## Document history

## Preface

## Contacting Extreme Technical Support

As an Extreme customer, you can contact Extreme Technical Support using one of the following methods: 24x7 online or by telephone. OEM customers should contact their OEM/solution provider. If you require assistance, contact Extreme Networks using one of the following methods:

- GTAC (Global Technical Assistance Center) for immediate support
- Phone: 1-800-998-2408 (toll-free in U.S. and Canada) or +1 408-579-2826. For the support phone number in your country, visit: <a href="https://www.extremenetworks.com/support/contact">www.extremenetworks.com/support/contact</a>.
- Email: support@extremenetworks.com. To expedite your message, enter the product name or model number in the subject line.
- GTAC Knowledge Get on-demand and tested resolutions from the GTAC Knowledgebase, or create a help case if you need more guidance.
- The Hub A forum for Extreme customers to connect with one another, get questions answered, share ideas and feedback, and get problems solved. This community is monitored by Extreme Networks employees, but is not intended to replace specific guidance from GTAC.
- Support Portal Manage cases, downloads, service contracts, product licensing, and training and certifications.

Before contacting Extreme Networks for technical support, have the following information ready:

- Your Extreme Networks service contract number and/or serial numbers for all involved Extreme Networks products
- A description of the failure
- A description of any action(s) already taken to resolve the problem
- A description of your network environment (such as layout, cable type, other relevant environmental information)
- Network load at the time of trouble (if known)
- The device history (for example, if you have returned the device before, or if this is a recurring problem)
- Any related RMA (Return Material Authorization) numbers

### Extreme resources

Visit the Extreme website to locate related documentation for your product and additional Extreme resources.

White papers, data sheets, and the most recent versions of Extreme software and hardware manuals are available at www.extremenetworks.com. Product documentation for all supported releases is available to registered users at <a href="http://www.extremenetworks.com/support/documentation">www.extremenetworks.com</a>.

## Document feedback

Quality is our first concern at Extreme, and we have made every effort to ensure the accuracy and completeness of this document. However, if you find an error or an omission, or you think that a topic needs further development, we want to hear from you.

You can provide feedback in two ways:

• Use our short online feedback form at <a href="http://www.extremenetworks.com/documentation-feedback-pdf/">http://www.extremenetworks.com/documentation-feedback-pdf/</a>

• Email us at internalinfodev@extremenetworks.com

Provide the publication title, part number, and as much detail as possible, including the topic heading and page number if applicable, as well as your suggestions for improvement.

## Overview

SLX-OS 18r.1.00 supports these features:

Multiple VLAN Registration Protocol (MVRP): Layer2 protocol to manage dynamic VLANs events per 802.1ak. This is supported with MCT.

Endpoint tracking: This feature complements MVRP by adding MAC-authentication, re-authentication using Radius. This feature is supported with MCT.

Streaming telemetry enhancements: JSON encoding support along with support for streaming of Line Card, MPLS LSP, Queue statistics.

## New SKUs

No new SKUs are introduced in this release.

## Behavior changes

## Behavior changes in release 18r.1.00

The following system behaviors have changed in this release:

- DNS improvement: Now we do not need to configure a domain name using command "ip dns domain-name ... ", along with "ip dns name-server <ip>" command. Previously, we had to configure domain name for DNS resolving to happen.
- Multi-VRF support for NTP client and server: Previously, NTP client tried to reach the server via mgmt-vrf instead of default-vrf. Support for default-vrf was added in this release.
- A defect in the firmware of the SSD used in the SLX 9540 may cause the SSD to stop responding. This is not corrected in the 18r.1.00 release. When this defect happens, the Extreme SLX-OS places the file system into a read-only mode to indicate that the file system is hung. A power-cycle fully recovers the device. An SSD controller firmware update is available, and GTAC can assist you in applying this to your systems. Please refer to Field Notice, FN-2018-422 for more information.

## Software Features

## New software features in 18r.1.00

The following software features are new in this release:

- Endpoint tracking:
  - o Minimizes the configuration and management of VLANs on switches in the data center
  - Supports authentication of macs using 802.1x protocol
  - Supports assignment of VLAN using NAC to authenticated mac, dynamic VLAN creation of the same and port vlan assignment
  - Can be used for dynamic VLAN management per host using NAC configuration
- Multiple VLAN Registration Protocol (MVRP):
  - Layer 2 protocol allows the dynamic propagation of VLAN information from device to device; manually configure an MVRP-aware access device with all desired VLANs for the network and all other MVRP-aware devices on the network learn these VLANs
- Layer 2 Loop Detection:
  - In Loose Mode, the LD shutdown action is changed from physical port level shutdown to LIF (Logical Interface) level shutdown. This keeps the physical port up and prevents other VLANs on the same physical port from being impacted.
- Data streaming Enhancements:
  - JSON encoding support
  - TM VoQ statistics
  - Line card CPU and Memory Statistics
  - o MPLS traffic statistics data streaming
- Increase scale support for class-maps under the service policy:
  - Number of class maps per policy-map has been changed from 128 to 4K.
  - Host and the SLX VM image snapshots:
    - Creates snapshot image of the currently running Host and the SLX VM images
- MPLS Enhancements:
  - Syslog enhancement for LDP session down events
  - Logging LSP down reason in syslog
  - Sort the output of "show mpls ldp tunnel" command by FEC address

#### BGP EVPN VxLAN based IP Fabric\*\*

BGP EVPN IP Fabric is a controller-less architecture that simplifies data center operations by leveraging open, standards-based protocols to abstract network control plane, data plane, and automation functions from the underlying physical platforms. BGP EVPN Network Virtualization builds upon underlying infrastructure platforms, fabrics, and automation to deliver simplified and secure network operations.

The following features are supported:

- BGP EVPN support: Support for EVPN route types (Inclusive Multicast, MAC/MACIP routes, IPv4/v6 prefix routes, ES routes, AD routes)
- Dynamic tunnel (VxLAN) discovery: Supports Dynamic Tunnel discovery using BGP EVPN
- Bridge Domain Support: BGP-EVPN is supported over basic VLAN and Bridge-Domain
- ARP Suppression: Suppress/reduce the ARP broadcast traffic in an IP fabric.
- Static Anycast Gateway: Static Anycast Gateway allows configuring Static Anycast MAC as
  gateway for multiple tenant systems in a virtualized data center fabric. Same Gateway address is
  configured across all TORs for a given Tenant/VLAN combination, thus enabling seamless VM
  mobility across the leaf switches in an IP Fabric deployment without any need for host gateway
  configuration changes.
- IP Unnumbered Interfaces: Reduces consumption of IP Address space. Leaf to spine inter-switch point-to-point L3 links are configured as ip unnumbered to conserve IP addresses and optimize hardware resources.
- L2VNI capability: The L2VNI is the MAC/NVE mapping table
- L3VNI/routing capability: Default and non-default VRF routing/L3VNI are supported with BGP-EVPN. Symmetric and Asymmetric IRB are supported
- Logical VTEP: A logical VXLAN tunnel end point (LVTEP) is supported for both Layer 2 and Layer 3 for SLX 9540 only. SLX 9850 is not supported as leaf in VXLAN IP fabric.

REST API Support: All configuration operations supported in CLI are supported via REST. Selected BGP show commands for EVPN are supported with REST.

\*\*Please note that the support for the L3VNI comes with limitations, which will be resolved in the patch release of 18r.1.00. Extreme recommends using 18r.1.00 for evaluation or controlled deployments of L3VNI.

## CLI commands

### CLI commands

### New commands

The following commands are new in this release:

- bypass-lsp (Telemetry)
- clear ip arp suppression-cache
- clear ip arp suppression-statistics
- clear ipv6 nd suppression-cache
- clear ipv6 nd suppression-statistics
- clear mrvp statistics
- endpoint-tracking enable
- fec (telemetry)

### Modified commands

The following commands have been modified for this release:

- show arp
- show arp summary
- show ipv6 neighbor
- show ipv6 neighbor summary

### Deprecated commands

There are no deprecated commands in this release.

## RFCs, Standards, and Scalability

For RFCs, standards, and scale numbers supported in this release, refer to the <u>Extreme SLX-OS Scale and</u> <u>Standards Matrix for SLX 9850 and SLX 9540</u>.

## Hardware support

## Supported devices

The following devices are supported in this release:

pewer supplies, 3 fam modules, and accessory kit. Pewer ord not included.           BR-SLV9850-4-BND-DC         Extreme SLV 9850-4-site hassis with 1 amagement module, 5 witch fabric modules, 4 3000W AC           BR-SLV9850-4-BND-AC         Extreme SLV 9850-8-site chassis with 1 amagement module, 5 witch fabric modules, 4 3000W AC           BR-SLV9850-4-BND-AC         Extreme SLV 9850-8-site chassis with 1 amagement module, 5 witch fabric modules, 4 3000W DC           power supplies, and 3 fam modules, and accessory kit. Power cord not included.         Extreme SLV 9850-8-BND-DC           BR-SLV9850-10GX725-M         Extreme SLV 9850 72-port 10 GbE/1 GbE dual-speed (M) interface module with IPv4/IPv6/MPLS           BR-SLV9850-10GX725-M         Extreme SLV 9850 72-port 10 GbE, 6D-port 40 GbE, or 240-port 10 GbE flocessoed (M) interface module           BR-SLV9850-10GX36CQ-M         Extreme SLV 9850 36-port 100 GbE, 6D-port 40 GbE, or 240-port 10 GbE flocessoed (M) interface module           BR-SLV9850-10GX36CQ-M         Extreme SLV 9850 72-port 10 GbE/1 GbE (D) Interface module with IPv4/IPv6 hardware support. Requires SDF28, 000 EX           BR-SLV9850-10GX36CQ-M         Extreme SLV 9850 72-port 10 GbE/1 GbE (D) Interface module with IPv4/IPv6 hardware support. Requires SDF28, 000 EX           BR-SLV9850-10GX36CQ-M         Extreme SLV 9850 36-port 10 GbE, 6D-port 40 GbE, or 240-port 10 GbE floc-speed (D) Interface module with IPv4/IPv6 hardware support. Requires SDF28, 000 FP or 10 GbE floc-speed (D) Interface module with IPv4/IPv6 hardware support. Requires SDF28, 000 FP or 10 GbE floc-speed (D) Interface module with IPv4/IPv6 hardware support.	Supported Hardware	Description			
BR-SL998-04-BND-DC         power supplies, 3 fam modules, and accessory kit. Power cord not included.           BR-SLX9850-8-BND-AC         Extreme SLX 9850 8-slot chassis with 1 management module, 5 switch fabric modules, 4 3000W DC           BR-SLX9850-8-BND-DC         Extreme SLX 9850 8-slot chassis with 1 management module, 5 switch fabric modules, 4 3000W DC           BR-SLX9850-8-BND-DC         Extreme SLX 9850 7-20prt 10 GbE/1 GbE dual-speed (M) interface module with IPv4/IPv6/MPLS           BR-SLX9850-10GX725-M         Extreme SLX 9850 72-port 100 GbE, 60-port 40 GbE, or 240-port 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 72-port 100 GbE, 60-port 40 GbE, or 240-port 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires SPF28 optics for 100 GbE, 60-port 40 GbE, or 240-port 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires SFF28 optics for 100 GbE, C0-port 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires SFF28 optics for 10 GbE connectivity. Supports up to 750,000 MAC. Supports 10 to 750,000 MAC. Support 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires 05FP28, Q5FP+ optics 8 40GbE to 10 GbE           BR-SLX9850-100GX12CQ-M         Extreme SLX 9850 72 port 10 GbE, flox optic VAD GbE, flox optics 8 40GbE to 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires 05FP28, Q5FP+ optic	BR-SLX9850-4-BND-AC				
BR-SL998-0-8-RU-AC         power supplies, 3 fam modules, and accessory kit. Power cord not included.           BR-SLY9850-8-BND-DC         Extreme SLX 9850 8-slot chassis with 1 management module, 5 switch fabric modules, 4 3000W DC power supplies, and 3 fam modules, and accessory kit. Power cord not included.           BR-SLY9850-10GX725-M         Extreme SLX 9850 72-port 10 GbE/1 GbE dual-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires SFP+ optics for 10 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale** Internet Routing.           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100 GbE, 60-port 40 GbE, or 240-port 10 GbE flex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires GSP28 optics for 100 GbE, CoSFP+ optics for 40 GbE, 10 GbE breakout for 10 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with optiScale** Internet Routing.           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100GbE/GbE (D) interface module with IPv4/IPv6 hardware support. Requires GSFP28, QSFP+ optics & 40GbE to 10GbE           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100GbE, 60-port 40GbE, or 240-port 10GbE flex-speed (D) interface module with IPv4/IPv6 hardware support. Requires GSFP28, QSFP+ optics & 40GbE to 10GbE           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100GbE/GbE (D) ODGbE 10 GDGE           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 Spare 4-slot Chasis           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 Spare 4-slot chasis           BR-SLX9850-100GX4CQ-	BR-SLX9850-4-BND-DC				
BR-SLX9850-3-BND-DL         power supplies, and 3 fan modules, and accessory kit, Power cord not included.           BR-SLX9850-10GX725-M         Extreme SLX 9850 72-port 10 GbE/1 GbE dual-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires SFP+ optics for 1 GbE connectivity. 3GP optics for 1 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale* Internet Routing.           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100 GbE, 60-port 40 GbE, or 240-port 10 GbE fiex-speed (M) interface module with IPv4/IPv6/MPLS hardware support. Requires GSFP28 optics for 10 GbE, CSFP+ optics for 40 GbE, and 40 GbE to 10 GbE breakout for 10 GbE connectivity. Supports up to 7,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale*' Internet Routing.           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100 GbE, Connectivity. Supports up to 7,500,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale*' Internet Routing.           BR-SLX9850-100GX36CQ-D         Extreme SLX 9850 37-port 100GbE connectivity and SFP optics for 10GbE flox-Speed (D) interface module with IPv4/IPv6/hardware support. Requires QSFP28, QSFP+ optics & 40GbE to 10GbE Extreme SLX 9850 12-port 100 GbE, 20-port 40GbE, or 80-port 100bE flex-speed (M) interface module with IPv4/IPv6/hardware support. Requires QSFP28, QSFP+ optics & 40GbE to 10GbE breakout (for 10 GbE) connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale*' Internet Routing.           BR-SLX9850-100GX12CQ-M         6x100G PD0 SW license to be used with SLX9850-100Gx12CQ-M 100G blade only UPG           BR-SLX9850-A-SF         Extreme SLX 9850 Spare 4-slot chassis </td <td>BR-SLX9850-8-BND-AC</td> <td colspan="4"></td>	BR-SLX9850-8-BND-AC				
BR-SLX9850-10GX725-M         Inardware support. Requires SFP optics for 10 GbE connectivity and SFP optics for 1 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale** Internet Routing.           BR-SLX9850-100GX36CQ-M         Extreme SLX 9850 36-port 100 GbE, 60-port 40 GbE, or 240-port 10 GbE, GSFP- optics for 40 GbE, and 40 GbE to 10 GbE breakout for 10 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale** Internet Routing.           BR-SLX9850-100GX725-D         Extreme SLX 9850 36-port 100 GbE/ GbE (0) interface module with IPv4/IPv6 hardware support. Requires QSFP28, QSFP+ optics for 10 GbE for States with up to 8GB packet buffers           BR-SLX9850-100GX36CQ-D         Extreme SLX 9850 3-port 100 GbE, 20-port 40GbE, or 240-port 10GbE flex-speed (D) interface module with IPv4/IPv6/MPLS hardware support. Requires QSFP28, QSFP+ optics & 40GbE to 10GbE breakout (for 10 GbE) connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with OptiScale** Internet Routing.           BR-SLX9850-100GX12CQ-M         Extreme SLX 9850 3-pare 4-slot chassis           BR-SLX9850-100GX12CQ-M         Extreme SLX 9850 Spare 4-slot chassis           BR-SLX9850-4-S         Extreme SLX 9850 Ox 000 Wp over supply for 4- and 8-slot systems, includes 16GB RAM, 2 internal Solid State Drives, 4-Core Intel CPU, 2	BR-SLX9850-8-BND-DC				
BR-SLX9850-100GX36CQ-M         with IPV4/IPv6/MPLS hardware support. Requires QSFP28 optics for 100 GbE, QSFP+ optics for 40 GbE, and 40 GbE to 10 GbE to sheakout for 10 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPV4 routes, 140,000 IPv6 routes with OptiScale <sup>™</sup> Internet Routing.           BR-SLX9850-10GX72S-D         Extreme SLX985072-port 10GbE/IGbE (D) Interface module with IPv4/IPv6 hardware support. Requires SFP+ optics for 10GbE connectivity. Supports 750K MAC, 256K IPV4 routes and 64K IPV6 routes with 0pt 08 GB packet buffers           BR-SLX9850-100GX36CQ-D         Extreme SLX 9850 36-port 100GbE, 60-port 40GbE, or 240-port 10GbE flex-speed (D) Interface module with IPv4/IPv6 hardware support. Requires QSFP28, QSFP+ optics & 40GbE to 10GbE breakout (for 10 GbE) connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with 0ptiScale <sup>™</sup> Internet Routing.           BR-SLX9850-100GX6CQ-M         Extreme SLX 9850 Spare 4-slot chassis           RR-SLX9850-100GX6CQ-M         6x100G POD SW license to be used with SLX9850-100Gx12CQ-M 100G blade only           IPv6         6x100G POD SW license to be used with SLX9850-100Gx12CQ-M 100G blade only           IPv6         Extreme SLX 9850 Spare 4-slot chassis           Rs-SLX9850-4-S         Extreme SLX 9850 Spare 8-slot chassis           Rs-SLX9850-4-SFM         Extreme SLX 9850 annagement module for 4-slot and 8-slot systems, includes 16GB RAM, 2 internal Sold State Drives, 42 0000 power supply for 4- and 8-slot chassis           Rs-SLX9850-4-SFM         Extreme SLX 9850 annodule for 4-slot chassis           Rs-SLX9850-A-SFM <td>BR-SLX9850-10GX72S-M</td> <td>hardware support. Requires SFP+ optics for 10 GbE connectivity and SFP optics for 1 GbE connectivity. Supports up to 750,000 MAC. Supports up to 1,500,000 IPv4 routes, 140,000 IPv6 routes with</td>	BR-SLX9850-10GX72S-M	hardware support. Requires SFP+ optics for 10 GbE connectivity and SFP optics for 1 GbE connectivity. Supported Hardware	Description
XBR-SLX9850-8-2PRM-KIT	Extreme SLX 9850 two-post rack mounting kit for 8-slot chassis. Include telco flush and midplane mounting
BR-SLX-9540-24S-AC-F	Extreme SLX 9540-24S Switch AC with Front to Back airflow. Supports 24x10GE/1GE + 24x1GE ports
BR-SLX-9540-24S-DC-F	Extreme SLX 9540-48S Switch DC with Front to Back airflow. Supports 48x10GE/1GE + 6x100GE/40GE
BR-SLX-9540-24S-AC-R	Extreme SLX 9540-24S Switch AC with Back to Front airflow. Supports 24x10GE/1GE + 24x1GE ports
BR-SLX-9540-24S-DC-R	Extreme SLX 9540-24S Switch DC with Back to Front airflow. Supports 24x10GE/1GE + 24x1GE ports
BR-SLX-9540-48S-AC-F	Extreme SLX 9540-48S Switch AC with Front to Back airflow. Supports 48x10GE/1GE + 6x100GE/40GE
BR-SLX-9540-48S-DC-F	Extreme SLX 9540-48S Switch DC with Front to Back airflow. Supports 48x10GE/1GE + 6x100GE/40GE
BR-SLX-9540-48S-AC-R	Extreme SLX 9540-48S Switch AC with Back to Front airflow. Supports 48x10GE/1GE + 6x100GE/40GE
BR-SLX-9540-48S-DC-R	Extreme SLX 9540-48S Switch DC with Back to Front airflow. Supports 48x10GE/1GE + 6x100GE/40GE
BR-SLX-9540-24S-COD	Upgrade 24x1GE to 24x10GE/1GE
BR-SLX-9540-2C-POD	Ports on Demand for 2x100GE/40GE Uplinks
BR-SLX-9540-ADV-LIC-P	Advanced Feature License for MPLS, BGP-EVPN, CE2.0, NSX, OptiScale™ Internet Routing (for Extreme SLX 9540-24S and 9540-48S)

