried from PoE hardware at boot time are not defaults, which indicates fast PoE configurations are still saved in hardware and used at boot time.

Remedy

This is a rare error. It may be caused by the failure of clearing fast PoE configuration from hardware in the last boot or the switch's NVRAM is cleared. When this inconsistent state is detected, the software resolves it by clearing the fast PoE configurations from hardware.

Severity

Warning

Message Text

Fast PoE is disabled in hardware but configurations are still found in hardware - clearing them now.

HAL.PoE.SkipHwInitAlrdyOper

Description

HAL PoE skips hardware initialization when fast PoE or perpetual boot successfully.

Remedy

No action required - Informational message only.

Severity

Info

Message Text

PoE already operational, skip hardware initialization.

HAL.PoE.GetHwFastEnblFail

| slotPort | SlotPort |

HAL.Port.OpticNotCompatPlatType

Description

An optic module of a particular type which is not compatible with the types of ports on this platform has been inserted into a port. The optic module can not and will not work in the specified port.

Remedy

Remove the incompatible optic from the port and replace it with one that is supported in that port.

Severity

Warning

Message Text

The %optic% optic module is not compatible with the %portType% ports on this platform - please remove it from port %slotPort%.

Message Parameters

| Name | Type |
|----------|----------|
| optic | String |
| slotPort | SlotPort |
| portType | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.OpticNotCompatPort

Description

An optic module of a particular type has been inserted into a port on this platform with which it is not compatible. The optic module can not and will not work in the specified port.

Remedy

Remove the incompatible optic from the port and replace it with one that is supported in that port.

Severity

Warning

Message Text

The %optic% optic module is not compatible with this port on this platform - please remove it from port %slotPort%.

Message Parameters

| Name | Type |
|----------|----------|
| optic | String |
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.OpticNotCompatPortType

Description

An optic module of a particular type has been inserted into a port of a type with which it is not compatible. The optic module can not and will not work in the specific port.

Remedy

Remove the incompatible optic from the port and replace it with one that is supported in that port.

Severity

Warning

Message Text

The %optic% optic module is not compatible with %portType% ports - please remove it from port %slotPort%.

Message Parameters

| Name | Type |

| optic | String |
| slotPort | SlotPort |
| portType | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.OpticCfgCflct

Description

An optic module of a particular type has been inserted into a port which is not configured correctly for it.

Remedy

Change the configuration of the port to be correct for the optic module, or remove the optic module from the port and replace it with one for which the port is correctly configured.

Severity

Warning

Message Text

The configuration for the %optic% optic module is not correct - please configure port %slotPort% for auto-negotiation %autoNeg% and speed %speed%

Message Parameters

| Name | Type |
|----------|----------|
| optic | String |
| slotPort | SlotPort |
| autoNeg | String |
| speed | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.OpticCfgSpeedCflct

Description

An optic module of a particular type has been inserted into a port which is not configured for a speed configured that is consistent with it.

Remedy

Reconfigure the port for a speed that is consistent with the optic module that is inserted.

Severity

Warning

Message Text

The configured speed of %speed% conflicts with the %optic% optic module - please correct the configuration for port %slotPort%

Message Parameters

| Name | Type |
|----------|----------|
| optic | String |
| slotPort | SlotPort |
| speed | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.CfgOpticFail

Description

The configuration of the hardware for particular optic module failed on the specified port.

Remedy

This could indicate a hardware problem related with the optic module or with the port itself.

Severity

Warning

Message Text

Configuration for the %optic% optic module in port %slotPort% failed (code %errCode%)

Message Parameters

| Name | Type |
|----------|----------|
| optic | String |
| slotPort | SlotPort |
| errCode | sInt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.CfgOpticAutoNegFail

Description

Setting the auto-negotiation mode in the hardware for the particular optic module failed on the specified port.

Remedy

This could indicate a hardware problem related with the optic module or with the port itself.

Severity

Error

Message Text

Configuring auto-negotiation %autoNeg% for the %optic% optic module in port %slotPort% failed (code %errCode%).

Message Parameters

| slotPort | SlotPort |
| errMsg | String |

HAL.Port.AddTrunkFail

Description

Failed to create trunk instance in the hardware due to a mismatch in the software data-structure.

Remedy

It is an inconsistent state. To add the new trunk, the system needs to be rebooted.

Severity

Warning

Message Text

Failed to create the trunk %slot%:%port% in Hardware

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

HAL.Port.CfgTrunkInstFail

Description

When a trunk is configured,,a Trunk Instance information is created in the hardware. This information is not passed to the I/O slot (software data-structure) in this case.

Remedy

Disable and re-enable sharing for the given slot,port.

Severity

Warning

Message Text

Failed to configure the Trunk Instance information to the I/O slots for the trunk
%slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

HAL.Port.CfgTrunkStateFail

Description

When ports comes up or go down the Trunk table has to be programmed with the current set of operational members. This error indicates that there is an error in writing the active port information to the I/O Slot.

Remedy

Disable and re-enable sharing for the given slot,port.

Severity

Warning

Message Text

Failed to configure the active trunk members to the I/O slots for the trunk
%slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

HAL.Port.CkptTrunkStateFail

Description

When there are operational changes in a trunk (member port goes down or comes up) the status is check-pointed to the backup MM from the master MM. This error indicates an error in such an updation.

Remedy

Disable and re-enable sharing for the given slot,port.

Severity

Warning

Message Text

Failed to Checkpoint the status information to the backup for the trunk %slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

HAL.Port.CkptTrunkDelFail

Description

When the sharing is disabled the master MSM indicates to the backup MSM that the trunk index is no longer in use. This error indicates that the check-point information has failed.

Remedy

reboot the backup MSM

Severity

Error

Message Text

Failed to Checkpoint the trunk delete information to the backup for the trunk

HAL.Port.PFCUnsuprt

Description

A Priority Flow Control configuration was applied on a port that does not support it. The 8900-10G24X-c and X650 systems have newer models that do support PFC but the configuration was applied to an older model without the support.

Remedy

This problem exists if the port is on an older version of the 8900-10G24X-c or Summit X650 that doesn't support PFC. The user needs to change to an I/O module or system that supports PFC. 8900-10G24X-c model 41632B, X650 models 17001B and 17002B, and the VIM-10G8X model 17012B support PFC.

Severity

Warning

Message Text

%slotport% is on an older model of the 8900-10G24X-c or X650 and does not support Priority Flow Control. 8900-10G24X-c 41632B, X650 17001B and 17002B, and VIM-10G8X 17012B are new models that support PFC.

Message Parameters

| Name | Type |
|----------|----------|
| slotport | SlotPort |

HAL.Port.PFCSubOptim

Description

A PFC configuration was applied to a chassis that contains MSMs that do not support fabric flow control. If ingress and egress ports are on different I/O modules, PFC may not work as expected.

Remedy

The customer can continue with the configuration, which may work in his environment. However, if fabric flow control is needed, the older MSMs will need to be replaced with newer MSMs that support the fabric configuration.

Severity

Warning

Message Text

Priority Flow Control is enabled but system behavior will not be optimal since older MSMs are present that cannot be programmed for fabric flow control.

HAL.Port.CfgDWDMOpticChanFail

Description

Setting the channel number in the hardware for the particular optic module failed on the specified port. This could indicate the optic module in the port does not support the optical wavelength associated with the channel number requested for

configuration. Or, it could indicate a hardware problem with the optic module or with the port itself.

Remedy

Check supportability information from XFP vendor and Extreme Networks. The problem may be resolved by retrying the operation.

Severity

Error

Message Text

Configuring operation failed for DWDM Channel %channelNumber% for the optic module in port %slotPort%.

Message Parameters

| Name | Type |
|---------------|----------|
| channelNumber | uint |
| slotPort | SlotPort |

HAL.Port.DWDMOpticNotSuprt

Description

The tunable DWDM optic module inserted in port %slotPort% is not certified by Extreme Networks. Channel configuration may fail on optical modules that are not Extreme Networks Certified.

Remedy

Remove the optic module from the port and replace it with an Extreme Networks certified optical module. Or, remove DWDM configuration on the port using 'configure ports <port-list> dwdm channel default'

Severity

Warning

Message Text

The %optic% optic module in port %slotPort% is not certified by Extreme Networks; therefore DWDM channel configuration may fail.

Message Parameters

| Name | Type |
|----------|----------|
| optic | String |
| slotPort | SlotPort |

HAL.Port.ReadOpticDDMIDataFail

Description

An error has occurred while reading DDMI operating parameters from the optical module EEPROM. The reason for this error could be that there is no DDMI information present on the optical module or the EEPROM i2c read has failed.

Remedy

Issue the "show log" command and check to determine if the optical module is not DDMI-capable. If the error occurred on a DDMI-capable module, determine if the condition persists or it is a problem with the optical module or the port. You can do this by checking if the optical module works in another port and if this port works with an optical module known to work correctly.

Severity

Error

Message Text

Reading of DDMI data failed on the optical module in port %slotPort%.

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |

HAL.Port.CfgDWDMOpticChanInv

Description

Configuring the channel number for the particular optic module failed on the specified port. This could indicate the optic module in the port does not support the optical wavelength associated with the channel number requested for configuration.

Remedy

Issue the "show dwdm channel-map port <p1>" command to determine the supported channels by the optic module.

Severity

Warning

Message Text

Configuring operation failed for DWDM Channel %channelNumber% due to a channel mapping error.

Message Parameters

| Name | Type |
|---------------|----------|
| channelNumber | ulnt |
| slotPort | SlotPort |

HAL.Port.FabFlowCtrlUnsuprt

Description

A Priority Flow Control configuration is applied to a stack that includes a Summit X670 or X670V which does not support fabric flow control messages on alternate stack ports or V80 native stack ports. These fabric flow control messages are required to provide priority flow control between ports on different slots in the stack. PFC between ports within the same slot will operate as expected.

Remedy

This is a hardware limitation on the X670 when using alternate stack ports or V80 native stack ports. PFC between ports on the same slot is not affected by this limitation. Stacking with V160 native stack ports supports fabric flow control messages and is the recommended stacking configuration for X670V if PFC is required between ports on different slots.

Severity

Warning

Message Text

Slot %slot% does not support fabric flow control messages on alternate stack ports or V80 native stack ports.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

Applicable Platforms

HAL.Port.Chk10GPortLcnsFail

Description

This log message will occur when a 10G optic is inserted in the specified port and the 10G license is missing. This message can also occur at boot time, if the 10G optic is already present when the HAL transceiver thread is started.

Remedy

10G license needs to be installed for the port to work with 10G optics at 10G speed.

Severity

Warning

Message Text

10G license not present for port %slotPort%. Speed will be reduced to 1Gbps with auto-negotiation on.

Message Parameters

| Name | Type |
|----------|----------|
| slotPort | SlotPort |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Port.OpticCfgVrfy

Description

This event will occur after a 10G license is installed on standby slot to advise the user to reconfigure the port to 10G speed if needed.

Remedy

Verify and change the configuration of the port to match the optic module present.

Severity

Warning

Message Text

The configuration for the optic module in port %slotPort% will need to be verified and corrected if needed. 10G optics need to be configured for auto-negotiation off and speed 10000.

Message Parameters

HAL.RateLimit.CreatMeterExist

Description

Trying to create meter which is already present in HAL. This is an inconsistent state between HAL and acl.

Remedy

Try to delete this meter and create again.

Severity

Error

Message Text

Meter %name% already exists

Message Parameters

| Name | Type |
|------|--------|
| name | String |

HAL.RateLimit.AllocMeterFail

Description

HAL is not able to allocate memory for this meter.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

A resource allocation to store meter %str% failed

Message Parameters

| Name | Type |
|------|--------|
| str | String |

HAL.RateLimit.CfgMeterNotExist

Description

An operation to configure a meter that does not exist. Meter configuration is not in sync between acl and HAL.

Remedy

Delete the meter and try to create it again.

Severity

Error

Message Text

Failed to configure meter. Meter %str% does not exist.

Message Parameters

| Name | Type |
|------|--------|
| str | String |

HAL.RateLimit.DelMeterNotExist

Description

An operation to delete a meter failed. Meter configuration is not in sync between HAL and acl.

Remedy

Try to recreate the meter with the same name. If this operation fails, please reboot the switch and contact Extreme Technical support.

Severity

Error

Message Text

Failed to delete meter. Meter %str% does not exist.

Message Parameters

| Name | Type |
|------|--------|
| str | String |

HAL.RateLimit.CfgMeter

Description

Meter with this configuration has been configured in HAL.

Remedy

No remedy is available.

Severity

Debug-Summary

Message Text

Meter %str% configured. CR %cr% CBS %cb% CR Valid %cv% PR %pr% PBS %pb% PR Valid %pv%

| cr | ulnt |
| cb | ulnt |
| cv | ulnt |
| pr | ulnt |
| pb | ulnt |
| pv | ulnt |

HAL.RateLimit.DelMeterInuse

Description

Trying to delete a meter which is in use.

Remedy

Unconfigure the meter association with ACL/VLAN, before trying to delete the meter.

Severity

Error

Message Text

An action to delete meter %str% failed. Meter is in use. Reference count %rc%

Message Parameters

| Name | Type |
|------|--------|
| str | String |
| rc | ulnt |

HAL.RateLimit.ClrMeterNotExist

Description

An operation to clear meter failed, as there is no such meter configured in HAL.

Remedy

No remedy is available.

Severity

Error

Message Text

An action to clear meter with index %ind% failed.

Message Parameters

| Name | Type |
|------|------|
| ind | ulnt |

HAL.RateLimit.GetMeter

Description

Get meter statistics.

Remedy

No remedy is available.

Severity

Debug-Summary

Message Text

Get statistics of meter %str% Vlan Instance %vlaninst% Port Instance %portinst%

Message Parameters

| Name | Type |
|----------|--------|
| str | String |
| vlaninst | uInt32 |
| portinst | uInt32 |

HAL.RateLimit.GetMeterNoACL

Description

No ACL is created on this vlan instance and port. Hence the operation to get statistics failed.

Remedy

Check if there is ACL created with this meter as one of the actions. .

Severity

Warning

Message Text

Failed to get meter statistics for meter %str% %vlaninst% %portinst% , as there is no corresponding ACL entry created with these parameters.

Message Parameters

| Name | Type |
|----------|--------|
| str | String |
| vlaninst | uInt32 |
| portinst | uInt32 |

HAL.RateLimit.CreatMeterLmtExcd

Description

Maximum number of meters have been created. Could not configure the ACL with this meter as an action.

Remedy

No remedy is available.

Severity

Warning

Message Text

An operation to create meter in this slot %slot% failed. Maximum meters are already created in this slot.

Message Parameters

| Name | Type |
|--------|--------|
| slot | Slot |
| maxent | uInt32 |

HAL.RateLimit.SyncMeterFail

Description

Configuration of meters in this IO slot failed.

Remedy

Disable and re-enable the slot again.

Severity

Warning

Message Text

An operation to sync meter entries in the IO slot %slot% failed. Param %mp% data %data%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| mp | Ptr |
| data | Ptr |

HAL.RateLimit.AllocSlotMsgFail

Description

Cannot send meter configuration to one or more IO slots as Management module failed to allocate a conduit message.

Remedy

Redo the configuration after sometime.

Severity

Warning

Message Text

An operation to allocate conduit event of length %len% failed

Message Parameters

| Name | Type |
|------|------|
| len | ulnt |

HAL.RateLimit.SendCfgMsgSlotFail

Description

An operation to send meter configuration to IO slot failed.

Remedy

Save the configuration, disable and re-enable the slot again.

Severity

Warning

Message Text

An operation to send meter configuration `%num%` to one or more slots failed with error `%str%`

Message Parameters

| Name | Type |
|------|--------|
| num | uint32 |
| str | String |

HAL.RateLimit.HookArgNull

Description

Ratelimit module received a message from IO, with null pointer.

Remedy

No remedy is available.

Severity

Warning

Message Text

Callback registered with conduit invoked with null ptr `%format%`

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.RateLimit.GetStatsFail

Description

An Operation to get statistics corresponding to a meter failed.

Remedy

Try to get statistics after sometime.

Severity

Warning

Message Text

An operation to get statistics %num% from slot %slot% failed.

Message Parameters

| Name | Type |
|------|--------|
| slot | Slot |
| num | uInt32 |

HAL.RateLimit.CfgSlotFail

Description

An operation to create/configure a meter in the I/O failed with the error code.

