

Threat Protection System

Snort Engine Update 112

Release Summary

Release Date: 23-October-2007

Purpose: This update is SEU 112 for all models of the 3D Sensor version 4.7, the 4.7 and 4.6 series of the Defense Center and Intrusion Sensor version 4.6.

Synopsis

The Nortel TPS team is aware of multiple vulnerabilities affecting CA BrightStor and has expanded coverage for Microsoft Security Bulletin MS07-057.

Details

CA BrightStor ARCServe Buffer Overflow (CVE-2007-5004):

CA BrightStor ARCServe Backup suffers from an integer overflow that may allow remote attackers to execute code on an affected host.

A rule to detect attacks targeting this vulnerability is included in this release and is identified as SID 12665.

CA BrightStor ARCServe File Upload (CVE-2007-5005):

CA BrightStor ARCServe Backup does not correctly handle user supplied input. This may allow a remote attacker to perform a directory traversal attack and subsequently upload and overwrite files on an affected host.

A rule to detect attacks targeting this vulnerability is included in this release and is identified as SID 12667.

Microsoft Security Bulletin MS07-057:

The URL handling in Windows XP and Windows Server 2003, with Windows Internet Explorer 7 installed, allows remote attackers to execute arbitrary programs via invalid "%" sequences.

The Nortel TPS team has updated coverage to detect attacks targeting this vulnerability with an additional rule. This rule is included in this release and is identified as SID 12664.

RealNetworks RealPlayer Buffer Overflow (CVE-2007-5601):

RealNetworks RealPlayer ActiveX control allows remote attackers to execute code on a vulnerable system.

Previously released rules are able to detect attacks targeting this vulnerability and are identified as SIDs 10192 through 10194.

Additional rules are included in this release to detect attacks targeting this vulnerability and are identified as SID 12663 and SIDs 12668 through 12671.

WARNING: Nortel Threat Protection System customers must upgrade to 4.5.1 prior to applying this patch. Failure to upgrade will result in sensor failure when installing these rules.

Snort Engine Updates: In Threat Protection System v4.1, Snort Engine Updates (SEUs) replaced rule pack updates as the mechanism for updating Snort and Snort-based rules. In addition, SEUs can provide new and updated preprocessors and protocol decoders that aid in detecting intrusion attempts.

Note that SEUs can contain new binaries (in the form of shared object rules and new versions of Snort), so make sure that your process for installing new SEUs complies with your network and security policies.

Shared Object Rules: Shared object rules (SORs) are a new type of rule that allows the Nortel Threat Protection System Team more flexibility in detecting possible intrusions. SORs are delivered in SEUs in binary format as compared with the text rules (now called standard text rules or STRs) that were provided in previous rule packs.

You can view the rule documentation and create copies of shared object rules just as you could with standard text rules. However, you can only view and modify attributes such as the message or the source and destination ports and addresses in the rule header. You cannot view or modify the rule keywords section, including rule content keywords. Note that you can still create and modify your own standard text rules, and you can view, copy, and modify any of the legacy standard text rules.

How to get help

If you have purchased a Nortel service program, contact Nortel Technical Support. To obtain contact information online, go to www.nortel.com, and then click on Technical Support.

From the Technical Support page, you can open a Customer Service Request online or find the telephone number for the nearest Technical Solutions Center. If you are not connected to the Internet, you can call 1-800-4 NORTEL (1-800-466-7835) to learn the telephone number for the nearest Technical Solutions Center.

An Express Routing Code (ERC) is available for many Nortel products and services. When you use an ERC, your call is routed to a technical support person who specializes in supporting that product or service. To locate an ERC for your product or service, go to <http://www.nortel.com/support>. Click on the link for Express Routing Codes located at the bottom-right corner of the Web page.