## Supported power supplies

- Extreme SLX 9850 AC 3000W power supply for 4- and 8-slot chassis, 90-270V AC input
- Extreme SLX 9850 DC 3000W power supply for 4- and 8-slot chassis, 48V DC input

## Supported optics

Part Number	Description

10G-SFPP-USR-E	10GE USR SFP+, HIGH RX SENSITIVITY
10G-SFPP-USR-8-E	10GE USR SFP+, HIGH RX SENSITIVITY (8-pack)
10G-SFP-USR-SA	10GE USR SFP+ OPTIC (LC),RANGE 100M MMF, TAA
10G-SFP-SR-S	10GBASE-SR, SFP+OPTIC(LC), 300M MMF, 70C
10G-SFP-LR-SA	10GBASE-LR, SFP+ OPTIC (LC),10KM OVERSMF, TAA, 70C
10G-SFP-BXU-S	10GE LR SFP+ OPTIC (LC) BIDIRECTIONAL UP
10G-SFP-BXD-S	10GE LR SFP+ OPTIC (LC) BIDIRECTIONAL DO
*Methode SP7051	Methode SP7051-BRCD SFP+ 10G-Base-T (10G speed only)
*Inphi IN-Q2AY2-XX	Inphi 100G QSFP-28 ColorZ DWDM (80km)

\*Optics reference qualified and should be purchased from the respective vendors. Extreme doesn't sell these.

## Software upgrade and downgrade

## Image file names

Download the following images from <u>www.extremenetworks.com</u>.

Image file name	Description
slxos18r.1.00.tar.gz	SLX-OS 18r.1.00 software
slxos18r.1.00_all_mibs.tar.gz	SLX-OS 18r.1.00 MIBS
slxos18r.1.00.md5	SLX-OS 18r.1.00 md5 checksum

## Upgrade and downgrade considerations

- Upgrade from a 32-bit to 32-bit SLX-OS is performed using 'coldboot' option
- Upgrade from a 32-bit to 64-bit SLX-OS is a twostep sequential process as shown below:
  - 1) Upgrade using 'coldboot' to 17r.1.01a
  - 2) Upgrade using 'fullinstall' to 64-bit SLX OS
- Upgrade/Downgrade using 'fullinstall' takes up to 60 minutes for completion as compared to 25 minutes for 'coldboot'
- Upgrade from a 64-bit to 64-bit SLX-OS is performed using 'coldboot' option
- When firmware upgrade or downgrade is performed, following matrix can be used as a reference

	16r.1.0	17r.1.0	17r.1.01	17r.1.01a	17r.2.0	18r.1.0
То	(32-bit)	(32-bit)	(32-bit)	(32-bit)	(64-bit)	(64-bit)

#### Upgrade Steps from 32-bit to 64-bit SLX-OS

- 1. Make sure the device is running SLXOS 17r.1.01a or later, if not, please see the 17r.1.01 documentation on how to upgrade to that release
- 2. Upgrade to SLX-OS 18r.1.00 using fullinstall
- 3. Save Configuration

To save the config, run

#### copy running-config startup-config

4. Firmware download with "fullinstall" option from source directory

device# firmware download fullinstall ftp user release user password release user file release.plist  $% \left( {{{\left[ {{{\left[ {{{\left[ {{{\left[ {{{\left[ {{{{\left[ {{{{\left[ {{{{\left[ {{{{}}}}} \right]}}}} \right.}$ 

#### Notes:

Firmware download with the "fullinstall" option will retain the startup configuration file, and upon auto reboot of the device, it will replay the startup configuration file automatically.

Upgrade/downgrade using firmware download CLI through USB:

• Upgrade from SLX-SLX 17r.1.01a to SLX-OS 17r.2.01 is supported via firmware download CLI with "fullinstall" option, but not supported with USB

### Instruction to check and upgrade FPGAs/CPLDs:

Refer to the SLX-OS Upgrade Guide for all variations on upgrading SLX-OS.

### MCT upgrade process from 32-bit OS to 64-bit OS

This section describes the procedure to upgrade from SLX-OS 17r.1.01x to SLX-OS 17r.2.01 and later releases with minimal traffic loss disruption to the customer.

The below steps are written based on the nomenclature used for MCT nodes being A and B

1. Configure client-isolation-mode under the cluster to be loose on Node A and Node B respectively.

Device(config)#cluster <Name of the cluster> <cluster-id> client-isolation loose

2. Isolate Node A from the network using the follow steps:

- a) Disable the MCT clients from the MCT node that needs to be taken offline using **client-interfaces-shutdown** command.
- b) Disable the link connected to MCT peer node and uplink to the core.
- 3. Copy running-configuration to startup-configuration on node A.
- 4. Upgrade node "A" using firmware download with fullinstall option to the Venus image. While the upgrade on node A is happening, the traffic passes through node B with <30sec downtime (depending on the scale and other parameters).
- 5. Verify that once the node comes UP, the member-vlan configuration under the cluster is removed.
- 6. Create a evpn template as in below and add to the existing configuration.

evpn <evpn-instance-name> route-target both auto ignore-as rd auto

vlan add <NUMBER:1-4090>

- 7. Isolate Node B from the network using the same steps as in Step 1. Note that there is a complete traffic loss at this step.
- 8. Copy running-configuration to startup-configuration on node B.
- 9. Bring back A to network by bringing the client-interfaces UP using the following command under cluster configuration.

### # no client-interfaces-shutdown

Also, enable the interface going to the peer MCT node and the uplink to the CORE network.

- 10. Upgrade MCT node B by repeating the steps 3-5.
- 11. Once the upgrade is completed, bring back MCT node B to network by using the same step as 8.
- 12. Configure "no client-isolation" under the cluster configuration on both Node A and Node B.

## Additional upgrade considerations for upgrading SLX9850 from 17r.1.01a or 17r.1.01b to 18r.1.00

When upgrading a SLX9850 from 17r.1.01a or 17r.1.01b to 18r.1.00, if TPVM is installed in the system, you must un-install it by running the "tpvm uninstall" command before starting firmware download. Otherwise, it will cause system initialization issue. After the system is upgraded, you can install the TPVM image from 18r.1.00 by running the "tpvm install" command.

## Limitations and restrictions

#### BFD:

- Sessions with less than 300ms timer may flap in scale conditions
- Known issues with BFD when BFD is configured over multi-slot LAG, or multi-hop session over ECMP paths

#### L3VPN: Known issues with Peer-group, RR-group and Prefix-list ORF

#### FRR facility backup

• VPLS/VLL Bypass traffic will not work when router/untagged VE interfaces configured as MPLS uplink ports

## MCT L3 cases are not supported when ICL interface is configured as router/untagged VE

it is required for all MPLS uplinks to be tagged interfaces to use FRR bypass for VLL/VPLS/L3VPN applications

#### Routing over VPLS

• pw-profile must be configured with tagged mode only under the bridge-domain instance for routing with VPLS

#### **Internet Routes Scaling**

- It is recommended that the internet routes scaling features be enabled with internet peering configurations, as qualified by Extreme
- Feature is supported with default VRF only; default VRF and non-default VRF should not be co-existing when default VRF is configured with Internet routes scaling feature

### L3VPN jumbo limitation

 The IPMTU value configured in CLI is applicable, if outgoing routing interface is an undelay IP interface (VE or L3 port); the IPMTU value configured in CLI is not applicable if the outgoing interface is uplink for IPOMPLS, L3VPN traffic, or ICL for MCT peers. Jumbo frames over MPLS/L3VPN tunnels can be accepted based the port L2MTU values.

#### **EVPN IP Fabric**

• IPv6 Static Anycast Gateway is not supported.

#### Increase scale support for class-maps under the service policy

• The ACL/VLAN/BD Rate Limiting scale numbers are dependent on tcam profile configured. Basically, based on the tcam entries reserved for the feature, user can scale number of policers/stats for appropriate application.

Consider below example with tcam profile "layer2-optimised-1".

- Create 2K Vlan/BD based class-maps and 2K ACL based class-maps associate those with policy-map pmap1.
- Configure 1k distinct policer attributes (cir/cbs/eir/ebs) for all the policymap/class-map combination and bind the policy-map pmap1 to any interface.
- Now overall there will be 4K policers active for that interface with 4k distinct class-maps (match criteria).

- Note: The 4K policers (class-maps) scale will not be applicable to port-channel. There are only 1,215 policers are reserved for port-channels.
- Based on the requirement user must set the tcam profile and must reboot the box for activating the same.

## Closed with code changes 18r.1.00

This section lists software defects with Critical, High, and Medium Technical Severity closed with a code change as of **09/27/2018** in 18r.1.00.

Defect ID:	DEFECT000632766				
Technical Severity:	High Probability: High				
Product:	Brocade SLX-OS	rocade SLX-OS Technology Group: Management			
<b>Reported In Release:</b>	SLXOS 17s.1.00 Technology: SNMP - Simple

			Protocol		
Symptom:	SNMP get of MIB ifHighSpeed for 100G interface returns value 99999				
Condition:	SNMP get response for MIB ifHighSpeed on 100G interface will				
	return 99999 instead of 100000				

Defect ID:	DEFECT000635924			
Technical Severity:	High	Probability:	Medium	
Product:	Brocade SLX-OS	Technology Group:	Layer 3	
			Routing/Network	
			Layer	
Reported In Release:	SLXOS 17r.1.00	Technology:	ARP - Address	
			<b>Resolution Protocol</b>	
Symptom:	Layer 3 traffic forwarding is affected for few Layer 3 interface on enabling RSTP.			
Condition:	Enable RSTP with 512 VLAN/VE and 512 BGP sessions.			
Workaround:	Enable RSTP before configuring or enabling Layer 3 interfaces.			
Recovery:	Clear the ARP associated with the route's nexthop IP address. (or)			
	Clear the mac table associated with the VLAN/VE interface.			

Defect ID:	DEFECT000640298		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.1.01	Technology:	Configuration
			Fundamentals
Symptom:	Traffic drop observed for a BD in MCT-VLL scenario.		
Condition:	Deleting peer IP and re-adding it multiple time may lead to this issue.		
Recovery:	Bridge-Domain flap or Deploy/Un-deploy of Cluster will recover the		
	issue.		

Defect ID:	DEFECT000643147		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17s.1.02	Technology:	Software Installation
			& Upgrade
Symptom:	Observe "NOTAKNOWN Resourceld" error message		
Condition:	Making configuration updates before ZTP process is complete.		
Workaround:	Do not perform configuration changes until "ZTP Complete" message		
	is seen.		
Recovery:	Disable ZTP with "dhcp	ztp cancel" and reboot	the switch.

Defect ID:	DEFECT000643918		
<b>Technical Severity:</b>	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.1.01	Technology:	IPv4 Multicast
			Routing
Symptom:	Traffic loss for the SG entries which are not registered with any cast		
	RP,		
Condition:	This issue happens when we have mixed topology with RP and		
	anycast RP in the same domain.		
Workaround:	configure all the nodes with anycast RP this issue will not be seen.		

Defect ID:	DEFECT000644746		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 17s.1.01	Technology:	SNMP - Simple
			Network
			Management
			Protocol
Symptom:	ifHighSpeed values are seen incorrect for 100G Physical Interfaces		
Condition:	Run SNMP to see ifHighSpeed of 100G Physical Interfaces		

Defect ID:	DEFECT000648772		
<b>Technical Severity:</b>	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.1.01	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Jumbo frames are not supported in BGP		
Condition:	Running BGP with jum	bo frame configuration	

Defect ID:	DEFECT000649765		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	LAG - Link
			Aggregation Group
Symptom:	During reload with LAG configuration, some unnecessary logs are		
	coming on console. There is no impact on functionality.		
Condition:	Logs comes during reload with LAG configuration.		
Workaround:	No workaround		
Recovery:	No impact on functionality		

Defect ID:	DEFECT000651113		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	Multi-VRF
Symptom:	Duplicate RT in IMR route of L3VRF if IPv4 and IPv6 address-family		
	have the same RT configured		
Condition:	Only if entering same export RT value for IPV4 and IPV6 address		
	family, it will be repeated in IMR route. It does not affect the		
	functionality, as in the remote end, route will be accepted even if the		
	first RT value matches.		

