Problems Resolved in This Release

The Mobile Adapter 2202 cannot connect to the Domain prior to Windows logon, so users will not have access to the network until after the log in to their Windows machine. This may require you to log in twice—first, to log in to the workstation and second, to log in to the network after the utility initializes. This issue is now resolved. (Q00965489)

7. Known Limitations

None

For other known issues, please refer to version 3.0.0.0 release notes from the Nortel Networks web site at <http://www.nortelnetworks.com/documentation>.
