Preface

Read the following topics to learn about:

- The meanings of text formats used in this document.
- Where you can find additional information and help.
- How to reach us with questions and comments.

Text Conventions

Unless otherwise noted, information in this document applies to all supported environments for the products in question. Exceptions, like command keywords associated with a specific software version, are identified in the text.

When a feature, function, or operation pertains to a specific hardware product, the product name is used. When features, functions, and operations are the same across an entire product family, such as ExtremeSwitching switches or SLX routers, the product is referred to as *the switch* or *the router*.

Table 1: Notes and warnings

Icon	Notice type	Alerts you to...
	Tip	Helpful tips and notices for using the product
	Note	Useful information or instructions
	Important	Important features or instructions
	Caution	Risk of personal injury, system damage, or loss of data
	Warning	Risk of severe personal injury

Table 2: Text

Convention	Description
screen displays	This typeface indicates command syntax, or represents information as it is displayed on the screen.
The words <i>enter</i> and <i>type</i>	When you see the word <i>enter</i> in this guide, you must type something, and then press the Return or Enter key. Do not press the Return or Enter key when an instruction simply says <i>type</i> .
Key names	Key names are written in boldface, for example Ctrl or Esc . If you must press two or more keys simultaneously, the key names are linked with a plus sign (+). Example: Press Ctrl+Alt+Del
Words in italicized type	Italics emphasize a point or denote new terms at the place where they are defined in the text. Italics are also used when referring to publication titles.
NEW!	New information. In a PDF, this is searchable text.

Table 3: Command syntax

Convention	Description
bold text	Bold text indicates command names, keywords, and command options.
<i>italic</i> text	Italic text indicates variable content.
[]	Syntax components displayed within square brackets are optional. Default responses to system prompts are enclosed in square brackets.
{ x y z }	A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options.
x y	A vertical bar separates mutually exclusive elements.
< >	Nonprinting characters, such as passwords, are enclosed in angle brackets.
...	Repeat the previous element, for example, <i>member</i> [<i>member</i> . . .].
\	In command examples, the backslash indicates a “soft” line break. When a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.

Open Source Declarations

Some software files have been licensed under certain open source licenses. More information is available at: www.extremenetworks.com/support/policies/open-source-declaration/.

Send Feedback

The Information Development team at Extreme Networks has made every effort to ensure that this document is accurate, complete, and easy to use. We strive to improve our documentation to help you in your work, so we want to hear from you. We welcome all feedback, but we especially want to know about:

- Content errors, or confusing or conflicting information.
- Improvements that would help you find relevant information.
- Broken links or usability issues.

To send feedback, do either of the following:

- Access the feedback form at <https://www.extremenetworks.com/documentation-feedback/>.
- Email us at documentation@extremenetworks.com.

Provide the publication title, part number, and as much detail as possible, including the topic heading and page number if applicable, as well as your suggestions for improvement.

Help and Support

If you require assistance, contact Extreme Networks using one of the following methods:

Extreme Portal

Search the GTAC (Global Technical Assistance Center) knowledge base; manage support cases and service contracts; download software; and obtain product licensing, training, and certifications.

The Hub

A forum for Extreme Networks customers to connect with one another, answer questions, and share ideas and feedback. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.

Call GTAC

For immediate support: (800) 998 2408 (toll-free in U.S. and Canada) or 1 (408) 579 2826. For the support phone number in your country, visit: www.extremenetworks.com/support/contact

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number, or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any actions already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

Subscribe to Product Announcements

You can subscribe to email notifications for product and software release announcements, Field Notices, and Vulnerability Notices.

1. Go to [The Hub](#).
2. In the list of categories, expand the **Product Announcements** list.
3. Select a product for which you would like to receive notifications.
4. Select **Subscribe**.
5. To select additional products, return to the **Product Announcements** list and repeat steps 3 and 4.

You can modify your product selections or unsubscribe at any time.

License Overview

The ExtremeSwitching family of switches includes two categories of switches with different license levels:

Switch Category	Switches	Applicable License Levels
Non-Universal Hardware switches (see Overview for non-Universal Hardware Switches on page 11)	X435 *, X440-G2, X450-G2, X460-G2, X465, X590, X620, X670-G2, X690, X695, X870	Value Edge *, Edge, Advanced Edge, Core
Universal Hardware switches (see Overview for Universal Hardware Switches on page 15)	5320, 5420, 5520	Base, Premier

Note: * The X435 is the only switch that supports the Value Edge license level.

The following figure illustrates that each license level builds on the features of the license level below it. For example, the Advanced Edge license includes all of the features in the Edge license, plus the features in the Advance Edge license level.