Defect ID:	DEFECT000652789		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	ARP - Address
			Resolution Protocol
Symptom:	"show ip arp suppression-cache" has invalid port number for the		
	entries which were learnt locally		
Condition:	Issue would be hitting after HA, and only for the locally learnt entries		
Workaround:	"show ip arp" which also displays the local entries will have proper		
	output		

Defect ID:	DEFECT000653068		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Mac is shown as learnt on CCL though the underlying interface is		
	down. CLI command : "show mac-address vlan <number>"</number>		
Condition:	A VXLAN tunnel is configured for the vlans and an underlying port-		
	channel is shut.		
Recovery:	"clear mac-address-tab	le cluster" will clear the	mac.

Defect ID:	DEFECT000653500		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.1.01	Technology:	Configuration
			Fundamentals
Symptom:	During copy support, the following message may be seen, "Is: cannot access /var/log/brocade/kmem/kmem_*: No such file or directory"		
Condition:	During copy support, in some rare scenario, this message may be displayed.		
Workaround:	none is needed.		
Recovery:	none is needed.		

Defect ID:	DEFECT000653929		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	CLI - Command Line
			Interface
Symptom:	BGP operational commands from NETCONF are not available.		

Defect ID:	DEFECT000654324			
<b>Technical Severity:</b>	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	MPLS	
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	MPLS VPLS - Virtual	
			Private LAN Services	
Symptom:	Traffic doesn't recover after all MPLS interfaces flap in Layer 2 VPN			
	MCT case.			
Condition:	All MPLS interfaces flaps			
Recovery:	Re-apply Layer 2 2VPN	Re-apply Layer 2 2VPN MCT. configuration		

Defect ID:	DEFECT000654902			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	MPLS	
Reported In Release:	SLXOS 17r.2.00	Technology:	MPLS VPLS - Virtual	
			Private LAN Services	
Symptom:	Following will not work	ζ.		
	1) L3 protocols over M	CT will not come up.		
	2) CFM			
	3) Logical vtep bum traffic			
	4) ELD protocol			
Condition:	Following features are not supported if the tcam profile set to "Layer-			
	2 optimized"			
	1) L3 protocols over M	CT will not come up.		
	2) CFM			
	3) Logical vtep bum traffic			
	4) ELD protocol			
Workaround:	Tcam profile should be	set to default profile.		

Defect ID:	DEFECT000654981		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	OSPF - IPv4 Open
			Shortest Path First
Symptom:	If we try to learn 100k routes through OSPF in scaled scenario with		
	200 Neighbors spanning across 200 Areas in single VRF, then some		
	routes may not be learned.		
Condition:	OSPF adjacency is FULL with 200 Neighbors spanning across 200		
	Areas.		

Defect ID:	DEFECT000655079			
Technical Severity:	Medium	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching	
Reported In Release:	SLXOS 17r.2.00	Technology:	VXLAN - Virtual	
			Extensible LAN	
Symptom:	Certain Filtering options with command - 'show mac-address mdb'			
	like 'show mac-address mdb client <id>' or 'show mac-address mdb</id>			
	bridge-domain <id>' do not display the expected result</id>			
Condition:	Always seen for these commands.			
Workaround:	Alternate commands such as 'show mac-address client <id> or 'show</id>			
	mac-address bridge-do	mac-address bridge-domain <id>' can be used</id>		

Defect ID:	DEFECT000655195		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	xSTP - Spanning Tree
			Protocols
Symptom:	After removing the port-channel, Show command still has the port-		
	channel ID displayed		
Condition:	Not an function impact nor getting reproduced easily		

Defect ID:	DEFECT000655803		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.00	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	Y1731 SLM/DM session will not start when the bridge domain		
	(VPLS/VLL) configuration is changed to peer load-balance.		
Condition:	Using Y1731 with Bridge domain (VPLS/VLL), followed by change in		
	bridge domain configuration.		
Workaround:	Workaround is to delete and add back the MEP on A/C LIF so as to		
	make CFM learn the Re	emote MEP on the updat	ed PW LIF.

Defect ID:	DEFECT000655853		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.00	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	Y1731 DM/SLM session will not start when peer config is assigned		
	with lsp in bridge-domain (VPLS/VLL).		
Condition:	Using 8021ag/Y1731 DM/SLM sessions with VPLS/VLL Bridge domain		
Workaround:	Workaround is to delete and add back the MEP on A/C LIF so as to		
	make 8021ag learn the	Remote MEP on the up	dated Pseudowire LIF.

Defect ID:	DEFECT000656127		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	Tunnel down syslog message is not observed on syslog server.		
Condition:	Unconfiguring Auto Route distinguisher configuration with cli		
	command "rd auto" .		

Defect ID:	DEFECT000656211		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	SNMP - Simple
			Network
			Management
			Protocol
Symptom:	Dot1qvlancurrentegressports and Dot1qvlancurrentuntaggedports		
	mib object values are not populated under Q-Bridge		
	root@ubuntu14-237-4:~#		
	root@ubuntu14-237-4:~# snmpwalk -v 2C -c cm2 10.20.100.25		
	1.3.6.1.2.1.17.7.1.4.2.1.4 -t 5iso.3.6.1.2.1.17.7.1.4.2.1.4 = No Such		
	Instance currently exists at this OIDroot@ubuntu14-237-4:~#		
Condition:	snmpwalk/snmpget on Dot1qvlancurrentegressports and		
	Dot1qvlancurrentuntaggedports		

Defect ID:	DEFECT000656319		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	LAG - Link
			Aggregation Group
Symptom:	Running configuration not cleaned properly once we switch the		
	hardware profile.		
Condition:	Not impact for the issue, as the backend is cleaned properly and		
	works as expected, only when HW profile change happens.		

Defect ID:	DEFECT000656392		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	CLI - Command Line
			Interface
Symptom:	Netconf session gets closed when sending the request to get the		
	chassis details.		
Condition:	Netconf command to get the chassis details is issued		
Workaround:	Avoid using the netconf command to get the chassis details.		

Defect ID:	DEFECT000656988				
Technical Severity:	Medium	Probability:	Medium		
Product:	Brocade SLX-OS	Technology Group:	MPLS		
Reported In Release:	SLXOS 17r.1.01	Technology:	IPv6 over MPLS		
Symptom:	VPLS Traffic drop observed				
Condition:	When VPLS peer load balanced with multiple LSPs/path, traffic drop				
	will seen rarely when continuously flapping two different paths.				
Workaround:	"clear mpls lsp all" will	recover from this issue.	"clear mpls lsp all" will recover from this issue.		

Defect ID:	DEFECT000657033		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	Licensing
Symptom:	Memory leak observed while license is being added to the system.		

Defect ID:	DEFECT000657219		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	There could be traffic loss for IPv6 host.		
Condition:	When the anycast IPv6 address is delete and added again.		

Defect ID:	DEFECT000657354		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	All evpn mac addresses will be displayed irrespective of filter option		
Condition:	When show mac-address command for evpn with tunnel id as filter		
	option is executed.		

Defect ID:	DEFECT000657672		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	Multi-VRF
Symptom:	Multiple leaked routes are not present in routing table		
Condition:	When same route is leaked from multiple vrfs , route is updated with		
	the last leaked route.		

Defect ID:	DEFECT000657752		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	IP Addressing
Symptom:	Traffic not routed after ICL is shut in the cluster		
Condition:	Traffic not routed after	· ICL is shut in the cluster	-

Defect ID:	DEFECT000657856		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	LAG - Link
			Aggregation Group
Symptom:	Link aggregation group(LAG) comes up as Link UP with back to back		
	connected links on the same switch.		
Condition:	LAG links are connected back to back to ports on the same switch.		
Workaround:	Keep individual links in	stead of configuring LAG	i.

Defect ID:	DEFECT000658005		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.00	Technology:	BGP/MPLS VPN
Symptom:	VPNV4 routes after HA failover are misssing if GR is enable		
Condition:	VPNV4 routes are not learnt after Switchover if GR is enable in		
	Address family IPv4 unicast.		
Workaround:	Disable BGP GR in in Address family IPv4 unicast.		
Recovery:	clear bgp neighbor		

Defect ID:	DEFECT000658043		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.2.01	Technology:	IGMP - Internet
			Group Management
			Protocol
Symptom:	snooping switch does not remove the OIF under (S, G) which is		
	inherited from (*, G) after this OIF left		
Condition:	OIF is not removed from (S, G) which is inherited from (*, G) after this		
	OIF left. (*,g) removed	the oif but not the (s,g)	

Defect ID:	DEFECT000658056		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	High Availability
Symptom:	Both MMs may be stuck in standby state.		
Condition:	This will happen if a daemon can't come up properly in the early		
	device boot up phase.		
Recovery:	Reboot the device agai	n.	

Defect ID:	DEFECT000658390		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	Software Installation
			& Upgrade
Symptom:	LC becomes faulty momentarily during firmware download		
Condition:	It is a rare case when the LC takes too long to boot up with the new		
	firmware.		
Workaround:	None is needed. The blade will recover automatically		
Recovery:	It will recover automat	ically	

Defect ID:	DEFECT000658576		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	BGP process termination is observed upon adding a large prefix list to		
	the running config and applying it to BGPv4 neighbors inbound ,		
	performing a soft clear to take effect		
Condition:	BGP process terminated after making filter changes and performing		
	soft clear		
Recovery:	BGP deamon will restart		

Defect ID:	DEFECT000658622		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.01	Technology:	RAS - Reliability,
			Availability, and
			Serviceability
Symptom:	Switch reloads when doing a REST query for MPLS operational state		
	with resource-depth greater than 10 from multiple sessions.		
Condition:	LSPs/Cross-connects count exceeding 1024		
Workaround:	Execute REST query fro	m one session only	

Defect ID:	DEFECT000658672		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	VLAN - Virtual LAN
Symptom:	L3 traffic drop on ARP suppression enabled VE's.		
Condition:	In L3VNI configured		
	node, when ARP suppression is enabled on VE, sometime MACs are		
	not synced from MAC manager to ARP.		
Recovery:	Executing "clear mac-address dynamic" will flush the MACs and		
	resolve the ARP cache.		

Defect ID:	DEFECT000658862		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.1.01	Technology:	CLI - Command Line
			Interface
Symptom:	show media optical-monitoring and show media optical-monitoring		
	supported-interfaces don?t display values for admin shutdown port		
Condition:	Port is in admin down i	mode and pluggable mee	dia is present

Defect ID:	DEFECT000659128		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	"show cluster x client y", displays bridge domain twice.		
Condition:	Addition of logical interfaces of same underlying main interface under		
	Bridge-Domain.		

Defect ID:	DEFECT000659344		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Access endpoint traffic	is flooded to other acce	ss endpoints and VPLS
	peers in the bridge-domain.		
Condition:	When message processing channel utilization is high within MAC		
	manager, the MCT client interface status is not synced and affects the		
	MAC learning. In this case MAC programming is not performed in the		
	hardware and traffic is flooded on ports in the bridge-domain.		
Recovery:	Performing shutdown and no shutdown on the physical interface of		
	MCT client interface resolves the status and update MAC		
	programming.		

Defect ID:	DEFECT000659358		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	CFM Connectivity fails.		
Condition:	Pseudo-wire is configured as LAG interface, and LAG is part of an VE		
	interface, and MEP is configured for this Pseudo-wire.		
	In nutshell, AC LIF and	LAG are part of same VL	AN.

Defect ID:	DEFECT000659427		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Sometimes fib compression is not enabled on loading config from		
	flash		
Condition:	Running fib compression	on	

Defect ID:	DEFECT000659439		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	MAC learned with VLAN 1 when the MCT ICL interface is flapped and		
	traffic is running on BD ( Logical interface with one vlan configured).		
	The workaround for the issue is to configure the ICL VE interface		
	without default-vlan		
Condition:	MAC learned with VLAN 1 when the MCT ICL interface is flapped and		
	traffic is running on BD ( Logical interface with one vlan configured).		
	The workaround for the issue is to configure the ICL VE interface		
	without default-vlan		

Defect ID:	DEFECT000659567		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	QinQ - IEEE 802.1Q
Symptom:	•	ed termination may be s le booting up SLX9850 w	
Condition:	and user tries to boot u Example:- interface ethernet 2/42 tag-type 0x9200 switchport switchport mode trunk	< red vlan add 4060,4070,4 g native-vlan	tup-configuration.
Workaround:	Since this issue is not c	onsistent, reloading the	device may resolve the
	issue.		

Defect ID:	DEFECT000659761		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 17r.2.01 Technology: MCT - Multi-Chassis		
			Trunking
Symptom:	Traffic drop and user may see a LSP down.		
Condition:	High availability failover followed by MCT cluster configuration of		
	removal and re-add.		

Defect ID:	DEFECT000659766		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.2.01	Technology:	IGMP - Internet
			Group Management
			Protocol
Symptom:	When systems learn more than 16384 IGMP snooping multicast		
	entries, "Memory Alloc Error: SNP Group Create" error messages will		
	be displayed on console.		
Condition:	When IGMP join messages are sent for more than 16384 IGMP		
	groups, "Memory Alloc Error: SNP Group Create" error messages will		
	be seen on console.		
Workaround:	Do not learn more than 16384 IGMP snooping multicast entries.		
Recovery:	Stop sending IGMP join messages for the IGMP groups that exceeds		
	16384 multicast entries	5.	

Defect ID:	DEFECT000659798			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Layer 3	
			Routing/Network	
			Layer	
Reported In Release:	SLXOS 17r.2.01 Technology: Multi-VRF			
Symptom:	OSPF adjacency would stuck in LOADING state for around 30 minutes			
	before becoming FULL.			
Condition:	Modifying OSPF area configuration multiple times in OSPF topology			
	with an ASBR could trig	gger this issue.		

Defect ID:	DEFECT000659832		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Flooding of packets is being observed for traffic targeted to the client		
	in MCT node		
Condition:	Removal and addition of MCT - cluster configuration.		
Workaround:	Clear the macs on other node in MCT set-up, so that macs are learnt		
	freshly.		

Defect ID:	DEFECT000659852			
Technical Severity:	Medium	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 17r.2.01	Technology:	SNMP - Simple	
	Network			
			Management	
			Protocol	
Symptom:	The single instance trap of bfdSessDown has same instance identifier			
	(as expected) but different values (not correct).			
Condition:	When bfdSessDown trap is received on a trap receiver.			

Defect ID:	DEFECT000659857		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.01	Technology:	Configuration
			Fundamentals
Symptom:	"system is about to reload" message is not sent to syslog server consistently.		
Condition:	On reload "system is about to reload" message may not be sent to syslog server.		
Workaround:	This message will show up inconsistently in syslog depending on how soon the system is rebooted. The user can monitor other messages to determine whether the system has rebooted.		

Defect ID:	DEFECT000659924		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	Timing issue which leads to unexpected reload.		
Condition:	CFM enabled bridge domain configuration is removed.		
Workaround:	Remove the MEP configuration before removing the bridge-domain		
	configuration.		

Defect ID:	DEFECT000659931		
Technical Severity:	High Probability: High		
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Evpn-static mac is not removed from mac table after the client port is		
	shut.		
Condition:	MCT Client is down on both the peers, Evpn static mac in the vlan is		
	still seen in mac table of both the peers. This issue is seen when the		
	interior gateway protocol was ISIS, The behaviour is not seen when		
	the interior gateway pr	rotocol is OSPF.	

Defect ID:	DEFECT000659952		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.01	Technology:	ARP - Address
			<b>Resolution Protocol</b>
Symptom:	Running failover tests may cause MAC tables to go out of		
	synchronization		
Condition:	Running failover tests		

Defect ID:	DEFECT000659954		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.01	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	Higher average and max frame delay in scheduled DMM tests.		
Condition:	When system exchanges high number of control frames.

			Leased Line
Symptom:	User may observe "hslagt_lif_brcm_delete_lag_lif: unable to find		
	xconnect partner LIF" on LC console.		
Condition:	Bridge domain is remove	ved from EVPN MCT.	

