

## **Nortel Threat Protection System SEU/Rule Update**

Date: 02/14/2007

Software Files and File Names:

TPS 4.5.1 Series SEU#63  
TPS 4.6 Series SEU #63

**TPS\_Snort\_Engine\_Upgrade-63-vrt.sh**  
**TPS\_Snort\_Engine\_Upgrade-63-vrt.sh**

Rule Update Synopsis:

The Nortel Vulnerability Research Team (VRT) is aware of multiple vulnerabilities affecting Microsoft products.

Details:

Microsoft Security Bulletin MS07-005:

Step-by-Step Interactive Training contains a remotely exploitable vulnerability that may allow an attacker to execute code on a vulnerable system.

Rules to detect attacks targeting this vulnerability were released on September 29, 2005 and are identified as SIDs 4195 and 4196.

Microsoft Security Bulletin MS07-008:

A vulnerability exists in the HTML Help ActiveX control that may allow a remote attacker to execute code on a vulnerable system.

Rules to detect attacks targeting this vulnerability were released on August 9, 2006 and are identified as SIDs 7439 and 7440.

Microsoft Security Bulletin MS07-009:

A vulnerability exists in the Microsoft Data Access Components (MDAC) ActiveX control that may allow a remote attacker to execute code on a vulnerable system.

A rule to detect attacks targeting this vulnerability was released on September 1, 2006 and is identified as SID 7866.

Microsoft Security Bulletin MS07-016:

Multiple vulnerabilities exist in Internet Explorer that may allow a remote attacker to execute code on a vulnerable system. The problems lie in how Internet Explorer handles COM objects and how the application handles FTP server responses.

Rules to detect attacks targeting this vulnerability are included in this release and are identified as SIDs 10137 through 10155.

Microsoft Security Bulletin MS07-014:

A vulnerability in Microsoft Word exists that may allow an attacker to execute code on an affected host using a specially crafted Word document.

Microsoft documents that exhibit vulnerable characteristics can be identified using the OfficeCat tool.

Microsoft Security Bulletin MS07-015:

Microsoft Excel contains a programming error that may allow an attacker to execute code on an affected host using a specially crafted Excel file.

Microsoft documents that exhibit vulnerable characteristics can be identified using the OfficeCat tool.

**WARNING:** Nortel Threat Protection System customers must upgrade to 4.1.0.2 or 4.5.1 (as applicable) prior to applying this patch. Failure to upgrade will result in sensor failure when installing these rules.

Snort Engine Updates: In Threat Protection System v4.1, Snort Engine Updates (SEUs) replace rule pack updates as the mechanism for updating Snort and Snort-based rules. In addition, SEUs can provide new and updated preprocessors and protocol decoders that aid in detecting intrusion attempts.

Note that SEUs can contain new binaries (in the form of shared object rules and new versions of Snort), so make sure that your process for installing new SEUs complies with your network and security policies.

Shared Object Rules: Shared object rules (SORs) are a new type of rule that allows the Nortel Threat Protection System Team more flexibility in detecting possible intrusions. SORs are delivered in SEUs in binary format as compared with the text rules (now called standard text rules or STRs) that were provided in previous rule packs.

You can view the rule documentation and create copies of shared object rules just as you could with standard text rules. However, you can only view and modify attributes such as the message or the source and destination ports and addresses in the rule header. You cannot view or modify the rule keywords section, including rule content keywords. Note that you can still create and modify your own standard text rules, and you can view, copy, and modify any of the legacy standard text rules.

How to get help: If you have purchased a Nortel service program, contact Nortel Technical Support. To obtain contact information online, go to [www.nortel.com](http://www.nortel.com), and then click on Technical Support.

From the Technical Support page, you can open a Customer Service Request online or find the telephone number for the nearest Technical Solutions Center. If you are not connected to the Internet, you can call 1-800-4 NORTEL (1-800-466-7835) to learn the telephone number for the nearest Technical Solutions Center.

An Express Routing Code (ERC) is available for many Nortel products and services. When you use an ERC, your call is routed to a technical support person who specializes in supporting that product or service. To locate an ERC for your product or service, go to <http://www.nortel.com/support>. Click on the link for Express Routing Codes located at the bottom-right corner of the Web page.