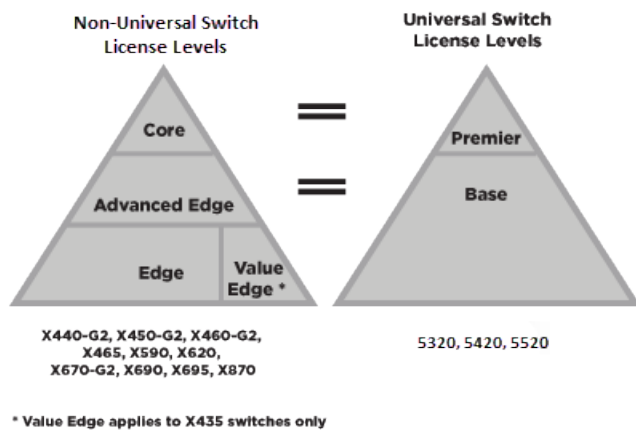

Figure 1: License Levels for non-Universal Hardware and Universal Switches

The non-Universal Hardware and universal switch license levels correlate in the following way:

Premier = Core

Base = Advanced Edge + AVB

Overview for non-Universal Hardware Switches

[Installing and Uninstalling Licenses on non-Universal Hardware Switches](#) on page 12

[Displaying the Installed License Levels and Feature Licenses](#) on page 13

[Trial Licenses for ExtremeSwitching non-Universal Hardware Switches](#) on page 13

This document explains the license levels and feature licenses available for non-Universal Hardware switches, and lists the features that they support. To view license levels for Universal Hardware switches, see [Overview for Universal Hardware Switches](#) on page 15.

The ExtremeXOS software supports the following license levels for all non-Universal Hardware series switches:

- Value Edge (see [Value Edge](#))
- Edge (see [Edge](#))
- Advanced Edge (see [Advanced Edge and Base License Features](#) on page 25)
- Core (see [Core and Premier License Features](#) on page 26)

The Value Edge license provides a basic feature set and the Core license includes the highest level of functionality. Each license level builds on the features of the license level below it. For example, the Advanced Edge license includes all of the features in the Edge license, plus the features in the Advanced Edge license. The Core license includes all of the features in the Edge license, Advanced Edge license, plus the features in the Core license.

Table 4: Standard and Upgrade Licenses for ExtremeSwitching non-Universal Hardware Switches

Switch platform	Value Edge	Edge	Advanced Edge	Core
ExtremeSwitching X435	Standard	—	—	—
ExtremeSwitching X440-G2	—	Standard	Upgrade	—
ExtremeSwitching X620	—	Standard	Upgrade	—
ExtremeSwitching X450-G2	—	Standard	Upgrade	Upgrade
ExtremeSwitching X460-G2	—	—	Standard	Upgrade
ExtremeSwitching X465	—	—	Standard	Upgrade
ExtremeSwitching X670-G2	—	—	Standard	Upgrade
ExtremeSwitching X870	—	—	Standard	Upgrade
ExtremeSwitching X690	—	—	Standard	Upgrade

Table 4: Standard and Upgrade Licenses for ExtremeSwitching non-Universal Hardware Switches (continued)

Switch platform	Value Edge	Edge	Advanced Edge	Core
ExtremeSwitching X590	—	—	Standard	Upgrade
ExtremeSwitching X695	—	—	Standard	Upgrade

Feature Licenses

To supplement the license levels, additional capabilities can be added by purchasing feature licenses (see [Feature Licenses](#) on page 28).

Additional General License Information

Software licenses are stored in the EEPROM and, after enabled, persist through reboots, software upgrades, power outages, and reconfigurations. The keys are unique to the switch and are not transferable.

If you attempt to execute a command and you either do not have the required license or have reached the limits defined by the current license level, the system displays one of the following messages:

```
Error: This command cannot be executed at the current license level.
Error: You have reached the maximum limit for this feature at this license level.
```

Installing and Uninstalling Licenses on non-Universal Hardware Switches

This section explains how to obtain and install/uninstall licenses for non-Universal Hardware switches.

For the ExtremeSwitching series switches, in addition to the CLI method listed below, you can use ExtremeCloud IQ to obtain licenses. For information about using ExtremeCloud IQ, go to <https://www.extremenetworks.com/support/documentation/extremecloud-iq/>.

To obtain and install a license:

Note

You should have received by email a license voucher after your purchase of a switch. You will need the voucher ID number on this email to generate a license.

1. Go to the [Extreme Portal](#) to obtain a license file:
 - a. Select **Asset > Licenses Home**.
 - b. Select **Generate License**.
 - c. In the **Generate License** dialog, type the ID number in the **Voucher ID** box, and then select **Next**.
 - d. Enter the hardware serial number of the device the license will be applied to.
 - e. Select the box to acknowledge the terms and conditions, and then select **Submit**.

The Voucher Details page displays the license key or license file at the bottom.

2. If you have a license file (extension `.lic`):
 - a. Load the license file onto the switch using either of the following commands: `download [url url {vr vrname} | image [active | inactive] [[hostname | ipaddress]`

```
filename {{vr} vrname} {block-size block_size} {partition} {install  
{reboot}}
```

```
tftp get [ ip-address | host-name] { vr vr_name } { block-size  
block_size } remote-file local-file} {force-overwrite}
```

To copy from a USB: `cp old_name new_name` specifying `/usr/local/ext`. For example:
`cp /usr/local/ext/old_name /usr/local/cfg/new_name`.

You can place the license file anywhere within the user-visible file system (for example: `/usr/local/*`).

