

# Threat Protection System

## Snort Engine Update 219

### Release Summary

**Release Date:** -14-April-2009

**Purpose:** The Snort Engine Upgrade (SEU) 219 (previous SEU-218) applies to:

- 3D Sensor Version: 4.8 and 4.7
- Defense Center Version(s): 4.8 and 4.7

### **SEU Change Summary:**

Component	Change
Total new rules	19
Total rule modifications	23
Policy change	Yes
Online help change	No
Detection Engine change	No
User Interface change	No

**Note:** SEU packages are cumulative. The installation of prior SEU packages is not required before installing the current package.

**WARNING:** The time taken to install the latest SEU will depend on the last time the 3D System was updated with an SEU. Installing SEUs weekly can help lessen the installation time. Additionally, SEUs require 50 Megabytes of free space in /tmp and 150 Megabytes of free space in /var to install successfully.

### Synopsis

The Nortel Threat Protection System Team is aware of multiple vulnerabilities affecting Microsoft products.

### Details

#### **Microsoft Security Advisory MS09-009:**

A programming error in Microsoft Excel may allow a remote attacker to execute code on a vulnerable system via a specially crafted XLS file.

A rule to detect attacks targeting this vulnerability is included in this release and is identified with GID 3, SID 15465.

A previously released rule identified with GID 3, SID 15365 will also detect attacks targeting this vulnerability.

#### **Microsoft Security Advisory MS09-010:**

Multiple vulnerabilities in Microsoft Wordpad may allow a remote attacker to execute code on a vulnerable system via a malformed file.

Rules to detect attacks targeting these vulnerabilities are included in this release and are identified with GID 3, SIDs 15466,15467,15469 and 15455.

**Microsoft Security Advisory MS09-011:**

A programming error in Microsoft DirectShow may allow a remote attacker to execute code on a vulnerable system via a specially crafted file.

A rule to detect attacks targeting this vulnerability is included in this release and is identified with GID 3, SID 15457.

**Microsoft Security Advisory MS09-012:**

A programming error in the Microsoft network service may allow a remote attacker to escalate privileges on a vulnerable system.

A rule to detect attacks targeting this vulnerability is included in this release and is identified with GID 3, SID 15470.

**Microsoft Security Advisory MS09-013:**

A vulnerability in Microsoft WinHTTP may allow a remote attacker to execute code on a vulnerable system. Additionally, a remote attacker may be able to supply an invalid SSL/TLS certificate to the service and impersonate a legitimate web service.

Rules to detect attacks targeting these vulnerabilities are included in this release and are identified with GID 3, SIDs 15456 and 15462.

Additionally, a previously released rule identified with GID 3, SID 15124 will also detect attacks targeting these vulnerabilities.

**Microsoft Security Advisory MS09-014:**

Multiple vulnerabilities in Microsoft Internet Explorer may allow a remote attacker to execute code on a vulnerable system.

Rules to detect attacks targeting these vulnerabilities are included in this release and are identified with GID 3, SIDs 15458,15459,15460 and 15461.

Additionally, a previously released rule identified with GID 3, SID 15124 will also detect attacks targeting these vulnerabilities.

**Microsoft Security Advisory MS09-015:**

A vulnerability in the Microsoft SearchPath function may be exploited by a remote attacker should the target system be using the Apple Safari browser.

A rule to detect attacks targeting this vulnerability is included in this release and is identified with GID 3, SID 15468.

**Microsoft Security Advisory MS09-016:**

Multiple vulnerabilities in Microsoft Internet Security and Acceleration (ISA) server may allow a remote attacker to cause a Denial of Service (DoS) or execute a cross site scripting attack.

Rules to detect attacks targeting these vulnerabilities are included in this release and are identified with GID 3, SIDs 15474 and 15475.

**WARNING:** Nortel Threat Protection System customers must upgrade to 4.5.1 prior to applying this patch. Failure to upgrade will result in sensor failure when installing these rules.

Snort Engine Updates: In Threat Protection System v4.1, Snort Engine Updates (SEUs) replaced rule pack updates as the mechanism for updating Snort and Snort-based rules. In addition, SEUs can provide new and updated preprocessors and protocol decoders that aid in detecting intrusion attempts.

Note that SEUs can contain new binaries (in the form of shared object rules and new versions of Snort), so make sure that your process for installing new SEUs complies with your network and security policies.

**Shared Object Rules:** Shared object rules (SORs) are a new type of rule that allows the Nortel Threat Protection System Team more flexibility in detecting possible intrusions. SORs are delivered in SEUs in binary format as compared with the text rules (now called standard text rules or STRs) that were provided in previous rule packs.

You can view the rule documentation and create copies of shared object rules just as you could with standard text rules. However, you can only view and modify attributes such as the message or the source and destination ports and addresses in the rule header. You cannot view or modify the rule keywords section, including rule content keywords. Note that you can still create and modify your own standard text rules, and you can view, copy, and modify any of the legacy standard text rules.

## **How to get help**

If you have purchased a Nortel service program, contact Nortel Technical Support. To obtain contact information online, go to [www.nortel.com](http://www.nortel.com), and then click on Technical Support.

From the Technical Support page, you can open a Customer Service Request online or find the telephone number for the nearest Technical Solutions Center. If you are not connected to the Internet, you can call 1-800-4 NORTEL (1-800-466-7835) to learn the telephone number for the nearest Technical Solutions Center.

An Express Routing Code (ERC) is available for many Nortel products and services. When you use an ERC, your call is routed to a technical support person who specializes in supporting that product or service. To locate an ERC for your product or service, go to <http://www.nortel.com/support>. Click on the link for Express Routing Codes located at the bottom-right corner of the Web page.