Remedy

Try to disable the slot and enable it again.

Severity

Error

Message Text

An operation to configure in IO slot %slot% failed with error code %rc%.

Message Parameters

| Name | Type |
|------|--------|
| slot | Slot |
| rc | uInt32 |

HAL.RateLimit.AddACLMeterNotExist

Description

The meter configured as one of the actions in the ACL has not been created. ACL configuration failed.

Remedy

Create and configure the meter before configuration of the ACL.

Severity

Warning

Message Text

An operation to add meter to acl failed. Meter %str% does not exist.

Message Parameters

| Name | Type |
|------|--------|
| str | String |

HAL.RateLimit.AddACLMeterNotCfg

Description

The meter configured as one of the actions in the ACL has not been Configured. ACL configuration failed.

Remedy

Configure the meter before configuration of the ACL.

Severity

Warning

Message Text

An operation to add meter to acl failed. Meter %str% is not configured.

Message Parameters

| Name | Type |
|------|--------|
| str | String |

HAL.RateLimit.CfgMeterVlanNotExist

Description

An operation to configure a meter to rate-limit flood-traffic on a vlan failed. VLAN configuration is not in sync between vlan, acl and HAL.

Remedy

Create the vlan, and configure meter to rate-limit flood traffic.

Severity

Error

Message Text

Failed to configure rate-limit meter on vlan %vlan%. Vlan %vlan% does not exist.

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |

HAL.SM.ChanDsbl

Description

A persistent high speed switch fabric link failure has caused the disabling of a high speed switch fabric channel. Each fabric module provides four high speed switch fabric channels. With four fabric modules present, there are sixteen of these channels normally available. Twelve of these channels are required for non-blocking operation with four of the sixteen channels being redundant. In other words, with four fabric modules operational, up to four of these channels can be disabled due to switch fabric link failure and non-blocking operation will still be available. If redundant channels are not available, then loss of a channel results in reducing the available high speed switch fabric bandwidth, increasing the probability of lost user data traffic.

Remedy

Please refer to the event HAL.Sys.IntPortDown indicating the high speed switch fabric link that has failed. The I/O blade that is connected to the link should be removed. The orthogonal connector that carries the failed link should be inspected for damage, both on the I/O blade and the fabric module. If damage is found, the slot should be left empty until the I/O blade and fabric module can be replaced. If no damage is found, it is possible that reseating the I/O blade could cure the link failure. Other than removing the I/O blade that cause the channel to be disabled or disabling its containing I/O slot, there is no way to enable the channel. Channels are automatically disabled based on link failure and are automatically enabled only when the I/O blade connected to the failed link is removed or disabled. If the link comes back up on its own, channels are not automatically enabled.

Severity

Notice

Message Text

Switch fabric channel %channel% provided by Fabric slot %fmslot% has been disabled due to failed connection with %ioslot%

Message Parameters

| Name | Type |
|---------|--------|
| channel | ulnt |
| fmslot | String |
| ioslot | String |

Applicable Platforms

- I386 virtual machine switch simulator
- BlackDiamond X8 series switches

HAL.SM.ChanRstor

Description

The switch fabric channel is restored.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Switch fabric channel %channel% provided by Fabric slot %fmslot% has been restored.

Message Parameters

HAL.SM.CtrlPathReroute

Description

A control fabric link to the specified slot has failed. The redundant control fabric link (available only in dual-MM operation) has been activated.

Remedy

Please refer to the event HAL.Sys.InPortDown indicating the failed link details. The affected I/O blade or fabric module should be removed and its midplane connector inspected for damage. If none is found, the blade can be reseated to see if the link recovers. If the link fails again, the affected MM should be removed and connectors inspected for damage. If none is found, the MM should be reseated. Note that if the MM through which the reroute has taken place is removed or otherwise failed the I/O blade or fabric module will also fail.

Severity

Warning

Message Text

Control fabric traffic to %ioslot% has been rerouted through %mm% due to a failed link.

Message Parameters

| Name | Type |
|--------|--------|
| ioslot | String |
| mm | String |

Applicable Platforms

- I386 virtual machine switch simulator
- BlackDiamond X8 series switches

HAL.SM.SlowPathReroute

Description

A slow speed switch fabric link to the specified slot and unit has failed. The redundant slow speed switch fabric link (available only in dual-MM operation) has been activated.

Remedy

Please refer the event HAL.Sys.IntPortDown indicating the failed link information details. The affected I/O blade should be removed and its midplane connector inspected for damage. If none is found, the I/O blade can be reseated to see if the link recovers. If the link fails again, the affected MM should be removed and its connectors inspected for damage. If none is found, the MM should be reseated. Note that is the MM through which the reroute has taken place is removed or otherwise failed, the I/O blade will also fail.

Severity

Warning

Message Text

Slow path traffic to %ioslot% Unit-%unit% has been rerouted through %mm% due to a failed link.

Message Parameters

| Name | Type |
|--------|--------|
| ioslot | String |
| unit | uInt32 |
| mm | String |

Applicable Platforms

- I386 virtual machine switch simulator
- BlackDiamond X8 series switches

HAL.SM.CtrlPathRstor

Description

Control fabric traffic to the specified slot has been restored.

Remedy

No action required - Notification message only.

Severity

Warning

Message Text

Control fabric traffic to %slot% has been restored through %mm%.

HAL.Stacking.CfgStkMACAddrInv

Description

The stack MAC address is either not configured, or if it is configured then it is different from the stack MAC that is in use by the master node in the stack.

Remedy

Configure the stack MAC (using the "configure stacking mac-address" command) to be the same on all nodes in the stack, and either reboot the entire stack or reboot the node(s) on which this message appears.

Severity

Error

Message Text

The stack MAC address is not correctly configured on this node. The stack can not operate properly in this condition. Please correct and reboot.

Message Parameters

| Name | Type |
|------|------|
| addr | MAC |

HAL.Stacking.QoSMismatchDtect

Description

A QoS mismatch has been detected in the stack. This occurs because versions of EXOS that are earlier than 12.2 reserved QoS profiles QP6 and QP7 for stack control traffic. From EXOS 12.2 onward, only QP7 is reserved. This means that when these versions are intermixed in the stack, the lower numbered version could send a stack control packet using QP6. When the higher numbered version node receives such a packet, it will process it at a lower priority than QP8. Thus QP8 traffic overload (such as could be caused by a network loop) could cause significant loss of stack protocol traffic and therefore destabilize the stack.

Remedy

Quiesce user data traffic on the stack and either replace the nodes whose version is lower than EXOS 12.2 or upgrade them.

Severity

Error

Message Text

At least one node in this stack is operating with an EXOS version that is earlier than 12.2. This may cause the stack to destabilize. Please upgrade and reboot all such nodes in this stack.

HAL.Stacking.BkupNodeMiscCfg

Description

The following recommendations should be followed if a more powerful and capable SummitX stackable switch is part of the SummitStack configuration: 1) One of the most powerful switches must be the Master node of a SummitStack. 2) One of the most powerful switches must be the Backup node of a SummitStack. 3) To use the failover feature offered by SummitStack architecture, the user must have at least 2 more and equally powerful switches configured in the stack as Master and Backup nodes.

Remedy

Configure the stacking parameters to allow the most powerful and capable nodes in the stack to become the Master and Backup nodes. This may be done by changing the master-capability, the priority, or both of those stacking parameters for one or more stack nodes. If there is not a node already in the stack that is as powerful and capable as the Master node, then an equivalent switch should be added to the stack and configured master-capable so as to become the Backup stack node.

Severity

Warning

Message Text

The Backup stack node is not as powerful or as capable as the Master stack node. This configuration is not recommended for successful use of the failover feature.

HAL.Stacking.StbyNodeMisCfg

Description

The following recommendations should be followed if a more powerful and capable SummitX stackable switch is part of the SummitStack configuration: 1) One of the most powerful switches must be the Master node of a SummitStack. 2) One of the most powerful switches must be the Backup node of a SummitStack. 3) To use the failover feature offered by SummitStack architecture, the user must have at least 2 more powerful switches configured in the stack as Master and Backup nodes.

Remedy

Configure the stacking parameters to allow the most powerful and capable nodes in the stack to become the Master and Backup nodes. This may be done by changing the master-capability, the priority, or both of those stacking parameters for one or more stack nodes.

Severity

Notice

Message Text

There are Standby stack nodes which are more powerful and more capable than the Master and/or Backup stack nodes. This configuration is not recommended for optimal stack performance.

HAL.Stacking.VerMisMatchDtect

Description

A stacking protocol version mismatch has been detected between the local and remote nodes. It means that the stacking protocol running on the remote node is not compatible with the stacking protocol running on the local node. Thus the stack topology could not be formed between these nodes and therefore software upgrade is not possible between these nodes.

Remedy

Upgrade the incompatible node with the version of EXOS that is running on the node that reported this message.

Severity

Warning

Message Text

Stacking protocol version mismatch detected on the node connected to node %mac% stack port %port%. Software upgrade is not possible between these nodes.

Message Parameters

| Name | Type |
|------|------|
| mac | MAC |
| port | uint |

Error

Message Text

Initialization of fan tray `#%fanTray%` has failed. Please re-initialize by hotswapping the fan tray

Message Parameters

| Name | Type |
|---------|------|
| fanTray | uInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.FanTrayFail

Description

Notified by the fan tray microcontroller indicates that the fan tray has failed. Reading fan tray temperature and odometer will be suspended.

Remedy

Try hotswapping the fan tray to see if the problem persists. If it still doesn't work, power cycle the chassis.

Severity

Error

Message Text

Fan tray %fanTray% has failed

Message Parameters

| Name | Type |
|---------|------|
| fanTray | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.UpgrdFanTrayStrt

Description

During the firmware upgrade of the fan tray, it will not respond to any communication. To prevent putting it in failed state, communications have been suspend to it.

Remedy

No remedy is available.

Severity

Info

Message Text

Fan tray %fanTray% is being upgraded. All communication with it are temporary suspended.

Message Parameters

| Name | Type |
|---------|------|
| fanTray | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.UpgrdFanTrayDone

Description

Firmware upgrade is completed. Communication with the fan tray are resumed.

Remedy

No remedy is available.

Severity

Info

Message Text

Fan tray %fanTray% upgrade is completed. All communication with it is resumed.

Message Parameters

| Name | Type |
|---------|------|
| fanTray | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.ShutDwnTempRangeExcd

Description

The temperature detected by the power and fan microcontroller is critically out of range. To prevent any hardware damages, the system will be powered off in 1 second.

Remedy

Replace the fans if they have failed or improve air circulation around the system. When temperature has returned to normal range, power cycle the power supplies and the system shall power on again.

Severity

Critical

Message Text

Temperature is critically out of range. System is being shutdown by the Power and Fan microcontroller.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.ReadPFCTempFail

Description

An error has occurred while trying to read temperature values from the power fan controller.

Remedy

Wait to see whether the sensor will come back alive or not. You can also power cycle the PFC by hotswapping the MM.

Severity

Warning

Message Text

Reading temperature from the Power Fan Controller #`%pfc%` has failed.

Message Parameters

| Name | Type |
|------|------|
| pfc | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.TempCritical

Description

The Power Fan Controller located on the MSM has reported that the chassis temperature is reaching the limits of the operating range. If the temperature does not return to normal, the PFC could shut down the chassis.

Remedy

Replace the fans if they have failed or improve air circulation around the system.

Severity

Critical

Message Text

Chassis air intake temperature (50C) is out of operating range. System shutting down.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.IntPortDown

Description

This message is generated when an internal port that is connected to a switch fabric link is down. The message is not generated unless the port down condition is persistent, and the blades at either end of the link remain Operational. There is no corresponding message that shows that the port has come back up. The message is repeated once every hour if the condition persists. The message shows the internal port that has gone down and also shows the internal port at the other end of the link. If that port also goes down, a separate message may be generated for it. To see the current port state, use the "debug hal show sys-health-check" command and look for the display marked "[Fabric Port Events]". The first slot-unit-port in the message is

identified in the Flapped column of the command output. The connected slot-unit-port in the message is identified in the Remote column. The Transitions column shows the number of times the port state changed since the blades at both ends of the related switch fabric link went Operational. A large number of transitions could indicate a port state flapping condition.

Remedy

This message could mean that a blade at one end of the link is not making proper contact with the backplane. Reseating either or both blades could cure the problem. It may also mean that backplane connectors are damaged, e.g., bent pins. In this case, reseating the blade could cause further damage. Visual inspection is recommended before either blade is reinserted. If the slot at both ends of the link is the same, the link is entirely contained on the blade, and this message could indicate that the hardware has failed.

Severity

Warning

Message Text

Sys-Health-Check: Switch fabric port state is Down for Module in %thisSlot% (unit %thisUnit%, internal port %thisPort%) connected to Module in %toSlot% (unit %toUnit%, internal port %toPort%)

Message Parameters

| Name | Type |

| thisSlot | String |
| thisUnit | ulnt |
| thisPort | ulnt |
| toSlot | String |
| toUnit | ulnt |
| toPort | ulnt |

HAL.Sys.FanTrayCommTimeout

Description

Commands are relayed to the fan tray via the Power Fan Controller(PFC). The PFC is getting timeouts when it attempted to relay these commands to the fan tray. The fan tray microcontroller could be hung or defective.

Remedy

Hotswap the fan tray or power cycle the switch.

Severity

Warning

Message Text

The Power Fan Controller has received %times% consecutive timeouts from fan tray #fanTray% when attempting to relay commands to it. The fan tray will be put into failed state if it's not in that state already.

Message Parameters

| Name | Type |
|---------|------|
| times | ulnt |
| fanTray | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.FanTrayCommTimeoutNotif

Description

Communication attempts between the Power Fan Controller(PFC) and the fan tray have failed a number of times so the PFC has notified the system. The fan tray will be put into failed state.

Remedy

Hotswap the fan tray or power cycle the switch.

Severity

Warning

Message Text

Notification was received from the Power Fan Controller that it is unable to communicate with fan tray #fanTray%. The fan tray will be put into failed state if it's not in that state already.

Message Parameters

| Name | Type |
|---------|------|
| fanTray | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.FanTrayCommRestoreNotif

Description

Communication between the Power Fan Controller(PFC) and the fan tray has been restored so the PFC has notified the system.

Remedy

Not applicable.

Severity

Notice

Message Text

Notification received from the Power Fan Controller that communication between it and fan tray #`%fanTray%` has been restored.

Message Parameters

| Name | Type |
|---------|------|
| fanTray | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.TempWarning

Description

The Power Fan Controller located on the MSM has reported a warning that the chassis temperature is reaching the limits of the operating range. If the temperature does not return to normal, the PFC could shut down the chassis.

Remedy

Replace the fans if they have failed or improve air circulation around the system.

Severity

Warning

Message Text

%sensor% Chassis air intake temperature %temp%. System shutdown may occur if corrective action is not taken. System shutdown will happen at 50C.

Message Parameters

| Name | Type |
|--------|--------|
| temp | String |
| sensor | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.Sys.HCExtTbl

Description

This message is generated when one of the external table TCAM error counters monitored by the system increments. This should not necessarily be interpreted as a severe error.

Remedy

From a new telnet session please do the following: 1. Run the following commands to check for an occurrence of the error message with component condition HAL.Card.ExtTblClbrtDataInv: "show log match HAL.Card.ExtTblClbrtDataInv" and "show log counters HAL.Card.ExtTblClbrtDataInv". 2. Run the command "debug hal show sys-health-check" and collect the output. Send the results to your service personnel for further analysis to determine whether this is a software or a hardware error.

Severity

Warning

Message Text

Sys-Health-Check: External Table error counters have incremented on %thisSlot%.

Message Parameters

| Name | Type |
|----------|--------|
| thisSlot | String |

HAL.Sys.HCPrCSSrECC

Description

This message is generated when one of the Error Correcting Code (ECC) counters monitored by the system increments. This counter shows the numbers of times errors have been corrected. Switch operation is not affected.

Remedy

Since this is just an informational message and does not affect switch operation, there are no remedial measures.