Defect ID:	DEFECT000660878		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	After rapid cluster 'no o	deploy' & 'deploy' on a c	luster peer, BUM
	traffic to certain clients	s connected via LACP por	rt-channel may not
	reach the client for hal	f the VLANs or bridge do	mains.
Condition:	Configuring 'no deploy' followed by 'deploy' rapidly without sufficient		
	time gap and clients connected through active LACP port-channel		
	during cluster 'no deploy'/'deploy'.		
Workaround:	Workaround to avoid running into this issue		
	1. Provide sufficient gap between 'no deploy' and 'deploy'.		
	2. If there are multiple clients using LACP port-channel, perform		
	client-interface-shutdown before 'no deploy' & 'deploy'. Remove		
	'client-interface-shutdown' after the cluster is deployed		
Recovery:	client interface shutdown followed by 'no shutdown' for the client		
	where the issue is seen	1	

Defect ID:	DEFECT000661053		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	NTP - Network Time
			Protocol
Symptom:	NTP client on the device can't sync up with external NTP servers in		
	default-vrf and user defined VRF.		
Condition:	External NTP server is reachable only via mgmt-VRF, not via default-		
	vrf or user defined VRF.		
Workaround:	Configure external NTP servers only in mgmt-vrf.		

Defect ID:	DEFECT000661097		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.01	Technology:	Configuration
			Fundamentals
Symptom:	VXLAN stripping may not work as expected in some cases		
Condition:	VXLAN stripping may not work as expected in some cases when		
	"strip-vlan" is configured		

Defect ID:	DEFECT000661115		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17s.1.02	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Multi Chassis Trunking	management cluster ma	ay not be up on an
	Multi Chassis Trunking network involving SLX 9140 or SLX 9240.		
Condition:	Multi Chassis Trunking management cluster may fail to come up		
	when the Multi Chassis Trunking source IP (used as the peer IP on the		
	remote node) is changed from IP_address1 to IP_address2 and back		
	to IP_address1.		
Workaround:	Avoid changing Multi Chassis Trunking source IP address during the		
	life of the Multi Chassis Trunking cluster.		
Recovery:	SLX switch may have to be reloaded if the same source IP which was		
	configured earlier has t	to be used again.	

Defect ID:	DEFECT000661125		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	During chassis reload or firmwaredownload, linecard goes faulty(97).		
Condition:	One of the possible interrupts generated by system FPGA was not		
	handled in the interrupt handler. This causes the system FPGA		
	interrupt handler to be called continuously and vCPU to be almost		
	100% busy. Eventually linecard is faulted.		
Recovery:	The faulty linecard is usually recovered automatically by the internal		
	reset recovery logic. If the reset-recovery logic doesn't kick-in, user		
	can power cycle the linecard to recover.		

Defect ID:	DEFECT000661132		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.1.01	Technology:	LAG - Link
			Aggregation Group
Symptom:	traffic floods across VPLS peer		
Condition:	MAC present in software but not present in HW

Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	IPv6 Addressing
Symptom:	IPv6 Prefix filter may not work as expected in BGP route filtering.		
Condition:	When the IPv6 Prefix is not configured with the prefix length as		
	multiples of 8.		

Defect ID:	DEFECT000661357		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.01	Technology:	High Availability
Symptom:	Restconf queries for GET methods gives output in non standard		
	format where comma comes at the beginning of the output in leaf,		
	list and container cases.		
Condition:	when the media type is given as JSON		
Workaround:	<b>RESTCONF</b> xml queries	will give correctly	

Defect ID:	DEFECT000661384			
<b>Technical Severity:</b>	Medium	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	MPLS	
Reported In Release:	SLXOS 17r.2.00	Technology:	MPLS VPLS - Virtual	
			Private LAN Services	
Symptom:	VPLS BUM packets are sent out on the interface for primary path			
	even though LSP is on the secondary.			
Condition:	VPLS BUM traffic flow.			

Defect ID:	DEFECT000661454		
<b>Technical Severity:</b>	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.1.01	Technology:	Hardware Monitoring
Symptom:	Incorrect port LED status		
Condition:	Shut down the faulty port.		

Defect ID:	DEFECT000661490		
<b>Technical Severity:</b>	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.2.00	Technology:	SSH - Secure Shell
Symptom:	Won't be able to login to device via console or telnet/SSH		
Condition:	Issue is seen after firmware upgrade, but it is not seen always		

Defect ID:	DEFECT000661509		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.1.01	Technology:	RAS - Reliability,
			Availability, and
			Serviceability
Symptom:	Different outputs of 'show loop-detect' and 'show interface' CLI will		
	be observed. The output of 'show loop-detection' cli will indicate the		
	interface is DOWN while the output of 'show interface' will indicate it		
	is UP. There will be no impact on functionality as it is a display issue		
	only in CLI 'show loop-detect'.		
Condition:	The issue will be observed when the loop-detect feature is enabled		
	on a PO interface .		
Workaround:	User can rely on the output of 'show interface' CLI as that depicts the		
	correct behavior when loop-detect is enabled on the interface or		
	otherwise.		

Defect ID:	DEFECT000661576		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.01	Technology:	CLI - Command Line
			Interface
Symptom:	When RESTCONF queries are run with namespaces in URI, The		
	response sometimes may not be correct.		
Condition:	If there are more than	2 namespaces in URI .	

Defect ID:	DEFECT000661583

			Fundamentals
Symptom:	The command output may be misaligned in the console window,		
Condition:	This issue may happen when the console window is resized after the		
	device boots up.		
Workaround:	Resize the console window to 24 lines, or resize the console window		
	to the proper size and reboot the device.		

Defect ID:	DEFECT000662166			
Technical Severity:	High	High Probability: High		
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 17r.2.00	Technology:	High Availability	
Symptom:	Enabling/disabling latch detection would cause the LC to be permanently faulty. Extreme GTAC Support can restore previously affected LCs by using a tool copied to the chassis in question.			
Condition:	This was a side effect o	f the 64-bit porting proc	ess.	

Defect ID:	DEFECT000662211		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Specific MPLS packets with inner TCP sequence number matched to		
	VRRP protocal entry 112 will get dropped at PHP node which in turn		
	will result BGP connections to drop		
Condition:	Issue seen while running	ng BGP traffic over IP ove	er MPLS

Defect ID:	DEFECT000662238			
<b>Technical Severity:</b>	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Security	
Reported In Release:	SLXOS 17r.1.01	Technology:	Security Vulnerability	
Symptom:	NFS port was open on management interface in earlier releases. The			
	NFS port on management VRF should be closed.			
Condition:	NFS port was open on	NFS port was open on management interface in earlier releases.		

Defect ID:	DEFECT000662239		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.1.01	Technology:	Security Vulnerability
Symptom:	Enhancement to disable the port 9110 for management vrf.		
Condition:	Port 9110, was exposed via management interface.		

Defect ID:	DEFECT000662394		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	VLAN - Virtual LAN
Symptom:	L2 Mac learning does not happen on a L2 interface.		
Condition:	If there is a "spanning-tree shut" configuration on a L2 interface and		
	the Spanning Tree protocol is configured as RSTP/MSTP, the MAC		
	learning will not happen on this L2 port. Also this behavior will be		
	observed when HA failover is executed.		
Workaround:	Do "no spanning-tree shut / spanning-tree shut" or "no switchport/		
	switchport" or "no protocol spanning-tree/ protocol spanning-tree		
	xstp" to recover the mac learning issue.		

Defect ID:	DEFECT000662501		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	The BGP daemon terminates unexpectedly and produces core file,		
	when unconfiguring BGP EVPN instance by removing RD and RT.		
Condition:	This will be observed while RD and RT are removed from EVPN		
	instance.		

Defect ID:	DEFECT000662565		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	The output of CLI "show bgp evpn route type inclusive-multicast ethernet-tag 0 ipv4-address <ip>" misses some routes while using BGP EVPN for IP Fabric.</ip>		
Condition:	This will happen when using BGP EVPN for IP Fabric and the number of IMR routes received or originated with same IMR Key are more than 25.		
Workaround:	"show bgp evpn routes type inclusive-multicast" or "show bgp evpn routes type inclusive-multicast ethernet-tag 0 ipv4-address <ip> I2- label <value>" can be issued to check for routes alternatively.</value></ip>		

Defect ID:	DEFECT000662753		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	High Availability
Symptom:	Process hslagtd terminated. LC restarted		
Condition:	Support Save initialization		

Defect ID:	DEFECT000662785		
Technical Severity:	Low	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	For an interface user can configure MTU locally, apart from global		
	MTU. If user configures default value of MTU (1548) as local MTU		
	then it's not shown in output of "show running-config". It should be		
	shown if it's user configured value even though it's default value.		
Condition:	Configuration of local N	ATU for an interface.	

Defect ID:	DEFECT000662899		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VLL - Virtual
			Leased Line
Symptom:	Control Protocols pkts can get dropped if there is CPU Queue		
	Congestion with sflow traffic.		
Condition:	Control Protocols pkts can get dropped if there is CPU Queue		
	Congestion with sflow	traffic, although this is v	ery rare case.

Defect ID:	DEFECT000662980			
Technical Severity:	High	Probability:	Low	
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching	
Reported In Release:	SLXOS 18s.1.00	Technology:	VLAN - Virtual LAN	
Symptom:	Unexpected reload see	n under certain config c	ombinations.	
	The box has to be reloa	aded with the following o	config- < file config1>	
	After box reboots, configure			
	evpn default			
	vlan 5			
	Box reload when this CLI is issued after reload.			
Condition:	Node reloads when VLAN is added to EVPN under certain			
	configuration combinations.			
Workaround:	Avoid adding VLAN to EVPN default after reload. Add it as a part of			
	reload config.			
Recovery:	reload the node.			

Defect ID:	DEFECT000663072		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.00	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	Y1731 Scheduled SLM cannot interop with CES device when SLX		
	device is configured as responder.		
Condition:	SLX device is configure	d as responder.	

Defect ID:	DEFECT000663150		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	import/export commands for normal L3 VPN do not work.		
Condition:	import/export commai	nds for normal L3 VPN de	o not work.

Defect ID:	DEFECT000663195		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	OSPF - IPv4 Open
			Shortest Path First
Symptom:	OSPF Hello packets will be sent on OSPF Ve interface even though it is administratively down.		
Condition:	Issue is seen when OSPF Ve interface is administratively down and this Ve is bound to a VLAN.		
Workaround:	Toggling the administrative state of OSPF Ve interface by using 'no shutdown' & 'shutdown' commands will resolve the issue.		

Defect ID:	DEFECT000663315		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.1.01	Technology:	xSTP - Spanning Tree
			Protocols
Symptom:	Customer may experience Mac inconsistency between Management		
	Module and Line Card Module .		
Condition:	When there is STP loop while doing ?spanning tree shutdown?,		
	triggers mac move.		

Defect ID:	DEFECT000663391		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	sFlow
Symptom:	At run time, after sFlow source interface is configured, any IP changes		
	or link UP/DOWN events does not effect the sFlow source IP.		
Condition:	1. sFlow source interface IP address is used even when the interface		
	is down.		
	2. sFlow doesn't pick up run time IP address changes to an already		
	configured source interface.		
Workaround:	To effect any run-time IP address changes to sFlow source interface,		
	unconfigure and then r	econfigure sFlow source	interface.

Defect ID:	DEFECT000663422		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	SNMP – Simple
			Network
			Management
			Protocol
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Management
Symptom:	When SNMP query is s	ent to switch inband loo	pback IP, switch sends
	SNMP replies with outgoing interface IP as source IP instead of the		
	loopback IP.		
Condition:	The issue is seen only for inband interfaces in mgmtvrf. For default-		
	vrf and user-defined vrf, we don't see the issue. That is, we see		
	loopback IP as source I	P in SNMP replies.	

Defect ID:	DEFECT000663425		
<b>Technical Severity:</b>	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	When the remote LVTEP up link port is shut, traffic did not reach the		
	destination as the VXLAN VNI lookup is failed.		
Condition:	This can happen when there is change in tunnel next hop happened		
	before this trigger		

Defect ID:	DEFECT000663449		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.1.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	VPLS traffic drop observed		
Condition:	When flapping more than 2 MPLS uplink interfaces, VPLS PWs configured with load balance occasionally hit this issue.		
Workaround:	Flapping of multiple MPLS uplink interface at same time can be avoided.		
Recovery:	Clearing MPLS LSPs use specific peer will recov	ed by the specific VPLS P er this issue.	W or reconfiguring the

Defect ID:	DEFECT000663621		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Traffic Management
Reported In Release:	SLXOS 17r.1.01	Technology:	QoS - Quality of
			Service
Symptom:	During SS Prior to SLXOS 17r.2.01, TM Commands are not be collected.		
Condition:	Support save collection	n for TM commands.	

Defect ID:	DEFECT000663635		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	Traffic drop is observed while using BGP EVPN for IP Fabric as the		
	router MAC is not installed on MCT peer node.		
Condition:	This issue happens when using MCT with BGP EVPN for IP Fabric		
	deployments.		
Recovery:		this situation by Issuing	command "clear bgp
	evpn neighbor all"		

Defect ID:	DEFECT000663637		
<b>Technical Severity:</b>	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Traffic Management
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	QoS - Quality of
			Service

Symptom:	LDP T-Hello/KA pkts can get dropped if there is CPU Queue	
	Congestion.	
Condition:	LDP T-Hello/KA pkts can get dropped if there is CPU Queue	
	Congestion although this is not common case.	

Defect ID:	DEFECT000663638		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.1.01	Technology:	CLI - Command Line
			Interface
Symptom:	During Debug, LDP Protocols pkts will be counted based on new		
	Socket AF_MPLS_LDP via debug cmd.		
	hslagt pkt show stats		
	Earlier, there was only common counter for IP traffic and no specific		
	counter for LDP pkt in HSLUA during debug.		
Condition:	This is only for LDP debug counters and is applicable only when		
	debugging LDP pkts dro	op.	

Defect ID:	DEFECT000663676		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 18x.1.00	Technology:	TACACS & TACACS+
Symptom:	Switch doesn't send Tacacs+ exec accounting message when AAA		
	authentication is configured as "radius local".		
Condition:	Tacacs+ exec accounting doesn't work when AAA authentication		
	method is configured a	s "radius local".	

Defect ID:	DEFECT000663739		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer

Reported In Release:	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	IPv6 prefix routes are not present in BGP IPv6 VRF table for MPLS		
	encap in MCT deployments.		
Condition:	This issue happens only using over MCT	y for IPV6 routes in BGP	VRF context while

Defect ID:	DEFECT000663838		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	Traffic loss is observed on MCT deployed setup.		
Condition:	Enabling and disabling "statistics" under the Vlans and Bridge-		
	Domains which are par	t of MCT.	

Defect ID:	DEFECT000663879		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	High Availability
Symptom:	Some of the port LEDs are off even though the port links are UP after		
	HA failover.		
Condition:	This issue only happens if the HA failover is a controlled failover via		
	"ha failover" command	l.	

Defect ID:	DEFECT000663894		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	Few MACs can be seen in Pending Authentication		
Condition:	With Stress and scale t	With Stress and scale testing, sometimes admin can observe this	

Defect ID:	DEFECT000663894		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	Few MACs can be seen in Pending Authentication		
Condition:	With Stress and scale testing, sometimes admin can observe this		

Defect ID:	DEFECT000663904		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 18r.1.00	Technology:	User Accounts &
			Passwords
Symptom:	Config-replay from a backup file will fail for rule cli commands.		
Condition:	If rules are configured and then config-replay from a backup config		
	file happens. Config replay from database has no issue.		

Defect ID:	DEFECT000664250		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	A few MAC leaning fail	ed because the staled M	AC entries left in HW.
Condition:	The issue might be seen in scaling system.		
	After the system image upgrade, replay the MCT configuration with		
	traffic running, then the issue might be seen.		
Workaround:	Stop traffic while replay the configuration; Start traffic after system		
	configuration is completed; then the issue can be avoided.		
Recovery:	Run CLI command "clea	ar mac-address-table dy	namic" may recover
	the issue.		

Defect ID:	DEFECT000664753		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching

Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Mcdsd daemon can terminate when changing configuration that		
	disrupts the ICL between leaf nodes in a management cluster.		
Condition:	A configuration change which disrupts the ICL between leaf nodes in		
	a management cluster.		

Defect ID:	DEFECT000664838		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	NTP - Network Time
			Protocol
Symptom:	Dcmd terminates when more than 1 NTP server is configured and		
	removes one of them.		
Condition:	More than one NTP server configured.		
Workaround:	Issue is fixed in this rele	ease (18r.1.00).	