- b. Run the following command to install the license:

```
enable license file filename
```

3. If you have a license key (format `xxxx-xxxx-xxxx-xxxx-xxxx`), run the following command to install the license:

```
enable license {software} [key ]
```

To remove a license:

```
clear license [{software} | port-speed]
```

Caution

This command should be used only with the advice of a representative from Extreme Networks.

Displaying the Installed License Levels and Feature Licenses

You can display the license level and feature licenses installed on your Extreme Networks switch by using the `show licenses {[slot slot |all]} {detail}` command.

Trial Licenses for ExtremeSwitching non-Universal Hardware Switches

For non-Universal Hardware switches, you can obtain a trial license, which enables you to use the license for 30 days, and you can downgrade trial licenses to a lower software license level during the trial period. You can extend the time of the trial by 30 days two times (for a total of 90 days). Most feature licenses are enabled. After you enable the trial license, the switch behaves as if all software license levels and feature licenses are enabled. The trial license key contains all the necessary information on the license level and the number of days. Trial licenses can be applied only once for each software version; if you upgrade to a different software version, you can reapply your trial license. It is not recommended to use a trial license in production.

Note

The Network Timing feature license is not included in the trial license.

To enable a trial license, execute `debug epm enable trial-license`.

To clear a trial license, execute `debug epm clear trial-license`. A reboot is required before the clear license takes effect.

Note

Enabling a newly obtained license requires clearing the trial license, and then rebooting the switch.

Overview for Universal Hardware Switches

[Installing and Uninstalling Licenses on Universal Switches](#) on page 16

[Displaying the Installed License Levels and Feature Licenses](#) on page 17

[Factory Default \(Evaluation\) License for Universal Hardware Switches](#) on page 17

This document explains the license levels and feature licenses available for universal hardware switches, and lists the features that they support.

The ExtremeXOS and Switch Engine software support the following license levels for the universal hardware switches:

- **Base**—included as standard (see [Advanced Edge and Base License Features](#) on page 25)
- **Premier** (see [Core and Premier License Features](#) on page 26)

The Base license provides a basic feature set and the Premier license adds additional functionality.

Table 5: Standard and Upgrade Licenses for Universal Hardware Switches

Switch platform	Base	Premier
ExtremeSwitching 5320	Standard	Upgrade
ExtremeSwitching 5420	Standard	Upgrade
ExtremeSwitching 5520	Standard	Upgrade

Feature Licenses

To supplement the license levels, additional capabilities can be added by purchasing feature licenses (see [Feature Licenses](#) on page 28).

Additional General License Information

Software licenses are stored in the EEPROM and, after enabled, persist through reboots, software upgrades, power outages, and reconfigurations. The keys are unique to the switch, but can be transferred (see [Transferring Licenses](#) on page 17).

If you attempt to execute a command and you either do not have the required license or have reached the limits defined by the current license level, the system displays one of the following messages:

```
Error: This command cannot be executed at the current license level.
```

```
Error: You have reached the maximum limit for this feature at this license level.
```

Installing and Uninstalling Licenses on Universal Switches

This section explains how to obtain and install/uninstall licenses on universal hardware switches.

Obtaining and Installing Licenses

For universal hardware switches, you can activate a license on the switch using either of the following methods:

1. Manual activation by obtaining the license activation file from Support Portal.
2. Automated activation using ExtremeCloud IQ. For information about using ExtremeCloud IQ for bulk automated license activation, go to <https://www.extremenetworks.com/support/documentation/extremecloud-iq/>.

For manual license generation and installation:

1. Follow manual activation instructions for license generation available on the [Extreme Portal](#): **Products > Products Home > ExtremeSwitching > Universal > EXOS (for your switch) > Activation Instructions**.
2. Load the license file onto the switch using either of the following commands:

```
download [url url {vr vrname} | image [active | inactive] [[hostname |  
ipaddress] filename {{vr} vrname} {block-size block_size}] {partition}  
{install {reboot}}
```

```
tftp get [ ip-address | host-name] { vr vr_name } { block-size  
block_size } remote-file local-file {force-overwrite}
```

To copy from a USB: `cp old_name new_name` specifying `/usr/local/ext`. For example:
`cp /usr/local/ext/old_name /usr/local/cfg/new_name`.

You can place the license file anywhere within the user-visible file system (for example: `/usr/local/*`).

3. To install the license, use the following command:

```
install license file filename {slot slot}
```

This command installs all of the license features contained in the selected license file to the specified slot (node).

Uninstalling Licenses Temporarily

You can temporarily uninstall a license from a switch. This enables you to retain the license entitlement on the switch, and thus, the original license can be used to reinstall the license. You can use this option to temporarily disable a license.

To uninstall a license temporarily from a universal hardware switch, use the following command:

```
uninstall license file filename [{revoke revocation_file} | withhold ]  
{slot slot} using the withhold option.
```

To temporarily uninstall a specific license feature, such as MAC Security (MACsec), from a universal hardware switch, use the following command:

```
uninstall license product product_name [revoke revocation_file | withhold] {slot slot}
```

Transferring Licenses

You can permanently remove a license, which enables you to transfer the license to another switch. This should only be done when preparing to return a defective switch for a replacement switch (RMA).

