---

## New Features and Enhancements

This release introduces the following new features and enhancements:

**Private Client Group Enhancements:** Devices running HiveOS 8.4r1 now have the ability to differentiate and group private clients by credentials in addition to their physical location, and to allow the admin to provision up to five individual sets of credentials per AP to accommodate shared-occupancy areas. Additionally, administrators can now generate, revoke, and delete PPSK keys for individual rooms, making key administration more efficient.

---
