#### Conventions

To help you better understand the information presented in this guide, the following topics describe the formatting conventions used for notes, text, and other elements.

#### **Text Conventions**

Unless otherwise noted, information in this document applies to all supported environments for the products in question. Exceptions, like command keywords associated with a specific software version, are identified in the text.

When a feature, function, or operation pertains to a specific hardware product, the product name is used. When features, functions, and operations are the same across an entire product family, such as ExtremeSwitching switches or SLX routers, the product is referred to as *the switch* or *the router*.

\	In command examples, the backslash indicates a "soft" line break. When a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.

## Platform-Dependent Conventions

Unless otherwise noted, all information applies to all platforms supported by Switch Engine software, which are the following:

- ExtremeSwitching® switches
- SummitStack™

When a feature or feature implementation applies to specific platforms, the specific platform is noted in the heading for the section describing that implementation in the Switch Engine command documentation (see the Extreme Documentation page at <a href="https://www.extremenetworks.com/documentation/">www.extremenetworks.com/documentation/</a>). In many cases, although the command is available on all platforms, each platform uses specific keywords. These keywords specific to each platform are shown in the Syntax Description and discussed in the Usage Guidelines sections.

### Terminology

When features, functionality, or operation is specific to a device family, such as ExtremeSwitching, the family name is used. Explanations about features and operations that are the same across all product families simply refer to the product as the *device*.

#### **Important**

ExtremeXOS and Switch Engine version 31.6.1.3 was removed from the portal due to a defect. Use version 31.6.2.1 instead. For more information, see Software Recall Notice SRN-2022-001.

#### New in this Release

Release 31.6 introduced new names for the network operating systems running on Universal hardware. ExtremeXOS (EXOS) was renamed to Switch Engine and VSP Operating System Software (VOSS) was renamed to Fabric Engine.

The following platforms support Switch Engine 31.7:

- ExtremeSwitching 5320 Series
- ExtremeSwitching 5420 Series

ExtremeSwitching 5520 Series

#### Note

Upgrading the firmware from an older version of ExtremeXOS to Switch Engine 31.7 on the ExtremeSwitching 5420 and 5520 series will change the SNMP SysObjectID value. This change might affect SNMP-based management systems.

#### Note

For non-Universal Hardware switches, the names of the network operating systems will continue to be VSP Operating System Software (VOSS) and ExtremeXOS (EXOS).

## New Hardware Supported in ExtremeXOS and Switch Engine 31.7

The following new hardware is supported in ExtremeXOS and Switch Engine 31.7:

#### Table 4: ExtremeSwitching 5320 Series Switches

ExtremeSwitching 5320-16P-4XE	16 10/100/1000BASE-T full/half duplex MACsec capable ports with 802.3at Type 2 PoE+ (30W), 4 10G unpopulated SFP+ ports, and one AC PSU
ExtremeSwitching 5320-16P-4XE-DC	16 10/100/1000BASE-T full/half duplex MACsec capable ports with 802.3at Type 2 PoE+ (30W), 4 10G unpopulated SFP+ ports, and one DC PSU

#### **Dual Network Operating System Information**

All Universal Hardware switches can run two different network operating systems: Switch Engine (default, formerly EXOS) or Fabric Engine (formerly VOSS). When you power up the switch for the first time, you must select an operating system.

For more information about selecting a network operating system, or changing it after initial selection, see Changing the Network Operating System on page 16.

## Security Information

The following section covers important security information for ExtremeXOS and Switch Engine 31.7.

#### Linux Kernel

ExtremeXOS and Switch Engine 31.7 use Linux Kernel 5.4 for ExtremeSwitching X465, X590, X690, X695, X870, 5320, 5420 and 5520 series switches, and Linux Kernel 4.14 for all other switches.

OpenSSL Version Overview

#### **OpenSSL Version**

ExtremeXOS and Switch Engine 31.7 use FIPS openssl-fips-2.0.16.