Severity

Warning

Message Text

Sys-Health-Check: CPU/L2 Memory ECC Counters have incremented on %thisSlot%.
These errors were corrected and did not affect switch operation

Message Parameters

| Name | Type |
|----------|--------|
| thisSlot | String |

HAL.Sys.PktMemOvrCmmt

Description

This warning is displayed when the per-port maxbuffer setting is changed resulting in the total amount of packet memory that is reserved for all ports in a particular port range exceeding the total available packet memory for the port range by at least 20 percent. Overcommitting the packet memory by less than 20 percent is usually safe to do since many ports would simultaneously have to demand usage of their reservations

in order for memory exhaustion to occur. As the number exceeds 20 percent, the exhaustion of the memory by fewer busy ports becomes more likely. The command that adjusts the per-port maxbuffer setting is "configure {qosprofile} <qosprofile> maxbuffer <0-10000> ports [<port-list> | all]".

Remedy

To view the allocation, the following debug command can be used: "debug hal show platform packet-buffer ports [<port-list>] | all)". Specify the port range shown in the log message. The maxbuffer parameter can then be adjusted as needed to reduce the overcommitment. Keep in mind that an overcommitted packet memory means that there is no shared packet memory available. When the memory is not overcommitted, the remaining packet buffer memory is shared among all ports. The amount each port may allocate from the shared memory can be configured as a percentage of the total available shared memory using the command "configure ports <port-list> shared-packet-buffer <percent>". The maxbuffer configuration can be reset to its default using the "unconfigure qosprofile ports <port-list>" command.

Severity

Warning

Message Text

Packet memory is overcommitted by %percentage%% for%spread%ports in range %port_range%

Message Parameters

| Name | Type |
|------------|--------|
| port_range | String |
| percentage | sInt |
| spread | String |

HAL.Sys.PktMemTxSizBlk

Description

The configured reserved packet memory for a port and QoS profile added to the amount of shared packet memory available to the port is insufficient to contain a packet whose size exceeds the stated size. This means that all received packets of the stated size or greater to be transmitted to such a port and QoS profile will be dropped. This may not be a problem if the customer's network does not use packets of such sizes. This message will appear when an I/O card enters Operational state if a saved packet memory configuration resulted in the condition, or each time thereafter that any change is made to the packet memory configuration and the condition still exists.

Remedy

If packets of the stated size or greater are used in the customer's network, the customer must change the packet memory configuration so that all ports and QoS profiles in the stated port range have sufficient packet memory space to hold the packets. This can be done by changing the maxbuffer settings using the command "configure {qosprofile} <qosprofile> maxbuffer <percent> ports <port-range>" and/or increasing the shared packet memory percentage using the command "configure ports <port-range> shared-packet-buffer <percent>". The packet memory condition may be viewed using the debug command "debug hal show platform packet-buffer ports <port-range>".

Severity

Warning

Message Text

At least one port and QoS profile for%spread%ports in range %port_range% cannot transmit packets larger than %pkt_size% bytes because of packet memory configuration.

Message Parameters

| Name | Type |
|------------|--------|
| port_range | String |
| spread | String |
| pkt_size | ulnt |

HAL.Sys.AltStkOptCardSlotEmpty

Description

This message occurs because one or both stacking ports are configured to use the alternate port on this switch (instead of the native stacking port) but the hardware to provide the port is not present. The message occurs on X450a or X450e series switches when the option card that provides the port(s) is not present.

Remedy

Use the "show stacking-support" command to view the configured stacking port selection. There are two methods to prevent this message from being displayed in the future: (1) Power down the unit. Insert an appropriate option card such as an XGM2-2xf card into the option slot. Power on the unit and use the option card. (2) Use the "configure stacking-support stack-ports <stack-ports> selection native"

command to use the native stacking port(s) on the switch. Then reboot the switch for the configuration to take effect.

Severity

Warning

Message Text

Alternate stacking port is selected on %switchStr% %slotNumStr% but the option card slot is empty.

Message Parameters

| Name | Type |
|------------|--------|
| switchStr | String |
| slotNumStr | String |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.Sys.RebootOverHeat

Description

Currently this message only applies to x430-8p where there's no HW or SW overheat protection. One of the reason that could cause overheat is when switch is in rack mount configuration and POE power is set to 90W. When temperature is above operating range, this event occurs, the switch reboots, stopping at a prompt before starting the operating system. If the user evaluates the situation and determines that switch is no longer in overheat state, he/she needs to manually type "Y/y" to continue boot up process.

Remedy

User needs to check the environment temperature and switch configuration (POE configuration, switch mounting position) to see if problems that caused switch overheat are now fixed. Once user determines switch is no longer in overheat state and ready to reboot, he/she can type "Y/y" to continue boot up process.

Severity

Critical

Message Text

Rebooting the switch because it has overheated.

HAL.SysHC.InitDone

Description

Indicates that System Health Check on the Management Module has been successfully initialized.

Remedy

Not Applicable

Severity

Notice

Message Text

System Health Check on this Management Module successfully initialized.

HAL.SysHC.CompFail

Description

Components are typically considered to have failed when certain errors in them exceed set thresholds or the component does not respond to health check's requests and the card has therefore to be rebooted. Since the card is being rebooted, this message will

be accompanied by Device Manager's card reboot messages. However, currently this message is not used as it is replaced by the CompFailDetail message.

Remedy

There is no remedial action that the customer can take. The switch itself is rebooting the card or shutting it down.

Severity

Error

Message Text

SysHealthCheck failure on slot %slot% component %deviceName%. Component exceeded error thresholds repeatedly or does not respond to health check requests. The card is being rebooted or shut down.

Message Parameters

| Name | Type |
|------------|--------|
| deviceName | String |
| slot | uInt32 |

HAL.SysHC.CompFailDetail

Description

Components are typically considered to have failed when certain errors in them exceed set thresholds or the component does not respond to health check's requests and the card has therefore to be rebooted. Since the card is being rebooted, this message will be accompanied by Device Manager's card reboot messages.

Remedy

There is no remedial action that the customer can take. The switch itself is rebooting the card or shutting it down.

Severity

Error

HAL.TunI.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

If the error message indicates no memory on the system, remove some configuration on the system may solve the problem. If the error message indicates invalid types or parameters, this is usually a software error, which should not happen in normal operation. Contact technical support with "show tech" output. For other error messages, they are usually generated due to failure of operations in other components. Please look for previous error or warning messages for resolution.

HAL.VLAN.Error

Description

A problem has been detected which is interfering with the normal operation of the system. The system is not functioning as expected. The problem may be related to the failure to allocate an internal system resource.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.VLAN.Warning

Description

An abnormal condition has been detected which, although it is not interfering with the normal operation of the system, may signal that the system or the network in general may not be functioning as expected. The condition may have been caused by an unusual or unexpect circumstance related to some external stimulus.

Remedy

The exact remedy is dependant on the particular situation; but the problem may have been resolved by rejecting the request or performing some default action.

Severity

Warning

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.VLAN.Notice

Description

A normal but significant condition has been detected, which signals that the system is functioning as expected. The condition is somewhat uncommon, but it is not necessarily unusual or unexpected.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Notice

Message Text

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.VLAN.Info

Description

A normal but potentially interesting condition has been detected, which signals that the system is functioning as expected and simply provides potentially detailed

information or confirmation in that regard. The circumstance is common and not unusual or unexpected in any way.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Info

HAL.VLAN.DebugSummary

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

HAL.VLAN.DsblLrnFiltFull

Description

Disabling learning on a VLAN requires hardware filtering resources which are not currently available on the specified slot and unit. Learning has not been disabled on the VLAN (in the hardware) even though it will show as being configured.

Remedy

Re-enable learning on the VLAN. For example, use the "enable learning vlan <vlan_name>" command on the CLI. Then free filtering resources (for example by removing or reorganizing ACLs).

Severity

Error

Message Text

Failed to disable learning on VLAN ID %vlanId% due to lack of filtering resources on slot %slot%, unit %unit%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |
| slot | ulnt |
| unit | ulnt |

HAL.VLAN.PVLANL2TbIFull

Description

At least one PVLAN or VLAN translation related MAC FDB entry could not be added because the hardware table is full. The hardware table is organized as a hash table so it is possible that there is still room for other MAC FDB entries that hash to different hash bucket locations. This message will be logged at most one time per hour while

new FDB forwarding entries trigger this condition. A more detailed message for each occurrence can be seen by enabling the PVLANL2TbIFullEnt debug summary message.

Remedy

If the network has exceeded the FDB resources available in the hardware, traffic will continue to flow, but it will be broadcast traffic. If this is not a transient condition, consider systems that have a larger hardware table size. If this is a transient condition, the L2 traffic will still be forwarded using L2 broadcast until the hardware table has enough space for the new MAC to be programmed. PVLANS and VLAN translation require more FDB entries than a regular VLAN, so this should be factored into the network design. Please see the technical publications for details on the increased FDB requirements for PVLANS and VLAN translation.

Severity

Error

Message Text

PVLAN/VLAN translation FDB entry not added. Hardware Table full.

HAL.VLAN.PVLANL2TbIFullEnt

Description

The hardware table was full and this FDB entry could not be added for PVLAN/Vlan translation. See the information for PVLANL2TbIFull for details.

Remedy

See the information for PVLANL2TbIFull for details.

Severity

Debug-Summary

Message Text

PVLAN/VLAN translation FDB entry not added for %mac% on vlan %phantomVlan%. This entry was being added because the MAC was learned on vlan %nativeVlan%. Hardware Table full.

Message Parameters

| Name | Type |
|-------------|------|
| nativeVlan | VLAN |
| phantomVlan | VLAN |
| mac | MAC |

HAL.VLAN.ParmInv

Description

Caller handed an invalid argument.

Remedy

This usually indicates memory corruption. Check internal-memory for core-dump if a switch was rebooted recently.

Severity

Debug-Data

Message Text

Caller handed the invalid value %varVal% for %varName%.

Message Parameters

| Name | Type |
|---------|--------|
| varVal | sInt |
| varName | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.VLANifNull

Description

Either caller handed the wrong argument or the Vlan Interface does not exist in the database.

Remedy

This implies memory corruption or a problem in VLAN library. Increase the log severity to highest for HAL and VLAN to collect more data.

Severity

Debug-Data

Message Text

Vlan Interface is NULL.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.VPifNull

Description

Either caller handed the wrong argument or the Virtual port Interface does not exist in the database.

Remedy

This implies memory corruption or a problem in VLAN library. Increase the log severity to highest for HAL and VLAN to collect more data.

Severity

Debug-Data

Message Text

Virtual Port Interface is NULL.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.PifNull

Description

Either caller handed the wrong argument or the port Interface does not exist in the database.

Remedy

This implies memory corruption or a problem in VLAN library. Increase the log severity to highest for HAL and VLAN to collect more data.

Severity

Debug-Data

Message Text

Port Interface is NULL.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.VLANifHwInfoNull

Description

Hardware specific VLAN data structure does not exist in the database.

Remedy

This implies memory corruption or a duplicate path in deleting VLANs. Check internal-memory for core-dump and increase the debug-level of HAL to debug-data to collect more data.

Severity

Debug-Data

Message Text

Platform-specific VLAN information of a VLAN instance `%vlanInst%` is not available.

Message Parameters

| Name | Type |
|----------|--------|
| vlanInst | uInt32 |

HAL.VLAN.AllocTXMIFail

Description

Failed to allocate a TXMI.

Remedy

Remove and re-add the port to the VLAN.

Severity

Debug-Summary

Message Text

Failed to allocate a packet modification index for port %slot%:%port% VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.AddPortPSIFail

Description

Failed to add the port to the L2 flooding table in FAP.

Remedy

Increase PSI log severity to get more data.

Severity

Debug-Summary

Message Text

Failed with error-code %error% to add port %slot%:%port% to the flood group of VLAN ID %vlanId% with Flooding index %floodPSI%.

Message Parameters

| Name | Type |
|----------|----------|
| error | sInt |
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |
| floodPSI | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.DeIPortPSIFail

Description

Failed to delete the port from the L2 flooding table in FAP.

Remedy

Increase PSI log severity to get more data.

Severity

Debug-Summary

Message Text

Failed with error-code %error% to delete port %slot%:%port% from the flood group of VLAN ID %vlanId%.

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |
| slot | Slot |
| port | Port |

| Name | Type |
|----------|----------|
| vlanId | VLAN-tag |
| floodPSI | uInt32 |

HAL.VLAN.SendAddPortCndtMsgFail

Description

Conduit module used up the pre-allocated conduit messages.

Remedy

Enable the log severity of HAL.Conduit to gather more data. If all the conduit messages are used, this error occurs. Check if Conduit raised an error. If an IOB is hot swapped but HAL has not detected the change, the error also can happen. Check if IOB is in the slot and operational.

Severity

Debug-Summary

Message Text

Update of IO in slot %slot% failed with error-code %error% when a port %slot%:%port% is added to the VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SendDelPortCndtMsgFail

Description

Conduit module used up the pre-allocated conduit messages.

Remedy

Enable the log severity of HAL.Conduit to gather more data. Enable the log severity of HAL.Conduit to gather more data. If all the conduit messages are used, this error occurs. Check if Conduit raised an error. If an IOB is hot swapped but HAL has not detected the change, the error also can happen. Check if IOB is in the slot and operational.

Severity

Debug-Summary

Message Text

Update of IO in slot %slot% failed with error-code %error% when a port %slot%:%port% is deleted from the VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.AddPortFail

Description

Failed to update HW tables in the IO card or the EXOS data structure related to the Virtual port.

Remedy

Delete and add the port to the VLAN. Increase the log severity of HAL.VLAN to gather more data.

Severity

Error

Message Text

Failed with error-code %error% to add port %slot%:%port% to the VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.DelPortFail

Description

Failed to update HW tables in the IO card or the EXOS data structure related to the Virtual port.

Remedy

Re-delete the port from the VLAN. Increase the log severity of HAL.VLAN to gather more data.

Severity

Error

Message Text

Failed with error-code %error% to delete port %slot%:%port% from the VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

| Name | Type |
|----------|--------|
| vlanInst | uInt32 |
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.AddPortToVLANFlood

Description

The control code path gets into the function adding a port to the Vlan's flood group.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Add a port %slot%:%port% to the flood group of VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.DeIPortFmVLANFlood

Description

The control code path gets into the function deleting a port from the Vlan's flood group.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Delete a port %slot%:%port% from the flood group of VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.RemVLANTag

Description

The VLAN ID is removed from the VLAN due to change in tag or deletion of the VLAN.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Remove a VLAN ID from VLAN ID %vlanId%.

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SyncSlot

Description

Inserting or enabling an IO card triggers the synchronization of the VLAN configuration.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Synchronize the configuration of VLAN ID %vlanId% to slot %slot%.

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |
| slot | Slot |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.MgmtVLAN

Description

HAL does not care for the management VLAN.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Skip the management VLAN instance %vlanInst% in slot %slot%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanInst | uInt32 |
| slot | Slot |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.DumpVLANPSI

Description

The VLAN occupies the FAP table entry indexed by PSI to list the ports.

Remedy

This is not an error message.

Severity

Debug-Data

Message Text

VLAN Instance %vlanInst% has PSI %psi%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanInst | uInt32 |
| psi | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CfgIPAddr

Description

The control code path reaches the point where an IP address is assigned or removed to/from the VLAN.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

%config% VLAN instance %vlanInst% with %ipType% IP address %ipAddr%/%maskLen%.

Message Parameters

| Name | Type |
|----------|-----------|
| config | String |
| vlanInst | uInt32 |
| ipType | String |
| ipAddr | IP |
| maskLen | IPmasklen |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CfgVLANToVRAssoc

Description

The control code path gets into the function associating the VLAN to the virtual-router.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Add VLAN instance %vlanInst% to Vr %vrId%.

Message Parameters

| Name | Type |
|----------|--------|
| vlanInst | uInt32 |
| vrId | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CreatVR

Description

The control code path gets into the function creating the virtual-router.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Create a virtual router %vrId%.

Message Parameters

| Name | Type |
|-------|--------|
| vrlId | ulnt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.DeIVR

Description

The control code path gets into the function deleting the virtual-router.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Delete a virtual router %vrlId%.

Message Parameters

| Name | Type |
|-------|--------|
| vrlId | ulnt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.AllocCndtMsgFail

Description

Conduit module used up the pre-allocated messages in a pool.

Remedy

Increase the log severity of HAL.conduit to collect more data. If all the conduit messages in the pool are used, this error occurs. Check if Conduit raised an error. If an IOB is hot swapped but HAL has not detected the change, the error also can happen. Check if IOB is in the slot and operational.