## Closed without code changes 18r.1.00

This section lists software defects with Critical, High, and Medium Technical Severity closed with a code change as of **09/27/2018** in 18r.1.00.

Defect ID:	DEFECT000627194	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17s.1.00	Technology:	Configuration
			Fundamentals
Symptom:	Switch terminates while executing REST requests		
Condition:	This happens in a stressed out environment where the switch is		
	pounded with the REST requests from multiple sources		
	simultaneously for a long time.		

Defect ID:	DEFECT000639618	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.1.01	Technology:	PIM - Protocol-
			Independent
			Multicast
Symptom:	Traffic loss for non programmed flows.		
Condition:	LC reload is the trigger for this issue.		

Defect ID:	DEFECT000650998	<b>Technical Severity:</b>	High
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	Configuration
			Fundamentals
Symptom:	MEP can timeout in a highly scaled setup, With more than 7000 MEPs configured over VLL.		
Condition:	When more than 7000 MEPs on both ends of the VLL service are configured.		
Workaround:	Spread the session acro	oss multiple Line cards ir	such scale scenarios.

Defect ID:	DEFECT000651543	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.1.01	Technology:	ARP - Address
			<b>Resolution Protocol</b>
Symptom:	MPLS tunnels could be programmed as DOWN in LC after multiple HA		
	failovers.		
Condition:	MPLS tunnels could be programmed as DOWN in LC after multiple HA		
	failovers.		

Defect ID:	DEFECT000652589	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Firmwaredownload might fail		
Condition:	When HA state is not in sync and firmwaredowload is triggered then		
	firmwaredownload might fail.		

Defect ID:	DEFECT000652954	<b>Technical Severity:</b>	Medium
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.00	Technology:	Syslog
Symptom:	Date format in ACL logging is not correct.		
Condition:	When ACL is enabled with logging and 'show access-list-log buffer' is		
	issued.		

Defect ID:	DEFECT000653531	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.1.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	The VPLS MACs are not removed from the MAC table		
Condition:	When trafiic is stopped after HA failover in scaled setup, VPLS MACs		
	are not aging out.		
Recovery:	Executing "clear mac dynamic" cli command will remove the MACs.		

Defect ID:	DEFECT000653869	<b>Technical Severity:</b>	Medium
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	VLAN - Virtual LAN
Symptom:	The command "show bridge-domain <id> logical-interface" will show</id>		
	more information than is required for some field.		
Condition:	The FLAG value in the o/p is greater than 0x7, in the output of the		
	command, "show bridge-domain <id> logical-interface".</id>		

Defect ID:	DEFECT000653893	<b>Technical Severity:</b>	High	
Reason Code:	Not Reproducible	Probability:	Medium	
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching	
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis	
			Trunking	
Symptom:	Unlikely unexpected reload of switch due to termination of vrrpd			
	when switch is reloaded with VRRPE config			
Condition:	Termination of vrrpd can happen under unlikely scenarios when			
	VRRPE configuration is	VRRPE configuration is present on the switch and switch is reloaded.		

Defect ID:	DEFECT000654559	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	LAG - Link
			Aggregation Group
Symptom:	ARP is not being resolved		
Condition:	A LAG has a single interface and the router is reloaded		
Recovery:	Remove the lag and using the physical interface as a stand alone		
	interface, as LAG has a single port.		

Defect ID:	DEFECT000655266	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	After cluster split/join, there is a possibility of VXLAN tunnels having inconsistent tunnel id (for a given tunnel destination) across the 2 nodes of the cluster.		
Condition:	Cluster split/join.		
Workaround:	Deletion and recreation of the overlay-gateway		

Defect ID:	DEFECT000655278	<b>Technical Severity:</b>	High
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Vxlan Tunnels take longer time to come up.		
Condition:	When VLAN-VNI mapping is deleted and re-configured.		
Recovery:	clear bgp epvn neighbor soft <i n="" out=""  =""></i>		

Defect ID:	DEFECT000656624	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Sometime HOST move is not detected.		
Condition:	When host is moved frequently.		
Recovery:	Clear mac table should recover from this state.		

Defect ID:	DEFECT000656825	Technical Severity:	High		
Reason Code:	Not Reproducible	Probability:	High		
Product:	Brocade SLX-OS	Technology Group:	Layer 3		
			Routing/Network		
			Layer		
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	OSPF - IPv4 Open		
			Shortest Path First		
Symptom:	OSPF adjacency flaps after configuring OSPF area range & OSPF				
	summary-address in 100k routes scale scenario				
Condition:	OSPF adjacency is FULL with 50k Intra Area routes and 50k external				
	routes		routes		

Defect ID:	DEFECT000657071	<b>Technical Severity:</b>	High
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	Ping was not functional between 2 loopback addresses after interface		
	flap.		
Condition:	IP enabled interfaces on the router.		

Defect ID:	DEFECT000657107	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	When BD to VNI mapping changed to different values for the same		
	BD, tunnel is not discovered		
Condition:	When BD to VNI mapping changed to different values for the same		
	BD, tunnel is not discovered		

Defect ID:	DEFECT000657538	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	OSPF - IPv4 Open
			Shortest Path First
Symptom:	Traffic loss is seen after HA failover, even when OSPF Graceful restart		
	is enabled.		
Condition:	OSPF Graceful restart is enabled & Adjacency is FULL with the		
	neighbor.		

Defect ID:	DEFECT000657687	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	Mac learning bridge domain interface from remote leaf node is		
	delayed.		
Condition:	Timing condition that can be observed on mac's learned on a bridge		
	domain in logical VTEP topology		
Recovery:	clear the mac in the node issue is seen and allow to relearn it again		

Defect ID:	DEFECT000657753	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Traffic drop over the EVPN Pseudo wires.		
Condition:	Reloading the line card when MCT cluster is up		

Defect ID:	DEFECT000657819	Technical Severity:	High
Reason Code:	Design Limitation	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.00	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	While using CFM with LAG with UP MEP, sometime Remote MEP flaps		
	is observed when the member port is administratively shut down.		
Condition:	This issue happens while using 8021ag with UP MEP over a LAG		
	interface.		

Defect ID:	DEFECT000657873	<b>Technical Severity:</b>	High	
Reason Code:	Not Reproducible	Probability:	Low	
Product:	Brocade SLX-OS	Technology Group:	Monitoring	
Reported In Release:	SLXOS 17r.2.00	Technology:	OAM - Operations,	
			Admin &	
			Maintenance	
Symptom:	Remote MEP does not recover from failed state when LAG interface is			
	brought up and down administratively			
Condition:	8021ag UP MEP configured with LAG.			
Workaround:	Bring down port-chann	Bring down port-channel and bring it back up administratively.		

Defect ID:	DEFECT000658164	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	MCT VPLS Traffic will dropped over MCT link		
Condition:	With High EVPN vlan range, Reloading of the MCT peer with EVPN		
	configuration will rarely cause this issue		
Recovery:	clear ip bgp neighbors <peer-ip></peer-ip>		

Defect ID:	DEFECT000658661	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	Some of the MAC routes missing when BGP neighborship is changed		
	form V4 to V6.		
Condition:	BGP neighborship is changed from V4 to V6		
Recovery:	Clear bgp epvn neighbor all		

Defect ID:	DEFECT000659056	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.2.00	Technology:	AAA - Authentication,
			Authorization, and
			Accounting
Symptom:	LDAP authentication is failing on default-vrf with the certificates.		
Condition:	LDAP authentication failure		
Workaround:	Do not use certificate		

Defect ID:	DEFECT000659662	Technical Severity:	Medium
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Client Pseudo wire stays down once router comes back up after		
	reload		
Condition:	Router reload		
Workaround:	Undeploy and deploy the MCT> "no deploy" followed by "deploy"		
	under client-pw		

Defect ID:	DEFECT000660012	Technical Severity:	High
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.01	Technology:	Configuration
			Fundamentals
Symptom:	VPLS data traffic loss seen for an average of 230 seconds after MM		
	failover.		
Condition:	MCT doesn't support hitless failover and hence it will tear down and		
	recreate all the BGP. MPLS RSVP sessions which the time taken for		
	programming is proportional to the total scale number. This is		
	expected as per current design.		

Defect ID:	DEFECT000660020	Technical Severity:	High		
Reason Code:	Will Not Fix	Probability:	High		
Product:	Brocade SLX-OS	Technology Group:	Management		
Reported In Release:	SLXOS 17r.2.01	Technology:	Configuration		
			Fundamentals		
Symptom:	User may observe traffic drop in a flooding domain for very short				
	time, approx 200 pkt.				
Condition:	When bridge domain is part of MCT and a peer is removed and added				
	to a bridge domain.				

Defect ID:	DEFECT000660084	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	MGID membership may be incorrect causing BUM traffic being		
	flooded by non-DF nodes.		
Condition:	This issue can occur when tunnel is flapped.		

Defect ID:	DEFECT000660103	Technical Severity:	Medium
Reason Code:	Will Not Fix	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	For a non-MCT node, the remote PW preferential status may have a		
	different value than the actual remote node status.		
Condition:	For a non-MCT VPLS peer, irrespective of the remote role, the PW will		
	get programmed in the hardware. From forwarding perspective, it		
	will not have any impact on the traffic forwarding.		
Workaround:	Ignore the remote PW	preferential status if the	local node is non-mct.

Defect ID:	DEFECT000660301	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	Software Installation
			& Upgrade
Symptom:	Sometimes after firmware upgrade 72x10G linecard stays in LOADING		
	state for 25-30 mins and then eventually faults. The software auto- recovery logic power cycles the line card to recover it.		
Condition:	Firmware upgrade on 72x10G linecard.		
Recovery:	The software auto-recovery logic automatically power cycles the line		
	card to recover it.		

Defect ID:	DEFECT000660326	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Layer 3 traffic drops over MCT link		
Condition:	After HA failover, remove and add EVPN configuration will		
	intermittently cause Layer 3 traffic to drop over MCT		
Recovery:	Clear mpls lsp will resolve the issue.		
	Clear mpls lsp all		

Defect ID:	DEFECT000660511	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Traffic is flooded on the VLAN mapped to MCT cluster		
Condition:	In scaled MCT setup when line card is reloaded the database sync-up		
	between MAC manager component is incomplete and affects MAC		
	learning.		
Recovery:	Reload the line card once again to allow database sync to complete.		

Defect ID:	DEFECT000660584	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Unexpected reload of the system.		
Condition:	High availability fail-over of MM.		

Defect ID:	DEFECT000660609	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.01	Technology:	MPLS VLL - Virtual
			Leased Line
Symptom:	MPLS daemon restarted due to software fault.		
Condition:	The TPID of the port-channel interface where 4000 VE interfaces was		
	configured.		

Defect ID:	DEFECT000660612	<b>Technical Severity:</b>	High
Reason Code:	Design Limitation	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.01	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	While deploying CFM, user might occasionally observed that MEPs		
	configured on port channel move to failed state, when member-ports are added or removed		
Condition:	CFM deployment with port-channel and then Addition or deletion of		
	member interfaces to port-channel		
Recovery:	Port channel shutdown and 'no shutdown' should help recover from		
	the situation		

Defect ID:	DEFECT000660617	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Cluster client status may not be UP, when evpn instance is removed and re-added after the HA. There will be traffic loss due to cluster status.		
Condition:	When EVPN instance is removed and re-added after HA.		
Recovery:	Clear bgp evpn neighbo	or <mct-peer> should rea</mct-peer>	solve this condition.

Defect ID:	DEFECT000660831	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Linecard (36x100) goes out of Memory and reboots		
Condition:	Continuos BGP session flaps for a long time using a script on a system		
	with Scaled routes(1 M)		

Defect ID:	DEFECT000660921	Technical Severity:	High
Reason Code:	Not Reproducible	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	PIM - Protocol-
			Independent
			Multicast
Symptom:	After line card reload, the out going interface will be deleted from the		
	entry and it shows as number of OIFs as ZERO.		
Condition:	1. This issue can be seen when a port-channel has member ports from		
	multiple line cards and 2. This port channel should be bound to a VE		
	interface which is out going interface of PIM entry and		
	3. One of the mentioned line card is reloaded.		
Recovery:	Clear the affected PIM	entry using "clear ip pim	mcache"

Defect ID:	DEFECT000661059	<b>Technical Severity:</b>	High
Reason Code:	Not Reproducible	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	In some rare case, EVPN routes might not be ex-changed between		
	peers.		
Condition:	After deactivating and activating the I2vpn EVPN address family		
Recovery:	Use clear bgp evpn neighbor soft in command		

Defect ID:	DEFECT000661754	Technical Severity:	Medium	
Reason Code:	Already Fixed in	Probability:	High	
	Release			
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 17r.2.01	Technology:	Configuration	
			Fundamentals	
Symptom:	"Error: This Speed is not supported on this port." pops up while			
	executing "speed 100" command under interface.			
Condition:	CLI execution of "speed	CLI execution of "speed 100" under interface.		

Defect ID:	DEFECT000664763	Technical Severity:	Critical	
Reason Code:	Not Reproducible	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 18r.1.00	Technology:	Software Installation	
Reported in Release:	SLAUS 101.1.00	rechnology:		
C. mantana	Custom faile in early he	eting stogs with holews	& Upgrade

## Known issues 18r.1.00

This section lists software defects with Critical, High, and Medium Technical Severity closed with a code change as of **09/27/2018** in 18r.1.00.

Defect ID:	DEFECT000639016		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.1.01	Technology:	PIM - Protocol-
			Independent
			Multicast
Symptom:	Mcache entries may keep fluctuating causing traffic loss for some SG		
	entries.		
Condition:	This happens only when there are more than 20k mcache entries.		

Defect ID:	DEFECT000639074		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.1.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	In case of vpls scenario	, packets may egress ou	t on the PW uplink as
	corrupted, without an mpls label.		
Condition:	When a large no of PW are configured, packets on some PW may		
	egress out corrupted if the underlying interface is either vlan		
	untagged or router port. This will happen when protected path		
	configured as strict, while vpls traffic is riding on bypass path.		
Workaround:	Using vlan tagged port for the PW underlying interface would resolve		
	the issue.		

Defect ID:	DEFECT000639445		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	Configuration
			Fundamentals
Symptom:	Traffic drop observed for some BD in MCT-L2vpn senario.		
Condition:	If HA is performed with explicit isolation mode configured in cluster.		
Recovery:	Deploy/Un-deploy will resolve the issue.		

Defect ID:	DEFECT000639584		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.1.01	Technology:	PIM - Protocol-
			Independent
			Multicast
Symptom:	This issue may cause transient traffic loss until all the missing S G		
	entries are re-converged back. max upto 60 sec for the affected flows.		
Condition:	ECMP enabled and having multiple paths between two devices. if one		
	of link is flap this issue	could be seen.	

Defect ID:	DEFECT000644556		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	Configuration
			Fundamentals
Symptom:	During MM failover, while the standby MM becomes active, process		
	L2sysd may be terminated and restarted.		
Condition:	The issue may happen with MCT VPN scaling configuration.		
Recovery:	After process L2sysd is restarted, the system will work fine.		

Defect ID:	DEFECT000645924				
Technical Severity:	Medium	Probability:	High		
Product:	Brocade SLX-OS	Technology Group:	Layer 3		
			Routing/Network		
			Layer		
Reported In Release:	SLXOS 17r.2.00	Technology:	MBGP -		
			Multiprotocol Border		
			Gateway Protocol		
Symptom:	Total number of BGP EVPN Routes includes valid routes and filtered				
	routes				
Condition:	BGP EVPN routes are f	Itered with mismatch Ro	BGP EVPN routes are filtered with mismatch Route Target.		

Defect ID:	DEFECT000648649			
Technical Severity:	Medium	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 17r.1.01	Technology:	Configuration	
			Fundamentals	
Symptom:	The "show slots" command does not work when requested using rest.			
Condition:	This issue occurs when the user uses rest operation to display "show			
	slots" output.			
Workaround:	The noscli has support for "show slots" to display the output.			
	So in order to view the desired data the user can use "show slots" cli			
	command through nos	command through noscli.		

Defect ID:	DEFECT000650830		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.1.01	Technology:	SNMP - Simple
			Network
			Management
			Protocol
Symptom:	No method to clear SNMP statistics.		
Condition:	snmpget/snmpwalk on ifMIB objects representing interface statistics.		