### Upgrading ExtremeXOS and Switch Engine

For instructions about upgrading ExtremeXOS and Switch Engine software, see *Software Upgrade and Boot Options* in *ExtremeXOS 31.7 User Guide*.

An ExtremeXOS or Switch Engine core image (.xos file) must be downloaded and installed on the alternate (non-active) partition. If you try to download to an active partition, the error message Error: Image can only be installed to the non-active partition. appears. An ExtremeXOS or Switch Engine modular software package (.xmod file) can still be downloaded and installed on either the active or alternate partition.

#### Stacking: Upgrading from ExtremeXOS 30.2 and Earlier

You cannot automatically update a switch running ExtremeXOS 30.2 or earlier to ExtremeXOS 30.3 or later due to a file system compatibility issue. If a switch has ExtremeXOS 30.2 or earlier, prior to inserting the switch into the stack topology, you need to upgrade the switch manually:

- 1. To download and install a new image, the active partitions (primary or secondary) of all non-master nodes must match the active partition of the master node.
  - a. To determine the active partition selected on all nodes and the ExtremeXOS versions installed in each partition, use the show slot {slot {detail} | detail } command with the detail option. If the node being upgraded is running on the primary partition, then the new image is downloaded and installed on the secondary partition.
  - b. If the active partition is different on some nodes, the action you take depends on what is stored in both partitions:

If both primary and secondary partitions have the same ExtremeXOS release, you can use the following commands to cause a node to use the same active image as the rest of the stack:

```
use image {primary | secondary} slot slot-number
reboot slot slot-number
```

- 2. Download a new ExtremeXOS software release and install it on all nodes on the active topology using the command: download [url url {vr vrname} | image [active | inactive] [[hostname | ipaddress] filename {{vr} vrname} {block-size block size}] {partition} {install {reboot}}
- 3. Restart all nodes in the new release using reboot {[time mon day year hour min sec] | cancel} {slot slot-number} | node-address node-address | stack-topology {as-standby} | all} | rolling}

## Newly Purchased Switches Require Software Upgrade

Newly delivered switches typically have pre-GA (general availability) ExtremeXOS or Switch Engine software installed. You should promptly upgrade the software to the latest version available by visiting the Extreme Portal.

For information about upgrading the ExtremeXOS or Switch Engine software, see the *ExtremeXOS Upgrade Process* topic in the *Software Upgrade and Boot Options* chapter of the *ExtremeXOS 31.7 User Guide*.

## New and Corrected Features in ExtremeXOS and Switch Engine 31.7

This section lists the new and corrected features supported in the 31.7 software:

#### **Enhanced Bluetooth Support**

Beginning with Release 31.7, Bluetooth is supported on platforms that do not support VR-Management, including the ExtremeSwitching 5320 Series. With this support, clients can connect using Link Local IPv4 addresses.

#### Note

Bluetooth clients will not be allocated with private IP addresses by the switch.

Supported Platforms

ExtremeSwitching 5320 series switches.

## Changing the Network Operating System

ExtremeSwitching Universal Hardware switches can run two different operating systems: Switch Engine (formerly EXOS) (default) or Fabric Engine (formerly VOSS).

#### Making Your Initial Network Operating System Selection

You can make your initial selection of the operating system using:

- ExtremeCloud™ IQ (see ExtremeCloud IQ Agent Support on page 17)—You
  can select your network operating system when purchasing your switch, which
  associates the switch serial number with your desired network operating system,
  which then causes the desired network operating system to be loaded during
  ExtremeCloud onboarding. For more information about using ExtremeCloud IQ, go
  to https://www.extremenetworks.com/support/documentation/extremecloud-iq/.
- Extreme Management Center—see Extreme Management Center User Guide
- Manually during boot-up:
  - Bootloader—When the message Starting Default Bootloader ...Press and hold the <spacebar> to enter the bootrom appears, press and hold the space bar until the boot menu appears (you have 30 seconds):

```
*** 5320-48T-8XE Boot Menu ( 3.4.2.8 ) ***

EXOS: Default
EXOS: Primary 31.6..
EXOS: Secondary 31.6..
EXOS: Primary 31.6.. with default configuration
EXOS: Secondary 31.6.. with default configuration
EXOS: Rescue
Change the switch OS to VOSS
Run Manufacturing Diagnostics
Update bootloader
Reboot system
```

Use the **up** and **down** arrow keys to select Change the switch OS to VOSS, and then press **Enter**.