Severity

Debug-Data

Message Text

Failed to allocate a conduit message %mesgType% for port %slot%:%port% VLAN ID %vlanId%.

Message Parameters

| Name | Type |
|----------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |
| mesgType | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.VLANLibAPIFail

Description

Functions in the Vlan library failed.

Remedy

Increase the log severity of VLAN and HAL.VLAN to collect more data.

Severity

Debug-Verbose

Message Text

VLAN Lib function %libName% failed for %slot%:%port% vlanInst %vlanInst% due to error %error%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |
| libName | String |
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SendCkptMsgFail

Description

Device manager, an EXOS module that delivers messages between the Master and the Slave MMs, failed to deliver the message.

Remedy

Increase the log severity of DM to gather more data.

Severity

Debug-Summary

Message Text

Failed to send a Check-point message.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.AllocMemFail

Description

The system is out of memory or the pre-allocated pool is out of memory.

Remedy

Record the configuration and steps to reproduce the problem.

Severity

Debug-Data

Message Text

Failed to allocate memory.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CkptNotRdy

Description

Due to the system configuration, check-pointing is not on. When check-pointing is not enabled, MM-failover is not working properly in the dual MM system.

Remedy

This message is a warning in case check-pointing is off by accident. Refer User's manual to enable check-pointing.

Severity

Warning

Message Text

Check-pointing is not ready.

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.Enter

Description

This message indicates the function is being executed with given arguments.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Start of the function for port %slot%:%port% in VLAN %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.Exit

Description

The function completes the operations.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

Complete the function for port %slot%:%port% in VLAN %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CfgVLANAttr

Description

The control code path reaches the function that configures the given attribute of the VLAN.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

%config% vlanInstance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| config | String |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.ConfigVLANPortAttr

Description

The control code path reaches the function that configures the given attribute of the VLAN's port.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

`%config% port %slot%:%port% in vlanInstance %vlanInst%.`

Message Parameters

| Name | Type |
|----------|--------|
| config | String |
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.VPifHwInfoNull

Description

This is a sanity check.

Remedy

No remedy is available.

Severity

Debug-Data

Message Text

Platform-specific virtual port information of a port %slot%:%port% in VLAN instance %vlanInst% does not match in two different frames in one call trace.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.VLANifHwInfoInv

Description

This is a sanity check.

Remedy

No remedy is available.

Severity

Debug-Data

Message Text

Platform-specific VLAN information of VLAN instance %vlanInst% is not matching in two different frames in one call trace.

Message Parameters

| Name | Type |
|----------|--------|
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.TXMIMisMatch

Description

The global packet modification index of the same recipe is different in VLAN-Port and VMAN.

Remedy

Enable "vman_txmi_debug" to gather more data.

Severity

Debug-Data

Message Text

The txmi assigned to the port %slot%:%port% in VLAN instance %vlanInst% is different from TXMI in FDB.

Message Parameters

| Name | Type |
|----------|--------|
| halTxmi | ulnt32 |
| fdbTxmi | ulnt32 |
| slot | Slot |
| port | Port |
| vlanInst | ulnt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.FreeTXMIFail

Description

The TXMI does not exist in FDB.

Remedy

Enable "vman_txmi_debug" to gather more data.

Severity

Debug-Data

Message Text

Failed to free TXMI %fdbTxmi% in FDB assigned to port %slot%:%port% in VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| fdbTxmi | uInt32 |
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.PifHwInfoInv

Description

This is a sanity check.

Remedy

No remedy is available.

Severity

Warning

Message Text

Platform-specific Port interface information of Port %slot%:%port% with portInstance %portInst% is not matching in two different frames in one call trace.

Message Parameters

| Name | Type |
|----------|--------|
| slot | Slot |
| port | Port |
| portInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.ChgVLANTagFail

Description

The operation which is triggered when a VLAN's ID changes, failed to update the HW table in IOB.

Remedy

Increase the log severity of HAL.VLAN and HAL.conduit to collect more data.

Severity

Error

Message Text

Failed to change the tag while adding a port %slot%:%port% in VLAN instance %vlanInst%.

Message Parameters

| Name | Type |
|----------|--------|
| op | String |
| slot | Slot |
| port | Port |
| vlanInst | uInt32 |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.OpenCndtFail

Description

VLAN in HAL in MM failed to open conduit channel to IO.

Remedy

Increase the log severity of HAL.conduit to collect more data.

Severity

Error

Message Text

Failed to open a communication channel to IO in HAL-VLAN due to error %error%.

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CndtAckFail

Description

The HW programming in IOB or the conduit module in HAL returns an error.

Remedy

Increase the log severity of HALIO.VLAN and HAL.conduit to collect more data.

Severity

Error

Message Text

IO slot %slot% returned error %error% for message %cndtMsgType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slot | Slot |
| error | String |
| cndtMsgType | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.CndtAck

Description

The message indicates that the conduit message is processed successfully in IOB.

Remedy

This is not an error message.

Severity

Debug-Summary

Message Text

IO slot %slot% returned OK %ret% for message %cndtMsgType%.

Message Parameters

| Name | Type |
|-------------|--------|
| slot | Slot |
| ret | String |
| cndtMsgType | sInt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SendCndtMsgFail

Description

HAL in MM failed to send a conduit event to the given slot. Each bit in the slot mask represents an IOB. If slot is 16, the message indicates an error in slot 5. 5 in decimal is 10000 in binary.

Remedy

Increase the log severity of HALIO.conduit to collect more data.

Severity

Error

Message Text

Failed to send the conduit message for port %slot%:port% VLAN ID %vlanId% due to error %error%.

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |
| error | String |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SendCndtMsgDone

Description

A conduit message is sent.

Remedy

This is not an error message.

Severity

Debug-Verbose

Message Text

Sent the conduit message for port %slot%:%port% VLAN ID %vlanId%.

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SendMCndtMsgFail

Description

The conduit cannot multicast the message to the slots marked in the slot mask.

Remedy

Check if all the IOBs in the slot mask is operational. Increase the log severity of HAL.conduit to collect more data.

Severity

Error

Message Text

Failed to send the VLAN library message to slot in mask %slotMask%.

Message Parameters

| Name | Type |
|----------|------|
| slotMask | ulnt |

Applicable Platforms

- I386 virtual machine switch simulator

HAL.VLAN.SetFloodDataFail

Description

Failed to configure the port flooding information to the L2 flooding table in FAP.

Remedy

Remove and re-add the port to the VLAN.

Severity

Error

Message Text

Failed with error-code %error% while configuring the flooding data for the port %slot%:%port% in VLAN ID %vlanId% with Flooding index %floodPSI%.

Message Parameters

| Name | Type |
|----------|----------|
| error | sInt |
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |
| floodPSI | uInt32 |

HAL.VLAN.AllocTagModFailed

Description

HAL is trying to allocate hardware to do 802.1q VLAN Tag modification, but failed.

Remedy

Try adding the VLAN to PVLAN/VLAN Translation again. Or, try deleting the VLAN and creating it again. Or, check the memory.

Severity

Error

Message Text

Hardware allocation for VLAN tag modification failed for VLAN ID: %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.MemoryAllocTagModFailed

Description

HAL is trying to allocate memory to store the 802.1q VLAN Tag Translation information into the tree, but failed.

Remedy

Try the operation again

Severity

Error

Message Text

Memory allocation failed while storing VLAN tag modification information for %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.TreeInsertTagModFailed

Description

HAL is trying to insert 802.1q VLAN Tag Translation information into the tree, but failed.

Remedy

Try the operation again

Severity

Error

Message Text

Inserting VLAN tag modification information into tree failed for %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.DeleteTagModGotNullInfo

Description

HAL is trying to delete 802.1q VLAN Tag Translation information from the tree, but got no information on it.

Remedy

Try the operation again

Severity

Error

Message Text

Got NULL information to delete VLAN Tag Translation information

HAL.VLAN.DeleteTagModFailed

Description

HAL is trying to delete 802.1q VLAN Tag Translation information, but failed.

Remedy

Try the operation again

Severity

Error

Message Text

Deleting of VLAN Tag Translation information failed for vlanId %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.GotNoVirPortInfo

Description

The virtual port information received was NULL, so HAL doesn't know which port to modify

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to modify the port information in the floodlist, but received no port to modify

HAL.VLAN.GotNullPortInfo

Description

HAL needs to get the port information using the port instance in order to add it to the floodlist, but for some reason, it got a NULL back

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information from the port instance while adding port to floodlist, but received a NULL

HAL.VLAN.GotNullPortInfo2

Description

HAL needs to get the port information using the slot,port information in order to add it to the floodlist, but for some reason, it got a NULL back

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information from the slot,port info while adding port to floodlist, but received a NULL

HAL.VLAN.halMallocFailed

Description

HAL needs to malloc memory to add a new port to the floodlist, but it failed.

Remedy

Try the operation again

Severity

Error

Message Text

HAL failed to halMalloc memory for creating a new FloodListPortList entry

HAL.VLAN.halMallocFailed2

Description

HAL needs to malloc memory to create a new FloodList for a VLAN, but it failed.

Remedy

Try the operation again

Severity

Error

Message Text

HAL failed to halMalloc memory for creating a new FloodList entry

HAL.VLAN.GotNullFL

Description

While trying to checkpoint Floodlist with the backup, the MSM got NULL for Floodlist.

Remedy

Try the operation again

Severity

Error

Message Text

Got NULL for Floodlist while trying to checkpoint

HAL.VLAN.FailedMallocForChkptMsg

Description

HAL is trying to allocate memory to send checkpointing information over to the backup MSM, but failed.

Remedy

Try the operation again

Severity

Error

Message Text

Failed to allocate memory for checkpointing custom Floodlist to backup MSM/MM

HAL.VLAN.FailedToChkptFL

Description

HAL is trying to checkpoint the custom floodlist over to the backup MSM/MM, but failed

Remedy

Try the operation again

Severity

Error

Message Text

Failed to checkpoint custom floodlist over to backup MSM/MM

HAL.VLAN.GotNullPortInfo3

Description

HAL needs to get the port information using the slot,port information in order to add it to the floodlist, but for some reason, it got a NULL back

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information from the slot,port info while adding port to floodlist, but received a NULL

HAL.VLAN.GotNullPortInfo4

Description

HAL received a NULL when it was trying to get the port information using port instance information in order to restore the original VLAN's floodlist.

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information using port instance information while trying to restore original floodlist, but received a NULL

HAL.VLAN.GotNullPortInfo5

Description

HAL received a NULL when it was trying to get the port information using slot,port information in order to restore the original VLAN's floodlist.

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information using slot,port information while trying to restore original floodlist, but received a NULL

HAL.VLAN.GotNullPortInfo6

Description

HAL received a NULL when it was trying to get the port information using port instance information in order to delete ports from the floodlist.

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information using port instance information while trying to delete ports from the floodlist, but received a NULL

HAL.VLAN.GotNullPortInfo7

Description

HAL received a NULL when it was trying to get the port information using slot,port information in order to delete ports from the floodlist.

Remedy

Try the operation again

Severity

Error

Message Text

HAL is trying to get port information using slot,port information while trying to delete ports from the floodlist, but received a NULL

HAL.VLAN.DelPortFromFLFailed

Description

HAL received a NULL when it was trying to get the port information using slot,port information in order to delete ports from the floodlist.

Remedy

Try the operation again

Severity

Error

Message Text

HAL is removing port %slot%:%port% from %vlanId% floodlist

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailedToFindFL

Description

HAL is trying to modify the packet modification information per port in the floodlist, but it couldn't find the crafted floodlist information for that vlan.

Remedy

Try the operation again

Severity

Error

Message Text

HAL is unable to find the crafted floodlist for vlan id %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.EmptyDefaultFLFailed

Description

During the process of updating the floodlist for PVLAN/VLAN Translation, the code has to clear the default floodlist of the VLAN first, then add the back later. The code failed at removing the ports.

Remedy

Try the operation again

Severity

Error

Message Text

Failed to clean up the original floodlist for %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.InitFLFailed

Description

HAL has just cleaned up the default VLAN floodlist and now trying to add them back with special fields, but failed

Remedy

Try the operation again

Severity

Error

Message Text

HAL failed to initialize the floodlist for %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.FailedToFindFL2

Description

HAL is trying to update the floodlist, but it failed to find the floodlist in the tree

Remedy

Try the operation again

Severity

Error

Message Text

HAL is unable to find the crafted floodlist while updating floodlist for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.FailedAddingPortToFL

Description

HAL is trying to update the floodlist, but failed while adding the port to the floodlist

Remedy

Try the operation again

Severity

Error

Message Text

Failed adding %slot%:%port% to %vlanId% floodlist

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailedAddingPortToFL2

Description

HAL is trying to update the floodlist by adding ports from other VLANs to the FL, but failed

Remedy

Try the operation again

Severity

Error

Message Text

Failed adding %slot%:%port% to vlan ID %vlanId% floodlist

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailedDelPortFromFL

Description

HAL is trying to update the floodlist, but failed while deleting the port from the floodlist

Remedy

Try the operation again

Severity

Error

Message Text

Failed deleting %slot%:%port% from %vlanId% floodlist

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailToFindVirPortInfo

Description

HAL needs to add the port back into the floodlists because it became active again, but it failed to find the virtual port information. Something is wrong with the SW data structures

Remedy

Try the operation again

Severity

Error

Message Text

While processing port up notification, HAL couldn't find the virtual port information for %slot%:%port% in vlanId %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailedAddingPortToFL3

Description

HAL needs to add the port back into the floodlists because it became active again, but it failed to add.

Remedy

Try the operation again

Severity

Error

Message Text

Failed while adding %slot%:%port% to vlan ID %vlanId% floodlist during port up notification

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailedToCreateFL

Description

HAL failed to create crafted floodlist for the VLAN.

Remedy

Try the operation again

Severity

Error

Message Text

Failed to create floodlist while adding %slot%:%port% to vlan ID %vlanId% floodlist during port up notice

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.FailToFindVirPortInfo2

Description

HAL needs to remove the port back into the floodlists because it became unactive, but it failed to find the virtual port information. Something is wrong with the SW data structures

Remedy

Try the operation again

Severity

Error

Message Text

While processing port down notification, HAL couldn't find the virtual port information for %slot%:%port% in vlanId %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.ConduitInitFailed

Description

Conduit is the mechanism used for the MM and IO to communicate. It has to be initialized during system bootup otherwise no information can be exchanged for this feature

Remedy

Try rebooting the system again or contact support

Severity

Error

Message Text

Initialization of the MM/IO conduit for Private VLAN and VLAN Translation failed with the following error message: %error%

Message Parameters

| Name | Type |
|-------|------|
| error | ulnt |

HAL.VLAN.ConduitSendFailed

Description

MM talks to the IO via the conduit to program the Hardware.

Remedy

Retry to the operation again.

Severity

Error

Message Text

Sending conduit messages from MM to IO Private VLAN/VLAN Translation failed with the following error message: %error% for slotMask %slotMask%

Message Parameters

| Name | Type |
|----------|------|
| error | ulnt |
| slotMask | ulnt |

HAL.VLAN.ProgramHWTblFailed

Description

Hardware tables needed to be setup in order for the feature to work properly. However, it failed so the feature will not work as expected.

Remedy

Retry to the operation again.

Severity

Error

Message Text

HW tables programming of vlan ID %vlanId% has failed while adding subscriber/
member vlan

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.GotNULLVlanInfo

Description

The code received NULL for VLAN information; hence, it can't process any further

Remedy

Retry to the operation again.

Severity

Error

Message Text

Received NULL VLAN Info

HAL.VLAN.StoreTagModFailed

Description

During configuration, the system failed to store the egress tag modification index

Remedy

No remedy is available.

Severity

Error

Message Text

Failed to store egress tag modification index for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.RestoreVLANFLFailed

Description

The system failed to restore the default VLAN floodlist during configuration tear down

Remedy

No remedy is available.

Severity

Error

Message Text

Failed to restore the default VLAN floodlist for %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.PortTXMIFindFailed

Description

Couldn't get the TXMI required for the port

Remedy

No remedy is available.

Severity

Error

Message Text

Failed to find the transmit modification index (TXMI) for slot:port %slot%:%port%

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |
| port | Port |

HAL.VLAN.SetEncodingTblFail

Description

Custom floodlist configuration has failed because setting of port encoding table has failed

Remedy

No remedy is available.