The `uninstall license file filename` command accepts *filename* as a `.lic` file that contains one or more licenses to be uninstalled. This is the license file that was used to install license.

The `uninstall license product product_name` command accepts *product_name* as the name of the license product to be uninstalled. This is the product name as it appears with the `show licenses` command.

- To uninstall a license permanently from a universal hardware switch, use the following command:

```
uninstall license file filename [{revoke revocation_file} | withhold ] {slot slot}
```

- To permanently uninstall a specific license product, such as PRD-5000-MACSEC, from a universal hardware switch, use the following command:

```
uninstall license product product_name [revoke revocation_file | withhold] {slot slot}
```

The `revoke` option invalidates the feature license and generates a revocation certificate, which is the first step to release the license entitlement back to the license entitlement manager (LEM). If the specified file name (for *revocation_file*) does not have an `.rvk` extension, it is automatically appended.

To transfer a license from a defective unit to a working unit:

- Go to the [Extreme Portal](#).
- Select **Asset > Licenses Home**.
- Select **License Transfer**.
- Enter the serial numbers of the defective unit and the replacement unit, and the RMA/case number.

Displaying the Installed License Levels and Feature Licenses

You can display the license level and feature licenses installed on your Extreme Networks switch by using the `show licenses {[slot slot |all]} {detail}` command.

Factory Default (Evaluation) License for Universal Hardware Switches

New universal hardware switches include a Factory Default (Evaluation) License to use all features (excluding MACsec). This Evaluation license is equivalent to a Premier license. You can configure all features, except MACsec, without restrictions and save the configuration.

The evaluation period is 30 days. If after 30 days you have not obtained and installed a Premier license (see [Obtaining and Installing Licenses](#) on page 16, and if you reboot the switch, the switch will effectively have only Base license (see [Table 5](#) on page 15) capabilities.

Note

The ExtremeSwitching 5320 series includes an additional Factory Default 4-port 10G Evaluation license. This license allows you to activate the last four SFP+ ports for 10G Ethernet uplink.

To extend the evaluation period, you can use the following commands:

To enable a trial license, execute `debug epm enable trial-license`.

To clear a trial license, execute `debug epm clear trial-license`. A reboot is required before the clear license takes effect.

Note

Enabling a newly obtained license requires clearing the trial license, and then rebooting the switch.

Switch License Features

[Value Edge License Features](#) on page 19

[Edge License Features](#) on page 23

[Advanced Edge and Base License Features](#) on page 25

[Core and Premier License Features](#) on page 26

Value Edge License Features

The Value Edge License includes features for L2 switching and L3 routing. The following table lists the features included in the Value Edge License.

Note

Listed platforms that do not support the Value Edge license do support these features with a higher license level.

Table 6: ExtremeXOS Value Edge License Features

ExtremeXOS software feature	Supported platforms
EDP	All platforms
Fabric Attach	All platforms
Identity Management	All platforms
LLDP 802.1ab	All platforms
LLDP-MED extensions	All platforms
VLANs—Port based and tagged trunks	All platforms
VLANs—MAC-based	All platforms
VLANs—Protocol-based	All platforms
VLANs—Private VLANs	All platforms
VLANs—VLAN translation	All platforms
VMANs—Q-in-Q tunneling (IEEE 802.1ad VMAN tunneling standard)	All platforms
VMANs—Egress queue selection based on 802.1p value in S-tag	All platforms
VMANs—Egress queue selection based on 802.1p value in C-tag	All platforms
VMANs—Secondary ethertype support	All platforms

Table 6: ExtremeXOS Value Edge License Features (continued)

ExtremeXOS software feature	Supported platforms
VMAN Customer Edge Port (CEP—also known as Selective Q-in-Q)	All platforms
VMAN Customer Edge Port CVID Egress Filtering / CVID Translation	All platforms
VMAN—CNP port	All platforms
VMAN—CNP port, double tag support	All platforms
VMAN—CNP port, double tag with egress filtering	All platforms
L2 Ping / Traceroute 802.1ag	All platforms
Jumbo frames (including all related items, MTU disc. IP frag.)	All platforms
QoS—egress port rate shaping/limiting	All platforms
QoS—egress queue rate shaping/limiting	All platforms
Link Aggregation Groups (LAG), static 802.3ad	All platforms
LAG dynamic (802.3ad LACP) edge, to servers only	All platforms
LAG (802.3ad LACP) core, between switches	All platforms
Port loopback detection and shutdown (ELRP CLI)	All platforms
Software redundant port	All platforms
STP 802.1D	All platforms
STP EMISTP +, PVST+ Compatibility mode (1 domain per port)	All platforms
STP EMISTP, PVST+ Full (multi-domain support)	All platforms
STP 802.1s	All platforms
STP 802.1w	All platforms
ERPS (4 max rings with matching ring ports)	All platforms
ESRP aware	All platforms
EAPS edge (4 max domains with matching ring ports) Note: You can increase the number of domains by upgrading to the Advanced Edge license (see Advanced Edge and Base License Features on page 25).	All platforms
Link Fault Signaling (LFS)	All platforms
ELSM (Extreme Link Status Monitoring)	All platforms
ACLs, applied on ingress ports <ul style="list-style-type: none"> • IPv4 • Static 	All platforms