- Safe defaults mode start-up menu—When the question Would you like to change the switch OS to VOSS? [y/N/q] appears:
  - For Switch Engine, type N.

• For Fabric Engine, type y.

Continue to log onto the switch. For more information about logging onto the switch, see the *ExtremeXOS 31.7 User Guide*.

#### Changing Your Network Operating System

You can change your network operating system selection at any time.

#### Caution

Changing your network operating systems deletes all configuration files, debug information, logs, events, and statistics information of the previous network operating system.

#### Note

If you anticipate ever changing the operating system to Fabric Engine, and you want to statically assign IP addresses on the DHCP server, then it is recommended to assign them based on the DHCP client ID. For more information about this issue, see the *Using a BOOTP or DHCP Server* topic in the *ExtremeXOS 31.7 User Guide*.

- ExtremeCloud IQ—See https://www.extremenetworks.com/support/documentation/ extremecloud-iq/
- Extreme Management Center—See Extreme Management Center User Guide
- CLI Command—run the download [url url {vr vrname} | image [active | inactive] [[hostname | ipaddress] filename {{vr} vrname} {block-size block\_size}] {partition} {install {reboot}} command specifying a VOSS image.

#### Note

Do *not* use the **active**, **inactive**, and **partition** options. They are not applicable for Fabric Engine.

## ExtremeCloud IQ Agent Support

ExtremeXOS and Switch Engine 31.7 support ExtremeCloud IQ. For network administrators looking for unified management of access points, switches, and routers, ExtremeCloud IQ is a cloud-driven network management application that:

- Simplifies network operations through an easy to use and intuitive interface, including minimal touch onboarding of devices.
- Provides ultimate flexibility in deployment choice, cloud platform choice, and OS choice.
- · Offers unlimited data duration for more informed networking decisions.

This release supports device discovery, basic monitoring, visibility into homogenous stacking, and the ability to configure an optional user-defined virtual router (VR) and server address for ExtremeCloud IQ agent to connect to. These values are used instead of any auto-detected values.

For more information about ExtremeCloud IQ, go to https://www.extremenetworks.com/support/documentation/extremecloud-iq/.

Note: \* The X435 is the only switch that supports the Value Edge license level.

The following figure illustrates that each license level builds on the features of the license level below it. For example, the Advanced Edge license includes all of the features in the Edge license, plus the features in the Advance Edge license level.

Limits Overview Limits

<sup>\*</sup> Value Edge applies to X435 switches only

#### Figure 1: License Levels for non-Universal and Universal Switches

The non-universal and universal switch license levels correlate in the following way:

Premier = Core

Base = Advanced Edge + AVB

For more information about licenses, see *ExtremeXOS* and *Switch Engine 31.7 Feature License Requirements*.

The following tables summarize tested metrics for a variety of features, as measured in a per-system basis unless otherwise noted. These limits may change, but represent the current status. The contents of this table supersede any values mentioned in the ExtremeXOS books.

The scaling and performance information shown in the following tables is provided for the purpose of assisting with network design. It is recommended that network architects and administrators design and manage networks with an appropriate level of network scaling "head room." The scaling and performance figures provided have been verified using specific network topologies using limited switch configurations. There is no guarantee that the scaling and performance figures shown are applicable to all network topologies and switch configurations and are provided as a realistic estimation only. If you experience scaling and performance characteristics that you feel are sufficiently below what has been documented, contact Extreme Networks technical support for additional assistance.