Severity

Error

Message Text

Setting of port encoding table for vlan %vlanId% slot:port %slot%:%port% has failed

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |
| slot | Slot |
| port | Port |

HAL.VLAN.ClearEncodingTblFail

Description

Custom floodlist tear down has failed because clearing of port encoding table has failed

Remedy

No remedy is available.

Severity

Error

Message Text

Clearing of port encoding table for vlan %vlanId% slot:port %slot%:%port% has failed with error code %rc%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |
| slot | Slot |
| port | Port |
| rc | sInt |

HAL.VLAN.CreateCustomFLFail

Description

Creation of custom floodlist has failed

Remedy

No remedy is available.

Severity

Error

Message Text

Creating custom floodlist failed for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.FindTagModFail

Description

Finding TXMI for vlan has failed

Remedy

No remedy is available.

Severity

Error

Message Text

Unable to find tag modification (txmi) for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.ConduitSendInfoFail

Description

During configuration, sending message to IO has failed. Configuration is not completed.

Remedy

retry the operation again because the conduit could be overloaded

Severity

Error

Message Text

Sending information to IO through conduit failed for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.DeleteCustomFLFail

Description

Deletion of custom floodlist has failed

Remedy

No remedy is available.

Severity

Error

Message Text

Deleting custom floodlist failed for vlan %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.DeIPVLANFail

Description

Failed to delete PVLAN because not enough information was received in the function

Remedy

No remedy is available.

Severity

Error

Message Text

Deleting of PVLAN has failed because PVLAN and VLAN name is NULL

HAL.VLAN.ChkptGotNullVlanFL

Description

The VLAN information the backup MM got from master MM was NULL.

Remedy

No remedy is available.

Severity

Error

Message Text

Checkpointing on backup MM got Null for VLAN information. num_data: %error%

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

HAL.VLAN.ChkptGotNullPortList

Description

The port list that the backup MM got from master MM was NULL.

Remedy

No remedy is available.

Severity

Error

Message Text

Checkpointing on backup MM got Null for port list. num_data: %error%

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

HAL.VLAN.ChkptGotNullPortTxmi

Description

The port TXMI that the backup MM got from master MM was NULL.

Remedy

No remedy is available.

Severity

Error

Message Text

Checkpointing on backup MM got Null for port transmit modification index (txmi).
num_data: %error%

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

HAL.VLAN.ChkptGotNullVlanIns

Description

The VLAN instance that the backup MM got from master MM was NULL.

Remedy

No remedy is available.

Severity

Error

Message Text

Checkpointing on backup MM got Null for VLAN instance. num_data: %error%

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

HAL.VLAN.ChkptGotNullTxmi

Description

The TXMI that the backup MM got from master MM was NULL.

Remedy

No remedy is available.

Severity

Error

Message Text

Checkpointing on backup MM got Null for transmit modification index (txmi).
num_data: %error%

Message Parameters

| Name | Type |
|-------|------|
| error | sInt |

HAL.VLAN.ChkptMsgBadInfo

Description

The checkpointing that the backup MM got from master MM has NULL data or length

Remedy

Redo the operation again

Severity

Error

Message Text

Checkpointing message from master MM has bad no data or length

HAL.VLAN.ConduitAllocFailed

Description

The system failed to allocate space to be used for sending messages through the conduit to the IO from the MM

Remedy

Retry to the operation again.

Severity

Error

Message Text

Failed to allocate space for conduit message of size %size%

Message Parameters

| Name | Type |
|------|------|
| size | ulnt |

HAL.VLAN.GotNullPortInstance

Description

The code received NULL for port instance; hence, it can't process any further

Remedy

Retry to the operation again.

Severity

Error

Message Text

Received NULL for port instance for ports in vlan %vlanId% while sending information over to IO from MM

Message Parameters

| Name | Type |
|--------|----------|
| vlanId | VLAN-tag |

HAL.VLAN.TrunkCustomFLFailed

Description

When a new master is selected in the trunk group, that master port has to be added to the custom floodlist. This addition has failed.

Remedy

Remove the trunk group from the VLAN and add it again.

Severity

Error

Message Text

Master trunk port in trunk group has just switched to %slot%:%port%, but has failed to initialize custom floodlist for VLAN ID %vlanId%

Message Parameters

| Name | Type |
|--------|----------|
| slot | Slot |
| port | Port |
| vlanId | VLAN-tag |

HAL.VLAN.SyncPVLANFail

Description

During IO slot boot up, PVLAN library sync from MM to IO has failed. PVLAN or VLAN Translation will not behave properly.

Remedy

Library sync is done at IO boot up. "disable slot <slot>" will turn off the slot. "enable slot <slot>" will power it up again.

Severity

Error

Message Text

During bootup of IO %slot%, PVLAN library sync with IO has failed

Message Parameters

| Name | Type |
|------|------|
| slot | Slot |

HAL.VLAN.AddIngrVLANXlateFail

Description

An attempt to add a VLAN translation hardware entry on the specified port failed. The reason_string parameter may give additional details on why this occurred. This may cause traffic destined to oldVlanId to not be handled properly.

Remedy

If the reason_string indicates a resource full condition then reduce the total number of VLANs being used for mapped services. Otherwise, deleting and re-adding VLAN memberships or saving and rebooting may restore the hardware programming.

Severity

Error

Message Text

Failed to add ingress vlan translation entry for vlanid %oldVlanId% to vlanid %newVlanId% on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|----------|
| oldVlanId | VLAN-tag |
| newVlanId | VLAN-tag |
| port | String |
| reason_string | String |

HAL.VLAN.EnblIngrVLANXlateFail

Description

The enable VLAN translation operation failed to execute successfully. The reason_string parameter may give additional details on why this occurred.

Remedy

Vlan translation is required to handle tagged VLANs when there is also an untagged VMAN membership association. Since this operation failed, VLAN traffic may be tunneled through the VMAN unexpectedly. If this was a transient failure, deleting and re-adding the VLAN memberships on the specified port may restore this setting.

Severity

Error

Message Text

Failed to add ingress vlan translation entry on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|--------|
| port | String |
| reason_string | String |

HAL.VLAN.DelIngrVLANXlateFail

Description

An attempt to delete a VLAN translation hardware entry on the specified port failed. The reason_string parameter may give additional details on why this occurred.

Remedy

Saving the configuration and rebooting should restore the proper VLAN translation hardware programming.

Severity

Error

Message Text

Failed to delete ingress vlan translation entry for vlanid %oldVlanId% on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|----------|
| oldVlanId | VLAN-tag |
| port | String |
| reason_string | String |

HAL.VLAN.StrtDfrSendUpdt

Description

HAL has received VPST Set state event from VLAN manager. This EMS message is used to profile various processing for this event

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Data

Message Text

```
Start Defer Update send to IO. Profiling Data for %str% Vlan %vlanTick% Fdb
%fdbTick% vpst %vpstTick% vpstSnd %vpstSndTick% psiAdd %psiAddTick% psiAddChk
%psiAddChkTick% psiAddIoSnd %psiAddIoSndTick% feAdd %feAddTick% feAddChk
%feAddChkTick%
```

Message Parameters

| Name | Type |
|-----------------|--------|
| str | String |
| vlanTick | ulnt |
| fdbTick | ulnt |
| vpstTick | ulnt |
| vpstSndTick | ulnt |
| psiAddTick | ulnt |

HAL.VLAN.RxStatsFiltRsrcUnavail

Description

Filtering resources required for the collection of receive statistics on the given VLAN and port are not available. The configuration for VLAN statistics collection on this port/VLAN combination has not been accepted.

Remedy

Transmit statistics may be gathered using the "tx-only" option for the "configure ports [<port_list>|all] monitor vlan <vlan_name>" command. Resources may be freed by unconfiguring features using ingress filtering hardware such as ACLs. Use the "show access-list usage [acl-rule | acl-slice] port <port>" command to display current filtering hardware usage.

Severity

Error

Message Text

Unable to add filter for receive statistics on VLAN %vlan% port %port%.

Message Parameters

| Name | Type |
|------|--------|
| vlan | VLAN |
| port | String |

HAL.VLAN.TxStatsFiltRsrcUnavail

Description

Filtering resources required for the collection of transmit statistics on the given VLAN and port are not available. The configuration for VLAN statistics collection on this port/VLAN combination has not been accepted.

Remedy

Receive statistics may be gathered using the "rx-only" option for the "configure ports [<port_list>|all] monitor vlan <vlan_name>," command. Resources may be freed by unconfiguring features using egress filtering hardware such as egress ACLs. Use the "show access-list usage [acl-rule | acl-slice] port <port>," command to display current filtering hardware usage.

Severity

Error

Message Text

Unable to add filter for transmit statistics on VLAN %vlan% port %port%.

Message Parameters

| Name | Type |
|------|--------|
| vlan | VLAN |
| port | String |

HAL.VLAN.DeIVLANXlateRangeFail

Description

An attempt to delete a VLAN translation range hardware entry on the specified port failed. The reason_string parameter may give additional details on why this occurred.

Remedy

If the reason_string indicates "Entry not found" and there was a previous occurrence of HAL.VLAN.AddVLANXlateRangeFail then this can be normal and no action is required. Otherwise, saving the configuration and rebooting should restore the proper VLAN translation hardware programming.

Severity

Error

Message Text

Failed to delete ingress VLAN translation entry for VLAN IDs %firstVlanId%-
%lastVlanId% to vlanid %newVlanId% on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|----------|
| firstVlanId | VLAN-tag |
| lastVlanId | VLAN-tag |
| newVlanId | VLAN-tag |
| port | String |
| reason_string | String |

HAL.VLAN.AddVLANXlateRangeFail

Description

An attempt to add a VLAN translation range hardware entry on the specified port failed. The reason_string parameter may give additional details on why this occurred. This may cause traffic destined to firstVlanId-lastVlanId to not be handled properly.

Remedy

If the reason_string indicates a resource full condition then reduce the total number of VLANs being used for mapped services. Otherwise, deleting and re-adding VLAN memberships or saving and rebooting may restore the hardware programming.

Severity

Error

Message Text

Failed to add ingress VLAN translation entry for VLAN IDs %firstVlanId%-
%lastVlanId% to vlanid %newVlanId% on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|----------|
| firstVlanId | VLAN-tag |
| lastVlanId | VLAN-tag |
| newVlanId | VLAN-tag |
| port | String |
| reason_string | String |

HAL.VLAN.AddEgrVLANXlateFail

Description

An attempt to add an egress VLAN translation hardware entry on the specified port failed. The reason_string parameter may give additional details on why this occurred. This may cause traffic destined to oldVlanId to not be handled properly.

Remedy

If the reason_string indicates a resource full condition then reduce the total number of VLANs being used for mapped services. Otherwise, deleting and re-adding VLAN memberships or saving and rebooting may restore the hardware programming.

Severity

Error

Message Text

Failed to add egress VLAN translation entry for VLAN ID %oldVlanId% to VLAN ID %newVlanId% on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|----------|
| oldVlanId | VLAN-tag |
| newVlanId | VLAN-tag |
| port | String |
| reason_string | String |

HAL.VLAN.DeIEgrVLANXlateFail

Description

An attempt to delete an egress VLAN translation hardware entry on the specified port failed. The reason_string parameter may give additional details on why this occurred.

Remedy

If the reason_string indicates "Entry not found" and there was a previous occurrence of HAL.VLAN.AddEgrVLANXlateFail then this can be normal and no action is required. Otherwise, saving the configuration and rebooting should restore the proper VLAN translation hardware programming.

Severity

Error

Message Text

Failed to delete egress VLAN translation entry for VLAN ID %oldVlanId% on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|----------|
| oldVlanId | VLAN-tag |
| port | String |
| reason_string | String |

HAL.VLAN.EnableEgrVLANXlateFail

Description

The enable egress VLAN translation operation failed to execute successfully. The reason_string parameter may give additional details on why this occurred. Due to this failure, VLAN traffic may not be properly translated when egressing the specified port.

Remedy

Rebooting and attempting to issue the configuration again may resolve this condition.

Severity

Error

Message Text

Failed to enable egress VLAN translation on port %port% due to %reason_string%

Message Parameters

| Name | Type |
|---------------|--------|
| port | String |
| reason_string | String |

HAL.VMAN.AddSVIDFail

Description

An internal software error has occurred while adding a port with a translated SVID to a VMAN. This indicates that the translated port has not been added correctly to the VMAN and the translated port may not function properly.

Remedy

Delete and readd the translated port to the VMAN. If the problem persists, Increase the log severity level of HAL.VMAN and report this problem to the customer support with the output of "show log" command.

Severity

Error

Message Text

Failed to add translated SVID %vmanxsvide% for the port %slot%:%port% in VMAN %vmanname%

Message Parameters

| Name | Type |
|------------|----------|
| slot | Slot |
| port | Port |
| vmanxsvide | VLAN-tag |
| vmanname | String |

HAL.VMAN.SetUpdtSVIDFail

Description

An internal software error has occurred while updating a translated port with a new translated SVID to a VMAN. This indicates that the translated port has not been updated correctly to the VMAN and the translated port may not function properly.

Remedy

Delete and readd the translated port with the new SVID to the VMAN. If the problem persists, Increase the log severity level of HAL.VMAN and report this problem to the customer support with the output of "show log" command.

Severity

Error

Message Text

Failed to set the translated SVID while updating the translated SVID %vmanxsvid% for the port %slot%:%port% in VMAN %vmanname%

Message Parameters

| Name | Type |
|-----------|----------|
| slot | Slot |
| port | Port |
| vmanxsvid | VLAN-tag |
| vmanname | String |

HAL.VMAN.DelPortUpdtSVIDFail

Description

An internal software error has occurred while updating a translated port with a new translated SVID to a VMAN. This indicates that the translated port has not been updated correctly to the VMAN and the translated port may not function properly.

Remedy

Delete and readd the translated port with the new SVID to the VMAN. If the problem persists, increase the log severity level of HAL.VMAN and report this problem to the customer support with the output of "show log" command.

Severity

Error

Message Text

Failed to delete the port while updating the translated SVID %vmanxsvid% for the port %slot%:%port% in VMAN %vmanname%

Message Parameters

| Name | Type |

Info

Message Text

Repaired egress block filter on slot %slot% unit %unit%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |

HAL.VSM.RepairFiltFail

Description

This log indicates that an attempt to repair the specified egress blocking filter failed after a node failover. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Failed to repair egress block filter on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

HAL.VSM.InstHwFiltFail

Description

An attempt to install an egress block mask filter to hardware has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Filter hardware install failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

HAL.VSM.FiltHwFull

Description

An attempt to install an egress block mask filter to hardware has failed due to a resource condition.

Remedy

Unconfigure other features which use the hardware ACL resource and re-try configuration.

Severity

Warning

Message Text

Filter hardware full on slot %slot%, unit %unit%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |

HAL.VSM.RecvUnsuprtCkptVer

Description

The backup node received a checkpoint message with an unsupported version identifier. Since the backup node is not in sync a node failover may result in unexpected behavior.

Remedy

Make sure that both the master and the backup nodes are running identical versions of EXOS.

Severity

Warning

Message Text

Received unsupported checkpoint version %ver%

Message Parameters

| Name | Type |
|------|------|
| ver | ulnt |

HAL.VSM.ReconcilFiltInSync

Description

After a node failover and during filter reconciliation, the specified block filter was found to be in sync.

Remedy

There is no remedy because there is no problem to be resolved.

Severity

Debug-Verbose

Message Text

Found VSM block filterid %fid% for %slotPort% unit %unit%, in sync

Message Parameters

| Name | Type |
|----------|----------|
| fid | ulnt |
| slotPort | SlotPort |
| unit | ulnt |

HAL.VSM.ReconcilAddFilt

Description

After a node failover and during filter reconciliation, the specified block filter was found to not be in sync. As a result, the filter was re-added.

Remedy

There is no remedy because there is no problem to be resolved. This message is for informational purposes only.

Severity

Info

Message Text

Found VSM block filterid %fid% for %slotPort% unit %unit%, not in sync added

Message Parameters

| Name | Type |
|----------|----------|
| fid | ulnt |
| slotPort | SlotPort |
| unit | ulnt |

HAL.VSM.ReconcilDelFilt

Description

After a node failover and during filter reconciliation, the specified block filter was found to not be in sync. As a result, the filter was deleted.

Remedy

There is no remedy because there is no problem to be resolved. This message is for informational purposes only.