Defect ID:	DEFECT000651257		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	LLDP - Link Layer
			Discovery Protocol
Symptom:	Setting clock backwards using SLXCLI "clock set" will cause SDK		
	linkscan to stop polling links. If a port is enabled after this clock set,		
	the link will not come up.		
	Links already up will not be affected. Also, setting clock forward		
	doesn't have this issue.		
Condition:	Setting clock backward will introduce this issue.		
Workaround:	1. Setting clock forward to the original date/time will recover the SDK		
	linkscan and bring up the link. Or		
	2. more cleanly, reload the system after setting clock backwards.		
Recovery:	Reload the system.		

Defect ID:	DEFECT000651851		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.1.01	Technology:	BFD - BiDirectional
			Forwarding
			Detection
Symptom:	Single hop BFD sessions flap on switching to multislot with 200ms timer		
Condition:	When BFD sessions are over multi-slot LAG interfaces with several members links, then change of topology can cause BFD sessions to flap.		
Workaround:	Keep the number of member links of the LAG less than 6-8		
Recovery:	Once flapped, session	should come back online	e by itself.

Defect ID:	DEFECT000653738		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	port-channel is up even though different cluster id is configured on		
	both mct nodes.		
Condition:	configuring different cluster id at both mct nodes		

Defect ID:	DEFECT000653739		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	MCT Client LAG interfa	ce goes to online state o	on SLX switch, which
	connected to an MLX switch, even though the client-id is		
	mismatched.		
Condition:	SLX switch configured with MCT Client LAG Interface with different		
	client ID on both MCT peer switches.		
	Note: LACP protocol on MCT LAG interface.		
Workaround:	It is negative test case.		
	Keep same client-id for MCT Client LAG inteface on both MCT peer		
	nodes		

Defect ID:	DEFECT000654558		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	IP Addressing
Symptom:	Ping not going through a TRANSIT node on a VE bounce with proxy-		
	arp enabled and protocol applications (MULTICAST) running.		
Condition:	Running proxy arp und	er conditions of scale wi	th triggers

Defect ID:	DEFECT000655147				
<b>Technical Severity:</b>	Medium	Probability:	High		
Product:	Brocade SLX-OS	Technology Group:	IP Multicast		
Reported In Release:	SLXOS 17r.2.00	Technology:	IGMP - Internet		
			Group Management		
			Protocol		
Symptom:	Multicast information for Bridge Domain is not shown in the REST				
	output.				
Condition:	Multicast information for Bridge Domain is not available when REST is				
	used.				

Defect ID:	DEFECT000656016		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.1.01	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Daemon bgpd would terminate and restart on HA even with BGP		
	process restart configured		
Condition:	Significant routing configuration changes are made to observe the		
	problem		

Defect ID:	DEFECT000656206		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.2.00	Technology:	Security Vulnerability
Symptom:	Nmap tool found unknown tcp open ports that are vulnerable to		
	attack from mgmt interface.		
Condition:	Unknown tcp open ports can be seen when Nmap tool is run on the		
	device.		

Defect ID:	DEFECT000656360		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.2.00	Technology:	ACLs - Access Control
			Lists
Symptom:	For "mac access-list" rules, providing 'count' option only works if		
	provided before 'copy-sflow', 'mirror' and 'log' option.		
Condition:	Occurs when configuring rules under mac access list		
Workaround:	Wrorkaound is to provide 'count' option before 'copy-sflow', 'mirror'		
	and 'log' options.		

Defect ID:	DEFECT000656979		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	NTP - Network Time
			Protocol
Symptom:	In this release, 'ntp disable all' configuration command is not		
	available. It will be added in a later release.		
Condition:	If NTP has to be configured, then it earlier disable command is not		
	available.		

Defect ID:	DEFECT000656999		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	<b>Technology Group:</b>	Management
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	CLI - Command Line
			Interface
Symptom:	IS-IS utilizes 2.5% of system memory		
Condition:	This issue happens when IS-IS process comes up		

Defect ID:	DEFECT000657101		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.2.00	Technology:	IGMP - Internet
			Group Management
			Protocol
Symptom:	Non existing logical interface if used in "ip igmp snooping mrouter" configuration, will be stored in the running-config but not activated in the backend. Cosmetic issue, with no impact to functionality.		
Condition:		r is configured with a no	

Defect ID:	DEFECT000657223		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	The configuration will f	ail with an error messag	e "%Error: LIF missing
	VLAN Classification"		
Condition:	1, Change the switch mode to trunk-no-default-native.		
	2. Change the vlan mode of logical interface from tagged to untagge		
	without removing the tagged vlan configuration under the logical		
	interface.		
Workaround:	Delete the tagged vlan configuration under the logical interface and		
	delete the logical interface before changing the switch mode and vlan		
	mode.		
Recovery:	Delete the logical interface and bridge domain configuration and re-		
	configure.		

Defect ID:	DEFECT000657261		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.2.00	Technology:	IGMP - Internet
			Group Management
			Protocol
Symptom:	In a high scale scenario of 4k LIFs configured on a Bridge Domain, and		
	sending Multicast or unknown unicast traffic traffic will not be		
	flooded to all the LIFs.		
Condition:	High scale of LIFs confi	gured on a Bridge Doma	iin

Defect ID:	DEFECT000657299		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Traffic duplication for certain VLANs on LACP enabled MCT client		
	ports after cluster deploy/'no deploy' or cluster re-configuration		
Condition:	Cluster re-configuration or 'no deploy and 'deploy' with active LACP		
	clients		
Workaround:	Shutdown of client ports before cluster re-configuration		
Recovery:	Re-configuration of pro	blematic VLANs i.e.	
	no vlan <id> followed b</id>	oy 'vlan <id>'</id>	

Defect ID:	DEFECT000657443		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.2.00	Technology:	ACLs - Access Control
			Lists
Symptom:	no warning message generated for identical acl on physical and bd		
	interface		
Condition:	no warning message generated for identical acl on physical and bd		
	interface		

Defect ID:	DEFECT000657490		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	"show ip bgp summary vrf <user-vrf-name>" would timeout without any output</user-vrf-name>		
Condition:	1199 IPv4 and 1199 IPv6 BGP sessions are UP in non-default vrf (user- vrf)		

Defect ID:	DEFECT000657689		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	With 650K IPv4 Interne	et routes and 42K IPv6 In	ternet routes in BGP,
	the router would take	more than 60 minutes to	o converge.
Condition:	BGP neighbors are cor	figured with keep-alive	timer: 30 seconds and
	hold-down timer: 90seconds		
	There are 2 RIB-IN neighbors(1 IPv4 neighbor and 1 IPv6 neighbor)		
	from which the internet routes(650K IPv4 routes from neighbor-1 and		
	42k IPv6 routes from neighbor 2) are learned.		
	There are 1115 inactive	e peering sessions to wh	ich all the Internet
	routes are blocked through a deny route-map		
	After the router converges for the fist time, when "clear ip route all"		
	is executed the symptom is observed		
Workaround:	Issue is not observed w	hen BGP neighbors are	configured with keep-
	alive:60 seconds and h	old-down timer:180 seco	onds

Defect ID:	DEFECT000658242		
Technical Severity:	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Traffic Management
Reported In Release:	SLXOS 17r.2.01	Technology:	Rate Limiting and
			Shaping
Symptom:	Rate limit will not be operational as per the configured values and the		
	operational CIR/EIR values will be zero.		
Condition:	Bind the policy-map/storm-control to an interface which has		
	information rates (CIR/	EIR) less than the 22000	) bps.

Defect ID:	DEFECT000658790		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 17r.2.01	Technology:	ACLs - Access Control
			Lists
Symptom:	ACL with logging enabled causes error message sometimes		
Condition:	ACL with logging enabl	ed causes error message	sometimes

Defect ID:	DEFECT000658871		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.01	Technology:	CLI - Command Line
			Interface
Symptom:	Empty response will be seen for "show ntp" command via restconf		
Condition:	When show ntp status command executed in restconf query		
Workaround:	Use CLI command to get desired output.		

Defect ID:	DEFECT000659154		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.1.01	Technology:	CLI - Command Line
			Interface
Symptom:	"Message Generic Error" is returned for various SLX CLIs.		
Condition:	File system errors on the SSD results in the file system becoming		
	read-only. Console shows "read-only file system" error when the		
	condition occurs.		

Defect ID:	DEFECT000659269		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Traffic Management
Reported In Release:	SLXOS 17r.1.01	Technology:	Rate Limiting and
			Shaping
Symptom:	100G interfaces on SLX 9850 may not achieve line rate egress		
	throughput.		
Condition:	On a L2VPN network 100G interfaces on SLX 9850 may not achieve		
	line rate of egress through put.		
Workaround:	Augment performance	with additional interfac	es as required.

Defect ID:	DEFECT000659400		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.01	Technology:	IP over MPLS
Symptom:	LSP down and traffic drop is observed.		
Condition:	Very huge scale of LSP and a bypass LSP tunnel is used by multiple		
	LSPs as secondary path. Excute "clear lsp all" multiple times.		

Defect ID:	DEFECT000659492		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	When routing is enabled over a Bridge Domain, for VEoVPLS, and if		
	the PW profile on that Bridge Domain is in Raw mode then		
	forwarding may not work as intended.		
Condition:	User has enabled routing over a Bridge Domain in earlier release, and		
	upgraded the setup to SLXOS17r.2.01.		
Recovery:	Disable routing on the	Bridge Domain.	

Defect ID:	DEFECT000659846		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	The order of peer-ip address under ' address-family ipv4 unicast ' is		
	dfifferent from order under 'address-family ipv4 unicast ', when		
	executing " show run router bgp".		
	This doesn't have any functional impact. This is just a cosmetic issue		
Condition:	Multiple peer-ip addre	ess are configured for bg	p.

Defect ID:	DEFECT000659847		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 17r.2.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	Adding BGP peers manually (pasting cli config on telnet/ssh sessions) taking a couple of minutes, same applies to making filter changes to many peers at once. In our testing it took more than 2 to 3 minutes to add 250 peers		
Condition:	Router configured with peer which learns full internet RIB IN (both IPv4 and IPv6)		

Defect ID:	DEFECT000659856			
<b>Technical Severity:</b>	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 17r.2.01 Technology: High Availability			
Symptom:	Loss of traffic for 275 seconds between MCT peers, when ve is			
	disabled.			
Condition:	In some topologies, when the outgoing ve link for an LSP is disabled			
	at ingress, the LSP is not able to route around the failure until the			
	RSVP state downstream times out.			

Defect ID:	DEFECT000660148		
Technical Severity:	Medium	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.00	Technology:	Syslog
Symptom:	Issue only happens after reboot and before DCMD config replay completes. Once the switch is fully up, the hostname will be reflected in the syslog message properly.		
Condition:	when ever new hostna	me is configured and the	e device is rebooted.

Defect ID:	DEFECT000660188		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.2.01	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	Some of the VXLAN MACs are not installed in the hardware when		
	EVPN configuration is removed and re-added		
Condition:	Some of the VXLAN MACs are not installed in the hardware when		
	EVPN configuration is removed and re-added		
Workaround:	clear all the bgp evpn s	essions	

Defect ID:	DEFECT000660423		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 17r.2.00	Technology:	CLI - Command Line
			Interface
Symptom:	Description CLI in interface submode can be used to configure a brief		
	description of the interface. This CLI is not present for VE and		
	loopback interfaces.		
Condition:	Configuration submode for VE and loopback interfaces.		

Defect ID:	DEFECT000660446		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	IP Multicast
Reported In Release:	SLXOS 17r.2.01	Technology:	IPv4 Multicast
			Routing
Symptom:	The symptoms involve reboot of the switch due to Layer 2 Multicast		
	process termination.		
Condition:	The issue is observed when the PIM SSM group range is configured		
	with the same IP Prefix	as of the IGMP SSM ma	p group prefix.

Defect ID:	DEFECT000660519		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.1.01	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	In an MCT setup, MAC address is learnt as "CR" (Cluster remote MAC)		
	on both the MCT peers.		
Condition:	When a MAC moves between MCT peers even after the MAC ages		
	out the MAC is shown as CR MAC (Cluster Remote MAC) on both the		
	MCT peers		

Defect ID:	DEFECT000661016			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Security	
Reported In Release:	SLXOS 18r.1.00	Technology:	ACLs - Access Control	
			Lists	
Symptom:	Additional ACL hardware entries programmed on ports which are not			
	member of Bridge Domain.			
	Functionality is not impacted only more hardware entries used.			
Condition:	Binding L3 ACL on Brid	Binding L3 ACL on Bridge Domain.		

Defect ID:	DEFECT000661026		
<b>Technical Severity:</b>	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17r.1.01	Technology:	LAG - Link
			Aggregation Group
Symptom:	SLX brings up the different speed interfaces among the port channel.		
Condition:	1.We have to configure the port-channel		
	2.All the configured interfaces should be administratively UP prior to		
	configure those interfaces into port-channel.		
	3.We have to add 1G,1	0G & 40G interface to th	ne port-channel.

Defect ID:	DEFECT000661051		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	During High availability Management Module fail-over, Layer 2 MAC addresses from a remote VPLS peer are learnt on a different Bridge Domain.		
Condition:	The user has issued High availability MM failover command so that the standby MM becomes an active MM		
Workaround:	MAC learned unexpectedly will be aged out after MAC age timer expires. Also, Configuring MAC age timer to a smaller value will help to age out the unexpected MAC faster.		

Defect ID:	DEFECT000661116		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 17s.1.02	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	MCT cluster formation takes a very long time(>4 mins) or cluster		
	formation fails.		
Condition:	If MCT cluster peer is added and removed repeatedly for more than		
	100 times, then the issue is seen.		
Workaround:	Reload of switch is required to recover from the condition.		

Defect ID:	DEFECT000661129		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	At times, following VRRP debug messages will be displayed on the oncole: VRRP: in vrrp_sr_notify, evt: 16391 VRRP_FABRIC_READY : 0 VRRP: fabric ready received is_vrrp_cold_recover : 1 VRRP: Reset hold timer for all sessions These are normal operations and shouldn't cause a concern.		
Condition:	Messages are seen at boot up time		

Defect ID:	DEFECT000661444		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	Port on line card goes down after 35 to 60 sec , when MM is plugged		
	off from the chassis.		
Condition:	The ports are disabled when the component on linecard get		
	heartbeat (with Management Moudule) timeout. The delay is due to		
	the existing timeout delays in the infrastructure.		
Workaround:	'reload system' CLI will bring down the front end ports immidiately.		
	User can execute the CLI and then plug out the active Management		
	Module in a single Mar	nagement Module chass	is.

Defect ID:	DEFECT000661488		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	BFD may flap after executing "clear loop-detection" multiple times.		
Condition:	Executing "clear loop-detection" multiple times. It is unlikely to		
	happen.		
Workaround:	It is not recommended to perform "clear loop-detection" multiple		
	times that may result in	n BFD flap.	

Defect ID:	DEFECT000661571		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	One of the node in L-VTEP cluster topology, may observe unexpected		
	reload, when Cluster is disrupted by unconfiguring and re-configuring.		
Condition:	Issue is only seen with scale configuration on L-VTEP topology, with		
	4K EVPN BD VLANS		

Defect ID:	DEFECT000661684		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	LVTEP Loop may not be detected if Loop Detection is enabled only on		
	one MCT node but not on the MCT peer node.		
Condition:	the issue is only happened with MCT LVTEP and Loop Detection only		
	enabled on one of the MCT nodes. Although LVTEP loop detection is		
	not officially supported	l in the current release.	

Defect ID:	DEFECT000661685		
Technical Severity:	High Probability: High		
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	VPLS traffic loss observed		
Condition:	Reloading one of the MCT nodes will result to this traffic loss.		
Workaround:	If it is planned reload, shutting down the CCEP interface in the MCT		
	node will avoid this traffic loss		
Recovery:	Disable CCEP interface after the MCT node up and can enable it back		
	after all VPLS PWs are	up.	

Defect ID:	DEFECT000661732		
Technical Severity:	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	VLAN - Virtual LAN
Symptom:	Unexpected reload.		
Condition:	When MAC updates crossed the scale limit(~750k).		
Workaround:	MAC updates to be on allowable salable limit.		

