

Nortel Threat Protection System SEU/Rule Update

Date: 05/09/2007

Software Files and File Names:

TPS 4.5.1 Series SEU#75
TPS 4.6 Series SEU #75

TPS_Snort_Engine_Upgrade-75-vrt.sh
TPS_Snort_Engine_Upgrade-75-vrt.sh

This update is SEU 75 for all models of the 4.6 and 4.5 series of the Defense Center and Intrusion Sensor.

Synopsis:

The Nortel TPS team is aware of vulnerabilities affecting Microsoft DNS Server Service, Microsoft Exchange Server, Microsoft CAPICOM, Microsoft Internet Explorer and Microsoft Excel.

Details:

Microsoft Security Bulletin MS07-029

Microsoft DNS Server Service is prone to a vulnerability that may allow a remote attacker to execute code on an affected system. The issue is present in the RPC interface of servers using Microsoft's implementation of DNS.

In order to detect attacks targeting this vulnerability, the DCE/RPC preprocessor must be configured to use 'autodetect'. This is the default behavior for this preprocessor.

Detection for attacks targeting this vulnerability was previously released.

Microsoft Security Bulletin MS07-028

A vulnerability in Microsoft Cryptographic API Component Object Model (CAPICOM) may allow a remote attacker to execute code on an affected system.

Rules to detect attacks targeting this vulnerability are included in this release and are identified as SIDs 11230 through 11235

Microsoft Security Bulletin MS07-027

Microsoft Internet Explorer suffers from programming errors that may allow a remote attacker to execute code on an affected system.

Rules to detect attacks targeting this vulnerability are included in this release and are identified as SIDs 11224 through 11229, 11247, 11248 and 11257.

Also, other rules that detect attacks targeting this vulnerability were previously released and are identified as SIDs 9427 and 9428.

Microsoft Security Bulletin MS07-026

Microsoft Exchange Server incorrectly handles certain electronic mail transactions. This may allow a remote attacker to execute code on an affected system.

A rule to detect attacks targeting this vulnerability is included in this release and is identified as SID 11222.

Additionally, a rule that also detects attacks targeting this vulnerability was previously released and is identified as SID 2665.

Microsoft Security Bulletin MS07-023

Microsoft Excel is prone to a vulnerability that may allow a remote attacker to execute code on an affected system.

A rule to detect attacks targeting this vulnerability is included in this release and is identified as SID 11258.

WARNING: Nortel Threat Protection System customers must upgrade to 4.5.1 prior to applying this patch. Failure to upgrade will result in sensor failure when installing these rules.

Snort Engine Updates: In Threat Protection System v4.1, Snort Engine Updates (SEUs) replaced rule pack updates as the mechanism for updating Snort and Snort-based rules. In addition, SEUs can provide new and updated preprocessors and protocol decoders that aid in detecting intrusion attempts.

Note that SEUs can contain new binaries (in the form of shared object rules and new versions of Snort), so make sure that your process for installing new SEUs complies with your network and security policies.

Shared Object Rules: Shared object rules (SORs) are a new type of rule that allows the Nortel Threat Protection System Team more flexibility in detecting possible intrusions. SORs are delivered in SEUs in binary format as compared with the text rules (now called standard text rules or STRs) that were provided in previous rule packs.

You can view the rule documentation and create copies of shared object rules just as you could with standard text rules. However, you can only view and modify attributes such as the message or the source and destination ports and addresses in the rule header. You cannot view or modify the rule keywords section, including rule content keywords. Note that you can still create and modify your own standard text rules, and you can view, copy, and modify any of the legacy standard text rules.

How to get help: If you have purchased a Nortel service program, contact Nortel Technical Support. To obtain contact information online, go to www.nortel.com, and then click on Technical Support.

From the Technical Support page, you can open a Customer Service Request online or find the telephone number for the nearest Technical Solutions Center. If you are not connected to the Internet, you can call 1-800-4 NORTEL (1-800-466-7835) to learn the telephone number for the nearest Technical Solutions Center.

An Express Routing Code (ERC) is available for many Nortel products and services. When you use an ERC, your call is routed to a technical support person who specializes in supporting that product or service. To locate an ERC for your product or service, go to <http://www.nortel.com/support> . Click on the link for Express Routing Codes located at the bottom-right corner of the Web page.
