

Threat Protection System

Snort Engine Update 139

Release Summary

Release Date: 08-April-2008

Purpose: This update is SEU 139 for all models of the 3D Sensor version 4.7, the 4.7 and 4.6 series of the Defense Center and Intrusion Sensor version 4.6.

Note: All SEU packages are cumulative. The installation of prior SEU packages is not required before installing the current package.

Warning: The time taken to install the latest SEU will depend on the last time the 3D System was updated with an SEU. Installing SEUs weekly can help lessen the installation time.

Synopsis

The Nortel TPS Team is aware of multiple vulnerabilities affecting products from the Microsoft Corporation.

Details

Microsoft Security Bulletin (MS08-019)

Microsoft Visio contains a programming error that may allow a remote attacker to execute code on an affected system.

A rule to detect attacks targeting this vulnerability is included in this release and is identified with GID 3 SID 13665.

Microsoft Security Bulletin (MS08-020)

A vulnerability in the Microsoft DNS client may allow a remote attacker to spoof DNS replies and redirect traffic away from the intended target.

A rule to detect attacks targeting this vulnerability is included in this release and is identified with GID 3 SID 13667.

Microsoft Security Bulletin (MS08-021)

A vulnerability in Microsoft GDI may allow a remote attacker to execute code on a vulnerable system via specially crafted EMF or WMF files.

Rules to detect attacks targeting this vulnerability are included in this release and are identified with GID 1 SID 13678, GID 3 SID 13676 and GID 3 SID 13666.

Microsoft Security Bulletin (MS08-022)

A vulnerability in the Microsoft VBScript and JScript scripting engines may allow a remote attacker to execute code on a vulnerable machine via a specially crafted file hosted on the Internet.

Rules to detect attacks targeting this vulnerability are included in this release and are identified with GID 3, SIDs 13448 and 13449.

Microsoft Security Bulletin (MS08-023)

Microsoft Internet Explorer contains vulnerabilities that may allow the execution of code by a remote attacker via various ActiveX controls.

Rules to detect attacks targeting this vulnerability are included in this release and are identified with GID 3 and SIDs 13668 through 13675.

WARNING: Nortel Threat Protection System customers must upgrade to 4.5.1 prior to applying this patch. Failure to upgrade will result in sensor failure when installing these rules.

Snort Engine Updates: In Threat Protection System v4.1, Snort Engine Updates (SEUs) replaced rule pack updates as the mechanism for updating Snort and Snort-based rules. In addition, SEUs can provide new and updated preprocessors and protocol decoders that aid in detecting intrusion attempts.

Note that SEUs can contain new binaries (in the form of shared object rules and new versions of Snort), so make sure that your process for installing new SEUs complies with your network and security policies.

Shared Object Rules: Shared object rules (SORs) are a new type of rule that allows the Nortel Threat Protection System Team more flexibility in detecting possible intrusions. SORs are delivered in SEUs in binary format as compared with the text rules (now called standard text rules or STRs) that were provided in previous rule packs.

You can view the rule documentation and create copies of shared object rules just as you could with standard text rules. However, you can only view and modify attributes such as the message or the source and destination ports and addresses in the rule header. You cannot view or modify the rule keywords section, including rule content keywords. Note that you can still create and modify your own standard text rules, and you can view, copy, and modify any of the legacy standard text rules.

How to get help

If you have purchased a Nortel service program, contact Nortel Technical Support. To obtain contact information online, go to www.nortel.com, and then click on Technical Support.

From the Technical Support page, you can open a Customer Service Request online or find the telephone number for the nearest Technical Solutions Center. If you are not connected to the Internet, you can call 1-800-4 NORTEL (1-800-466-7835) to learn the telephone number for the nearest Technical Solutions Center.

An Express Routing Code (ERC) is available for many Nortel products and services. When you use an ERC, your call is routed to a technical support person who specializes in supporting that product or service. To locate an ERC for your product or service, go to <http://www.nortel.com/support>. Click on the link for Express Routing Codes located at the bottom-right corner of the Web page.