Table 6: ExtremeXOS Value Edge License Features (continued)

ExtremeXOS software feature	Supported platforms
ACLs, applied on ingress ports <ul style="list-style-type: none"> IPv6 Dynamic 	All platforms
ACLs, applied on egress ports	All platforms
ACLs, ingress meters	All platforms
ACLs, egress meters	All platforms
ACLs <ul style="list-style-type: none"> Layer-2 protocol tunneling Byte counters 	All platforms
CPU DoS protect	All platforms
CPU Monitoring	All platforms
SNMPv3	All platforms
SSH2 server	All platforms
SSH2 client	All platforms
SCP/SFTP client	All platforms
SCP/SFTP server	All platforms
RADIUS and TACACS+ per command authentication	All platforms
Network Login <ul style="list-style-type: none"> Web-based method 802.1X method MAC-based method Local database for MAC/web-based methods Integration with Microsoft NAP Multiple supplicants - same VLAN HTTPS/SSL for web-based method 	All platforms
Network Login—Multiple supplicants - multiple VLANs	All platforms
Trusted OUI	All platforms
MAC security <ul style="list-style-type: none"> Lockdown Limit 	All platforms
IP security—DHCP Option 82—L2 mode	All platforms
IP security—DHCP Option 82—L2 mode VLAN ID	All platforms
IP security—DHCP IP lockdown	All platforms
IP security—Trusted DHCP server ports	All platforms
Static IGMP membership, IGMP filters	All platforms
IPv4 unicast L2 switching	All platforms

Table 6: ExtremeXOS Value Edge License Features (continued)

ExtremeXOS software feature	Supported platforms
IPv4 multicast L2 switching	All platforms
IPv4 directed broadcast	All platforms
IPv4 <ul style="list-style-type: none"> • Fast-direct broadcast • Ignore broadcast 	All platforms
IPv6 unicast L2 switching	All platforms
IPv6 multicast L2 switching	All platforms
IPv6 netTools—Ping, traceroute, BOOTP relay, DHCP, DNS, and SNTP	All platforms
IPv4 netTools—Ping, traceroute, BOOTP relay, DHCP, DNS, NTP, and SNTP	All platforms
IGMP v1/v2 snooping	All platforms
IGMP v3 snooping	All platforms
Multicast VLAN Registration (MVR)	All platforms
Static MLD membership, MLD filters	All platforms
MLD v1 snooping	All platforms
MLD v2 snooping	All platforms
sFlow accounting	All platforms
CLI scripting	All platforms
Web-based device management	All platforms
Web-based management—HTTPS/SSL support	All platforms
XML APIs (for partner integration)	All platforms
MIBs - Entity, for inventory	All platforms
Connectivity Fault Management (CFM)	All platforms
Remote mirroring	All platforms
Egress mirroring	All platforms
Y.1731 compliant frame delay and delay variance measurement	All platforms
MVRP - VLAN Topology Management	All platforms
EFM OAM - Unidirectional Link Fault Management	All platforms
Universal Port—VoIP auto configuration	All platforms
Universal Port—Dynamic user-based security policies	All platforms
Universal Port—Time-of-day policies	All platforms

Edge License Features

The Edge License includes all Value Edge license features and the features in the following table.

Table 7: ExtremeXOS and Switch Engine Edge License Features

Software feature	Supported platforms
Extended Edge Switching	ExtremeSwitching X670-G2 , X465 , X590 , X690, 5420, 5520
Convergence End Point (CEP) detection	All platforms
Direct Attach—based on the IEEE version of VEPA, eliminates the virtual switch layer, simplifying the network and improving performance. Direct Attach enables data center simplification by reducing network tiers from four or five tiers to just two or three tiers, depending on the size of the data center.	All platforms
CLEAR-Flow	All platforms
System virtual routers (VRs)	All platforms
DHCPv4: <ul style="list-style-type: none"> • DHCPv4 server • DHCv4 client • DHCPv4 relay • DHCPv4 smart relay 	All platforms
DHCPv6: <ul style="list-style-type: none"> • DHCPv6 relay • DHCPv6 prefix delegation snooping • DHCPv6 client • DHCPv6 smart relay • DHCPv6 remote ID 	All platforms
User-created virtual routers (VRs) Virtual router and forwarding (VRF)	ExtremeSwitching X450-G2, X460-G2, X670-G2, X465, X870, X690, X590, X695, 5320-48T/48P, 5420, 5520
Local-only, user-created virtual routers (VR)	ExtremeSwitching X435, X440-G2, X620, 5320-24T/24P
VLAN aggregation	All platforms
Multinetting for forwarding	All platforms
UDP Forwarding	All platforms
UDP BootP relay forwarding	All platforms
IPv4 unicast routing, including static routes	All platforms
IPv4 multicast routing, including static routes Note: This feature has limitations in the Edge and Advanced Edge licenses. See the ExtremeXOS 31.7 User Guide .	All platforms
IPv4 Duplicate Address Detection (DAD)	All platforms