Defect ID:	DEFECT000661746		
Technical Severity:	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.1.01	Technology:	Hardware Monitoring
Symptom:	Incorrect output at "Local Fault detected"		
Condition:	When we execute "flex-cli show local-fault slot X"		

Defect ID:	DEFECT000661763		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	Switch may undergo unexpected reload		
Condition:	With scale and stress conditions with endpoint tracking enabled, if		
	admin does clear mac-address-table dynamic multiple times		

Defect ID:	DEFECT000661772		
<b>Technical Severity:</b>	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.1.01	Technology:	IP Addressing
Symptom:	VE interface protocol status shows down after reload.		
Condition:	When there is no online interfaces associated with VE interface.		
Workaround:	Make sure we have one online interface associated to VE interface		
	before reload.		

Defect ID:	DEFECT000661828		
Technical Severity:	Medium	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.1.01	Technology:	RAS - Reliability,
			Availability, and
			Serviceability
Symptom:	Message "VERIFY - Failed expression: probe(peerDesc),file = public.c,		
	line = 6663, user mode Call backtrace:" logged on console.		
Condition:	It's rare scenario, VERIFY message logged along with "BUG:		
	MAX_LOCKDEP_KEYS t	oo low!"	

Defect ID:	DEFECT000662058		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	LACP LAG interface does not display the reason for LAG down when		
	minimum links criteria not met on SLX switch		
	It is interoperable issue between SLX to MLX.switches.		
Condition:	When the LAG members are made administratively down on remote		
	switch (MLX) against L	ACP LAG minimum link	configured on SLX.

Defect ID:	DEFECT000662140		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	The slot info is missing in these two raslog messages and this happens only during the switch reboot. This issue is not seen once the switch is up and running.		
Condition:	Issue happens on rebo	ot only.	

Defect ID:	DEFECT000662181		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	High Availability
Symptom:	Bridge Domain statistics will not displayed though the configuration		
	has statistics enabled in hardware profile "counter-profile-1". It		
	doesn't have any functionality impact.		
Condition:	Enable statistics under Bridge Domain in default profile and reload		
	box by changing the hardware profile to "counter-profile-1"		
Workaround:	Display issue and no service impact.		

Defect ID:	DEFECT000662189		
Technical Severity:	Low	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	ARP - Address
			<b>Resolution Protocol</b>
Symptom:	"WHEM: alloc failed" messages might be seen. No functionality		
	impact.		
Condition:	The error message comes when the trace buffer memory runs below		
	a threshold, and the re	quested memory size is	larger.

Defect ID:	DEFECT000662335				
<b>Technical Severity:</b>	Medium	Probability:	High		
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching		
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis		
			Trunking		
Symptom:	NHID is created with local VTEP.				
Condition:	This is internal design issue, no functionality impact.				
Workaround:	No work around need.		No work around need.		

Defect ID:	DEFECT000662358		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	show-ntp netconf/REST RPC call execution does not provide		
	corresponding NTP status output.		
Condition:	Issue exists for all "show-ntp" RPC function calls via netconf/REST.		
Workaround:	Use "show ntp status" CLI command instead for getting the respective		
	status output.

<b>Technical Severity:</b>	Medium	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Management	
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration	
			Fundamentals	
Symptom:	Show command for VE shows the operational state. But no reason is provided in the show command if the operational state is down.			
Condition:	Configure a VE and enable it but do not associated with a VLAN. VE in			
	this case will be operational down but the reason why it was			
	"operational down" co	"operational down" could not be determined via show commands		

Defect ID:	DEFECT000662569		
Technical Severity:	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	ping/traceroute commands may fail when issued using host name		
	instead of IP address.		
Condition:	DNS lookups are done in the same VRF context as the application's		
	(ping/traceroute) VRF context. So, the DNS lookup will fail if the DNS		
	server is not reachable via the same VRF as the application VRF.		
Workaround:	1. Provide DNS server which is reachable via the same VRF as the		
	application's VRF (or)		
	2. Use IP address instead of host name for ping/traceroute		
	commands.		

Defect ID:	DEFECT000662574		
Technical Severity:	Medium	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	Help strings for ping, traceroute and trace-I2 are all conform to the		
	unified format. However, when these commands have options, their		
	help strings don't conform to the unified format.		
Condition:	When options are specified for Ping, traceroute, and trace-I2		
	commands. For examples:		
	ping google.com count		
	traceroute google.com maxttl		
	trace-l2 vlan 1		
Workaround:	No functional impact

Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	L2sysdd terminates unexpectedly on MCT peer with scaled system with 2000 VLANs advertised from CCEP client and 1900 of them are withdrawn.		
Condition:	L2sysd may terminate unexpectedly on MCT peer with scale configuration.		
Workaround:	Reduce the scale configuration.		

Defect ID:	DEFECT000663241		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	CCR MAC shows under the local MAC count		
Condition:	CCR MACs synced from the peer using BGP-EVPN control plane on		
	MCT node		

Defect ID:	DEFECT000663247		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VXLAN - Virtual
			Extensible LAN
Symptom:	Virtual system MAC display under Ports/LIF/PW/ column		
Condition:	Virtual System MAC presence on system using VRRP etc.		

Defect ID:	DEFECT000663298		
<b>Technical Severity:</b>	High Probability: Medium		
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 18r.1.00	Technology:	Hardware Monitoring
Symptom:	Fan failure will not be displayed in 'show system monitor'.		
Condition:	Fan monitor state in 'show system monitor' will not change from		
	healthy to marginal in case of any fan failure.		

Defect ID:	DEFECT000663349		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	User may hit traffic loss in MCT VLL scenarios.		
Condition:	If below sequence of tr	iggered is tried in scale	scenarios.
	Client-interface-shut->undeploy-> Deploy-> no client-interface-shut.		
Workaround:	Deploy cluster after removing client interface shut.		
Recovery:	Any further flap will recover from issue. Like: BD delete/add, Cluster		
	deploy/no deploy.		

Defect ID:	DEFECT000663351		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	Packets get fragmented even their sizes are smaller than the L3 MTU configured.		
Condition:	There are only three supported L3 MTU values: 1300, 1500, 9194. If the configured L3 MTU doesn't match one of the three values, the actual MTU programmed in HW will take one of the three values that is smaller than the configured one. For example, if configuring L3 MTU as 9100, the actual L3 MTU programmed in HW will be 1500. Any packets with sizes more than 1500 will be fragmented.		
Workaround:	Configure the recomm	ended MTU value	

Defect ID:	DEFECT000663386

Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	Stale EVPN L3 routes a	re present in BGP RIB-IN	Table, when overlay-
	gateway instance is removed.		
Condition:	Deleting overlay-gateway EVPN Instance configuration.		
Workaround:	Trigger the "clear bgp evpn neighbor all" after removing the overlay-		
	gateway configuration		

Defect ID:	DEFECT000663489		
Technical Severity:	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	Serial Number is not getting displayed in show cluster management		
	detail.		
Condition:	This issue is seen always due to some application logical error.		
Workaround:	The serial number can still be seen from other command like "show		
	chassis"		

Defect ID:	DEFECT000663490			
<b>Technical Severity:</b>	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Monitoring	
Reported In Release:	SLXOS 18r.1.00 Technology: Telemetry			
Symptom:	The warning messages are displayed on device console .			
	These warning messages are displayed from GRPC library and it will			
	not have any impact on working of telemetry server operations.			
Condition:	When telemetry server is activated for the first time after device boot			
	up.			

Defect ID:	DEFECT000663523		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	CCEP physical main interface shows admin down state even though		
	interface is UP		
Condition:	Adding interface as client interface under cluster		
Workaround:	perform no deploy/dep	oloy under client	

Defect ID:	DEFECT000663525		
Technical Severity:	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	"show running-config all cluster" reports a default setting of "client-		
	interfaces-shutdown" which is not correct.		
Condition:	When doing "show running-config all cluster"		
Workaround:	No work-around, No fu	inctional impact	

Defect ID:	DEFECT000663580		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	When there exist very	high rate traffic and very	low rate traffic
	together, the counter for the very low rate traffic increments very		
	very slowly.		
Condition:	When there exist very high rate traffic and very low rate traffic		
	together.		

Defect ID:	DEFECT000663667

Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	•	ap consisting of several i	•
		BGP peer in and out(sa	•
	configured both for ro	ute-map in and route-ma	ap out) BGP daemon
	would terminate and cause the router to reload.		
Condition:	A large route-map consisting of several instances of match/set		
	statement should be configured and added to BGP peer in and peer		
	out		

Defect ID:	DEFECT000663692		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 17r.2.00	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	After the devices boots up, the user will see the dcmd.sh, ccmd.sh,		
	and netstat defunct processes.		
Condition:	The defunct processes will show up when the user runs the "ps aux"		
	command.		
Workaround:	None. They are not ha	mful and so the user car	n just ignore them.

Defect ID:	DEFECT000663745			
		Drobobilitur	Madium	
Technical Severity:	Medium	Probability:	Medium	
Product:	Brocade SLX-OS	Technology Group:	Monitoring	
Reported In Release:	SLXOS 18r.1.00	Technology:	OAM - Operations,	
			Admin &	
			Maintenance	
Symptom:	CFM connectivity failur	e is seen for UP MEP. w	hen bridge-domain vc-	
	mode is tagged and the	e main interface(physica	l or LAG) TPID is	
	configured other than	0x8100,		
Condition:	Configure Interface TPI	D other than default 0x8	3100	
	Configure Logical inter	face under this main inte	erface	
	Bind logical interface to	o a bridge-domain.		
	Configure pw-profile w	ith vc-mode as tag.		
	Bind pw-profile to the same bridge-domain.			
	Configure CFM with Maintenance Association(MA) binded to the			
	same main interface. Configure MEP with direction as UP within the			
	MA.			
	Remote MEP here would not be learnt leading to connectivity failure.			
Recovery:	Remove the vc-mode configuration in pw-profile to reset to default as			
	raw mode.			
	Another recovery is to	remove the interface TP	ID so that it is reset to	
	default of 0x8100.			
	In both these scenarios	s, the CFM connectivity v	vill be restored with	
	Remote MEP learnt.			

Defect ID:	DEFECT000663929		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	OSPF - IPv4 Open
			Shortest Path First
Symptom:	This issue is seen with	n Multi-Hop ICL MCT topo	ology and reloading
	inter-node router and	l HA Failover multiple tin	nes.
Condition:	With this topology an	d also combination of Re	load and HA Failover,
	some OSPF session will go down on the MCT nodes and also the MCT		
	cluster will go down.		
Workaround:	Identify the VE interfaces that are between MCT nodes and then on		
	the inter-node MCT router, clear ARP entry for that IP address.		
	Enter the following command after figuring out the Remote IP		
	address on the MCT nodes as following :		
	"clear arp ip 1.2.3.4 no-refresh"		
	During failure, this command was executed and all OSPF session came		
	up and also Cluster state and II its clients came up.		
	Second work around	could be shut & no shut o	command on the VE
	interface on the Inter	-node Router.	

Defect ID:	DEFECT000663934		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Static Routing (IPv4)
Symptom:	User may experience the traffic loss for more than one minute on		
	LACP LAG interfaces connected to another Switch.		
Condition:	When user shutdown the LACP Port-Channel interface connected		
	another switch, the traffic loss would be seen.		
Workaround:	User can shutdown the Port-Channel members manually to get ride		
	of traffic loss for more	than minute.	

Defect ID:	DEFECT000663937		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	User may hit traffic loss in MCT VLL scenarios.		
Condition:	HA failover will cause this issue in VLL scaled scenarios		
Recovery:	Any further flap will recover from issue. Like: BD delete/add, Cluster		
	deploy/no deploy.		

Defect ID:	DEFECT000664059		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.2.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	LSP doesn't failover properly.		
Condition:	dynamic bypass ISP configuration has to be present		
Workaround:	Changing the MPLS interface to tagged VE		

Defect ID:	DEFECT000664088		
<b>Technical Severity:</b>	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.1.01	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	Traffic drop over MPLS tunnels.		
Condition:	Reload of the MPLS uplink line card multiple times may occasionally		
	cause this issue.		
Recovery:	Reload problematic line card(s).		

Defect ID:	DEFECT000664170		
Technical Severity:	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	Endpoint may be authenticated using older radius configured.		
Condition:	Client interface, configured with endpoint tracking, shutdown under		
	cluster configuration can lead to issue.		

Defect ID:	DEFECT000664210		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 17r.1.01	Technology:	LDP - Label
			<b>Distribution Protocol</b>
Symptom:	LDP sessions will flap		
Condition:	With a configuration of Bridge Domain having multiple VC peers, flaps		
	can be seen when any of the peer continuously receives unknown		
	unicast traffic		
Workaround:	TM tuning can be done to limit unknown unicast traffic to		
	workaround this issue.		

Defect ID:	DEFECT000664211			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Monitoring	
Reported In Release:	SLXOS 18r.1.00 Technology: Syslog			
Symptom:	"show slot" indicates MM enabled but console log indicates MM is			
	rebooting			
Condition:	The MM status is being updated at an earlier stage, during MM			
	bootup.			
Workaround:	The MM state will eventually corrected once the MM fully boots up.			

Defect ID:	DEFECT000664212		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	"show mpls statistics tunnel rsvp destination " output is not clear.		
	some fields are missing or messed up into other.		
Condition:	When this command is executed from console session, output may		
	not be clear. The root cause is still unknown.		
Workaround:	Use telnet session to se	ee the output of this con	nmand
Recovery:	There is no side effect	of this issue	

Defect ID:	DEFECT000664309		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VLL - Virtual
			Leased Line
Symptom:	VLL MACs will get learned incorrectly on VPLS BDs		
Condition:	Removing VLL peers will occasionally results VLL traffic MAC		
	addresses to learn on wrong VPLS BDs		
Recovery:	Clear mac will delete the wrongly learned mac.		

Defect ID:	DEFECT000664356		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	When bpdu-block is enabled, LACP is enabled on the port and STP packets are sent only in that case we see the mac learning. This has no functional issue.		
Condition:	This has no functional issue and seen in a specific condition. This will		
	not cause any mis-forwarding or any functional issue.		
Workaround:	Disabling STP on remote	e link will recover this is	sue.

Defect ID:	DEFECT000664451		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Traffic Management
Reported In Release:	SLXOS 17r.1.01	Technology:	Traffic Queueing and
			Scheduling
Symptom:	ARP flooding with high rate(1G) can cause CPU Protocol Queue		
	Congestion. This could cause RSVP flap, Fix will be included in next		
	release.		
Condition:	ARP flooding with high rate(1G) is unlikely user scenario.Workaround		
	is to apply shaper if thi	s issue happens.	

Defect ID:	DEFECT000664456		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	The command "write erase all" throws some errors while it is issued.		
Condition:	when issuing the command "write erase all".		

Defect ID:	DEFECT000664459		
<b>Technical Severity:</b>	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	Hardware Monitoring
Symptom:	The output of "show media" command shows wrong calculation for		
	Aggregate TX power.		
	This issue do not have any impact to functionality.		
Condition:	The user issues the command "show media".		

Defect ID:	DEFECT000664491		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	Incorrect MAC address may briefly appear after HA failover at peer in		
	the network. The traffic loop is extremely brief but it may cause		
	misdelivery of a few packets. This causes the mac table to be		
	incorrect for 30 minutes, though the traffic recovers within a few		
	milliseconds.		
Condition:	MM HA failover or MPLS process restart with MPLS tunnels; unless		
	LDP tunnels are used for transport and GR is enabled.		

Defect ID:	DEFECT000664496		
<b>Technical Severity:</b>	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	slowpath MAC stays as CCR on MCT nodes		
Condition:	no deploy/deploy under client		

Defect ID:	DEFECT000664497		
Technical Severity:	Low	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	Minor cosmetic issue in help. When user enters '?' or ' <tab>' after command 'ip access-list extended <acl-name>', help does not show '<cr>'. The command works as expected if user hits '<enter>'. Issue is only with help string.</enter></cr></acl-name></tab>		
Condition:	When using IP ACL.		

Defect ID:	DEFECT000664545		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	MCT Tunnel client remote state show down		
Condition:	"clear bgp evpn neighbor" on spine on large scale in terms of EVPN		
	VLAN/BD, client triggers this issue.		