Severity

Info

Message Text

Found VSM block filterid %fid% for %slotPort% unit %unit%, not in sync deleted

Message Parameters

| Name | Type |
|----------|----------|
| fid | ulnt |
| slotPort | SlotPort |
| unit | ulnt |

HAL.VSM.FastCnvrgeCtrlSyncFail

Description

The access-list filter associated with MLAG fast convergence-control was not programmed on the slot during initialization. Traffic destined to the associated MLAG group which is received on the slot will be dropped.

Remedy

The user can try rebooting the slot or discontinue using MLAG fast convergence-control mode by issuing "configure mlag port convergence-control conserve-access-lists".

Severity

Error

Message Text

MLAG fast convergence-control has failed to synchronize on slot %slot%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |

HAL.VSM.SetHwFiltClassIdFail

Description

An attempt to set classId on egress block mask filter to hardware has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Filter hardware classId set failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.VSM.SelHwFiltClassIdFail

Description

An attempt to set classId selection method on egress block mask filter to hardware has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Filter hardware classId selection failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

Applicable Platforms

- Summit family switches
- I386 virtual machine switch simulator

HAL.VSM.SetL2DestHitQualFail

Description

An attempt to set the packet resolution criterion on egress block mask filter to hardware has failed. The specified return code value is provided by the low level driver which has only internal significance.

Remedy

This is an unexpected internal condition needing technical assistance. Contact technical support with the following information: - output of "show tech"

Severity

Error

Message Text

Filter hardware packet resolution matching failed on slot %slot%, unit %unit% return code %rv%

Message Parameters

| Name | Type |
|------|------|
| slot | ulnt |
| unit | ulnt |
| rv | ulnt |

Applicable Platforms

- Summit family switches

- I386 virtual machine switch simulator

HAL.VXLAN.DebugData

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

No action required - Informational message only.

Severity

Debug-Data

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.VXLAN.ParmNull

Description

An internal function was called with a NULL pointer. This condition is not expected and the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

Provide the configuration, and the "show log" output. Also, check the scalability limit and compare this with the current configurations.

Severity

Debug-Verbose

Message Text

Null pointer %arg%

Message Parameters

| Name | Type |
|------|--------|
| arg | String |

HAL.VXLAN.AllocMemFail

Description

Memory for the displayed object could not be allocated. This may be due to the system running low on memory. This will result in incorrect programming of hardware tables and will impact forwarding of tenant traffic.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim memory.

Severity

Error

Message Text

Memory allocation failed when trying to allocate a %obj% structure.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |

HAL.VXLAN.AllocHwFail

Description

Hardware resource for the displayed object could not be allocated. This will result in incorrect programming of hardware tables and will impact forwarding of tenant traffic.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim the resource.

Severity

Error

Message Text

Hardware resource %obj% allocation failed.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |

HAL.VXLAN.VNetExist

Description

An internal function was called to create virtual network that already exists. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual network with internal id %vnId% exists.

Message Parameters

| Name | Type |
|------|--------|
| vnId | uInt32 |

HAL.VXLAN.VNetNotFnd

Description

An internal function was called for a virtual network that does not exist. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual network with internal id %vnId% is not found.

Message Parameters

| Name | Type |
|------|--------|
| vnId | uInt32 |

HAL.VXLAN.VNetHwOperFail

Description

Hardware programming error for virtual network. This will impact forwarding of tenant traffic. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual network hardware resource %op% failed for virtual network with internal id %vnId%, rc=%rc%.

Message Parameters

| Name | Type |
|------|--------|
| op | String |
| vnId | uInt32 |
| rc | uInt32 |

HAL.VXLAN.VNetInsFail

Description

This is an internal error caused by failure of inserting into internal data structure.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Fail to insert virtual network with internal id %vnId% into data structure.

Message Parameters

| Name | Type |
|------|--------|
| vnId | uInt32 |

HAL.VXLAN.VNetDelFailHasPort

Description

Virtual network that has virtual ports cannot be deleted. Deletion of virtual ports must happen first and it should, hence this is an internal error.

Remedy

Provide the configuration, and the "show log" output.

Severity

Error

Message Text

Deletion of virtual network with internal id %vnId% failed because it has virtual ports.

Message Parameters

| Name | Type |
|------|--------|
| vnId | uInt32 |

HAL.VXLAN.VLANNotAttach

Description

The vlan has not been attached to the virtual network. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

VLAN %vlan% isn't attached to virtual network with internal id %vnId%.

Message Parameters

| Name | Type |
|------|--------|
| vlan | String |
| vnId | uInt32 |

HAL.VXLAN.VNetAlrdyVLANAttach

Description

A vlan has been attached to the virtual network. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

VLAN %avlan% is already attached to virtual network internal id %vnId%. VLAN %nvlan% can not be added.

Message Parameters

| Name | Type |
|-------|--------|
| avlan | String |
| vnId | uInt32 |
| nvlan | String |

HAL.VXLAN.VPortInUse

Description

A virtual port that represents tenant access port or remote endpoint is in use.

Remedy

Retry the operation. If the error persists, provide the configuration, and the "show log" output.

Severity

Error

Message Text

Virtual port %vp% is in use.

Message Parameters

| Name | Type |
|------|--------|
| vp | uInt32 |

HAL.VXLAN.TunlAlrdyExist

Description

An internal function was called to create a tunnel that already exists. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Tunnel for remote endpoint %dst% and local endpoint %src% exists.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.InsTunlFail

Description

This is an internal error cause by failure of inserting into internal data structure.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Fail to insert tunnel for remote endpoint %dst% and local endpoint %src% into data structure.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.TunlNotFnd

Description

An internal function was called for a tunnel that does not exist. This can happen due to timing issue.

Remedy

Provide the configuration, and the "show log" output.

Severity

Debug-Verbose

Message Text

Tunnel for remote endpoint %dst% and local endpoint %src% does not exist.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.TunlInUse

Description

Tunnel is in use. Not an error because there is a try to delete and if there is an error, a retry will be done later.

Remedy

Retry the operation. If the error persists, provide the configuration, and the "show log" output.

Severity

Debug-Verbose

Message Text

Tunnel for remote endpoint %dst% and local endpoint %src% is in use.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.AllocSpecHwFail

Description

Hardware resource for the displayed object could not be allocated. This will result in incorrect programming of hardware tables and will impact forwarding of tenant traffic.

Remedy

Provide the configuration, and the "show log" output.

Severity

Critical

Message Text

Hardware resource %obj% allocation failed for id %id%.

Message Parameters

| Name | Type |
|------|--------|
| obj | String |
| id | ulnt32 |

HAL.VXLAN.InsVPortFail

Description

This is an internal error cause by failure of inserting into internal data structure.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Fail to insert virtual port %vp% for virtual-network with internal id %vnId%.

Message Parameters

| Name | Type |
|------|--------|
| vp | uInt32 |
| vnId | uInt32 |

HAL.VXLAN.TunIEgrAlrdyExist

Description

Tunnel egress already exists.

Remedy

Provide the configuration, and the "show log" output.

Severity

Debug-Verbose

Message Text

Tunnel for remote endpoint %dst% and local endpoint %src% egress for next hop %nhip% exists.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |
| nhip | IP |

HAL.VXLAN.InsTunEgrFail

Description

This is an internal error cause by failure of inserting into internal data structure.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Fail to insert tunnel for remote endpoint %dst% and local endpoint %src% egress next hop %nhip% port %inst% into data structure.

Message Parameters

| Name | Type |
|------|--------|
| dst | IP |
| src | IP |
| nhip | IP |
| inst | uInt32 |

HAL.VXLAN.TunEgrNotFnd

Description

Tunnel egress does not exist. This most likely is an internal error.

Remedy

Provide the configuration, and the "show log" output.

Severity

Warning

Message Text

Tunnel for remote endpoint %dst% and local endpoint %src% egress for next hop %nhip% not found (%op%: %fam% %intf%).

Message Parameters

| Name | Type |
|------|--------|
| dst | IP |
| src | IP |
| nhip | IP |
| op | String |
| fam | uInt32 |
| intf | uInt32 |

HAL.VXLAN.LifNotFnd

Description

VLAN manager function returned a NULL port interface for port instance

Remedy

Provide the configuration, and the "show log" output.

Severity

Error

Message Text

Port with internal instance %instance% not found.

Message Parameters

| Name | Type |
|----------|--------|
| instance | uInt32 |

HAL.VXLAN.TunlIdNotFnd

Description

An internal function was called for a tunnel that does not exist. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Tunnel with internal id %id% does not exist.

Message Parameters

| Name | Type |
|------|--------|
| id | uInt32 |

HAL.VXLAN.ECMPHwOperFail

Description

Hardware programming error for ECMP. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

ECMP hardware %op% failed for virtual port %vp%, rc=%rc%.

Message Parameters

| Name | Type |
|------|--------|
| op | String |
| vp | uInt32 |
| rc | uInt32 |

HAL.VXLAN.AccessVportNotFnd

Description

A virtual port that represents tenant access port is not found. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Access virtual port for virtual-network instance %vn% vport %vpif% not found.

Message Parameters

| Name | Type |
|------|--------|
| vn | uint32 |
| vpif | uint32 |

HAL.VXLAN.VNetForVLANNotFnd

Description

A virtual network for the tenant vlan is not found. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual-network for vlan instance %vlan% not found.

Message Parameters

| Name | Type |
|------|--------|
| vlan | uInt32 |

HAL.VXLAN.BatchTypeInv

Description

Invalid batch type is programmed to the slot. This is a programming error and should not happen, hence it is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Invalid batch type %type% for slot %slot%.

Message Parameters

| Name | Type |
|------|--------|
| type | uInt32 |
| slot | uInt32 |

HAL.VXLAN.BatchCmmtFail

Description

Fail to commit batch to the slot. This is a hardware programming error and should not happen, hence it is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

VXLAN batch commit failed for slot %slot%, error %message%.

Message Parameters

| Name | Type |
|---------|--------|
| slot | uInt32 |
| message | String |

HAL.VXLAN.CkptTypeInv

Description

Checkpoint message with unknown type should not happen. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Invalid checkpoint type %type%.

Message Parameters

| Name | Type |
|------|--------|
| type | uInt32 |

HAL.VXLAN.VPifNotFnd

Description

VLAN manager does not have this VPIF. This should not happen, hence it is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

VPIF instance %vpif% or vlan instance %vlan%, port inst %port%, vpif vid %vid% not found.

Message Parameters

| Name | Type |
|------|--------|
| vpif | uInt32 |
| vlan | uInt32 |
| port | uInt32 |
| vid | uInt32 |

HAL.VXLAN.VPortNotFnd

Description

A virtual port that represents tenant access port or remote endpoint is not found. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual port %vp% for virtual network with internal id %vnId% is not found.

Message Parameters

| Name | Type |
|------|--------|
| vp | uInt32 |
| vnId | uInt32 |

HAL.VXLAN.VNetHwRsrcNotFnd

Description

An internal function was called for a vfi that does not exist. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Cannot find a corresponding virtual network for hardware resource vfi %vfi%.

Message Parameters

| Name | Type |
|------|--------|
| vfi | uInt32 |

HAL.VXLAN.PortTypeUnk

Description

Port type is not recognized. This should not happen thus and is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Unknown VXLAN port type %type%.

Message Parameters

| Name | Type |
|------|--------|
| type | uInt32 |

HAL.VXLAN.TunlMismatch

Description

This mismatch happens during checkpointing. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Tunnel %type% virtual port hardware resource for remote endpoint %dst% and local endpoint %src% supposed to be %vp1% instead of %vp2%.

Message Parameters

| Name | Type |
|------|--------|
| type | String |
| dst | IP |
| src | IP |
| vp1 | uInt32 |
| vp2 | uInt32 |

HAL.VXLAN.VPortAlrdyExist

Description

Hardware resource virtual port allocation fails due to there already is a virtual port with the same index. This can happen during addition of a remote VXLAN FDB entry.

Remedy

This is informational message.

Severity

Info

Message Text

Virtual port %vp% exists.

Message Parameters

| Name | Type |
|------|--------|
| vp | uInt32 |

HAL.VXLAN.TunlPortTypeUnk

Description

Tunnel has a port type. This is an unknown type and is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Unknown port type %type% for tunnel with remote endpoint %dst% and local endpoint %src%.

Message Parameters

| Name | Type |
|------|---------|
| type | ulInt32 |
| dst | IP |
| src | IP |

HAL.VXLAN.TunlHwOperFail

Description

Fail to program hardware resource for a tunnel. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Failed to set hardware resource for tunnel with remote endpoint %dst% and local endpoint %src%.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.PifSlotPortNotFnd

Description

VLAN manager function returned an error for the port.

Remedy

Provide the configuration, and the "show log" output.

Severity

Error

Message Text

No pif found for port %slot%:%port%.

Message Parameters

| Name | Type |
|------|--------|
| slot | uInt32 |
| port | uInt32 |

HAL.VXLAN.SetAccessEgrVPortFail

Description

Hardware programming to set the egress of an access virtual port failed. Forwarding is impacted. This should not happen and is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Failed to set access egress for virtual port %vp%.

Message Parameters

| Name | Type |
|------|--------|
| vp | uInt32 |

HAL.VXLAN.SetVPortHwFail

Description

Hardware programming to set a virtual port failed. Forwarding is impacted. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Failed to set virtual port %vp%.

Message Parameters

| Name | Type |
|------|--------|
| vp | ulnt32 |

HAL.VXLAN.ParmInv

Description

An internal function was called with an invalid parameter. This condition is not expected and the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Invalid parameter %arg%. Reason: %str%.

Message Parameters

| Name | Type |
|------|--------|
| arg | String |
| str | String |

HAL.VXLAN.McastEgrHwOperFail

Description

Hardware programming to set multi-destination egress hardware resource failed. Multidestination traffic is impacted. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

%op% mcast egress port failed for VFI %vfi% VP %vp% IPMC %ipmc% PIF %pif%.

Message Parameters

| Name | Type |
|------|--------|
| op | String |
| vfi | uInt32 |
| vp | uInt32 |
| ipmc | uInt32 |
| pif | uInt32 |

HAL.VXLAN.AccessVPortMismatch

Description

This mismatch happens during checkpointing. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Access virtual port supposed to be %vp1% instead of %vp2%.

Message Parameters

| Name | Type |
|------|--------|
| vp1 | uInt32 |
| vp2 | uInt32 |

HAL.VXLAN.DebugSummary

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.VXLAN.TunlNotAssoc

Description

Deletion of a network port of a virtual network failed because there is no tunnel associated with the port. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Tunnel with remote endpoint %dst% and local endpoint %src% is not associated with virtual network with internal id %id%.

Message Parameters

| Name | Type |
|------|--------|
| dst | IP |
| src | IP |
| id | uInt32 |

HAL.VXLAN.NotSuprt

Description

This slot does not support VXLAN.

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

VXLAN is not supported on slot %slot%.

Message Parameters

| Name | Type |
|------|--------|
| slot | uInt32 |

HAL.VXLAN.VLANNotFnd

Description

VLAN manager function returned an error for the vlan. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Vlan with instance %inst% is not found.

Message Parameters

| Name | Type |
|------|--------|
| inst | uInt32 |

HAL.VXLAN.VNIDNotFnd

Description

Fail to find a virtual network with a matching VNID. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual network with VNID %vnid% is not found.

Message Parameters

| Name | Type |
|------|--------|
| vnid | uInt32 |

HAL.VXLAN.NetVPortNotFound

Description

A virtual port that represents a remote endpoint is not found. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Network virtual port for virtual network with internal id %vpn%, type %type%, internal tunnel id %tunnel% and IPMC index %ipmc% is not found.

Message Parameters

| Name | Type |
|--------|--------|
| vpn | uInt32 |
| type | uInt32 |
| tunnel | uInt32 |
| ipmc | uInt32 |

HAL.VXLAN.VNetTenantVLANNone

Description

An internal function was called for a virtual network that does not exist. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Virtual network with internal id %vpnId% does not have tenant vlan.

Message Parameters

| Name | Type |
|-------|--------|
| vpnId | uint32 |

HAL.VXLAN.BatchReadFail

Description

Fail to read batch from the slot. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

VXLAN batch read failed for slot %slot%, error %message%.

Message Parameters

| Name | Type |
|---------|--------|
| slot | uInt32 |
| message | String |

HAL.VXLAN.VNetHwResrcReduc

Description

Hardware resource for the displayed object is impacted by resource reduction. This will result in incorrect programming of hardware tables and will impact forwarding.