Table 7: ExtremeXOS and Switch Engine Edge License Features (continued)

Software feature	Supported platforms
IPv6 unicast routing, including static routes	All platforms
IPv6 interworking—IPv6-to-IPv4 and IPv6-in-IPv4 configured tunnels	All platforms, except X435, X620, and X440-G2
IPv6 DAD without CLI management	All platforms
IPv6 DAD with CLI management	All platforms
IP security: <ul style="list-style-type: none"> • DHCP Option 82—L3 mode • DHCP Option 82—L3 mode VLAN ID • Disable ARP learning • Gratuitous ARP protection • DHCP secured ARP / ARP validation • Source IP lockdown 	All platforms
IP address security: <ul style="list-style-type: none"> • DHCP snooping • Trusted DHCP server • Source IP lockdown • ARP validation 	All platforms

Route maps	All platforms
SummitStack (switch stacking using native or dedicated ports)	ExtremeSwitching X460-G2 with X460-G2-VIM-2SS optional card, and X450-G2

Table 7: ExtremeXOS and Switch Engine Edge License Features (continued)

Software feature	Supported platforms
SummitStack-V (switch stacking using dual-purpose data ports)	All platforms, except X435. See the specific models listed in the "Support for Alternate Stacking Ports" section of the ExtremeXOS 31.7 User Guide .
SyncE	ExtremeSwitching X460-G2
Python scripting	All platforms
Extreme Network Virtualization (XNV)	All platforms, except X435 and 5320

Advanced Edge and Base License Features

The Advanced Edge License and Base License includes all Edge License features and the features in the following table.

Table 8: ExtremeXOS and Switch Engine Advanced Edge License and Base License Features

Software Feature	Supported Platforms
AVB <ul style="list-style-type: none"> Generalized Precision Time Protocol (GPTP) Multiple VLAN Registration Protocol (MVRP) Multiple Stream Registration Protocol (MSRP) Platform Support 	All platforms. The ExtremeSwitching X590, X690, X870, X695, 5320, 5420, and 5520 series switches have the AVB Feature License included in the Advanced Edge or Base License. You do not need to separately purchase and install the AVB Feature License for these switches. Note: The ExtremeSwitching X465 series switches support AVB on the front panel ports only, and only on the following VIMs (all ports): <ul style="list-style-type: none"> VIM5-4X VIM5-2Y VIM5-4Y VIM5-2Q
BGP Auto-peering	ExtremeSwitching X670-G2, X465, X690, X870, X590, X695, 5320, 5420, 5520.
BGP peers—Universal switches are allowed up to 2 manually configured BGP peers on the default VR with a base license.	ExtremeSwitching 5320, 5420, 5520
EAPS Advanced Edge—multiple physical rings, and "common links", also known as "shared port".	All platforms.
ERPS—more domains (allows 32 rings with matching ring ports) and multi-ring support	All platforms.
ESRP-Full	All platforms.
ESRP-Virtual MAC	All platforms.

Table 8: ExtremeXOS and Switch Engine Advanced Edge License and Base License Features (continued)

Software Feature	Supported Platforms
OSPFv2-Edge (limited to max of 4 active interfaces)	All platforms that support the Advanced Edge or Core licenses (see Table 4 on page 11).
OSPFv2 Auto-peering	ExtremeSwitching X670-G2, X465, X690, X870, X590, X695, 5320, 5420, 5520.
OSPFv3-Edge (limited to max of 4 active interfaces)	All platforms that support the Advanced Edge or Core licenses (see Table 4 on page 11).
PIM—Universal switches are not subject to the maximum number of PIM IPv4 interfaces (4) that pertains to other switch models.	ExtremeSwitching 5320, 5420, 5520
PIM-SM-Edge	All platforms that support the Advanced Edge or Core licenses (see Table 4 on page 11).
PSTag	ExtremeSwitching X460-G2, X670-G2, X465, X870, X690, X590, X695, 5420, 5520.
VRRP	All platforms that support the Advanced Edge or Core licenses (see Table 4 on page 11).
VXLAN	ExtremeSwitching X670-G2, X465, X870, X690, X590, X695, 5320, 5420, 5520.

Core and Premier License Features

The Core and Premier Licenses includes all Edge License features, Advanced Edge License features, and the features in the following table.

Table 9: ExtremeXOS and Switch Engine Core and Premier License Features

ExtremeXOS software feature	Supported platforms
PIM DM "Full"	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
PIM SM "Full"	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
PIM SSM "Full"	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
Anycast RP Using PIM (RFC 4610)	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.

Table 9: ExtremeXOS and Switch Engine Core and Premier License Features (continued)

ExtremeXOS software feature	Supported platforms
OSPFv2 "Full" (not limited to 4 active interfaces)	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
OSPFv3 "Full" (not limited to 4 active interfaces)	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
BGP4 and MBGP (BGP4+) for IPv4 ECMP	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
BGP4 and MBGP (BGP4+) for IPv6	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
IS-IS for IPv4	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
IS-IS for IPv6	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
MSDP	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
Anycast RP	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
GRE tunneling	Core license platforms listed in Table 4 on page 11 and Premier license platforms listed in Table 5 on page 15.
EVPN	ExtremeSwitching X670-G2, X465, X590, X690, X695, X870, 5320, 5420, 5520 series switches.
Integrated Application Hosting (IAH)	ExtremeSwitching X465-24MU, X465-2MU-24W, X465i-48W, and X465-24XE switches, X695.