Defect ID:	DEFECT000664551		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Deleting and re-adding ESI value under MCT client in cluster configuration.User will see BCM error message. Hard to reproduce. Reload the system to recover.		
Condition:	This problem has been observed only once and several attempts to reproduce it failed.		

Defect ID:	DEFECT000664554		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	MPLS
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	Relearning of MACs takes more time when all dynamics are cleared		
	with high number of MACs learnt in the system like 32k MACs. There		
	is no disruption to the traffic.		
Condition:	Executing the command "clear mac dynamic" to clear all MACs from		
	the system.		
Recovery:	It is auto recovered wit	hin 4-5 mins.	

Defect ID:	DEFECT000664612		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 18r.1.00	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	User may observe that dot1ag daemon may get blocked when significant number of SNMP notifications are triggered instantaneously for large number of CFM session, when the timeout interval parameter changes for these CFM sessions, from a higher timeout value to lower timeout value.		
Condition:	User may observe this issue when he is changing CCM interval for 300 or more sessions and timeout interval value from higher to lower.		
Workaround:	Before changing the CCM interval, bring DOWN CFM sessions,		
	followed by configuring the CCM timeout interval on both local and		
	remote systems and th	en bring them UP.	

Defect ID:	DEFECT000664624		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Security
Reported In Release:	SLXOS 18r.1.00	Technology:	DoS (Denial of
			Service) protection
Symptom:	When Bridge Domain based Rate Limiting and ACL are applied on the		
	same port, both Bridge Domain RL counter and ACL counter		
	increment. Only ACL counter should increment.		
Condition:	When Bridge Domain R	L and ACL are applied to	the same port.

Defect ID:	DEFECT000664627		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Prefix routes are not installed.		
Condition:	Prefix route sources are from MCT (IBGP) and non-MCT (EBGP) peer. When MPLS tunnel is brought down and IP reach ability is available. The prefix route from NON-MCT peers are not installed.		
Workaround:	Shutdown the MCT Peer, there should not be any functionality impact as ICL down is down.		
Recovery:	Shutdown the MCT Peer, there should not be any functionality impact as ICL down is down.		

Defect ID:	DEFECT000664673		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	One of the client state is shown as un-deploy.		
Condition:	Multiple deploy/no deploy done at both the MCT peers.		

Defect ID:	DEFECT000664676		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	several minutes traffic drops might be seen with a batch of remote		
	VPLS MACs movement		
Condition:	The issue might be seen with over 5K remote VPLS MACs movement.		
	The traffic drops will be recovered in 5 minutes.		

Defect ID:	DEFECT000664679		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	IP Addressing
Symptom:	Next hop IP address is displayed in wrong format in debug internal		
	command. There is not functionality impact.		
Condition:	The regular user CLI command displayed in the correct format.		

Defect ID:	DEFECT000664710		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	I2sysd terminates unexpectedly and switch is reloaded.		
Condition:	With stress and scaled endpoint enabled scenarios if admin does		
	"clear mac-address-table" multiple times

			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	BGP daemon would terminate and cause router to reload		
Condition:	BGP process restart is configured.		
	Add/remove in/out route-map for all BGP peers in a loop using a		
	script.		

Defect ID:	DEFECT000664821		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	1. LIF HW programming error messages shown on LP Console.		
	2. Traffic associated with the HW programming error LIFs will be		
	dropped.		
Condition:	When the number of MCT LIF configured exceeds HW resource at a		
	scaled configuration environment. The exact threadshold depends		
	on other feature that n	nay also be using the sar	ne EED HW resource.

Defect ID:	DEFECT000664825				
<b>Technical Severity:</b>	High	Probability:	High		
Product:	Brocade SLX-OS	Technology Group:	MPLS		
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual		
			Private LAN Services		
Symptom:	After HA failover, BD MAC exists under "show mac-address-table" CLI				
	though the PW is not operational				
Condition:	This will be observed after HA failover				
Recovery:	No impact to the traffic	and the MAC will event	No impact to the traffic and the MAC will eventually get aged out.		

Defect ID:	DEFECT000664840		
<b>Technical Severity:</b>	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Syslog
Symptom:	The VLAN id displayed in logs is the port default VLAN ID which is not		
	matching with the VLAN ID in the packet		
Condition:	When interface is dual tagged and traffic coming on interface is single		
	tagged traffic.		

Defect ID:	DEFECT000664849		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	Syslog messages are received with source IP as Chassis IP instead of		
	the in-band. if we have chassis IP configured in the device.		
Condition:	Bring up the device and configure chassis IP.		
	Configure in-band configuration through MGMT-VRF.		
	Configure syslog server	with in-band IP.	

Defect ID:	DEFECT000664851		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	SNMP traps are received with source ip as device Mgmt IP instead of		
	the in-band mgmt ip when the in-band interface is in mgmt-vrf		
Condition:	Seen only when the in-band interface is in mgmt-vrf. No such issue		
	exists for default-vrf and <user vrf="">.</user>		

Defect ID:	DEFECT000664867		
Technical Severity:	Medium	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	SNMP - Simple
			Network
			Management
			Protocol
Symptom:	'snmp-server enable trap' and its no command do not show up in		
	show running-config		
Condition:	by default 'snmp-server enable trap' is enabled and it can be disabled		
	by no form of its command. In both cases the command does not		
	show in 'show running-config'		
Workaround:	'snmp-server enable tr	ap' can be seen in the sh	low command for
	default values i.e "show	v running-config all"	

Defect ID:	DEFECT000664912

Product:	Brocade SLX-OS	Technology Group:	Management		
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line		
			Interface		
Symptom:	'show user' command won't show the correct role for the user.				
Condition:	When AAA authentication method is tacacs+ and REST query is				
	issued, 'show user' wo	n't show correct role for	issued, 'show user' won't show correct role for the user.		

Defect ID:	DEFECT000664923			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching	
Reported In Release:	SLXOS 18r.1.00 Technology: MCT - Multi-Chassis			
			Trunking	
Symptom:	May experience little delay while collecting SupportSave.			
Condition:	While collecting System Supportsave. it would be seen with scaled			
	configuration.			

Defect ID:	DEFECT000664969		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	CLI - Command Line
			Interface
Symptom:	Error like "% Error: VRF	does not exist & %Error	r: Given vrf is not
	configured." will be seen while doing config replay and could not		
	retain the syslog related configuration with this user defined VRF.		
Condition:	1) Bring up the device and do the configuration as "logging syslog-		
	server 5.5.5.1 use-vrf red", where "red" is the user defined VRF. and		
	then copy the running configuration to remote server.		
	2) Copy default config to startup config and reload system		
	3) After reload and system is up and running do config replay by		
	copying the config from	n remote server to switc	h.

Defect ID:	DEFECT000664982		
<b>Technical Severity:</b>	Critical	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 17r.2.01	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	BGP terminates unexpectedly while configure/modifying prefix-list,		
	applied to IPv6 peer.		
Condition:	BGP terminates unexpectedly while configure/modifying prefix-list,		
	applied to IPv6 peer.		
Workaround:	Perform the reload system, if process restart is configured.		
Recovery:	Perform the reload sys	tem, if process restart is	configured.

Defect ID:	DEFECT000664985		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	After clearing BGP EVPN Neighbors, I am seeing DF discrepancy where		
	is being elected in both the nodes for some of the VLANs and BD.		
Condition:	Seen on high VLAN/BD scale setup after executing multiple BGP EVPN		
	clear command		
Recovery:	Remove and re-add VL	AN under EVPN on both	nodes

Defect ID:	DEFECT000664986		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	After clearing BGP EVPN neighbors VXLAN tunnel traffic sent out with zero DA MAC. This is seen rarely does not happen always. Need to reload the box to recover.		
Condition:	After clearing BGP EVPN neighbors VXLAN tunnel traffic sent out with		
	zero DA MAC. This is s	een rarely does not hap	pen always.

Defect ID:	DEFECT000664990		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	Console messages indicating encap failure appear on the standby console. During HA failover; even when LDP GR is enabled; there may be traffic loss until the correct hardware ids are reallocated.		
Condition:	LDP tunnel framework with dual MMs. Problem was seen during upgrade.		

Defect ID:	DEFECT000664993		
Technical Severity:	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	After clear BGP session, some of NHIDs are in down state which can		
	cause MAC learning failure on those NHIDs. This can recovered by		
	flapping the specific tunnel which has the issue		
Condition:	After clear BGP session, some of NHID are in down state which can		
	cause MAC learning failure on those NHIDs. This can recovered by		
	flapping the specific tunnel which has the issue		

Defect ID:	DEFECT000665036		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	OSPF - IPv4 Open
			Shortest Path First
Symptom:	Ping is not working for MCT peer VE interface defined IP. OSPF is not		
	coming up.		
Condition:	issue was reported first time and same issue existed from very early		
	kernel EVPN support (VDX as well) - happens due to timing		
Workaround:	shut/no-shut interface to recover from this condition		
Recovery:	shut/no-shut interface	to recover from this cor	ndition

Defect ID:	DEFECT000665046		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Management
Reported In Release:	SLXOS 18r.1.00	Technology:	Configuration
			Fundamentals
Symptom:	displayed: VERIFY - Failed express 272, user mode an or following: VERIFY - Failed express	g up, sometimes followin ion: shmid != -1, file rgs = 22 ion: SFMPS_OK == status user mode args = 4	s, file =
Condition:	Sometimes, we don't generate unique keys used to created shared		
	memory.		

Defect ID:	DEFECT000665081		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	While using IP Fabric, the cluster gateway MAC Address may not be		
	correctly programmed in the Hardware . It has no functional impact.		
Condition:	Using IP Fabric with BGP-EVPN		
Recovery:	execute the below CLI commands in the following order :		
	no evpn irb ve <ve-id></ve-id>		
	evpn irb ve <ve-id> cluster-gateway</ve-id>		

Defect ID:	DEFECT000665159			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	MPLS	
Reported In Release:	SLXOS 18r.1.00 Technology: MPLS Traffic			
			Engineering	
Symptom:	User may hit traffic drop on MPLS transit node.			
Condition:	Interface(Port-channel) flaps on mpls transit node.			
Recovery:	Clear arp for on mpls transit node for the problematic tunnel.			

Defect ID:	DEFECT000665171		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	VLAN - Virtual LAN
Symptom:	FFDC files get generated.		
Condition:	FFDC gets generated on LC		

Defect ID:	DEFECT000665177		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Without a reboot, if cluster is reformed like more than 150 times, you		
	see that the manageme	ent cluster formation tak	kes huge time.
	Initially after a reboot (1st time), cluster will form in 60 to 80 seconds,		
	but after 150 iterations, the performance might degrade and go up to		
	6-7 mins.		
Condition:	The ICL should be continuously flapping without any reboots.		
	Then we can hit this pe	rformance issue.	

Defect ID:	DEFECT000665183		
<b>Technical Severity:</b>	Low	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Monitoring
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	Hardware Monitoring
Symptom:	Below bogus error messages may be displayed:		
	"Ic faulty on slot"		
	after issue "reload system powercycle".		
Condition:	Issuing "reload system powercycle". It is timing related. Sometimes it		
	happens.		
Workaround:	No work-around needed as it doesn't affect functionality.		

Defect ID:	DEFECT000665195			
Technical Severity:	High	Probability:	High	
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching	
Reported In Release:	SLXOS 17r.1.01	Technology:	LAG - Link	
			Aggregation Group	
Symptom:	Port Mac Security violation will not occur after HA failover operation.			
	Port Mac Security violation occurred and port is brought up with no			
	shutdown command.			
	After HA failover , violation will not occur even for violating traffic.			
Condition:	when admin up performed on Port Mac Security violated port.			
	all flags related to PMS are set , but not synced to standby MM.			
Recovery:	perform shut and no sh	nut on port under port m	nac security	

Defect ID:	DEFECT000665215		
Technical Severity:	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
Reported In Release:	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	some errors and it sho	During the cluster form uld rollback to its origina unnels discovered and he	l state. During which
Condition:	ICL flaps during cluster	formation can lead to th	nis.

Defect ID:	DEFECT000665218			
Technical Severity:	High	Probability:	Medium	
Product:	Brocade SLX-OS	Technology Group:	MPLS	
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual	
			Private LAN Services	
Symptom:	"show mpls ldp fec vc <id>" output repeats</id>			
Condition:	Observed when LDP session was in Non-existent state, but the			
	correlation between th	correlation between this bug and that condition is not verified.		

Defect ID:	DEFECT000665239		
<b>Technical Severity:</b>	High	Probability:	Low
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	Some of the unrelated VE MAC addresses may not be present when		
	one PO is flapped. Does not have any functional impact		
Condition:	This does not have any functional impact as the MAC will be relearnt		
	and traffic will be norm	nal.	

Defect ID:	DEFECT000665296		
<b>Technical Severity:</b>	High	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Monitoring
Reported In Release:	SLXOS 17r.2.01	Technology:	OAM - Operations,
			Admin &
			Maintenance
Symptom:	User might observe that CFM sessions do not come up upon reload		
	with MAs configured with Long MAID in scaled scenarios		
Condition:	Configure MEPs within MA that uses Long MAID.		
	With Remote MEPs lea	rnt, perform a reload.	
	User will observe that the CFM remote MEPs would not be learnt		
	after reload. This is typically seen with MA scale of 20 or more.		
Recovery:	Remove and Configure back the MAs with Long MAID and the MEPs		
	within.		

Defect ID:	DEFECT000665328		
Technical Severity:	Medium	Probability:	High
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	BGP4+ - IPv6 Border
			Gateway Protocol
Symptom:	Cluster-Gateway Remote MAC is not programmed.		
Condition:	Cluster-Gateway Remote MAC is not programmed.		
Workaround:	Configure allow-as to accept, prefix routes from LVTEP peer.		
Recovery:	Configure allow-as to a	accept, prefix routes from	n LVTEP peer.

Defect ID:	DEFECT000665403		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	MPLS Traffic
			Engineering
Symptom:	mplsd terminated and restarted,		
Condition:	High scale of FRR LSPs , combined with stressful events.		

Defect ID:	DEFECT000665422		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	VPLS or VLL traffic loss will be seen		
Condition:	HA failover will intermittently lead to this issue due to MPLS tunnel		
	not programmed in the hardware		
Recovery:	Clear arp will resolve the	ne issue	

Defect ID:	DEFECT000665424		
<b>Technical Severity:</b>	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	VPLS BD learned unknown MAC addresses from remote peer		
Condition:	This issue will be seen intermittently when HA failover trigerred after		
	MPLS core uplink flap		
Recovery:	Clear wrongly learned MAC address to resolve the issue.		

Defect ID:	DEFECT000665430		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Management
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	SNMP - Simple
			Network
			Management
			Protocol
Symptom:	SNMPWALK on OSPF MIB causes the switch to reload unexpectedly.		
Condition:	Configure OSPF area and basic SNMP. Do SNMPWALK under the table		
	"ospfAreaTable".		

Defect ID:	DEFECT000665489		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 3
			Routing/Network
			Layer
Reported In Release:	SLXOS 18r.1.00	Technology:	BGP4 - IPv4 Border
			Gateway Protocol
Symptom:	L3 Traffic might be sent out on a wrong tunnel in EVPN/VxLAN		
	scenario.		
Condition:	Sometimes when ?clear bgp evpn neighbor all? or "reload" is trigged		
	on a peer router.		
Recovery:	clear bgp evpn neighbor all		

Defect ID:	DEFECT000665493		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	MPLS
Reported In Release:	SLXOS 18r.1.00	Technology:	MPLS VPLS - Virtual
			Private LAN Services
Symptom:	In stress scenarios, this may show as MAC out of sync in MM and LC		
	but has no functional impact as traffic gets forwarded normally.		
Condition:	Seen in stress scenarios and has no impact on forwarding of traffic.		

Defect ID:	DEFECT000665494		
Technical Severity:	High	Probability:	Medium
Product:	Brocade SLX-OS	Technology Group:	Layer 2 Switching
<b>Reported In Release:</b>	SLXOS 18r.1.00	Technology:	MCT - Multi-Chassis
			Trunking
Symptom:	Cluster management is in a degraded state after removing and adding		
	back an EVPN instance on one cluster peer.		
Condition:	Removing and adding back an EVPN instance on one cluster peer.		
Recovery:	Execute "clear bgp evpn neighbor <neighbor address="" ip="">" on</neighbor>		
	degraded leaf node to reform the management cluster.