Remedy

Check the run-time scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim the resource.

Severity

Error

Message Text

Virtual network hardware resource reduction causes virtual network with internal id %vpnId% to be invalid.

Message Parameters

| Name | Type |
|-------|--------|
| vpnId | uInt32 |

HAL.VXLAN.VPortHwResrcReduc

Description

Hardware resource for the displayed object is impacted by resource reduction. This will result in incorrect programming of hardware tables and will impact forwarding.

Remedy

Check the run-time scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim the resource.

Severity

Error

Message Text

Virtual port hardware resource reduction causes virtual port %vp% to be invalid.

Message Parameters

| Name | Type |
|------|--------|
| vp | uInt32 |

HAL.VXLAN.CallFncForPrimOnly

Description

This is an internal error since the backup executes a function that is intended to be called on the primary. This will result in incorrect programming of hardware tables and internal data structure.

Remedy

This is a severe internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Function %func% should only be called on primary slot.

Message Parameters

| Name | Type |
|------|--------|
| func | String |

HAL.VXLAN.InitSlotFail

Description

Problem initializing the slot. The system is not functioning as expected.

Remedy

Contact technical support with the following information: configuration, and the "show log" output.

Severity

Error

Message Text

Fail to initialize slot %slot%: %format%

Message Parameters

| Name | Type |
|--------|--------|
| slot | Slot |
| format | Printf |

HAL.VXLAN.VNetOperDown

Description

The displayed object is operationally down. This impacts forwarding.

Remedy

Check the run-time scalability limit and compare this with the current configurations. Reducing the system configuration may help bring up the object.

Severity

Warning

Message Text

Virtual network %name% (internal id %vpnId%) is operationally down.

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| vpnId | uInt32 |

HAL.VXLAN.VNetOperUp

Description

The displayed object is recovered from the state of operationally down.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Virtual network %name% (internal id %vpnId%) is recovered and operationally up.

Message Parameters

| Name | Type |
|-------|--------|
| name | String |
| vpnId | uInt32 |

HAL.VXLAN.DebugVerbose

Description

A condition has been detected that may interest a developer inspecting the data underlying system behavior

Remedy

No action required - Informational message only.

Severity

Debug-Verbose

Message Text

%format%

Message Parameters

| Name | Type |
|--------|--------|
| format | Printf |

HAL.VXLAN.VNIDNotFndBkup

Description

Fail to find a virtual network with a matching VNID on the backup slot. This may happen during scaled configuration due to timing.

Remedy

No action required. Eventually the backup will resolve this warning.

Severity

Warning

Message Text

Virtual network with VNID %vnid% is not found on the backup slot.

Message Parameters

| Name | Type |
|------|--------|
| vnid | uInt32 |

HAL.VXLAN.VNetHwRsrcNotFndBkup

Description

An internal function was called for a vfi that does not exist on the backup slot. This may happen during scaled configuration due to timing.

Remedy

No action required. Eventually the backup will resolve this warning.

Severity

Warning

Message Text

Cannot find a corresponding virtual network for hardware resource vfi %vfi% on the backup slot.

Message Parameters

| Name | Type |
|------|--------|
| vfi | uInt32 |

HAL.VXLAN.TunlOperDown

Description

The displayed object is operationally down. This impacts forwarding. HW resource limit may have been reached, see Release Notes.

Remedy

Check the run-time limitation and compare this with the current configurations. Changing the system configuration such as deleting other tunnel(s) may help bring up the object.

Severity

Warning

Message Text

Tunnel with remote endpoint %dst% and local endpoint %src% is operationally down for %str%.

Message Parameters

| Name | Type |
|------|--------|
| dst | IP |
| src | IP |
| str | String |

HAL.VXLAN.TunlOperUp

Description

The displayed object is recovered from the state of operationally down.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Tunnel with remote endpoint %dst% and local endpoint %src% is operationally up.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.TunlDown

Description

The displayed object is down. Check the show output.

Remedy

No action required - Notification message only.

Severity

Notice

Message Text

Tunnel with remote endpoint %dst% and local endpoint %src% is down.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.TunIPifNotFnd

Description

VLAN manager function returned an error for the tunnel port. This might happens due to timing.

Remedy

No action required. If this causes a problem, contact technical support with the following information: configuration, and the "show log" output.

Severity

Debug-Summary

Message Text

Tunnel with remote endpoint %dst% and local endpoint %src% port interface is not found.

Message Parameters

| Name | Type |
|------|------|
| dst | IP |
| src | IP |

HAL.VXLAN.TunIIdVNetAssocNotFnd

Description

An internal function was called for an association that does not exists. This is an internal error.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, and the "show log" output.

Severity

Warning

Message Text

Tunnel having internal id %id% is not associated with virtual network having internal id %vnId%.

Message Parameters

| Name | Type |
|------|--------|
| id | uInt32 |
| vnId | uInt32 |

HAL.VXLAN.UnprocCkptMsgAtFailOvr

Description

This may be due to timing condition when there is a lot of configuration. This will impact forwarding of tenant traffic.

Remedy

Check the scalability limit and compare this with the current configurations by issuing commands such as: show virtual-networks, show virtual-network remote-endpoint vxlan, and show fdb. Reducing the system configuration may help.

Severity

Error

Message Text

There are %num% unprocessed checkpoint message(s) when failover starts.

Message Parameters

| Name | Type |
|------|--------|
| num | uInt32 |

HAL.VXLAN.L3IntfVIDInvlId

Description

This event occurs when the VID of the L3 interface is needed to program the hardware and that VID is not valid. This may be due to timing condition and may impact forwarding of tenant traffic.

Remedy

This is a rare internal condition needing technical assistance. Contact technical support with the following information: configuration, "show log", "debug ems show trace hal pibvnetcfg", "debug ems show trace hal pibvnetadj", "debug ems show trace hal pibvxlancfg", "debug hal show platform vxlan tunnel", "debug hal show platform vnet nbr", and "debug hal show ipv4adj hw-info" output.

Severity

Warning

Message Text

The VLAN ID (%vid%) of the L3 interface (%intf%) is not valid.

Message Parameters

| Name | Type |
|------|--------|
| intf | uInt32 |
| vid | uInt32 |

HAL.VXLAN.Error

Description

While programming the hardware, the specified error was encountered. This can result in incorrect programming of hardware tables and impact forwarding of tenant traffic.

Remedy

Check the scalability limit and compare this with the current configurations. Reducing the system configuration may help reclaim the resource.

Severity

Error

Message Text

%msg%

Message Parameters

| Name | Type |
|------|--------|
| msg | Printf |

HAL.VXLAN.VLANNotFndBkup

Description

VLAN manager function returned an error for the vlan on the backup slot. This may happen due to timing.

Remedy

No action required. Eventually the backup will resolve this warning.

Severity

Warning

Message Text

VLAN with instance %inst% is not found on the backup slot.

Message Parameters

| Name | Type |
|------|--------|
| inst | uInt32 |

HAL.VXLAN.LifNotFndBkup

Description

VLAN manager function returned a NULL port interface for port instance on the backup slot. This may happen due to timing.

Remedy

No action required. Eventually the backup will resolve this warning.

Severity

Warning

Message Text

Port with internal instance %instance% not found on the backup slot.

Message Parameters

| Name | Type |
|----------|--------|
| instance | uInt32 |

HAL.VXLAN.VPifNotFndBkup

Description

VLAN manager does not have this VPIF on the backup slot. This may happen due to timing.

Remedy

No action required. Eventually the backup will resolve this warning.

Severity

Warning

Message Text

VPif instance %vpif% or VLAN instance %vlan%, port instance %port%, VPif VID %vid% not found on the backup slot.

Message Parameters

| Name | Type |
|------|--------|
| vpif | uInt32 |
| vlan | uInt32 |
| port | uInt32 |
| vid | uInt32 |

HAL.WRED.GetStatsFail

Description

Getting values associated with WRED related counters from H/W has failed. This may be due to the lack of WRED Statistics support on the Hardware.

Remedy

Unconfigure WRED. Repeat WRED configuration. If this error message is observed after reconfiguration, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

WRED Statistics retrieval failed on port %port% with Error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| port | String |
| errmsg | String |

HAL.WRED.ClrStatsFail

Description

Clearing values associated with WRED related counters from H/W has failed. This may be due to the lack of WRED Statistics support on the Hardware or deficiency of software to reset the specific Hardware registers.

Remedy

Unconfigure WRED. Repeat WRED related configuration. If this error message is observed after reconfiguration, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

Failed to clear WRED Statistics on port %port% with Error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| port | String |
| errmsg | String |

HAL.WRED.MemAllocParmFail

Description

This is an error message stating that System cannot allocate memory for WRED parameters cache table.

Remedy

The exact remedy is dependant on the particular situation; but the problem may be resolved by retrying the operation when the resource becomes available.

Severity

Error

Message Text

Failed to calloc memory for WRED parameters

HAL.WRED.GetGenPortFail

Description

System failed to get generic port number for specified physical port. This may occur when incorrect physical port number is passed.

Remedy

Ensure that correct port number is passed. Unconfigure WRED. Reboot the switch. Repeat WRED configuration steps. If the problem persists after reboot, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

Failed to get generic port for physical port %port% with Error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| port | String |
| errmsg | String |

HAL.WRED.GetGenPortModportFail

Description

Constructing the Egress Mod-Port Type generic port based on slot number and port number has failed. This may be caused when the system is not able to get generic port number for specified physical port.

Remedy

Ensure that correct port number is passed. Unconfigure WRED. Reboot the switch. Repeat WRED configuration steps. If the problem persists after reboot, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

Failed to extract Modport type generic port for physical port %port% with Error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| port | String |
| errmsg | String |

HAL.WRED.GetEgrGenPortAchv

Description

A condition has been detected that may interest a developer determining the reason underlying some system behavior. The circumstances may be either very common or completely unexpected, but the information provided in the associated message is such that the internal workings of the system are exposed.

Remedy

No action required - Informational message only.

Severity

Debug-Summary

Message Text

Retrieved egress generic port number from underlying hardware for port %port%

Message Parameters

| Name | Type |
|------|--------|
| port | String |

HAL.WRED.CfgStatsFail

Description

Configuration of WRED statistics on the Hardware has failed. This may be due to the lack of WRED Statistics support on the Hardware.

Remedy

Unconfigure WRED. Reboot the switch. Repeat WRED configuration steps. If the problem persists after reboot, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

WRED Statistics configuration failed on port %port% with Error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| port | String |
| errmsg | String |

HAL.WRED.EnblStatsFail

Description

Enabling WRED statistics on the Hardware has failed. This may be due to the lack of WRED Statistics support on the Hardware.

Remedy

Unconfigure WRED. Reboot the switch. Repeat WRED configuration steps. If the problem persists after reboot, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

Enabling WRED Stats failed on port %port% with Error: %errormsg%

Message Parameters

| Name | Type |
|----------|--------|
| port | String |
| errormsg | String |

HAL.WRED.SetStatsPortUnavail

Description

WRED statistics setup has failed because of unavailablility of port. Port may not be in Ready state.

Remedy

Disable the port. Enable it again. Reboot the slot/switch if necessary. Unconfigure WRED. Repeat WRED configuration. If this error message is observed after reconfiguration, collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

Port %port% unavailable for WRED Statistics setup

Message Parameters

| Name | Type |
|------|--------|
| port | String |

HAL.WRED.GetQueEstBufSizFail

Description

The configured Buffer Pool Size for the Port's Queue from H/W is read to calculate the buffer size that would be used. This error message states that retrieval of buffer parameters for port range instance has failed. This may occur when incorrect unit number is passed.

Remedy

Appropriate value of unit number should be passed in order to retrieve queue's buffer parameters. Collect show tech output and contact technical support with suitable information.

Severity

Error

Message Text

%funct%: Failed to get queue's buffer parameters for port %port% with retCode %retCode%

Message Parameters

| Name | Type |
|---------|--------|
| funct | String |
| port | String |
| retCode | uint32 |

HAL.WRED.GetBufPortInv

Description

This system error occurs when we try to extract the total buffer space, dedicated space, and dynamic pool size from an invalid port number on a specific slot.

Remedy

Appropriate value of port number should be passed in order to retrieve total buffer space. Collect data from 'show tech' command and contact technical support with suitable information.

Severity

Error

Message Text

%funct%: Failed to extract buffer space due to Invalid port number

Message Parameters

| Name | Type |
|-------|--------|
| funct | String |

HAL.WRED.GetBufCfgPortInv

Description

This situation occurs when we try to extract the buffer pool configuration from an invalid port number on a specific slot.

Remedy

Appropriate value of port number should be passed in order to retrieve buffer pool configuration. Collect data from 'show tech' command and contact technical support with suitable information.

Severity

Error

Message Text

%funct%: Failed to extract buffer pool configuration due to invalid port number %port%

Message Parameters

| Name | Type |
|-------|--------|
| funct | String |
| port | String |

HAL.WRED.CfgFail

Description

This situation occurs when WRED parameters are not configured on the underlying Hardware. SDK API calls returns this error when WRED Discard values are not programmed on Hardware.

Remedy

Unconfigure WRED. Repeat WRED configuration steps. Reboot the switch. If problem persists after reboot, collect data from 'show tech' command and contact technical support with suitable information.

Severity

Error

Message Text

Failed to configure WRED parameters on the underlying Hardware on port %port% qosprofile %qos% with Error: %errmsg%

Message Parameters

| Name | Type |
|--------|--------|
| port | String |
| qos | uInt32 |
| errmsg | String |

HAL.WRED.ClrStatsInv

Description

This indicates that WRED counters/statistics are not cleared on specified slot.

Remedy

Repeat clearing the WRED statistics. Unconfigure WRED parameters. Reboot the switch. Repeat WRED configuration steps. If problem persists after reboot, collect data from 'show tech' command and contact technical support with suitable information.

Severity

Warning

Message Text

Unable to clear WRED statistics on slot %slot%

IdMgr.RecvACLClbk

Description

This message logs all call backs received from the ACL Manager.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

idMgrACLCallBack() returned \"%rcString%\" [%rc%] for command %cmd%, context %context%

Message Parameters

| Name | Type |
|----------|--------|
| cmd | xInt |
| rc | sInt |
| rcString | String |
| context | Ptr |

IdMgr.RecvLLDPTrig

Description

This message logs all triggers received from LLDP.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Received LLDP trigger %triggerName% for %mac%/%port%, capabilities %cap%

Message Parameters

| Name | Type |
|-------------|----------|
| triggerName | String |
| mac | MAC |
| port | SlotPort |
| cap | xInt32 |

IdMgr.RecvNetLoginTrig

Description

This message logs all triggers received from NetLogin.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Received NetLogin trigger %triggerName% for %user%/mac%/port%[%v1Size%]
%v11%;%v12%;%v13%;%v14%, authMethod %authMethod%

Message Parameters

| Name | Type |
|-------------|----------|
| triggerName | String |
| user | String |
| mac | MAC |
| port | SlotPort |
| v1Size | uInt32 |
| v11 | uInt32 |
| v12 | uInt32 |
| v13 | uInt32 |
| v14 | uInt32 |
| authMethod | sInt |

IdMgr.RecvFDBTrig

Description

This message logs all triggers received from FDB Manager.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Received FDB trigger %triggerName% for %port%/%vlanInstance%/%mac% -->
%ipAddress%

Message Parameters

| Name | Type |
|--------------|----------|
| triggerName | String |
| mac | MAC |
| port | SlotPort |
| vlanInstance | uInt32 |
| ipAddress | IP |

IdMgr.RecvIPSecTrig

Description

This message logs all triggers received from IP-Security

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Received FDB trigger %triggerName% for %port%/%vlanInstance%/%mac% -->
%ipAddress%

Message Parameters

| Name | Type |
|--------------|----------|
| triggerName | String |
| mac | MAC |
| port | SlotPort |
| vlanInstance | uInt32 |
| ipAddress | IP |

IdMgr.RecvCIntCtrl

Description

Logged when we receive a connection control call back.

Remedy

This is a debug only message, and does not indicate any problem. This message should only be enabled when requested by engineering.

Severity

Debug-Verbose

Message Text

LibConnCtrl(%cookie%, %code%, %data%, %len%), peer %peer%

Message Parameters

| Name | Type |
|--------|--------|
| cookie | Ptr |
| code | sInt |
| data | Ptr |
| len | sInt |
| peer | uInt32 |

IdMgr.RecvCIntData

Description

Logged when we receive the IPML receive data call back.