Feature Licenses

[MPLS Feature License on page 33](#)

[ExtremeSwitching 5320 10 Gigabit Port Licensing on page 35](#)

[MAC Security Feature License on page 36](#)

[Optics XMOD on page 37](#)

The ExtremeXOS and Switch Engine software features are listed in the following table are managed as feature licenses. Feature licenses are distributed in one of the following forms:

- **In ExtremeXOS and Switch Engine software** (standard software component)—You must purchase a license to use the feature.
- **Modular software package** (XMOD file, so named because of its .xmod file extension)—You must request the XMOD file from your supplier and install it.

For feature license and installation instructions, see *Installing a Modular Software Package* in the [ExtremeXOS 31.7 User Guide](#).

Note

Starting with ExtremeXOS 21.1, Secure Shell 2 (SSH2) is no longer provided as a feature license. It is incorporated into the main ExtremeXOS software image and is no longer provided as an XMOD. However, SSH2 contains strong encryption algorithms that heighten the export controls required in the US and other countries. When downloading the ExtremeXOS software image, you are required to verify that you meet the export clearance requirements. For more information, see *Software Upgrade and Boot Options* in the [ExtremeXOS 31.7 User Guide](#).

For more information on SSH2, see *Using Secure Shell 2* in the [ExtremeXOS 31.7 User Guide](#).

Table 10: ExtremeXOS and Switch Engine Feature Licenses

Feature License	Feature	Platform support	XMOD Required
MPLS Feature License See MPLS Feature License on page 33.	<ul style="list-style-type: none"> • MPLS • LDP • Static LSPs • OSPF-TE • MPLS label • EXP bit replacement and classification • RSVP-TE • VPLS / H-VPLS for VLANs • VPLS STP redundancy • VPLS with ESRP redundancy • VPLS with EAPS redundancy • Fast Reroute (FRR) • Support for PW counters • User Virtual Routers • L3VPN 	ExtremeSwitching X460-G2, X670-G2, X465, X590, X870, X690, X695, 5520 series switches.	No

Table 11: Supported Platforms (continued)

Switch Series	Switch Models
ExtremeSwitching 5420	5420F-8W-16P-4XE 5420F-24P-4XE 5420F-24S-4XE 5420F-24T-4XE 5420F-16MW-32P-4XE 5420F-16W-32P-4XE 5420F-48P-4XE 5420F-48P-4XL 5420F-48T-4XE 5420M-24T-4YE 5420M-24W-4YE 5420M-16MW-32P-4YE 5420M-48T-4YE 5420M-48W-4YE
ExtremeSwitching 5520	5520-24T 5520-24W 5520-48T 5520-48W 5520-12MW-36W 5520-24X 5520-48SE

MPLS Feature License

MPLS support, including VPLS L2 VPNs and L3 VPNs, can be obtained from Extreme Networks at an additional cost, as a feature license.

A separate feature license must be purchased for each switch that runs MPLS and VPLS.

Note

ExtremeSwitching 5520 series switches have the MPLS Feature set included in the Premier License. You do not need to separately purchase and install the MPLS Feature License for these switches.

MPLS requires an Advanced Edge or Core software license.

After you enable the feature license, the feature CLI commands are visible; without an enabled MPLS feature license, you do not see any feature commands on the console.

Network Timing Feature License

The Network Timing Feature License supports the Precision Time Protocol (PTPv2).

This feature license is included with all ExtremeXOS software and can be enabled by purchasing and enabling a feature license key.

Note

Network-Clock module is required in addition to Network Timing Feature License to enable PTPv2 in ExtremeXOS.

**Note**

Beginning with ExtremeXOS 30.7 and 31.2, PTPv2 is not supported on X670-G2 and X460-G2 series switches, respectively.

For more information about PTP, see *Overview of PTP* in the [ExtremeXOS 31.7 User Guide](#).

ExtremeSwitching X440-G2 10 Gigabit Port Licensing

ExtremeSwitching X440-G2 10 Gigabit model switches require a license to upgrade the four SFP+ 1GbE ports to 10G:

- Dual 10GbE Upgrade License—enables 10G Ethernet on the non-stack capable ports
- Quad 10GbE Upgrade License—enables 10G Ethernet on all four uplink ports
- Dual to Quad 10 GbE Upgrade License—enables two more (total of four) 10G Ethernet on the uplink ports

**Note**

SFP+ ports that can be used as stack ports after enabling stacking-support do not require a license to operate as stack ports.

The following table summarizes the specific ports licensed with each license type along with the ports that can be used as stack ports without any license.