The route limits shown in the following tables for IPv4 and IPv6 routing protocols are software limits only. The actual hardware limits may be higher or lower than the software limits, based on platform. The hardware limits for specific platforms are specified as "IPv4/IPv6 routes (LPM entries in hardware)" in the following tables.

In the Extended Edge Switching architecture, Layer-2, Layer-3, and multicast packet forwarding and filtering operations take place on the controlling bridge. The controlling bridge switch and attached BPEs (V400 Virtual Port Extenders) constitute a single, extended switch system. Therefore, the Extended Edge Switching system assumes the scale and limits from the specific controlling bridge model (for example, Extended

Edge Switching X670-G2 series switches) in use. For applicable limits, see the following tables for the controlling bridge you are using.

# Notes for Limits Tables

Notes for Limits Tables Limits

<sup>&</sup>lt;sup>a</sup> The table shows the total available. When installing ACL rules bound to a set of ports, rules are replicated for each port if there are ACL counters and counter compression is not enabled, or if the ports are Extended Edge Switching extended ports.

<sup>&</sup>lt;sup>c</sup> When there are BFD sessions with minimal timer, sessions with default timer should not be used.

<sup>&</sup>lt;sup>f</sup> Effective capacity varies based on actual MAC addresses and VLAN IDs used and hash algorithm selected.

<sup>&</sup>lt;sup>g</sup> Based on "configure forwarding internal-tables more I2".

h Based on "configure forwarding internal-tables more I3-and-ipmc".

<sup>&</sup>lt;sup>j</sup> The limit depends on setting configured with configure iproute reserved-entries.

m The IPv4 and IPv6 multicast entries share the same hardware tables, so the effective number of IPv6 multicast entries depends on the number of IPv4 multicast entries present and vice versa.

<sup>&</sup>lt;sup>n</sup> If IGMP and MLD are simultaneously configured on the switch, the number of effective subscribers supported are lessened accordingly.

<sup>°</sup> The total of all PBR next hops on all flow redirects should not exceed 4,096.

P The number of XNV authentications supported based on system ACL limitations.

<sup>&</sup>lt;sup>q</sup> Based on "configure forwarding internal-tables more routes".

Based on configure forwarding internal-tables more routes ipv6-mask-length 128.

<sup>&</sup>lt;sup>s</sup> Based on configure forwarding internal-tables more 13-and-ipmc or configure forwarding internal-tables 12-and-13.

Defect Number	Description
General	
EXOS-30441	For 25G ports, auto-negotiation is disabled by default in ExtremeXOS. When connecting an EXOS switch to a VOSS switch via a 25G Direct Attached Cable, auto-negotiation is mismatched, as the default behavior in VOSS is "enabled". Workaround: Enable auto-negotiation on the ExtremeXOS port.

EXOS-31548	When PRD-5320-10G-8P is applied to the ExtremeSwitching 5320 Series switch, the DEF-EVAL-10G-4P is not removed, despite the persistent 10G Port Evaluation Days Remain warning. Workaround: The warning can be disregarded.	
EXOS-32841	The following PoE - 54V DC output error log messages are displayed after a full power cycle on PoE capable switches:  11/03/2022 13:03:20.03 <erro:hal.poe.error> (summitPoeRecoveryCheck) pse_system_power_query failed.</erro:hal.poe.error>	
	<pre>11/03/2022 13:03:09.99 <info:hal.sys.info> (halPSDetectionProcessing) Internal Power Supply is disconnected.  11/03/2022 13:03:09.99 <info:hal.sys.info></info:hal.sys.info></info:hal.sys.info></pre>	
	(summitPerPsuStatusToHalState) PSU 54V DC output changed.	
	<b>Note:</b> These messages do not occur during a normal switch reboot, but on a full power cycle only. This is non-impacting to switch or network functions.	
Extended Edge S	Extended Edge Switching	
EXOS-29969	A hal process failure occurs while running the <b>configure access-list</b> command on ExtremeSwitching 5520 and X590 VPEX stack platforms.