Remedy

This is a debug only message, and does not indicate any problem. This message should only be enabled when requested by engineering.

Severity

Debug-Verbose

Message Text

LibReceive(%arg%, %service%, %peer%, %pkt%, %bytes%)

Message Parameters

| Name | Type |
|---------|--------|
| arg | Ptr |
| service | Ptr |
| peer | uInt32 |
| pkt | Ptr |
| bytes | sInt |

IdMgr.RecvCIntMsg

Description

Logged when a message is received from the IdMgr client library

Remedy

This is a debug only message, and does not indicate any problem. This message should only be enabled when requested by engineering.

Severity

Debug-Verbose

Message Text

Received message %msgtype% from %proc%, peerId %peer%

Message Parameters

| Name | Type |
|---------|--------|
| peer | uint32 |
| proc | String |
| msgtype | uint32 |

IdMgr.DscvrId

Description

Logged when a new identity is discovered on a port

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod%, discovered on port %port%

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.UndscvrId

Description

Logged when an identity is undiscovered on a port

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod%, undiscovered on port %port%

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.PurgIdEnt

Description

Logged when Identity database entries are purged.

Remedy

This message is generated when all entries in identity database are purged by admin. The purging of entries from identity database is done for debug purposes only, and can be done only by using internal engineering command by Extreme Networks Engineering.

Severity

Info

Message Text

Identity database entries purged

IdMgr.HighMemUsageRch

Description

Logged when the size of Identity database reaches to high memory usage level. Before adding any new information in identity management, check for memory availability is performed. If 80% or more of the maximum allocated memory is already used and

new information is to be added to the database, this EMS is generated. This can be a temporary condition as memory is released by deleting stale database entries periodically.

Remedy

This message is for informational purpose, and does not indicate any problem. However, admin may want to check the configured memory size for identity database and increase the memory size, if required

Severity

Info

Message Text

Current memory usage %memUsed% Kbytes, %percMem% percent of %maxMem% Kbytes

Message Parameters

| Name | Type |
|---------|------|
| memUsed | sInt |
| percMem | sInt |
| maxMem | sInt |

IdMgr.MaxMemUsageRch

Description

Logged when the size of Identity database reaches to maximum size configured

Remedy

This message is for reporting error purpose, and indicates that no more new identities may be recorded. Admin needs to check the reason behind so many identities getting logged on to the switch. Also, admin needs to check the configured identity manager database size and stale entry aging interval, and if required make the necessary adjustments to one or more of these parameters

Severity

Error

Message Text

Current memory usage %memUsed% Kbytes, %percMem% percent of %maxMem% Kbytes. No new information shall be added to the database.

Message Parameters

| Name | Type |
|---------|------|
| memUsed | sInt |
| percMem | sInt |
| maxMem | sInt |

IdMgr.AddIPv4Addr

Description

This message logs the ip address used by the identity

Remedy

This message is for informational purposes only and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, on port %port%, vlan %vlanName% got IP %ipAddress%

Message Parameters

| Name | Type |
|-----------|----------|
| identity | String |
| mac | MAC |
| port | SlotPort |
| vlanName | String |
| ipAddress | IP |

IdMgr.DellPv4Addr

Description

This message logs the ip address binding freed, which was used by the identity

Remedy

This message is for informational purposes only and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, on port %port%, vlan %vlanName% released IP %ipAddress%

Message Parameters

| Name | Type |
|-----------|----------|
| identity | String |
| mac | MAC |
| port | SlotPort |
| vlanName | String |
| ipAddress | IP |

IdMgr.AuthIdFail

Description

Logged when a user fails authentication

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod%, failed authentication on port %port%

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.CritMemUsageRch

Description

Logged when the size of Identity database reaches near to max size configured. Before adding any new information in identity management, check for memory availability is performed. If 90% of the maximum allocated memory is already used and new information is to be added to the database, this EMS is generated. This can be an indicator of error condition as too many identities have been discovered on the device

Remedy

This message is for error notification purpose, and indicates that too many users/device have been detected on the device. Admin may want to check the reason for the discovery of so many identities on the device. Also, admin may want to check the configured memory size for identity database and increase the memory size, if required

Severity

Error

Message Text

Current memory usage %memUsed% Kbytes, %percMem% percent of %maxMem% Kbytes. No new Identities shall be added to the database.

Message Parameters

| Name | Type |
|---------|------|
| memUsed | sInt |
| percMem | sInt |
| maxMem | sInt |

IdMgr.NrmMemUsageRch

Description

Logged when the size of Identity database reaches to normal memory usage limits.

Remedy

This message is for informational purpose, and does not indicate any problem.

Severity

Info

Message Text

Current memory usage %memUsed% Kbytes, %percMem% percent of %maxMem% Kbytes

Message Parameters

| Name | Type |
|---------|------|
| memUsed | sInt |
| percMem | sInt |
| maxMem | sInt |

IdMgr.ChgAgeOutTime

Description

Logged when the database memory usage level changes. The memory usage change requires adjusting stale entry aging time

Remedy

This message is for informational purpose, and does not indicate any problem. However, admin may want to check if any external application(s) need to adjust its behavior based on adjusted values of clean-up interval and stale entry aging time

Severity

Info

Message Text

Based on new memory usage level stale entry aging time set to %agingTime%

Message Parameters

| Name | Type |
|-----------|------|
| agingTime | ulnt |

IdMgr.RecvKerberosTrig

Description

This message logs all triggers received from the Kerberos Snooping module.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Kerberos %triggerName% trigger for %user%@%realm%/%mac%/%port%/%vlan%, IP %ipAddress%, NB host \"%netbios%\"

Message Parameters

| Name | Type |
|-------------|----------|
| triggerName | String |
| user | String |
| realm | String |
| mac | MAC |
| port | SlotPort |
| vlan | ulnt32 |

| Name | Type |
|-----------|--------|
| netbios | String |
| ipAddress | IP |

IdMgr.RecvKerberosEvent

Description

This message events send to the Kerberos Snooping thread

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Kerberos thread received event %event%

Message Parameters

| Name | Type |
|-------|-------|
| event | sInt8 |

IdMgr.OpenRxSockFail

Description

This message gets generated when the Kerberos Snooping Module, which is part of Identity Manager, is not able to open its receive socket.

Remedy

For some reason the required socket could not be opened. Restart the idMgr process to see if this resolves the issue. If not, please contact Extreme Networks Technical Support.

Severity

Error

Message Text

Error opening receive socket required for Kerberos Snooping : %reason%

Message Parameters

| Name | Type |
|--------|--------|
| reason | String |

IdMgr.AddLLDPInfo

Description

Logged when a LLDP device information gets correlated with a Netlogin based identity. The correlation logic maps LLDP identity to the appropriate Netlogin authenticated identity and add LLDP capability information to Netlogin based identity.

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod% discovered on port %port% got LLDP capability \"%capability%\" added

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |
| capability | String |

IdMgr.DelLLDPInfo

Description

Logged when a LLDP device which was correlated with a Netlogin based identity gets disconnected. Upon disconnection, the LLDP capability information is removed from the Netlogin based identity.

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod% discovered on port %port% got LLDP capability information deleted

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.AddKerberosInfo

Description

Logged when a kerberos snooped identity information gets correlated with a Netlogin based identity

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod% discovered on port %port% got kerberos snooped identity information added

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.DelKerberosInfo

Description

Logged when a kerberos snooped identity which was correlated with a Netlogin based identity logs out

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod% discovered on port %port% got kerberos snooped identity information deleted

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.ReauthId

Description

Logged when a user gets reauthenticated successfully.

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod%, reauthenticated on port %port%

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.ReauthIdFail

Description

Logged when the reauthentication fails for a user which is currently logged in

Remedy

This is an informational only message, and requires no action

Severity

Info

Message Text

Identity \"%identity%\" with MAC %mac%, auth method %authMethod%, failed reauthentication on port %port%

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| authMethod | String |
| port | SlotPort |

IdMgr.EvtObjAddFail

Description

This message logs failure while creating event notification.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Event data object \"%object%\" creation failed. Error code: %code%, %errorMsg%

Message Parameters

| Name | Type |
|----------|--------|
| object | String |
| code | ulnt32 |
| errorMsg | String |

IdMgr.EvtInfoAddFail

Description

This message logs failure while adding information of field in event object.

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Event data field \"%fieldName%\" addition failed. Error code: %code%, %errorMsg%

Message Parameters

| Name | Type |
|-----------|--------|
| fieldName | String |
| code | uint32 |
| errorMsg | String |

IdMgr.EvtNotifyFail

Description

This message logs failure while triggering event notification

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Error: %errorMsg%

Message Parameters

| Name | Type |
|----------|--------|
| errorMsg | String |

IdMgr.EvtSendFail

Description

This message logs failure while event notification send is failed

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Could not send event data. Error code: %code%, %errorMsg%

Message Parameters

| Name | Type |
|----------|--------|
| code | uint32 |
| errorMsg | String |

IdMgr.EvtHandleError

Description

This message logs failure while event notification handle creation is failed

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Failed to create handle for event notificaiton. Error code: %code%, %errorMsg%

Message Parameters

| Name | Type |
|----------|--------|
| code | uInt32 |
| errorMsg | String |

IdMgr.RecvDOSTrig

Description

This message logs all triggers received from the CPU DoS protect module

Remedy

This message is for debug purposes only, and should only be enabled on request of Extreme Networks Engineering.

Severity

Debug-Verbose

Message Text

Received CPU-DoS trigger %triggerName% for %port%, %sip%, %dip%, %protocol%

Message Parameters

| Name | Type |
|-------------|----------|
| triggerName | String |
| port | SlotPort |
| sip | srcIP |
| dip | dstIP |
| protocol | uInt16 |

IdMgr.AssocIdToRole

Description

This message logs when an identity is associated to a role.

Remedy

No action required - Information message only.

Severity

Info

Message Text

The identity \"%identityName%\" detected on port %port% with MAC %mac% and IP %ipAddress% has been associated to role \"%roleName%\"

Message Parameters

| Name | Type |
|--------------|----------|
| identityName | String |
| roleName | String |
| port | SlotPort |
| mac | MAC |
| ipAddress | IP |

IdMgr.DisassocIdFmRole

Description

This message logs when an identity is dissociated from its role.

Remedy

No action required - Information message only.

Severity

Info

Message Text

The identity \"%identityName%\" detected on port %port% with MAC %mac% and IP %ipAddress% has been dissociated from role \"%roleName%\"

Message Parameters

| Name | Type |
|--------------|----------|
| identityName | String |
| roleName | String |
| port | SlotPort |
| mac | MAC |
| ipAddress | IP |

IdMgr.ApplyPlcyVerbose

Description

This message logs detailed information while applying or removing dynamic rules to an identity with source address information.

Remedy

No action required - Information message only.

Severity

Debug-Verbose

Message Text

```
%configure% \"%ruleName%\" for source %src% on port %port%
```

Message Parameters

| Name | Type |
|-----------|----------|
| configure | String |
| ruleName | String |
| src | String |
| port | SlotPort |

IdMgr.CnctLDAPsrvrFail

Description

LDAP client could not successfully connect to the LDAP server.

Remedy

Check if the LDAP server is up and running. Verify that the LDAP configuration on the switch matches with the LDAP server configuration. Check the connectivity to the LDAP server.

Severity

Error

Message Text

Connect to LDAP server %serverIP% failed

Message Parameters

| Name | Type |
|----------|--------|
| serverIP | String |

IdMgr.BndUserLDAPSrvrFail

Description

LDAP bind failed while trying to bind to LDAP server using the configured bind username and password.

Remedy

Check the LDAP bind username and password configuration. Ensure that the user exists on the LDAP server.

Severity

Error

Message Text

Bind for user \"%bindUser%\" to LDAP server %serverIP% failed

Message Parameters

| Name | Type |
|----------|--------|
| bindUser | String |
| serverIP | IP |

IdMgr.SrchUserLDAPSrvtFail

Description

LDAP search failed for the username in the configured LDAP server(s). Either the user was not found in the LDAP server directory or the LDAP connection to the server(s) could not be established.

Remedy

Check the LDAP configuration on the switch. Confirm the reachability of the LDAP server(s) from the switch. Also ensure that the user information is configured in the LDAP server(s).

Severity

Error

Message Text

LDAP Search failed for \"%searchStr%\" at base=\"%searchBase%\"

Message Parameters

| Name | Type |
|------------|--------|
| searchStr | String |
| searchBase | String |

IdMgr.CnctLDAPSrvtOK

Description

LDAP client successfully connected to the LDAP server.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

Connect to LDAP server %serverIP% got success

Message Parameters

| Name | Type |
|----------|--------|
| serverIP | String |

IdMgr.BndUserLDAPSrvrOK

Description

LDAP client successfully bound to LDAP server using the configured bind username and password.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

Bind for user \"%bindUser%\" to LDAP server %serverIP% got success

Message Parameters

| Name | Type |
|----------|--------|
| bindUser | String |
| serverIP | IP |

IdMgr.SrchUserLDAPSrvrOK

Description

LDAP search operation succeeded for the user.

Remedy

No action required - Information message only.

Severity

Debug-Summary

Message Text

Search for "\"%searchStr%" at base=\"%searchBase%" in LDAP server %serverIP% got success

Message Parameters

| Name | Type |
|------------|--------|
| searchStr | String |
| searchBase | String |
| serverIP | IP |

IdMgr.MoveIdMACMoveDtect

Description

The Identity has moved from one port to other port because a MAC Move was detected. The Identity can be detected by one of the following methods, 1) FDB 2) Netlogin 3) LLDP 4) IPARP 5) Kerberos 6) IP-Security

Remedy

No action required - Informational message only.

Severity

Info

Message Text

Moved the identity \"%identity%\", detected by %authMethod%, from %prevPort% to %newPort% because a move of the MAC address %mac% was detected.

Message Parameters

| Name | Type |
|------------|----------|
| identity | String |
| mac | MAC |
| prevPort | SlotPort |
| newPort | SlotPort |
| authMethod | String |

IdMgr.AddPlcyToRoleFail

Description

The policy is either syntactically incorrect or already contains a source address type that is configured to be dynamically inserted by Identity Manager. Hence this policy cannot be used with Identity Manager. "Invalid policy specified" means that the policy file is either syntactically incorrect or non-existent. "The policy already contains a source MAC address" or "The policy already contains a source IP address" means that the policy should not contain the source address of the type that is configured to be inserted by identity manager dynamically while installing ACLs for identities.

Remedy

Correct the syntax errors (if any) and also remove statically configured source address (if any) from the policy and then try adding the policy to Identity Manager.

Severity

Error

Message Text

Add %policyType% %policyName% to role %roleName% failed. %errMsg%.

Message Parameters

| Name | Type |
|------------|--------|
| policyType | String |
| policyName | String |
| roleName | String |
| errMsg | String |

IdMgr.SrcAddrTypeChgFail

Description

All the policies listed here already contain a source address type that is configured to be dynamically inserted by Identity Manager. Hence these policies cannot be used with Identity Manager. Note: The message will be either "List of policies:" or "List of the first 50 policies:" depending on the number of policies that have a problem.

Remedy

Remove the statically configured source address from the policy and then try adding the policy to Identity Manager. After this the access list source address type can be changed as desired.

Severity

Error

Message Text

`%count% %polType% already contain a %attrName%. %prefix% %policyList%`

Message Parameters

| Name | Type |
|------------|--------|
| count | uint32 |
| polType | String |
| attrName | String |
| maxNumPol | uint32 |
| prefix | String |
| policyList | String |

IdMgr.MoveIdFmEnblToDsblPort

Description

The Identity is moved from IDMgr enabled port to IDMgr disabled port, because a MAC move was detected. This Identity will not be detected by the switch in the new port as the Identity management is disabled in this port. The identity will be cleared on receiving the undetect event from the corresponding detection method. For e.g.: The LLDP identity will be cleared on receiving LLDP undetect event for this identity. Kerberos identities will be cleared immediately if the Aging timer is not configured else it will be cleared after Aging timer is expired for this Kerberos identity.

Remedy

To continue managing this identity, enable Identity Management on the port on which this identity is connected using the "configure identity-management add ports [<port_list>|all]" command.

Severity

Warning

Message Text