Table 12: ExtremeSwitching X440-G2 10G Port Licensing

Model	Dual License	Quad License	Convert to Stack Port (No License Required)
X440-G2-48t-10GE4 X440-G2-48p-10GE4 X440-G2-48t-10GE4-DC	51-52	49-52	49-50
X440-G2-24t-10GE4 X440-G2-24p-10GE4 X440-G2-24t-10GE4-DC X440-G2-24x-10GE4	25-26	25-28	27-28
X440-G2-12t-10GE4 X440-G2-12p-10GE4	13-14	13-16	15-16

These licenses take effect immediately after successful installation. No reboot is required to activate the installed license. Following successful installation of the license, 10G speed is supported on these ports. Ports with 10G optics installed are re-enabled at 10G speed and ports without optics are defaulted to 10G speed.

Without a license installed, these ports are set at 1G, autonegotiation enabled, and cannot be configured for 10G.

In a stack, a 10G upgrade license must be applied to each node in the stack for which 10G capability is required on the individual node's non-stack 10G ports. There is no requirement to match or install any 10G licenses on master-capable nodes.

For example, consider a stack of three nodes, all 10G-capable X440-G2 models with slot-1 as master, slot-2 as backup, and slot-3 as standby, and not master-capable. In this stack, you only require the 10G capability on the standby slot-3, non-stack 10G ports. In this case, a Dual 10G upgrade license should be installed on slot-3. Slots 1 and 2 do not require any license. Note also that a Quad 10G license can be used in this configuration, but adds no extra capability since the two stacking capable 10G ports are used as stack ports.

ExtremeSwitching X870-96x-8c Switch Port Speed License

This license increases the rate from 10G to 100G on QSFP28+ ports 1 through 24 on ExtremeSwitching X870-96x-8c switches.

Each license enables a group of six ports. You can purchase a total of four licenses per switch, which enables the first 24 QSFP28+ ports to operate in the following partition modes: 4x10G, 4x25G, 2x50G, 1x40G and 1x100G. Each license enables the highest numbered six-port group that is not already activated (first 19–24, then 13–18, then 7–12, and finally 1–6).

Note

The first 24 unlicensed ports are 4x10G by default.

Note

A switch reboot is not required when a license is successfully installed.

A port speed license cannot be downgraded. However, you can disable the license by clearing all of the installed port speed licenses.

ExtremeSwitching 5320 10 Gigabit Port Licensing

ExtremeSwitching 5320 10 Gigabit model switches require a license to upgrade the last four or eight SFP+ 1GbE ports to 10G:

- 4-port 10G license
- 8-port 10G license

Note

The last two SFP+ ports that can be used as stack ports after enabling stacking-support do not require a license to operate as stack ports.

The following table summarizes the specific ports that can be upgraded to 10G when the proper license is installed:

Table 13: ExtremeSwitching 5320 10G Port Licensing

Model	4-port 10G license	8-port 10G license
5320-16P-4XE 5320-16T-4XE-DC	17-20	17-20
5320-24P-8XE 5320-24T-8XE	29-32	25-28 29-32
5320-48P-8XE 5320-48T-8XE	53-56	49-52 53-56

These licenses take effect immediately after successful installation. No reboot is required to activate the installed license. Following successful installation of the license, 10G speed is supported on these ports. Ports with 10G optics installed are re-enabled at 10G speed and ports without optics are defaulted to 10G speed.

Without a license installed, these ports are set at 1G, autonegotiation enabled, and cannot be configured for 10G.

In a stack, a 10G upgrade license must be applied to each node in the stack for which 10G capability is required on the individual node's non-stack 10G ports. There is no requirement to match or install any 10G licenses on master-capable nodes.

For example, consider a stack of three nodes, all 10G-capable 5320 models with slot-1 as master, slot-2 as backup, and slot-3 as standby, and not master-capable. In this stack, you only require the 10G capability on the standby slot-3, non-stack 10G ports. In this case, a 4-port or 8-port 10G upgrade license should be installed on slot-3. Slots 1 and 2 do not require any license.

MAC Security Feature License

Use of the MAC Security (MACsec) feature requires a slot-based MACsec Feature License.

Slot-based MACsec licenses have the following behaviors (see [Table 14](#)).

Table 14: MACsec License Behavior

	No License	License Installed
Standalone Switch	<ul style="list-style-type: none"> The command <code>show macsec</code> is the only available command. MACsec cannot be configured or enabled. 	<ul style="list-style-type: none"> All MACsec commands are available. MACsec can be configured and enabled.
Stack	<ul style="list-style-type: none"> All MACsec commands are available. MACsec can be configured on MACsec-capable slots. If configured, MACsec cannot be enabled. 	<ul style="list-style-type: none"> All MACsec commands are available. MACsec can be configured and enabled on licensed slots.

Note

In a stack, any slot configured with a MACsec-capable module (with `configure slot slot module module_type`) can be configured for MACsec, even if the slot is not physically present, or if the slot is present, but does not have a valid MACsec license installed.

Optics XMOD

The Optics XMOD is a separate software package that can add optical transceiver support between ExtremeXOS releases.

Limitations

The Optics XMOD does not have the capability to communicate directly with the hardware, so not all transceivers can be supported solely through the Optics XMOD. If a new transceiver requires some type of unique initialization that requires direct hardware access, it may require a new ExtremeXOS release.
